Beginning with the breakup of the New Left and the proliferation of "new social movements" such as feminism, Black Power, and gay liberation, this seminar explores the key debates around which gender and sexuality were articulated as politically significant categories. How did feminist and queer politics come to be scripted increasingly in terms of identity and its negation? To what extent has a juridical and state-centered conception of politics come to displace quotidian practices of freedom and world-building? What are the limits to rights-oriented political movements? What are the political implications of the recent ontological turn to affect in feminist and queer theory?

Instructor(s): Linda Zerilli Terms Offered: Winter

Note(s): Undergraduates by consent only.

Equivalent Course(s): PLSC 21410, GNSE 21400, MAPH 36500, ENGL 30201, GNSE 31400, PLSC 31410

ENGL 21420. Futures Other Than Ours: Science Fiction and Utopia. 100 Units.

Science fiction is often mistaken for a variety of futurism, extrapolating what lies ahead. This class will consider what kind of relationship science fiction might have to the future other than prediction, anticipation, optimism or pessimism. How might science fiction enable thinking or imaging futures in modes other than those available to liberalism (progress, reproduction, generation) or neoliberalism (speculation, anticipation, investment)? This class asks how science fiction constitutes its horizons, where and how difference emerges in utopias, and what it might be to live in a future that isn't ours. Readings may include SF works by Delany, Le Guin, Russ, Butler, Robinson, Banks, Ryman, Jones; theoretical and critical readings by Bloch, Jameson, Suvin, Munoz, Murphy, and others.

Instructor(s): Hilary Strang Terms Offered: Winter

Note(s): Email the instructor directly for consent.

Equivalent Course(s): ENGL 41420, MAPH 41400

ENGL 21644. American Muckrakers: The Literature of Exposé, 1900/2000. 100 Units.

This seminar examines the genre of American "muckraking," a form of journalism and fiction intended to expose social and economic injustices. We attend, in particular, to writers active in the years surrounding 1900, when muckraking narratives enjoyed great social influence, and then turn to the new crop of prominent muckrakers that emerged around 2000. In coining the term "muck-rake" in a 1906 speech, President Theodore Roosevelt linked the genre's aesthetic deficiencies to a potentially dangerous political impact: Its tendency towards "hysteric sensationalism" threatened to provoke a "morbid and vicious public sentiment" marked by cynical apathy. Though we may not end up agreeing with Roosevelt, the seminar picks up his emphasis on the relationship between the aesthetics and politics of exposé in our examination of muckraking media. We will discuss the narrative strategies of a genre often designated as "bad" literature, focusing, in particular, on the link between its purported aesthetic deficiencies-populism, sentimentalism, melodrama, sensationalism-and its political mission. Last but certainly not least, this seminar situates muckraking narratives in their historical contexts-what they hoped to expose, why, and what impact they ended up having. Texts in this course may include the work of: Upton Sinclair, Ida Tarbell, Jacob Riis, Ray Stannard Baker, Frank Norris, Lincoln Steffens, Barbara Ehrenreich, Eric Schlosser, Naomi Klein, Michael Moore, and Laurie Garrett.

Instructor(s): Agnes Malinowska Terms Offered: Spring

Equivalent Course(s): ENGL 41644, MAPH 41600

ENGL 21648. Languages of Migration: Literature, Law, and Language Justice. 100 Units.

For decades, human rights activists and lawmakers in the United States have been fighting for a person's right to speak their native language before the law, implying that language justice could be achieved through the use of interpreters. At the same time, a new generation of poets and fiction writers has been exercising alternative approaches to language justice, shifting the focus from speakers to listeners, and from the legal to the personal. This course brings these seemingly separate discourses into conversation in an attempt to trace the assumptions that undergird different formulations of language justice in the late 20th century and 21st century. Drawing on Edward Said's *The Public Role of Writers and Intellectuals*, we will examine NGO statements and immigration court hearings side by side with poetry and fiction by Monica de la Torre, Antonio Ruiz Camacho, Irena Klepfisz, Joseph Brodsky and others. As we analyze theories of identity, desire, language and responsibility and engage with thinkers such as Andrea Long Chu, Hannah Arendt and Amir Mufti, we will consider the potential implications of bringing literature and law into conversation with one another.

Instructor(s): Yael Flusser Terms Offered: Spring

Equivalent Course(s): CMLT 21648, HMRT 21648

ENGL 21690. Empire and the Novel. 100 Units.

This course investigates how the rise of the nineteenth-century British novel is intimately linked to the expansion of the British Empire. Many understand that this empire was based on unfair trade relations, indigenous genocide, and the exploitative labor of millions, but it can be difficult at times to see how this atrocious history fits into the domestic and metropolitan realism of the novel. How does the practice of imperialism impact the conventions of domestic fiction? How are the novel's constructions of gender, race, and class related to the political status of colonized and enslaved peoples? Our focus will be to connect narrative form with the realities of imperialism and colonial rule, but we will also draw on other genres of nineteenth-century cultural production such as autobiography, visual art, and political essays in order to help us trace the sociopolitical conditions that made empire possible. Fictional readings may include work by Charlotte Brontë, Wilkie Collins, Joseph Conrad, Olive Schreiner, and others. Non-fictional readings may include work by Aimé Césaire, Franz Fanon, Saidiya Hartman, Karl Marx, Mary Jane Seacole, Edward Said, Gayatri Spivak. (Fiction, 1830-1940)

Instructor(s): Rebeca Velasquez Terms Offered: Autumn

ENGL 21699. London Program: Empire and the Novel. 100 Units.

This course investigates how the rise of the nineteenth-century British novel is intimately linked to the expansion of the British Empire. Many understand that this empire was based on unfair trade relations, indigenous genocide, and the exploitative labor of millions, but it can be difficult at times to see how this atrocious history fits into the domestic and metropolitan realism of the novel. How does the practice of imperialism impact the conventions of domestic fiction? How are the novel's constructions of gender, race, and class related to the political status of colonized peoples? Our focus will be to connect narrative form with the realities of imperialism and colonial rule, but we will also draw on other genres of nineteenth-century cultural productions such as print journalism, visual art, and political essays in order to help us trace the sociopolitical conditions that made empire possible. Fictional readings may include work by Charlotte Brontë, George Eliot, Thomas Hardy, Joseph Conrad, Olive Schreiner, and others. We will utilize our access to colonial archives in London with possible field trips to the British Library and the Victoria & Albert Museum, among other outings throughout the city. Assignments include weekly Canvas posts, a close-reading exercise, a 4-5-page reflection paper on an archival object, and a 6-7-page final paper. (Fiction, 1830-1940, Theory)

Instructor(s): Rebeca Velasquez Terms Offered: Autumn

Prerequisite(s): Admission to the London Study Abroad Program

ENGL 21785. Black in Colonial America: Three Women. 100 Units.

Through a survey of texts by and about Sally Hemings, Phillis Wheatley and Tituba, "the Indian," we will consider the lives of three black women in colonial America. In this period of expansion and contraction of the concepts of race and bondage, what kind of "tellings" were possible for these women? By reading texts written as early as 1692 and as late as 2008, we will also consider how representations of these women have changed over time. Simplified by history as a witch, a poet and a mistress, the details of the lives of Tituba, Phillis and Sally resists these epithets. This course will ask why and how they remain present in the written record today, and what this teaches us about the formation of literary and historical canons. (Fiction, 1650-1830)

Instructor(s): Sarah Johnson Terms Offered: Autumn

Equivalent Course(s): SIGN 26076, CRES 21785, GNSE 21725

ENGL 21855. The Literary Hebrew Bible: An Introduction. 100 Units.

What does it mean for a biblical character to be "fraught with background," in Erich Auerbach's evocative phrase? How can we approach the Bible's dense, terse, paratactic prose as literary interpreters? What are the conventions and restrictions of biblical poetry, and how does the text move within these rules? In this course, students will read key narrative and poetic texts from the Hebrew Bible, de-familiarize traditional stories, acquire tools of literary analysis particular to biblical poetics, and ask questions about the literary legacy of this complicated, messy collection. Along the way, we will treat important comparative literary issues the Hebrew Bible highlights, including distinctions between history and fiction, literary genre, biblical translation, and notions of canon and tradition. Though our primary focus will be on the biblical text itself, our reading will be aided by foundational texts on biblical poetics (including works by Auerbach, Alter, Sternberg and Kawashima) and more recent examples of feminist, queer-theoretical, postmodern and postcolonial biblical criticism.

Instructor(s): Chloe Blackshear Terms Offered: Winter

Equivalent Course(s): CMLT 21855, JWSC 21855, RLST 21855, FNDL 21855

ENGL 22048. Girlhood. 100 Units.

This course focuses on narratives in which the category of "girl" or "girlhood" is under construction, or called into question. We'll begin with a number of works from the eighteenth and nineteenth centuries (novels by Frances Burney, Jane Austen, Mary Wollstonecraft, Charlotte Brontë), and will move into novels, films, comics, and memoirs from the twentieth and twenty-first centuries that draw on or depart from some of those earlier texts. Throughout, the course will draw on work from fields like sociology, history, and feminist and queer theory to consider changing conceptions of childhood, adolescence, and development, as well as the way that intersections of race, class, gender, sexuality, and ability shape categories and narratives of "girlhood." (Fiction, 1650-1830)

Instructor(s): Heather Keenleyside Terms Offered: Spring

Equivalent Course(s): GNSE 22048

ENGL 22140. Lyric Intimacies in the Renaissance. 100 Units.

This course will examine how writers in the Atlantic and Mediterranean world used lyric verse as a tool for establishing, imagining or faking intimacy with potential lovers, employers, friends, and God. Poetry has often been perceived as a peculiarly intimate medium, tasked with providing access to a person's inner experience: we'll examine how Renaissance poets created the experience of lyric nearness and track the social functions the poetry of intimacy served. The course will feature British authors such as William Shakespeare, John Donne and Katherine Philips in conversation with Petrarch's transformational sonnets, verse in the Islamic poetic tradition by Hafez and 'A'ishah al-Ba'unīyyah, and the work of writers in the Americas such as Sor Juana Inez de la Cruz and Anne Bradstreet. Along the way, we will explore some of the following questions: what was the gender politics of Renaissance lyric? How did writers make space for queer or heteronormative writing and attachment within the conventions of the love poem? What looks familiar about the forms of intimacy we find in these texts? What remains profoundly strange about them?

Instructor(s): Sarah Kunjummen Terms Offered: Winter

Equivalent Course(s): MAPH 40140, ENGL 40140, GNSE 44440, GNSE 24440

ENGL 22402. Perspective as a Challenge to Art History. 100 Units.

Equivalent Course(s): ENGL 42412, SETH 32402, ARTH 32402, ARTH 22402

ENGL 22434. Extinction, Disaster, Dystopia: Environment and Ecology in the Indian Subcontinent. 100 Units.

This course aims to provide students an overview of key environmental and ecological issues in the Indian subcontinent. How have the unique precolonial, colonial, regional and national histories of this region shaped the peculiar nature of environmental issues? We will consider three major concepts—"extinction", "disaster" and "dystopia" to see how they can be used to frame issues of environmental and ecological concern. Each concept will act as a framing device for issues such as conservation and preservation of wildlife, erasure of adivasi (first dwellers) ways of life, environmental justice, water scarcity and climate change. The course will aim to develop students' ability to assess the specificity of these concepts in different disciplines. For example: What methods and sources will an environmental historian use to write about wildlife? How does this differ from the approach an ecologist or literary writer might take? Students will analyze various media: both literary and visual, such as autobiographies of shikaris (hunters), graphic novels, photographs, documentary films, ethnographic accounts and environmental history.

Instructor(s): Joya John Terms Offered: Spring

Equivalent Course(s): GLST 25310, CRES 25310, HIST 26806, SALC 25310

ENGL 22817. Pale Fire. 100 Units.

This course is an intensive reading of *Pale Fire* by Nabokov.

Equivalent Course(s): REES 20020, REES 30020, FNLD 25311, GNSE 29610, GNSE 39610

ENGL 23112. Trans Performativity. 100 Units.

In this course we will explore how these dialogues and conflicts between gender studies, queer theory, and trans studies have developed and transformed our understandings of categories like "gender," "sex" and "trans." Some guiding questions will be: how do we, and should we, conceive the materiality of the body? How do assumptions about 'nature' and the 'natural' determine how we view categories of identity, and what are the political ramifications of these determinations? Why, within certain discourses, has the fluidity of gender been promoted, while the fluidity of race remains controversial and generally unsupported? How do we account for these different receptions, and what kind of opportunities do they make available for politically engaged communities? How can we simultaneously value performative theories of gender, while also maintaining a certain stability of identity as developed within trans criticism, even when these two discourses seem in direct conflict?

Equivalent Course(s): CMLT 23112, GNSE 23112

ENGL 23127. Queer Letters and LGBTQ+ Lifeworlds. 100 Units.

This course asks after the social and aesthetic possibilities of queer literatures, with a particular interest in such life-writing forms as the personal letter and epistolary (or electronic) correspondence. What, we will ask, can attending to specifically LGBTQ+ correspondences and life-writings teach us about minoritarian lifeworlds and literary canons? And, vice versa, how does an attention to the sub- or counter-cultural spaces of queer literary production change the way we read even canonical literary texts? We will visit a variety of LGBTQ+ literary lifeworlds across the twentieth and twenty-first centuries - between London, Paris, New York, San Francisco - and engage a wide range of texts and media that represent and encode queer social circuits: collected correspondences, coterie literatures, auto/biographies, memoirs, poetry, and film. In so doing, we will develop a backdrop of queer theoretical scholarship devoted to questions of community-making, subcultural space and belonging, and queer time, including the work of José Esteban Muñoz, Juana María Rodríguez, Elizabeth Freeman, and Jack Halberstam. In addition to a self-designed archival, analytical, or creative final project, we will also hone archival research strategies through two excursions to local archives and experiment with creative and collaborative strategies for reading and writing as we challenge ourselves to think from the position of correspondents.

Instructor(s): Sarah McDaniel Terms Offered: Autumn

Note(s): This course counts as a Concepts Course for GNSE majors.

Equivalent Course(s): GNSE 23127

ENGL 23130. Screwing Up: Shame, Apology, and Gender Theory. 100 Units.

What does it feel like to be wrong? How do we know when we have "erred", and who decides what's right? How does feeling shame change how we think of ourselves and how we might behave in the future? What does the "normative" in heteronormative mean? In this class, we will use the question of normativity-senses of wrongness and rightness and how those judgments are articulated, navigated, and enforced-to explore foundational concepts in and across theories of gender and sexuality. We will also examine the social performances of apology, guilt, regret, and remorse that occur when individuals believe they have erred. We will examine ways in which gender and bodily regimes of normativity occur in and around scenes of discomfort, uncertainty, and insecurity as well as through infrastructures of legality and policing. This course pairs our central theoretical texts from feminist, queer, critical race and disability studies with literary texts, works of poetry, and contemporary cultural objects in order to examine how these questions are enacted in a variety of lived and literary perspectives.

Instructor(s): Bellamy Mitchell Terms Offered: Autumn

Note(s): This course counts as a Concepts Course for GNSE Majors

Equivalent Course(s): GNSE 23130

ENGL 23708. The Poetry and Prose of Thomas Hardy. 100 Units.

A Victorian and a Modernist, a rare master of the arts of fiction and poetry, Thomas Hardy outraged Victorian proprieties and helped to make 20th century literature in English possible. Close reading of four novels and selected early middle, and late poems by Hardy, with attention to the contexts of Victorian and Modern literary culture and society.

Instructor(s): Rosanna Warren Terms Offered: Winter. Course to be taught winter 2020

Note(s): For graduate students and advanced undergraduates.

Equivalent Course(s): SETH 46011, FNDL 26011, ENGL 43708

ENGL 24114. Representing Revolutions. 100 Units.

TBD

Instructor(s): Larry Rothfield Terms Offered: Spring

Equivalent Course(s): ENGL 34114, CMLT 34104, CMLT 24104

ENGL 24119. Literature and Citizenship. 100 Units.

What we think of as modernity can be said to begin with the birth (or rebirth) of the citizen. During the 17th and 18th centuries, revolutions in Britain, France, and North America sought to recast political society as a structure built upon social contracts and natural rights of the people rather than the divine right of kings. Yet the category of citizen was (and remains) exclusionary as well as inclusive, frequently deployed to mark those outside its boundaries and protections. During the 19th and 20th centuries, the constructions of race, gender, and nation continued to shift into new forms, and many literatures of these centuries focus on how "the citizen" is conceived and reinvented into the present. This interdisciplinary, trans-historical, and transatlantic course will discuss how these tensions and debates influence literature and political discourse over four centuries, a breadth that will allow us to trace the concepts and critiques of citizenship as they have come to shape our contemporary world. Primary readings will include William Shakespeare, Tobias Smollett, Olaudah Equiano, Anna Laetitia Barbauld, Herman Melville, Frederick Douglass, Richard Wright, Miné Okubo, and Claudia Rankine. Secondary and theoretical readings will include Michel Foucault, Raymond Williams, Benedict Anderson, Ian Baucom, Lord Mansfield, C. L. R. James, Paul Gilroy, John Locke, Thomas Jefferson, Achille Mbembe, Emma Goldman, and Harry Harootunian.

Equivalent Course(s): MAPH 40110, ENGL 40110

ENGL 24255. America's Literary Scientists. 100 Units.

This course targets in on the entanglements between science and literature during the nineteenth and early twentieth century in America-a historical moment when these realms did not appear nearly as divided as they do now. In particular, we attend to the period's exciting developments in biology, which promised to revolutionize contemporary notions of human being. Our analysis of American fiction will center on the subjects and methods that writers adopted (imaginatively and often critically) from fields like evolutionary science, microbiology, and experimental psychology. But the course syllabus also includes American scientists who wrote fiction: What types of knowledge did they hope to produce in becoming literary? The aim of our inquiry will, in large part, be to examine the role of literature in shaping the significance of science in American culture, as well as the role of science in helping to build an American literary canon. Along the way, we will track the kinds of experiments in form and genre that such literary-scientific hybrids might produce. Readings may include works by Henry Adams, W.E.B. Du Bois, Charlotte Perkins Gilman, Oliver Wendell Holmes, William James, Silas Weir Mitchell, Mark Twain, and Edith Wharton. Theoretical and critical works will be drawn from the history of science, science and technology studies, and nonhuman studies.

Instructor(s): Agnes Malinowska Terms Offered: Spring

Note(s): Open to 3rd and 4th years in the College and MA students

Equivalent Course(s): MAPH 34255, ENGL 34255

ENGL 24400. Brecht and Beyond. 100 Units.

Brecht is indisputably the most influential playwright in the 20th century, but his influence on film theory and practice and on cultural theory generally is also considerable. In this course we will explore the range and variety of Brecht's own theatre, from the anarchic plays of the 1920's to the agitprop Lehrstück and film esp Kühle Wampe) to the classical parable plays, as well as the work of his heirs in German theatre (Heiner Müller, Peter Weiss) and film (RW Fassbinder, Alexander Kluge),

in French film (Jean-Luc Godard) and cultural theory (the Situationists and May 68), film and theatre in Britain (Mike Leigh and Lucy Prebble), and theatre and film in Africa, from South Africa to Senegal. (Drama, 1830-1940)

Instructor(s): Loren Kruger Terms Offered: Winter

Prerequisite(s): NOTE: This is *not* a basic intro course: background in one or more of the following areas is essential: Intro to film/international cinema AND/OR TAPS AND/OR German or French.

Note(s): This course also includes a weekly screening session.

Equivalent Course(s): TAPS 28435, FNDL 22405, CMLT 20800, CMST 26200

ENGL 24421. The Interrupted Word: Photographs in Contemporary Central Europe. 100 Units.

Literature from East-Central Europe in the past 20 years has been largely populated by the genre of "witness literature," or fictional narratives about factual historical traumas. Given the global popularity of memoirs, why would an author choose to write a fictional account of historical trauma as a way to bear witness? Even more curiously, these novels frequently embed photographs-pictures of real people and places-within their fictional narrative. How do these mixings of media-and of reality and fiction-affect the ways these novels bear witness? In this course, we will focus on the literary legacy of three historical moments of witness- Germany after WWII, Yugoslav Successor States after the Yugoslav Wars of the 1990s, and Post-Soviet Poland- to ground a theoretical analysis of the function of photographs in texts. As the four novels (by W.G. Sebald, Dubravka Ugrešić, Aleksandar Hemon, and Paveš Huelle) that serve as touchstones for our inquiry were all composed at both a temporal and spatial remove from their historical referents, we will also engage the discourses of post- memory and exilic literature. Throughout the course, our main goal will be to determine the function of photographs embedded in literary narratives: what kind of truths do they represent? How does a photographic truth interact with a narrative one? How can diverse media theory help us understand the relationships between photography, narrative, literature and history?

Instructor(s): Kaitlyn Tucker Sorenson Terms Offered: Spring

Equivalent Course(s): REES 24411, GRMN 24415

ENGL 24422. The Science of Literature. 100 Units.

This course examines the modern history of literature as an object of scientific study. In particular, it introduces key moments in the conversation between quantitative methods and literary interpretation from the late-19th century to today. These include physiological theories of the novel; stylistics; book history; sociologies of reading; distant reading; and cultural analytics. At each moment we consider the intellectual contexts that encouraged dialogue between the sciences and literature; probe the theories and models by which this dialogue was framed; and consider its relevance to the practice of literary criticism today.

Instructor(s): H. Long Terms Offered: Spring

Equivalent Course(s): EALC 34411, EALC 24411, ENGL 34422

ENGL 24503. 20th Century American Drama. 100 Units.

Beginning with O'Neill's 'Long Day's Journey into Night' through the American avant-garde to the most recent production on Broadway, this course focuses on American contemporary playwrights who have made a significant impact with regard to dramatic form in context to specific decade as well as cumulatively through the twentieth century. Textual analysis is consistently oriented towards production possibilities, both historically and hypothetically. ATTENDANCE AT FIRST CLASS SESSION IS MANDATORY.

Instructor(s): H. Coleman

Equivalent Course(s): ARTH 25885, TAPS 20110

ENGL 24526. Forms of Autobiography in the Twentieth and Twenty-First Centuries. 100 Units.

This course examines the innovative, creative forms autobiography has taken in the last one hundred years in literature. We will study closely works written between 1933 and 2013 that are exceptional for the way they challenge, subvert and invigorate the autobiographical genre. From unpublished sketches to magazine essays and full-length books, we will see autobiography take many forms and engage with multiple genres and media. These include biography, memoir, fiction, literary criticism, travel literature, the graphic novel and photography. Producing various mutations of the autobiographical genre, these works address some of the same concerns: the self, truth, memory, authenticity, agency and testimony. We will complement discussions of these universal issues with material and historical considerations, examining how the works first appeared and were received. Autobiography will prove a privileged site for probing constructions of family narratives, identity politics and public personas. The main authors studied are Paul Auster, James Baldwin, Roland Barthes, Alison Bechdel, Doris Lessing, Vladimir Nabokov, W.G. Sebald, Gertrude Stein, and Virginia Woolf.

Instructor(s): Christine Fourniaies Terms Offered: Spring

Equivalent Course(s): ENGL 34526

ENGL 24540. Islands and Otherness. 100 Units.

The island as a space of possibility - of discovery, of (re)imagination, and of otherness - is a concept with a very long history in Anglophone literature. Indeed, Britain's own archipelagic geography (a landscape unique among Europe's imperial powers) has often been invoked for a range of rhetorical ends. John of Gaunt's famous speech in Richard II uses the idea of Britain as the "scepter'd isle" as both a source of comfort (England as especially favored) and the foundation of critique (favor squandered). With the rise of transoceanic empires, writers throughout Great Britain, its colonial dominions, and other literary traditions imbued the symbol of the island with ever-increasing layers of meaning. Yet the island was also always already a location of anxiety, hostility, and liminality - of alternate cultural practices and systems of belief, of indigenous peoples who refused the claims of the colonizer, and where the meaning of Europe itself was destabilized in the colonial encounter. While eighteenth- and nineteenth-century European writers often deployed the island to think through the implications of empire for the metropole, anticolonial writers turned to the island as a site of resistance and recuperation. This transhistorical course will discuss the many significations of the island in metropolitan, colonial, and postcolonial literature as a lens into the conflicts and debates of imperialism.

Instructor(s): Tristan Schweiger Terms Offered: Spring
 Note(s): Open to MAPH students and 3rd and 4th years in the College
 Equivalent Course(s): MAPH 34540, ENGL 34540

ENGL 24545. The Rise of Free Speech: Aesthetics, Politics and Censorship, 1857-2020. 100 Units.

This course will consider a variety of historical debates and controversies surrounding the concept of freedom of speech and expression, from 19th century obscenity law through instances of 20th century political and economic repression and on to the concept's cooption by right-wing free market discourse and debates about hate speech in the present. Case studies from 19C-21C literature in English and English-translation. (Fiction, Poetry, 1830-1940, Theory)

Instructor(s): Zach Samalin Terms Offered: Spring
 Equivalent Course(s): GNSE 24545

ENGL 24554. Mysticism and Modernity. 100 Units.

This course will explore the impact of medieval and early modern mysticism on modern theories of sex, gender, and sexuality. We will begin by examining some of the most highly-cited texts from the Christian mystical tradition and by paying particular attention to the significance of gender, eroticism, and embodiment in these texts. We will then explore the circulation of these texts in modern theoretical projects on sex, gender, and sexuality with particular emphasis on existentialism, psychoanalysis, and deconstruction. Why does Lacan cite Hadewijch in order to articulate his notion of feminine jouissance? Why does Beauvoir hold up Teresa of Ávila as an exemplar of existential authenticity? Why does Derrida follow Pseudo-Dionysius but not Hadewijch in his meditation on negative theology? And how might these intellectual genealogies give rise to contemporary work in queer, feminist, and queer of color critique? Ultimately, by putting premodern and modern texts into dialogue, this course will enable students not only to develop the skill of diachronic analysis but also to challenge the assumption that mysticism and theory are at all apolitical.

Instructor(s): Kris Trujillo Terms Offered: Spring
 Equivalent Course(s): CMLT 34554, GNSE 24554, RLST 24554, CMLT 24554, GNSE 34554, ENGL 34554

ENGL 24610. Uncanny Encounters in Global Medieval Literature. 100 Units.

Meetings with ghosts, dragons, elves, and jinn - violent or erotic, compassionate or unsettling - animate many key texts of the Middle Ages. Unlike in our stereotypes of a past when people blamed their daily problems on witches or demons, medieval literature depicts strange beings, dangerous monsters, and otherworld realms as anything but quotidian. Rather, medieval protagonists regularly find their lives changed by experiences with the strange. In this course, we will interrogate the literary and cultural meanings of these uncanny encounters through close readings of primary texts in translation from across medieval Eurasia - including Norse sagas, Persian epics, Celtic legends, Tibetan hagiographies, and Japanese drama. We will draw on comparative methods in responding analytically and creatively to these underappreciated works.

Instructor(s): Sam Lasman Terms Offered: Autumn
 Equivalent Course(s): RLST 28450, MDVL 24610, CMLT 24610

ENGL 24750. Imperialism and the Intimate Self. 100 Units.

TBD

Equivalent Course(s): MAPH 34750

ENGL 24950. Animal Studies: A Theoretical Introduction. 100 Units.

TBD

Equivalent Course(s): MAPH 34950

ENGL 24951. Animals, Ethics and Religion. 100 Units.

Why are some animals considered food and others objects of religious devotion? Why do we treat dogs like family and kill flies without a second thought? Why do animals appear so frequently as metaphors in our everyday speech? In this course, students will explore these questions by reading texts featuring animals in literature, scripture, and theory, ranging from the Bible, Zora Neale Hurston, and Franz Kafka to Flannery O'Connor and J.M. Coetzee. We will bring these diverse texts together in order to investigate how animals illuminate religious questions about the relationship among humans, animals, and the divine.

Equivalent Course(s): RLST 28020

ENGL 24960. California Fictions: Literature and Cinema 1945-2018. 100 Units.

This course uses the cases of the Los Angeles and San Francisco areas to track the entanglement of literature and critical space studies. We will engage with critical geography studies, considerations of everyday life, and cultural studies of urbanism to interrogate the relationship of literature and cinema to the politics of space. Students will learn to read contemporary literature through the political construction of the lived world, and to think with current scholarship on race, space, gender, sexuality, and ordinary life. Includes fiction by Chester Himes, Michelle Tea, and Oscar Zeta Acosta, and theoretical and critical works by Karen Tongson, Sara Ahmed, Michel de Certeau, and Nigel Thrift.

Instructor(s): Megan Tusler Terms Offered: Winter
 Note(s): Open to MAPH students: 3rd and 4th years in the College email 2-3 sentences about why you want to take the course for consent.

Equivalent Course(s): ENGL 34960, MAPH 34960

ENGL 25113. In the Beginning': Origin, Style, and Transformation in the King James Version Matrix. 100 Units.

The 400th anniversary of the King James Bible (KJV) set off a series of events and texts dedicated to the great influence of this literary classic-a vernacular English Bible from 1611. What is it about the KJV that has so obsessed readers and writers? How has it become part of and affected world literature? Are there competing ways of conceiving the biblical text in English literature? In this course, we will trace some of the KJV's thematic and stylistic influences in global Anglophone literature;

sometimes we will deal with direct allusion and rewriting, and other times we will study the possibilities of more tenuous links. In parallel to this work, we will problematize the KJV's astounding centrality by: examining some pre-KJV literature and alternative early-modern and 20th century translations (particularly as these intersect with Jewish tradition); attending to subversive and postcolonial literary uses of the translation; and close-reading the political and ideological motivations behind certain forms of critical adulation. Texts examined may include works by authors such as George Peele, William Shakespeare, Herman Melville, William Faulkner, Toni Morrison, Cynthia Ozick, Zora Neale Hurston, Chinua Achebe and Wole Soyinka.

Instructor(s): Chloe Blackshear Terms Offered: Spring

Equivalent Course(s): JWSC 27703, CMLT 25113

ENGL 25208. Literature and Human Rights. 100 Units.

TBD

Equivalent Course(s): HMRT 25108

ENGL 25260. Romanticism. 100 Units.

In depth study of the period literature across poetry and fiction. Poetry: not just the canonical "big six" but also selections from the expanded horizon that includes once neglected women poets, as well as Robert Burns, Thomas Moore, John Clare. Fiction might include works by Godwin, Austen, Mary Shelley, and Walter Scott. Some attention will be paid as well to Romanticism as a fertile source for criticism and theory over the decades. (1650-1830, Theory)

Instructor(s): Jim Chandler Terms Offered: Winter

ENGL 25262. Gender and Sexuality in a Transnational World. 100 Units.

This course, through attention to critical theory and expressive cultures, surveys gender and sexuality across time and place. Students will learn about theories of sex, gender, and sexuality; colonialisms and nationalisms; social movements; and war, migration, and technology. (Fiction, Theory)

Instructor(s): Kaneesha Parsard Terms Offered: Winter

Equivalent Course(s): GNSE 25262

ENGL 25318. Literary Radicalism and the Global South: Perspectives from South Asia. 100 Units.

What does it mean to speak of literary radicalism? What are the hallmarks of a radical literature? And how does any such body of radical literature relate to the crucial question of empire, while also seeking to not be limited by that address? This course will explore the theme of literary radicalism through perspectives arising from South Asia. Over the twentieth century the subcontinent has been shaped through a wide variety of social and political movements: from anticolonial struggles to communist organising, feminist struggles, anti-caste mobilisation, indigenous protest and more, with their histories intertwining in different ways. We will start with a consideration of some texts on literary radicalism from other parts of the global South by authors such as Julia de Burgos and Ngũgĩ Wa Thiong'o, and then move through a detailed discussion of South Asian texts every week to examine particular aspects of literary style and history. We will study texts from a variety of subcontinental languages (in translation, unless originally in English), and across different forms - poetry, short fiction, children's literature, novels, a memoir, a graphic novel and a documentary film on a poet.

Instructor(s): Abhishek Bhattacharyya Terms Offered: Spring

Note(s): No prior training in South Asia or literature courses is a requirement.

Equivalent Course(s): SALC 25318

ENGL 25320. Debate, Dissent, Deviate: Literary Modernities in South Asia. 100 Units.

This class introduces students to the modernist movement in post-independence South Asia. Modernism will be understood here as a radical experimental movement in literature, film, photography and other arts, primarily aimed at critiquing mainstream narratives of history and culture. Given its wide scope, we will analyze a variety of texts over the ten-week duration of the class. These include novels, short stories, manifestos, essays, photographs, and films. The chronological span of the class is from the 1930s to the 1970s. Our aim will be to understand the diverse meanings of modernism as we go through our weekly readings. Was it a global phenomenon that was adopted blindly by postcolonial artists? Or were there specifically South Asian innovations that enable us to think about the local story as formative of global modernism? What bearings do such speculations have on genre, gender, and medium, as well as on politics? I will help situate the readings of each week in their specific literary and political contexts. Students will be able to evaluate, experiment with, and analyze various forms of modernist literary expressions emerging out of South Asia. This class will provide them with critical tools to interpret, assess, compare, and contrast cultural histories of non-Western locations and peoples, with an eye for literary radicalism. No prior knowledge of any South Asian language is necessary.

Instructor(s): S. Dasgupta Terms Offered: Autumn

Equivalent Course(s): KNOW 25320, CRES 25320, SALC 25320, GLST 25132, GNSE 25320

ENGL 25509. Psychoanalytic Theory: Freud and Lacan. 100 Units.

For this course, we will read major texts by Freud and Lacan. Freud readings will include "Beyond the Pleasure Principle," "Note on a Mystic Writing Pad," "The Uncanny," "Jensen's Grävida," the Dora case, and a selection of texts from other works. Lacan readings: "Seminar on the Purlined Letter," Poe's "The Purlined Letter," "God and the Jouissance of the Woman: A love letter," and parts of the *Écrits*. We will also read excerpts from a variety of texts that use the writings of Freud and Lacan for theoretical purposes: Derrida, Sarah Kristeva, Irigaray, Zizek, and others.

Instructor(s): Françoise Meltzer Terms Offered: Winter

Equivalent Course(s): CMLT 25551, FREN 25551, ENGL 35509, CMLT 35551, FREN 35551

ENGL 25613. How Does It Feel to Be an Outlier? Narratives of Medical 'Otherness'. 100 Units.

Ideas of what is "normal" and what is "different" are fundamental organizing concepts in scientific and humanistic thinking. Writers in both the sciences and the humanities use these concepts particularly when constructing narratives

about how individuals experience selfhood and the world. This course examines a body of writings that depict the lives of those who identify, or are identified, as outliers. Students will approach this topic through medical case studies; through autobiographies and biographies about the experience of being physical or mental exceptions; and through writings by and about doctors, patients, medical researchers, and people who are the subjects of medical research. How do scientists, biographers, journalists, and others capture the experience of being different? What are the aims of outlier narratives? What ethical questions surround these writings? How do such narratives underscore or undercut concepts of what is "normal" and what is "different"? In addition to surveying the landscape of outlier literature, students will research and write an outlier narrative in the form of a medical case study, biography, journalistic profile, or memoir.

Instructor(s): P. Mason, N. Titone Terms Offered: Winter

Prerequisite(s): Third or fourth-year standing. Interested students are asked to send one page on why they want to take this course to pmason@uchicago.edu and ntitone@uchicago.edu

Equivalent Course(s): ENGL 45613, BPRO 25600

ENGL 25850. What was Cultural Studies. 100 Units.

This course examines the origins and development of cultural studies in Britain, between 1956-1978. We will be reading texts by Stuart Hall, E.P. Thompson, Angela McRobbie, and Raymond Williams (among others) as well as engaging with art and journalism from the period. The problems that compelled these writers to develop new ways to study culture were political: they were responding to changes in the traditional working-class, the shifting role of the 'mass media' in modern democracies, and the 'moral panic' that many Britons felt when faced with new immigrants and rebellious youth in weird clothes. By the end of the course we may hope to gain both a deeper understanding not only of what cultural studies meant in Britain before Thatcher but also what it might be and become now, in America under Trump. Course intended as an introduction.

Equivalent Course(s): HIST 21502, SCTH 20603

ENGL 26002. Literature and Hunger. 100 Units.

This course pursues themes of hunger the consumption of food, the formation of community, and relation to the sacred, through a sequence of readings in the Western tradition. By reading classic works (The Odyssey, selections from the Hebrew Bible and Christian Scriptures, selections from The Divine Comedy, the Letters of St. Catherine of Siena, Paradise Lost), and modern works by Kafka, Simone Weil, and Louise Gluck, we will examine how different philosophies have imagined the acceptance or rejection of love, life, and the sacred in terms of the symbolism of food. Class work will involve close analysis of literary works, even those in translation; intensive critical writing; and secondary readings in literary criticism, anthropology, theology, and psychology.

Instructor(s): Rosanna Warren Terms Offered: Autumn

Note(s): Open to grads

Equivalent Course(s): RLST 26002, SCTH 26002

ENGL 26150. American Literature and Photography. 100 Units.

This class considers how photographic techniques spurred new literary methods. We'll discuss how visual media impact the development of forms, methods, and genres of literature, and how pictures and novels can be read together. Students will learn how to consider the visual register in novels, and how the drive to make fiction "real," or "photographic," helps to shed light on many attendant issues - the question of evidence, the problem of reliability, the terms of objectivity. We will discuss the drive to narrate real events in photographic and literary terms, and the limits of representation. Furthermore, we will think carefully about how discourses of race and poverty are imbricated with the development of photographic technologies and methods, and how racial groups such as American Indians are invented and reinvented in the advent of the mobile camera. Primary texts include fiction by Stephen Crane, Ella Cara Deloria, and Ralph Ellison and secondary texts include works from Roland Barthes, Walter Benjamin, Judith Butler, Susan Sontag, and Gerald Vizenor.

Instructor(s): Megan Tusler Terms Offered: Spring

Note(s): Instructor consent required for undergraduates.

Equivalent Course(s): AMER 25150, MAPH 40150, ENGL 45150, AMER 40150

ENGL 26312. Global Speculative Fiction. 100 Units.

This course examines literary and cinematic works of speculative fiction in a comparative context. An expansive genre that encompasses science fiction, fantasy, magic realism, horror, as well as utopian and dystopian literature, speculative fiction envisions alternate, parallel, possible, or imagined worlds. These worlds often exhibit characteristics such as: scientific and technological advancements; profound social, environmental, or political transformations; time or space travel; life on other planets; artificial intelligence; and evolved, hybrid, or new species. The course reflects on how these texts and films reimagine the past and the present in order to offer radical visions of desirable or undesirable futures. To that end, we will consider how this genre interrogates existential questions about what it means to be human, the nature of consciousness, the relationship between mind/body, thinking/being, and self/other, as well as planetary concerns confronting our species. Literary and cinematic works will be paired with theoretical readings that critically frame speculative and science fiction in relation to questions of gender, race, class, colonialism, bio-politics, human rights, as well as environmental and social justice. In addition to exploring speculative fiction as a way of reading and interpreting the universe, we will examine its generic and aesthetic qualities across a variety of subgenres (Afrofuturism, cyberpunk, steampunk, climate fiction).

Instructor(s): Hoda El Shakry Terms Offered: Winter

Equivalent Course(s): CMLT 36311, CMLT 26311, ENGL 36312

ENGL 26614. T.S. Eliot. 100 Units.

With the major new edition of Eliot's poems by Jim McCue and Christopher Ricks, the new volumes of Eliot's letters, and two separate new editions of Eliot's complete prose, we are in a position to rethink the meanings and force of Eliot's life

work. The class will be devoted to careful reading of his poems, essays, plays, and correspondence, with attention to his literary, cultural, and political contexts.

Instructor(s): Rosanna Warren Terms Offered: Spring. Course will be taught spring 2021

Equivalent Course(s): SETH 36014, FNDL 26614, ENGL 34850

ENGL 26660. The Rise of the Global New Right. 100 Units.

This course traces the intellectual genealogies of the rise of a Global New Right in relation to the contexts of late capitalist neoliberalism, the fall of the Soviet Union, as well as the rise of social media. The course will explore the intertwining political and intellectual histories of the Russian Eurasianist movement, Hungarian Jobbik, the American Traditional Workers Party, the French GRECE, Greek Golden Dawn, and others through their published essays, blogs, vlogs and social media. Perhaps most importantly, the course asks: can we use f-word (fascism) to describe this problem? In order to pose this question we will explore the aesthetic concerns of the New Right in relation to postmodern theory, and the affective politics of nationalism. This course thus frames the rise of a global new right interdisciplinary and comparatively as a historical, geopolitical and aesthetic problem.

Instructor(s): Leah Feldman Terms Offered: Autumn

Equivalent Course(s): REES 36661, CRES 36660, REES 26660, CRES 26660, SIGN 26050, ENGL 36661, CMLT 26660, CMLT 36660

ENGL 26703. How to Read Difficult Poems. 100 Units.

Different kinds of difficulty will be identified in English-language poems of different periods, and appropriate reading strategies developed. The aim is an education in the pleasures and rigors of difficulty, and subsequently in the art of making difficulties out of apparent simplicity and in attuning to the "possibles of joy" beyond difficulty. (Poetry, 1650-1830, 1830-1940, Theory)

Instructor(s): John Wilkinson Terms Offered: Winter

ENGL 26855. Queer Theory. 100 Units.

This course aims to offer a foundation in queer theoretical texts. In order to understand the contested definitions of the term "queer" and explore the contours of the field's major debates, we will work to historicize queer theory's emergence in the 1980s and 1990s amidst the AIDS crisis. Reading texts by key figures like Foucault, Sedgwick, Butler, Lorde, Bersani, Crimp, Warner, Halperin, Dinshaw, Edelman, Anzaldúa, Ferguson, and Muñoz in addition to prominent issues of journals like GLQ, differences, and Signs, we will approach these pieces as historical artifacts and place these theorists within the communities of intellectuals, activists, and artists out of which their work emerged. We will, thus, imagine queer theory as a literary practice of mournful and militant devotion, trace queer theory's relationship to feminism and critical race theory, critique the hagiographic tendency of the academic star system, and interrogate the assumptions of queer theory's secularity.

Instructor(s): Kris Trujillo Terms Offered: Winter

Equivalent Course(s): CMLT 36855, GNSE 26855, GNSE 36855, CMLT 26855, ENGL 36855, RLST 26885

ENGL 26856. Queer Theory: Futures. 100 Units.

ENGL 26912. Literature and Critical Debates at Midcentury. 100 Units.

This course serves as an introduction to three different critical fields in the United States between 1930 and 1960: the black literary-political debate, the New Critical movement, and the New York Intellectuals. It tracks the canonization of American modernism as well as renewed interest in literary figures of the 19th century. In this class, we will ask important critical questions like, under what circumstances is a text taken to be part of a significant movement or historical moment? How do novels and short fiction come to be seen as "dominant" or "minor"? How do critical communities make sense of a novel's politics? What is the relationship between institutional intellectuals and the creation of modes of reading? Primary texts will include novels by William Faulkner, James Baldwin, and Mary McCarthy and short fiction by Carson McCullers, Flannery O'Connor, and Jean Toomer. Secondary texts will include works by Ralph Ellison, Lionel Trilling, Leslie Fiedler, John Crowe Ransom, and Robert Penn Warren.

Equivalent Course(s): MAPH 34550

ENGL 27008. Black in the City. 100 Units.

Moving from literature written during the early Jim Crow era to contemporary hip hop, this course will look at the ways black artists have staged encounters with urban space. We will pay close attention to not just how black artists have represented the city but the methodologies they have experimented with in studying and surviving it. From the juxtaposition of Southern and Northern cities in pre and post-Great Migration literature, to Gwendolyn Brooks' mid-century experiments in urban seeing, Spike Lee's staged urban explosions and Kendrick Lamar's Compton soundscapes, this course complicates both the dreams and the despairs yoked to being black in the city. (Fiction, 1830-1940, Theory)

Instructor(s): Adrienne Brown Terms Offered: Spring

Equivalent Course(s): ARCH 27708, AMER 27008, CRES 27008, SIGN 26077

ENGL 27012. Reading the Known World: Medieval Travel Genres. 100 Units.

This course will consider how medieval English readers came to knowledge of their world, and imagined a place within it, through genres of travel narrative such as the pilgrim's itinerary, the merchant manual, and the saint's life. We will reflect on genre as concept en route: how did generic conventions and strategies organize this knowledge of unknown lands, other peoples, and distant marvels? We will read medieval texts like Book of Margery Kempe, Mandeville's Travels, and the Digby play of Mary Magdalene, along with medieval and modern literary theory, to survey how vernacular literature

presented a picture of the world and charted paths across it. Students will leave the class proficient in reading Middle English (the precursor of modern English). No previous experience with the language is required, and an optional weekly reading group will meet to work through passages in this half-new language.

Instructor(s): Joe Stadolnik Terms Offered: Winter

Equivalent Course(s): HIPS 27012, KNOW 27012

ENGL 27013. Being Corporate. 100 Units.

Corporations suffuse our lives. We study with them, work with them, consume their products—even become part of them through the purchase of stock. But what, exactly, is a corporation? In this course, we will trace the evolution of the US corporation from its historical roots through the present day. Our focus will be twofold: the evolving rights and responsibilities of the corporate person in law, and the ways that individual humans both inside and outside the corporate structure have imagined that person in a wider social context. Texts will include US court cases, legal treatises, historical analyses, novels, and cultural ephemera. By the end of the course, students will have a deeper understanding of the persistent and evolving problems of corporate personhood and corporate social responsibility, both from a business and a consumer perspective.

Instructor(s): Nicolette I. Bruner Terms Offered: Spring

Equivalent Course(s): HIPS 27006, KNOW 27013

ENGL 27015. Graphic Medicine. 100 Units.

What do comics add to the discourse on health, illness, and disease? What insight do comics provide about the experience of illness? Can comics improve health? Graphic Medicine: Concepts and Practice is a course designed to introduce students to the basic concepts and practices of the emerging field of graphic medicine. Broadly defined as the "intersection between the medium of comics and the discourse of healthcare," graphic medicine allows for a unique exploration of health, disease, and illness through the narrative use of graphic and textual elements. Following a life-cycle framework, this course will examine the range of graphic medicine works that address topics such as pregnancy, abortion, mental health, sexuality, chronic medical diseases, HIV/AIDS, dementia, and end-of-life issues. Students will learn about conceptual and practical aspects of the field and be exposed to a variety of styles and genres that capture its breadth and diversity. In addition to reading, analyzing, and discussing the works, an important component of the class will be exercises during which students will create their own graphic medicine works. Taught by a nurse cartoonist (also a founding figure in the field) and a physician, the course also provides a perspective of the field from within the practice of medicine. Through didactics, discussion, and practice, this course will provide students with a thorough understanding of the field of graphic medicine.

Instructor(s): Brian Callender, MK Czerwec Terms Offered: Winter

Prerequisite(s): No prior knowledge or experience of graphic novels, comics, drawing, or medicine required.

Equivalent Course(s): HIPS 27015, KNOW 27015, KNOW 37015, CHSS 37015

ENGL 27017. Passing. 100 Units.

In this course, we examine how people move within and between categories of identity, with particular attention to boundary crossings of race and gender in U.S. law and literature from the nineteenth century to the present. Law provides a venue and a language through which forces of authority police categories of identity that, at Jean Stefancic and Richard Delgado observe, "society invents, manipulates, or retires when convenient." Readings will include theoretical texts as well as court rulings, cultural ephemera, and literary texts.

Instructor(s): Nicolette I. Bruner Terms Offered: Spring

Equivalent Course(s): GNSE 27017, KNOW 27017, CRES 27017

ENGL 27102. Dissident Lit. 100 Units.

This seminar will explore the literature and history of "the dissident," a central figure of late 20th-century and 21st-century human rights politics. Through our readings of novels, essays, and criticism drawn from a range of traditions (from the US and Latin America to Russia and East-Central Europe) we will consider both the possibilities and dilemmas of literary dissidence.

Equivalent Course(s): HMRT 37102, ENGL 47102, HMRT 27102

ENGL 27125. Voices of Alterity and the Languages of Immigration. 100 Units.

This course investigates the individual experience of immigration: how do immigrants recreate themselves in this alien world in which they seem to lose part of themselves? How do they find their voice and make a place for themselves in their adoptive homes? If in the new world the immigrant becomes a new person, what meanings are still carried in traditional values and culture? How do they remember their origins and record new experiences?

Instructor(s): Angelina Ilieva Terms Offered: Spring. Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Note(s): Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Equivalent Course(s): PBPL 27125, REES 29025, ENST 27125, HIST 27710, CMLT 27125

ENGL 27170. Ghost Hunting with American Literature. 100 Units.

American literature teems with haunts. What does the trope of the ghost tell us about structures of memory, the insatiability of history, and the ethics of letting go? We will hunt the ghosts of American literature from Henry James's specters of the everyday to the disruptive spirits of the enslaved conjured differently by Charles Chesnutt and Zora Neale Hurston. We will meet ghosts with no names (Beloved) and ghosts whose names have lost their meaning (Roth's Anne Frank), ghosts of history (Oscar Wao) and ghosts of estranged presents (Virgin Suicides). With the help of theorists such as Freud, Marx, Gordon, and Morrison, this class will explore America's uncanny possession by phantoms of history, memory, and nationhood. (Fiction)

Instructor(s): Adrienne Brown Terms Offered: Autumn

ENGL 27330. History That Never Was: The Counterfactual Novel. 100 Units.

In this course, we will consider counterfactuality in fiction from the 19th century to the 21st. Following critic Catherine Gallagher, we will ask, what if things had happened otherwise? and wonder-along with a range of authors-about the literary, generic, historical, and ethical stakes of the answers. Readings will focus on the counterfactual from the scale of the sentence to the scale of the (alternate) world. Readings will be drawn from Jane Austen, Charles Dickens, L. Sprague de Camp, Philip Roth, Kim Stanley Robinson, Ursula K. Le Guin, Octavia Butler, Kingsley Amis, and Abdourahman A. Waberi, among others. (Fiction)

Instructor(s): Schachter, Lauren Terms Offered: Spring

ENGL 27451. Stateless Imaginations: Global Anarchist Literature. 100 Units.

Stateless Imaginations: World Anarchist Writing This course examines the literature, aesthetics, and theory of global anarchist movements, from nineteenth-century Russian anarcho-syndicalism to Kurdish stateless democratic movements of today. We will also study the literature of "proto-anarchist" writers, such as William Blake, and stateless movements with anarchist resonances, such as Maroon communities in the Caribbean. Theorists and historians will include Dilar Dirik, Nina Gurianova, Paul Avrich, Luisa Capetillo, Emma Goldman, Maia Ramnath, and Thomas Nail. Particular attention will be given to decolonial thought, religious anarchism, fugitivity and migration, and gender and race in anarchist literature.

Instructor(s): Anna Elena Torres Terms Offered: Spring

Equivalent Course(s): ENGL 37451, CMLT 37450, CMLT 27450

ENGL 27529. Intoxication and Dispossession in Colonialism. 100 Units.

Manhattan, according to one folk etymology, means "the place at which we were drunk." Supposedly the Lenape (Delaware) people named the island after their "general intoxication," in 1609, on wine and aqua vitae offered by the English explorer Henry Hudson. That derivation, though false, nonetheless puts drunkenness intriguingly close to the center of an originary colonial encounter. In this course, students will examine how such scenes were reiterated, transformed, and exploited throughout the 19th century. As we move along these historical itineraries, we will ask how toxic ideology distills and reinforces logics of racial dispossession. But we will also ask how intoxication opens onto altered states, draws out chronic conditions, and expands repertoires of conviviality. Our readings will weave between multiple genres in pursuit of these questions. Juxtaposing antiquarian files and execution sermons, medical inquiries and autobiographies, bureaucratic reports and romantic episodes, we will retrace scenes of intoxication through the texts, images, and institutions that configured them over time.

Instructor(s): Matthew Boulette Terms Offered: Spring

Equivalent Course(s): CRES 27529

ENGL 27533. Fugitive Poetics: Slaves, Runaways, Exiles, and Nineteenth-Century American Poetry. 100 Units.

This course considers late-eighteenth- and nineteenth-century American poetry from the perspective of the disprized. One central point of discussion will be how slavery and indentured servitude-and the attendant urge for escape and freedom from these and other carceral institutions-shaped the American poetic imaginary. We will take up both the poetry and poetic theory written by fugitives and explore poetry itself as a form of fugitivity for the enslaved, politically exiled, or ideologically confined. Central figures in the traditional canon of nineteenth-century U.S. poetry-Poe, Whitman, and Dickinson-will be considered from this vantage alongside figures like Harriet Jacobs, Frances E. W. Harper, José María Heredia y Heredia, and José Martí, among others. In the process, we will explore the potential connections and collisions between these nineteenth-century literary texts and contemporary lyric and critical race theory. This course is as interested in the nineteenth-century construction of a national American poetics as it is in American poetry itself; equal weight will be given to poetry and prose. Topics will include the poetic imaginary in early American statecraft, prosody and the carceral condition (what Max Cavitch calls "Slavery and its Metrics"), blackface lyrics and class mobility, abolitionism, and inter-American literary exchange.

Instructor(s): Jake Fournier Terms Offered: Spring

Equivalent Course(s): CRES 27533

ENGL 27537. Poetry for the People': Global Black Politics and Culture in the Age of Marcus Garvey. 100 Units.

When Jamaican activist Marcus Garvey established the Universal Negro Improvement Association, he at once catalyzed a global mass movement for racial equality, projected a new Black diasporic identity, and redrew the fault-lines of modern racial politics. He also created the organizational and ideological framework for a global Black literature. Poets, workers, and political organizers from across the Black Diaspora sent both poetic and prosaic expressions of race-consciousness to the pages of Garvey's newspaper *Negro World*. These writers and activists challenged the legitimacy of world white supremacy, developed new modes of transnational racial affiliation, and enshrined Africa as the normative symbolic center of global Black politics. Despite its historical importance, however, Garveyism occupies an ambiguous place in African American studies. Controversies that trace back to the inception of UNIA, in addition to the loss of the organization's records, have impeded a full reckoning with the movement's global impact. Nonetheless, the great multivolume anthology of UNIA papers edited by Robert A. Hill, in addition to recent revisionist scholarship, suggest unexplored avenues of inquiry. The history of Garveyism, it seems, remains unfinished. "Poetry for the People" will introduce students to the real and imagined worlds of Garveyist Pan-Africanism, and explore the legacies of Garvey's movement for contemporary debates on race, empire, nationalism, and the politics of culture.

Instructor(s): Noah Hansen Terms Offered: Spring

Equivalent Course(s): CRES 27537

ENGL 27583. 21st Century American Drama. 100 Units.

This hybrid seminar focuses on American contemporary playwrights who have made a significant and commercial impact with regard to dramatic form in the past 20 years. Playwrights will include, Tracy Letts, Annie Baker, Lynn Nottage, Quiara

Alegria Hudes, Ayad Akhtar, and Amy Herzog. Textual analysis is consistently oriented towards staging, design, and cultural relevancies. Work for the course will include research papers, presentations, and scene work.

Instructor(s): H. Coleman Terms Offered: Autumn

Note(s): Attendance at the first class session is mandatory. Questions: contact vwalden@uchicago.edu.

Equivalent Course(s): TAPS 20120

ENGL 27600. Cinema in Africa. 100 Units.

This course examines Africa in film as well as films produced in Africa. It places cinema in Sub Saharan Africa in its social, cultural, and aesthetic contexts ranging from neocolonial to postcolonial, Western to Southern Africa, documentary to fiction, art cinema to TV, and includes films that reflect on the impact of global trends in Africa and local responses, as well as changing racial and gender identifications. We will begin with *La Noire de...* (1966), by the "father" of African cinema, Ousmane Sembene, contrasted w/ a South African film, *African Jim* (1960) that more closely resembles African American musical film, and anti-colonial and anti-apartheid films from Lionel Rogosin's *Come Back Africa* (1959) to Sarah Maldoror's *Sambizanga*, Sembene's *Camp de Thiaroye* (1984), and Jean Marie Teno's *Afrique, Je te Plumerai* (1995). The rest of the course will examine 20th and 21st century films such as *I am a not a Witch* and *The wound* (both 2017), which show tensions between urban and rural, traditional and modern life, and the implications of these tensions for women and men, Western and Southern Africa, in fiction, documentary and fiction film. (20th/21st)

Instructor(s): Loren Kruger Terms Offered: Spring

Prerequisite(s): One or more of the following: Intro to Film/ International Cinema AND/OR Intro to African Studies or equivalent

Note(s): This course also includes a weekly screening section.

Equivalent Course(s): ENGL 47600, ENGL 48601, CMST 34201, CRES 24201, CMST 24201, CRES 34201, CMLT 22900, CMLT 42900, GNSE 28602, GNSE 48602

ENGL 27713. Nothing New Under the Sun? 'Adapting' in Twentieth-Century Jewish Literature. 100 Units.

How do works as disparate as Jerry Siegel and Joe Schuster's first Superman comics, Joseph Roth's moving *Job* (1930), or Cynthia Ozick's golem novel *The Puttermesser Papers* (1997) treat the histories, genres, and texts they (arguably) refashion? In this course, we will take on and close-read a variety of fictions, treating these both as stand-alone works of art in their own right as well as participants in a kind of literary lineage (and sometimes a very non-linear one!). With the help of Linda Hutcheon's *Theory of Adaptation* and other theorists, we will engage with different kinds of transfer (Bible to Novel, Fiction to Film/Television; Archive to Drama; Original to Translation, etc.). We will explore different ways of understanding "adaptation" as a concept across linguistic, temporal, and geographic axes, and we will also consider texts and stories which push against and challenge definitions of adaptation. Ultimately, we will ask: What counts as adaptation, and why adapt? Does the art of adaptation and remix take on particular resonances for Jewish diasporic and immigrant writers in the twentieth century? How do these authors and creators pull "original" works, stories and history into new contexts? How do they draw readers and audiences in to alternate, unfamiliar forms? How do popular genres deal with the weight of tradition? How do these fictions negotiate between the familiar and the strange, and to what ends?

Instructor(s): Chloe Blackshear Terms Offered: Winter

Equivalent Course(s): JWSC 27713, CMLT 27703

ENGL 27815. Appropriations and Impositions. 100 Units.

What are the different aesthetic and literary uses of appropriation? The editor of a Canadian magazine who set up the Appropriation Prize in 2017, defended the practice of cultural appropriation by insisting that "anyone, anywhere, should be encouraged to imagine other peoples, other cultures, other identities." This case underscores the continuing tension between narrative as a vehicle for imagining and empathizing with distant others, and notions of cultural property. In this course, we look at a selection of literary works that speak to these themes including Diderot, Ern Malley, Patricia Highsmith, Peter Carey, Kenneth Goldsmith, and Sherman Alexie, with particular attention to the work of appropriation in postcolonial contexts. We also touch on appropriation in other media, such as for instance, Richard Prince's "New Portraits," Sherrie Levine's "After Walker Evans", and Ni Haifeng's installations.

Instructor(s): Darrell Chia Terms Offered: Spring

Note(s): Open to MAPH students and 3rd and 4th years in the College

Equivalent Course(s): MAPH 37815, ENGL 37815

ENGL 28113. The American Novel in History and the Historical Novel. 100 Units.

We will read several American novels-some canonical, others largely forgotten-to explore the relationship between literature and history from the early Republic to the present. A novel like Nathaniel Hawthorne's "The House of the Seven Gables" is both a historical artifact, a rich and suggestive reflection of the world in which it was written and a profound meditation on history itself, on the narratives by which a culture acknowledges and denies its inheritance from the past. Indeed, many novelists have explored dimensions of our collective past that historians, tethered to the surface of recorded fact, cannot reach and should not ignore. From the creation of the American republic to the unraveling of the American working class, from the experience of slavery to the experience of industrialized warfare, we will examine some of the most significant issues in American history through the art of some of the nation's most gifted novelists

Instructor(s): A. Rowe Terms Offered: Spring

Equivalent Course(s): HIST 28103

ENGL 28211. Intro to Religion and Literature: Dramatic Encounters. 100 Units.

This course will explore some of the major statements from the Western intellectual tradition on religion and literature as categories of thought, forms of human expression and communication, and sources of personal and social meaning. We will pay close attention to the various ways that the relationship between these two concepts has been understood and constructed

by artists, philosophers, and theologians alike. Students from all concentrations are welcome; no prior knowledge or foreign language competency is required for enrollment.

Instructor(s): Matthew Creighton Terms Offered: Winter

Equivalent Course(s): RLST 28211

ENGL 28404. Introduction to Old English. 100 Units.

Moðde word fræt." These are the first words of a riddle that students will learn how to read in this course. As the first part of the Medieval Research Series, this course introduces students to the Old English language, the literary history of early medieval England, and current research tools and scholarship in the field of Old English. In studying the language, we will explore its diverse and exciting body of literature, including poems of heroic violence and lament, laws, medical recipes, and humorously obscene riddles. Successful completion of the course will give students a rich sense not only of the earliest period of English literary culture, but also of the structure of the English language as it is written and spoken today. (Pre-1650; Med/Ren) This course is the first in a two quarter Medieval Research sequence. No prior experience with Old or Middle English is required. The second course in the Medieval Research sequence (Beowulf) will be offered in the Spring Quarter.

Instructor(s): Benjamin Saltzman Terms Offered: Autumn

Equivalent Course(s): MDVL 28404, ENGL 38404

ENGL 28405. Old English Riddles (Med. Research Sequence II) 100 Units.

In this course, we will read and translate all of the Exeter Book Riddles from Old English, attending closely to issues of language, paleography, textual cruxes, and-of course-interpretation. In an effort to understand these riddles within a broader early medieval tradition of enigmatic poetry, we will also read several Old English charms as well as Anglo-Latin riddles in translation. Emphasis will also be placed on the history of scholarship on early medieval riddles, and over the course of the term, each student will produce a piece original scholarly research that engages with a riddle or set of riddles and the critical tradition. (Pre-1650, Poetry); (Med/Ren).

Instructor(s): Benjamin Saltzman Terms Offered: Winter

Prerequisite(s): This course is the second in a two-quarter Medieval Research Sequence and prior knowledge of Old English will be required.

Equivalent Course(s): MDVL 28405, ENGL 38405

ENGL 28510. Mythologies of America: 19th Century Novels. 100 Units.

Hawthorne, Melville, Stowe, Alcott, and Twain wrote fiction that, in individual novels and also read comparatively, offers a civic template of mythologies of America: its genesis, its composition, its deities, its ritual life. The course considers this writing as both distinctively American, and as engaging central themes of modern novels, e.g. time, history, and memory, the relation of private to civic life, and the shifting role of religious authority.

Instructor(s): Richard Rosengarten Terms Offered: Spring

Equivalent Course(s): RLVC 38500, ENGL 38500, RAME 38500, RLST 28510

ENGL 28612. Human Rights Witness. 100 Units.

This course examines contemporary narratives about human rights and their violation, focusing in particular on "witnessing" and "testimony" as political and aesthetic forms. We will consider novels, memoirs, legal and political documents, films, and reportage and activist writings in order to consider how these works register the experience of witnessing human rights violations, whether from a position of complicity (active or passive), engaged opposition, or as the victim/survivor of such violence. (1830-1940)

Instructor(s): Sonali Thakkar Terms Offered: Spring

Equivalent Course(s): HMRT 28612

ENGL 28619. Postcolonial Openings. 100 Units.

In this course, we examine the perspectives, debates, and attitudes that characterize the contemporary field of postcolonial theory, with attention to how its interdisciplinary formation contributes to reading literary works. We begin by surveying the development and trajectory of the field, particularly as it develops around debates on revolution and compromise, cosmopolitanism, the psychology of colonialism, and anti-colonial historiography. Alongside this, we consider the recent disciplinary revival of the categories of "global Anglophone" and "world literature" through readings on "literary worlds" to evaluate these categories, and their contributions to ongoing debates about translation/translatibility, vernaculars, rewriting, and mimicry. What are the claims made on behalf of literary texts in orienting us to other lives and possibilities, and in registering the experience of geographic and cultural displacement? To better answer this, we read recent scholarship that engages the field in conversations around intimacy, belonging, and human rights, to think about the impulses that animate the field, and its possible futures. Readings will likely include works by Debjani Ganguly, Kamau Brathwaite, Jean Rhys, Amitava Kumar, Sara Ahmed and Amitav Ghosh.

Equivalent Course(s): MAPH 34520

ENGL 28660. How Literature Thinks: Contemporary Writers on Big Problems. 100 Units.

Big Problems" have affective dimensions that not only complicate our thinking about issues like climate change or income inequality but pose "big problems" of their own: apathy, depression, boredom, paranoia. Literature invites us to reflect on these affective states and their social repercussions while also expanding the forms of feeling and knowing available to us. How do novels, poems, and memoirs explore the connections between emotion, understanding, and individual and collective action? Can criticism help us to see those connections? In this course, we will read the work of contemporary writers who explore a variety of pressing questions. Authors will include celebrated novelists and poets visiting the University, University of Chicago faculty in Creative Writing, and award-winning local authors. These writers will visit our class to share their views on how literature "thinks" in generative ways. Readings of contemporary novels, poetry, and nonfiction

will be supplemented by theoretical texts that illuminate the affective, epistemological, and political dimensions of artistic responses to social crises. Assignments will include both creative and critical writing exercises, attendance at literary events, and a final (creative, critical, or creative/critical hybrid) project. No prior creative writing experience is required.

Instructor(s): S. Reddy, S. Ngai Terms Offered: Spring

Prerequisite(s): PQ: Third- or fourth-year standing

Equivalent Course(s): ENGL 38660, BPRO 26800

ENGL 28710. On Fear and Loathing: Negative Affect and the American Novel. 100 Units.

Equivalent Course(s): ENGL 38710, MAPH 40120

ENGL 28775. Racial Melancholia. 100 Units.

This course provides students with an opportunity to think race both within a psychoanalytic framework and alongside rituals of loss, grief, and mourning. In particular, we will interrogate how psychoanalytic formulations of mourning and melancholia have shaped theories of racial melancholia that emerged at the turn of the twenty-first century. Turning to Asian American, African American, and Latinx theoretical and literary archives, we will interrogate the intersections of race, gender, and sexuality and ask: How do literatures of loss enable us to understand the relationship between histories of racial trauma, injury, and grief, on the one hand, and the formation of racial identity, on the other? What might it mean to imagine literary histories of race as grounded fundamentally in the experience of loss? What forms of reparations, redress, and resistance are called for by such literatures of racial grief, mourning, and melancholia? And, finally, how, if understood as themselves rituals of grief, might psychoanalysis and the writing of literature assume the role of religious devotion in the face of loss and trauma?

Instructor(s): Kris Trujillo Terms Offered: Autumn

Equivalent Course(s): ENGL 38775, CMLT 38775, RLVC 38775, GNSE 28775, RLST 28775, GNSE 38775, CRES 22775, CMLT 28775

ENGL 28811. The Simple Art of Murder. 100 Units.

Philosophers and literary critics of various stripes have been attracted to the detective story, often taking its intrepid protagonist as a figure for the reader and the genre itself as an exploration into practices of reading and interpretation. This course will examine the form and context of the detective story and some of the key critical and theoretical work the genre has inspired. We will read examples of British and American detective fiction, asking: What is the nature of the pleasure the detective story delivers? How-and why-has this genre become a favorite object of study for some of the most influential theorists of the twentieth century? How does detective fiction, a formula which allows for seemingly endless variety, evoke the ongoing and open-ended dynamic between modern rationality and something like "natural" intuition? We'll consider the answers to these questions proposed by selected theorists of the genre, as well as the critical and self-reflective writings of the detective-story writers themselves.

Instructor(s): Kerri Hunt

Note(s): Current MAPH students and third and fourth years in the College. All others by instructor consent only.

Equivalent Course(s): MAPH 34125

ENGL 28881. Secrecy and Exemplarity: On Parables and Their Interpretation, from the Bible to Walter Benjamin. 100 Units.

A parable - usually defined as "a short narrative told for an ulterior purpose" - should be easy to understand, given its apparent simplicity and didacticism. So why does it turn out to be so difficult, in practice, to interpret parables? From Jesus's parables and Plato's famous parable of the cave onward, parables have led reader after reader to the disturbing realization that it might in fact be the parables which read their interpreters, and not the other way around! In this course, we'll ask how it is that this particular literary form so deftly articulates the relations between text and reader, narrative and interpretation, literature and religion, secrecy and power, sign and meaning, concealment and revelation, fiction and truth. The course serves as both an introduction to the history of the many ways interpreters have engaged the parabolic form in religious, literary, and philosophical contexts, on the one hand, and a chance to develop the intensity and rigor of our own close-reading practices, on the other. Besides biblical and rabbinic parables, we will read parables in works by Plato, Maimonides, La Fontaine, Pascal, G.E. Lessing, Kant, Andersen, Hawthorne, Kierkegaard, Nietzsche, Kafka, W. Benjamin, and O. Welles.

Instructor(s): Sam Catlin Terms Offered: Winter

Equivalent Course(s): JWSC 28881, RLST 28881, GRMN 28881, CMLT 28881

ENGL 28910. Introduction to Yiddish Culture and Literature. 100 Units.

Course description unavailable.

Equivalent Course(s): GRMN 31709, YDDH 21709, YDDH 31709, GRMN 21709, JWSC 24309

ENGL 28912. War and Peace. 100 Units.

Tolstoy's novel is at once a national epic, a treatise on history, a spiritual meditation, and a masterpiece of realism. This course presents a close reading of one of the world's great novels, and of the criticism that has been devoted to it, including landmark works by Victor Shklovsky, Boris Eikhenbaum, Isaiah Berlin, and George Steiner. (B, G)

Instructor(s): William Nickell Terms Offered: TBD

Equivalent Course(s): CMLT 32301, ENGL 32302, HIST 23704, CMLT 22301, REES 20001, FNDL 27103, REES 30001

ENGL 28916. Nabokov: Lolita. 100 Units.

Lolita, light of my life, fire of my loins. My sin, my soul, Lolita: the tip of the tongue taking a trip of three steps down the palate, to tap at three on the teeth." Popular as Nabokov's "all-American" novel is, it is rarely discussed beyond its psychosexual profile. This intensive text-centered and discussion-based course attempts to supersede the univocal obsession

with the novel's pedophilic plot as such by concerning itself above all with the novel's language: language as failure, as mania, and as conjuration.

Instructor(s): M. Sternstein Terms Offered: Autumn

Equivalent Course(s): SIGN 26027, FNDL 25300, GNSE 24900, REES 20004

ENGL 28918. Comparative Methods in the Humanities. 100 Units.

This course introduces models of comparative analysis across national literatures, genres, and media. The readings pair primary texts with theoretical texts, each pair addressing issues of interdisciplinary comparison. They include Orson Welles's "Citizen Kane" and Coleridge's poem "Kubla Khan"; Benjamin's "The Storyteller," Kafka's "Josephine the Mouse Singer," Deleuze and Guattari, Kafka: Toward a Minor Literature, and Mario Vargas Llosa's *The Storyteller*; Victor Segalen's *Stèles*; Fenollosa and Pound's "The Chinese Character as a Medium of Poetry" and Eliot Weinberger's *Nineteen Ways of Looking at Wang Wei*; Mérimée, "Carmen," Bizet, *Carmen*, and the film adaptation *U-Carmen e-Khayelitsha* (South Africa, 2005); Gorky's and Kurosawa's *The Lower Depths*; Molière, *Tartuffe*, Dostoevsky, *The Village Stepanchikovo* and its inhabitants, and Bakhtin, "Discourse in the Novel"; Gogol, *The Overcoat*, and Boris Eikhenbaum, "How Gogol's *Overcoat* Is Made."

Instructor(s): Olga Solovieva Terms Offered: Winter

Prerequisite(s): Prerequisite: Completed Humanities, or Civilization Core requirement. The course is designed for the second-year students and above.

Equivalent Course(s): CMLT 20109

ENGL 29103. Representations of Islam in Early Modern England. 100 Units.

This seminar explores the representation of Islam and Islamic cultures in early modern English literature, from the 1580s to the 1650s with a primary but not exclusive focus on drama. What enduring fantasies about the Islamic world does early modern English literature express? How do religion, race, gender, and sexuality intersect in the formation of those fantasies? How do specific English social, political, and cultural issues inform literary representations of Islam? Ultimately, what do texts about Islam tell us about early modern England?

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): Limited to 15 students, generally third- and fourth-year English majors but is open to all undergraduates; focuses on the analytical, research, and bibliographic skills necessary for producing a substantial seminar paper

Equivalent Course(s): RLST 29103

ENGL 29120. Renaissance Christian Epic: Tasso, Vida, Milton. 100 Units.

This course will focus upon the two most important Renaissance Christian epics, Torquato Tasso's *La Gerusalemme liberata*/Jerusalem Delivered (first pub. 1581) and John Milton's *Paradise Lost* (first pub. 1667), and two brief Biblical epics, Marco Girolamo Vida's *Christiad* (1535) and Milton's *Paradise Regained* (1671). We will examine these four Renaissance epics as ambitious efforts to revive an ancient and pagan form in order to depict Christian and self-consciously modern visions. We will consider how Renaissance epic poets imitate and emulate both their classical models (primarily Homer's *Iliad* and *Odyssey*, Virgil's *Aeneid*, and Ovid's *Metamorphoses*) and Judeo-Christian sources (primarily the Bible); seek to forge an elevated and appropriate language for epic in Latin, Italian, and English; espouse new visions of the human, the heroic, and gender relations; and adumbrate distinctively modern national, imperial, and global ambitions. All non-English texts will be read in translation, but students who can read Latin or Italian will be encouraged to read the originals.

Instructor(s): Joshua Scodel Terms Offered: Spring

Note(s): This course fulfills the Poetry and 1650-1830 distribution requirements for English majors.

Equivalent Course(s): CMLT 39120, ENGL 39120, CMLT 29120

ENGL 29300-29600. History of International Cinema I-II.

This sequence is required of students majoring in Cinema and Media Studies. Taking these courses in sequence is strongly recommended but not required.

ENGL 29300. History of International Cinema I: Silent Era. 100 Units.

This course provides a survey of the history of cinema from its emergence in the mid-1890s to the transition to sound in the late 1920s. We will examine the cinema as a set of aesthetic, social, technological, national, cultural, and industrial practices as they were exercised and developed during this 30-year span. Especially important for our examination will be the exchange of film techniques, practices, and cultures in an international context. We will also pursue questions related to the historiography of the cinema, and examine early attempts to theorize and account for the cinema as an artistic and social phenomenon.

Instructor(s): A. Field Terms Offered: Autumn

Prerequisite(s): Prior or concurrent registration in CMST 10100 required. Required of students majoring or minoring in Cinema and Media Studies.

Note(s): For students majoring in Cinema and Media Studies, the entire History of International Cinema three-course sequence must be taken.

Equivalent Course(s): CMLT 22400, CMST 28500, CMLT 32400, MAPH 33600, ARTH 38500, ENGL 48700, CMST 48500, MAAD 18500, ARTH 28500, ARTV 20002

ENGL 29600. History of International Cinema II: Sound Era to 1960. 100 Units.

The center of this course is film style, from the classical scene breakdown to the introduction of deep focus, stylistic experimentation, and technical innovation (sound, wide screen, location shooting). The development of a film culture is also discussed. Texts include Thompson and Bordwell's *Film History: An Introduction*; and works by Bazin, Belton, Sitney, and Godard. Screenings include films by Hitchcock, Welles, Rossellini, Bresson, Ozu, Antonioni, and Renoir.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): Prior or concurrent registration in CMST 10100 required. Required of students majoring or minoring in Cinema and Media Studies.

Note(s): CMST 28500/48500 strongly recommended

Equivalent Course(s): REES 45005, REES 25005, CMST 28600, ENGL 48900, CMST 48600, MAAD 18600, ARTH 28600, ARTV 20003, MAPH 33700, ARTH 38600, CMLT 22500, CMLT 32500

ENGL 29413. Language is Migrant: Yiddish Poetics of the Border. 100 Units.

This course examines Ashkenazi Jewish literary narratives about geopolitical borders and border-crossing through travel and migration, engaged with questions about the linguistic borders of Yiddish itself. As a diasporic language, Yiddish has long been constructed as subversively internationalist or cosmopolitan, raising questions about the relationships between language and nation, vernacularity and statelessness. This course explores the questions: How do the diasporic elements of the language produce literary possibilities? How do the "borders" of Yiddish shape its poetics? How do Yiddish poets and novelists thematize their historical experiences of immigration and deportation? And how has Yiddish literature informed the development of other world literatures through contact and translation? Literary and primary texts will include the work of Anna Margolin, Alexander Harkavy, Peretz Markish, Dovid Bergelson, Yankev Glatshteyn, Yosef Luden, S. An-sky, and others. Theoretical texts will include writing by Wendy Brown, Dilar Dirik, Gloria Anzaldúa, Wendy Trevino, Agamben, Arendt, Weinreich, and others. The course will incorporate Yiddish journalism and essays, in addition to poetry and prose. All material will be in English translation, and there are no prerequisites.

Instructor(s): Anna Elena Torres Terms Offered: Spring

Equivalent Course(s): ENGL 39413, CMLT 29402, CMLT 39402, JWSC 29402

ENGL 29416. Freud. 100 Units.

This course will involve reading Freud's major texts, including, e.g., parts of *The Interpretation of Dreams*, "Beyond the Pleasure Principle," and his later work on feminine sexuality. We will consider Freud's views on bisexuality as well. We will also read case studies and consider theoretical responses to Freud's work, by Derrida, Lacan, and other important theorists. Course requirements will be one in-class presentation, based on the reading(s) for that day, and one final paper.

Instructor(s): Françoise Meltzer Terms Offered: Autumn

Equivalent Course(s): CMLT 39416, DVPR 39416, ENGL 39416, CMLT 29416, RLST 29416

ENGL 29700. Reading Course. 100 Units.

An instructor within ENGL agrees to supervise the course and then determines the kind and amount of work to be done. These reading courses must include a final paper assignment to meet requirements for the ENGL major, and students must receive a quality grade. Students may not petition to receive credit for more than two ENGL 29700 courses. Students may register for this course using the College Reading and Research Form, available in the College Advising offices. This form must be signed by the instructor and the Director of Undergraduate Studies and then submitted to the Office of the Registrar. Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of instructor and Director of Undergraduate Studies

ENGL 29900. Independent BA Paper Preparation. 100 Units.

Senior students completing a Critical BA Project may register for this course using the College Reading and Research Form, available in the College Advising offices. This form must be signed by the faculty BA advisor and the Director of Undergraduate Studies and then submitted to the Office of the Registrar. This course may not be counted toward the distribution requirements for the major, but it may be counted as a departmental elective.

Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of instructor and Director of Undergraduate Studies

Environmental Science

Department Website: <http://geosci.uchicago.edu>

Program of Study

The Department of the Geophysical Sciences offers a BS degree in Environmental Science. The program is intended for students whose interests fall at the intersection of biology, chemistry, and earth sciences, and is designed to prepare them to enter a variety of interdisciplinary fields in the environmental sciences, including the interface of environmental science and public policy. Students are given the opportunity to study such topics as the biogeochemical cycles, environmental chemistry, microbiology, ecology, the chemistry and dynamics of the ocean and atmosphere, climate change, and environmentally relevant aspects of economics and policy. Students are encouraged to participate in the Semester in Environmental Science at the Marine Biological Laboratory, and undergraduate research is also strongly encouraged.

Program Requirements for the BS in Environmental Science

The requirements for the BS degree in Environmental Science involve completion of:

- six required courses that fulfill general education requirements for the physical sciences, biological sciences, and mathematics
- seven required science or mathematics courses
- eleven elective courses pertinent to the major from the electives lists below, which must include
 - four courses designated ENSC or GEOS
 - one course in Statistics, and two more in any of Mathematics, Statistics, or Computing
 - one to three courses in Social Science/Public Policy

Candidates for the BS in Environmental Science complete a year of chemistry, a year of mathematics (including Calculus I-II), and a year of biology (ENSC 24400 Ecology and Conservation, GEOS 27300 Biological Evolution-Advanced, and BIOS 20198 Biodiversity), as well as PHYS 13100 Mechanics or the equivalent. (Note that some advanced chemistry courses require further physics as a prerequisite.)

Students are encouraged to begin discipline-specific courses as early as possible. Required disciplinary courses include ENSC 13300 The Atmosphere, ENSC 23800 Global Biogeochemical Cycles, and ENSC 24400 Ecology and Conservation. (Note that ENSC 23800 Global Biogeochemical Cycles is typically offered every other year.) Of ENSC/GEOS science electives, one can be a field course, and one may be ENSC 29700 Reading and Research in Environmental Science. Students participating in the Semester in Environmental Science receive credit for four courses in environmental science, two of which can be used to substitute for ENSC 24400 Ecology and Conservation and ENSC 24500 Environmental Microbiology.

The major is designed to be flexible enough to accommodate students whose primary interests cover various aspects of environmental science. Sample course schedules below give examples of course plans appropriate to students focusing on climatology, conservation, and biogeochemistry. Students with a focus on policy questions may take up to three courses in social science/public policy. These courses are available through undergraduate programs in Economics, Public Policy Studies, and Environmental and Urban Studies, or through the Harris School of Public Policy (<http://collegecatalog.uchicago.edu/harrispublicpolicy/courses/>).

Because analysis of data and mathematical modeling are fundamental to environmental science, the major requires six courses in quantitative methods: a year of mathematics, one course in statistics, and two additional courses in mathematics, statistics, or computing.

Note that while students taking calculus through the more introductory MATH 13000s sequence are encouraged to complete the third quarter of calculus, MATH 13300 Elementary Functions and Calculus III, in the higher tracks Calculus III (e.g., MATH 15300 Calculus III) is not specifically required or recommended, as the first two courses offer a sufficiently comprehensive calculus training for students to move on to other courses. Depending on the choice of electives, students may credit as many as nine Mathematics/Statistics/Computing courses toward the major.

Summary of Requirements for the BS in Environmental Science

GENERAL EDUCATION

One of the following sequences:		200
CHEM 10100 & CHEM 10200	Introductory General Chemistry I and Introductory General Chemistry II	
CHEM 11100-11200	Comprehensive General Chemistry I-II *	
CHEM 12100 & CHEM 12200	Honors General Chemistry I and Honors General Chemistry II	
One of the following sequences:		200
MATH 13100-13200	Elementary Functions and Calculus I-II *	
MATH 15100-15200	Calculus I-II	
MATH 16100-16200	Honors Calculus I-II	
Both of the following: **		200

BIOS 20198	Biodiversity	
GEOS 27300	Biological Evolution-Advanced %	
Total Units		600
MAJOR		
ENSC 13300	The Atmosphere	100
ENSC 23800	Global Biogeochemical Cycles	100
ENSC 23900	Environmental Chemistry	100
ENSC 24400	Ecology and Conservation	100
CHEM 11300	Comprehensive General Chemistry III *	100
or CHEM 12300	Honors General Chemistry III	
One of the following:		100
PHYS 12100	General Physics I * ‡	
PHYS 13100	Mechanics	
PHYS 14100	Honors Mechanics	
One of the following:		100
MATH 20000	Mathematical Methods for Physical Sciences I	
MATH 20250	Abstract Linear Algebra	
PHYS 22000	Introduction to Mathematical Methods in Physics	
BIOS 20152	Introduction to Quantitative Modeling in Biology (Advanced)	
MATH 13300	Elementary Functions and Calculus III *	
MATH 15300	Calculus III	
MATH 16300	Honors Calculus III	
Eleven electives as follows:		1100
Four courses designated ENSC or GEOS from List E-1: Physical and Biological Sciences		
One course from List E-2: Social Sciences		
Three courses from List E-3: Computational Sciences, of which one must be under the heading of Statistics		
Three more courses from any of the elective lists, but only up to two of these may be from List E-2: Social Sciences		
Total Units		1800

- * Credit may be granted by examination.
- ** Only students majoring in Environmental Science or Geophysical Sciences may use this pairing toward the general education requirement in the Biological Sciences. Environmental Science and Geophysical Sciences majors can take these courses without the BIOS prerequisites (BIOS 20150-20151/20152) unless they pursue a double major in Biological Sciences. They are expected to show competency in mathematical modeling of biological phenomena covered in BIOS 20151/20152.
- ‡ PHYS 13100 or PHYS 14100 are the preferred courses. PHYS 12100 is allowable on a case-by-case basis but may not provide adequate preparation to allow for enrollment in higher level PHYS courses. Additionally, PHYS 12100 has a prerequisite of a year of Chemistry. Special petition to the department counselor is required for PHYS 12100 approval.
- % Biological Evolution-Advanced has several cross-listings. Environmental Sciences majors *must* register for it under the GEOS 27300 listing.

Lists of Elective Courses
 List E-1: Physical and Biological Sciences
 Environmental Science

ENSC 21100	Energy: Science, Technology, and Human Usage	100
ENSC 24000	Geobiology	100
ENSC 24500	Environmental Microbiology	100
ENSC 29700	Reading and Research in Environmental Science	100

Semester in Environmental Science/MBL

The following courses are the College designations for the Semester in Environmental Science that is taught at the Marine Biological Laboratory (MBL) in Woods Hole, Massachusetts. One quarter at MBL counts for four courses: ENSC 23820, ENSC 24100, ENSC 29800, and an elective of ENSC 24200, ENSC 24300, or ENSC 28100. Admission to the Semester in Environmental Science program is by application, which must be received by the MBL generally in March of the year preceding the start of the semester. Admissions decisions will generally be sent in April. Note that these

courses start at the beginning of September, typically four weeks prior to the start of the College's Autumn Quarter and are completed by the end of Autumn Quarter. More information on the course content and the application process, and deadlines can be found at college.uchicago.edu/academics/semester-environmental-science. (<https://college.uchicago.edu/academics/semester-environmental-science/>) Students participating in the Semester in Environmental Science receive credit for four courses in environmental science, two of which can be used to substitute for ENSC 24400 Ecology and Conservation and ENSC 23900 Environmental Chemistry.

ENSC 23820	Biogeochemical Analysis in Terrestrial and Aquatic Ecosystems # Marine Biological Laboratory	100
ENSC 24100	Ecology - Marine Biological Laboratory	100
ENSC 29800	Independent Undergraduate Research in Environmental Sciences Marine Biological Laboratory	100
ENSC 24200	Methods in Microbial Ecology - Marine Biological Laboratory	100
ENSC 24300	Roles of Animals in Ecosystems # Marine Biological Laboratory	100
ENSC 28100	Quantitative Environmental Analyses # Marine Biological Laboratory	100

Field Courses in Environmental Science

The department sponsors field trips that range in length from one day to several weeks. Shorter field trips typically form part of lecture-based courses and are offered each year. (The trips are open to all students and faculty if space permits.) Longer trips are designed as undergraduate field courses, and one such course may be used as an elective science course for the major. Destinations of field courses have recently included Baja California and the Bahamas.

ENSC 29002	Field Course in Modern and Ancient Environments	100
------------	---	-----

Geophysical Sciences

GEOS 21000	Mineralogy	100
GEOS 21400	Thermodynamics and Phase Change	100

PHYS 22600	Electronics	100
PHYS 22700	Intermediate Electricity and Magnetism II	100

- * Enrollment in CHEM 23300 requires a grade of C or higher in CHEM 22200 or 23200
- ** Prerequisites include MATH 20100 and PHYS 13300
- *** ENSC majors can take these courses without the BIOS prerequisites (20150-20151) unless they pursue a double major in biology. Students are expected to show competency in the mathematical modeling of biological phenomena covered in BIOS 20151.
- [‡] PHYS 13200-13300 or PHYS 14200-14300 are the preferred sequences. PHYS 12200-12300 is allowable on a case-by-case basis but may not provide adequate preparation to allow for enrollment in higher level PHYS courses. Special petition to the department counselor is required for PHYS 12100-12200-12300 approval.

List E-2: Social Sciences

Microeconomics Foundations

Students may take one of the following:

ECON 19800	Introduction to Microeconomics	100
ECON 20000	The Elements of Economic Analysis I [*]	100
ECON 20100	The Elements of Economic Analysis II [*]	100
PBPL 20000	Economics for Public Policy	100
PPHA 32300	Principles of Microeconomics and Public Policy I [*]	100
PPHA 32400	Principles of Microeconomics and Public Policy II [*]	100

Other Social Science Electives

(Note that many courses below require microeconomics as a prerequisite)

ECON 19900	Introduction to Macroeconomics ^{**}	100
ECON 26500	Environmental Economics	100
ENST 23550	Urban Ecology and the Nature of Cities	100
ENST 24102	Environmental Politics	100
ENST 28220	Global Energy & Climate Challenge: Economics, Science & Policy	100
PBPL 21800	Economics and Environmental Policy	100
PBPL 23100	Environmental Law	100
PBPL 24701	U.S. Environmental Policy	100
PBPL 26530	Environment, Agriculture, and Food: Economic and Policy Analysis	100
PBPL 26531	Environment, Agriculture, and Food: Advanced Economic and Policy Analysis	100
PPHA 36921	Energy Economics and Policy	100
PPHA 36930	Environmental Economics: Theory and Applications	100
PPHA 38900	Environmental Science/Policy	100
PPHA 39901	Policy Approaches to Mitigating Climate Change	100

- * Must be taken in sequence
- ** Acceptable only if a microeconomics course is also taken

List E-3: Computational Sciences

Mathematics

MATH 15300 or MATH 16300	Calculus III Honors Calculus III	100
MATH 15910	Introduction to Proofs in Analysis	100

or STAT 24300	Numerical Linear Algebra	
MATH 20000-20100	Mathematical Methods for Physical Sciences I-II *	200
MATH 21100	Basic Numerical Analysis	100
MATH 20250	Abstract Linear Algebra	100
BIOS 20152	Introduction to Quantitative Modeling in Biology (Advanced)	100
BIOS 26210-26211	Mathematical Methods for Biological Sciences I-II	200

Physics

PHYS 22000	Introduction to Mathematical Methods in Physics **	100
PHYS 22100	Mathematical Methods in Physics ***	100

Statistics

Students may take any course in statistics at the 22000 level or higher, but recommended courses are shown below. Some courses require one of the first three as a prerequisite.

Students may take one of the following:

PPHA 31200 & PPHA 31300	Mathematical Statistics for Public Policy I and Mathematical Statistics for Public Policy II †	
STAT 22000	Statistical Methods and Applications §§	
STAT 23400	Statistical Models and Methods ††	
STAT 24400-24500	Statistical Theory and Methods I-II §	200
STAT 22400	Applied Regression Analysis	100
STAT 22600	Analysis of Categorical Data	100
STAT 26100	Time Dependent Data	100
PPHA 34600	Program Evaluation	100

The 30000 (and above) level courses listed below are a joint offering of the Department of Statistics and the Department of Public Health Studies, and may be suitable for Environmental Science majors.

STAT 31900	Introduction to Causal Inference	100
STAT 35800	Statistical Applications	100
STAT 36900	Applied Longitudinal Data Analysis	100

Computing

CMSC 12100	Computer Science with Applications I +	100
CMSC 12200	Computer Science with Applications II	100
CMSC 12300	Computer Science with Applications III	100
CMSC 23710	Scientific Visualization	100

* Recommended prerequisite is MATH 19620 or MATH 15300 or MATH 16300

** Would generally substitute for MATH 20000-20100

*** Recommended in addition to MATH 20000-20100 for advanced students—covers partial differential equations

† Must be taken as a sequence

†† Higher programming component than STAT 22000

§ Recommended for advanced students. Must be taken as a sequence to be credited. STAT 24400-24500 have no prerequisite but it is possible to take both STAT 23400 and STAT 24400-24500.

§§ AP credit for STAT 22000 does not count toward the major requirements. Students with AP credit for STAT 22000 should plan to take at least three other courses from List E-3: Computational Sciences, one of which must be under the heading of Statistics.

+ Students seeking to double major in Computer Science must complete CMSC 12100-12200-12300 as a sequence per the Computer Science rule.

Grading

Students majoring in Environmental Science must receive quality grades in all courses taken to meet requirements in the major.

Honors

The BS degree with honors is awarded to students who meet the following requirements: (1) a GPA of 3.25 or higher in the major and of 3.0 or higher overall; (2) completion of a paper based on original research, supervised and approved by a faculty member in geophysical sciences; (3) an oral presentation of the thesis research. All theses will be examined by the supervisor and a second reader from the faculty. Manuscript drafts will generally be due in the sixth week of the quarter in

which the student will graduate (fifth week in Summer Quarter), and final manuscripts and oral presentations in the eighth week (seventh week in Summer Quarter).

Students are strongly encouraged to reach out to potential faculty supervisors no later than their third year, since theses generally arise out of research projects already begun with faculty members. When a thesis topic is determined, students should notify the undergraduate adviser of their intent to complete a thesis and confirm their eligibility. ENSC 29700 Reading and Research in Environmental Science can be devoted to the preparation of the required paper; however, students using this course to meet a requirement in the major must take it for a quality grade.

Students who wish to submit a single paper to meet the honors requirement in Environmental Science and the BA paper requirement in another major should discuss their proposals with the undergraduate advisers from both programs no later than the end of third year. Certain requirements must be met. A consent form, to be signed by the undergraduate advisers, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Sample BS Programs

Each student will design an individual plan of course work, choosing from a wide range of selections that take advantage of rich offerings from a variety of subdisciplines. The sample programs that appear below are merely for the purpose of illustration; many other variations would be possible. NOTE: Courses that meet general education requirements and are required for the major are not listed.

Environmental Geochemistry

ENSC 23820	Biogeochemical Analysis in Terrestrial and Aquatic Ecosystems # Marine Biological Laboratory	100
ENSC 28100	Quantitative Environmental Analyses # Marine Biological Laboratory	100
ENSC 29800	Independent Undergraduate Research in Environmental Sciences Marine Biological Laboratory	100
BIOS 20200	Introduction to Biochemistry	100
BIOS 26210-26211	Mathematical Methods for Biological Sciences I-II	200
CHEM 22000 & CHEM 22100	Organic Chemistry I and Organic Chemistry II	200
PBPL 20000	Economics for Public Policy	100
STAT 22000	Statistical Methods and Applications	100

Environmental Microbiology

ENSC 23820	Biogeochemical Analysis in Terrestrial and Aquatic Ecosystems # Marine Biological Laboratory	100

PPHA 31301	Statistical Theory and Applications for Public Policy II	100
PPHA 32300 & PPHA 32400	Principles of Microeconomics and Public Policy I and Principles of Microeconomics and Public Policy II	200
STAT 22400	Applied Regression Analysis	100

Environmental Science Courses

ENSC 13300. The Atmosphere. 100 Units.

This course introduces the physics, chemistry, and phenomenology of the Earth's atmosphere, with an emphasis on the fundamental science that underlies atmospheric behavior and climate. Topics include (1) atmospheric composition, evolution, and structure; (2) solar and terrestrial radiation in the atmospheric energy balance; (3) the role of water in determining atmospheric structure; and (4) wind systems, including the global circulation, and weather systems.

Instructor(s): D. Abbot Terms Offered: Spring

Prerequisite(s): MATH 13100-MATH 13200

Equivalent Course(s): GEOS 13300, ENST 13300

ENSC 13400. Global Warming: Understanding the Forecast. 100 Units.

This course presents the science behind the forecast of global warming to enable the student to evaluate the likelihood and potential severity of anthropogenic climate change in the coming centuries. It includes an overview of the physics of the greenhouse effect, including comparisons with Venus and Mars; an overview of the carbon cycle in its role as a global thermostat; predictions and reliability of climate model forecasts of the greenhouse world. This course is part of the College Course Cluster program, Climate Change, Culture, and Society. (L)

Instructor(s): D. MacAyeal Terms Offered: Not offered in 2020-21.

Prerequisite(s): Some knowledge of chemistry or physics helpful.

Equivalent Course(s): ENST 12300, GEOS 13400, PHSC 13400

ENSC 13410. Global Warming: Understanding the Forecast (Flipped Class) 100 Units.

This course presents the science behind the forecast of global warming to enable the student to evaluate the likelihood and potential severity of anthropogenic climate change in the coming centuries. It includes an overview of the physics of the greenhouse effect, including comparisons with Venus and Mars; predictions and reliability of climate model forecasts of the greenhouse world. This course is part of the College Course Cluster program, Climate Change, Culture, and Society. This course covers the same material as PHSC 13400, but is organized using a flipped classroom approach in order to increase student engagement and learning.

Instructor(s): D. Abbot Terms Offered: Autumn Spring

Prerequisite(s): Some knowledge of chemistry or physics helpful.

Equivalent Course(s): ENST 13410, PHSC 13410, GEOS 13410

ENSC 21100. Energy: Science, Technology, and Human Usage. 100 Units.

This course covers the technologies by which humans appropriate energy for industrial and societal use, from steam turbines to internal combustion engines to photovoltaics. We also discuss the physics and economics of the resulting human energy system: fuel sources and relationship to energy flows in the Earth system; and modeling and simulation of energy production and use. Our goal is to provide a technical foundation for students interested in careers in the energy industry or in energy policy. Field trips required to major energy converters (e.g., coal-fired and nuclear power plants, oil refinery, biogas digester) and users (e.g., steel, fertilizer production). This course is part of the College Course Cluster program: Climate Change, Culture and Society.

Instructor(s): E. Moyer

Prerequisite(s): Knowledge of physics or consent of instructor.

Note(s): See GEOS 24750/ENSC 21150.

Equivalent Course(s): GEOS 24705, GEOS 34705, ENST 24705

ENSC 21150. Humans in the Earth System. 100 Units.

Human activities now have global-scale impact on the Earth, affecting many major biogeochemical cycles. One third of the Earth's surface is now used for production of food for humans, and CO₂, the waste product of human energy use, now substantially affects the Earth's radiative balance. This course provides a framework for understanding humanity as a component of Earth system science. The course covers the Earth's energy flows and cycles of water, carbon, and nitrogen; their interactions; and the role that humans now play in modifying them. Both agriculture and energy technologies can be seen as appropriation of natural energy flows, and we cover the history over which human appropriations have become globally significant. The course merges geophysical and biological sciences and engineering, and includes lab sessions and field trips to agriculture, water management, and energy facilities to promote intuition. One year of university-level science is recommended.

Terms Offered: Spring

Equivalent Course(s): GEOS 34750, GEOS 24750, ENST 24750

ENSC 23600. Chemical Oceanography. 100 Units.

This course explores the chemistry of the ocean system and its variations in space and time. The oceans play an essential role in most (bio)geochemical cycles, interacting in various ways with the atmosphere, sediments, and crust. These interactions can be understood through studying the geochemical and isotopic properties of the ocean, its inputs and outputs, and its evolution as recorded in marine sediments and sedimentary rocks. Topics include: the marine carbon cycle, nutrient cycling, chemical sediments, and hydrothermal systems.

Instructor(s): Clara Blättler Terms Offered: Spring

Prerequisite(s): Completion of one of the following Chemistry Sequences: CHEM 10100-10200-11300 Introductory General Chemistry I-II; Comprehensive General Chemistry III or CHEM 11100-11200-11300 Comprehensive General Chemistry I-II-III or CHEM 12100-12200-12300 Honors General Chemistry I-II-III AND either GEOS 13100 or GEOS 13200.

Equivalent Course(s): GEOS 23600, GEOS 33600

ENSC 23800. Global Biogeochemical Cycles. 100 Units.

This survey course covers the geochemistry of the surface of the Earth, focusing on biological and geological processes that shape the distributions of chemical species in the atmosphere, oceans, and terrestrial habitats. Budgets and cycles of carbon, nitrogen, oxygen, phosphorous, and sulfur are discussed, as well as chemical fundamentals of metabolism, weathering, acid-base and dissolution equilibria, and isotopic fractionation. The course examines the central role that life plays in maintaining the chemical disequilibria that characterize Earth's surface environments. The course also explores biogeochemical cycles change (or resist change) over time, as well as the relationships between geochemistry, biological (including human) activity, and Earth's climate.

Instructor(s): J. Waldbauer Terms Offered: Autumn

Prerequisite(s): CHEM 11100-11200 or consent of instructor

Equivalent Course(s): GEOS 33800, GEOS 23800

ENSC 23820. Biogeochemical Analysis in Terrestrial and Aquatic Ecosystems # Marine Biological Laboratory. 100 Units.

This course examines the interface of biological processes with chemical processes in ecological systems. Course content emphasizes aquatic chemistry and the role of microbes in the cycling of nitrogen, carbon, and other elements. Effects of global changes on chemical cycling are emphasized.

Instructor(s): Marine Biological Laboratory Staff. Terms Offered: Autumn. L.

Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710 and BIOS 27712 along with one of BIOS 27713, BIOS 27714 or BIOS 27715.

Equivalent Course(s): BIOS 27711

ENSC 23900. Environmental Chemistry. 100 Units.

The focus of this course is the fundamental science underlying issues of local and regional scale pollution. In particular, the lifetimes of important pollutants in the air, water, and soils are examined by considering the roles played by photochemistry, surface chemistry, biological processes, and dispersal into the surrounding environment. Specific topics include urban air quality, water quality, long-lived organic toxins, heavy metals, and indoor air pollution. Control measures are also considered. This course is part of the College Course Cluster program: Climate Change, Culture, and Society.

Instructor(s): D. Archer Terms Offered: Autumn

Prerequisite(s): CHEM 11100-11200 or equivalent, and prior calculus course

Equivalent Course(s): ENST 23900, GEOS 23900, GEOS 33900

ENSC 24000. Geobiology. 100 Units.

Geobiology seeks to elucidate the interactions between life and its environments that have shaped the coevolution of the Earth and the biosphere. The course will explore the ways in which biological processes affect the environment and how the evolutionary trajectories of organisms have in turn been influenced by environmental change. In order to reconstruct the history of these processes, we will examine the imprints they leave on both the rock record and on the genomic makeup of living organisms. The metabolism and evolution of microorganisms, and the biogeochemistry they drive, will be a major emphasis.

Instructor(s): M. Coleman, J. Waldbauer

Prerequisite(s): GEOS 13100-13200-13300 or college-level cell & molecular biology

Equivalent Course(s): GEOS 36600, GEOS 26600

ENSC 24100. Ecology - Marine Biological Laboratory. 100 Units.

This course examines the structure and functioning of terrestrial and aquatic ecosystems including the application of basic principles of community and ecosystem ecology. The course also examines contemporary environmental problems such as the impacts of global and local environmental change on community composition and food webs within forest, grassland, marsh and nearshore coastal ecosystems on Cape Cod. This course examines the structure and functioning of terrestrial and aquatic ecosystems including the application of basic principles of community and ecosystem ecology. The course also examines contemporary environmental problems such as the impacts of global and local environmental change on community composition and food webs within forest, grassland, marsh and nearshore coastal ecosystems on Cape Cod.

Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn. L.

Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27711 and BIOS 27712 along with one of BIOS 27713, BIOS 27714 or BIOS 27715.

Equivalent Course(s): BIOS 27710

ENSC 24200. Methods in Microbial Ecology - Marine Biological Laboratory. 100 Units.

This course explores the biology of microbes found in the environment, including relationships with the physical, chemical, and biotic elements of their environment. Emphasis is placed on understanding the science underlying the various methodologies used in the study of these organisms and systems. In the laboratory, students will work with the latest techniques to measure microbial biomass, activity, extracellular enzymes, and biogeochemical processes. Students are also introduced to molecular methods for assessing microbial genomic diversity.

Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn. L.

Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710, BIOS 27711 and BIOS 27712.

Equivalent Course(s): BIOS 27714

ENSC 24300. Roles of Animals in Ecosystems # Marine Biological Laboratory. 100 Units.

This course addresses the question, How do animals, including man, affect the structure and function of ecosystems. The course takes an interdisciplinary approach focused on the interactions of animal diversity, migration patterns, population dynamics, and behavior with biogeochemical cycles, productivity, and transport of materials across ecosystems. This course is an elective option within the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA.

Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn

Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710, BIOS 27711, and BIOS 27712.

Equivalent Course(s): BIOS 27715

ENSC 24400. Ecology and Conservation. 100 Units.

This course focuses on the contribution of ecological theory to the understanding of current issues in conservation biology.

We emphasize quantitative methods and their use for applied problems in ecology (e.g., risk of extinction, impact of harvesting, role of species interaction, analysis of global change). Course material is drawn mostly from current primary literature; lab and field components complement concepts taught through lecture. Prerequisite(s): BIOS 20150, BIOS 20151 or BIOS 20152 Note(s): BIOS 20196 is identical to the previously offered BIOS 23251. Students who have taken BIOS 23251 should not enroll in BIOS 20196. Equivalent Course(s): ENSC 24400

Instructor(s): C. Pfister, E. Larsen Terms Offered: Autumn. L.

Prerequisite(s): BIOS 20150, BIOS 20151 or BIOS 20152

Note(s): BIOS 20196 is identical to the previously offered BIOS 23251. Students who have taken BIOS 23251 should not enroll in BIOS 20196.

Equivalent Course(s): BIOS 20196

ENSC 24500. Environmental Microbiology. 100 Units.

The objective of this course is to understand how microorganisms alter the geochemistry of their environment. The course will cover fundamental principles of microbial growth, metabolism, genetics, diversity, and ecology, as well as methods used to study microbial communities and activities. It will emphasize microbial roles in elemental cycling, bioremediation, climate, and ecosystem health in a variety of environments including aquatic, soil, sediment, and engineered systems.

Instructor(s): M. Coleman Terms Offered: Autumn

Prerequisite(s): CHEM 11100-11200 and BIOS 20186 or BIOS 20197 or BIOS 20198

Equivalent Course(s): GEOS 36650, GEOS 26650

ENSC 28100. Quantitative Environmental Analyses # Marine Biological Laboratory. 100 Units.

This course emphasizes the application of quantitative methods to answering ecological questions. Students apply mathematical modeling approaches to simulating biological and chemical phenomena in terrestrial and marine ecosystems.

Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn. L.

Prerequisite(s): Consent Only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710, BIOS 27711 and BIOS 27712.

Equivalent Course(s): BIOS 27713

ENSC 29002. Field Course in Modern and Ancient Environments. 100 Units.

This course uses weekly seminars during Winter Quarter to prepare for a one-week field trip over spring break, where students acquire experience with sedimentary rocks and the modern processes responsible for them. Destinations vary; past trips have examined tropical carbonate systems of Jamaica and the Bahamas and subtropical coastal Gulf of California. We usually consider biological, as well as physical, processes of sediment production, dispersal, accumulation, and post-depositional modification.

Instructor(s): S. Kidwell, M. LaBarbera Terms Offered: Winter

Note(s): Organizational meeting and deposit usually required in Autumn Quarter; interested students should contact an instructor in advance. Enrollment allowed by permission of instructor. This course meets weekly in Winter Quarter prior to Spring Break field work.

Equivalent Course(s): GEOS 29002, GEOS 39002

ENSC 29700. Reading and Research in Environmental Science. 100 Units.

Independent study; regular meetings with Geophysical Sciences faculty member required. Register by section corresponding to faculty supervisor.

Terms Offered: Autumn Spring Summer Winter

Prerequisite(s): Consent of instructor and departmental counselor

Note(s): Students are required to submit the College Reading and Research Course Form. Available to nonmajors for P/F grading. Must be taken for a quality grade when used to meet a requirement in the major.

ENSC 29800. Independent Undergraduate Research in Environmental Sciences Marine Biological Laboratory. 100 Units.

This course is the culmination of the Semester in Environmental Science at the Marine Biological Laboratory. An independent research project, on a topic in aquatic or terrestrial ecosystem ecology, is required. Students will participate in a seminar for scientific communication as well as submit a final paper on their project.

Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn. L.

Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710 and BIOS 27711 along with one of BIOS 27713, BIOS 27714 or BIOS 27715.

Equivalent Course(s): BIOS 27712

Environmental and Urban Studies

Department Website: <http://environmentalstudies.uchicago.edu>

Urban and environmental issues are interconnected. Urbanization, climate change, habitat loss, pollution, food and energy needs, and issues of social justice and economic stability are among the most pressing issues facing contemporary societies. Environmental and urban processes operate at multiple scales, involving natural and human consequences that cannot be addressed solely from within a single discipline. Students will gain an understanding of the interconnected natural and urban realms, building their understanding of what sustainable development means and how opportunities and challenges can be met. The major motivates a deeper theoretical understanding of urbanism and nature, as well as practical strength in addressing urban and environmental challenges. It brings a spatial and place-based perspective to the study of these challenges, using built form and environmental context as key, conceptual lenses to investigate the social, cultural, economic, and humanistic dimensions of urbanism.

Program of Study

The Environmental and Urban Studies program encourages interdisciplinary approaches to the complex interactions and intersections of urbanism, environment, and society by incorporating frameworks, theories, models, and methods from the humanities, social sciences, natural sciences, urban planning and design, and urban science. Students can choose to focus on either the Environmental Track or the Urban Track. A student interested in urban environmental topics can design a program of study through either track.

- **The Environmental Track** of the major emphasizes critical thinking and rigorous applications to the study of the environment through the social sciences and humanities. Central concepts to this track include human behavior and its relationship to the environment, moral and ethical dimensions of environmental preservation and conservation, the evolution of environmental discourse, communications, and media, and cultural and historical constructions of nature and the human. The track provides emphases in environmental economics and policy, law and politics, sustainable development, human ecology, environmental ethics and justice, and the social and humanistic study of climate change.
- **The Urban Track** of the major emphasizes perspectives on human interaction with the urban, built environment. The track encourages a spatial and place-based urban perspective, meaning that built form and environmental context provide the conceptual core through which the social, economic, and political understanding of urbanism is pursued. The track approaches the nature, dynamics, and human experience of cities by capitalizing on the growth of interest in urban design, urban planning, and emerging urban science.

Students in other fields of study may also complete a minor in Environmental and Urban Studies with an emphasis on one of these tracks. Requirements for the minor follow the description of the major.

Note: Students who matriculated before July 2016 and have questions about Environmental Studies courses that they have already taken should contact the program director of Environmental and Urban Studies, Sabina Shaikh (773.834.4405, sabina@uchicago.edu), to devise their program of study.

Environmental and Urban Studies Major Requirements

Students in the Class of 2021 and beyond will follow the requirements for the Environmental and Urban Studies major, as described below. Students in the Class of 2020 may continue under the previous requirements appropriate to their chosen track, but they may also choose to complete the updated major requirements, provided that they fit within the student's graduation plan. The previous requirements may be found on the program website.

Students in the major must complete thirteen courses.

Environmental and Urban Studies Core Sequence

Students are required to take the two-course core sequence in Environmental and Urban Studies: ENST 21201 Human Impact on the Global Environment and ENST 20150 Sustainable Urban Development. These courses provide an overview of contemporary environmental issues and the theoretical and empirical approaches used to understand and address them.

Quantitative Requirements

Students in both tracks of the major will take ENST 28702 Introduction to GIS and Spatial Analysis (or equivalent), which provides the conceptual and analytics tools for space-based approaches to environmental and urban study. The course is designed to incorporate applications from the social sciences and humanities. Other GIS courses may satisfy this requirement by petition. Students in the major also have a statistics requirement of STAT 22000 Statistical Methods and Applications or an equivalent course, approved by petition to the program director.

Summary of Requirements for All Majors

(13 total courses: 4 common courses, 8 in the chosen track, and BA Colloquium)

ENST 21201	Human Impact on the Global Environment	100
ENST 20150	Sustainable Urban Development	100
ENST 28702	Introduction to GIS and Spatial Analysis	100
STAT 22000	Statistical Methods and Applications (or equivalent)	100
Eight Chosen Track Courses		800

ENST 29801	BA Colloquium I	100
Internship/field studies experience		
Total Units		1300

Thematic Tracks in Environmental and Urban Studies

Environmental Track

Students in the Environmental Track will take ENST 21301 Making the Natural World: Foundations of Human Ecology, a course which considers the conceptual underpinnings of contemporary notions of ecology, environment, and balance through the examination of historical trajectories of anthropogenic landscape modification and human society.

The Environmental Track requires completion of three elective courses from an approved list of Environmental Track courses and one elective course from an approved list of Urban Track courses. There is significant overlap in the tracks and many approved courses will be counted towards either track.

Students in the Environmental Track will also complete an experiential learning, practicum, or studio course from an approved list or through petition to the program director. The remaining two courses required for the Environmental Track must come from an approved list of Environmental Science courses, which are focused on physical and natural sciences.

The list of approved courses can be found on the program’s website (<https://environmentalstudies.uchicago.edu/courses-offered/>). Please click here (https://docs.google.com/spreadsheets/d/1WDErGwY498DXKgZNihqfr-W95pGVpDG3_Mvr4VuLDck/edit#gid=0) for a full list of approved courses.

Environmental Track Requirements
 (8 additional courses)

ENST 21301	Making the Natural World: Foundations of Human Ecology	100
Three Environmental Track elective courses from approved list*		300
One Urban Track elective course from approved list*		100
One experiential learning course from approved list*		100
Two Environmental Science courses from approved list*		200
Internship/field studies experience		
Total Units		800

* Must come from approved lists, found on the program’s website (<http://environmentalstudies.uchicago.edu/courses-offered/>).

Urban Track

Students in the Urban Track are required to take ENST 24600 Introduction to Urban Sciences, a course that provides a grand tour of conceptual frameworks, general phenomena, emerging data and policy applications that define a growing scientific integrated understanding of cities and urbanization.

The Urban Track requires completion of four elective courses from an approved list of Urban Track courses and one elective course from an approved list of Environmental Track courses. There is significant overlap in the tracks and many approved courses will be counted towards either track.

Students in the Urban Track will choose one elective course from an approved list of courses in urban social science. The Urban Track also requires the completion of an experiential learning, practicum, or studio course from an approved list or through petition to the program director.

The list of approved courses can be found on the program’s website (<https://environmentalstudies.uchicago.edu/courses-offered/>). Please click here (https://docs.google.com/spreadsheets/d/1WDErGwY498DXKgZNihqfr-W95pGVpDG3_Mvr4VuLDck/edit#gid=0) for a full list of approved courses.

Urban Track Requirements
 (8 additional courses)

ENST 24600	Introduction to Urban Sciences	100
Four Urban Track elective courses from approved list*		400
One urban social science course from approved list*		100
One Environmental Track elective course from approved list*		100
One experiential learning course from approved list*		100
Internship/field studies experience		
Total Units		800

* *Must come from approved lists, found on the program’s website (<http://environmentalstudies.uchicago.edu/courses-offered/>).

BA Thesis

All students in the major are expected to develop significant independent research projects in close consultation with their preceptor and faculty adviser. In their third year, students must meet with an Environmental and Urban Studies preceptor by fourth week of Spring Quarter and submit a detailed topic page by eighth week of Spring Quarter. At this time, students are also required to secure a faculty adviser. The thesis adviser may be chosen from among the faculty teaching in Environmental and Urban Studies (<http://environmentalstudies.uchicago.edu/people/?group=Faculty%20and%20Staff>), members of the Program on Global Environment faculty advisory committee (<https://environmentalstudies.uchicago.edu/faculty-advisory-committee/>), or from relevant outside departments. An assigned preceptor will serve as a second reader on all theses. Where appropriate, outside scholars, scientists, or policy experts may be added as additional readers with the approval of the program director.

In their fourth year, students register for ENST 29801 BA Colloquium I (Autumn) or ENST 29802 BA Colloquium II (Winter), which are designed to teach research skills and more generally to aid the research and writing process. Students interested in dedicating more time to the BA process can register for both the Autumn and Winter sections. The final version of the BA thesis is due by the second Friday of the quarter in which the student plans to graduate. Students who have a BA thesis requirement for another major may petition to the program director to count that program's BA Colloquium towards their Environmental and Urban Studies requirement. Students wishing to build additional time for research or writing into their schedules may speak with their thesis adviser about potentially taking ENST 29900 B. A. Thesis (Reading and Research).

All students graduating in Spring Quarter are required to participate in the BA presentation session during reading period following Spring Quarter of the year they plan to graduate.

This program may accept a BA paper or project used to satisfy the same requirement in another major if certain conditions are met and with the consent of the other program director. Approval from both program directors is required. Students should consult with the directors by the earliest BA proposal deadline (or by the end of their third year, when neither program publishes a deadline). A consent form, to be signed by the directors, is available from the College adviser and on the program website. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Required BA Timeline

Third years:

- Attend third year BA meeting at the end of week 7 of Winter Quarter
- Meet with BA preceptor by the end of week 4 of Spring Quarter
- Submit BA Topic Form by the end of week 8 of Spring Quarter

Fourth years:

- Register for either ENST 29801 in Autumn Quarter or ENST 29802 in Winter Quarter
- Submit final BA thesis to preceptor and faculty adviser by the end of week 2 of Spring Quarter
- Submit bound copy of final thesis to the department by the end of week 7 of Spring Quarter
- Attend BA Thesis Poster Presentation during reading period of Spring Quarter

Forms can be found here (<http://environmentalstudies.uchicago.edu/content/program-forms/>).

Internship or Field Studies Program

In addition to course work, students will be required to participate in an approved internship or field studies program with significant links to their program of study. Activities that fulfill the internship requirement include summer or academic year internships of varying lengths, research assistantships, fellowships or field studies with faculty or other academic staff, participation in working groups or the program Student Advisory and Research Council, completion of the Chicago Studies Certificate Program, or other sustained engagements relating to environmental and urban studies. Participation in recognized student organizations, while encouraged, does not count towards the internship requirement. Students must complete the internship evaluation form available on the program website before week 2 of Spring Quarter in the year they plan to graduate. See below for more on the Chicago Studies Certificate Program.

Advising

Application for admission to the Environmental and Urban Studies program should be made to the program preceptor, who explains requirements and arranges a preliminary program of study. Admission to the major or minor is complete when a program of study has been approved by the program director. This program of study, which the student formulates in consultation with both the program preceptor and the program director, should be in place by a student's third year. The contact information for the current program preceptors is available on the program website at environmentalstudies.uchicago.edu (<https://environmentalstudies.uchicago.edu/>).

Environmental and Urban Studies majors and minors must submit the Intent to Graduate form no later than the first week of the quarter in which they intend to graduate. The form is available online (<https://registrar.uchicago.edu/graduation/application-to-graduate/>) and must be submitted electronically.

Students will need to formalize their declaration of the major on my.uchicago.edu (<https://my.uchicago.edu/>) and provide regular documentation of any program approvals from the department to their College adviser for the requisite processing.

Grading

Students who are majoring or minoring in Environmental and Urban Studies must receive quality grades in courses taken to meet the requirements of the program.

Honors

Eligibility for honors requires an overall GPA of 3.0 or higher, a GPA of 3.5 or higher in the courses taken to meet the requirements of the program, and a BA thesis that is judged to be a high pass by the faculty and preceptor readers.

Minor Program in Environmental and Urban Studies

Students who are not Environmental and Urban Studies majors may complete a minor in Environmental and Urban Studies. Such a minor requires six courses be taken according to the following guidelines:

Tracks

- Environmental
- Urban

Requirements for Both Minor Tracks (2 courses)

ENST 21201	Human Impact on the Global Environment	100
ENST 20150	Sustainable Urban Development	100
Total Units		200

Additional Requirements for Minor Environmental Track (4 additional courses)

ENST 21301	Making the Natural World: Foundations of Human Ecology	100
Three courses in the Environmental Track*		300
Total Units		400

Additional Requirements for Minor Urban Track (4 additional courses)

ENST 24600	Introduction to Urban Sciences	100
One course in urban social sciences*		100
Two Urban Track elective courses*		200
Total Units		400

Students who elect the minor program in Environmental and Urban Studies should meet with the program director before the end of Spring Quarter of their third year to declare their intention to complete the minor and select appropriate courses. The approval of the program director for the minor program should be submitted to a student's College adviser by the deadline above on a form obtained from the adviser.

Courses in the minor (1) may not be double counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for quality grades, and at least half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Experiential Learning Opportunities

The Environmental and Urban Studies major offers experiential learning opportunities through practicum courses, the Chicago Studies Quarter, and the Chicago Studies Certificate Program. Students are encouraged to enroll in these programs, which offer immersion in the academic, experiential, interdisciplinary study of Chicago and its region. For more information about these programs, please see the listing in this catalog or visit chicagostudies.uchicago.edu (<http://chicagostudies.uchicago.edu>).

Chicago Studies Quarter

Each spring, a small cohort of students studies the culture, politics, and history of the city through a curriculum of three interrelated courses with a common theme through the Chicago Studies Quarter. Admission to the program is competitive. Courses are taught by Chicago specialists from a variety of disciplines and join classroom instruction with weekly excursions and co-curricular activities.

All courses in the Chicago Studies Quarter will have an Environmental and Urban Studies course number. They are also listed in all three tracks of the major and can therefore be taken to satisfy requirements either within or outside the student's primary track.

Chicago Studies Quarter: Calumet

Since 2012, the Calumet Quarter has offered a one-quarter, intensive, experience-based program focused on human land use in the Calumet Region just south and east of the city. As of 2017–18, it has merged with the Chicago Studies

Quarter and is officially known as the Chicago Studies Quarter: Calumet. It features integrated courses, projects, field trips, guest lectures, and presentations, and integrates perspectives from the sciences, humanities, and social sciences in the study of local environments and communities.

Chicago Studies Quarter: Calumet is offered every other year. The next offering will be in Spring Quarter 2022. Courses taken as part of this program can be used to satisfy requirements in all three tracks of the major.

Chicago Studies Certificate

The Chicago Studies Certificate, launched in 2017–18, is designed for students who wish to integrate their academic inquiry with positive impact in Chicago through sustained community engagement, urban scholarship, and creative expression. The certificate is overseen by the University Community Service Center in collaboration with the Environmental and Urban Studies program, which supervises the program's academic requirements.

Completion of the *Chicago Studies Certificate* will satisfy the internship/field study requirement for the Environmental and Urban Studies major.

Environmental Studies Courses

ENST 10050. Pathways in Urban Studies. 100 Units.

The world is urbanizing at an increasing rate, and the idea of the city remains a potent one for community builders, policy makers, and researchers of all kinds. This course explores the work of city-building through public policy, placemaking, and urban planning and design. Students will read from fundamental writings in urbanism and policy, and then hear directly from practitioners in the field - community organizers, social entrepreneurs, and other urban actors - to understand how theory meets practice in the form and function of the city, as well as visit local organizations and sites of urban intervention. While the course will focus on American cities, students will also have an opportunity to read and think globally about urbanism, and to learn from guest speakers who work in the field of international urban development. Many consider Chicago a paradigmatic American city, and there is much to learn simply from experiencing the boundaries of our campus and the ways in which our campus touches and changes the city. Students in this course will join the university's long history of urban research that continues to this day, across disciplines.

Terms Offered: Summer

ENST 10550. Pathways in City Planning and Politics. 100 Units.

The world is urbanizing at an increasing rate, and the idea of the city remains a potent one for community builders, policy makers, and researchers of all kinds. This course explores the work of city-building through public policy, placemaking, and urban planning. Students will read from fundamental writings in urbanism and policy, and then hear directly from practitioners in the field - community organizers, elected officials, real estate developers, and other urban actors - to understand how theory meets practice in the form and function of the city, as well as visit local organizations and sites of urban intervention. While the course will focus on American cities, students will also have an opportunity to read and think globally about urbanism, and to learn from guest speakers who work in the field of international urban development. Many consider Chicago a paradigmatic American city, and there is much to learn simply from experiencing the boundaries of our campus and the ways in which our campus touches and changes the city. Students in this course will join the university's long history of urban research that continues to this day, across disciplines.

Terms Offered: Summer

ENST 12105. Sex and Gender in The City. 100 Units.

This course is designed to introduce students to some of the key concerns at the intersection of gender studies and urban studies. In this course, we will take gender relations and sexuality as our primary concern and as a constitutive aspect of social relations that vitally shape cities and urban life. We will examine how gender is inscribed in city landscapes, how it is lived and embodied in relation to race, class, and sexuality, and how it is (re)produced through violence, inequality, and resistance. Over the course of the quarter, we will draw on an interdisciplinary scholarship that approaches the central question of how and why thinking about urban life in relation to gender and sex matters.

Instructor(s): Sneha Annavarapu Terms Offered: Spring

Note(s): This course counts as a Foundations course for GNSE majors

Equivalent Course(s): ARCH 22105, SOCI 28088, GLST 22105, GNSE 12105

ENST 12300. Global Warming: Understanding the Forecast. 100 Units.

This course presents the science behind the forecast of global warming to enable the student to evaluate the likelihood and potential severity of anthropogenic climate change in the coming centuries. It includes an overview of the physics of the greenhouse effect, including comparisons with Venus and Mars; an overview of the carbon cycle in its role as a global thermostat; predictions and reliability of climate model forecasts of the greenhouse world. This course is part of the College Course Cluster program, Climate Change, Culture, and Society. (L)

Instructor(s): D. MacAyeal Terms Offered: Not offered in 2020-21.

Prerequisite(s): Some knowledge of chemistry or physics helpful.

Equivalent Course(s): GEOS 13400, PHSC 13400, ENSC 13400

ENST 12402. Life Through a Genomic Lens. 100 Units.

The implications of the double helical structure of DNA triggered a revolution in cell biology. More recently, the technology to sequence vast stretches of DNA has offered new vistas in fields ranging from human origins to the study of biodiversity. This course considers a set of these issues, including the impact of a DNA perspective on the legal system, on medicine, and on conservation biology.

Instructor(s): A. Turkewitz, M. Nobrega Terms Offered: Winter

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

Equivalent Course(s): BIOS 11125

ENST 13300. The Atmosphere. 100 Units.

This course introduces the physics, chemistry, and phenomenology of the Earth's atmosphere, with an emphasis on the fundamental science that underlies atmospheric behavior and climate. Topics include (1) atmospheric composition, evolution, and structure; (2) solar and terrestrial radiation in the atmospheric energy balance; (3) the role of water in determining atmospheric structure; and (4) wind systems, including the global circulation, and weather systems.

Instructor(s): D. Abbot Terms Offered: Spring

Prerequisite(s): MATH 13100-MATH 13200

Equivalent Course(s): ENSC 13300, GEOS 13300

ENST 13410. Global Warming: Understanding the Forecast (Flipped Class) 100 Units.

This course presents the science behind the forecast of global warming to enable the student to evaluate the likelihood and potential severity of anthropogenic climate change in the coming centuries. It includes an overview of the physics of the greenhouse effect, including comparisons with Venus and Mars; predictions and reliability of climate model forecasts of the greenhouse world. This course is part of the College Course Cluster program, Climate Change, Culture, and Society. This course covers the same material as PHSC 13400, but is organized using a flipped classroom approach in order to increase student engagement and learning.

Instructor(s): D. Abbot Terms Offered: Autumn Spring

Prerequisite(s): Some knowledge of chemistry or physics helpful.

Equivalent Course(s): ENSC 13410, PHSC 13410, GEOS 13410

ENST 16603. Rome: The Eternal City. 100 Units.

The city of Rome was central to European culture in terms both of its material reality and the models of political and sacred authority that it provided. Students in this course will receive an introduction to the archaeology and history of the city from the Iron Age to the early medieval period (ca. 850 BCE-850 CE) and an overview of the range of different intellectual and scientific approaches by which scholars have engaged with the city and its legacy. Students will encounter a broad range of sources, both textual and material, from each period that show how the city physically developed and transformed within shifting historical and cultural contexts. We will consider how various social and power dynamics contributed to the formation and use of Rome's urban space, including how neighborhoods and residential space developed beyond the city's more famous monumental areas. Our main theme will be how Rome in any period was, and still is, a product of both its present and past and how its human and material legacies were constantly shaping and reshaping the city's use and space in later periods.

Instructor(s): Margaret Andrews Terms Offered: Spring

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): HIST 16603, ARCH 16603, CLCV 24119, ANTH 26115

ENST 20104. Urban Structure and Process. 100 Units.

This course reviews competing theories of urban development, especially their ability to explain the changing nature of cities under the impact of advanced industrialism. Analysis includes a consideration of emerging metropolitan regions, the microstructure of local neighborhoods, and the limitations of the past American experience as a way of developing urban policy both in this country and elsewhere.

Instructor(s): M. Garrido Terms Offered: Spring

Equivalent Course(s): GEOG 22700, GEOG 32700, ARCH 20104, SOCI 20104, SOSC 25100, CRES 20104, SOCI 30104

ENST 20150. Sustainable Urban Development. 100 Units.

The course covers concepts and methods of sustainable urbanism, livable cities, resiliency, and smart growth principles from a social, environmental and economic perspective.

Instructor(s): Evan Carver Terms Offered: Spring Winter

Note(s): ENST 21201 and 20150 are required of students who are majoring in Environmental and Urban Studies and may be taken in any order.

Equivalent Course(s): ARCH 20150, PBPL 20150, GLST 20150

ENST 20160. Cities on Screen. 100 Units.

How do the movies shape our collective imagination about cities? Why do we so often turn to them for visions of disaster and dystopia, on the one hand, or a futuristic utopia on the other? How has film responded to cities in the past, and how can it help investigate our present urban condition? How can film be understood as a tool for exploring what a city is? In this seminar, we will watch and discuss feature films in which the built environment or urban issues play important roles. Students will improve their film literacy -- learning not just what a film does but how it does it -- and understand applications for film in the analysis of social, spatial, temporal, and immersive phenomena, as well as how it can help inspire and communicate design more effectively. For more information, contact Evan Carver (ehc@uchicago.edu).

Instructor(s): Evan Carver Terms Offered: Winter

Equivalent Course(s): ARCH 20160

ENST 20170. Pandemics, Urban Space, and Public Life. 100 Units.

Much of the cultural vibrance, economic strength, and social innovation that characterizes cities can be credited to their density. Put simply, cities bring people together, and togetherness allows for complex and fruitful exchange. But togetherness also brings risks, notably from infectious disease. A pandemic feeds on propinquity. "Social distance," while

a short-term public health imperative, is antithetical to the very idea of the urban. In this seminar, we will explore these competing tensions in light of current and past disease outbreaks in urban settings. Drawing on a range of texts from history, design theory, sociology, and anthropology, as well as cultural artifacts like film, graphic memoir, and photography, we will engage questions like: How are the risks of contagion balanced with the benefits of density? How are such risks distributed throughout society? What creative responses have architects, urban designers, and planners brought to this challenge? Most importantly, how can we respond constructively to the challenge of pandemic to create cities where the benefits of togetherness are maximized, perhaps even improved on compared with the pre-outbreak condition? Students will have the opportunity to propose design or policy interventions to help their own communities cope with the present coronavirus/COVID-19 crisis as it is unfolding and to return to post-pandemic life more vibrant than ever.

Instructor(s): Evan Carver Terms Offered: Autumn Spring

Equivalent Course(s): ARCH 20170, PBPL 20170, GEOG 20170, HLTH 20170

ENST 20180. Writing the City. 100 Units.

How do great writers convey sense-of-place in their writing? What are the best ways to communicate scientific and social complexity in an engaging, accessible way? How can we combine academic rigor with journalistic verve and literary creativity to drive the public conversation about urgent environmental and urban issues? These are just some of the questions explored in WRITING THE CITY, an intensive course dedicated to honing our skills of verbal communication about issues related to the built and natural environments. Students will research, outline, draft, revise, and ultimately produce a well-crafted piece of journalistic writing for publication in the program's new annual magazine. Throughout the quarter we will engage intensely with a range of authors of place-based writing exploring various literary and journalistic techniques, narrative devices, rhetorical approaches and stylistic strategies.

Instructor(s): Evan Carver Terms Offered: Autumn

Prerequisite(s): At least one ENST, GEOG, or ARCH course; or one PBPL, ARTH, ANTH, or SOCI course with an urban focus; or instructor permission. Please contact ehc@uchicago.edu with questions.

Equivalent Course(s): ARCH 20180

ENST 20185. Visualizing the City. 100 Units.

An underlying principle of all modern inquiry is to "make the unseen seen." But all too often, the phrase is thrown about as a meaningless cliché or, even worse, is used as an excuse for obfuscation. In VISUALIZING THE CITY, we reclaim the mandate to "make the unseen seen" by taking the cliché literally: we will restore the potential of excellent visual communication in the context of urban and environmental studies, culminating in the production of a print and online magazine for the program. Throughout this hands-on course, students will explore theories of visibility and visual communication and then apply various visualization tools to document, analyze, and communicate aspects of the built environment. Students will learn the fundamentals of software applications (such as Illustrator, InDesign, and Photoshop), web design, image editing, drawing, graphic advertising, layout, and page design. Special attention will be given to representing 2- and 3-dimensional space (i.e., cartography and drafting). Small exercises will build toward the final publication, with students acting as the production team, thereby coordinating technical skills with organization, management, communication, ethics, and teamwork.

Instructor(s): Evan Carver Terms Offered: Winter

Equivalent Course(s): ARCH 20185

ENST 20209. An Environmental History of Africa, 1800-2016. 100 Units.

For much of the twentieth century the African environment has been a story of decline and degradation—a narrative of how Africans have consistently destroyed their pristine environments. Images of soil erosion, desiccation, deforestation, and famines have, in part, shaped Western perceptions of Africa. This course will consider an alternative perspective of Africa's environment by focusing on the dynamic and complex processes of environmental change from the precolonial period to the present. We will draw on historical texts, novels, and films from multiple regions on the continent to explore how Africans understood, exploited, and managed their natural environments. By adopting an African "point of view," this course will attempt to address some of the grave misconceptions that have led so many to believe that Africa was and continues to be a "Dark Continent." Students will be encouraged to think critically about the meaning of "environmental crisis" and how that trope has served various political and cultural projects over time. But we will also seriously consider the ways in which human beings have taxed natural resources in ways that have produced profound short- and long-term consequences.

Equivalent Course(s): HIST 20209

ENST 20224. Virtual Ethnographic Field Research Methods. 100 Units.

"Virtual worlds are places of imagination that encompass practices of play, performance, creativity and ritual." - Tom Boellstorff, from *Ethnography and Virtual Worlds: A Handbook of Method* This course is designed to provide students in the social sciences with a review of ethnographic research methods, exposure to major debates on ethnographic research, opportunities to try their hand at practicing fieldwork virtually, and feedback on a proposed study that employs ethnographic methods. By way of analyzing and problematizing enduring oppositions associated with ethnographic fieldwork - field/home, insider/outsider, researcher/research subject, expert/novice, 'being there'/removal - this seminar is a practicum in theoretically grounded and critically reflexive qualitative methods of research. By introducing students to participant observation and interviews in virtual worlds, ethics, data analysis and writing up, the course offers an opportunity to make sense of the current pandemic we're all experiencing in real time. An emphasis will be placed on multimedia, digital, and virtual ethnography."

Terms Offered: Summer

Equivalent Course(s): SOSC 30224, SOCI 20515, ANTH 31432, ANTH 21432, SOSC 20224, GLST 26220

ENST 20250. Introduction to Statistical Concepts and Methods. 100 Units.

Statistical techniques offer psychologists a way to build scientific theories from observations we make in the laboratory or in the world at large. As such, the ability to apply and interpret statistics in psychological research represents a foundational and necessary skill. This course will survey statistical techniques commonly used in psychological research. Attention will be given to both descriptive and inferential statistical methodology.

Instructor(s): TBD Terms Offered: Winter

Prerequisite(s): It is recommended that students complete MATH 13100 and MATH 13200 (or higher) before taking this course.

Equivalent Course(s): EDSO 20250, PSYC 20250

ENST 20300. The Science, History, Policy, and Future of Water. 100 Units.

Water is shockingly bizarre in its properties and of unsurpassed importance throughout human history, yet so mundane as to often be invisible in our daily lives. In this course, we will traverse diverse perspectives on water. The journey begins with an exploration of the mysteries of water's properties on the molecular level, zooming out through its central role at biological and geological scales. Next, we travel through the history of human civilization, highlighting the fundamental part water has played throughout, including the complexities of water policy, privatization, and pricing in today's world. Attention then turns to technology and innovation, emphasizing the daunting challenges dictated by increasing water stress and a changing climate as well as the enticing opportunities to achieve a secure global water future.

Instructor(s): Seth Darling Terms Offered: Winter. Not offered in 2020-2021

Prerequisite(s): None

Equivalent Course(s): ANTH 22131, MENG 20300, HIPS 20301, GLST 26807, HIST 25426

ENST 20510. Introduction to Spatial Data Science. 100 Units.

Spatial data science consists of a collection of concepts and methods drawn from both statistics and computer science that deal with accessing, manipulating, visualizing, exploring and reasoning about geographical data. The course introduces the types of spatial data relevant in social science inquiry and reviews a range of methods to explore these data. Topics covered include formal spatial data structures, geovisualization and visual analytics, rate smoothing, spatial autocorrelation, cluster detection and spatial data mining. An important aspect of the course is to learn and apply open source software tools, including R and GeoDa.

Instructor(s): L. Anselin and M. Kolak Terms Offered: Autumn

Prerequisite(s): STAT 22000 (or equivalent), familiarity with GIS is helpful, but not necessary

Equivalent Course(s): SOCI 30253, MACS 54000, SOCI 20253, GEOG 20500, GEOG 30500

ENST 20805. Cities and Urban Space in the Ancient World. 100 Units.

Cities have been features in human landscapes for nearly six thousand years. This course will explore how cities became such a dominant feature of settlement patterns in the ancient Mediterranean and Near East, ca. 4,000 BCE-350 CE. Was there an "Urban Revolution," and how did it start? What various physical forms did cities assume, and why did cities physically differ (or not) from each other? What functions did cities have in different cultures of the past, and what cultural value did "urban" life have? How do past perspectives on cities compare with contemporary ones? Working thematically and using theoretical and comparative approaches, this course will address various aspects of ancient urban space and its occupation, with each topic backed up by in-depth analysis of concrete case studies.

Instructor(s): M. Andrews Terms Offered: Spring

Equivalent Course(s): HIST 20805, HIST 30805, CLAS 36618, CLCV 26618, ANCM 36618, ARCH 20805

ENST 21020. Is Humanity Doomed? 100 Units.

This class explores the possibilities and perils of continued human existence on Earth. Taking climate change as a launching point, the class investigates the features of collective human life that make its prolonged existence a perennial challenge. The texts include those on challenges unique to the environment, like Stephen Gardiner's *A Perfect Moral Storm* and Jared Diamond's *Collapse*, as well as philosophical and religious theories of progress and their skeptics, centering class discussions on sources of hope and reasons for doubt about the human future. A central question of the course is whether climate change is unique or whether there are characteristics of human beings and human society (freedom, sin, tragedy) that make threats like it inevitable.

Instructor(s): David Barr Terms Offered: Spring

Equivalent Course(s): RLST 21020

ENST 21201. Human Impact on the Global Environment. 100 Units.

The goal of this survey course is to analyze the impact of the human enterprise on the world that sustains it. Topics include human population dynamics and historical trends in global impact, with most of the course focusing on how humans have altered the Earth system through a variety of processes (including climate change, air, water, nutrient cycling, pollution/novel entities, biodiversity, and land use). We read and discuss diverse sources, write short analytical papers, and a final argument based research paper.

Instructor(s): Alison Anastasio Terms Offered: Autumn Spring

Note(s): ENST 21201 and 20150 are required of students who are majoring in Environmental Studies and may be taken in any order.

ENST 21220. Cities Through Space and Time. 100 Units.

This course introduces you to cities. What are cities? Where do they come from? How do they work? In Calvino's words, what are the "invisible reasons that make cities live"? And, crucially, how can cities be better than they are today? In investigating these questions, we will explore the spatial, economic, cultural, political, and social aspects of cities, including topics like industrialization, transportation technologies, social movements, gentrification, and environmental design. We

will examine case studies drawn from both the Global North and South that will help us see how the ideas we explore are being worked out in actual practice in cities, and we will also explore the qualitative, quantitative, and spatial tools used for studying cities. Class sessions will involve a mix of (interactive) lectures, discussion, and exercises. Outside class, the primary work will be reading selected texts and writing responses. There will also be a midterm and a final exam.

Instructor(s): Evan Carver Terms Offered: Autumn

Note(s): Not offered during the 2020-21 academic year.

Equivalent Course(s): PBPL 21220, GEOG 21221

ENST 21301. Making the Natural World: Foundations of Human Ecology. 100 Units.

Humans have "made" the natural world both conceptually, through the creation of various ideas about nature, ecosystem, organism, and ecology, and materially, through millennia of direct action in and on the landscape. In this course we will consider the conceptual underpinnings of contemporary Western notions of nature, environment, and balance, through the examination of specific historical trajectories of anthropogenic landscape modification and human society. Taking examples from current events we will evaluate the extent and character of human entanglement with the environment. ENST 21201 and 21301 are required of students who are majoring in Environmental and Urban Studies and may be taken in any order.

Instructor(s): Alison Anastasio Terms Offered: Winter

Equivalent Course(s): ANTH 21303

ENST 21310. Water: Economics, Policy and Society. 100 Units.

Water is inextricably linked to human society. While modern advances in technology and new economic and policy mechanisms have emerged to address water stressors from overconsumption, development pressures, land use changes and urbanization, challenges continue to evolve across the globe. These problems, while rooted in scarcity, continue to become more complex due to myriad human and natural forces. In addition to water quality impairments, droughts and water shortages persist, putting pressure on agricultural production and urban water use, while the increased frequency and severity of rainfall and tropical storms, already being experienced globally, are only projected to grow in intensity and duration under climate change. Students will explore water from the perspective of the social sciences and public policy, with attention on behavioral dimensions of water use and water conservation. Qualitative and quantitative approaches to examining how humans use and affect water will be considered, and a case study using visualizations of campus water data will be conducted by students in the course.

Instructor(s): Sabina Shaikh Terms Offered: Spring

Note(s): No prerequisites but the following courses are recommended prior to enrollment in ENST 21310: one economics course and ENST/MENG 20300: The Science, History, Policy, and Future of Water (Winter 2020) ENST/MENG 20300: The Science, History, Policy, and Future of Water (Winter 2020)

Equivalent Course(s): ECON 16510, LLSO 21310, GLST 21310, PBPL 21310

ENST 21404. Britain in the Age of Steam 1783-1914. 100 Units.

Britain in the Victorian era rose to global dominance by pioneering a new fossil fuel economy. This course explores the profound impact of coal and steam on every aspect of Victorian society, from politics and religion to industrial capitalism and the pursuit of empire. Our historical investigation also serves a second purpose by helping us see our own fossil-fuel economy with fresh eyes through comparison with Victorian energy use. Assignments include short essays based on energy "field work" and explorations in material culture.

Instructor(s): F. Albritton Jonsson Terms Offered: Spring

Equivalent Course(s): LLSO 21404, HIST 21404, HIST 31404, CHSS 31404, HIPS 21404

ENST 21440. (Re)constructing Nature: Restoration Ecology in a Time of Climate Change. 100 Units.

Restoration ecologists, environmental professionals, and average citizens all participate in the process of habitat restoration. How does this interdisciplinary practice balance the priorities of ecosystem function and services, conservation of imperiled species and habitats, aesthetic appeal, and human use in a dynamic climate? In this course students will gain a broad overview of the field of restoration ecology and approach it from scientific, practical, and humanistic perspectives using scientific literature, case studies, and planning documents.

Instructor(s): Alison Anastasio Terms Offered: Autumn

Note(s): Not offered in Autumn of the 2020-21 academic year.

ENST 21700. Applied Research in Environment, Development and Health. 100 Units.

This course engages students in collaborative research on topics that connect the environment, health, agriculture and development. After identifying a shared theme, students will design and commence a plan of research with the goal of producing content including reading lists, research and policy briefs, data visualizations, maps, blog posts and web content, as well as creative media such as podcasts. Students will also apply their findings to programming surrounding the Frizzell Speaker and Learning Series for 2020-21 by identifying possible keynote speakers and curating other events. Students are strongly encouraged but not required to enroll in both the autumn and winter courses to gain the full benefit of a sustained research experience.

Instructor(s): Shaikh, Sabina Terms Offered: Autumn

Equivalent Course(s): GEOG 21710, PBPL 21700, GLST 21700

ENST 21800. Economics and Environmental Policy. 100 Units.

This course combines basic microeconomic theory and tools with contemporary environmental and resources issues and controversies to examine and analyze public policy decisions. Theoretical points include externalities, public goods, common-property resources, valuing resources, benefit/cost analysis, and risk assessment. Topics include pollution, global climate change, energy use and conservation, recycling and waste management, endangered species and biodiversity, nonrenewable resources, congestion, economic growth and the environment, and equity impacts of public policies.

Instructor(s): S. Shaikh Terms Offered: Autumn

Prerequisite(s): ECON 19800 or higher, or PBPL 20000

Note(s): Not offered in Autumn of the 2020-21 academic year.

Equivalent Course(s): ECON 16520, PBPL 21800, LLSO 26201

ENST 22209. Philosophies of Environmentalism and Sustainability. 100 Units.

Many of the toughest ethical and political challenges confronting the world today are related to environmental issues: for example, climate change, loss of biodiversity, the unsustainable use of natural resources, pollution and toxic waste, and other threats to the well-being of both present and future generations. Using both classic and contemporary works, this course will highlight some of the fundamental and unavoidable philosophical questions presented by such environmental issues. Does the environmental crisis demand radically new forms of ethical and political philosophizing and practice? Must an environmental ethic reject anthropocentrism? If so, what are the most plausible non-anthropocentric alternatives? What counts as the proper ethical treatment of non-human animals, living organisms, or ecosystems? What do the terms "nature" and "wilderness" even mean, and should "natural" environments as such have ethical and/or legal standing? What fundamental ethical and political perspectives inform such approaches as the "Land Ethic," ecofeminism, and deep ecology? Is there a plausible account of environmental justice applicable to both present and future generations? Are we now in the Anthropocene, and if so, is "adaptation" the best strategy at this historical juncture? How can the wild, the rural, and the urban all contribute to a better future for Planet Earth? (A)

Instructor(s): B. Schultz Terms Offered: Autumn

Note(s): Field trips, guest speakers, and special projects will help us philosophize about the fate of the earth by connecting the local and the global. Please be patient with the flexible course organization! Some rescheduling may be necessary in order to accommodate guest speakers and the weather!

Equivalent Course(s): HMRT 22201, PLSC 22202, PHIL 22209

ENST 22300. South Side Ecologies. 100 Units.

South Side Ecologies is a project based course offered every other spring on an environmental topic of concern to communities on the South Side of Chicago. During the first half of the class we will use scholarly and popular sources to understand the background and extent of the issue, while the second half will engage with expert partners to execute a project in their area of need. Due to the experiential nature of this course, while we will strive to have class meetings in the official time and place, students should expect they may need to attend meetings, interviews, guest lectures, or other activities at other times and locations during the week. Every effort will be made to accommodate the needs and schedules of students in the course. In 2019, we will focus on the confluence of history, culture, industry, nature, recreation, and the narratives that weave them together, on the South East Side of Chicago. In particular, we will be collaborating with the Chicago Park District and community stakeholders to research and develop interpretive materials for parks in the Calumet region, including Steelworkers Park and Big Marsh.

Instructor(s): Alison Anastasio Terms Offered: Spring. Every other spring

ENST 22310. The Commons: Environment and Economy in Early Modern Europe. 100 Units.

Drawing on case studies from Europe and the Atlantic world, this course will track changes in land use and property rights over the early modern period (ca. 1500-1800), inviting students to reflect on the relationship between natural environments (woodlands, waterways, pasture) and histories of state formation, economic growth, rebellion, and colonialism. Organizing concepts and debates will include the tragedy of the commons, moral economies, sustainability and scarcity, the "organic economy" of the old regime, primitive accumulation, and economic takeoff. Readings will encompass classic works in agrarian, environmental, and social history (i.e., Marc Bloch, E. P. Thompson, Silvia Federici, James Scott, Carolyn Merchant) as well as primary documents and contemporary texts (i.e., More, Bacon, Smith, Paine, Babeuf). We will also reflect on how these histories bear on debates about land use and natural resources in the present day.

Instructor(s): O. Cussen Terms Offered: Winter

Equivalent Course(s): HIPS 22310, HIST 22310, LLSO 22310

ENST 22330. Flooding the World: Creation and Restoration in the Levant, Mesopotamia, and India. 100 Units.

From Genesis to the Epic of Gilgamesh and the Rig Veda to modern novels like Geraldine McCaughrean's *Not the End of the World* (2004) and Jeanette Winterson's *Boating for Beginners* (1997), humans have repeatedly accounted for, imagined, and ironized civilizational collapse and restoration through stories of catastrophic floods. These texts, modern and ancient, are fraught with political, religious, and historical background. In this course, we will compare these texts, focusing on literary issues like narrative plot, the construction of characters, the literary devices used, and the role of the narrator in telling the story of the flood. We will attempt to ascertain why imaginings of a deluge are generative, while being attuned to the complex differences between the ancient narratives and their significantly different afterlives. Through sustained inquiry, we will both challenge notion of sacred exceptionalism even while confronting the enduring presence of this trope in the post-modern novel.

Instructor(s): Cathleen Chopra-McGowan Terms Offered: Winter

Equivalent Course(s): JWSC 26030, SALC 22330, RLST 22330

ENST 22425. The Ghosts of Hunger: Global Food Insecurities Past and Present. 100 Units.

Today, both sides of the political debate take aim at America's dependency on external sources of food, labor, manufacturing and energy (resources that academics sometimes refer to as "ghost" acres, labor, etc.). The Global South, in short, plays a key role in fueling and sustaining the rapid, dramatic, and on-going domestic growth of so-called "industrialized" countries. As early as the 1960s, ecologists such as Georg Borgstrom warned about patterns of economic and population growth that drew beyond the limits of domestic ecology with the help of imports from land-rich developing nations. This course will explore the origins of the contemporary global food system, critique theoretical frameworks for understanding and justifying the current global agricultural commodities trade, and compare alternative visions of its future. Case studies will include

the emergence of British imperial wheat-beef markets, the trans-Atlantic cotton trade through the Civil War, the westward migration of forest-based smelting, and the movements of American textile manufacturing and protein production to the global East and South. Theoretical frameworks will include core/periphery relationships; frontier expansion; the Malthusian and Smithian limits of self-sufficient and regionally specialized growth; and trade dependency theory.

Instructor(s): Amy Coombs Terms Offered: Winter

ENST 22611. Paris from 'Les Misérables' to the Liberation, c. 1830-1950. 100 Units.

Starting with the grim and dysfunctional city described in Victor Hugo's "Les Misérables," the course will examine the history of Paris over the period in which it became viewed as the city par excellence of urban modernity through to the testing times of Nazi occupation and then liberation (c. 1830-1950). As well as focussing on architecture and the built environment, we will examine the political, social, and especially cultural history of the city. A particular feature of the course will be representations of the city-literary (Victor Hugo, Baudelaire, Zola, etc.) and artistic (impressionism and postimpressionism, cubism, surrealism). We will also examine the city's own view of itself through the prism of successive world fairs (expositions universelles).

Instructor(s): C. Jones Terms Offered: Spring

Prerequisite(s): Students taking FREN 22620/32620 must read texts in French.

Equivalent Course(s): HIST 22611, ARCH 22611, HIST 32611, FREN 22620, FREN 32620

ENST 22708. Planetary Britain, 1600-1900. 100 Units.

What were the causes behind Britain's Industrial Revolution? In the vast scholarship on this problem, one particularly heated debate has focused on the imperial origins of industrialization. How much did colonial resources and markets contribute to economic growth and technological innovation in the metropole? The second part of the course will consider the global effects of British industrialization. To what extent can we trace anthropogenic climate change and other planetary crises back to the environmental transformation wrought by the British Empire? Topics include ecological imperialism, metabolic rift, the sugar revolution, the slave trade, naval construction and forestry, the East India Company, free trade and agriculture, energy use and climate change.

Equivalent Course(s): HIPS 22708, CHSS 32708, HIST 22708, KNOW 32808, KNOW 22708, HIST 32708

ENST 23100. Environmental Law. 100 Units.

This course will examine the bases and assumptions that have driven the development of environmental law, as well as the intersection of this body of law and foundational legal principles (including standing, liability, and the Commerce Clause). Each form of lawmaking (statutes, regulations, and court decisions) will be examined, with emphasis on reading and understanding primary sources such as court cases and the laws themselves. The course also analyzes the judicial selection process in order to understand the importance of how the individuals who decide cases that determine the shape of environmental law and regulations are chosen.

Instructor(s): R. Lodato Terms Offered: Winter

Prerequisite(s): Third- or fourth-year standing, or consent of instructor

Equivalent Course(s): PBPL 23100, LLSO 23100

ENST 23289. Marine Ecology. 100 Units.

This course provides an introduction into the physical, chemical, and biological forces controlling the function of marine ecosystems and how marine communities are organized. The structures of various types of marine ecosystems are described and contrasted, and the lectures highlight aspects of marine ecology relevant to applied issues such as conservation and harvesting.

Instructor(s): T. Wootton Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and prior introductory course in ecology or consent of instructor.

Equivalent Course(s): BIOS 23289

ENST 23321. Writing and Reading Space(s) in the Italian Renaissance. 100 Units.

This course offers an introduction to the study of the Renaissance in Italian literature. A defining movement in the history of European culture and civilization, the Renaissance is best known for its rediscovery of classical antiquity, its achievements in the arts, literature, philosophy, exploration etc., as well as for the rise of a modern sense of self. Italy represents the gateway to the study of the Renaissance as it was the birthplace of many of its key protagonists. In this course, students will become familiar with some of the major male and female representatives of the Italian Renaissance. From Petrarch to Alberti, from Lorenzo de' Medici to Ficino, from Machiavelli to Michelangelo, from Vittoria Colonna to Moderata Fonte, we will situate their writings against the discrete geographical, political, and cultural backdrops that engendered them.

Thematically, the class will focus on the issue of space and the relationship between authors and the built environment. We will compare/contrast the physical milieux in which texts were produced (city/countryside, courts etc.), as well as look at how real and imaginary spaces were represented in literary form in order to examine how location both informs and affects the production of literary works. Lastly, we will engage with manuscripts and early printed editions of these texts during our in-and-off campus visits to the Special Collections at The University of Chicago Library and the Newberry Library.

Instructor(s): E. Baldassarre Terms Offered: Winter

Note(s): Taught in Italian.

Equivalent Course(s): ARCH 23321, ARTH 23321, ITAL 23321

ENST 23500. Political Sociology. 100 Units.

This course provides analytical perspectives on citizen preference theory, public choice, group theory, bureaucrats and state-centered theory, coalition theory, elite theories, and political culture. These competing analytical perspectives are assessed in

considering middle-range theories and empirical studies on central themes of political sociology. Local, national, and cross-national analyses are explored. The course covers readings for the Sociology Ph.D. Prelim exam in political sociology.

Instructor(s): T. Clark Terms Offered: Spring

Prerequisite(s): Completion of the general education requirement in the social sciences

Equivalent Course(s): SOCI 30106, SOCI 20106, PBPL 23600

ENST 23505. Environmental Ethics. 100 Units.

This course examines foundational issues of environmental ethics. What kind of values (economic, aesthetic, existence) are important? What kind of value do individual biota, humans, other species, ecosystems, humans, or inorganic entities have? What is the relationship of humans to the rest of the world? What should it be? Do religious and philosophical traditions contribute to or help address environmental degradation?

Instructor(s): S. Fredericks Terms Offered: Winter

Equivalent Course(s): RLST 23505

ENST 23550. Urban Ecology and the Nature of Cities. 100 Units.

Urban ecology is an interdisciplinary field derived from the academic discipline of ecology. How well does classical ecological theory, typically formed from reductionist views of nature without humans, describe and predict patterns in human-dominated landscapes? Students will learn fundamental concepts in ecological theory, examine how these concepts apply to urban systems, and explore the paradigms of ecology in, of, and for cities. Readings and discussions will focus on classical research papers from the ecological literature, history of modern ecology, and contemporary approaches to studying biotic systems in cities.

Instructor(s): Alison Anastasio Terms Offered: Winter

Equivalent Course(s): PBPL 23550

ENST 23807. Toxic: Body Burdens and Environmental Exposures. 100 Units.

Toxicity is a pervasive and often elusive presence in our lives today. In this seminar class, we begin to address this condition by asking: what exactly is toxic? Who bears the burden of this classification? And, how then, are these understandings of toxicity defined and deployed in broader historical, political, and scientific contexts? From these preliminary questions, we explore the pathways through which toxic exposure, contamination, and fallout accumulates in disproportionate and uneven ways, especially for minoritized populations and upon Indigenous territories. Drawing upon a variety of social science literature and community-based research we trace these challenges through overlapping structures of race, class, gender, citizenship, and coloniality. This transnational and interdisciplinary orientation will acquaint students with case studies of exposure across different scales and geographies, from Chernobyl to Chicago. Through mixed approaches of ethnography and media curation, students will also have the opportunity to research and document their own cases studies of body burdens and environmental exposure.

Instructor(s): Teresa Montoya Terms Offered: Autumn. Autumn 2020

Equivalent Course(s): HLTH 23807, ANTH 23807, CRES 23807

ENST 23811. Facing Climate Change in the Global South. 100 Units.

Reckoning with climate change often leads to an appeal to a common humanity that is on the brink of annihilation. The call is to act together to stall the harmful effects we as a species have had on the planet. This course will critically interrogate the social, political, racial inequalities that such a rhetoric evades. Reading ethnographies from different parts of the world, we will examine the causes and consequences of the Global South disproportionately bearing both the impact of environmental degradation and the burden of remedial measures to avert the climate crisis. Taking up four environmental issues, we will ask: what causes environmental inequality, how is it manifested, and what are the consequences - both for people experiencing these inequalities and for effectivity of climate change action? The course will cover: (a) The problem of toxicity and waste in underprivileged communities from New York to New Delhi. (b) The impact of the global quest to save tropical wilderness on local communities that are pitted against prioritized megafauna such as the tigers of the Sundarbans and the elephants of the Zambezi. (c) The inequalities in climate disaster relief, from New Orleans after Hurricane Katrina to Maldives facing sea-level rise (d) The toll on marginal farming communities of the global push towards sustainable, organic food production.

Instructor(s): Suchismita Das Terms Offered: Winter. Winter 2021

Equivalent Course(s): CRES 23811, ANTH 23811

ENST 23900. Environmental Chemistry. 100 Units.

The focus of this course is the fundamental science underlying issues of local and regional scale pollution. In particular, the lifetimes of important pollutants in the air, water, and soils are examined by considering the roles played by photochemistry, surface chemistry, biological processes, and dispersal into the surrounding environment. Specific topics include urban air quality, water quality, long-lived organic toxins, heavy metals, and indoor air pollution. Control measures are also considered. This course is part of the College Course Cluster program: Climate Change, Culture, and Society.

Instructor(s): D. Archer Terms Offered: Autumn

Prerequisite(s): CHEM 11100-11200 or equivalent, and prior calculus course

Equivalent Course(s): GEOS 23900, ENSC 23900, GEOS 33900

ENST 24020. The Place of the Intellectual: Civic Life in Italian Literature and Theory. 100 Units.

This course offers a survey of the notion of civic life in Italian literature and theory, from its beginning(s) to contemporary authors. The topic will be explored through some of the major representatives in Italian intellectual history, actively concerned with the life of the community at the urban, national and transnational level. From Dante to Petrarch, from Renaissance Civic Humanism to Machiavelli, from Vico to Gramsci, from Esposito to Agamben, the focus of the class will be on human sociability and on the forces that enhance or hinder the constitution of communities and collective life. Italy

offers a privileged entry point into the issue of civic life due to its belated national unification and richness in local cultural varieties, traits that makes Italy unique in the European cultural and political landscape. Thematically, the class will look at the relationship between Church and Empire; at forms of communality beyond political institutions, such as friendship and family; at the imagination of ideal cities and utopias; at the effects of disruptive natural and human events on the making/unmaking of human sociability; at literature and popular culture in the constitution of regional and national identities.

Instructor(s): M. Muccione Terms Offered: Spring

Note(s): Taught in English.

Equivalent Course(s): ITAL 24020

ENST 24102. Environmental Politics. 100 Units.

Politics determines not only which particular faction holds power, but the parameters upon which contests for power are conducted. At present, the desirability of economic growth is the universal consensus principle that actors across the political spectrum and national borders agree upon despite their disagreement on the shape that this should take and the beneficiaries of it. This principle overrides any other consideration, including environmental protection and restoration, regardless of the political beliefs of the leader or party in question. This course undertakes a term-long discussion of how the assumptions and practices of politics, policy, and activism would be changed if the protection of the environment was the central organizing principle of the international system, with particular attention to theories that challenge conventional ways of organizing society, economics, and politics.

Instructor(s): R. Lodato Terms Offered: Spring

Equivalent Course(s): PBPL 24102, LLSO 24102

ENST 24106. Introduction to Environmental Ethics. 100 Units.

This course will examine answers to four questions that have been foundational to environmental ethics: Are religious traditions responsible for environmental crises? To what degree can religions address environmental crises? Does the natural world have intrinsic value in addition to instrumental value to humans, and does the type of value the world has imply anything about human responsibility? What point of view (anthropocentrism, biocentrism, theocentrism) should ground an environmental ethic? Since all four of the above questions are highly contested questions, we will examine a constellation of responses to each question. During the quarter we will read texts from a wide variety of religious and philosophical perspectives, though I note that the questions we are studying arose out of the western response to environmental crises and so often use that language. Some emphasis will be given to particularly influential texts, thinkers, and points of view in the scholarship of environmental ethics. As the questions above indicate, the course prioritizes theoretical issues in environmental ethics that can relate to many different applied subjects (e.g. energy, water, animals, climate change) rather than emphasizing these applied issues themselves. Taking this focus will give you the background necessary to work on such issues.

Instructor(s): Sarah Fredericks Terms Offered: Autumn

Equivalent Course(s): KNOW 20702, LLSO 24106, PBPL 20702, RETH 30702, RLST 24106, KNOW 30702

ENST 24190. Imagining Chicago's Common Buildings. 100 Units.

This course is an architectural studio based in the common residential buildings of Chicago and the city's built environment. While design projects and architectural skills will be the focus of the course, it will also incorporate readings, a small amount of writing, some social and geographical history, and several explorations around Chicago. The studio will: (1) give students interested in pursuing architecture or the study of cities experience with a studio course and some skills related to architectural thinking, (2) acquaint students intimately with Chicago's common residential buildings and built fabric, and (3) situate all this within a context of social thought about residential architecture, common buildings, housing, and the city. This course is part of the College Course Cluster program: Urban Design.

Instructor(s): L. Joyner Terms Offered: Autumn

Note(s): Consent is required to enroll in this course. Interested students should email the instructor (Luke Joyner, lukejjoy@uchicago.edu) to briefly explain their interest and any previous experience with the course topics. Students must attend first class to confirm enrollment.

Equivalent Course(s): ARTV 20210, ARTH 24190, GEOG 24190, AMER 24190, ARCH 24190

ENST 24196. Second Nature: New Models for the Chicago Park District. 100 Units.

The Chicago Park District seems to preserve "first nature" within the metropolitan field. But the motive for establishing this sovereign territory was hardly natural. Today, cultural change raises questions about the significance and operation of this immense network of civic spaces. What opportunities emerge as we rethink them? While this design studio focuses on the development of new model parks for Chicago, it can support students coming from a broad range of disciplines. Texts, seminar discussions, and field trips will complement and nourish the development of architectural proposals.

Instructor(s): A. Schachman Terms Offered: Spring

Equivalent Course(s): GEOG 24196, ARTH 24196, ARCH 24196, ARTV 20206

ENST 24201. China's Eco-Environmental Challenges and Society's Responses. 100 Units.

In nearly four decades of reform and opening policies, China's economic achievements have come at a high cost for its ecological environment; air pollution, water pollution, and soil contamination, among other problems, are facts of life for most Chinese citizens. In addition, China is now the world's biggest emitter of carbon dioxide and has recently acknowledged its contributions to global warming and the need for drastic mitigation of greenhouse gases. Facing these tremendous challenges, remarkable shifts in the way that Chinese society communicates and tackles these problems are occurring. This seminar will look, in particular, at relevant public debates, crucial policies, as well as popular initiatives and protest, to approach this wide topic. How is the relationship between humans/society and nature/environment conceptualized and communicated? Can we detect shifts from traditional to modern, even contemporary 'Chinese approaches'? And to what extent and how do political authorities, media, the general population and scientists in China interact in the face of the

acknowledged risks that environmental pollution poses to communities, to China's (economic) development and, not least, to individual health and well-being. Basic knowledge about modern Chinese society and politics as well as Chinese reading skills are helpful, but not a strict requirement for participation in this course.

Instructor(s): A.L. Ahlers Terms Offered: Autumn

Equivalent Course(s): EALC 24201, EALC 34201

ENST 24214. Cities in Modern China: History and Historiography. 100 Units.

China's shift from a predominantly rural country to an urban majority is one of the greatest social and demographic transformations in world history. This course begins with the roots of this story in the early modern history of China's cities and traces it through a series of momentous upheavals in the nineteenth and twentieth centuries. We will learn about how global ideas and practices contributed to efforts to make Chinese cities "modern," but also how urban experiences have been integral to the meaning of modernity itself. We will discuss urban space, administration, public health, commerce and industry, transportation, foreign relations, and material culture. In addition to tackling these important topics in urban history and tracing the general development of Chinese cities over time, another primary concern of our course will be the place of urban history in English-language scholarship on Chinese history more broadly. We will track this development from Max Weber's observations on Chinese cities through the rise of "China-centered" scholarship in the 1970s to the "global turn" of the 2000s. Students will develop the skills necessary for writing an effective historiography paper, i.e., doing background research, writing annotated bibliographies, and using citation-management software. Students will put these skills to work by writing a critical historiographical review of scholarship on a topic of their choice.

Instructor(s): D. Knorr Terms Offered: Spring

Prerequisite(s): Students taking ARCH 24214 should explain the relationship between their final projects and architectural studies.

Equivalent Course(s): GLST 24214, ARCH 24214, HIST 24214, EALC 24214

ENST 24233. Food Politics in a Global World. 100 Units.

"Food Politics" means so many things: Trust, risk, danger. Safety, regulation, retail, and consumption across wildly different scales: global, (trans)national, urban, regional, local, distant, foreign. Diets, fasts, binges. Canning, refrigeration, cafeterias, farmers' markets, and the cold aisles of supermarkets. Educated consumers, mass panics, and the "distant" bodies of humanitarian aid. In this class, ethnographic and comparative approaches to food politics will be our lens into recognizing, discussing, and thinking about food as a critical site of global politics. We will examine articulations of social differences, performances and performativities of bodies (gendered, migrant, public, private, clandestine, hungry, satiated, healthy, and criminal), transnational battles over regional and local "purity," and sensibilities that do or do not trust sites of economic and/or political authority positioned far away. Indeed, food politics are just as much a window into the investigative and critical potentials of ethnography in a global world as they are a way to recognize the moral, popular, imaginary, and experiential processes at work and constitutive of taken-for-granted political actor-abstractions such as "the state" "the economy" and "the public."

Instructor(s): Czarnecki, Natalja Terms Offered: Winter

Equivalent Course(s): ANTH 25322, GLST 24233

ENST 24302. Early Modern China: An Age of Global Transformation, 1500-1800. 100 Units.

The period between 1500 and 1800 was pivotal in the emergence of the modern world. We tend to focus on Europe and the Americas when we think of the changes that occurred in this period. However, this was also an age of dramatic transformation for China in ways that were connected and/or similar to changes unfolding elsewhere. After reviewing how the legacy of the Mongol conquests shaped early modern Eurasia, we will examine a series of intertwined developments that were characteristic of not only China but also global experiences in this period: population growth, expanded commercial activity, silver imports from the Americas, and the adoption of "New World" crops, such as maize and sweet potatoes. We will then look at how new intellectual currents and major shifts in government policies responded to these new social and economic realities. We will examine two developments—print culture and colonialism—that play important roles in narratives of early modern European history but are no less applicable to Chinese history. Our course will end with a consideration of how the growth of the early modern period generated not only tremendous wealth but also considerable political and ecological challenges that modern actors would struggle to overcome. For the final project, students will design a museum exhibit that focuses on one aspect of China's early modern history and underscores the global interconnectedness of this period.

Instructor(s): D. Knorr Terms Offered: Winter

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): GLST 24302, HIST 14302, EALC 14302

ENST 24340. Political Ecologies of Colonialism: Local and Global. 100 Units.

The rapidly warming planet makes it clear that the natural and human worlds are inseparable and that local ecologies are inextricable from global political and economic processes. While resulting devastation has more recently emerged as global crisis, the assimilation of local landscapes and ecologies into global social processes has a deep history. This class considers the development and intensification of such global connections through the lens of political ecology. It contextualizes local ecological changes wrought by expansive colonial powers - poisoned mountains, mono-cropped landscapes, and disappeared forests - within the emergence of a global economy in the early modern era. The course is roughly divided into two parts. First, it examines the political ecology of colonialism, considering links between extractive practices of land management and the imbalances of power typical of colonial contexts. Secondly, it assesses how the extraction and expansion inherent to colonial projects provided impetus to the emerging global economy from the 16th to 20th centuries, and considers how those historical processes continue to reverberate into the present. While historicizing contemporary environmental issues, students

will be introduced to political ecology, environmental history, 'the Anthropocene' concept, theories of commodification and value, and world systems analysis.

Instructor(s): Raymond Hunter Terms Offered: Spring

Equivalent Course(s): GLST 24340, ANTH 28505

ENST 24550. Urban Ecology in the Great Nearby. 100 Units.

Places like the Great Barrier Reef, Great Smoky Mountains, or Great Outdoors elicit ideas of a nature that is far away and often presumed to be "pristine." Not only are these presumptions worthy of interrogation, but they may limit our understanding of the natural world that is in close proximity to humans. In this course students will use our restricted geographical movement during a pandemic as an opportunity to focus on hyperlocal urban ecology: that of the Great Nearby. What can we learn about our neighborhood and its human and non-human residents through close observation in a finite geographic area? What are the benefits, scientifically and socially, of understanding the Great Nearby? What are the challenges of place-based ecology, especially in scaling up to make regional and global connections? Using an ecological lens to investigate the urban landscape up close, students will learn the importance of observation as it relates to forming hypotheses to understand the world, as well as revealing the urban natural world that we may not have noticed before. Grounded in the rigor of urban ecology, place-based research, long-term monitoring, and their application, students are expected to be actively outdoors in their local urban environment throughout the quarter.

Instructor(s): Alison Anastasio Terms Offered: Autumn

Note(s): Remote course with an expectation that students will be able to make multiple observations weekly in a ~2 block radius of their urban location. If students are in Chicago, some activities/assignments may take place outside (safely, with masks and physical distance) close to campus. Alternative assignments/methods of participation will be available to those who are not in Chicago. This course is intended to be complementary to ENST 23550 and does not require it as a prerequisite.

Equivalent Course(s): GEOG 24550

ENST 24600. Introduction to Urban Sciences. 100 Units.

This course is a grand tour of conceptual frameworks, general phenomena, emerging data and policy applications that define a growing scientific integrated understanding of cities and urbanization. It starts with a general outlook of current worldwide explosive urbanization and associated changes in social, economic and environmental indicators. It then introduces a number of historical models, from sociology, economics and geography that have been proposed to understand how cities operate. We will discuss how these and other facets of cities can be integrated as dynamical complex systems and derive their general characteristics as social networks embedded in structured physical spaces. Resulting general properties of cities will be illustrated in different geographic and historical contexts, including an understanding of urban resource flows, emergent institutions and the division of labor and knowledge as drivers of innovation and economic growth. The second part of the course will deal with issues of inequality, heterogeneity and (sustainable) growth in cities. We will explore how these features of cities present different realities and opportunities to different individuals and how these appear as spatially concentrated (dis)advantage that shape people's life courses. We will show how issues of inequality also have consequences at more macroscopic levels and derive the general features of population and economic growth for systems of cities and nations.

Instructor(s): Luis Bettencourt Terms Offered: Autumn

Prerequisite(s): STAT 22000

Equivalent Course(s): PBPL 24605, GEOG 24600, SOCI 20285, GEOG 34600

ENST 24660. Urban Geography. 100 Units.

This course examines the spatial organization and current restructuring of modern cities in light of the economic, social, cultural, and political forces that shape them. It explores the systematic interactions between social process and physical system. We cover basic concepts of urbanism and urbanization, systems of cities urban growth, migration, centralization and decentralization, land-use dynamics, physical geography, urban morphology, and planning. Field trip in Chicago region required. This course is part of the College Course Cluster, Urban Design.

Instructor(s): M. Conzen Terms Offered: Winter

Note(s): This course offered in even years.

Equivalent Course(s): GEOG 33500, GEOG 23500, ARCH 24660

ENST 24701. U.S. Environmental Policy. 100 Units.

Making environmental policy is a diverse and complex process. Environmental advocacy engages different governmental agencies, congressional committees, and courts, depending on the issue. This course examines how such differentiation has affected policy making over the last several decades.

Instructor(s): R. Lodato Terms Offered: Autumn

Equivalent Course(s): PBPL 24701, LLSO 24901

ENST 24705. Energy: Science, Technology, and Human Usage. 100 Units.

This course covers the technologies by which humans appropriate energy for industrial and societal use, from steam turbines to internal combustion engines to photovoltaics. We also discuss the physics and economics of the resulting human energy system: fuel sources and relationship to energy flows in the Earth system; and modeling and simulation of energy production and use. Our goal is to provide a technical foundation for students interested in careers in the energy industry or in energy policy. Field trips required to major energy converters (e.g., coal-fired and nuclear power plants, oil refinery, biogas digester) and users (e.g., steel, fertilizer production). This course is part of the College Course Cluster program: Climate Change, Culture and Society.

Instructor(s): E. Moyer

Prerequisite(s): Knowledge of physics or consent of instructor.

Note(s): See GEOS 24750/ENSC 21150.

Equivalent Course(s): GEOS 24705, ENSC 21100, GEOS 34705

ENST 24750. Humans in the Earth System. 100 Units.

Human activities now have global-scale impact on the Earth, affecting many major biogeochemical cycles. One third of the Earth's surface is now used for production of food for humans, and CO₂, the waste product of human energy use, now substantially affects the Earth's radiative balance. This course provides a framework for understanding humanity as a component of Earth system science. The course covers the Earth's energy flows and cycles of water, carbon, and nitrogen; their interactions; and the role that humans now play in modifying them. Both agriculture and energy technologies can be seen as appropriation of natural energy flows, and we cover the history over which human appropriations have become globally significant. The course merges geophysical and biological sciences and engineering, and includes lab sessions and field trips to agriculture, water management, and energy facilities to promote intuition. One year of university-level science is recommended.

Terms Offered: Spring

Equivalent Course(s): ENSC 21150, GEOS 34750, GEOS 24750

ENST 24756. Exploring the Resilient City. 100 Units.

In recent years, sub-national units of government have enacted meaningful policy plans in the wake of the ongoing failure of the international community to address global climate change. Cities in particular have shaped their plans to address the now-inevitable effects of climate change by adopting policies that emphasize resilience and environmental protection, without sacrificing economic growth, and with attention to the ongoing challenges of poverty and inequality. This course will take a comparative look at the policies adopted by cities on an international basis, while defining what it means to be a resilient city and how much the built environment can be adjusted to limit the environmental impact of densely populated metropolises. It will also consider what impact citizen activism and input had upon the shape of each plan and the direction that its policies took. Students will also be asked to consider what might be missing from each plan and how each plan could be improved to foster greater resiliency.

Instructor(s): R. Lodato Terms Offered: Course was not offered 2019-2020

Equivalent Course(s): PBPL 24756

ENST 24776. International Environmental Policy. 100 Units.

Environmental issues have become a prominent part of the work of international organizations and their member nations. The international community has recognized the efficacy of multi-national agreements as a method for comprehensive solutions to problems that were once dealt with on a nation-by-nation basis. This course will address such topics as the Montreal Protocol, climate change agreements, and the Law of the Sea treaty, as well as the efforts being undertaken by some leading nations to address present-time environmental challenges.

Instructor(s): R. Lodato Terms Offered: Spring

Equivalent Course(s): PBPL 24776

ENST 24902. The Politics of Plant Life: Edens, Plots, and Ruins. 100 Units.

How do plant ecologies materialize conflicted and incommensurate political formations? How are political ideals, collectivities, or anxieties reflected in the matter and meaning of plant life across its many social guises (as food, magic, medicine, drugs, industrial commodities, mortal enemies, alien invaders, and more)? How might radical attention to the complexities of our lives with plants help us to formulate ethical and political possibilities in the wake of conflicted histories and in midst of uncertain planetary futures? This course explores possibilities for understanding political imaginaries through the lens of plant life. We will attend to the history of social and natural scientific understandings of plant life as these shaped foundational concepts in social and political theory (including concepts of culture, race, gender and sexuality, economy, and history). We will examine how the scientific, military, and commercial transformation of plant natures was central to political projects from 18th century imperialism to 21st century counter-insurgency, from World War to the "War on Drugs," from colonization to climate crisis. This seminar brings together historical sources, classical theoretical texts, and contemporary ethnographic projects with experimental and multi-media materials to explore the history of plant life's entanglement with imagined political histories and futures--apocalyptic, utopian and revolutionary."

Instructor(s): Amy McLachlan Terms Offered: Spring

Equivalent Course(s): ANTH 23806, GLST 24901, ANTH 33809

ENST 25000. The Amazon: Literature, Culture, Environment. 100 Units.

This course proposes a cultural history of the Amazonian region. Through films, novels, visual arts, essays, manifestos, and works on cultural and environmental history, we will explore the history of Amazon from a range of perspectives.

We will examine indigenous cultures and epistemologies, extractivist activities, environmental policies, contemporary literature and film, and a global imagination of the Amazon. Authors and projects may include Claudia Andujar, Gaspar de Carvajal, Bernardo Carvalho, Euclides da Cunha, Heitor Dhalia, Ciro Guerra, Milton Hatoum, Susanna Hecht, Alexander von Humboldt, Davi Kopenawa, Ailton Krenak, Chico Mendes, Daniel Munduruku, Lúcia Sá, Silvino Santos, Candace Slater, Mario Vargas Llosa, Eduardo Viveiros de Castro, Video in the Villages, among others.

Instructor(s): V. Saramago Terms Offered: Spring

ENST 25006. How Things Get Done in Cities and Why. 100 Units.

Innovation. Prosperity. Democracy. Diversity. Cities long have been lauded as unique incubators of these social features. In contrast to the national level, the smaller scale and dense diversity of cities is thought to encourage the development of civic solutions that work for the many. But cities are inhabited by distinct groups of people with divergent interests

and varied beliefs about how to address countless urban issues, such as creating jobs, delivering education, ensuring safe neighborhoods, promoting environmental sustainability, and taking care of the vulnerable. Many groups and organizations have an interest in the outcomes of these processes. Some take action to try to shape them to their own advantage, while others have few chances to make themselves heard. This course examines the social and political dynamics that undergird possible avenues for creating social change in cities, including interest representation, decision-making, and inclusion/exclusion. We will draw insights from multiple disciplines and explore a variety of substantive areas, such as housing, public safety, economic development, education, and the provision of social welfare. This course is part of the College Course Cluster program: Urban Design.

Terms Offered: TBD

Equivalent Course(s): SOCI 20294, PBPL 25006, LLSO 21100, SSAD 21100

ENST 25014. Introduction to Environmental History. 100 Units.

How have humans interacted with the environment over time? This course introduces students to the methods and topics of environmental history by way of classic and recent works in the field: Crosby, Cronon, Worster, Russell, and McNeill, etc. Major topics of investigation include preservationism, ecological imperialism, evolutionary history, forest conservation, organic and industrial agriculture, labor history, the commons and land reform, energy consumption, and climate change. Our scope covers the whole period from 1492 with case studies from European, American, and British imperial history.

Instructor(s): F. Albritton Jonsson Terms Offered: Winter

Equivalent Course(s): HIST 25014, CHSS 35014, HIPS 25014, HIST 35014

ENST 25114. Natural History and Empire, circa 1500-1800. 100 Units.

This course will examine natural history-broadly defined as a systematic, observational body of knowledge devoted to describing and understanding the physical world of plants, animals, natural environments, and (sometimes) people-in the context of European imperial expansion during the early modern era. Natural history was upended by the first European encounters with the New World. The encounter with these new lands exposed Europeans for the first time to unknown flora and fauna, which required acute empirical observation, collection, cataloguing, and circulation between periphery and metropole in order to understand their properties and determine their usefulness. As the Spanish, Portuguese, British, French, and Dutch competed with one another to establish overseas trade and military networks in the sixteenth, seventeenth, and eighteenth centuries, they also competed over and shared information on natural resources. The course will combine lecture and discussion and mix primary source readings on natural history in the early modern world with modern historical writings. Though the readings skew a bit toward Britain and the British Atlantic world, every effort has been made to include texts and topics from multiple European and colonial locales. Topics and themes will include early modern sources of natural history from antiquity and their (re)interpretation in imperial context; early modern collecting cultures and cabinets of curiosities; Linnaeus and the origins of

Instructor(s): J. Niermeier-Dohoney Terms Offered: Autumn

Equivalent Course(s): HIST 25114, HIPS 25114

ENST 25115. Francis Bacon's Philosophy of Nature. 100 Units.

Historians of science have traditionally regarded Francis Bacon (1561-1626) as one of the most prominent seventeenth-century champions of induction, empiricism, and experimental methodology. While these are perhaps his most important contributions to natural philosophy, Bacon and his adherents also exerted a profound influence on Western notions of power over nature and of the possibilities of alteration, manipulation, and exploitation of the natural world. This course will examine some of Bacon's principal works ("The New Organon", "The Advancement of Learning", "The New Atlantis", and "The Great Instauration") in order to first develop an understanding of Bacon's philosophical positions and the changing landscape of natural philosophy in the seventeenth century. Then, we will examine the implications of Bacon's philosophy from his lifetime to the present, focusing particularly on the rise of artisanal and craft knowledge; the emergence of civil institutions for cooperative knowledge making; utopian and cornucopian conceptions of the natural economy; science as the manipulation of nature; the competing and complementary notions of dominion over nature versus environmental stewardship; the practical uses of natural materials during European imperial expansion; the origins of industrialization and technological development; and his influence on modern science, politics, economics, and environmentalism.

Instructor(s): J. Niermeier-Dohoney Terms Offered: Winter

Equivalent Course(s): HIST 25115, HIPS 25115

ENST 25116. Utopia, Dystopia, and the Apocalypse in Western Culture. 100 Units.

This course will examine how Western society has asked and answered questions about potential futures throughout its history. We will look especially at ways in which these questions have been explored through utopian, dystopian, and apocalyptic scenarios within religious, scientific, and political cultures. These narratives have denoted moral righteousness, critiqued the hubris of science and industrialization, and advocated or denounced systems of governance and social organization. They also reveal historical assumptions about human nature, progress, and the relationship between rationality and irrationality. Topics will include Biblical apocalypticism and its influence in the medieval and modern worlds; medieval and early modern millenarianism or the active pursuit of the apocalypse; early modern utopianism and its influence on later utopian writing; modern economic prognostication; modern utopian and dystopian science fiction in literature, film, and television; nineteenth- and twentieth-century socialist and nationalist utopianism and totalitarianism; global catastrophic risks such as asteroid impacts, pandemics, climate change, ecological degradation, and nuclear war; and the increasing importance of science in "futurology" or "future studies," a burgeoning field in the postwar era.

Instructor(s): J. Niermeier-Dohoney Terms Offered: Spring

Equivalent Course(s): HIPS 25116, RLST 25116, HIST 25116

ENST 25117. Natural History of Humans/Human History of Nature. 100 Units.

In this course we will think broadly about human history as a type of natural history and the recent history of nature as a part of the human narrative. Students will be introduced to the concept of "deep time," its discovery by geologists and biologists in the 18th and 19th centuries, and its impact on human history. Topics will include 16th- and 17th-century historiography and Biblical exegesis, geological theories of Hutton, Cuvier, and Lyell, and biological theories of Lamarck and Darwin. We will examine how certain modern sciences have affected historians' approaches. Topics will include how the structure and function of the brain affected kinship development, language acquisition, and social bonding; interpretations of "human nature" by theology, philosophy, anthropology, and psychology; massive time scales and intergenerational governing, justice, and ethics; and geography's role in shaping civilizational development. Finally, we will consider how the rising human impact over natural earth systems may change the way human and civilizational history will be studied going forward. Topics include anthropogenic changes to the biosphere through hunting and agriculture in the ancient world and the globalization of communicable diseases and invasive plant and animal species after 1492; the impact of climate change on modern civilization; the potential that humans are responsible for a new geological epoch; and what "history" looks like without humans.

Instructor(s): J. Niermeier-Dohoney Terms Offered: Spring

Equivalent Course(s): HIPS 25117, HIST 25117

ENST 25218. American Epidemics, Past and Present. 100 Units.

This course explores how disease epidemics have shaped watershed periods in US history from the late eighteenth century to the present. Through readings, lectures, and in-class discussions, we will employ different categories of analysis (e.g., race, gender, class, and citizenship) to answer a range of historical questions focused on disease, health, and medicine. For instance, to what extent did smallpox alter the trajectory of the American Revolution? How did cholera and typhoid affect the lived experiences of slaves and soldiers during the Civil War? In what ways did the US government capitalize on fears over yellow fever and bubonic plague to justify continued interventions across the Caribbean and the Pacific? What do these episodes from the American past reveal about contemporary encounters with modern diseases like HIV/AIDS, Ebola, and COVID-19? Course readings will be drawn from book chapters and scholarly articles, as well as primary sources ranging from public-health reports, medical correspondence, and scientific journals to newspapers, political cartoons, maps, and personal diaries. Grades will be based on participation, weekly Canvas posts, peer review, and a series of written assignments (a proposal and an annotated bibliography, primary source analysis, book review, and rough draft) all of which will culminate in a ten-page final research paper.

Instructor(s): C. Kindell Terms Offered: Winter

Equivalent Course(s): CRES 25218, HIPS 25218, GNSE 25210, GLST 25218, HLTH 25218, HIST 25218, AMER 25218

ENST 25250. Global Disaster Ecologies: Interspecies Exposures and Immunities. 100 Units.

This class explores ecologies that thrive, transform, or collapse under severe anthropogenic pressures. Construing "ecology" and "disaster" broadly, it attends to human and nonhuman interdependencies in contexts at once different and related: (post)war landscapes, sites of modern agriculture and food production, and extreme weather events attributed to global climate change. The class asks: what social and ecological relations become possible, thinkable, and tenable when scientific and experiential facts of natural destruction meet optimistic ideologies of conservation, resilience, and climate finance? Interdisciplinary class readings will place special emphasis on honeybees' collapse and worldwide insect decline.

Instructor(s): Jasarevic, Larisa Terms Offered: Autumn

Equivalent Course(s): GLST 25250, ANTH 24835

ENST 25320. Poverty and Urban Development: the Right to Housing in Latin America. 100 Units.

Bringing a wide variety of disciplinary texts into conversation, this course leads towards a holistic understanding of the historically rooted and globally entangled housing condition of Latin America's urban poor. It encourages students to read along the grain of developmental discourse at different stages of twentieth-century development, thus advancing students' capacity to critically situate and condition global and national policies. The course analytically foregrounds problems of governance, resource distribution, and sociopolitical complexity, providing students with a representative range of case studies from across the subcontinent and interrogating what it means for social and economic goods to be labeled human rights. Throughout the course, students will examine diverse housing arrangements and policies in the context of national, regional, and global development histories. Ultimately, this course advances comprehension of the particularities of contemporary Latin American societies, and that which they share with the Global South and the world at large.

Instructor(s): Gonzalez, Ines Escobar Terms Offered: Spring

Equivalent Course(s): GLST 25320, ANTH 23097

ENST 25422. Struggle and Solidarity: The Politics of Chicago Labor in the 19th and 20th Centuries. 100 Units.

In this course we will question how and why Chicago was important to the way we think about "work." Employment, equity, wages, and security are certainly of debate throughout the nation today, but Chicago has been at the forefront of this contentious conversation for the last two hundred years. In order to better understand the relationship between advancing capitalism, labor politics, the workers' body, exploitation, and resistance we will analyze the Haymarket Massacre, the Chicago Stockyards, and the African-American Pullman Porters. To be sure, laborers built this city with broad shoulders, but also with a commitment to struggle and solidarity that changed the social, political, and economic landscape of the United States and the world forever. What about the confluence of labor and capital sparked these events? How does union organization work on a pragmatic level as well in regards to ideological (re)formation? In what other ways can populations resist oppression? How do class, race, capital, and labor intersect in society over time and why do those relationships shift? What are the differences or similarities regarding labor issues between Chicago and other parts of the world?

Instructor(s): K. Bryce Lowry Terms Offered: Spring, Spring 2021

Equivalent Course(s): ANTH 25422, HIST 28812

ENST 25460. Environmental Effects on Human Health. 100 Units.

Given the increasing human population in urban areas, the effects of urbanization and the urban environment on human health can be particularly profound. In this course, students will be introduced to environmental health issues, research, policy and advocacy. An overview of fundamental concepts in environmental health will be paired with case studies based on current local issues and topical research. Guest-led lectures and discussions will connect biological, chemical, and physical exposures to their real effects on human communities.

Instructor(s): Alison Anastasio Terms Offered: Spring

ENST 25500. Biogeography. 100 Units.

This course examines factors governing the distribution and abundance of animals and plants. Topics include patterns and processes in historical biogeography, island biogeography, geographical ecology, areography, and conservation biology (e.g., design and effectiveness of nature reserves).

Instructor(s): B. Patterson (odd years, lab). L., Heaney (even years, discussion) Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and a course in either ecology, evolution, or earth history; or consent of instructor

Equivalent Course(s): GEOG 35500, GEOG 25500, BIOS 23406, EVOL 45500

ENST 25704. Environmental Justice in Chicago. 100 Units.

This course will examine the development of environmental justice theory and practice through social scientific and ethical literature about the subject. We will focus on environmental justice issues in Chicago including, but not limited to waste disposal, toxic air and water, the Chicago heat wave, and climate change. Particular attention will be paid to environmental racism and the often understudied role of religion in environmental justice theory and practice.

Instructor(s): Sarah Fredericks Terms Offered: Autumn

Equivalent Course(s): RETH 35704, PBPL 25704, KNOW 25704, RLST 25704

ENST 25705. Climate Ethics. 100 Units.

Anthropogenic climate change is the largest challenge facing human civilization. Its physical and temporal scale and unprecedented complexity at minimum require extensions of existing ethical systems, if not new ethical tools. In this course we will examine how religious and philosophical ethical systems respond to the vast temporal and spatial scales of climate change. For instance, common principles of environmental ethics such as justice and responsibility are often reimagined in climate ethics even as they are central to the ethical analysis of its effects. In the course, we will take a comparative approach to environmental ethics, examining perspectives from secular Western philosophy, Christianity (Catholic and Protestant), Buddhist, and Indigenous thought. We will also look at a variety of ethical methods. Throughout the course we will focus on communication about climate change as well as articulating rigorous ethical arguments about its causes and implications.

Instructor(s): Sarah Fredericks Terms Offered: Spring

Equivalent Course(s): RLST 25703

ENST 25841. Global Viral News Lab: Crises, Inequalities, and Pandemic Trajectories of Global news and info. 100 Units.

Through news portals, podcasts, and other media, students will track recent journalistic work on the political, economic, and other forms of social fallout from the COVID-19 pandemic. Ethnic and racial politics, class conflict, and the obsession with quantification have all consistently re-emerged as issues and frequently as dangerous tropes in coverage. Moreover, omnipresent "crisis" narratives often slip into easy justifications for bipartisan corporate bailouts, surveillance, and the unequal access of intricate, amplified social hierarchies. How does clickbait news-making pose threats to an ideology of supposedly unmediated, unfiltered, "just the facts" information-sharing (including in academia)? How do viruses, illness, and health emerge as both news stories and metaphors for understanding the contemporary media and social landscape? In this experimental lab, students will track reporting on the pandemic to think critically about the social construction of narrative.

Instructor(s): Kohl, Owen Terms Offered: Autumn

Equivalent Course(s): GLST 25841

ENST 25910. Introduction to Location Analysis. 100 Units.

Understanding the location of business activities - agricultural, industrial, retail, and knowledge-based - has long been a focus for economic geographers, regional scientists, and urban planners. This course traces the key theories and conceptual models that have been developed over time to explain why economic activities tend to locate where they do. To introduce and explain these theories, this course covers several foundational concepts in economic geography and urban planning, such as: bid-rent theory, locational triangulation, various models of urban structure and growth, urban market areas, transportation, economic restructuring, and the "back-to-the-city" movement. This course incorporates several GIS exercises to teach students the basic principles of location optimization and to help illuminate the foundational theoretical principles of economic geography.

Instructor(s): Kevin Credit Terms Offered: Autumn. Offered 2020-21

Equivalent Course(s): GEOG 25900, GEOG 35900

ENST 26003. Chicago by Design. 100 Units.

This course examines the theory and practice of urban design at the scale of block, street, and building-the pedestrian realm. Topics include walkability; the design of streets; architectural style and its effect on pedestrian experience; safety and security in relation to accessibility and social connection; concepts of urban fabric, repair, and placemaking; the regulation of urban form; and the social implications of civic spaces. Students will analyze normative principles and the debates that surround them through readings and discussion as well as firsthand interaction with the urbanism of Chicago. This course is part of the College Course Cluster, Urban Design.

Instructor(s): E. Talen Terms Offered: Spring
 Equivalent Course(s): PBPL 26003, GEOG 24300, SOSC 26003

ENST 26005. Cities by Design. 100 Units.

This course examines the theory and practice of city design-how, throughout history, people have sought to mold and shape cities in pre-determined ways. The form of the city is the result of myriad factors, but in this course we will hone in on the purposeful act of designing cities according to normative thinking-ideas about how cities ought to be. Using examples from all time periods and places around the globe, we will examine how cities are purposefully designed and what impact those designs have had. Where and when has city design been successful, and where has it resulted in more harm than good?

Instructor(s): Emily Talen Terms Offered: Autumn
 Equivalent Course(s): GEOG 26005, ARCH 26005, PBPL 26005

ENST 26100. Roots of the Modern American City. 100 Units.

This course traces the economic, social, and physical development of the city in North America from pre-European times to the mid-twentieth century. We emphasize evolving regional urban systems, the changing spatial organization of people and land use in urban areas, and the developing distinctiveness of American urban landscapes. All-day Illinois field trip required. This course is part of the College Course Cluster, Urban Design.

Instructor(s): M. Conzen Terms Offered: Autumn
 Note(s): This course offered in odd years.
 Equivalent Course(s): HIST 28900, GEOG 36100, GEOG 26100, HIST 38900

ENST 26170. Why Do Animals Talk? Beastly Worlds in South Asian Literature. 100 Units.

Comprised of a diverse set of languages covering a disparate set of regions, South Asian literatures share a deep investment in the figure of the animal. Whether imagined through the genre of political advice, in narrative tellings of the past lives of the Buddha, or simply as characters in an expanded continuum of life, animals serve as important literary devices to reflect on human beings as well as autonomous subjects bound up with humans with their own distinct emotional and spiritual lives. Drawing particularly from the Sanskrit tradition among others, this course will introduce students to a broad survey of animal literature in South Asia alongside more recent scholarship in Animal Studies. By the end of the course, students can expect to have a myriad of answers to the question: why do animals talk?

Instructor(s): Sarah Pierce Taylor Terms Offered: Spring
 Equivalent Course(s): SALC 26170, RLST 26170

ENST 26225. Ethnographic Methods. 100 Units.

This is a course on how to do ethnographic research. While recent decades have seen scholars rightfully insist on the artistic and inherently personal quality of 'doing' and 'writing' ethnography, the course aims to illuminate the regulating structures of thought and practice underpinning every piece of original ethnographic work. The course is both a reading and a research workshop. As a reading workshop, it seeks to enable students to read ethnography like ethnographers: identifying and learning from the inner workings of the research project at the heart of each ethnographic text. As a research workshop, the course progressively leads students to construct and implement a research project of their own. Students will methodically enact the physical techniques and analytic practices emerging from their reading of ethnography. Throughout the course, we will grapple with the challenges facing an ethnographic researcher and identify the building blocks of an ethnographic project. In this effort, we will focus on the posing of a research question; the formulation of conceptual frameworks; constructing a statement of problem; actors and informants; the semiotics and pragmatics of interviewing; analysis of interactions qua participant-observer, and historical approaches in ethnography. Students will also experiment with forms of non-verbal visual representation.

Instructor(s): Gonzalez, Ines Escobar Terms Offered: Winter
 Equivalent Course(s): GLST 26225

ENST 26235. The Craft of Research Design. 100 Units.

Research methodologies are the backbone of academic thinking and of sound arguing and yet they are too often taken for granted or unduly dismissed as mere technicalities. In the course of this class, the students will learn to discern intricacies of research design in exemplary pieces of scholarship. Students will also have a chance to develop essential elements of a research project designed in accordance with their own research interests. Aside from introducing students to examples of how some concrete research problems were investigate in the fields, in the libraries and archives, and on the Internet, the class readings focused on bodies, medicine, and health will help students conceptualize the most persistent research puzzle: human bodies and cultural subjectivities.

Instructor(s): Jasarevic, Larisa Terms Offered: Spring
 Equivalent Course(s): GLST 26230

ENST 26244. Research Approaches to Global New Media. 100 Units.

The development of new media technology has prompted questions about and challenges to conceptions of power, knowledge, and subjectivity. In this course we will examine how different groups around the world use digital media in the construction of new identities, subcultures, virtual public spheres, and new forms of political participation. This course will equip students with methodological tools for studying new media, including discourse analysis, digital ethnography, and other interpretive methods. The goal of this course is not only to acquaint students with the theoretical and epistemological underpinnings of such methods, but to put them into practice through class exercises and a final multi-media research project.

Instructor(s): Mekawy, Yasmeen Terms Offered: Spring
 Equivalent Course(s): PLSC 26244, GLST 26244

ENST 26255. Environmental Justice Field Research Project I. 100 Units.

This two-quarter sequence will expose students to real-world policy-making questions and field-based research methodologies to design an environmentally based research project, collect data, conduct analyses, and present findings. In the first quarter, we will follow a robust methodological training program in collaboration with University partners to advance the foundations laid elsewhere in the public policy studies program. In the second quarter, this expertise in a full range of research methodologies will be put into practice to tackle public policy problems in the city and neighborhoods that surround the University. PBPL 26255 and PBPL 26355 satisfy the Public Policy practicum Windows and Methods requirements.

Instructor(s): Lodato, R. Terms Offered: Autumn

Prerequisite(s): Students taking this course to meet the Public Policy practicum requirement must take both courses.

Equivalent Course(s): PBPL 26255

ENST 26275. Doing Fieldwork: Mobilizing Ethnography to Investigate a Radically Transforming Global World. 100 Units.

In the age of "post-truth" politics; of globally-scaled and mediated flows of information, bodies, and biological threats; of magnified uncertainties related to public safety, to conditions of geopolitical belonging, and to human rights themselves, how do we, as ethical researchers, approach emergent social issues in a radically transforming global world? In this course, students will explore the investigative and critical potentials of qualitative research, with a focus on ethnographic fieldwork and discursive analysis. How do we recognize, collect, and make sense of fieldwork data, when our questions deal with seemingly intangible concepts? What does "home" mean, for immigrant and diasporic communities and what do concepts like "place," "space," and memory have to do with it? How do people in urban contexts, especially those who rely on mass transit, service and gig economy workers, and first responders in cities like Chicago manage daily life in conditions of existential, biological, and extreme economic threat in the age of COVID-19? How do we "know" experiential categories like anxiety when we see them, and how do we, as ethical researchers, find answers to questions in our ethnographic materials, without imposing our own conceptual constructs on them? In this collaborative forum, students will practice, share, and critically engage with ethnographic methods, including participant observation, documentation, interviewing, historical research, and discourse analysis.

Instructor(s): Czarnecki, Natalja Terms Offered: Winter

Equivalent Course(s): GLST 26275

ENST 26322. A History of Public Spaces in Mexico, 1520-2020. 100 Units.

Streets and plazas have been sites in which much of Mexican history has been fought, forged, and even performed. This course examines the history of public spaces in Mexico since the Spanish Conquest. By gauging the degree to which these sites were truly open to the public, it addresses questions of social exclusion, resistance, and adaptability. The course traces more than the role and evolution of built sites. It also considers the individuals and groups that helped to define these places. This allows us to read street vendors, prostitutes, students, rioters, and the "prole" as central historical actors. Through case studies and primary sources, we will examine palpable examples of how European colonization, various forms of state building, and more recent neoliberal reforms have transformed ordinary Mexicans and their public spaces.

Instructor(s): C. Rocha Terms Offered: Spring

Equivalent Course(s): LACS 25322, ARCH 26322, HIST 26322

ENST 26355. Environmental Justice Field Research Project II. 100 Units.

This two-quarter sequence will expose students to real-world policy-making questions and field-based research methodologies to design an environmentally based research project, collect data, conduct analysis, and present findings. In the first quarter, we will follow a robust methodological training program in collaboration with University partners to advance the foundations laid elsewhere in the public policy studies program. In the second quarter, this expertise in a full range of research methodologies will be put into practice to tackle public policy problems in the city and neighborhoods that surround the University. PBPL 26255 and PBPL 26355 satisfy the Public Policy practicum Windows and Methods requirements.

Instructor(s): Lodato, R. Terms Offered: Winter

Prerequisite(s): Students taking this course to meet the Public Policy practicum requirement must take both courses.

Equivalent Course(s): PBPL 26355

ENST 26382. Development and Environment in Latin America. 100 Units.

This course will consider the relationship between development and the environment in Latin America and the Caribbean. We will consider the social, political, and economic effects of natural resource extraction, the quest to improve places and peoples, and attendant ecological transformations, from the onset of European colonialism in the fifteenth century, to state- and private-led improvement policies in the twentieth. Some questions we will consider are: How have policies affected the sustainability of land use in the last five centuries? In what ways has the modern impetus for development, beginning in the nineteenth century and reaching its current intensity in the mid-twentieth, shifted ideas and practices of sustainability in both environmental and social terms? And, more broadly, to what extent does the notion of development help us explain the historical relationship between humans and the environment?

Instructor(s): Diana Schwartz Francisco Terms Offered: Winter

Equivalent Course(s): LACS 26382, HIST 36317, HIST 26317, LACS 36382, GEOG 26382, HIPS 26382, ANTH 23094

ENST 26500. Environmental Economics. 100 Units.

This course applies theoretical and empirical economic tools to environmental issues. We discuss broad concepts such as externalities, public goods, property rights, market failure, and social cost-benefit analysis. These concepts are applied to areas that include nonrenewable resources, air and water pollution, solid waste management, and hazardous substances. We emphasize analyzing the optimal role for public policy.

Instructor(s): S. Shaikh

Prerequisite(s): ECON 20100

Equivalent Course(s): ECON 26500, PBPL 32631

ENST 26511. Cities from Scratch: The History of Urban Latin America. 100 Units.

Latin America is one of the world's most urbanized regions, and its urban heritage long predates European conquest. And yet the region's cities are most often understood through the lens of North Atlantic visions of urbanity, many of which fit poorly with Latin America's historical trajectory, and most of which have significantly distorted both Latin American urbanism and our understandings of it. This course takes this paradox as the starting point for an interdisciplinary exploration of the history of Latin American cities in the nineteenth and twentieth centuries, focusing especially on issues of social inequality, informality, urban governance, race, violence, rights to the city, and urban cultural expression. Readings will be interdisciplinary, including anthropology, sociology, history, fiction, film, photography, and primary historical texts.

Instructor(s): B. Fischer Terms Offered: Winter

Prerequisite(s): Some knowledge of Latin America or urban studies helpful.

Equivalent Course(s): LACS 36510, LACS 26510, HIST 36511, HIST 26511, ARCH 26511

ENST 26530. Environment, Agriculture, and Food: Economic and Policy Analysis. 100 Units.

The connections between environment, agriculture, and food are inherent in our social, cultural, and economic networks. Land use, natural resource management, energy balances, and environmental impacts are all important components in the evolution of agricultural systems. Therefore it is important to develop ways in which to understand these connections in order to design effective agricultural programs and policies. This course is designed to provide students with guidance on the models and tools needed to conduct an economic research study on the intersecting topics of environment, agriculture, and food. Students learn how to develop original research ideas using a quantitative and applied economic policy analysis for professional and scholarly audiences. Students collect, synthesize, and analyze data using economic and statistical tools. Students provide outcomes and recommendations based on scholarly, objective, and policy relevant research rather than on advocacy or opinions, and produce a final professional-quality report for a workshop presentation and publication. This small seminar course is open by instructor consent to undergraduate and graduate students who meet the prerequisites. For consideration, please submit a one-page proposal of research to pge@uchicago.edu.

Instructor(s): S. Shaikh Terms Offered: Winter

Prerequisite(s): ECON 20000 or ECON 20100 or PBPL 20000 or PBPL 22200 (or equivalent), STAT 22000 or STAT 23400

or PBPL 26400 (or equivalent); for ECON Enrollment: ECON 20000 and ECON 20100, STAT 23400

Equivalent Course(s): PPHA 32510, PBPL 26530, ECON 26530

ENST 26531. Environment, Agriculture, and Food: Advanced Economic and Policy Analysis. 100 Units.

This course is an extension of ENST 26530 but also stands alone as a complete course itself. Students don't need to take ENST 26530 to enroll in this course. This small seminar course is open by instructor consent to undergraduate and graduate students who meet the prerequisites. For consideration, please submit a one-page proposal of research to pge@uchicago.edu.

Instructor(s): S. Shaikh Terms Offered: Spring

Prerequisite(s): ECON 20000 or ECON 20100 or PBPL 20000 or PBPL 22200 (or equivalent), STAT 22000 or STAT 23400 or PBPL 26400 (or equivalent); for ECON Enrollment: ECON 20000 and ECON 20100, STAT 23400

Equivalent Course(s): PBPL 26531, PPHA 32520, ECON 26540

ENST 26801. The Global Urban. 100 Units.

This course was conceived with the aim of "globalizing" urban scholarship. To this end, we will highlight different urban trajectories and forms and different ways of being urban around the world. We will focus on urban experiences in the Global South and in Southeast Asia particularly. We will spend the first week of the course discussing how and why Southern cities are different. We will talk about their explosive growth in the twentieth century, the precarious nature of urban employment, informal settlement as a major urban form, the housing divide as a social structure distinct to such cities, class formation, economic and spatial restructuring under neoliberalism, and the nature of urban citizenship. We will spend the second week examining two very different cases: Manila and Phnom Penh. In the third week, we will focus exclusively on Hong Kong, and students will be tasked with conducting their own urban fieldwork.

Instructor(s): Marco Garrido Terms Offered: Summer

Equivalent Course(s): GLST 26801

ENST 27101. Sustainable Urbanism in Context. 100 Units.

Sustainable urbanism presents a great range of challenges at conceptual, practical, and spatial levels. But solutions to these challenges are only meaningful insofar as they can be implemented at local scales and in a context-appropriate manner.

This hands-on seminar-studio takes students into the heart of the Calumet, a region with complex environmental, industrial, and urban histories. Students will learn to assess the conditions of the built environment, to identify needs, and, working in concert with local stakeholders, to propose design solutions to help reinvigorate a sense of place and restore a fragmented landscape.

Instructor(s): Evan Carver Terms Offered: Spring

Prerequisite(s): Acceptance is based on enrollment in the Chicago Studies Quarter: Calumet in Spring 2020.

Equivalent Course(s): GEOG 27101, PBPL 27101

ENST 27103. Planning for Land and Life. 100 Units.

The collaborative plan to create a Calumet National Heritage Area that touches aspects of environmental conservation, economic development, cultural heritage, recreation, arts, and education will ground this course's exploration of landscape history and landscape planning in the Calumet region. Students will investigate this planning process and its relationship to

other local and regional plans. A strong focus of the course is on the opportunities and challenges this complex and richly textured industrial region faces in its transition to a more sustainable future.

Instructor(s): Mark Bouman Terms Offered: Spring

Equivalent Course(s): ARCH 27103, PBPL 27103, GEOG 27103

ENST 27125. Voices of Alterity and the Languages of Immigration. 100 Units.

This course investigates the individual experience of immigration: how do immigrants recreate themselves in this alien world in which they seem to lose part of themselves? How do they find their voice and make a place for themselves in their adoptive homes? If in the new world the immigrant becomes a new person, what meanings are still carried in traditional values and culture? How do they remember their origins and record new experiences?

Instructor(s): Angelina Ilieva Terms Offered: Spring. Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Note(s): Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Equivalent Course(s): PBPL 27125, ENGL 27125, REES 29025, HIST 27710, CMLT 27125

ENST 27150. Urban Design with Nature: Assessing Social and Natural Realms in the Calumet Region. 100 Units.

This course will use the Calumet region as a laboratory for evaluating the social, environmental, and economic effects of alternative forms of human settlement. Students will be introduced to the basics of geographic information systems (GIS) and use GIS to map the Calumet region's "place types" - human habitats that vary along an urban-to-rural transect, as well as the ecosystem services provided by the types. They will then evaluate these place types using a range of social, economic and environmental criteria. In this way, students will evaluate the region's potential to simultaneously realize economic potential, protect environmental health, and provide social connectivity.

Terms Offered: Spring

Note(s): Enrollment is based on acceptance into the Chicago Studies Quarter Program. Not offered in 19-20.

ENST 27155. Urban Design with Nature. 100 Units.

This course will use the Chicago region as the setting to evaluate the social, environmental, and economic effects of alternative forms of human settlement. Students will examine the history, theory and practice of designing cities in sustainable ways - i.e., human settlements that are socially just, economically viable, and environmentally sound. Students will explore the literature on sustainable urban design from a variety of perspectives, and then focus on how sustainability theories play out in the Chicago region. How can Chicago's neighborhoods be designed to promote environmental, social, and economic sustainability goals? This course is part of the College Course Cluster program: Urban Design.

Instructor(s): Sabina Shaikh and Emily Talen Terms Offered: Autumn

Prerequisite(s): Third or fourth-year standing

Note(s): Students who have taken ENST 27150: Urban Design with Nature: Assessing Social and Natural Realms in the Calumet Region in the Spring of 2018 may not enroll in this course.

Equivalent Course(s): BPRO 27155, GEOG 27155, PBPL 27156

ENST 27210. Where We Come From: Methods & Materials in the Study of Immigration. 100 Units.

This course provides an interactive survey of methodologies that engage the experiences of immigrants in Chicago.

Exploring practices ranging from history to fiction, activism to memorialization, this course will introduce students to a variety of the ways that immigrants and scholars have approached the Second City.

Instructor(s): William Nickell Terms Offered: Spring. Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Note(s): Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Equivalent Course(s): PBPL 27210, REES 24417, HIST 27712

ENST 27221. Sustainable Urbanism. 100 Units.

This course explores cutting-edge solutions to today's interrelated challenges of decarbonizing the economy, reversing the obesity epidemic, and replacing sprawl. In addition to learning about the current state of sustainable urban planning and design, students will apply to the Calumet region a collection of future-forward urban design strategies to build prosperous and sustainable urban communities that can thrive for years to come. Topics include community organizing; public health, safety, and welfare; governance; neighborhood planning and design; stormwater management; density, and net-zero-energy building design. While not a studio class, there will be opportunities to practice spatial design drawing, community engagement tactics, and sustainability metrics.

Instructor(s): Doug Farr Terms Offered: TBD

Prerequisite(s): Enrollment is based on acceptance into the Calumet Quarter Program.

Note(s): Calumet Quarter course for 17-18 AY. Not offered 18-19 or 19-20.

ENST 27325. Urban Ecology in the Calumet Region. 100 Units.

This course will give students a strong foundation in the local ecology of the Calumet. Students will use local research and habitats to understand fundamental concepts in ecology and the scientific method. Students will explore some of these habitats during field trips with scientists and practitioners. The course focus will be on urban ecology in the region, whether these fundamental ecological concepts are applicable, what other factors need to be considered in the urban ecosystem, and the role humans have in restoring natural and managing novel ecosystems, among other topics.

Instructor(s): Alison Anastasio Terms Offered: Spring

Note(s): Enrollment is based on acceptance into the Chicago Studies Quarter: Calumet program for Spring 2020.

Equivalent Course(s): PBPL 27325, GEOG 27325

ENST 27330. Spaces of Hope: The City and Its Immigrants. 100 Units.

The city is the site where people of all origins and classes mingle, however reluctantly and agonistically, to produce a common if perpetually changing and transitory life." (David Harvey) This course will use the urban studies lens to explore the complex history of immigration to Chicago, with close attention to communities of East European origin. Drawing on anthropological theory and ethnographic materials, we will study the ways in which the city and its new citizens transform one another.

Instructor(s): Nada Petkovic Terms Offered: Spring. Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Note(s): Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Equivalent Course(s): PBPL 27330, REES 21500, HIST 27713

ENST 27400. Epidemiology and Population Health. 100 Units.

This course does not meet requirements for the biological sciences major. Epidemiology is the study of the distribution and determinants of health and disease in human populations. This course introduces the basic principles of epidemiologic study design, analysis, and interpretation through lectures, assignments, and critical appraisal of both classic and contemporary research articles.

Instructor(s): D. Lauderdale Terms Offered: Autumn

Prerequisite(s): STAT 22000 or other introductory statistics highly desirable. For BIOS students-completion of the first three quarters of a Biological Sciences Fundamentals sequence.

Equivalent Course(s): PPHA 36410, PBHS 30910, STAT 22810, HLTH 20910

ENST 27534. The Aspirational City: Chicago's Multicultural Communities. 100 Units.

No city has meant more to the hopes and dreams of more divergent groups of Americans than Chicago. The Aspirational City: Chicago's Multicultural Communities will explore the histories of Chicago's various racial, ethnic and marginalized communities and the ways in which they have sought to fashion the destinies of themselves, their communities, and the city of Chicago. The course is a weekly seminar open to both undergraduate and graduate students.

Terms Offered: Spring

Equivalent Course(s): CRES 27534, HIST 27308

ENST 28601. Ideas of Nature I. 100 Units.

Nature is, and has been, a fundamental category in human thought. Yet Arthur Lovejoy (1935) enumerated sixty-six senses in which the word had been used in European literature and philosophy. We examine the roles that the (nominally continuous) category of "nature" played in sources such as ancient religious texts, Greek and Roman philosophical writings, and medieval poetry and theology.

Instructor(s): A. Gugliotta Terms Offered: Spring

Prerequisite(s): ECON 20900, 21000, or 26500; or ENST 26500

Note(s): ENST 28601 and 28602 may be taken individually in any order. This course is offered in alternate years.

Equivalent Course(s): HIPS 29001, MDVL 28601

ENST 28702. Introduction to GIS and Spatial Analysis. 100 Units.

This course provides an introduction and overview of how spatial thinking is translated into specific methods to handle geographic information and the statistical analysis of such information. This is not a course to learn a specific GIS software program, but the goal is to learn how to think about spatial aspects of research questions, as they pertain to how the data are collected, organized and transformed, and how these spatial aspects affect statistical methods. The focus is on research questions relevant in the social sciences, which inspires the selection of the particular methods that are covered. Examples include spatial data integration (spatial join), transformations between different spatial scales (overlay), the computation of "spatial" variables (distance, buffer, shortest path), geovisualization, visual analytics, and the assessment of spatial autocorrelation (the lack of independence among spatial variables). The methods will be illustrated by means of open source software such as QGIS and R.

Instructor(s): M. Kolak Terms Offered: Spring. Offered 2020-21

Equivalent Course(s): SOCI 30283, SOCI 20283, GEOG 28702, ARCH 28702, GEOG 38702

ENST 28728. Climate Change and Society: Human Impacts, Adaptation, and Policy Solutions. 100 Units.

Anthropogenic climate change is one of the most difficult challenges faced by modern society. A revolution in socioeconomic and environmental data, along with new and old insights from economics, can inform how we face this global challenge. During the course, our focus will be on the impacts of climate change upon society, and the necessity of solutions that deal with the global scope, local scales, and often unequal nature of the impacts. This interdisciplinary course covers the tools and insights from economic analysis, environmental science, and statistics that inform our understanding of climate change impacts, the design of mitigation and adaptation policies, and the implementation of these policies. Students will develop a mastery of key conceptual ideas from environmental economics relevant for climate change and acquire tools, both theoretical and empirical, for conducting analyses of climate impacts and policies. The latter part of the course will hone students' ability in applying these insights and tools through policy debates and presentations. The goal is to help students become informed and critically-minded practitioners of evidence-based, climate-informed policy making.

Instructor(s): Jina, A. Terms Offered: Winter

Prerequisite(s): PBPL 20000 or ECON 20000 or consent of instructor

Equivalent Course(s): PBPL 28728

ENST 28800. Readings in Spatial Analysis. 100 Units.

This independent reading option is an opportunity to explore special topics in the exploration, visualization and statistical modeling of geospatial data.

Instructor(s): K. Credit and M. Kolak Terms Offered: Autumn Spring Winter. Students are required to submit the College Reading and Research Course Form. Available for either quality grades or for P/F grading.

Note(s): By permission of instructor only.

Equivalent Course(s): GEOG 28700, GEOG 38700

ENST 28900. Environmental and Science Policy. 100 Units.

With a strong emphasis on the fundamental physics and chemistry of the environment, this course is aimed at students interested in assessing the scientific repercussions of various policies on the environment. The primary goal of the class is to assess how scientific information, the economics of scientific research, and the politics of science interact with and influence public policy development and implementation.

Instructor(s): D. Coursey Terms Offered: TBD

Equivalent Course(s): PBPL 28900

ENST 28925. Health Impacts of Transportation Policies. 100 Units.

Governments invest in transport infrastructure because it encourages economic growth and mobility of people and goods, which have direct and indirect benefits to health. Yet, an excessive reliance on motorized modes of transport harms population health, the environment, and social well-being. The impact on population health is substantial: Globally, road traffic crashes kill over 1.3 million annually. Air pollution, to which transport is an important contributor, kills another 3.2 million people. Motorized modes of transport are also an important contributor to sedentary lifestyles. Physical inactivity is estimated to cause 3.2 million deaths every year, globally. This course will introduce students to thinking about transportation as a technological system that affects human health and well-being through intended and unintended mechanisms. The course will examine the complex relationship between transportation, land use, urban form, and geography, and explore how decisions in other sectors affect transportation systems, and how these in turn affect human health. Students will learn to recognize how the system level properties of a range of transportation systems (such as limited-access highways, urban mass transit, inter-city rail) affect human health.

Terms Offered: Spring

Equivalent Course(s): ARCH 28925, PBPL 28925, HLTH 28925

ENST 28980. Readings in Urban Planning and Design. 100 Units.

This independent reading option is an opportunity to explore contemporary debates and theoretical arguments involved in the planning and design of cities.

Instructor(s): E.Talen Terms Offered: Autumn Spring Winter. Students are required to submit the College Reading and Research Course Form. Available for either quality grades or for P/F grading.

Note(s): By permission of instructor only.

Equivalent Course(s): GEOG 38900, GEOG 28900

ENST 29421. Politics of Commemoration. 100 Units.

Most of the time we pass in front of the statues, commemorative museums, monuments, and flags that inhabit our cities without noticing them. In recent years, however, they (along with pre-college history curricula) have become controversial across the globe. This course addresses those controversies primarily in Europe and the United States, but also in Latin America, West Africa, and South Africa. Through a series of case studies we will analyze the conditions of the creation of statues, monuments, and museums. Who conceptualized them and lobbied for their creation? Who paid for them? For whom were they originally intended? What message did they convey? What happened over time? How did their message change? Did they provoke controversy at the moment of their planning or inauguration or later and, if so, from whom? Equal attention will be paid to scholars' efforts to address the question of what these commemorative works actually do. If they really become unnoticeable, then why does the threat of their removal so often spark such intense controversy? Assignments: Active participation in class, one secondary text analysis, one analysis of a controversy, and one proposal for a monument, museum, or school curriculum.

Instructor(s): L. Auslander Terms Offered: Spring

Equivalent Course(s): HIST 29421, ARCH 29421, GLST 29526, CRES 39421, HIST 39421, LLSO 29421, CRES 29421, JWSC 29421

ENST 29525. The Global Life of Things. 100 Units.

We are often told that the market has taken over all aspects of our social lives. The effects of this process can be seen in the financialization of the economy, the deregulation of labor, and the exploitation of natural resources. Goods are produced on one side of the world and consumed in another. Even college students are seen as investments that accrue value. How did this happen? This course will examine the deep history of how so much of the world became commodities. Focusing primarily on the seventeenth to the nineteenth centuries, we will ask how work, time, land, money, and people were commodified. We will also consider how historians and anthropologists have told the history of global capitalism through particular commodities, including sugar, cotton, meat, grain and mushrooms. Readings will span western Europe, India, the Atlantic World, Chicago, and contemporary Japan. Periodically, we will reflect on how these histories bear on questions of labor, gender, and the environment in the present day.

Instructor(s): O. Cussen Terms Offered: Spring

Equivalent Course(s): HIST 29525, GLST 29525

ENST 29527. The Spatial History of Nineteenth-Century Cities: Tokyo, London, New York. 100 Units.

The late-nineteenth century saw the transformation of cities around the world as a result of urbanization, industrialization, migration, and the rise of public health. This course will take a spatial history approach; that is, we will explore the transformation of London, Tokyo, and New York over the course of the nineteenth century by focusing on the material "space" of the city. For example, where did new immigrants settle and why? Why were there higher rates of infectious

disease in some areas than in others? How did new forms of public transportation shape the ability to move around the city, rendering some areas more central than others? To explore questions such as these, students will be introduced to ArcGIS in four lab sessions and asked to develop an original research project that integrates maps produced in Arc. No prior ArcGIS experience is necessary, although students will be expected to have familiarity with Microsoft Excel and a willingness to experiment with digital methods. Assignments: Discussion posts, homework (mapping), and a final research project.

Instructor(s): S. Burns Terms Offered: Autumn

Note(s): Making History courses forgo traditional paper assignments for innovative projects that develop new skills with professional applications in the working world. Open to students at all levels, but especially recommended for 3rd- and 4th-yr students.

Equivalent Course(s): EALC 29527, HIST 39527, GLST 29527, HIST 29527, EALC 39527

ENST 29700. Reading and Research. 100 Units.

This course is a reading and research course for independent study not related to BA research or BA paper preparation.

Prerequisite(s): Consent of faculty supervisor and program director Note(s): Students are required to submit the College Reading and Research Course Form. This course may be counted as one of the electives required for the major.

Terms Offered: Autumn, Spring, Winter

Prerequisite(s): Consent of faculty supervisor and program director

Note(s): Students are required to submit the College Reading and Research Course Form. This course may be counted as one of the electives required for the major.

ENST 29701. Readings and Research: Working Group in Environment, Agriculture, and Food (EAF) 100 Units.

This course consists of participation in the Environment, Agriculture, and Food Group in a role assigned by the instructor.

Instructor(s): S. Shaikh Terms Offered: Winter

Prerequisite(s): Registration by instructor consent only

Note(s): Please email Sabina Shaikh at sabina@uchicago.edu.

Equivalent Course(s): PBPL 29701

ENST 29703. Readings and Research: Humans and Natural Environments. 100 Units.

This course is a readings and research course for independent study in Environmental and Urban Studies.

Instructor(s): Sabina Shaikh Terms Offered: Winter

Note(s): Enrollment by instructor consent only

ENST 29704. Readings and Research: Humans and Built Environments. 100 Units.

This course is a readings and research course for independent study in Environmental and Urban Studies.

Instructor(s): Sabina Shaikh Terms Offered: Spring

Note(s): Enrollment by instructor consent only

ENST 29720. Reading and Research: Calumet. 100 Units.

The Program on the Global Environment will be hosting many interesting guest speakers during the Calumet Quarter, and this readings course will be dedicated primarily to the discussion of relevant articles written by the speakers. This will acquaint students with literature on a variety of topics ranging from food security to wetlands ecology to conservation theory. Students will be expected to discuss the articles, drawing on knowledge gained in the three core Calumet courses. Students will also attend the guest presentations and write short responses to the lectures.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): Enrollment is based on acceptance into Calumet Quarter Program.

ENST 29801. BA Colloquium I. 100 Units.

This colloquium is designed to aid students in their thesis research. Students are exposed to different conceptual frameworks and research strategies. The class meets weekly.

Instructor(s): Graduate preceptor Terms Offered: Autumn

Prerequisite(s): Students must have an approved topic proposal and a faculty reader

Note(s): Required of students with fourth-year standing who are majoring in Environmental and Urban Studies.

Equivalent Course(s): GEOG 29801

ENST 29802. BA Colloquium II. 100 Units.

This colloquium assists students in conceptualizing, researching, and writing their BA theses.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): Open only to students with fourth-year standing who are majoring in Environmental Studies

ENST 29900. B. A. Thesis (Reading and Research) 100 Units.

This is a reading and research course for independent study related to BA research and BA thesis preparation.

Instructor(s): Staff Terms Offered: Winter, Spring

Prerequisite(s): Consent of instructor and program director

Note(s): Students are required to submit the College Reading and Research Course Form.

Fundamentals: Issues and Texts

Department Website: <http://fundamentals.uchicago.edu>

About Fundamentals

The Fundamentals program enables students to concentrate on fundamental questions by reading classic texts that articulate and speak to these questions. It seeks to foster precise and thoughtful pursuit of basic questions by means of (1) rigorous training in the interpretation of important texts, supported by (2) extensive training in at least one foreign language, and by (3) the acquisition of the knowledge, approaches, and skills of conventional disciplines: historical, religious, literary, scientific, political, and philosophical.

Rationale

A richly informed question or concern formulated by each student guides the reading of texts. Classic texts are also informed by such questions; for example, Socrates asks: What is virtue? What is the good? What is justice? Aristotle and Cicero explore the relation of civic friendship to society. Freud asks: What is happiness? Can humans be happy? Milton investigates how poetic vocation may be related to political responsibility. Students who are engaged by these questions and others like them, and who find them both basic and urgent, may wish to continue to explore them more thoroughly and deeply within the structure of the program which provides the wherewithal to address them on a high level.

That wherewithal is to be found in the fundamental or classic *texts* (historical, religious, literary, scientific, political, and philosophical) in which the great writers articulate and examine questions in different and competing ways. These books illuminate the persisting questions and speak to contemporary concerns because they are both the originators and exacting critics of our current opinions. These texts serve as colleagues who challenge us to think that something else might actually be the case than what we already think. The most important questions may, at bottom, be the most contested, and those most susceptible to, and most requiring, sustained, probing engagement.

This program emphasizes the firsthand experience and knowledge of major texts, read and reread and reread again. Because they are difficult and complex, only a small number of such works can be studied. Yet the program proposes that intensively studying a profound work and incorporating it into one's thought and imagination prepares one for reading any important book or reflecting on any important issue. Read rapidly, such books are merely assimilated into preexisting experience and opinions; read intensively, they can transform and deepen experience and thought.

Studying fundamental texts is, by itself, not enough. Even to understand the texts themselves, supporting studies and training are necessary: a solid foundation in at least one foreign language and in disciplines and subject matters pertinent to the main questions of students are essential parts of the major. Students benefit from knowledge of the historical contexts out of which certain problems emerged or in which authors wrote; knowledge of specific subject matters and methods; knowledge of the language in which a text was originally written, as well as an understanding of the shape a given language imparts to a given author; fundamental skills of analysis, gathering evidence, reasoning, and criticism; different approaches and perspectives of conventional disciplines. All these are integral parts of the educational task.

Individual Program Design

Genuine questions cannot be assigned to a student; they must arise from within. For this reason, a set curriculum is not imposed upon students. Each student's course of study must answer to his or her interests and concerns, and must begin from a distinctive concern. One student may be exercised about questions of science and religion; another about freedom and determinism; another about friendship and conversation; another by prudence, romance, and marriage; a fifth about distributive justice. Through close work with a suitably chosen faculty adviser, a student determines texts, text and author courses, and supporting courses as appropriate to address the student's Fundamentals question. Beginning with a student's questions and interests does not, however, imply an absence of standards or rigor; this program is most demanding.

Activities of Graduates

The Fundamentals program serves the purposes of liberal education, regarded as an end in itself, and offers no specific pre-professional training; yet Fundamentals graduates have successfully prepared for careers in the professions and in scholarship. Some are now pursuing work in law, medicine, journalism, ministry, government service, business, veterinary medicine, and secondary school teaching. Others have gone on to graduate schools in numerous fields, including classics, English, comparative literature, Slavic, history, philosophy, social thought, theology, religious studies, clinical psychology, political science, development economics, mathematics, film studies, and education.

Faculty

The faculty of the Fundamentals program comprises humanists and social scientists, representing interests and competencies in both the East and the West and scholarship in matters ancient and modern. This diversity and pluralism exists within a common agreement about the primacy of fundamental questions and the centrality of important books and reading them well. The intention is for the students to see and work with a variety of scholars presenting their approaches to and understanding of books that they love, that they know well, and that are central to their ongoing concerns.

Application to the Program

Students should apply in Spring Quarter of their first year to enter the program in their second year; the goals and requirements of the program are best met if students spend three years in the major. Students are interviewed and counseled

in order to discover whether or not their interests and intellectual commitments would be best served by this program. Admissions are decided on the basis of the application statement, interviews, and previous academic performance.

Program Requirements

The Fundamentals program comprises (a) **13 courses**, (b) the **Junior Paper**, and (c) the **Senior Exam**, for a total of 1500 units.

A. Course Work

Gateway Course (1 course) (Autumn Quarter or Winter Quarter): This course is specifically designed for the incoming cohort of Fundamentals students and is a mandatory part of the program. It is devoted to the close reading of one or two texts or the works of a single author, chosen because they raise challenging questions and present important and competing answers. Through this course, students will study a variety of ways in which a text can respond to their concerns and can compel consideration of its own questions.

1. **Text/Author Courses (7 courses).** The seven Text/Author courses are devoted to the study of one or two particular texts or the work of a particular author. Text/Author courses are generally cross-listed as FNDL courses in Class Search (<http://registrar.uchicago.edu/classes/>); if a relevant course is not cross-listed, the student should contact the coordinator to see if it can be counted towards the major. In years when the Gateway Course is offered in Autumn Quarter, entering students are required to take at least one Text/Author course in Winter Quarter; in years when the Gateway Course is offered in Winter Quarter, entering students are expected to take at least one Text/Author course in Autumn Quarter.

The Text/Author Courses and the Gateway Course—eight courses total—give each student the opportunity to develop a list of **six texts** that will become the basis of his or her Senior Exam (see below). This list should contain works in the area of the student's primary interest that examine that interest from diverse perspectives. One of the six must be studied in an original language other than English, the same language in which the student establishes competency (any exceptions must be approved by the chair).

2. **Supporting Courses (4 courses).** These are courses that complement the student's program, providing historical context, theoretical and methodological training, or other complements. They do not have to be listed as FNDL to satisfy this requirement, but they must be explicitly identified as supporting courses in consultation with the student's adviser.
3. **Foreign Language (1 course).** Students in the program are expected to achieve a level of proficiency in a foreign language sufficient to enable them to study in the original language (other than English) one of the texts on their examination list. Such training ordinarily requires two years of formal language instruction or its equivalent. The third quarter of the second year of the language is counted toward the major. In addition, students are required to take a course where they study a text in that language; the instructor of the course may be asked to provide an evaluation of the student's linguistic proficiency on the basis of this work. Students and instructors should work closely together in determining how the student will demonstrate competency in the language. As the achievement of proficiency may differ vis-à-vis length of study from language to language, it may prove harder for students of some languages to read a text in its entirety even after completing two years of instruction. Any students who believe that their language is so difficult that doing so is unrealistic may petition to have the requirement met by reading a clearly marked-out portion of the text—perhaps a chapter or two, or series of smaller sections. To be considered, the petition must set out a clear plan and must be signed by the instructor of the text in question.

B. The Junior Paper

In the Winter or Spring Quarter of their junior year, students write an extended essay called the Junior Paper. This project provides the opportunity for students to originate and formulate a serious inquiry into an important issue arising out of their work and to pursue the inquiry extensively and in depth in a paper of about twenty to twenty-five pages (roughly 8,000 to 10,000 words). At every stage in the preparation of the paper, students work closely with their Fundamentals faculty adviser. Students register in the independent study course FNDL 29901 in the quarter in which they write the paper; they are also expected to participate in the Junior Paper Colloquium that takes place in the Winter Quarter. Acceptance of a successful Junior Paper is a prerequisite for admission to the senior year of the program.

C. The Senior Examination

At the end of Week Six in the Spring Quarter of their senior year, students are examined on six texts they have studied in the context of their Text/Author courses and approved independent study courses. Preparation for this examination allows students to review and integrate their full course of study. During a three-day period, students write two substantial essays on questions designed for them by the associated faculty. The examination has a pedagogical intention, more than a qualifying one; its purpose is to allow students to demonstrate how they have related and integrated their questions, texts, and disciplinary studies. To take the examination, students register in FNDL 29902 in the Spring Quarter (or, with the consent of the chair, in the Autumn or Winter Quarters if there are scheduling issues).

Summary of Requirements

The Gateway Course	100
Seven Text/Author Courses	700
Four Supporting Courses	400

Third quarter of second-year foreign language *	100
FNDL 29901 Independent Study: Junior Paper	100
FNDL 29902 Independent Study: Senior Examination	100
Total Units	1500

* or credit for the equivalent, determined by petition

Grading, Advising, and Honors

Grading. The Junior Paper and Senior Examination (FNDL 29901 and FNDL 29902) are graded Pass/Fail; all other courses within the major must be taken for quality grades. Independent study courses must include a term paper, and students should be prepared to request statements of reference or evaluation from faculty with whom they have worked in this capacity.

Advising. Each student has a faculty adviser who is assigned to the student on the basis of their mutual interests and areas of expertise. The adviser closely monitors the student's choice of texts, courses, and language studies, allowing for the gradual development of a fitting and coherent program. The faculty adviser may also oversee the student's Junior Paper and is responsible for approving the final list of texts for the Senior Exam. In addition, the program coordinator is available for advice and consultation on all aspects of the program.

Honors. Honors are awarded by the Fundamentals faculty to students who have performed with distinction in the program. An overall GPA of 3.5 is necessary to be considered for honors, and special attention is paid to both the Junior Paper and the Senior Exam.

Academic Year 2020–21 Courses

Gateway Course (required for all incoming Fundamentals majors)

FNDL 21408. Vico's New Science. 100 Units.

This course offers a close reading of Giambattista Vico's masterpiece, *New Science* (1744)—a work that sets out to refute 'all opinions hitherto held about the principles of humanity.' Vico, who is acknowledged as the most resolute scourge of any form of rationalism, breathed new life into rhetoric, imagination, poetry, metaphor, history, and philology in order to promote in his readers that originary 'wonder' and 'pathos' which sets human beings on the search for truth. However, Vico argues, the truths that are most available and interesting to us are the ones humanity 'authored' by means of its culture and history-creating activities. For this reason the study of myth and folklore as well as archeology, anthropology, and ethnology must all play a role in the rediscovery of man. The *New Science* builds an 'alternative philosophy' for a new age and reads like a 'novel of formation' recounting the (hi)story of the entire human race and our divine ancestors. In Vico, a prophetic spirit, one recognizes the fulfillment of the Renaissance, the spokesperson of a particular Enlightenment, the precursor of the Kantian revolution, and the forefather of the philosophy of history (Herder, Hegel, and Marx). The *New Science* remained a strong source of inspiration in the twentieth century (Cassirer, Gadamer, Berlin, Joyce, Beckett, etc.) and may prove relevant in disclosing our own responsibilities in postmodernity.

Instructor(s): R. Rubini Terms Offered: Autumn

Note(s): Taught in English.

Equivalent Course(s): ITAL 32900, CMLT 32501, ITAL 22900, CMLT 22501

Independent Study (for registering for the Junior Paper and Senior Examination)

FNDL 29901. Independent Study: Junior Paper. 100 Units.

Students who are on campus will be required to attend a series of colloquium meetings in Winter Quarter, but should enroll in the quarter that they will write the Junior Paper. Students are required to submit the College Reading and Research Course Form. Must be taken for P/F grading.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): Open only to Fundamentals students with consent of faculty supervisor and program chair.

FNDL 29902. Independent Study: Senior Examination. 100 Units.

Students should expect to register for this independent study in the Spring of their final year, the quarter in which they will take their Senior Exam. Exceptions to this can only be made with the consent of the program chair. Students are required to submit the College Reading and Research Course Form. Must be taken for P/F grading.

Terms Offered: Spring

Prerequisite(s): Open only to Fundamentals students with consent of faculty supervisor and program chair.

Autumn Quarter Courses

FNDL 21404. Shakespeare II: Tragedies and Romances. 100 Units.

This course explores mainly major plays representing the genres of tragedy and romance; most (but not all) date from the latter half of Shakespeare's career. After having examined how Shakespeare develops and deepens the conventions of tragedy in *Hamlet*, *Othello*, *Macbeth*, *King Lear*, and *Antony and Cleopatra*, we will turn our attention to how he complicates and even subverts these conventions in *The Winter's Tale* and *The Tempest*. Throughout, we will treat the plays

as literary texts, performance prompts, and historical documents. Section attendance is required. This course is part of the College Course Cluster, The Renaissance. (Pre-1650, Drama)
 Instructor(s): Timothy Harrison Terms Offered: Autumn
 Equivalent Course(s): ENGL 16600, TAPS 28406

FNDL 22001. Foucault and The History of Sexuality. 100 Units.

This course centers on a close reading of the first volume of Michel Foucault's 'The History of Sexuality', with some attention to his writings on the history of ancient conceptualizations of sex. How should a history of sexuality take into account scientific theories, social relations of power, and different experiences of the self? We discuss the contrasting descriptions and conceptions of sexual behavior before and after the emergence of a science of sexuality. Other writers influenced by and critical of Foucault are also discussed.

Instructor(s): A. Davidson Terms Offered: Autumn

Prerequisite(s): One prior philosophy course is strongly recommended.

Equivalent Course(s): GNSE 23100, RLST 24800, KNOW 27002, HIPS 24300, CMLT 25001, PHIL 24800

FNDL 22220. Marx's Capital, Volume I. 100 Units.

We will study the first volume of Karl Marx's Capital, attempting to understand the book on its own terms and with minimal reference to secondary literature. (A) (I)

Instructor(s): A. Ford Terms Offered: Spring

Equivalent Course(s): PHIL 22220, PHIL 32220

FNDL 24003. Kieslowski: The Decalogue. 100 Units.

In this class, we study the monumental series 'The Decalogue' by one of the most influential filmmakers from Poland, Krzysztof Kie#lowski. Without mechanically relating the films to the Ten Commandments, Kie#lowski explores the relevance of the biblical moral rules to the state of modern man forced to make ethical choices. Each part of the series contests the absolutism of moral axioms through narrative twists and reversals in a wide, universalized sphere. An analysis of the films will be accompanied by readings from Kie#lowski's own writings and interviews, including criticism by Zizek, Insdorf, and others.

Instructor(s): Bozena Shallcross Terms Offered: Autumn

Equivalent Course(s): CMST 26705, REES 37026, REES 27026, CMST 36705

FNDL 24106. Readings in Maimonides' Guide of the Perplexed. 100 Units.

A careful study of select passages in Maimonides' Guide of the Perplexed, focusing on the method of the work and its major philosophical-theological themes, including: divine attributes, creation vs. eternity, prophecy, the problem of evil and divine providence, law and ethics, the final aim of human existence.

Instructor(s): James Robinson Terms Offered: Autumn

Equivalent Course(s): NEHC 40470, ISLM 45400, RLST 21107, HREL 45401, RLVC 45400, JWSC 21107, MDVL 25400, HIJD 45400

FNDL 24500. The Ethics of War: Reading Michael Walzer's Just and Unjust Wars. 100 Units.

Questions about war, the taking of human life, the obligations of citizenship, the role of state power, and international justice are among the most pressing topics in ethics and political life. This class will examine these matters through a close reading of Michael Walzer's Just and Unjust Wars: A Moral Argument with Historical Illustrations, first published in 1977 and now in its 5th edition. Widely considered a classic in the ethics of war, JUW develops a theory for evaluating whether to enter war as well as decisions within war-what are known as the *jus ad bellum* and the *jus in bello*. Walzer applies his theory to a number of actual cases, ranging from military interventions to reprisals to terrorism to insurgencies to nuclear policy, all informed by the history of warfare and arguments in the history of Western thought. We will critically examine Walzer's theory, his use of cases, and the conclusions to which his arguments lead. Along the way, we'll examine core ideas in political morality, e.g., human rights; state sovereignty; morality, necessity, and extremity; liability and punishment, nonviolence, and killing and murder.

Instructor(s): Richard B. Miller Terms Offered: Autumn

Equivalent Course(s): RLST 24110

FNDL 24920. Primo Levi. 100 Units.

Witness, novelist, essayist, translator, linguist, chemist, and even entomologist. Primo Levi is a polyhedral author, and this course revisits his work in all its facets. We will privilege the most hybrid of his texts: The Search for Roots, an anthology that collects the author's favorite readings--a book assembled through the books of the others, but which represents Levi's most authentic portrait. By using this work as an entry point into Levi's universe, we will later explore his other texts, addressing issues such as the unsettling relationship between survival and testimony, the 'sinful' choice of fiction, the oblique path towards autobiography, and the paradoxes of witnessing by proxy.

Instructor(s): M. Mariani Terms Offered: Autumn

Prerequisite(s): Open to advanced undergrads with consent of instructor.

Note(s): Taught in Italian.

Equivalent Course(s): JWSC 24920, ITAL 34920, ITAL 24920

FNDL 25200. Early Daoist Texts. 100 Units.

In this course, we will focus primarily on reading (in English) the Laozi and Zhuangzi, paying attention both to philosophical and historical issues. We'll also read several ancillary texts, such as the 'Nei ye' chapter of the Guanzi and the 'Yu Lao' and 'Jie Lao' chapter of the Han Feizi, as well as such unearthed manuscripts as the Tai Yi sheng shui and Heng xian. In all cases, we will be concerned first of all with what these texts may have meant to people in the Warring States period, and then only incidentally with how they have been understood in subsequent periods and places.

Instructor(s): E. Shaughnessy Terms Offered: Spring
Equivalent Course(s): EALC 25200

FNDL 25721. Literature as Self Help: The Poetry of Rainer Maria Rilke. 100 Units.

Rainer Maria Rilke's writing is famous for its lyrical intensity. The pathos of his poetic language appears to 'move' and 'touch' readers in an unparalleled way. Soldiers going to fight in the Second World War carried volumes of Rilke's poetry in their knapsacks and letters of fallen soldiers contained quotes from his verse ('Who talks of victory? To endure is all.'). Recent editions of his writings, such as *Rilke on Love and Other Difficulties* (1994), *Rilke for the Stressed* (1998) or *Words of Consolation* (2017), attest to Rilke being viewed as someone from whom readers expect insight into the value or vanity of life. In this course, we will read selections of Rilke's poetry and correspondence alongside excerpts from his writings on art to critically examine his language's purported ability to express our innermost feelings and to offer solace. Along the way, we will also pay attention to situating his work in the context of 'modernism.' Other readings by: Paul de Man 'Tropes (Rilke),' Rita Felski 'Uses of Literature,' Beth Blum 'Self-Help Compulsion: Searching for Advice in Modern Literature,' among others. Readings and discussions in English. Those who read German will read the texts in the original.

Instructor(s): Margareta Ingrid Christian Terms Offered: Autumn
Equivalent Course(s): GRMN 35721, GRMN 25721

FNDL 25802. Philosophical Petrarchism. 100 Units.

This course is a close reading of Petrarch's Latin corpus. Readings include the Coronation Oration, The Secret, and selections from Remedies for Fortune Fair and Foul, On Illustrious Men, On Religious Leisure, and The Life of Solitude. Special attention is devoted to Petrarch's letter collections (Letters on Familiar Matters, Letters of Old Age, Book without a Name, etc.) and his invectives. The aim of the course is to familiarize the student with the new and complete Petrarch that emerged in 2004 on the occasion of the 700th anniversary of his birth. Discussion will focus on Petrarch's self-consciousness as the 'father of humanism,' his relationship to Dante, autobiographism, dialogical inquiry, anti-scholasticism, patriotism, and Petrarch's 'civic' reception in the Quattrocento as well as on a comparative evaluation of the nineteenth-century Petrarchs of Alfred Mézières, Georg Voigt, and Francesco De Sanctis.

Instructor(s): R. Rubini Terms Offered: Autumn
Note(s): Taught in English.
Equivalent Course(s): ITAL 36002, ITAL 26002, MDVL 26002

FNDL 25910. Racine. 100 Units.

Racine's tragedies are often considered the culminating achievement of French classicism. Most famous for his powerful re-imaginings of Greek myth (Phèdre, Andromaque), his tragic universe nevertheless ranged considerably wider, from ancient Jewish queens to a contemporary Ottoman harem. We will consider the roots (from Euripides to Corneille) of his theatrical practice as well as its immense influence on future writers (from Voltaire to Proust, Beckett, and Genet).

Instructor(s): L. Norman Terms Offered: Autumn
Prerequisite(s): At least one French literature course, 21700 or higher.
Note(s): Course taught in French; all work in French for students seeking FREN credit; written work may be in English for those taking course for TAPS or FNDL credit.
Equivalent Course(s): FREN 35910, FREN 25910, TAPS 28476, TAPS 35910

FNDL 27301. Weimar Political Theology: Schmitt and Strauss. 100 Units.

This course is devoted to the idea of 'political theology' that developed during the interwar period in twentieth-century Central Europe, specifically Germany's Weimar Republic. The course's agenda is set by Carl Schmitt, who claimed that both serious intellectual endeavors and political authority require extra-rational and transcendent foundations. Along with Schmitt's works from the period, such as *Political Theology* and *The Concept of the Political*, we read and discuss the related writings of perhaps his greatest interlocutor, Leo Strauss.

Instructor(s): J. McCormick Terms Offered: Spring
Prerequisite(s): Consent of instructor.
Equivalent Course(s): PLSC 37301, PLSC 27301

Winter Quarter Courses

FNDL 21403. Shakespeare I: Histories and Comedies. 100 Units.

An exploration of some of Shakespeare's major plays from the first half of his professional career when the genres in which he primarily worked were comedies and (English) histories. Plays to be studied include *The Comedy of Errors*, *The Taming of the Shrew*, *A Midsummer Night's Dream*, *Twelfth Night*, *Richard III*, *Richard II*, *Henry IV Parts 1 and 2*, and *Henry V*. A shorter and a longer paper will be required. (Pre-1650, Drama)

Instructor(s): Ellen MacKay Terms Offered: Winter
Prerequisite(s): general education requirement in the humanities
Equivalent Course(s): ENGL 16500, TAPS 28405

FNDL 21820. Italo Calvino: the Dark Side. 100 Units.

An intense reading of Italo Calvino's later works: We will contemplate the orbital debris of Cosmicomics and t zero, and we will follow the labyrinthine threads of *The Castle of Crossed Destinies* and *Invisible Cities*. After stumbling upon the suspended multiple beginnings of *If on a winter's night a traveler*, we will probe the possibilities of literature with the essays collected in *Una pietra sopra*. Finally, we will encounter Mr. Palomar, who will provide us with a set of instructions on how to neutralize the self and 'learn how to be dead.' The approach will be both philosophical and historical, focusing on Calvino's ambiguous fascination with science, his critique of the aporias of reason and the 'dementia' of the intellectual, and his engagement with the nuclear threat of total annihilation.

Instructor(s): M. Mariani Terms Offered: Winter

Note(s): Taught in Italian.

Equivalent Course(s): ITAL 31820, ITAL 21820

FNDL 22010. The Cinema of Miloš Forman. 100 Units.

The films of Miloš Forman (1932-2018) reflect the turbulence of the 1960s, '70s, '80s and '90s, and 2000s by focusing on the underdog, the pariah, the eccentric. The subject matter to which Forman was drawn translated into his cinema with a signature bittersweet tone, emphatic narrative cogency, and lush spontaneity. This course is an intensive study of Forman's work from his 'New Wave' work in Czechoslovakia (*Loves of a Blonde*, *The Fireman's Ball*) to his U.S. studio successes (*One Flew Over the Cuckoo's Nest*, *Amadeus*), to his idiosyncratic and parabolic last films (*Man on the Moon*, *Goya's Ghosts*). Among other topics, the course contemplate the value of a dark sense of humor, cinematic gorgeousness, and artistic dissidence.

Instructor(s): Malynne Sternstein Terms Offered: Winter

Equivalent Course(s): CMST 26603, REES 32010, REES 22010, CMST 36603

FNDL 22417. Greek Comedy. 100 Units.

We will read in Greek Menander's *Dyskolos*, with an eye to understanding 'New Comedy' and its robust afterlife in Renaissance Europe and modern sitcoms. We will also devote some time to reading and assessing fragments from Menander's contemporaries. Coursework will include translation as well as secondary readings.

Instructor(s): Sofia Torallas Tovar Terms Offered: Spring

Prerequisite(s): GREK 20300

Equivalent Course(s): GREK 22417, GREK 32417

FNDL 26510. The Films of Alfred Hitchcock. 100 Units.

This course focuses on the films of Alfred Hitchcock, one of the greatest filmmakers of the 20th century. We study both his films and a variety of approaches to them. We investigate the enduring power of his movies; his contributions to genre and popular cinema; his storytelling techniques; his stylistic command; his approach to romance, suspense, and action; his status as a master and auteur; and his remarkable control over the audience's thoughts and feelings.

Instructor(s): Maria Belodubrovskaya Terms Offered: Winter

Equivalent Course(s): CMST 36500, ARTH 38405, CMST 26500, ARTH 28405

FNDL 27200. Dante's Divine Comedy 1: Inferno. 100 Units.

This is the first part of a sequence focusing on Dante's masterpiece. We examine Dante's *Inferno* in its cultural (i.e., historical, artistic, philosophical, sociopolitical) context. In particular, we study Dante's poem alongside other crucial Latin and vernacular texts of his age. They include selections from the Bible, Virgil's *Aeneid*, Augustine's *Confessions*, Ovid's *Metamorphoses*, and the stilnovist and Sicilo-Tuscan poets. Political turmoil, economic transformation, changing philosophical and theological paradigms, and social and religious conflict all converge in the making of the *Inferno*.

Instructor(s): J. Steinberg Terms Offered: Winter

Note(s): Taught in English.

Equivalent Course(s): MDVL 21900, ITAL 31900, ITAL 21900

FNDL 27716. Exemplary Leaders: Livy, Plutarch, and Machiavelli. 100 Units.

Cicero famously called history the 'schoolmistress of life.' This course explores how ancient and early modern authors—in particular, Livy, Plutarch, and Machiavelli—used the lives and actions of great individuals from the Greek and Roman past to establish models of political behavior for their own day and for posterity. Such figures include Solon, Lycurgus, Alexander, Romulus, Brutus, Camillus, Fabius Maximus, Scipio Africanus, Julius Caesar, and Augustus. We will consider how their actions are submitted to praise or blame, presented as examples for imitation or avoidance, and examine how the comparisons and contrasts established among the different historical individuals allow new models and norms to emerge. No one figure can provide a definitive model. Illustrious individuals help define values even when we mere mortals cannot aspire to reach their level of virtue or depravity. Course open to undergraduates and graduate students. Readings will be in English. Students wishing to read Latin, Greek, or Italian will receive support from the professors.

Instructor(s): J. McCormick, M. Lowrie Terms Offered: Winter

Equivalent Course(s): PLSC 27703, CLAS 37716, PLSC 47703, CLCV 27716

FNDL 27950. The Declaration of Independence. 100 Units.

This course explores important intellectual, political, philosophical, legal, economic, social, and religious contexts for the Declaration of Independence. We begin with a consideration of the English Revolution, investigating the texts of the Declaration of Rights of 1689 and Locke's *Second Treatise* and their meanings to American revolutionaries. We then consider imperial debates over taxation in the 1760s and 1770s, returning Benjamin Franklin's *Autobiography* to its original context. Reading Paine's *Common Sense* and the letters of Abigail Adams and John Adams we look at the multiple meanings of independence. We study Jefferson's drafting process, read the Declaration over the shoulders of people on both sides of the Atlantic, and consider clues to contemporary meanings beyond the intentions of Congress. Finally, we briefly engage the post-revolutionary history of the place and meaning of the Declaration in American life. (1650-1830, 1830-1940) This is a 2018-19 College Signature Course.

Instructor(s): Eric Slauter Terms Offered: Winter

Note(s): This was a 2018–19 College Signature Course.

Equivalent Course(s): ENGL 17950, HMRT 17950, HIST 17604, SIGN 26039, LLSO 27950

FNDL 28202. Introduction to the New Testament: Texts and Contexts. 100 Units.

An immersion in the texts of the New Testament with the following goals: 1. through careful reading to come to know well some representative pieces of this literature; 2. to gain useful knowledge of the historical, geographical, social, religious,

cultural and political contexts of these texts and the events they relate; 3. to learn the major literary genres represented in the canon ('gospels,' 'acts,' 'letters,' and 'apocalypses') and strategies for reading them; 4. to comprehend the various theological visions and cultural worldviews to which these texts give expression; 5. to situate oneself and one's prevailing questions about this material in the history of research, and to reflect on the goals and methods of interpretation; 6. to raise questions for further study.

Instructor(s): Margaret Mitchell Terms Offered: Winter

Prerequisite(s): Interest in this literature, and willingness to enter into conversation with like-minded and non-like-minded others on the texts and the issues involved in their interpretation.

Note(s): This course counts as a Gateway course for RLST majors/minors.

Equivalent Course(s): RLST 12000, BIBL 32500, MDVL 12500

Spring Quarter Courses

FNDL 20905. Walter Benjamin: 1935-1938. 100 Units.

[Volume 3 of] Harvard's majestic annotated edition of the essays and fragments includes reflections on Brecht, Kafka and the collector Eduard Fuchs, an early version of the famous analysis of art in the age of mechanical reproduction (here more accurately translated as 'technological reproducibility') and the equally exhilarating inquiry into the nature of narrative, 'The Storyteller.' You feel smarter just holding this book in your hand.' -Michael Dirda, *The Washington Post*. In this course, we hold the book in our hands for extended periods of time to read it and discuss its contents. Extracurricular carriage of the book is encouraged.

Instructor(s): Malyne Sternstein Terms Offered: Spring

Prerequisite(s): Open to Fundamentals students and upperclass students in other majors.

Equivalent Course(s): REES 20905

FNDL 21201. Milton. 100 Units.

A study of Milton's major writings in lyric, epic, tragedy, and political prose, with emphasis upon his evolving sense of his poetic vocation and career in relation to his vision of literary, political, and cosmic history. Graduate students will be expected to do additional secondary reading. (Pre-1650, 1650-1830, Poetry), (Med/Ren)

Instructor(s): Joshua Scodel Terms Offered: Spring

Equivalent Course(s): ENGL 17501, RLST 25405

FNDL 21300. James Joyce: Ulysses. 100 Units.

This course considers themes that include the problems of exile, homelessness, and nationality; the mysteries of paternity and maternity; the meaning of the Return; Joyce's epistemology and his use of dream, fantasy, and hallucinations; and Joyce's experimentation with and use of language.

Equivalent Course(s): ENGL 21301

FNDL 21703. Plato: The Republic. 100 Units.

This course will guide students through a careful reading of Plato's Republic. Among questions we shall consider: What is justice and why think of it as a human excellence? What is the relation between politics, human psychology and metaphysics? Why does Plato write in dialogue form and why does he use myths, allegories and images in the course of his argument? What are the problems with democracy as Plato understood it? (A)

Instructor(s): B. Reece Terms Offered: Spring

Prerequisite(s): Those who are not Philosophy majors or Fundamentals majors should seek instructor permission to enroll.

Equivalent Course(s): PHIL 25704

FNDL 21804. Dante's Divine Comedy III: Paradiso. 100 Units.

An in-depth study of the third cantica of Dante's masterpiece, considered the most difficult but in many ways also the most innovative. Read alongside his scientific treatise the Convivio and his political manifesto the Monarchia.

Instructor(s): J. Steinberg Terms Offered: Spring

Prerequisite(s): Completion of the previous courses in the sequence not required, but students should familiarize themselves with the Inferno and the Purgatorio before the first day of class.

Note(s): Taught in English.

Equivalent Course(s): ITAL 32101, ITAL 22101, MDVL 22101

FNDL 21812. Pascal and Simone Weil. 100 Units.

Blaise Pascal in the seventeenth century and Simone Weil in the twentieth formulated a compelling vision of the human condition, torn between greatness and misery. They showed how human imperfection coexists with the noblest callings, how attention struggles with distraction and how individuals can be rescued from their usual reliance on public opinion and customary beliefs. Both thinkers point to the religious dimension of human experience and suggest unorthodox ways of approaching it. We will also study an important text by Gabriel Marcel emphasizing human coexistence and cooperation.

Instructor(s): T. Pavel Terms Offered: Spring

Prerequisite(s): Undergraduates must be in their third or fourth year.

Note(s): Taught in English. For French undergraduates and graduates, there will be a bi-weekly one-hour meeting to study the original French texts.

Equivalent Course(s): CMLT 39101, SCTH 38201, FREN 39100, RLST 24910, CMLT 29101, FREN 29100

FNDL 23518. Colloquium: How to Be Good. 100 Units.

Medieval Christians understood virtue as both a habit and a gift of grace. In this course, we will test this understanding by comparison with the definitions of virtue found in three complementary traditions: Greek, Jewish, and Confucian.

Readings will be taken from the New Testament, Thomas Aquinas, Aristotle, Plato, the Torah, the Talmud, and the Analects. Our purpose will be to discover how each of these systems of training the soul works, along with their similarities and differences.

Instructor(s): R. Fulton Brown Terms Offered: Spring

Equivalent Course(s): HIST 23518, MDVL 23518, HIST 33518

FNDL 23599. Christian and Anti-Christian: Kierkegaard and Nietzsche on Religion and Morality. 100 Units.

This course explores two radically different assessments of religion and morality, one by the Protestant thinker Søren Kierkegaard, and the other by an arch-critic of religion and morality, Friedrich Nietzsche. The course will focus on their assessments of Christian faith and its relation to morality and the human good. Both thinkers wrote in complex and confusing styles: Kierkegaard used pseudonyms; Nietzsche wrote in aphorisms. In order to explore their styles of writing and their critiques of religion and morality we will read Kierkegaard's *Fear and Trembling* as well as Nietzsche's *On the Genealogy of Morals*. The general aim of the course, then, is to explore two seminal minds in the development of Western thought with the question in mind of their possible contribution to current theological and ethical thinking.

Instructor(s): William Schweiker Terms Offered: Spring

Equivalent Course(s): RLST 23599, THEO 33599, RETH 33599

FNDL 24612. Dostoevsky. 100 Units.

Dostoevsky was an inveterate risk-taker, not only at the baccarat tables of the Grand Casino in Baden-Baden, but in his personal life, his political activities, and his artistic endeavors. This course is intended to investigate his two greatest wagers: on the presence of the divine in the world and on the power of artistic form to convey and articulate this presence. Dostoevsky's wager on form is evident even in his early, relatively conventional texts, like *The Double*. It intensifies after his decade-long sojourn in Siberia, exploding in works like *The Notes from Underground*, which one-and-a-half centuries later remains an aesthetic and philosophical provocation of immense power. The majority of the course will focus on Dostoevsky's later novels. In *Crime and Punishment* Dostoevsky adapts suspense strategies to create a metaphysical thriller, while in *The Demons* he pairs a study of nihilism with the deformation of the novel as a genre. Through close readings of these works we will trace how Dostoevsky's formal experimentation created new ways of exploring realms of existence that traditionally belonged to philosophy and theology. The results were never comfortable or comforting; we will focus on interpreting Dostoevsky's metaphysical provocations.

Instructor(s): R. Bird Terms Offered: Spring

Equivalent Course(s): HUMA 24800, RLST 28204, RLIT 39501, REES 20013, REES 30013

FNDL 24921. Robert Musil: Altered States. 100 Units.

This course is an introduction to the work of Robert Musil, one of the major novelists of the twentieth century. We will focus on Musil's idea of the 'Other Condition' [der andere Zustand], which he once described in contrast to our normal way of life as a 'secret rising and ebbing of our being with that of things and other people.' What is this 'Other Condition': what are its ethics and aesthetics, and how can it be expressed in literature? We will begin with readings from Musil's critical writings and early narrative prose, then devote the majority of the quarter to his unfinished magnum opus, *The Man without Qualities*. Particular attention will be paid to Musil's experimentations with narrative form and his development of the genre of 'essayism'. Readings and discussion in English.

Instructor(s): Sophie Salvo Terms Offered: Spring

Equivalent Course(s): GRMN 24921, GRMN 34921

FNDL 25300. Nabokov: Lolita. 100 Units.

Lolita, light of my life, fire of my loins. My sin, my soul, *Lolita*: the tip of the tongue taking a trip of three steps down the palate, to tap at three on the teeth.' Popular as Nabokov's 'all-American' novel is, it is rarely discussed beyond its psychosexual profile. This intensive text-centered and discussion-based course attempts to supersede the univocal obsession with the novel's pedophilic plot as such by concerning itself above all with the novel's language: language as failure, as mania, and as conjuration.

Instructor(s): M. Sternstein Terms Offered: Autumn

Equivalent Course(s): SIGN 26027, ENGL 28916, GNSE 24900, REES 20004

FNDL 26614. T.S. Eliot. 100 Units.

With the major new edition of Eliot's poems by Jim McCue and Christopher Ricks, the new volumes of Eliot's letters, and two separate new editions of Eliot's complete prose, we are in a position to rethink the meanings and force of Eliot's life work. The class will be devoted to careful reading of his poems, essays, plays, and correspondence, with attention to his literary, cultural, and political contexts.

Instructor(s): Rosanna Warren Terms Offered: Spring. Course will be taught spring 2021

Equivalent Course(s): SETH 36014, ENGL 34850, ENGL 26614

FNDL 27213. The Philosophy of Stanley Cavell. 100 Units.

The aim of this first course will be to offer a careful reading of three quarters of Stanley Cavell's major philosophical work, *The Claim of Reason*. The course will concentrate on Parts I, II, & IV of the book (with only very cursory discussion of Part III). We will look at other writings by Cavell insofar as they directly assist in an understanding of this central work of his. In particular, we will focus on Cavell's treatment of the following topics: criteria, skepticism, agreement in judgment, speaking inside and outside language games, the distinction between specific and generic objects, the relation between meaning and use, our knowledge of the external world, our knowledge of other minds, the concept of a non-claim context, the distinction between knowledge and acknowledgment, and the relation between literary form and philosophical content. We will read background articles by authors whose work Cavell himself discusses in the book, as well as related articles by Cavell. We will also discuss several of the better pieces of secondary literature on the book to have appeared over the course of the last

three decades. Though no separate time will be given over to an independent study of Wittgenstein's philosophy, we will take the required time to understand those particular passages from Wittgenstein to which Cavell himself devotes extended attention in his book and upon which he builds his argument.

Instructor(s): J. Conant Terms Offered: Spring

Prerequisite(s): One previous course in philosophy.

Equivalent Course(s): PHIL 37213, PHIL 27213

FNDL 29020. The Shadows of Living Things: The Writings of Mikhail Bulgakov. 100 Units.

What would your good do if evil did not exist, and what would the earth look like if all the shadows disappeared? After all, shadows are cast by things and people.... Do you want to strip the earth of all the trees and living things just because of your fantasy of enjoying naked light?" asks the Devil. Mikhail Bulgakov worked on his novel *The Master and Margarita* throughout most of his writing career, in Stalin's Moscow. Bulgakov destroyed his manuscript, re-created it from memory, and reworked it feverishly even as his body was failing him in his battle with death. The result is an intense contemplation on the nature of good and evil, on the role of art and the ethical duty of the artist, but also a dazzling world of magic, witches, and romantic love, and an irresistible seduction into the comedic. Laughter, as shadow and light, as the subversive weapon but also as power's whip, grounds human relation to both good and evil. Brief excursions to other texts that help us better understand *Master and Margarita*.

Instructor(s): A. Ilieva Terms Offered: Spring

Equivalent Course(s): REES 29021, REES 39021

FNDL 29133. Benjamin Franklin and The Arts of Persuasion. 100 Units.

An examination of Franklin's lifelong attempts to persuade people to change their behavior without appearing to do so.

Instructor(s): Ralph Lerner Terms Offered: Autumn. Course will be taught in Autumn 2020

Prerequisite(s): Open to undergrads.

Equivalent Course(s): SCTH 39133

FNDL 29501. Mary Wollstonecraft and Mary Shelley. 100 Units.

This course examines the major works—novels, political treatises, letters, travel essays—of two of Romanticism's most influential women writers. We will attend to historical, intellectual, and cultural contexts as well as matters of literary concern, such as their pioneering development of modes like gothic and science/speculative fiction, Wollstonecraft's stylistic theories, and Shelley's scenes of imaginative sympathy. (Fiction, 1650-1830).

Instructor(s): Alexis Chema Terms Offered: Spring

Equivalent Course(s): GNSE 19500, ENGL 19500

Possible Supporting Courses

Supporting Courses are intended to provide further methodological training, historical context, and conceptual frameworks to enrich the student's engagement with the texts, topics, and ideas relevant to his or her project; the selection of such courses will therefore vary considerably from person to person. The list below is a selection of what Fundamentals students might consider as their Supporting Courses, but it is by no means an exhaustive or prescriptive list. Students are encouraged to make a habit of reading the catalogs of other relevant departments and to comb through Class Search (<https://coursesearch.uchicago.edu/>) to locate courses that speak to their interests. The program coordinator and the student's advisers are also valuable resources to consult when planning out the academic year.

Gender and Sexuality Studies

Department Website: <http://gendersexuality.uchicago.edu>

Program of Study

Gender and Sexuality Studies at the University of Chicago encompasses diverse disciplines, modes of inquiry, and objects of knowledge. Gender and Sexuality Studies allows undergraduates the opportunity to shape a disciplinary or interdisciplinary plan of study focused on gender and sexuality. Students can thus create a cluster of courses linked by their attention to gender or sexuality as an object of study or by their use of gender/sexuality categories to investigate topics in sexuality, social life, science, politics and culture, literature and the arts, or systems of thought.

Students in other fields of study may also complete a minor in Gender and Sexuality Studies. Information follows the description of the major.

Program Requirements

The requirements listed here apply to students in the Classes of 2022 and beyond. Students in the Class of 2021 should consult the Archived Catalogs and may direct any questions to Bonnie Kanter via email at bonniek@uchicago.edu.

The major is designed with flexibility in mind and is meant to provide students with the opportunity to design a course of study tailored to their particular concentrations. The major requires a total of thirteen courses—eleven courses plus a BA Seminar (GNSE 29800) and BA research project or essay (GNSE 29900). The eleven courses consist of a combination of courses from within Gender and Sexuality Studies and supporting courses in a different discipline (or further GNSE courses if the student chooses).

Students are required to take one Foundations course (GNSE 12000–14999), one Problems course (GNSE 11000-11199 or 20100–20399), and one Concepts course (GNSE 23101–23399). The Foundations courses are designed to provide an introduction to theories in the field of Gender and Sexuality Studies and are recommended as an entry point for the major. Concepts and Problems courses delve further in to a specific subject area and are a way to build upon prior knowledge in the field. Additionally, students must take GNSE 20001 Theories of Sexuality and Gender (or an approved substitute). This course is recommended for third- and fourth-year students following enrollment in other GNSE courses.

To complete the major requirements, students must take three or four additional GNSE courses and three or four supporting courses that can be further GNSE course work or courses in a different discipline that provide training in the methodological, technical, or scholarly skills needed to pursue research in the student's primary field. Within the GNSE course requirement, students must enroll in at least one course that is grounded in the social sciences and one course that is grounded in the humanities in order to explore how gender and sexuality work across different disciplines. All Gender and Sexuality Studies majors are advised, but not required, to take GNSE 15002-15003 Gender and Sexuality in World Civilizations I-II to fulfill their general education requirement in civilization studies. They may fulfill this general education requirement with another sequence and count GNSE 15002-15003 in the major.

Research Project or Essay

A substantial essay or project is to be completed in the student's fourth year under the supervision of a Gender Studies Adviser who is a member of the Gender and Sexuality Studies Affiliated Faculty (<https://gendersexuality.uchicago.edu/research/faculty.shtml/>) in the student's primary field of interest. Majors will attend two workshops during the Spring Quarter of their third year at which point they will create a proposal for their thesis. (If students are studying abroad, they should meet with the BA preceptor individually in the quarter prior to departure.) Students are also required to attend a BA Seminar in Autumn and Winter Quarters of their fourth year. Enrollment in the corresponding course (GNSE 29800 B.A. Paper Seminar) can occur in either Autumn or Winter but attendance is required through both quarters. Registration for GNSE 29900 BA Essay is also required in any quarter during the student's fourth year. Students must submit the completed thesis by fifth week of their quarter of graduation.

This program may accept a BA paper or project used to satisfy the same requirement in another major if certain conditions are met and with the consent of the other program chair. Approval from both program chairs is required. Students should consult with the chairs by the earliest BA proposal deadline (or by the end of their third year, when neither program publishes a deadline). A consent form, to be signed by both chairs, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Summary of Requirements

MAJOR		
One Foundations course (GNSE 12000–14999)		100
One Problems course (GNSE 11000-11199 or 20100–20399)		100
One Concepts course (GNSE 23100–23399)		100
GNSE 20001	Theories of Sexuality and Gender *	100
Seven additional courses		700
Three to four additional GNSE courses (at least one course in humanities and one in social sciences)		
Three to four supporting courses (can be further GNSE course work or other courses with approval)		
GNSE 29800	B.A. Paper Seminar	100

GNSE 29900	BA Essay	100
Total Units		1300

The requirements listed here apply to students in the Classes of 2022 and beyond. Students in the Class of 2021 should consult Archived Catalogs and meet with the Student Affairs Administrator.

- * GNSE 10310 (taught in previous academic years) is an automatically approved substitute. Other courses may be considered but need individual approval.

Grading

Two of the supporting field courses may be taken for P/F grading. All other courses must be taken for a quality grade.

Honors

Students with a 3.25 or higher overall GPA and a 3.5 or higher GPA in the major are eligible for honors. Students must also receive a grade of A on their BA project or essay with a recommendation for honors from their faculty adviser.

Advising

Students are encouraged to design their program of study with the assistance of Bonnie Kanter, the Student Affairs Administrator and/or the Director of Undergraduate Studies. Regular check-ins are recommended to be sure all requirements are being met.

Minor Program in Gender and Sexuality Studies

Gender and Sexuality Studies at the University of Chicago encompasses diverse disciplines, modes of inquiry, and objects of knowledge. A minor in Gender and Sexuality Studies allows students in other major fields to shape a disciplinary or interdisciplinary plan of study that will provide a competence in gender and sexuality studies. Such a minor requires a total of six courses:

GNSE 20001	Theories of Sexuality and Gender *	100
Five additional courses in Gender and Sexuality Studies		500
Total Units		600

- * GNSE 10310 (taught in previous academic years) is an automatically approved substitute. Other courses may be considered but need individual approval.

It is recommended, but not required, that students who minor in Gender and Sexuality Studies take GNSE 15002-15003 Gender and Sexuality in World Civilizations I-II to fulfill their general education requirement. Students who elect the minor program in Gender and Sexuality Studies must meet with the Director of Undergraduate Studies before the end of Spring Quarter of their third year to declare their intention to complete the minor. Students choose courses in consultation with the Director of Undergraduate Studies. The chair's approval for the minor program should be submitted to a student's College adviser by the deadline above on a form obtained from the adviser.

Courses in the minor (1) may not be double counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for quality grades, and at least four of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Nonmajors are encouraged to use the lists of faculty and course offerings as resources for the purpose of designing programs within disciplines, as an aid for the allocation of electives, or for the pursuit of a BA project. For further work in Gender and Sexuality Studies, students are encouraged to investigate other courses taught by resource faculty. For more information about Gender and Sexuality Studies, visit the Center for the Study of Gender and Sexuality website at gendersexuality.uchicago.edu (<http://gendersexuality.uchicago.edu>) or contact the Student Affairs Administrator at 773.702.2365.

Gender and Sexuality Studies Courses - Foundations

GNSE 12103. Treating Trans:- Practices of Medicine, Practices of Theory. 100 Units.

Medical disciplines from psychiatry to surgery have all attempted to identify and to treat gendered misalignment, while queer theory and feminisms have simultaneously tried to understand if and how trans- theories should be integrated into their respective intellectual projects. This course looks at the logics of the medical treatment of transgender (and trans- more broadly) in order to consider the mutual entanglement of clinical processes with theoretical ones. Over the quarter we will read ethnographic accounts and theoretical essays, listen to oral histories, discuss the intersections of race and ability with gender, and interrogate concepts like 'material bodies' and 'objective science'. Primary course questions include: 1.

Instructor(s): Paula Martin Terms Offered: Spring

Note(s): This course counts as a Foundations Course for GNSE majors

Equivalent Course(s): HLTH 12103, CHDV 12103, HIPS 12103, ANTH 25212

GNSE 12104. Foundations in Masculinity Studies. 100 Units.

In recent years, the term 'toxic masculinity' has been used in contexts from the #MeToo movement to the rise of Donald Trump, from Gillette advertisements to the behavior of men on the reality show *The Bachelorette*. Why is the conversation around 'toxic masculinity' taking place in the United States at this moment? In this course, we will go beyond banal statements like 'toxic masculinity' and 'men are trash' to critically ask, What role does masculinity play in social life? How

is masculinity produced, and are there different ways to be masculine? This course provides students with an intensive introduction to the foundational theory and research in the field of masculinities studies. We will use an intersectional lens to study the ways in which the concept and lived experience of masculinity are shaped by economic, social, cultural, and political forces. We will examine how the gendered social order influences the way people of all genders perform masculinity as well as the ways men perceive themselves and other men, women, and social situations. Verbally and in writing, students will develop an argument about the way contemporary masculinity is constructed and performed.

Instructor(s): Rebecca Ewert Terms Offered: Spring

Note(s): This class counts as a Foundations course for GNSE majors.

Equivalent Course(s): SOCI 28087

GNSE 12105. Sex and Gender in The City. 100 Units.

This course is designed to introduce students to some of the key concerns at the intersection of gender studies and urban studies. In this course, we will take gender relations and sexuality as our primary concern and as a constitutive aspect of social relations that vitally shape cities and urban life. We will examine how gender is inscribed in city landscapes, how it is lived and embodied in relation to race, class, and sexuality, and how it is (re)produced through violence, inequality, and resistance. Over the course of the quarter, we will draw on an interdisciplinary scholarship that approaches the central question of how and why thinking about urban life in relation to gender and sex matters.

Instructor(s): Sneha Annavarapu Terms Offered: Spring

Note(s): This course counts as a Foundations course for GNSE majors

Equivalent Course(s): ARCH 22105, ENST 12105, SOCI 28088, GLST 22105

GNSE 12106. Women of the Avant-Garde. 100 Units.

This course provides an introduction to the written materials of women artists who belonged to various twentieth-century avant-garde movements and circles. The institutions of 'woman art' and 'the avant-garde' will come under scrutiny as we consider the literary and archival miscellany of pan- & non-sexual, cross-generational, inter-aesthetic, multilingual, and transnational works by such makers as Gertrude Stein, Gwendolyn Brooks, Clarice Lispector, Frida Kahlo, and Yoko Ono. How do these artists conceive of their work and process as interventions into social, political, and historical realities? How does their subjective view of those realities provide an account of the identificatory powers of their gender and sexuality? We will examine the ways in which abstraction in writing becomes useful for commenting on issues raised by feminist and queer theory, periodization, canonization, and institution. Taking to the Regenstein's Special Collections Research Center, we will also open up the criticism, diaries, and letters of these artists to gain a new perspective on their creative processes. In addition to learning how to constellate these materials with the course readings, students will acquire hands-on experience in archival research, annotation, and curation as they make an archival project of their own. Students' final projects will serve as the basis for a prospective library exhibition in concert with Special Collections.

Instructor(s): Rivky Mondal Terms Offered: Winter

Note(s): This course counts as a Foundations course for GNSE majors.

Equivalent Course(s): ENGL 12106

Gender and Sexuality Studies Courses - Problems

GNSE 20106. Capitalism, Gender, and Intimate Life. 100 Units.

What is the relationship between the capitalist economy and the gendered organization of society and identity of individuals? Are these two systems, or one? This class pursues these questions, seeking to understand capitalism as an everyday and intimate experience. How have markets and production shaped and been shaped by personal identity, and in particular gendered identity? We examine the historical interrelationships among practices of sexuality, marriage, family, reproduction, labor, and consumption and trace the economic dimensions of masculinity and femininity over time, focusing largely but not exclusively on US history. Assignments: Midterm paper (8-10 pages) applying a theoretical reading to a secondary text, and a final paper (15 pages) based on secondary research.

Instructor(s): G. Winant Terms Offered: Winter

Equivalent Course(s): LLSO 27906, HIST 27906, GNSE 30106, HIST 37906

GNSE 20107. Queer and Trans Cinema and Media. 100 Units.

In this course we explore the history of queer and transgender cinema and media in an effort to situate new developments in queer and trans cinema and media making. We will consider relevant theories about gender and sexuality and their implications for our categories of film and media analysis.

Instructor(s): Kara Keeling Terms Offered: Spring

Equivalent Course(s): CMST 20605, MAAD 10605, CMST 30605, GNSE 30107

GNSE 20108. Feminist Political Philosophy. 100 Units.

This course focuses on three interrelated themes in contemporary feminist political philosophy: objectification; the relation of gender oppression to the economic structure of society; and the problem of 'intersectionality,' that is, the problem of how to construct adequate theories of gender injustice given that gender 'intersects' with other axes of oppression, e.g. race and class. Authors we'll read include (but are not limited to) the following: Martha Nussbaum, Sandra Bartky, Iris Marion Young, Nancy Fraser, Patricia Hill Collins, bell hooks, Serene Khader and Tithi Bhattacharya. (A)

Instructor(s): T. Zimmer Terms Offered: Winter

Equivalent Course(s): PHIL 25405

GNSE 20110. Trans* Forms: On Gender and Genre. 100 Units.

Gender and genre share the common root term, 'genus,' which refers to classification. In this class, students will engage how authors make use of decolonial, antiracist, feminist and queer theory and praxis to approach and refigure gender's colonial

legacies. Reading across genres--memoir, poetry, and speculative fiction, to name a few --Trans* Forms attends to the remaking and proliferation of gender as matters of form. (Theory) This class counts as a Problems course for GNSE majors.
 Instructor(s): Riley Snorton Terms Offered: Winter
 Equivalent Course(s): ENGL 19980, CRES 19980

GNSE 20113. Inequalities. 100 Units.

This course analyzes inequality and the overt and covert violence that results from it. These inequalities are often grounded in gender and sex but also result from a complex intersection of sex gender systems with other historical factors such as city life, environment, media and so on. Inequality is what produces the experience of differential citizenship, a topic that exercises scholars the world over. In particular, those interested in issues of feminism, community, and ethnicity have studied why women (some women more than others) or particular social groups such as gay or trans groups, experience disenfranchisement more than their counterparts, even when, officially, many cultures/ nation states grant their members/ citizens formal legal equality. Many of the examples around which this course is framed emerge out of South Asia, but our analyses will be structured through an engagement with theoretical texts that address issues of gendered oppression and discrimination in other parts of the world. Readings will include historical, anthropological, literary texts.

Instructor(s): Rochona Majumdar Terms Offered: Autumn

Prerequisite(s): Students who have previously completed "Problems in the Study of Gender and Sexuality: Inequality" are not eligible to receive credit for this class.

Note(s): This course counts as a Problems course for GNSE majors.

Equivalent Course(s): SALC 30011, SALC 20113, GNSE 30111

GNSE 20114. Media Wars. 100 Units.

Media practices and discourses evoking war or violence are common today, such as the 'weaponization' of social media; 'cyber warfare' and attacks; 'online battlefields'; 'guerrilla' media tactics; 'The Great Meme War' and 'Infowars.com,' to name a few. In relationship with terms suggesting that we live in an age of 'post-truth' dominated by 'fake news' or 'fact-challenged' journalism, the media wars of today may seem unique to the twenty-first century. But in fact, the history of the use of media to either combat or spread ideas dates back centuries to the earliest phases of mass media and communication. In this class, we will proceed historically, broadly conceiving of media to include print and visual, cultural, and artistic forms, cinema, television, and the internet. While we will explore how media have historically been used to construct or counter dominant systems of representation, we will also discuss how different media forms function formally, learning to analyze how they construct discourses of truth as texts (documentary; propaganda). This class will also function as a contemporary research laboratory where students will be asked to track, evaluate, and theorize contemporary or historical media that are taking part in a so-called 'media war.'

Instructor(s): Jennifer Wild Terms Offered: Spring

Note(s): Please note: Students who have previously completed the course "Problems in the Study of Gender and Sexuality: Media Wars" are not eligible to receive credit for this class.

Equivalent Course(s): GNSE 30114, CMST 30904, SIGN 26061, MAAD 10904, CMST 20904

Gender and Sexuality Studies Courses - Concepts

GNSE 23127. Queer Letters and LGBTQ+ Lifeworlds. 100 Units.

This course asks after the social and aesthetic possibilities of queer literatures, with a particular interest in such life-writing forms as the personal letter and epistolary (or electronic) correspondence. What, we will ask, can attending to specifically LGBTQ+ correspondences and life-writings teach us about minoritarian lifeworlds and literary canons? And, vice versa, how does an attention to the sub- or counter-cultural spaces of queer literary production change the way we read even canonical literary texts? We will visit a variety of LGBTQ+ literary lifeworlds across the twentieth and twenty-first centuries - between London, Paris, New York, San Francisco - and engage a wide range of texts and media that represent and encode queer social circuits: collected correspondences, coterie literatures, auto/biographies, memoirs, poetry, and film. In so doing, we will develop a backdrop of queer theoretical scholarship devoted to questions of community-making, subcultural space and belonging, and queer time, including the work of José Esteban Muñoz, Juana María Rodríguez, Elizabeth Freeman, and Jack Halberstam. In addition to a self-designed archival, analytical, or creative final project, we will also hone archival research strategies through two excursions to local archives and experiment with creative and collaborative strategies for reading and writing as we challenge ourselves to think from the position of correspondents.

Instructor(s): Sarah McDaniel Terms Offered: Autumn

Note(s): This course counts as a Concepts Course for GNSE majors.

Equivalent Course(s): ENGL 23127

GNSE 23128. Home and Empire: From Little House on the Prairie to Refugee Camps. 100 Units.

What can living rooms tell us about Empires? What did it mean to be a housewife in an imperial society? This course answers these and other questions by exploring the relationship between domesticity and imperialism over the past three hundred years. We will explore how Catholic Native Potawatomi women decorated their homes in the early 18th century, how black South African maids interacted with white employers during apartheid, and how young male refugees in contemporary France try to make homes in the land of their former colonial ruler. Through this work students will unpack the racial, gendered, spatial, and political logics of imperial rule. This course is organized around three thematic phases: conquest and expansion, rule and resistance, and decolonization. After introducing theoretical approaches to the study of domesticity and imperialism, we will use case studies from across the globe to work through these thematic groups. We will discuss cases from North America, the Caribbean, Asia, Africa, Oceania, and Europe. By combining secondary literature with films, memoirs, domestic objects, and visual sources we will evaluate the intersections of imperialism and home-life. Students will ultimately conduct a final research project on a topic of their choosing to explore this courses' themes in depth.

Students will work to challenge notions of home as an idyllic or a historical space and see the power and struggles that took place within walls.

Instructor(s): Greg Valdespino Terms Offered: Winter

Note(s): This course counts as a Concepts Course for GNSE majors

Equivalent Course(s): HIST 29506

GNSE 23129. Gender and Consumption. 100 Units.

The course looks at the intricate relationship between consumption and gender and sexuality. Drawing on the sociology and history of consumer capitalism, it examines how consumer culture has been predicated on patriarchal and hierarchical notions of gender and sexuality, and how it also provided opportunities to challenge them. The course will ask and answer questions such as: What are the social and political meanings of consumption and how it has been gendered? How did consumer society and consumer culture develop in light of gendered ideologies and practices? And what are the models to challenge and change these institutions and their gendered reality? How has consumerism been related to the development of feminism? And how has feminist thought contributed to the critique of consumer capitalism? The course will examine the relationship of gender and sexuality to consumption through major sociological terms and concepts: How consumption, and gender, are practiced and experienced through space; how does consumption perpetuate and facilitate notions of class and class-distinction; how do consumption practices construct identities and gender-identities in particular; how have citizens, and especially women, used their status as consumers to promote political and feminist goals; and what are the relationships between consumption and the body? The course is recommended to students who are interested in the study of gender and sexuality, sociology, history, and anthropology.

Instructor(s): Yaniv Ron-El Terms Offered: Spring

Note(s): This course counts as a Concepts Course for GNSE majors

Equivalent Course(s): SOCI 28090

GNSE 23130. Screwing Up: Shame, Apology, and Gender Theory. 100 Units.

What does it feel like to be wrong? How do we know when we have 'erred', and who decides what's right? How does feeling shame change how we think of ourselves and how we might behave in the future? What does the 'normative' in heteronormative mean? In this class, we will use the question of normativity-senses of wrongness and rightness and how those judgments are articulated, navigated, and enforced—to explore foundational concepts in and across theories of gender and sexuality. We will also examine the social performances of apology, guilt, regret, and remorse that occur when individuals believe they have erred. We will examine ways in which gender and bodily regimes of normativity occur in and around scenes of discomfort, uncertainty, and insecurity as well as through infrastructures of legality and policing. This course pairs our central theoretical texts from feminist, queer, critical race and disability studies with literary texts, works of poetry, and contemporary cultural objects in order to examine how these questions are enacted in a variety of lived and literary perspectives.

Instructor(s): Bellamy Mitchell Terms Offered: Autumn

Note(s): This course counts as a Concepts Course for GNSE Majors

Equivalent Course(s): ENGL 23130

Gender and Sexuality Studies Courses - Theories

GNSE 20001. Theories of Sexuality and Gender. 100 Units.

This is a one-quarter, seminar-style course for undergraduates. Its aim is triple: to engage scenes and concepts central to the interdisciplinary study of gender and sexuality; to provide familiarity with key theoretical anchors for that study; and to provide skills for deriving the theoretical bases of any kind of method. Students will produce descriptive, argumentative, and experimental engagements with theory and its scenes as the quarter progresses.

Instructor(s): C. Riley Snorton Terms Offered: Autumn

Prerequisite(s): Prior course experience in gender/sexuality studies (by way of the general education civilization studies courses or other course work) is strongly advised.

Equivalent Course(s): CHDV 20001, ENGL 20001, LLSO 20001, SOCI 20290

GNSE 21400. Advanced Theories of Gender and Sexuality. 100 Units.

Beginning with the breakup of the New Left and the proliferation of 'new social movements' such as feminism, Black Power, and gay liberation, this seminar explores the key debates around which gender and sexuality were articulated as politically significant categories. How did feminist and queer politics come to be scripted increasingly in terms of identity and its negation? To what extent has a juridical and state-centered conception of politics come to displace quotidian practices of freedom and world-building? What are the limits to rights-oriented political movements? What are the political implications of the recent ontological turn to affect in feminist and queer theory?

Instructor(s): Linda Zerilli Terms Offered: Winter

Note(s): Undergraduates by consent only.

Equivalent Course(s): PLSC 21410, MAPH 36500, ENGL 30201, GNSE 31400, PLSC 31410, ENGL 21401

Gender and Sexuality Studies Courses - General

GNSE 15002-15003. Gender and Sexuality in World Civilizations I-II.

This two-quarter sequence aims to expand students' exposure to an array of texts—theoretical, historical, religious, literary, visual—that address the fundamental place of gender and sexuality in the social, political, and cultural creations of different civilizations. This sequence meets the general education requirement in civilization studies.

GNSE 15002. Gender and Sexuality in World Civilizations I. 100 Units.

The first quarter offers a theoretical framing unit that introduces concepts in feminist, gender, and queer theory, as well as two thematic clusters, 'Kinship' and 'Creativity and Cultural Knowledge.' The 'Kinship' cluster includes readings on such topics as marriage, sex and anti-sex, love and anti-love, and reproduction. The 'Creativity and Cultural Knowledge' cluster addresses the themes of authorship and authority, fighting and constructing the canon, and the debates over the influence of 'difference' on cultural forms.

Instructor(s): Staff Terms Offered: Autumn

Note(s): This sequence meets the general education requirement in civilization studies.

GNSE 15003. Gender and Sexuality in World Civilizations II. 100 Units.

Three thematic clusters make up the second quarter. 'Politics' focuses on texts related to activism/movement politics and women's rights as human rights and the question of universalism. 'Religion' contextualizes gender and sexuality through examinations of a variety of religious laws and teachings, religious practices, and religious communities.

'Economics' looks at slavery, domestic service, prostitution as labor, consumption, and the gendering of labor in contemporary capitalism.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): GNSE 15002

Note(s): This sequence meets the general education requirement in civilization studies.

GNSE 15220. Unrequited Love in Fiction and Film. 100 Units.

Unrequited love stories are some of the most beloved romances in literature and film. Why do readers and audiences find unique pleasure in the agonizing tragedy of feelings not returned? And what does 'unrequited' really mean anyway? This class focuses on unrequited love from the perspective of mostly British women fiction writers and film writer/directors, toggling between eighteenth- and nineteenth-century literature and contemporary romances on screen. From Jane Austen to Céline Sciamma, Eliza Haywood to Sofia Coppola, we will consider how women tell stories of attractions plagued by lack of reciprocity, misunderstandings, persistent longing and social obstacles. Moving across centuries, genre and media, we will consider what changes and what remains consistent in how these women illustrate yearning and dissatisfaction. We will read theories of desire in literature and film by Lauren Berlant, Laura Mulvey, Renata Salecl and others in order to work towards a definition of 'unrequited love.' Our class will examine unrequitedness across registers, including as a source of dark humor in *The Favourite* and Austen, and as an occasion for psychological and real violence in *Mary Wollstonecraft and The Riot Club*. Throughout the course, we will ask ourselves as readers and viewers to interrogate our own investment in the resolution (or, more importantly, the lack thereof) of unrequitedness. (Fiction, 1650-1830, 1830-1940)

Instructor(s): Madison Chapman Terms Offered: Spring

Equivalent Course(s): ENGL 15220

GNSE 17612. The Art of Michelangelo. 100 Units.

The focus of this course will be Michelangelo's sculpture, painting and architecture while making use of his writings and his extensive body of drawings to understand his artistic personality, creative processes, theories of art, and his intellectual and spiritual biography, including his changing attitudes towards Neoplatonism, Christianity and politics. Our structure will be chronological starting with his juvenilia of the 1490s in Florence at the court of Lorenzo the Magnificent through his death in Rome in 1564 as an old man who was simultaneously the deity of art and a lonely, troubled, repentant Christian. Beyond close examination of the works themselves, among the themes that will receive attention for the ways they bear upon his art are Michelangelo's fraught relationship with patrons; his changing attitude towards religion, especially his engagement with the Catholic Reform; his sexuality and how it might bear on the representation of gender in his art and poetry; his 'official' biographies during Michelangelo's lifetime and complex, ambivalent, reception over the centuries; new ideas about Michelangelo that have emerged from the restoration and scientific imaging of many of his works. At the same time, the course will be an introduction of students with little or no background in art history to some of the major avenues for interpretation in this field, including formal, stylistic, iconographical, psychological, social, feminist, theoretical and reception.

Instructor(s): C. Cohen Terms Offered: Autumn

Note(s): This course meets the general education requirement in the arts.

Equivalent Course(s): FNLD 21411, ARTH 17612

GNSE 18804. America in the Nineteenth Century. 100 Units.

This lecture course will examine major conflicts that shaped American life during the nineteenth century. Focusing on contemporaries' attempts to seize upon or challenge the nation's commitment to the ideals of liberty and equality, we will examine pivotal moments of contestation, compromise, and community building. Central questions that will frame the course include how were notions of freedom negotiated and reshaped? What were the political and socioeconomic conditions that prompted the emergence of reform movements, including antislavery, women's rights, temperance, and labor? How did individuals mobilize and stake claims on the state? How were the boundaries of American citizenship debated and transformed over the course of the century?

Instructor(s): N. Maor Terms Offered: Winter

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): CRES 18804, AMER 18804, LLSO 22106, HIST 18804

GNSE 18950. Nineties Feminisms. 100 Units.

This course will survey feminist literatures of the 1790s, 1890s, and 1990s. We will cover works by authors like Mary Wollstonecraft, Sarah Grand, and Greta Gaard as well as feminist movements from New Woman ideal in the 1890s to ecofeminism and material feminisms in the 1990s. (1650-1830, 1830-1940, Theory)

Instructor(s): Caroline Heller Terms Offered: Autumn

Equivalent Course(s): ENGL 18950

GNSE 19860. Ladies Nite: Women Beatniks in Literary Counterculture. 100 Units.

Three writers do not a generation make.' Often relegated to status of wife or muse in the writings and history of the Beat Generation, women's literary contributions to this experimental zeitgeist remain largely unknown and unread. This course explores the dynamic body of work produced by female Beatniks from the 1950s-1970s. We first trace the Beat Generation's aesthetic roots within the experimental poetics of Romanticism and American Transcendentalism and then shift our focus to post-war Greenwich Village, Mexico, and the American West. We will delve into works from authors like Elise Cowen, Diane diPrima, Denise Levertov and Lucia Berlin, to investigate how women's authorship across place and form--chapbooks, poetry, memoirs, travel journals and films--gave voice to a vibrant, complex feminism awash with psychedelic drugs, sexual liberation and the metaphysical exploration deeply inherent to Beat counterculture. (Fiction, Poetry, 1830-1940)

Instructor(s): Carrie Taylor Terms Offered: Spring

Equivalent Course(s): ENGL 19860

GNSE 21019. Gender and Policy. 100 Units.

This course seeks to familiarize undergraduate students with historic and current policy in the US and in other developed countries concerning various aspects of women's lives at work and in the home. We will begin by discussing the reasons for the rise in female labor force participation between the 50s and the 80s. We will discuss the role of male deployment in WWII, the role of technological change in both fertility planning and in the invention of household appliances, and the role of changes in the demand for skilled labor. With this backdrop in mind, we will discuss the historic development of maternity leave policies in many European countries and evaluate the impact of these developments on female labor force participation. We will then turn to understanding the relative stagnation in female advancement in the past twenty-five years. The focus of this portion of the course will be to summarize recent trends in female labor force participation.

Instructor(s): Yana Gallen Terms Offered: Spring

Equivalent Course(s): PBPL 24520

GNSE 21001. Cultural Psychology. 100 Units.

There is a substantial portion of the psychological nature of human beings that is neither homogeneous nor fixed across time and space. At the heart of the discipline of cultural psychology is the tenet of psychological pluralism, which states that the study of 'normal' psychology is the study of multiple psychologies and not just the study of a single or uniform fundamental psychology for all peoples of the world. Research findings in cultural psychology thus raise provocative questions about the integrity and value of alternative forms of subjectivity across cultural groups. In this course we analyze the concept of 'culture' and examine ethnic and cross-cultural variations in mental functioning with special attention to the cultural psychology of emotions, self, moral judgment, categorization, and reasoning.

Instructor(s): R. Shweder Terms Offered: Autumn

Prerequisite(s): Undergraduates must be in third or fourth year.

Note(s): CHDV Distribution: B, C

Equivalent Course(s): GNSE 31000, PSYC 33000, AMER 33000, ANTH 35110, EDSO 21100, PSYC 23000, CHDV 21000, CRES 21100, ANTH 24320, CHDV 31000

GNSE 21293. Global Family Change. 100 Units.

This course examines sociological perspectives on changes in marriage and childbearing that have swept the globe from 1850-today. We will examine changes in arranged marriage, marriage timing, first birth timing, contraception to limit childbearing, family size and divorce. We will review theories of family change, research designs for studying family change, and empirical data about family change. We will investigate family changes in specific sites in Africa, Asia, the Americas, Europe and the European diaspora. The course will also investigate specific factors likely to produce family change, including industrialization, mass education, mass media, health care, migration, and attitudes and beliefs. Finally, the course will consider some of the important consequences of these changing families around the world. Students will prepare an in-depth study of family change in one specific place and time. Course examples will highlight family changes in South Asia, but students are welcome to select any region and time period for their own study.

Instructor(s): W. Axinn Terms Offered: Autumn

Equivalent Course(s): GNSE 31293, SOCI 20293, SOCI 30293

GNSE 21303. Gender, Capital, and Desire: Jane Austen and Critical Interpretation. 100 Units.

Today, Jane Austen is one of the most famous (perhaps the most famous), most widely read, and most beloved of eighteenth- and nineteenth-century British novelists. In the two hundred years since her authorial career, her novels have spawned countless imitations, homages, parodies, films, and miniseries - not to mention a thriving 'Janeite' fan culture. For just as long, her novels have been the objects of sustained attention by literary critics, theorists, and historians. This course will offer an in-depth examination of Austen, her literary corpus, and her cultural reception as well as a graduate-level introduction to several important schools of critical and theoretical methodology. We will read all six of Austen's completed novels in addition to criticism spanning feminism, historicism, Marxism, queer studies, postcolonialism, and psychoanalysis. Readings may include Shoshana Felman, Frances Ferguson, William Galperin, Deidre Lynch, D.A. Miller, Edward Said, Eve Sedgwick, and Raymond Williams.

Instructor(s): Tristan Schweiger Terms Offered: Autumn

Equivalent Course(s): MAPH 40130, ENGL 21360, GNSE 41303, ENGL 41360

GNSE 21330. Despair and Consolation: Emotion and Affect in Late-Medieval and Reformation Christianity. 100 Units.

The course surveys major texts in Christian thought and culture from the fourteenth through the sixteenth centuries, and it focuses on how these authors understood despair—a central theme in the writings of many women and men, secular and religious—and how, if at all, despair may be remedied. We will think alongside these late-medieval and early-modern figures about the phenomenon of emotion, the relations between of feeling and knowing, possible responses to (especially negative) affects, and how religious belief, practice, and experience shape and are shaped by emotional life. Major historical figures to be read include: Catherine of Siena, Jean Gerson, Christine de Pisan, Julian of Norwich, Heinrich Kramer, Martin Luther, John Calvin, Teresa of Ávila, and Michel de Montaigne. We will also read selected contemporary voices in affect theory and disability studies to hone our critical and analytical resources for interpreting the primary texts.

Instructor(s): M. Vanderpoel Terms Offered: Autumn

Equivalent Course(s): HIST 22121, RLST 21330, MDVL 21330

GNSE 21350. Early Modern Women Writing Trauma. 100 Units.

This course examines 16th and 17th century women's writing alongside the scholarship of trauma studies, with attention to themes of childhood suffering, loss, and geographical displacement. How did early modern authors employ a vocabulary for individual and collective encounters with death, illness, violence, and emotional disturbance prior to the modern conceptualization of trauma in the 20th century? What displaced histories are we able to access by bringing sustained focus to women's writing? We will explore how early modern women articulate questions around suffering, personhood, and macro categories of identity (such as race, gender, class, and disability) as well as how their writing might reframe and/or disrupt the category of trauma in contemporary theory. Early modern authors of focus will include, among others, Aphra Behn, Elizabeth Carey, Margaret Cavendish, and Katherine Philips; we will also read widely across genres and time periods, with a syllabus that incorporates materials ranging from early modern midwifery treatises to contemporary drama. (Pre-1650, 1650-1830, Theory)

Instructor(s): Beatrice Bradley Terms Offered: Autumn

Equivalent Course(s): ENGL 21350

GNSE 21500. Darwinian Health. 100 Units.

This course will use an evolutionary, rather than clinical, approach to understanding why we get sick. In particular, we will consider how health issues such as menstruation, senescence, pregnancy sickness, menopause, and diseases can be considered adaptations rather than pathologies. We will also discuss how our rapidly changing environments can reduce the benefits of these adaptations.

Instructor(s): K. Pagel Terms Offered: Winter

Prerequisite(s): Prerequisite(s): For BIOS Majors: Three quarters of a Biological Sciences Fundamentals sequence or consent of instructor.

Note(s): CHDV Distribution: A

Equivalent Course(s): CHDV 21500, HLTH 21500, HIPS 22401, BIOS 23405

GNSE 22046. Introduction to Caribbean Studies. 100 Units.

Why have critics, writers, and artists described the Caribbean as 'ground zero' of Western modernity? Beginning with the period before European settlement, we will study slavery and emancipation, Asian indentureship, labor and social movements, decolonization, debt and tourism, and today's digital Caribbean. We will survey literary and visual cultures, primary source documents, and thought across the English, French, Spanish, and Dutch-speaking Caribbean. All readings will be available in translation. (Fiction, Theory)

Instructor(s): Kaneesha Parsard Terms Offered: Spring

Equivalent Course(s): CRES 20046, ENGL 20046, LACS 20046

GNSE 22048. Girlhood. 100 Units.

This course focuses on narratives in which the category of 'girl' or 'girlhood' is under construction, or called into question. We'll begin with a number of works from the eighteenth and nineteenth centuries (novels by Frances Burney, Jane Austen, Mary Wollstonecraft, Charlotte Brontë), and will move into novels, films, comics, and memoirs from the twentieth and twenty-first centuries that draw on or depart from some of those earlier texts. Throughout, the course will draw on work from fields like sociology, history, and feminist and queer theory to consider changing conceptions of childhood, adolescence, and development, as well as the way that intersections of race, class, gender, sexuality, and ability shape categories and narratives of 'girlhood.' (Fiction, 1650-1830)

Instructor(s): Heather Keenleyside Terms Offered: Spring

Equivalent Course(s): ENGL 22048

GNSE 22220. The Promise of Nightlife: Queer Desires & the Marketing of the Erotic. 100 Units.

In brief, this course will survey various forms of nightlife performance across the 20th and 21st century (drag, stripping, burlesque, variety shows & showgirl performance) alongside popular portrayals of nightlife industries. The course asks what it means (for performers and for pop culture more broadly) that nightlife is thought of as an escape from ordinary life and ordinary or conventional forms of work. The focus of this course will track nightlife performance and industries from the material perspective of the performers, organizers, and collectives that form to address economic, racial, and sexual constraints, in addition to thinking about the figure and function of nightlife in U.S. pop culture's imagination (through, for example, films like *Hustlers*, *Showgirls*, etc.). From both questions, we will think through different conceptions and geographies of spectacle, performance, and the erotic that undergird the world of nightlife entertainment. We will also hear from local nightlife performers/artists in Chicago with the option to attend a local nightlife outing as well. We will examine how nightlife has been approached through various disciplines from ethnomusicology, anthropology, performance studies,

literary and cultural studies and read works by selected scholars and performers including Esther Newton, Tim Lawrence, Luis-Manuel Garcia, Kia LaBeija, and madison moore.

Instructor(s): E. Pensis Terms Offered: Winter

Equivalent Course(s): TAPS 20220

GNSE 22266. Coming of Age: Autobiography, Bildungsroman, and Memoir in Victorian Britain and its Empire. 100 Units.

In this course, we will consider the broad generic category of 'coming of age' stories that characterized the literary writing of the nineteenth century. Across several different kinds of writing, a focus on the growth and development of the child into adulthood became an obsessive focus. We will read autobiographies by Mill and Martineau, Bildungsroman by Bronte and Eliot, memoirs by Dickens but also lesser known figures: working class autodidacts, women in childbirth, colonial subjects. We will, along the way, learn more about Victorian childhood, the emergence of developmental psychology, psychoanalysis, and the socio-psychological 'invention' of adolescence. (1830-1940)

Instructor(s): Elaine Hadley Terms Offered: Winter

Equivalent Course(s): ENGL 20266

GNSE 23002. Workshop: Regulation of Family, Sex, and Gender. 50 Units.

This workshop exposes students to recent academic work in the regulation of family, sex, gender, and sexuality and in feminist theory. Workshop sessions are devoted to the presentation and discussion of papers from outside speakers and University faculty. The substance and methodological orientation of the papers will both be diverse. Continuing students only.

Equivalent Course(s): GNSE 33002

GNSE 23004. The Poetics of Life in Modern Latin America. 100 Units.

How do Latin American authors imagine humans, animals, and other nonhuman lives? In what ways do considerations of race, gender, and species determine their cultural imaginary? This course will explore representations of life in Latin American fiction from the nineteenth century to the present. Paying special attention to subjects that are considered 'other' (women, indigenous people, animals, cyborgs), we will reflect on the ways in which bodies are valued, ordered, and discarded in stories and novels. Through this examination of the hierarchies of life, we will gain insights into the major shifts in Latin American politics of the past two centuries. Moreover, we will see how literature, often considered to simply 'mirror' contemporary values, may become a locus of resistance against racist, speciesist, and gender-based oppression and violence. Our readings will be complemented by excerpts from major cultural theorists and critics including Michel Foucault, Donna Haraway, and Gabriel Giorgi.

Instructor(s): A. Kulez

Note(s): Taught in Spanish.

Equivalent Course(s): LACS 23020, SPAN 23020

GNSE 23100. Foucault and The History of Sexuality. 100 Units.

This course centers on a close reading of the first volume of Michel Foucault's 'The History of Sexuality', with some attention to his writings on the history of ancient conceptualizations of sex. How should a history of sexuality take into account scientific theories, social relations of power, and different experiences of the self? We discuss the contrasting descriptions and conceptions of sexual behavior before and after the emergence of a science of sexuality. Other writers influenced by and critical of Foucault are also discussed.

Instructor(s): A. Davidson Terms Offered: Autumn

Prerequisite(s): One prior philosophy course is strongly recommended.

Equivalent Course(s): FNDL 22001, RLST 24800, KNOW 27002, HIPS 24300, CMLT 25001, PHIL 24800

GNSE 23106. Modern Disability Histories: Gender, Race, and Disability. 100 Units.

This course introduces students to the conceptual apparatus of disability studies and major developments in disability history since the late nineteenth century. The course will consider disability beyond physical impairment, centering the ways in which notions of gender, race, class, sexuality, and ability interact and shape subjects, and how these subject positions shift across political watersheds. Students will engage a variety of sources, such as autobiographies, pamphlets, visual material, laws, and medical texts, as well as historiographical sources. Topics will include late nineteenth-century female 'hysteria,' evolutionary approaches to sign language and orality, and the effects of industrialization on new impairments; early twentieth-century eugenics and the Nazi T4 program; postwar developments in prosthetics and discursive intersections between psychosis and civil rights movement. Students are encouraged to work on creative collective projects (e.g., an exhibit or a short video) in addition to written assignments.

Instructor(s): M. Appeltová Terms Offered: Winter

Equivalent Course(s): HIPS 29318, CHDV 29318, HIST 29318, HMRT 29318, HLTH 29318, CRES 29318

GNSE 23127. Queer Letters and LGBTQ+ Lifeworlds. 100 Units.

This course asks after the social and aesthetic possibilities of queer literatures, with a particular interest in such life-writing forms as the personal letter and epistolary (or electronic) correspondence. What, we will ask, can attending to specifically LGBTQ+ correspondences and life-writings teach us about minoritarian lifeworlds and literary canons? And, vice versa, how does an attention to the sub- or counter-cultural spaces of queer literary production change the way we read even canonical literary texts? We will visit a variety of LGBTQ+ literary lifeworlds across the twentieth and twenty-first centuries - between London, Paris, New York, San Francisco - and engage a wide range of texts and media that represent and encode queer social circuits: collected correspondences, coterie literatures, auto/biographies, memoirs, poetry, and film. In so doing, we will develop a backdrop of queer theoretical scholarship devoted to questions of community-making, subcultural space and belonging, and queer time, including the work of José Esteban Muñoz, Juana María Rodríguez, Elizabeth Freeman,

and Jack Halberstam. In addition to a self-designed archival, analytical, or creative final project, we will also hone archival research strategies through two excursions to local archives and experiment with creative and collaborative strategies for reading and writing as we challenge ourselves to think from the position of correspondents.

Instructor(s): Sarah McDaniel Terms Offered: Autumn

Note(s): This course counts as a Concepts Course for GNSE majors.

Equivalent Course(s): ENGL 23127

GNSE 23490. Sex in Twentieth-Century Europe. 100 Units.

This course will examine the 'syncopated' history of sexuality across this tumultuous century. The period took Europeans from bourgeois norms of sexuality through the 1960s sexual revolution to same-sex marriages; genocide and the emergence of rape as a war crime; and the unprecedented regulation of sexuality and biomedical developments treating infertility. Since the history of sex and sexuality in Europe cannot be thought outside of European colonialism and the Cold War, the course will also examine how sexuality shaped and was shaped by political ideologies. In short, by examining the centrality of 'who can have sex with whom,' students will rethink 'standard' political narratives of twentieth-century Europe. Working with Dagmar Herzog's 'Sexuality in Europe: A Twentieth-Century History,' the main text of the course, and drawing on a variety of primary sources-including law and medical treatises, popular culture, and autobiographies-students will also gain an insight into the ways in which sexuality can be studied beyond archival sources.

Instructor(s): M. Appeltová Terms Offered: Winter

Equivalent Course(s): HIST 23400, HLTH 23400, HIPS 23410, HMRT 23400

GNSE 23505. Ethnographic Approaches to Gender and Sexuality. 100 Units.

This methods course aims to prepare graduate students and advanced undergraduates for ethnographic research on topics focused on gender and sexuality. We will read articles and books showcasing ethnographic methodologies, and we will discuss benefits and limitations of various research designs. Class debates will cover epistemological, ethical, and practical matters in ethnographic research. We will discuss issues of positionality, self-reflexivity, and power. Students will be required to formulate a preliminary research question at the beginning of the course, and will conduct a few weeks of ethnographic research in a field site of their choosing. Each week students will produce field notes to be exchanged and discussed in class, and as a final project they will be asked to produce a research proposal or a short paper based on their observations.

Instructor(s): Cate Fugazzola Terms Offered: Autumn Winter

Equivalent Course(s): SOCI 30319, MAPS 33503, GNSE 33505

GNSE 23506. Gender, Sex, and Culture. 100 Units.

This introductory graduate course examines the social construction of gendered identities in different times and places. We study culturally-specific gendered experiences, 'roles,' rights and rebellions around the world, discussing the individual and social consequences of gender and the interrelationships between gender and other categories for identity including race, class and sexuality. While focusing on the global diversity of gendered experience and expectations, we also examine gender in the US, taking a critical approach to understanding gendered inequality and gender-based and sexual violence both abroad and at home. Finally, we examine the role of gendered expectations in Western science, the relationship between gender and 'globalization,' and the contemporary movements affecting change in gendered norms, especially in the arts and media. Advanced Undergraduates admitted with Instructor consent.

Instructor(s): Mary Elena Wilhoit Terms Offered: Autumn

Prerequisite(s): Advanced Undergraduates admitted with Instructor consent.

Equivalent Course(s): ANTH 25216, MAPS 33502, ANTH 32925, GNSE 33506

GNSE 24514. Colonial Power in East Asia. 100 Units.

This course takes a transnational and comparative approach to the study of colonialism in East Asia from the Opium Wars through the end of World War I. Using foundational theories of postcolonial scholarship as a starting template, we will explore the interrelationship of colonial power and ideologies of race and gender across China, Japan, and Korea during the nineteenth century. Critically evaluating both primary and secondary sources will help us contextualize the development of the Japanese empire within a larger narrative of the expansion of Euro-American colonial power into East Asia. In doing so, we will discover that sites of empire in East Asia often destabilize the most common binaries of postcolonial study: Occident/Orient, colonizer/colonized, white/other, and premodern/modern.

Instructor(s): J. Dahl Terms Offered: Winter

Equivalent Course(s): GLST 24514, EALC 24514, CRES 24514, HIST 24514

GNSE 24515. Social Outcasts: Exclusion and Discontent in Late Imperial and Modern China. 100 Units.

This course considers the often neglected presence of 'social outcasts' in Chinese history as a gateway to understanding ideas and practices of discrimination from the late Qing to modern-day China. It traces changes in the intersection of law, custom, and daily social practices, focusing on attempts aimed at legitimizing discrimination across class, territory, ethnicity, religion, gender and disability. Thus a theoretical objective of the course is to analyze legal and social dimensions of exclusion along the axis of empire and state building. Chronologically, this course begins with the collapse of status order in the late Qing and explores how the Republic and the PRC managed transgressive elements of society, from beggars, prostitutes, and the insane to ethnic and religious minorities. We will use legal documents, police records, and visual materials to explore how sociocultural processes shape the experience of discrimination and its resistance. Another focus of this course will be asking how disenfranchised groups might enhance our understanding of mainstream values. Through discussions, in-class presentations, and written assignments, students will develop skills to analyze historical evidence and critically reflect on its implication for cross-cultural issues.

Instructor(s): C. Wang Terms Offered: Spring

Equivalent Course(s): CRES 24515, HIST 24515, EALC 24515

GNSE 24545. The Rise of Free Speech: Aesthetics, Politics and Censorship, 1857-2020. 100 Units.

This course will consider a variety of historical debates and controversies surrounding the concept of freedom of speech and expression, from 19th century obscenity law through instances of 20th century political and economic repression and on to the concept's cooptation by right-wing free market discourse and debates about hate speech in the present. Case studies from 19C-21C literature in English and English-translation. (Fiction, Poetry, 1830-1940, Theory)

Instructor(s): Zach Samalin Terms Offered: Spring

Equivalent Course(s): ENGL 24545

GNSE 24706. Japanese Art in the Sinosphere. 100 Units.

From the earliest centuries of the common era until the 1870s, Japanese writers, artists, and scholars considered themselves to be living in the Sinosphere: the realm of China's cultural and political centrality. Starting with a consideration of Chinese material culture in the Tale of Genji, we will proceed to address topics such as the relation between Chinese and Japanese handscroll paintings, the spread of Chinese-style ink monochrome painting in Japan, the rise of the Kano school as official painters and Chinese-style painting experts, and the immense popularity of literati painting and calligraphy. Korean painting's intersection with Chinese and Japanese art in the medieval and early modern periods will also factor into the discussion. We will evaluate the changing dynamics around political power and gender embodied in the Chinese/Japanese oppositional duality and reassess the prevailing narratives concerning how the Sinosphere faded from view in the Meiji era.

Instructor(s): C. Foxwell Terms Offered: Winter

Note(s): Students must attend first class to confirm enrollment. Registration is permitted by instructor consent only.

Equivalent Course(s): GNSE 34706, ARTH 34706, ARTH 24706

GNSE 25210. American Epidemics, Past and Present. 100 Units.

This course explores how disease epidemics have shaped watershed periods in US history from the late eighteenth century to the present. Through readings, lectures, and in-class discussions, we will employ different categories of analysis (e.g., race, gender, class, and citizenship) to answer a range of historical questions focused on disease, health, and medicine. For instance, to what extent did smallpox alter the trajectory of the American Revolution? How did cholera and typhoid affect the lived experiences of slaves and soldiers during the Civil War? In what ways did the US government capitalize on fears over yellow fever and bubonic plague to justify continued interventions across the Caribbean and the Pacific? What do these episodes from the American past reveal about contemporary encounters with modern diseases like HIV/AIDS, Ebola, and COVID-19? Course readings will be drawn from book chapters and scholarly articles, as well as primary sources ranging from public-health reports, medical correspondence, and scientific journals to newspapers, political cartoons, maps, and personal diaries. Grades will be based on participation, weekly Canvas posts, peer review, and a series of written assignments (a proposal and an annotated bibliography, primary source analysis, book review, and rough draft) all of which will culminate in a ten-page final research paper.

Instructor(s): C. Kindell Terms Offered: Winter

Equivalent Course(s): CRES 25218, HIPS 25218, ENST 25218, GLST 25218, HLTH 25218, HIST 25218, AMER 25218

GNSE 25222. Feminist Perspectives on Science. 100 Units.

Feminist perspectives on science come from anthropology, sociology, history, and philosophy. What they have in common is a determination to uproot the deepest and least visible forms of oppression in our society: those pertaining to facts and methods we unquestioningly take to be true, known, and valid. We will first acquaint ourselves with the value-free ideal of science as an objective, rational process of discovery, and the ways this ideal has been wielded as an instrument of domination. We will spend the rest of the quarter challenging this dogma by (1) historically demonstrating science's symbiotic alliances with political ideologies of gender and race, (2) ethnographically examining structural and interactive practicalities of knowledge-construction and -circulation that reproduce social oppression, and (3) epistemologically deconstructing the very notions of objectivity and rationality that are used to insulate science from feminist critique. Works include but are not limited to authors Londa Schiebinger, Evelyn Hammonds, Emily Martin, Sharon Trawick, Susan Leigh Star, Joan Fijimura, Helen Longino, Heather Douglas, Donna Haraway, Elizabeth Anderson, Sandra Harding, and Susan Haack.

Instructor(s): P. Mostajir Terms Offered: Autumn 2020

Equivalent Course(s): HIPS 25202, ANTH 22124, SOCI 20517

GNSE 25262. Gender and Sexuality in a Transnational World. 100 Units.

This course, through attention to critical theory and expressive cultures, surveys gender and sexuality across time and place. Students will learn about theories of sex, gender, and sexuality; colonialisms and nationalisms; social movements; and war, migration, and technology. (Fiction, Theory)

Instructor(s): Kaneesha Parsard Terms Offered: Winter

Equivalent Course(s): ENGL 25262

GNSE 25404. Gender, Politics and Philosophy. 100 Units.

In this class we'll read classic and contemporary texts in the philosophy of gender that examine questions such as the following. What exactly is gender? And what is sex? What does it mean to be a man or a woman? Are these natural or social kinds-that is, do these words refer to phenomena that humans have discovered or to ones they've created? Should we continue to group all human beings into just two sex/gender categories-or should we instead expand the number of categories we use? Or should we stop classifying humans by sex and gender altogether? And who should have the authority to make these kinds of decisions? We will frequently ask how these conceptual matters bear on how we should live, how we should relate to others, and how we should organize social and political life. Readings will include works by authors such as

Simone de Beauvoir, Iris Marion Young, Angela Davis, Nancy Fraser, Sally Haslanger, Sandra Bartky, Patricia Hill Collins, Serene Khader and Katharine Jenkins. (A)
 Instructor(s): T. Zimmer Terms Offered: Winter
 Equivalent Course(s): PHIL 25404

GNSE 25602. Feminism, Race, Culture, and Liberation. 100 Units.

Beginning in the twentieth century, a popular global discourse amongst some feminists, anthropologists, and human rights activists has become focused on liberating oppressed peoples from tyrannical systems of power, most often non-Western women of color from traditional patriarchies. However, oftentimes these well-intentioned movements toward liberation are incompatible with the lived realities of the oppressed, and, oftentimes, the 'oppressed' are actually active agents in their own liberations. This course will explore what we mean when we discuss ideas of liberation and social acceptance through a gendered cultural lens, considering the foundations of contemporary feminism and human rights dialogues within different cultural and racial contexts. What and whom are we purportedly liberating with our liberal Western ideals, and what and whom are we failing to consider? Why are gender, sex, and sexuality emphasized to the degree they are, and how do differing emphases produce different sociocultural results? What moral exercises are necessary to most accurately understand the various central elements of a human cultural experience? Can individuals, including ourselves, ever truly be liberated from cultural contexts?

Instructor(s): T. Mandviwala Terms Offered: Winter

Note(s): Request AV room

Equivalent Course(s): CRES 25002, CHDV 25002

GNSE 26003. Introduction à l'autobiographie. 100 Units.

This course traces the history of the autobiographical genre in France from the eighteenth century to the present. The study of key texts will be accompanied by an introduction to some critical perspectives. We will give special emphasis to questions of reference and authenticity, identity and subject formation, and gender and the family. Authors include Rousseau, Chateaubriand, Stendhal, Colette, Péric, and Sarraute.

Instructor(s): A. James Terms Offered: Autumn

Prerequisite(s): FREN 20500 or 20503

Note(s): Taught in French. This is an introductory-level course.

Equivalent Course(s): FREN 26003

GNSE 26856. Queer Theory: Futures. 100 Units.

TBD

Instructor(s): Kris Trujillo Terms Offered: Winter

Equivalent Course(s): CMLT 36856, CRES 26856, GNSE 36856, RLST 26856, RLVC 36856, CMLT 26856, ENGL 36856, ENGL 26856

GNSE 27017. Passing. 100 Units.

In this course, we examine how people move within and between categories of identity, with particular attention to boundary crossings of race and gender in U.S. law and literature from the nineteenth century to the present. Law provides a venue and a language through which forces of authority police categories of identity that, at Jean Stefancic and Richard Delgado observe, 'society invents, manipulates, or retires when convenient.' Readings will include theoretical texts as well as court rulings, cultural ephemera, and literary texts.

Instructor(s): Nicolette I. Bruner Terms Offered: Spring

Equivalent Course(s): KNOW 27017, CRES 27017, ENGL 27017

GNSE 27100. Sociology of Human Sexuality. 100 Units.

After briefly reviewing several biological and psychological approaches to human sexuality as points of comparison, this course explores the sociological perspective on sexual conduct and its associated beliefs and consequences for individuals and society. Substantive topics include gender relations; life-course perspectives on sexual conduct in youth, adolescence, and adulthood; social epidemiology of sexually transmitted infections (including AIDS); sexual partner choice and turnover; and the incidence/prevalence of selected sexual practices. Network analytic approaches will be introduced.

Instructor(s): E. Laumann Terms Offered: Spring

Prerequisite(s): Introductory social sciences course

Equivalent Course(s): SOCI 20107, SOCI 30107

GNSE 27205. Reproductive Rights as Human Rights. 100 Units.

This course examines human rights approaches to reproductive health and justice with critical grounding in ethnographic case studies. We will begin by surveying major debates and tactics of feminist movements in North and South America, comparing visions of reproductive rights based on ideals of liberal individualism and private property with traditions of collective claims for social and economic rights. Our case studies include the Zika epidemic in Brazil, immigration and reproductive health care access in the United States, the shackling of pregnant women in U.S. prisons, the politics of sterilization and birth control in Puerto Rico, and the legalization of abortion in Mexico City. Hearing from guest speakers who work as lawyers, healthcare practitioners, activists and community organizers, we will consider reproductive rights as human rights in a field of contestation that involves diverse actors, state interests, and social movement histories.

Instructor(s): Amy Krauss, Postdoctoral Lecturer Terms Offered: Spring

Equivalent Course(s): HLTH 27205, GNSE 37205, HMRT 27205, HMRT 37205

GNSE 27536. The Transatlantic Slave Trade & the Making of the Black Lusophone Atlantic, 1450-1888. 100 Units.

By the abolition of Brazilian slavery in 1888, an estimated 4.3 million men, women, and children had been imported from Africa to Brazil. Yet, the narratives of slavery and freedom in the North Anglophone and Francophone Atlantic often

dominate the popular imagination. This course is aimed at increasing knowledge about how slavery and the transatlantic slave trade shaped the Atlantic World through an examination of the deeply intertwined histories of Brazil and West Africa. This course offers a critical 'genealogy of the present' by investigating the historical roots of racial, gendered, and social inequality that persist in Brazil and Lusophone West Africa today. It will focus on the diverse social, cultural, and political linkages that were forged as a result of the transatlantic trade with particular attention to the Portuguese in West Africa; the development and growth of the slave trade to Brazil; the relationship between slavery and gender; the continuity and adaptation of African social and cultural practices; and resistance, rebellion, and freedom. We will end the course with a look at how different communities, individuals, and nations continue to grapple with the memory and legacy of slavery today.

Instructor(s): Erin McCullugh Terms Offered: Spring

Equivalent Course(s): HIST 29009, HMRT 27536, CRES 27536, LACS 27536

GNSE 27539. The Politics of Black Queer Feminist Praxis. 100 Units.

This course critically interrogates contemporary 'status quo' power dynamics through a lens of Black Queer Feminism. This course understands Black Queer Feminism as a political praxis that operationalizes intersectionality by seeking to deconstruct normative and hegemonic systems of power. While many of the attendees of the Women's March of 2017 were white, over 53% of white women had just voted for Donald Trump in the 2016 presidential election. This comes at a stark comparison with the 94% of Black women that voted for Hillary Clinton. As one journalist cleverly wrote, this highlights a '53 percent problem in American Feminism'. This seminar-style course, through critical engagement with Black Queer Feminist praxis (thought and action), attempts to reconcile this 53 percent problem. We will begin with a history of Black feminist thought and transition to its contemporary iterations, including trans politics and queer theory. Along with a diasporic and transnational analysis, we will investigate: how do contemporary iterations of radical Black feminism engage with and resist against the state? How does Black Queer Feminism shape politics and society? The syllabus will incorporate readings from various disciplines including political science, sociology, and Black studies and will focus on how the simultaneity of hegemony shapes access to and relationships with power.

Instructor(s): Laterricka Smith Terms Offered: Spring

Equivalent Course(s): PLSC 21539, CRES 27539

GNSE 28202. United States Latinos: Origins and Histories. 100 Units.

An examination of the diverse social, economic, political, and cultural histories of those who are now commonly identified as Latinos in the United States. Particular emphasis will be placed on the formative historical experiences of Mexican Americans and mainland Puerto Ricans, although some consideration will also be given to the histories of other Latino groups, i.e., Cubans, Central Americans, and Dominicans. Topics include cultural and geographic origins and ties; imperialism and colonization; the economics of migration and employment; legal status; work, women, and the family; racism and other forms of discrimination; the politics of national identity; language and popular culture; and the place of Latinos in US society. Equivalent Course(s): AMER 28001, CRES 28000, GNSE 28202, HIST 38000, LACS 28000, LACS 38000, CRES 38000, GNSE 38202, AMER 38001

Instructor(s): R. Gutiérrez Terms Offered: Autumn

Equivalent Course(s): HIST 38000, CRES 28000, GNSE 38202, AMER 28001, HIST 28000, AMER 38001, LACS 38000, LACS 28000, CRES 38000

GNSE 28307. Trans/Formations: Changing Bodies and Gender in Premodern Christianity. 100 Units.

The course surveys ancient and medieval Christian views on the body and gender with a particular interest in ideas of transformation, supplemented by contemporary readings in trans studies. The course focuses on a series of topics: the creation of human bodies, debates about matter, doctrines of the resurrection, eunuchs, possession, gender (non)conformity, and various modes of gender crossing. Thus, it provides both an introduction to major figures in the history of Christianity and a primer in religious-studies and historical methods in light of trans and queer studies. A central question for the course would be how to think about historical distance and anachronism in our use of theoretical lenses with the interpretation of sources. In addition to readings in contemporary feminist, queer, and trans thought, the course primarily treats Christian sources spanning a number of genres such as narrative, theological treatise, allegory, visionary literature, and forensic transcripts.

Instructor(s): M. Vanderpoel Terms Offered: Winter

Equivalent Course(s): RLST 28307

GNSE 28498. Women, Development and Politics. 100 Units.

This course will explore the dominant and emerging trends and debates in the field of women and international development. The major theoretical perspectives responding to global gender inequities will be explored alongside a wide range of themes impacting majority-world women, such as free market globalization, health and sexuality, race and representation, participatory development, human rights, the environment and participation in politics. Course lectures will integrate policy and practitioner accounts and perspectives to reflect the strong influence development practice has in shaping and informing the field. Course materials will also include anti-racist, postcolonial and post-development interruptions to dominant development discourse, specifically to challenge the underlying biases and assumptions of interventions that are predicated on transforming 'them' into 'us'. The material will also explore the challenges of women participating in politics and what are the consequences when they do or do not.

Instructor(s): Bautista, M. and Chishti, M. Terms Offered: Autumn

Equivalent Course(s): LACS 28498, PBPL 28498

GNSE 28603. United States Labor History. 100 Units.

This course explores the history of labor and laboring people in the United States. It will consider the significance of work from the vantage points of law, culture, and political economy. Key topics will include working-class life, industrialization

and corporate capitalism, slavery and emancipation, the role of the state and trade unions, race and sex difference in the workplace. The course is intended for freshmen through seniors, as well as majors in history and in other disciplines.

Instructor(s): A. Stanley Terms Offered: Autumn

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): HMRT 28600, LLSO 28000, HIST 18600

GNSE 28775. Racial Melancholia. 100 Units.

This course provides students with an opportunity to think race both within a psychoanalytic framework and alongside rituals of loss, grief, and mourning. In particular, we will interrogate how psychoanalytic formulations of mourning and melancholia have shaped theories of racial melancholia that emerged at the turn of the twenty-first century. Turning to Asian American, African American, and Latinx theoretical and literary archives, we will interrogate the intersections of race, gender, and sexuality and ask: How do literatures of loss enable us to understand the relationship between histories of racial trauma, injury, and grief, on the one hand, and the formation of racial identity, on the other? What might it mean to imagine literary histories of race as grounded fundamentally in the experience of loss? What forms of reparations, redress, and resistance are called for by such literatures of racial grief, mourning, and melancholia? And, finally, how, if understood as themselves rituals of grief, might psychoanalysis and the writing of literature assume the role of religious devotion in the face of loss and trauma?

Instructor(s): Kris Trujillo Terms Offered: Autumn

Equivalent Course(s): ENGL 38775, CMLT 38775, ENGL 28775, RLVC 38775, RLST 28775, GNSE 38775, CRES 22775, CMLT 28775

GNSE 29001. Painting and Description in the Roman World: Philostratus' Imagines - Religion, Education, Sexuality. 100 Units.

This course explores Roman art, especially painting, through the single most thoughtful, playful and creative text on naturalistic painting written in antiquity. Arguably, it is the most interesting examination of the brilliance and the problems of naturalism ever written in the Western tradition, creating a non-historicist, fictive and rhetorically-inflected model for thinking about art. Philostratus took the rhetorical trope of Ekphrasis to new heights, in an extraordinary intermedial investigation of textuality through the prism of visuality and of visual art through the descriptive prism of fictional prose. The course will involve close readings of Philostratus' descriptions of paintings alongside exploration of the Greek and Roman art of the imperial period from Pompeian paintings via floor mosaics to sarcophagi. A reading knowledge of Greek could not be described as a disadvantage (!) but is not a requirement. The course will be taught over 5 weeks in the Spring Quarter on an intensive schedule. =Before the course begins, read the Imagines of the Elder Philostratus in the Loeb Classical Library translation (by Arthur Fairbanks, 1931, Harvard U.P., much reprinted). This book is not exorbitantly expensive and is worth buying, as we will all need a copy throughout.

Instructor(s): Ja# Elsner Terms Offered: Spring

Prerequisite(s): Before the course begins, read the Imagines of the Elder Philostratus in the Loeb Classical Library translation (by Arthur Fairbanks, 1931, Harvard U.P., much reprinted).

Equivalent Course(s): ARTH 39001, GNSE 39001, ARTH 29001, RLVC 39001, RLST 29001

GNSE 29313. Childhood and Human Rights in the Twentieth Century. 100 Units.

How and when did we come to embrace the idea that children are innocent and defenseless? What are the implications of framing children's rights as human rights? In this course, we will explore key historical transformations in the legal, social, and cultural construction of childhood in modern Western societies. We will examine children's own experiences and how adults rendered them the subjects of study and state regulation. Topics of discussion will include work, leisure, education, sexuality, criminality, consumerism, and censorship. Throughout, we will discuss how ideas about race, gender, class, and age have shaped the way that the public and the state had defined childhood: who was entitled to a protected period of nurture, care, and play; who was allowed to be disobedient, or even lawless, and still avoid legal consequences. We will explore how and why some children have been and continue to be excluded from this idealized vision.

Instructor(s): N. Maor Terms Offered: Spring

Equivalent Course(s): CRES 29313, AMER 29313, HIST 29313, HMRT 29313, LLSO 20301

GNSE 29700. Readings in Gender Studies. 100 Units.

This is a general reading and research course for independent study not related to the BA thesis or BA research.

Terms Offered: Autumn, Spring, Winter

Prerequisite(s): Consent of instructor and director of undergraduate studies

Note(s): Students are required to submit the College Reading and Research Course Form. May be taken for P/F grading with consent of instructor. With prior approval, students who are majoring in Gender Studies may use this course to satisfy program requirements.

GNSE 29800-29900. BA Seminar; BA Essay.

GNSE 29800 and 29900 form a two-quarter sequence for seniors who are writing a BA essay.

GNSE 29800. B.A. Paper Seminar. 100 Units.

GNSE 29800 and 29900 form a two-quarter sequence for seniors who are writing a BA essay. This seminar provides students with the theoretical and methodological grounding in gender and sexuality studies needed to formulate a topic and conduct the independent research and writing of their BA essay. Prerequisite(s): Consent of instructor and program chairman Note(s): May be taken for P/F grading with consent of instructor.

Instructor(s): Jennifer Wild Terms Offered: Autumn

GNSE 29900. BA Essay. 100 Units.

The purpose of this course is to assist students in the preparation of drafts of their BA essay. An approved GNSE course may be substituted.

Terms Offered: Summer, Autumn, Winter, Spring

Prerequisite(s): Consent of instructor and program chairman

Note(s): Students are required to submit the College Reading and Research Course Form signed by the faculty BA essay reader.

Geographical Sciences

Department Website: <http://geography.uchicago.edu>

Program of Study

The discipline of geography contributes to an understanding of society by exploring the Earth's environment and its interactions with human life, by inquiring into cultures and societies from the perspective of area study, and by investigating problems of spatial organization. The BA program in geographical sciences offers a distinctive focus for general education and provides a background both for advanced specialization in the discipline and for study in other fields. Solid grounding in modern geography can lead to careers in government service, environmental consulting, marketing, publishing, planning, and teaching at all levels.

Program Requirements

The BA degree in geographical sciences calls for the satisfactory completion of eleven courses, at least eight of which must be in geographical sciences. These include an introduction to Geographic Information Systems/GIS (GEOG 28202 Geographic Information Science I); the senior seminar (GEOG 29800 Senior Seminar); and at least nine additional geography courses, up to three of which may be in approved related fields. A BA thesis is prepared in connection with the senior seminar.

Summary of Requirements: BA in Geographical Sciences

GEOG 28202	Geographic Information Science I	100
Nine additional geographical sciences courses; up to three may be in approved related fields		900
GEOG 29800	Senior Seminar	100
BA thesis		
Total Units		1100

Grading

All courses counted toward the geographical sciences major must be taken for quality grades.

Research Grants

Geographical sciences students may apply for small grants from the Ada Espenshade Wrigley Fund in support of extraordinary expenses connected with research leading to their BA thesis.

Honors

Honors are awarded to students with an overall GPA of 3.0 or higher who submit a BA thesis that is judged to be outstanding.

Awards

Each year the Committee on Geographical Sciences nominates fourth-year students for an Outstanding Senior in Geography Award from the Illinois Geographical Society and an Award for Excellence from the National Council for Geographic Education and the Association of American Geographers.

Minor in Geographic Information Science

Spatial thinking deals with the fundamental role of space, place, location, distance, and interaction—crucial to tackling many research questions in the social and physical sciences. The minor in geographic information science provides a coherent exposure to rigorous spatial thinking and its expression through the theories and methods of geographic information science. Geographic information science covers all aspects pertaining to accessing, storing, transforming, manipulating, visualizing, exploring, and reasoning about information where the locational component is important (spatial data). This includes the technical and computational aspects of geographic information systems, the methodologies of spatial analysis and spatial statistics, mapping, and geo-visualization, as well as societal aspects related to the use of geographic data.

The minor serves as a complement to other majors, such as computer science, statistics, economics, public policy studies, sociology, anthropology, political science, or environmental and urban studies, but would also be of value to majors in the humanities and physical sciences interested in the spatial aspects of their field.

The courses in the minor are open to geographical sciences majors, but the minor cannot be taken concurrently with a geographical sciences major.

Program Requirements for the Minor

The minor consists of six core courses* and one elective from a series of offerings. The core courses provide a coherent exposure to rigorous spatial thinking and its incorporation into the methodologies of geographic information systems, spatial analysis, and spatial data science.

The electives consist of courses that touch upon various aspects of spatial thinking, with different degrees of technical materials, and are intended to either act as “gateways” into the minor or to provide the opportunity for the application of spatial analysis in a range of fields.

The sequencing of courses is designed such that students can complete all requirements for the minor in one year of study (provided the statistics prerequisite has been taken prior).

The capstone course for the minor is GEOG 28000 GIScience Practicum, which may be taken concurrently with GEOG 28602 Geographic Information Science III. Students will develop a multifaceted GIS project incorporating spatial thinking in design, infrastructure, and implementation. Projects could include the development of a web application, dynamic dashboard, interactive storytelling map, infographic-driven policy brief, or research article, and can be carried out in conjunction with a thesis requirement of the student's major.

Summary of Requirements: Minor in Geographic Information Science

GEOG 28202	Geographic Information Science I	100
GEOG 28402	Geographic Information Science II	100
GEOG 28602	Geographic Information Science III	100
GEOG 28000	GIScience Practicum	100
GEOG 20500	Introduction to Spatial Data Science	100
STAT 22000	Statistical Methods and Applications (or equivalent) *	100
Any elective from the list of courses below		100
Total Units		700

Note: Many GEOG courses are also cross-listed with SOCI and ENST.

* Students who take STAT 22000 to satisfy a requirement in a major will complete a six course minor. Students who take STAT 22000 to satisfy only the GIS minor will complete a seven course minor.

Elective Options for the Minor in Geographic Information Science

One of the following courses may be taken to fulfill the elective course option for the minor in geographic information science.

GEOG 20273	Urban Spatial Archaeology I	100
GEOG 24600	Introduction to Urban Sciences	100
GEOG 24700	Introduction to Urban Planning	100
GEOG 25900	Introduction to Location Analysis	100
GEOG 27155	Urban Design with Nature	100
GEOG 28700	Readings in Spatial Analysis	100
GEOG 28702	Introduction to GIS and Spatial Analysis	100
GEOG 28800	History of Cartography	100
GEOG 28900	Readings in Urban Planning and Design	100

Note: many GEOG courses are also cross-listed with SOCI and ENST.

Advising and Grading

Courses in the minor may not be double counted with the student's major(s), other minors, or general education requirements. For students who have taken STAT 22000 (or equivalent) as a requirement for another major, minor, or general education requirement, an approved elective must replace that requirement.

Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

The courses in the minor are open to geographical sciences majors, but the minor cannot be taken concurrently with a geographical sciences major.

Students who elect the minor must meet with the program director before the end of Spring Quarter of their third year to declare their intention to complete the minor. The director's approval for the minor program should be submitted to a student's College adviser by the deadline above using a form available from the adviser.

Students may petition the program director to have a course counted as an elective that is not included on the current list of electives.

Geographical Sciences Courses

The following courses are for reference only. See Class Search at registrar.uchicago.edu/classes/ (http://registrar.uchicago.edu/classes/) for specific offerings. See the Geography webpage at geography.uchicago.edu (https://geography.uchicago.edu/) for further information on quarterly offerings.

GEOG 20273. Urban Spatial Archaeology I. 100 Units.

Space and time are fundamental concepts in urban spatial science. In this course, students will gain substantive and technical knowledge on how to analyze space and time through the tools of urban spatial archaeology. Specifically, this course will introduce students to various historical data sources on Chicago and New Orleans to digitize, then conduct a spatial historical

analysis of any topic of their choice. By taking a historical approach to the study of time and space, students will walk away from the course with (1) ways to conceptualize time and space when studying urban issues, and (2) skills for designing a project to empirically demonstrate the workings of time and space in the real world. At the end of this course, students will be expected to have produced a historical dataset for a research paper that will be completed in the next course sequence.

Instructor(s): R. Vargas Terms Offered: Winter

Prerequisite(s): GEOG 30500 and GEOG 38201

Equivalent Course(s): GEOG 30273, SOCI 20273, SOCI 30273

GEOG 23500. Urban Geography. 100 Units.

This course examines the spatial organization and current restructuring of modern cities in light of the economic, social, cultural, and political forces that shape them. It explores the systematic interactions between social process and physical system. We cover basic concepts of urbanism and urbanization, systems of cities urban growth, migration, centralization and decentralization, land-use dynamics, physical geography, urban morphology, and planning. Field trip in Chicago region required. This course is part of the College Course Cluster, Urban Design.

Instructor(s): M. Conzen Terms Offered: Winter

Note(s): This course offered in even years.

Equivalent Course(s): GEOG 33500, ENST 24660, ARCH 24660

GEOG 24600. Introduction to Urban Sciences. 100 Units.

This course is a grand tour of conceptual frameworks, general phenomena, emerging data and policy applications that define a growing scientific integrated understanding of cities and urbanization. It starts with a general outlook of current worldwide explosive urbanization and associated changes in social, economic and environmental indicators. It then introduces a number of historical models, from sociology, economics and geography that have been proposed to understand how cities operate. We will discuss how these and other facets of cities can be integrated as dynamical complex systems and derive their general characteristics as social networks embedded in structured physical spaces. Resulting general properties of cities will be illustrated in different geographic and historical contexts, including an understanding of urban resource flows, emergent institutions and the division of labor and knowledge as drivers of innovation and economic growth. The second part of the course will deal with issues of inequality, heterogeneity and (sustainable) growth in cities. We will explore how these features of cities present different realities and opportunities to different individuals and how these appear as spatially concentrated (dis)advantage that shape people's life courses. We will show how issues of inequality also have consequences at more macroscopic levels and derive the general features of population and economic growth for systems of cities and nations.

Instructor(s): Luis Bettencourt Terms Offered: Autumn

Prerequisite(s): STAT 22000

Equivalent Course(s): PBPL 24605, SOCI 20285, GEOG 34600, ENST 24600

GEOG 25900. Introduction to Location Analysis. 100 Units.

Understanding the location of business activities - agricultural, industrial, retail, and knowledge-based - has long been a focus for economic geographers, regional scientists, and urban planners. This course traces the key theories and conceptual models that have been developed over time to explain why economic activities tend to locate where they do. To introduce and explain these theories, this course covers several foundational concepts in economic geography and urban planning, such as: bid-rent theory, locational triangulation, various models of urban structure and growth, urban market areas, transportation, economic restructuring, and the 'back-to-the-city' movement. This course incorporates several GIS exercises to teach students the basic principles of location optimization and to help illuminate the foundational theoretical principles of economic geography.

Instructor(s): Kevin Credit Terms Offered: Autumn. Offered 2020-21

Equivalent Course(s): ENST 25910, GEOG 35900

GEOG 26100. Roots of the Modern American City. 100 Units.

This course traces the economic, social, and physical development of the city in North America from pre-European times to the mid-twentieth century. We emphasize evolving regional urban systems, the changing spatial organization of people and land use in urban areas, and the developing distinctiveness of American urban landscapes. All-day Illinois field trip required.

This course is part of the College Course Cluster, Urban Design.

Instructor(s): M. Conzen Terms Offered: Autumn

Note(s): This course offered in odd years.

Equivalent Course(s): HIST 28900, GEOG 36100, ENST 26100, HIST 38900

GEOG 26500. Transportation Geography. 100 Units.

Transportation is one of the most important issues facing regions today, due in large part to a host of recent concerns - the 'back to the city' movement, sustainability, freight traffic, autonomous vehicles - and some older ones, like suburban sprawl and aging infrastructure. This course introduces these issues in a GIScience framework by teaching students both the theory of transportation geography and empirical methods for analyzing transportation patterns in GIS. Methods covered include: network analysis, accessibility (walkability) analysis, spatial interaction models, and the economic analysis of transportation systems in GIS.

Instructor(s): Kevin Credit Terms Offered: Not offered 2020-21

GEOG 26510. Urban Analytics. 100 Units.

Urban analytics is a new field emerging at the intersection of urban planning practice and data science. While quantitative analytics have been used to study cities for some time, several new trends have begun to coalesce in the way that urban data is collected, analyzed, and used to make decisions: 1) increased velocity, volume, and variety in 'big', spatially-referenced

open source datasets generated by cities, 2) the development of easily-implementable machine learning, spatial analysis, and visualization techniques to analyze these data, and 3) cities' increasing use of new data, new technologies, and new approaches to decision-making and planning (e.g., 'Smart Cities'). The rise of this technological-quantitative framework has also raised concerns over public participation, representation, data transparency, 'crowd-sourcing', and equity. In this course, we will cover contemporary urban planning issues (such as transportation planning, economic development, and land use planning) and theory. We will also investigate several cutting-edge urban analytic methodological tools, applied to questions of relevance in planning practice using 'big' open source datasets.

Instructor(s): Kevin Credit Terms Offered: Spring. Offered 2020-21

Equivalent Course(s): GEOG 36510

GEOG 27155. Urban Design with Nature. 100 Units.

This course will use the Chicago region as the setting to evaluate the social, environmental, and economic effects of alternative forms of human settlement. Students will examine the history, theory and practice of designing cities in sustainable ways - i.e., human settlements that are socially just, economically viable, and environmentally sound. Students will explore the literature on sustainable urban design from a variety of perspectives, and then focus on how sustainability theories play out in the Chicago region. How can Chicago's neighborhoods be designed to promote environmental, social, and economic sustainability goals? This course is part of the College Course Cluster program: Urban Design.

Instructor(s): Sabina Shaikh and Emily Talen Terms Offered: Autumn

Prerequisite(s): Third or fourth-year standing

Note(s): Students who have taken ENST 27150: Urban Design with Nature: Assessing Social and Natural Realms in the Calumet Region in the Spring of 2018 may not enroll in this course.

Equivalent Course(s): BPRO 27155, PBPL 27156, ENST 27155

GEOG 28000. GIScience Practicum. 100 Units.

This applied course in geographic information science builds upon and refines knowledge and geocomputational expertise gained in the GIScience sequence. Students will develop a multifaceted GIS project incorporating spatial thinking in design, infrastructure, and implementation. Projects could include the development of a web application, dynamic dashboard, interactive storytelling map, infographic-driven policy brief, or research article and are encouraged to link additional disciplines like health, sociology, economics, or political science.

Instructor(s): Kevin Credit Terms Offered: Spring. Offered 2020-21

Prerequisite(s): GEOG 38202; GEOG 38402

Equivalent Course(s): GEOG 38000

GEOG 28202. Geographic Information Science I. 100 Units.

This course introduces students to a wide range of geospatial technologies and techniques in order to explain the basic theory and application of geographic information systems (GIS). To do this, students will use open source or free software such as QGIS and Google Earth Pro to complete GIS lab exercises that cover a range of topics, including an introduction to different types of geospatial data, geographic measurement, GIS, principles of cartography, remote sensing, basic GIS mapping and spatial analysis techniques, remote sensing, and specific geospatial applications such as 3D modeling and geodesign. By providing a general overview of geospatial technologies, this course provides students with a broad foundational knowledge of the field of GIScience that prepares them for more specialized concepts and applications covered in future GIS courses.

Instructor(s): Kevin Credit Terms Offered: Autumn. Offered 2020-21

Equivalent Course(s): GEOG 38202

GEOG 28402. Geographic Information Science II. 100 Units.

This course investigates the theory and practice of infrastructure and computational approaches in spatial analysis and GIScience. Geocomputation is introduced as a multidisciplinary systems paradigm necessary for solving complex spatial problems and facilitating new understandings. Students will learn about the elements of spatial algorithms and data structures, geospatial topologies, spatial data queries, and the basics of geodatabase architecture and design.

Instructor(s): Marynia Kolak Terms Offered: Winter. Offered 2020-21

Prerequisite(s): GEOG 28202 /GEOG 38202. Students must receive a grade of C or higher in GEOG 28202/GEOG 38202 in order to register for this course.

Equivalent Course(s): GEOG 38402, ARCH 28402

GEOG 28602. Geographic Information Science III. 100 Units.

This advanced course extends and connects both foundational and functional GIScience concepts. Students will be introduced to advanced programming and scripting languages necessary for spatial analysis and GIScience applications. Additional topics include customization, enterprise GIS, web GIS, and advanced visualization and analytic techniques.

Instructor(s): M. Kolak Terms Offered: Spring. Offered 2020-21

Prerequisite(s): GEOG 38202 and GEOG 38402. Students must receive a grade of C or higher in GEOG 28402/GEOG 38402 in order to register for this course.

Equivalent Course(s): ARCH 28602, GEOG 38602

GEOG 28700. Readings in Spatial Analysis. 100 Units.

This independent reading option is an opportunity to explore special topics in the exploration, visualization and statistical modeling of geospatial data.

Instructor(s): K. Credit and M. Kolak Terms Offered: Autumn Spring Winter. Students are required to submit the College Reading and Research Course Form. Available for either quality grades or for P/F grading.

Note(s): By permission of instructor only.

Equivalent Course(s): ENST 28800, GEOG 38700

GEOG 28702. Introduction to GIS and Spatial Analysis. 100 Units.

This course provides an introduction and overview of how spatial thinking is translated into specific methods to handle geographic information and the statistical analysis of such information. This is not a course to learn a specific GIS software program, but the goal is to learn how to think about spatial aspects of research questions, as they pertain to how the data are collected, organized and transformed, and how these spatial aspects affect statistical methods. The focus is on research questions relevant in the social sciences, which inspires the selection of the particular methods that are covered. Examples include spatial data integration (spatial join), transformations between different spatial scales (overlay), the computation of 'spatial' variables (distance, buffer, shortest path), geovisualization, visual analytics, and the assessment of spatial autocorrelation (the lack of independence among spatial variables). The methods will be illustrated by means of open source software such as QGIS and R.

Instructor(s): M. Kolak Terms Offered: Spring. Offered 2020-21

Equivalent Course(s): SOCI 30283, ENST 28702, SOCI 20283, ARCH 28702, GEOG 38702

GEOG 28800. History of Cartography. 100 Units.

This course offers a grand overview of the key developments in mapmaking throughout history worldwide, from pre-literate cartography to the modern interactive digital environment. It looks at the producers, their audience, the technologies and artistic systems used, and the human and global contexts in which they developed. The course also draws on the extensive map collections of Regenstein Library.

Instructor(s): Staff Terms Offered: Spring

Equivalent Course(s): GEOG 38800

GEOG 28900. Readings in Urban Planning and Design. 100 Units.

This independent reading option is an opportunity to explore contemporary debates and theoretical arguments involved in the planning and design of cities.

Instructor(s): E.Talen Terms Offered: Autumn Spring Winter. Students are required to submit the College Reading and Research Course Form. Available for either quality grades or for P/F grading.

Note(s): By permission of instructor only.

Equivalent Course(s): GEOG 38900, ENST 28900

GEOG 29100. Undergraduate Tutorial. 100 Units.

This course is intended for individual study of selected geographical problems.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): Consent of instructor.

Note(s): Available for either quality grades or for P/F grading.

GEOG 29700. Readings in Special Topics in Geography. 100 Units.

A program of supervised reading of a special topic in geography. Students will meet periodically with the instructor to discuss the readings, and submit a final paper critically reviewing the conceptual orientation and substantive content of the readings.

Instructor(s): M. Conzen, L. Anselin, E. Talen. Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of instructor.

Note(s): Consent of instructor. Students are required to submit the College Reading and Research Course Form. Available for either quality grades or for P/F grading.

Geophysical Sciences

Department Website: <http://geosci.uchicago.edu>

Program of Study

The Department of the Geophysical Sciences (GEOS) offers unique programs of study in the earth, atmospheric, and planetary sciences. Topics include the physics, chemistry, and dynamics of the atmosphere, oceans, and ice sheets; past and present climate change; the origin and history of the Earth, moon, and meteorites; properties of the deep interior of the Earth and the dynamics of crustal movements; and the evolution and geography of life and the Earth's surface environments through geologic time. These multidisciplinary topics require an integrated approach founded on mathematics, physics, chemistry, and biology.

Both the BA and BS programs prepare students for careers that draw upon the earth, atmospheric, and planetary sciences. However, the BS degree provides a more focused and intensive program of study for students who intend to pursue graduate work in these disciplines. The BA degree also offers thorough study in the geophysical sciences, but it provides a wide opportunity for elective freedom to pursue interdisciplinary interests, such as environmental policy, law, medicine, business, and precollege education.

Program Requirements for the BA in Geophysical Sciences

The requirements for the BA degree in Geophysical Sciences involve completion of:

- six required courses that fulfill general education requirements for the physical sciences, biological sciences, and mathematics
- eight required science or mathematics courses
- seven elective courses pertinent to the major from the electives lists below, which must include:
 - one course in Computational Sciences (List 2)
 - four 20000-level courses designated GEOS in List 1
 - two more 20000-level science courses from any of Lists 1–2

Candidates for the BA in Geophysical Sciences complete a year of chemistry, a year of physics, a year of mathematics (including Calculus I-II), and a year of biology (GEOS 27300 Biological Evolution-Advanced and BIOS 20198 Biodiversity).

The requirement for the third quarter of mathematics may be satisfied by either completing the calculus sequence (recommended for students taking the more introductory MATH 13000s sequence but not specifically required or recommended for the higher tracks such as MATH 15000s, as the first two quarters offer a sufficiently comprehensive calculus training for students to move on to other courses) or taking one of the designated mathematical methods courses instead. In addition, students must complete one elective course from Computational Sciences (List 2).

Students are encouraged to begin discipline-specific courses as early as possible. Required disciplinary courses include GEOS 13100 Physical Geology, GEOS 13200 Earth History, and GEOS 13300 The Atmosphere. With prior consent of the departmental counselor, students with the appropriate background may substitute a 20000-level course, which may be taken during or after the third year.

A minimum of six additional 20000-level science courses are required. At least four must be GEOS courses from List 1. Up to two may be chosen from other science courses in List 1. Up to two may be chosen from Computational Sciences (List 2). One may be a field course.

Summary of Requirements for the BA in Geophysical Sciences

GENERAL EDUCATION

One of the following sequences:		200
CHEM 10100 & CHEM 10200	Introductory General Chemistry I and Introductory General Chemistry II	
CHEM 11100-11200	Comprehensive General Chemistry I-II *	
CHEM 12100 & CHEM 12200	Honors General Chemistry I and Honors General Chemistry II	
One of the following sequences:		200
MATH 13100-13200	Elementary Functions and Calculus I-II *	
MATH 15100-15200	Calculus I-II	
MATH 16100-16200	Honors Calculus I-II	
Both of the following: **		200
BIOS 20198	Biodiversity	

GEOS 27300	Biological Evolution-Advanced [%]	
Total Units		600
MAJOR		
GEOS 13100 & GEOS 13200 & GEOS 13300	Physical Geology and Earth History and The Atmosphere	300
CHEM 11300 or CHEM 12300	Comprehensive General Chemistry III [*] Honors General Chemistry III	100
One of the following sequences:		300
PHYS 12100-12200-12300	General Physics I-II-III ^{*§}	
PHYS 13100-13200-13300	Mechanics; Electricity and Magnetism; Waves, Optics, and Heat	
PHYS 14100-14200-14300	Honors Mechanics; Honors Electricity and Magnetism; Honors Waves, Optics, and Heat	
One of the following:		100
MATH 20000	Mathematical Methods for Physical Sciences I	
MATH 20250	Abstract Linear Algebra	
PHYS 22000	Introduction to Mathematical Methods in Physics	
MATH 13300	Elementary Functions and Calculus III [*]	
MATH 15300	Calculus III	
MATH 16300	Honors Calculus III	
One Computational Sciences course (List 2)		100
Six electives as follows: [†]		600
Four courses designated GEOS from List 1: Physical and Biological Sciences		
Two additional courses from List 1: Physical and Biological Sciences and/or from List 2: Computational Sciences		
Total Units		1500

^{*} Credit may be granted by examination.

^{**} Only Environmental Science and Geophysical Sciences majors may use this pairing to satisfy the general education requirement in the biological sciences. Geophysical Sciences majors can take these courses without the Biological Sciences prerequisites (BIOS 20153-20151) unless they pursue a double major in Biological Sciences. They are expected to show competency in mathematical modeling of biological phenomena covered in BIOS 20151.

[†] Only one of these electives may be a field course (GEOS 29001, GEOS 29002, GEOS 29005) and only one of these electives may be GEOS 29700 Reading and Research in the Geophysical Sciences.

[§] PHYS 13100-13200-13300 or PHYS 14100-14200-14300 are the preferred courses. PHYS 12100-12200-12300 is allowable on a case-by-case basis but may not provide adequate preparation to allow for enrollment in higher level PHYS courses. Additionally, PHYS 12100 has a prerequisite of a year of chemistry. Special petition to the department counselor is required for PHYS 12100-12200-12300 approval.

[%] Biological Evolution-Advanced has several cross-listings. Geophysical Sciences majors *must* register for it under the GEOS 27300 listing.

Program Requirements for the BS in Geophysical Sciences

The requirements for the BS degree in Geophysical Sciences involve completion of:

- six required courses that fulfill general education requirements for the physical sciences, biological sciences, and mathematics
- eight required science or mathematics courses
- ten elective courses pertinent to the major from the electives lists below, which must include:
 - two courses in Computational Sciences (List 2)
 - four 20000-level courses designated GEOS in List 1
 - four more 20000-level science courses from any of Lists 1–2: up to three non-GEOS courses from List 1, up to two from List 2

Candidates for the BS in Geophysical Sciences complete a year of chemistry, a year of physics, a year of mathematics (including Calculus I-II), and a year of biology (GEOS 27300 Biological Evolution-Advanced and BIOS 20198 Biodiversity).

The requirement for the third quarter of mathematics may be satisfied by either completing the calculus sequence (recommended for students taking the more introductory MATH 13000s sequence but not specifically required or recommended for the higher tracks such as MATH 15000s, as the first two quarters offer a sufficiently comprehensive calculus training for students to move on to other courses) or taking one of the designated mathematical methods courses instead. In addition, students must complete two elective courses from Computational Sciences (List 2). The requirements are structured to allow and encourage students to complete sequences that extend through the study of differential equations.

Students are encouraged to begin discipline-specific courses as early as possible. Required disciplinary courses include GEOS 13100 Physical Geology, GEOS 13200 Earth History, and GEOS 13300 The Atmosphere, which is the introductory sequence. With prior consent of the departmental counselor, students with the appropriate background may substitute a 20000-level course, which may be taken during or after the third year.

A minimum of eight additional 20000-level science courses are required. At least four must be GEOS courses from List 1. Up to three may be chosen from other science courses in List 1. Up to two may be chosen from Computational Sciences (List 2). One may be a field course. One may be GEOS 29700 Reading and Research in the Geophysical Sciences.

GEOS 26650	Environmental Microbiology	100
GEOS 26905	Topics in Conservation Paleobiology	100
GEOS 28000	Introduction to Structural Geology	100
GEOS 28100	Global Tectonics	100
GEOS 28300	Principles of Stratigraphy	100

GEOS 28600	Earth and Planetary Surface Processes	100
GEOS 29700	Reading and Research in the Geophysical Sciences	100

Field Courses in Geophysical Sciences

The department sponsors field trips that range in length from one day to several weeks. Shorter field trips typically form part of lecture-based courses and are offered each year. (The trips are open to all students and faculty if space permits.) Longer trips are designed as undergraduate field courses, and one such course may be used as an elective science course for the major. Destinations of field courses have recently included Baja California, Death Valley, Nevada, Salton Trough, Newfoundland, and the Bahamas.

Semester in Environmental Science/MBL

The following courses are the College designations for the Semester in Environmental Science that is taught at the Marine Biological Laboratory (MBL) in Woods Hole, Massachusetts. Registration in ENSC 23820 Biogeochemical Analysis in Terrestrial and Aquatic Ecosystems # Marine Biological Laboratory, ENSC 24100 Ecology - Marine Biological Laboratory, and ENSC 29800 Independent Undergraduate Research in Environmental Sciences Marine Biological Laboratory, plus one of ENSC 24200 Methods in Microbial Ecology - Marine Biological Laboratory, ENSC 24300 Roles of Animals in Ecosystems # Marine Biological Laboratory, or ENSC 28100 Quantitative Environmental Analyses # Marine Biological Laboratory is required. Admission to the Semester in Environmental Science program is by application, which must be received by the MBL generally in March of the year preceding the start of the semester. Admissions decisions will generally be sent in April. Note that these courses start at the beginning of September, typically four weeks prior to the start of the College's Autumn Quarter, and are completed by the end of Autumn Quarter. More information on the course content, the application process, and deadlines can be found at college.uchicago.edu/academics/semester-environmental-science/. Students participating in the Semester in Environmental Science receive credit for four courses in environmental science.

ENSC 23820	Biogeochemical Analysis in Terrestrial and Aquatic Ecosystems # Marine Biological Laboratory	100
ENSC 24100	Ecology - Marine Biological Laboratory	100
ENSC 24200	Methods in Microbial Ecology - Marine Biological Laboratory	100
ENSC 24300	Roles of Animals in Ecosystems # Marine Biological Laboratory	100
ENSC 28100	Quantitative Environmental Analyses # Marine Biological Laboratory	100
ENSC 29800	Independent Undergraduate Research in Environmental Sciences Marine Biological Laboratory	100

Chemistry

CHEM 20100-20200	Inorganic Chemistry I-II	200
CHEM 22000-22100-22200	Organic Chemistry I-II-III	300
CHEM 26100-26200-26300	Quantum Mechanics; Thermodynamics; Chemical Kinetics and Dynamics	300
CHEM 26700	Experimental Physical Chemistry [†]	100

[†] requires CHEM 26100

Physics

PHYS 18500	Intermediate Mechanics	100
PHYS 22500	Intermediate Electricity and Magnetism I	100
PHYS 22600	Electronics	100
PHYS 22700	Intermediate Electricity and Magnetism II	100

List 2: Computational Sciences**Mathematics**

MATH 20000-20100	Mathematical Methods for Physical Sciences I-II §	200
MATH 15910	Introduction to Proofs in Analysis	100
or STAT 24300	Numerical Linear Algebra	
MATH 20250	Abstract Linear Algebra	100
MATH 20300	Analysis in Rn I	100
MATH 20400	Analysis in Rn II	100
MATH 20500	Analysis in Rn III	100
MATH 20310	Analysis in Rn I (accelerated)	100
MATH 20410	Analysis in Rn II (accelerated)	100
MATH 20510	Analysis in Rn III (accelerated)	100
MATH 21100	Basic Numerical Analysis	100
MATH 27000	Basic Complex Variables	100
MATH 27300	Basic Theory of Ordinary Differential Equations	100
MATH 27500	Basic Theory of Partial Differential Equations	100
MATH 38300	Numerical Solutions to Partial Differential Equations	100

Biological Sciences

BIOS 20152	Introduction to Quantitative Modeling in Biology (Advanced)	100
------------	---	-----

Physics

PHYS 22000	Introduction to Mathematical Methods in Physics §§	100
PHYS 22100	Mathematical Methods in Physics §§§	100

Statistics

Any course in statistics at the 22000 level or higher. Some recommendations follow:

STAT 22000	Statistical Methods and Applications * ‡‡	100
or STAT 23400	Statistical Models and Methods	
STAT 22400	Applied Regression Analysis	100
STAT 22600	Analysis of Categorical Data	100
STAT 24400-24500	Statistical Theory and Methods I-II ‡‡‡	200
STAT 26100	Time Dependent Data	100

Computing

CMSC 12100	Computer Science with Applications I +	100
CMSC 12200	Computer Science with Applications II	100
CMSC 12300	Computer Science with Applications III	100
CMSC 23710	Scientific Visualization	100
CMSC 28510	Introduction to Scientific Computing	100
CMSC 34200	Numerical Hydrodynamics	100

* AP credit for STAT 22000 does not count toward the major requirements. Students with AP credit for STAT 22000 should plan to take at least one other course from List 2 (BA program) or two other courses from List 2 (BS program).

§ Recommended prerequisite is MATH 19620 or MATH 15300 or MATH 16300

§§ Would generally substitute for MATH 20000-20100

§§§ Recommended in addition to MATH 20000-20100 for advanced students—covers partial differential equations

‡‡ STAT 23400 has a higher programming component than STAT 22000

‡‡‡ Recommended for advanced students. Must be taken as a sequence to be credited. STAT 24400-24500 have no prerequisite but it is possible to take both STAT 23400 and STAT 24400-24500.

- + Students seeking to double major in Computer Science must complete CMSC 12100-1220-12300 as a sequence per the Computer Science rule.

Grading

Students majoring in geophysical sciences must receive quality grades in all courses taken to meet requirements in the major.

Honors

The BA or BS degree with honors is awarded to students who meet the following requirements: (1) a GPA of 3.25 or higher in the major and of 3.0 or higher overall; (2) completion of a paper based on original research, supervised and approved by a faculty member in geophysical sciences; (3) an oral presentation of the thesis research. All theses will be examined by the supervisor and a second reader from the faculty. Manuscript drafts will generally be due in the sixth week of the quarter in which the student will graduate (fifth week in Summer Quarter), and final manuscripts and oral presentations in the eighth week (seventh week in Summer Quarter).

Students are strongly encouraged to reach out to potential faculty supervisors no later than their third year, since theses generally arise out of research projects already begun with faculty members. When a thesis topic is determined, students should notify the undergraduate adviser of their intent to complete a thesis and confirm their eligibility. GEOS 29700 Reading and Research in the Geophysical Sciences can be devoted to the preparation of the required paper; however, students using this course to meet a requirement in the major must take it for a quality grade.

Students who wish to submit a single paper to meet the honors requirement in geophysical sciences and the BA paper requirement in another major should discuss their proposals with the undergraduate advisers from both programs no later than the end of third year. Certain requirements must be met. A consent form, to be signed by the undergraduate advisers, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Sample BS Programs

Each student will design an individual plan of course work, choosing from a wide range of selections that take advantage of rich offerings from a variety of subdisciplines. The sample programs that appear below are merely for the purpose of illustration; many other variations would be possible. NOTE: Courses that meet general education requirements and are required for the major are not listed.

Environmental Geochemistry		
CHEM 26200-26300	Thermodynamics; Chemical Kinetics and Dynamics	200
GEOS 21000	Mineralogy	100

GEOS 28100	Global Tectonics	100
MATH 20000	Mathematical Methods for Physical Sciences I	100
PHYS 18500	Intermediate Mechanics	100
PHYS 22500	Intermediate Electricity and Magnetism I	100
STAT 23400	Statistical Models and Methods	100

Geophysical Sciences Courses

GEOS 13100. Physical Geology. 100 Units.

This course introduces plate tectonics; the geologic cycle; and the internal and surface processes that make minerals and rocks, as well as that shape the scenery. Topics include: planetary geophysics; evidence leading to the theory of plate tectonics; natural hazards including earthquakes and volcanoes; economic geology including energy resources, ores, and mineral resources; crustal deformation and mountain building; and surface processes (erosion, groundwater). Laboratory exercises introduce identifying features of rocks and minerals, and interpreting geological maps. Biweekly writing assignments explore topics in geology that are supplemental to the lecture material. (L)

Instructor(s): D. Rowley Terms Offered: Autumn

GEOS 13200. Earth History. 100 Units.

This course covers principles of historical inference in Earth science; the physical, chemical, and biological data that are used to reconstruct Earth history; and the geographic, biotic, and environmental development of Earth. Weekly labs focus on observation and interpretation of sedimentary rocks and fossil assemblages in hand samples. (L)

Instructor(s): M. Foote Terms Offered: Winter

Prerequisite(s): GEOS 13100

GEOS 13300. The Atmosphere. 100 Units.

This course introduces the physics, chemistry, and phenomenology of the Earth's atmosphere, with an emphasis on the fundamental science that underlies atmospheric behavior and climate. Topics include (1) atmospheric composition, evolution, and structure; (2) solar and terrestrial radiation in the atmospheric energy balance; (3) the role of water in determining atmospheric structure; and (4) wind systems, including the global circulation, and weather systems.

Instructor(s): D. Abbot Terms Offered: Spring

Prerequisite(s): MATH 13100-MATH 13200

Equivalent Course(s): ENSC 13300, ENST 13300

GEOS 13400. Global Warming: Understanding the Forecast. 100 Units.

This course presents the science behind the forecast of global warming to enable the student to evaluate the likelihood and potential severity of anthropogenic climate change in the coming centuries. It includes an overview of the physics of the greenhouse effect, including comparisons with Venus and Mars; an overview of the carbon cycle in its role as a global thermostat; predictions and reliability of climate model forecasts of the greenhouse world. This course is part of the College Course Cluster program, Climate Change, Culture, and Society. (L)

Instructor(s): D. MacAyeal Terms Offered: Not offered in 2020-21.

Prerequisite(s): Some knowledge of chemistry or physics helpful.

Equivalent Course(s): ENST 12300, PHSC 13400, ENSC 13400

GEOS 13410. Global Warming: Understanding the Forecast (Flipped Class) 100 Units.

This course presents the science behind the forecast of global warming to enable the student to evaluate the likelihood and potential severity of anthropogenic climate change in the coming centuries. It includes an overview of the physics of the greenhouse effect, including comparisons with Venus and Mars; predictions and reliability of climate model forecasts of the greenhouse world. This course is part of the College Course Cluster program, Climate Change, Culture, and Society. This course covers the same material as PHSC 13400, but is organized using a flipped classroom approach in order to increase student engagement and learning.

Instructor(s): D. Abbot Terms Offered: Autumn Spring

Prerequisite(s): Some knowledge of chemistry or physics helpful.

Equivalent Course(s): ENSC 13410, ENST 13410, PHSC 13410

GEOS 13606. Natural Disasters: Science, Statistics, and Minimizing Risk. 100 Units.

This course investigates the mechanisms behind hurricanes, floods, earthquakes, and other natural hazards, and how to minimize the risks they can pose. First, we will apply the fundamental principles of physics, chemistry, and biology to understand the earth's climate, geology, and oceans, and how their conditions can become hazardous. Then we will apply this knowledge through physical experiments in the lab, 2D and 3D plots of data fields, and computer-assisted mathematical analysis. We will also explore how to use statistics to assess risk when we analyze data collected about hazards. By the end of the course, students will understand the nature of natural hazards as well as basic strategies for tackling complex scientific problems. Taught by two leading professors in the field, this will be an ideal course for students considering a STEM career, especially those wanting to apply hard science to real-world problems.

GEOS 13610. The Physics of Climate and Weather. 100 Units.

Rarely a month goes by without hearing some news about natural disasters around the world. Whether it is a hurricane, flooding, or a catastrophic wildfire, many of these disasters are associated with extreme weather events or climatic conditions. Increasingly, the conversation then turns towards global climate change and its potential effect on natural disasters. This course will provide you with the concepts needed to understand the fundamentals of weather and climate, how scientists apply the principles of physics and statistics to the earth's environment to dissect seemingly complex phenomena, and how these insights can be used to forecast not only the weather of tomorrow, but also the climate of the next century. By the end of this course you will learn how the atmospheric and oceanic environments of our planet operate, what causes impactful events to occur, how and why the climate and associated weather events may change in the future, and perhaps most importantly-how to think like a scientist by meshing principles of physics and statistics with observed data. You will also be exposed to some of the general tools and concepts of STEM research such as programming, problem solving, laboratory measurements, and technical writing.

Terms Offered: Summer

GEOS 13900. Biological Evolution. 100 Units.

This course is an introduction to evolutionary processes and patterns in present-day organisms and in the fossil record and how they are shaped by biological and physical forces. Topics emphasize evolutionary principles. They include DNA and the genetic code, the genetics of populations, the origins of species, and evolution above the species level. We also discuss major events in the history of life, such as the origin of complex cells, invasion of land, and mass extinction. This course is part of the College Course Cluster program: Climate Change, Culture and Society. (L)

Instructor(s): D. Jablonski Terms Offered: Winter

Prerequisite(s): BIOS 10130; No Biological Sciences majors except by petition to the BSCD Senior Advisers.

Note(s): Due to significant overlap of course content, students may register for only one of PHSC 11000, BIOS 12117, or GEOS 13900/BIOS 13123. Students using this course for credit in the GEOS or ENSC major register for GEOS 27300; additional work, including a term paper, will be required.

Equivalent Course(s): BIOS 13123

GEOS 21000. Mineralogy. 100 Units.

This course covers structure, chemical composition, stability, and occurrence of major rock-forming minerals. Labs concentrate on mineral identification with the optical microscope. (L)

Instructor(s): A. Campbell Terms Offered: Winter. Offered every other year.

Equivalent Course(s): GEOS 31000

GEOS 21005. Mineral Science. 100 Units.

This course examines the relationship between the structure of minerals, their chemistry, and their physical properties. Topics include crystallography, defect properties, phase transitions, and analytical tools, followed by detailed study of specific mineral groups.

Instructor(s): A. Campbell Terms Offered: Winter. Offered every other year.

Prerequisite(s): GEOS 21000 or consent of instructor.

Equivalent Course(s): GEOS 31005

GEOS 21100. Introduction to Petrology. 100 Units.

Students in this course learn how to interpret observable geological associations, structures, textures, and mineralogical and chemical compositions of rocks so as to develop concepts of how they form and evolve. Our theme is the origin of granitic continental crust on the only planet known to have oceans and life. Igneous, sedimentary, and metamorphic rocks; ores; and waste disposal sites are reviewed. (L)

Instructor(s): N. Dauphas Terms Offered: Spring

Prerequisite(s): GEOS 21000 is strongly recommended.

GEOS 21200. Physics of the Earth. 100 Units.

This course considers geophysical evidence bearing on the internal makeup and dynamical behavior of the Earth, including seismology (i.e., properties of elastic waves and their interpretation, and internal structure of the Earth); mechanics of rock deformation (i.e., elastic properties, creep and flow of rocks, faulting, earthquakes); gravity (i.e., geoid, isostasy); geomagnetism (i.e., magnetic properties of rocks and history, origin of the magnetic field); heat flow (i.e., temperature within the Earth, sources of heat, thermal history of the Earth); and plate tectonics and the maintenance of plate motions. (L)

Instructor(s): D. Heinz Terms Offered: Spring

Prerequisite(s): Prior calculus and college-level physics courses, or consent of instructor.

Equivalent Course(s): GEOS 31200

GEOS 21205. Introduction to Seismology, Earthquakes, and Near-Surface Earth Seismicity. 100 Units.

This course introduces the mechanics and phenomenology of elastic waves in the Earth and in the fluids near the Earth's surface (e.g., S and P waves in the solid earth, acoustic waves in the ocean and atmosphere). Topics include stress and strain, constitutive equations, elasticity, seismic waves, acoustic waves, theory of refraction/reflection, surface waves, dispersion, and normal modes of the Earth. Phenomenology addressed includes exploration geophysics (refraction/reflection seismology), earthquakes and earthquake source characterization, seismograms as signals, seismometers and seismological networks, and digital seismogram analysis.

Instructor(s): D. Heinz Terms Offered: Winter

Equivalent Course(s): GEOS 31205

GEOS 21400. Thermodynamics and Phase Change. 100 Units.

This course develops the thermodynamics of minerals, with emphasis on relations between thermodynamic variables and equations of state. Geological and geochemical applications include homogeneous and heterogeneous phase equilibrium, culminating in the construction of representative multicomponent phase diagrams of petrological significance, and fluid-rock interactions.

Instructor(s): A. Campbell Terms Offered: Winter

Prerequisite(s): College-level chemistry and calculus.

Equivalent Course(s): GEOS 31400

GEOS 22040. Planet Formation in the Galaxy I: From Dust to Planetesimals. 100 Units.

This course examines the physical and chemical processes that operate during the earliest stages of planet formation when dust in a protoplanetary disk aggregates into bodies 1 to 10 km in size. Topics include the physical and chemical evolution of protoplanetary disks, radial transport of dust particles, transient heating events, and the formation of planetesimals. We discuss the evidence of these processes found in meteorites and observed in disks around young stars. Chemical and physical models of dust evolution are introduced, including an overview of basic numerical modeling techniques.

Instructor(s): F. Ciesla

Prerequisite(s): One year of college-level calculus and physics or chemistry, or consent of instructor.

Note(s): This course is offered in alternate years.

Equivalent Course(s): GEOS 32040

GEOS 22050. Planet Formation in the Galaxy II: From Planetesimals to Planets. 100 Units.

This course explores the stage of planet formation during which 1 to 10 km planetesimals accrete to form planets. Topics include heating of planetesimals, models of giant planet formation, the delivery of water to terrestrial planets, and the impact that stellar mass and external environment have on planet formation. We also discuss what processes determine

the properties (mass, composition, and orbital parameters) of a planet and its potential for habitability. Basic modeling techniques and current research papers in peer-reviewed journals are also discussed.

Instructor(s): F. Ciesla

Prerequisite(s): Consent of instructor

Equivalent Course(s): GEOS 32050

GEOS 22060. What Makes a Planet Habitable? 100 Units.

This course explores the factors that determine how habitable planets form and evolve. We will discuss a range of topics, from the formation of planets around stars and the delivery of water, to the formation of atmospheres, climate dynamics, and the conditions that allow for the development of life and the evolution of complex life. Students will be responsible for periodically preparing presentations based on papers in peer-reviewed journals and leading the discussion. This course is part of the College Course Cluster program: Climate Change, Culture and Society.

Instructor(s): Edwin Kite Terms Offered: Winter

Equivalent Course(s): GEOS 32060, ASTR 45900

GEOS 22200. Geochronology. 100 Units.

This course covers the duration of planetary differentiation and the age of the Earth (i.e., extinct and extant chronometers); timescales for building a habitable planet (i.e., the late heavy bombardment, the origin of the atmosphere, the emergence of life, and continent extraction); dating mountains (i.e., absolute ages, exposure ages, and thermochronology); the climate record (i.e., dating layers in sediments and ice cores); and dating recent artifacts (e.g., the Shroud of Turin). Prerequisite(s): Background in college-level geology, physics, and mathematics. Equivalent Course(s): GEOS 32200

Prerequisite(s): Background in college-level geology, physics, and mathematics.

Note(s): Equivalent Course(s): GEOS 32200

Equivalent Course(s): GEOS 32200

GEOS 22600. Topics in Earth Science: The Accretion of Extraterrestrial Matter Throughout Earth's History. 100 Units.

This course will provide a discussion of the nature and variability of extraterrestrial (ET) matter accreted throughout Earth's history that is preserved in the geological record. This record is a rich archive of ET matter whose study not only provides unique insight into the origin and evolution of different Solar System objects but also enables a better understanding of delivery mechanisms. The course will highlight periods of dramatically increased accretion rates and important impact events. This includes events such as the recent Chelyabinsk and Tunguska air blasts, the "global killer" Chicxulub impact 66 Ma ago, the Ordovician meteorite showers, all the way to cataclysmic events that occurred on early Earth. The course will also provide an introduction to related key techniques such as classification with material from the meteorite collection, the identification of impact craters, and the use of tracers of ET material in the geological record.

Instructor(s): P. Heck Terms Offered: Autumn

Prerequisite(s): Background in college-level geology and mineralogy or consent of instructor

Equivalent Course(s): GEOS 32600

GEOS 22700. Analytical Techniques in Geochemistry. 100 Units.

Modern geochemistry requires the use of many sophisticated laboratory instruments. The idea behind GEOS 32700 is to survey the major types of instrumentation used in geochemistry laboratories, including mass spectrometers, electron microscopes, x-ray microanalysis, DNA sequencing, etc. Students should come away from the course with a better appreciation of the inner workings of these instruments rather than treating them as black boxes. As a laboratory portion of the course, students will be trained and do a project using the TESCAN SEM-FIB in the Department of the Geophysical Sciences. The course is open to graduate students and advanced undergraduates.

Instructor(s): Andrew M. Davis & Michael J. Pellin Terms Offered: Autumn

Equivalent Course(s): GEOS 32700

GEOS 23205. Introductory Glaciology. 100 Units.

The fundamentals of glacier and ice-sheet dynamics and phenomenology will be covered in this introductory course (snow and sea ice will be excluded from this course, however may be taken up in the future). Emphasis will be placed on developing the foundation of continuum mechanics and viscous fluid flow as a means of developing the basic equations of glacier deformation, ice-sheet and -shelf flow, basal processes, glacier hydrology, and unstable modes of flow. This course is intended for advanced undergraduate students in physics, math, geophysical sciences, and related fields as well as graduate students considering research in glaciology and climate dynamics. This course is part of the College Course Cluster program: Climate Change, Culture, and Society.

Instructor(s): D. MacAyeal Terms Offered: Winter

Prerequisite(s): Knowledge of vector calculus, linear algebra, and computer programming.

Equivalent Course(s): GEOS 33205

GEOS 23600. Chemical Oceanography. 100 Units.

This course explores the chemistry of the ocean system and its variations in space and time. The oceans play an essential role in most (bio)geochemical cycles, interacting in various ways with the atmosphere, sediments, and crust. These interactions can be understood through studying the geochemical and isotopic properties of the ocean, its inputs and outputs, and its evolution as recorded in marine sediments and sedimentary rocks. Topics include: the marine carbon cycle, nutrient cycling, chemical sediments, and hydrothermal systems.

Instructor(s): Clara Blättler Terms Offered: Spring

Prerequisite(s): Completion of one of the following Chemistry Sequences: CHEM 10100-10200-11300 Introductory General Chemistry I-II; Comprehensive General Chemistry III or CHEM 11100-11200-11300 Comprehensive General Chemistry I-II-III or CHEM 12100-12200-12300 Honors General Chemistry I-II-III AND either GEOS 13100 or GEOS 13200.

Equivalent Course(s): ENSC 23600, GEOS 33600

GEOS 23800. Global Biogeochemical Cycles. 100 Units.

This survey course covers the geochemistry of the surface of the Earth, focusing on biological and geological processes that shape the distributions of chemical species in the atmosphere, oceans, and terrestrial habitats. Budgets and cycles of carbon, nitrogen, oxygen, phosphorous, and sulfur are discussed, as well as chemical fundamentals of metabolism, weathering, acid-base and dissolution equilibria, and isotopic fractionation. The course examines the central role that life plays in maintaining the chemical disequilibria that characterize Earth's surface environments. The course also explores biogeochemical cycles change (or resist change) over time, as well as the relationships between geochemistry, biological (including human) activity, and Earth's climate.

Instructor(s): J. Waldbauer Terms Offered: Autumn

Prerequisite(s): CHEM 11100-11200 or consent of instructor

Equivalent Course(s): GEOS 33800, ENSC 23800

GEOS 23900. Environmental Chemistry. 100 Units.

The focus of this course is the fundamental science underlying issues of local and regional scale pollution. In particular, the lifetimes of important pollutants in the air, water, and soils are examined by considering the roles played by photochemistry, surface chemistry, biological processes, and dispersal into the surrounding environment. Specific topics include urban air quality, water quality, long-lived organic toxins, heavy metals, and indoor air pollution. Control measures are also considered. This course is part of the College Course Cluster program: Climate Change, Culture, and Society.

Instructor(s): D. Archer Terms Offered: Autumn

Prerequisite(s): CHEM 11100-11200 or equivalent, and prior calculus course

Equivalent Course(s): ENST 23900, ENSC 23900, GEOS 33900

GEOS 24200. Fundamentals of Geophysical Fluid Dynamics. 100 Units.

This course is an introduction to geophysical fluid dynamics for upper-level undergraduates and starting graduate students. The topics covered will be the equations of motion, the effects of rotation and stratification, shallow water systems and isentropic coordinates, vorticity and potential vorticity, and simplified equations for the ocean and atmosphere.

Instructor(s): D. Abbot Terms Offered: Winter

Prerequisite(s): Knowledge of vector calculus, linear algebra, or consent of instructor

Equivalent Course(s): GEOS 34200

GEOS 24220. Climate Foundations. 100 Units.

This course introduces the basic physics governing the climate of planets, the Earth in particular but with some consideration of other planets. Topics include atmospheric thermodynamics of wet and dry atmospheres, the hydrological cycle, blackbody radiation, molecular absorption in the atmosphere, the basic principles of radiation balance, and diurnal and seasonal cycles. Students solve problems of increasing complexity, moving from pencil-and-paper problems to programming exercises, to determine surface and atmospheric temperatures and how they evolve. An introduction to scientific programming is provided, but the fluid dynamics of planetary flows is not covered. This course is part of the College Course Cluster program: Climate Change, Culture and Society. (L)

Instructor(s): Liz Moyer Terms Offered: Autumn

Prerequisite(s): Prior physics course (preferably PHYS 13300 and 14300) and knowledge of calculus required; prior geophysical sciences course not required.

Note(s): Prior programming experience helpful but not required.

Equivalent Course(s): GEOS 34220

GEOS 24230. Geophysical Fluid Dynamics: Foundations. 100 Units.

This course is for incoming graduate students in physical sciences intending to take further courses in geophysical fluid dynamics, fluid dynamics, condensed matter physics, and other areas requiring this fundamental skill set. It sets the stage for follow-on courses that present the detail of the behavior of fluids and continua in geophysical, physical, chemical, and other settings. The material may be a student's first contact with continuum mechanics or a remedial or review for students who have previously taken similar courses. Topics include description of material properties in a continuum, including displacement, velocity, and strain rate; scalar, vector, and tensor properties of continua, strain, strain rate, and stress; derivations and understanding of mass, momentum, and energy conservation principles in a continuum; applications of conservation principles to simple rheological idealizations, including ideal fluids and potential flow, viscous fluids and Navier-Stokes flow, elasticity and deformation; introductory asymptotic analysis, Reynolds number; heat transfer by conduction and convection, convective instability, Rayleigh number; fluids in gravitational fields, stratification, buoyancy; elliptic, parabolic, and hyperbolic partial differential equations, typical properties of each. Prerequisite(s): Vector calculus, linear algebra, advanced classical mechanics, basic knowledge of computing. Undergrads who take this course should intend to complete a second fluid-dynamics course in Geophysical Sciences.

Instructor(s): D. MacAyeal Terms Offered: Autumn

Prerequisite(s): Vector calculus, linear algebra, advanced classical mechanics, basic knowledge of computing. Undergrads who take this course should intend to complete a second fluid-dynamics course in Geophysical Sciences.

Equivalent Course(s): GEOS 34230

GEOS 24240. Geophysical Fluid Dynamics: Rotation and Stratification. 100 Units.

This course is an introduction to geophysical fluid dynamics for upper-level undergraduates and starting graduate students. The topics covered will be the equations of motion, the effects of rotation and stratification, shallow water systems and isentropic coordinates, vorticity and potential vorticity, and simplified equations for the ocean and atmosphere.

Instructor(s): T. Shaw Terms Offered: Winter

Prerequisite(s): PQ: GEOS 24230 or equivalent; Knowledge of mechanics (PHYS 13100 or equivalent), thermodynamics (PHYS 19700 or equivalent), vector calculus and linear algebra (MATH 20000-20100-20200 or equivalent)

Equivalent Course(s): GEOS 34240

GEOS 24250. Geophysical Fluid Dynamics: Understanding the Motions of the Atmosphere and Oceans. 100 Units.

This course is part of the atmospheres and oceans sequence (GEOS 24220, 24230, 24240, 24250) and is expected to follow Geophysical Fluid Dynamics: Rotation and Stratification (GEOS 24240). The course demonstrates how the fundamental principles of geophysical fluid dynamics are manifested in the large-scale circulation of the atmosphere and oceans and their laboratory analogs. Topics include: balance of forces and the observed structure of the atmospheric and oceanic circulations, statistical description of the spatially and temporally varying circulation, theory of Hadley circulation, waves in the atmosphere and oceans, baroclinic instability, wind-driven ocean circulation.

Instructor(s): N. Nakamura Terms Offered: Spring

Prerequisite(s): GEOS 24230 and 24240, or consent of the instructor. Knowledge of vector calculus, linear algebra, and ordinary differential equations is assumed.

Equivalent Course(s): GEOS 34250

GEOS 24260. Radiation. 100 Units.

Develops the theory of radiation emission, absorption, and scattering by planetary atmospheres. Emphasis on the derivation and solution of the radiative transfer equation for plane parallel, horizontally homogeneous atmospheres.

Instructor(s): D. Abbot

Prerequisite(s): Advanced undergraduate level knowledge of electromagnetic theory, atomic structure, and differential equations.

Equivalent Course(s): GEOS 34260

GEOS 24300. Paleoclimatology. 100 Units.

This class will cover the theory and reconstruction of the evolution of Earth's climate through geologic time. After reviewing fundamental principles that control Earth's climate, the class will consider aspects of the climate reconstructions that need to be explained theoretically, such as the faint young sun paradox, snowball Earth episodes, Pleistocene glacial / interglacial cycles, and long-term Cenozoic cooling. Then we will switch to a temporal point of view, the history of Earth's climate as driven by plate tectonics and biological evolution, and punctuated by mass extinctions. This will allow us to place the theoretical ideas from the first part of the class into the context of time and biological progressive evolution.

Terms Offered: Winter

Prerequisite(s): One quarter of chemistry

Note(s): D. Archer

Equivalent Course(s): GEOS 34300

GEOS 24550. Ocean Circulation. 100 Units.

In this course we discuss the dynamics of the global-scale ocean circulation, which plays an important role in the climate system via the transport and storage of heat and carbon. Topics include the wind-driven ocean gyres, the ocean's thermocline, the turbulent Antarctic Circumpolar Current as a critical connector of the major ocean basins, as well as the meridional overturning circulation. The course aims to promote a fundamental understanding of ocean dynamics, rather than a purely empirical treatment, and hence builds on the fluid dynamical equations that govern the oceanic motions. The structure of the course includes a combination of lectures, in-class exercises, and discussion of material read by the students at home. The course is suitable for graduate students and upper-level undergraduates.

Instructor(s): Malte Jansen Terms Offered: Spring

Prerequisite(s): Prerequisite(s): GEOS 24230/34230 and GEOS 24240/34240, or consent of instructor. Knowledge of vector calculus, linear algebra, and ordinary differential equations is assumed.

Equivalent Course(s): GEOS 34550

GEOS 24600. Introduction to Atmosphere, Ocean, and Climate Modeling. 100 Units.

This hands-on course will discuss how we model atmosphere- ocean- and climate-dynamics using numerical models of varying complexity. We will discuss both the relevant physics as well as numerical techniques, including finite-difference methods for ordinary and partial differential equations, as well as spectral methods. The primary focus of the course will be on relatively simple models, including 1D energy balance models, radiative-convective columns, and quasi-geostrophic models for atmosphere and ocean dynamics, which can be fully understood and applied in the context of a quarter-long course. We will end with an overview of the physics and numerics used in more complex general circulation and coupled climate models. The course will be structured using a combination of lectures, in-class exercises, and discussion of homework exercises. Homework will include programming exercises as well as simulations and analysis using existing model code.

Instructor(s): M. Jansen Terms Offered: Autumn

Prerequisite(s): Prerequisites: GEOS 24220/34220 "Climate foundations"; knowledge of vector calculus, linear algebra, and partial differential equations; basic knowledge of python (could potentially be replaced by significant programming experience in other languages). Recommended: Geophysical fluid dynamics 24220/34220 and 24240/34240.

Equivalent Course(s): GEOS 34600

GEOS 24705. Energy: Science, Technology, and Human Usage. 100 Units.

This course covers the technologies by which humans appropriate energy for industrial and societal use, from steam turbines to internal combustion engines to photovoltaics. We also discuss the physics and economics of the resulting human energy system: fuel sources and relationship to energy flows in the Earth system; and modeling and simulation of energy production and use. Our goal is to provide a technical foundation for students interested in careers in the energy industry or in energy policy. Field trips required to major energy converters (e.g., coal-fired and nuclear power plants, oil refinery, biogas digester) and users (e.g., steel, fertilizer production). This course is part of the College Course Cluster program: Climate Change, Culture and Society.

Instructor(s): E. Moyer

Prerequisite(s): Knowledge of physics or consent of instructor.

Note(s): See GEOS 24750/ENSC 21150.

Equivalent Course(s): ENSC 21100, GEOS 34705, ENST 24705

GEOS 24750. Humans in the Earth System. 100 Units.

Human activities now have global-scale impact on the Earth, affecting many major biogeochemical cycles. One third of the Earth's surface is now used for production of food for humans, and CO₂, the waste product of human energy use, now substantially affects the Earth's radiative balance. This course provides a framework for understanding humanity as a component of Earth system science. The course covers the Earth's energy flows and cycles of water, carbon, and nitrogen; their interactions; and the role that humans now play in modifying them. Both agriculture and energy technologies can be seen as appropriation of natural energy flows, and we cover the history over which human appropriations have become globally significant. The course merges geophysical and biological sciences and engineering, and includes lab sessions and field trips to agriculture, water management, and energy facilities to promote intuition. One year of university-level science is recommended.

Terms Offered: Spring

Equivalent Course(s): ENSC 21150, GEOS 34750, ENST 24750

GEOS 25400. Intro to Numerical Techniques for Geophysical Sciences. 100 Units.

This class provides an introduction to different types of numerical techniques used in developing models used in geophysical science research. Topics will include how to interpolate and extrapolate functions, develop functional fits to data, integrate a function, or solve partial differential equations. Students are expected to have some familiarity with computers and programming-programming methods will not be discussed in detail. While techniques will be the focus of the class, we will also discuss the planning needed in developing a model as well as the limitations inherent in such models.

Instructor(s): Ciesla, F. Terms Offered: Winter

Equivalent Course(s): GEOS 35400

GEOS 26100. Phylogenetics and the Fossil Record. 100 Units.

Phylogenies are branching diagrams that reflect evolutionary relationships. In addition to providing information on the history of life, phylogenies are fundamental to modern methods for studying macroevolutionary and macroecological pattern and process. In the biological sciences, phylogenies are most often inferred from genetic data. In paleobiology, phylogenies can only be inferred from the fossilized remains of morphological structures, and collecting and analyzing morphological data present a different set of challenges. In this course, students will study both traditional and state-of-the-art approaches to inferring phylogenies in the fossil record, from data collection to interpretation. Lectures will explore the statistical underpinnings of phylogenetic methods, as well as their practical implementation in commonly used software. Topics will include: identifying and coding morphological characters, models of morphological evolution, parsimony, maximum likelihood, and bayesian methods, supertree approaches, and integrating time into phylogenetic inference. Fifty percent of the final assessment will come from a research paper due at the end of the quarter.

Instructor(s): G. Slater Terms Offered: Autumn. Course is offered every other year.

Prerequisite(s): BIOS 20197 or equivalent.

Equivalent Course(s): GEOS 36100

GEOS 26300. Invertebrate Paleobiology and Evolution. 100 Units.

This course provides a detailed overview of the morphology, paleobiology, evolutionary history, and practical uses of the invertebrate and microfossil groups commonly found in the fossil record. Emphasis is placed on understanding key anatomical and ecological innovations within each group and interactions among groups responsible for producing the observed changes in diversity, dominance, and ecological community structure through evolutionary time. Labs supplement lecture material with specimen-based and practical application sections. An optional field trip offers experience in the collection of specimens and raw paleontological data. Several "Hot Topics" lectures introduce important, exciting, and often controversial aspects of current paleontological research linked to particular invertebrate groups. (L)

Instructor(s): M. Webster Terms Offered: Autumn

Prerequisite(s): GEOS 13100 and 13200, or equivalent. Students majoring in Biological Sciences only; Completion of the general education requirement in the Biological Sciences, or consent of instructor.

Equivalent Course(s): GEOS 36300, EVOL 32400, BIOS 23261

GEOS 26600. Geobiology. 100 Units.

Geobiology seeks to elucidate the interactions between life and its environments that have shaped the coevolution of the Earth and the biosphere. The course will explore the ways in which biological processes affect the environment and how the evolutionary trajectories of organisms have in turn been influenced by environmental change. In order to reconstruct the history of these processes, we will examine the imprints they leave on both the rock record and on the genomic makeup of living organisms. The metabolism and evolution of microorganisms, and the biogeochemistry they drive, will be a major emphasis.

Instructor(s): M. Coleman, J. Waldbauer

Prerequisite(s): GEOS 13100-13200-13300 or college-level cell & molecular biology

Equivalent Course(s): ENSC 24000, GEOS 36600

GEOS 26650. Environmental Microbiology. 100 Units.

The objective of this course is to understand how microorganisms alter the geochemistry of their environment. The course will cover fundamental principles of microbial growth, metabolism, genetics, diversity, and ecology, as well as methods used to study microbial communities and activities. It will emphasize microbial roles in elemental cycling, bioremediation, climate, and ecosystem health in a variety of environments including aquatic, soil, sediment, and engineered systems.

Instructor(s): M. Coleman Terms Offered: Autumn

Prerequisite(s): CHEM 11100-11200 and BIOS 20186 or BIOS 20197 or BIOS 20198

Equivalent Course(s): ENSC 24500, GEOS 36650

GEOS 26905. Topics in Conservation Paleobiology. 100 Units.

Paleobiological data from very young sedimentary records, including skeletal 'death assemblages' actively accumulating on modern land surfaces and seabeds, provide unique information on the status of present-day populations, communities, and biomes and their responses to natural and anthropogenic stress over the last few decades to millennia. This course on the emerging discipline of 'conservation paleobiology' uses weekly seminars and individual research projects to introduce how paleontologic methods, applied to modern samples, can address critical issues in the conservation and restoration of biodiversity and natural environments, including such basic questions as 'has a system changed, and if so how and when relative to suspected stressors?'. The course will include hands-on experience, either in the field or with already-collected marine benthic samples, to assess societally relevant ecological change in modern systems over time-frames beyond the reach of direct observation. Enrollment limited.

Instructor(s): S. Kidwell Terms Offered: Winter

Prerequisite(s): Additional Notes For undergraduates: completion of GEOS 13100-13200-13300 or equivalent or completion of a 20000 level course in Paleontology.

Equivalent Course(s): GEOS 36905, EVOL 36905

GEOS 27300. Biological Evolution-Advanced. 100 Units.

This course is an overview of evolutionary processes and patterns in present-day organisms and in the fossil record and how they are shaped by biological and physical forces. Topics emphasize evolutionary principles. They include DNA and the genetic code, the genetics of populations, the origins of species, and evolution above the species level. We also discuss major events in the history of life, such as the origin of complex cells, invasion of land, and mass extinctions. Aimed at GEOS and ENSC majors, this course differs from GEOS 13900 in requiring a term paper, topic chosen from a list provided by the instructor (L).

Instructor(s): D. Jablonski Terms Offered: Winter

Prerequisite(s): Prerequisite(s): BIOS 10130; No Biological Sciences majors except by petition to the BSCD Senior Advisers.

Note(s): Terms Offered: Winter

GEOS 28000. Introduction to Structural Geology. 100 Units.

This course explores the deformation of the Earth materials primarily as observed in the crust. We emphasize stress and strain and their relationship to incremental and finite deformation in crustal rocks, as well as techniques for inferring paleostress and strain in deformed crustal rocks. We also look at mesoscale to macroscale structures and basic techniques of field geology in deformed regions.

Instructor(s): D. Rowley Terms Offered: Winter

Prerequisite(s): GEOS 13100

Note(s): This course is offered in alternate years.

Equivalent Course(s): GEOS 38000

GEOS 28100. Global Tectonics. 100 Units.

This course reviews the spatial and temporal development of tectonic and plate tectonic activity of the globe. We focus on the style of activity at compressive, extensional, and shear margins, as well as on the types of basin evolution associated with each. (L)

Instructor(s): D. Rowley Terms Offered: Autumn

Prerequisite(s): GEOS 13100 or consent of instructor

Note(s): This course is offered in alternate years.

Equivalent Course(s): GEOS 38100

GEOS 28300. Principles of Stratigraphy. 100 Units.

This course introduces principles and methods of stratigraphy. Topics include facies analysis, physical and biostratigraphic correlation, and development and calibration of the geologic time scale. We also discuss controversies concerning the completeness of the stratigraphic record; origin of sedimentary cycles; and interactions between global sea level, tectonics, and sediment supply. (L)

Instructor(s): S. Kidwell Terms Offered: Autumn

Prerequisite(s): GEOS 13100-13200 or equivalent required; GEOS 23500 and/or 28200 recommended

Note(s): This course is offered in alternate years.

Equivalent Course(s): GEOS 38300

GEOS 28600. Earth and Planetary Surface Processes. 100 Units.

The focus of this course is geomorphology, both of the Earth and other planets. Moving from the controls on planetary-scale topography down to the scale of individual streams and hillslopes, the course will emphasize fluvial and aeolian sediment transport, and landscape evolution.

Instructor(s): E. Kite Terms Offered: Winter

GEOS 29001. Field Course in Geology. 100 Units.

Students in this course visit classic locations to examine a wide variety of geological environments and processes, including active tectonics, ancient and modern sedimentary environments, and geomorphology.

Prerequisite(s): GEOS 13100-13200 and consent of instructor

Note(s): Interested students should contact the departmental counselor.

Equivalent Course(s): GEOS 39001

GEOS 29002. Field Course in Modern and Ancient Environments. 100 Units.

This course uses weekly seminars during Winter Quarter to prepare for a one-week field trip over spring break, where students acquire experience with sedimentary rocks and the modern processes responsible for them. Destinations vary; past trips have examined tropical carbonate systems of Jamaica and the Bahamas and subtropical coastal Gulf of California. We usually consider biological, as well as physical, processes of sediment production, dispersal, accumulation, and post-depositional modification.

Instructor(s): S. Kidwell, M. LaBarbera Terms Offered: Winter

Note(s): Organizational meeting and deposit usually required in Autumn Quarter; interested students should contact an instructor in advance. Enrollment allowed by permission of instructor. This course meets weekly in Winter Quarter prior to Spring Break field work.

Equivalent Course(s): GEOS 39002, ENSC 29002

GEOS 29003. Field Course in Oceanography. 100 Units.

Students in this course spend roughly a week sailing a tall ship from the SEA education program, learning oceanographic sampling techniques and data interpretation as well as principles of navigation and seamanship.

Prerequisite(s): Consent of instructor

Note(s): Interested students should contact the departmental counselor.

GEOS 29600. Science Writing Practicum. 100 Units.

Writing is fundamental to science and to the careers of scientists -- even a brilliant scientific idea has no impact if no one understands the paper describing it. In this practicum, students will learn to write papers that communicate their work clearly to the scientific community, that attract citations, and that are compelling even for experts from other fields and members of the general public. The course is intended for students engaged in research and at the stage of working on a paper intended for publication in a peer-reviewed journal, and students are expected to bring their work in progress. Students will learn to evaluate their writing to anticipate its effectiveness with different audiences, and to organize and revise it for maximal impact, using techniques from academic writing and science journalism and insights from cognitive theories of reading. Students from diverse backgrounds will read and critique one another's work weekly, learning to overcome barriers to communication between different communities of scholars and the public. We will also discuss techniques for effective science graphics and oral presentations. The course culminates in a practicum research presentation and production by each student of a final or near-final draft of a manuscript for submission.

Instructor(s): Jeff McMahon Terms Offered: Spring

Prerequisite(s): Consent only. Priority enrollment is given to students in UChicago's NRT research traineeship program on computational environmental sciences (nrt.geosci.uchicago.edu), PI Elisabeth Moyer. Write to jmcmahon@uchicago.edu to request consent to enroll.

Equivalent Course(s): GEOS 39600

GEOS 29700. Reading and Research in the Geophysical Sciences. 100 Units.

Independent study; regular meetings with Geophysical Sciences faculty member required. Topics available include, but are not limited to: Mineralogy, Petrology, Geophysics, High Pressure Geophysics, Geodynamics, Volcanology, Cosmochemistry, Geochemistry, Atmospheric Dynamics, Paleoclimatology, Physical Oceanography, Chemical Oceanography, Paleooceanography, Atmospheric Chemistry, Fluid Dynamics, Glaciology, Climatology, Radiative Transfer, Cloud Physics, Morphometrics, Phylogeny, Analytical Paleontology, Evolution, Taphonomy, Macroevolution, Paleobiology, Paleobotany, Biomechanics, Paleoecology, Tectonics, Stratigraphy.

Instructor(s): Staff Terms Offered: Autumn, Spring, Summer, Winter

Prerequisite(s): Consent of instructor and departmental counselor

Note(s): Students are required to submit the College Reading and Research Course Form. Available to nonmajors for P/F grading. Must be taken for a quality grade when used to meet a requirement in the major.

Germanic Studies

Department Website: <http://german.uchicago.edu>

Program of Study

The program for the BA degree in Germanic Studies is intended to provide students with a wide ranging and highly personalized introduction to the language, literature, and culture of German-speaking countries and to various methods of approaching and examining these areas. It is designed to be complemented by other areas of study (e.g., anthropology, art history, comparative literature, economics, film studies, history, philosophy, political science, sociology).

Students in other fields of study may also complete a minor in Germanic Studies. Information follows the description of the major.

Program Requirements

Students majoring in Germanic Studies typically register for:

- Six German language courses at the second-year level and above (Or students may have satisfactory working knowledge of German, in which case they satisfy the required language courses through placement or accreditation examinations and may petition for back credits.)
- Three courses in German literature and culture
- Three courses in German literature and culture conducted in German, of which one may be a *departmental course* with a Languages Across the Curriculum (LxC) session and one may be an additional third-year course
- GRMN 29900 BA Paper

With prior approval of the Director of Undergraduate Studies (DUS), *students may count up to two relevant German-oriented courses from other departments* in the humanities or social sciences toward the requirements of the major in Germanic Studies.

Students must meet with the Director of Undergraduate Studies to discuss a plan of study as soon as they declare their major and no later than the end of Spring Quarter of their third year. *Students must have their programs approved by the DUS before the end of their third year.*

BA Paper

The BA paper typically is a research paper of a minimum of twenty-five pages. While the paper may be written in either English or German, it must include a bibliography that makes ample use of German-language sources. Students must submit a proposal for their BA paper to their faculty adviser by the beginning of the eighth week of Autumn Quarter in their senior year. A first draft of the paper is due on the first day of Spring Quarter, and the completed paper must be submitted by the beginning of the sixth week of Spring Quarter.

Germanic Studies will accept a paper or project used to meet the BA requirement in another major, under the condition that original German sources are used. Students should consult with both chairs by the earliest BA proposal deadline (or by the end of their third year, when neither program publishes a deadline). A consent form, to be signed by both chairs, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Summary of Requirements

Second-Year German: One of the following three-course sequences:		300
GRMN 12001-12002-12003	Intensive German I-II-III	
GRMN 20100-20201-20300	Deutsche Maerchen; Grünes Deutschland; Kurzprosa 20. Jahrhundert *	
Third-Year German: Any three of the following courses: **		300
GRMN 21103	Erzaehlen	
GRMN 21303	Gedicht	
GRMN 21403	Philosophie	
GRMN 21503	Film	
GRMN 21603	Drama	
GRMN 21703	Medien und Gesellschaft	
Three courses in literature or culture taken in German ‡		300
Three courses in German literature and culture §		300
GRMN 29900	BA Paper	100
Total Units		1300

- * Or credit for the equivalent as determined by petition.
- ** With approval of the Director of Undergraduate Studies, one third-year course can be replaced by the independent project in Vienna.
- † One may be a course with a Languages Across the Curriculum (LxC) session taught within the Department of Germanic Studies; one may be an additional third-year course.
- § Two may be courses in other departments.

Grading

Students who are majoring in Germanic Studies must receive a quality grade in all courses taken to meet requirements in the major. Non-majors have the option of taking courses for P/F grading (except for language courses, which must be taken for quality grades). More than half of the requirements for the major must be met by registering for courses bearing University of Chicago course numbers.

Honors

Honors are reserved for students who achieve overall excellence in grades for courses in the College and within the major, as well as complete a BA paper that shows proof of original research or criticism. Students with an overall GPA of at least 3.0 for College work and a GPA of at least 3.5 in classes within the major, and whose GRMN 29900 BA Paper is judged superior by two readers, will be recommended to the Master of the Humanities Collegiate Division for honors.

Study Abroad

As early in their course of study as possible, interested students are encouraged to take advantage of one of the study abroad options that are available in the College. The five options are:

1. A program in Vienna, which is offered each Autumn Quarter, includes three courses of European Civilization, as well as German language instruction on several levels.
 - Vienna program: contact Lauren Schneider, lschneider12@uchicago.edu and consult study-abroad.uchicago.edu/programs/vienna-western-civilization (<https://study-abroad.uchicago.edu/programs/vienna-western-civilization/>)
2. The College also co-sponsors, with the Berlin Consortium for German Studies, a yearlong program at the Freie Universität Berlin. Students register for regular classes at the Freie Universität or at other Berlin universities. To be eligible, students must have completed the second year of German language courses or an equivalent, and should have completed all general education requirements.
 - Berlin Consortium: contact Elana Kranz, ekranz@uchicago.edu and consult study-abroad.uchicago.edu/programs/berlin-freie-universität-berlin (<https://study-abroad.uchicago.edu/programs/berlin-freie-universität-berlin/>)
3. Third-year majors can apply for a Romberg Summer Research Grant to do preparatory work for the BA paper.
 - Send your application, a *two-page single-spaced* description of your research project and a budget description, to the Director of Undergraduate Studies by March 1.
4. Students who wish to do a summer study abroad program can apply for a Foreign Language Acquisition Grant (FLAG) that is administered by the College and provides support for a minimum of eight weeks of study at a recognized summer program abroad. Students must have completed GRMN 10300 Elementary German For Beginners-3 or its equivalent to be eligible for FLAG support for the study of German. For more information, visit study-abroad.uchicago.edu/sitg (<http://study-abroad.uchicago.edu/sitg/>).
 - FLAG program: consult study-abroad.uchicago.edu/programs/foreign-language-acquisition-grant-flag (<https://study-abroad.uchicago.edu/programs/foreign-language-acquisition-grant-flag/>)
5. DAAD (German Academic Exchange Service) Programs
 - *DAAD German Studies Research Grant*: Supports third- or fourth-year students seeking a 1-2 month research experience in Germany
 - *DAAD Research Internships in Science and Engineering (RISE)*: Offers a stipend of 650 Euros per month for up to three months to conduct research in Germany over the summer
 - *DAAD Undergraduate Scholarship* (Supports second- and third-year students who wish to study and conduct research in Germany for 4 to 10 months)
 - *DAAD University Summer Course Grant* (Summer courses at German universities to help build your language skills while studying anything from film to politics to engineering)
 - *UA7 Study & Internship Program (SIP) in Germany* (Provides support for study at a German university, followed by an internship (including applied science research))

For other opportunities, details, and updates, visit ccrf.uchicago.edu/scholarships-and-fellowships/daad-german-academic-exchange-programs (<https://ccrf.uchicago.edu/scholarships-and-fellowships/daad-german-academic-exchange-programs/>) or contact Arthur Salvo at aksalvo@uchicago.edu.

More than half of the requirements for the major must be met by registering for courses bearing University of Chicago course numbers.

Foreign Language Proficiency Certificates

It is recommended that students studying German complete one of the College’s Language Proficiency Certificates (Practical or Advanced) as documentation of functional ability in German. Students who successfully pass a University of Chicago oral and written proficiency test will receive a certificate of proficiency in a foreign language and will have this proficiency noted on their transcripts. Students are eligible to take the Advanced examination after they have completed courses beyond the second year of language study and subsequently have spent a minimum of one quarter abroad in an approved program. FLAG students are also eligible. For more information, contact Maeve Hooper at hooperm@uchicago.edu, and consult languageassessment.uchicago.edu (<https://languageassessment.uchicago.edu/>).

Placement Testing

The German Placement Test is offered online to students registered at the University. Students may only take the Placement Test once. A score on the test does not confer credit, rather, it provides students with an entry point into the German language program. For questions or issues regarding placement, please contact the Director of the German Language Program, Maeve Hooper, hooperm@uchicago.edu.

Accreditation Testing

For issues regarding accreditation, please contact the Director of the German Language Program, Maeve Hooper, hooperm@uchicago.edu.

Minor Program in Germanic Studies

Students in other fields of study may complete a minor in Germanic Studies. The minor in Germanic Studies requires a total of six courses in addition to the second-year language sequence (GRMN 20100-20201-20300 Deutsche Maerchen; Grünes Deutschland; Kurzprosa 20. Jahrhundert) (or credit for the equivalent as determined by petition). These six courses usually include the third-year sequence and three literature/culture courses. Two of the literature/culture courses must be taken in German. Note that credit toward the minor for courses taken abroad must be determined in consultation with the director of undergraduate studies.

Students who elect the minor program in Germanic Studies must meet with the Director of Undergraduate Studies before the end of Spring Quarter of their third year to declare their intention to complete the minor and must submit a form obtained from their College adviser. Students choose courses in consultation with the director of undergraduate studies. The director’s approval for the minor program should be submitted to the student’s College adviser by the deadline above on the form.

Courses in the minor may not be double counted with the student’s major(s) or with other minors and may not be counted toward general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

The following group of courses would comprise a minor in Germanic Studies. Other programs may be designed in consultation with the director of undergraduate studies. Minor program requirements are subject to revision.

Germanic Studies Minor Requirements

Third-Year German: Any three of the following courses: ‡		300
GRMN 21103	Erzaehlen	
GRMN 21303	Gedicht	
GRMN 21403	Philosophie	
GRMN 21503	Film	
GRMN 21603	Drama	
GRMN 21703	Medien und Gesellschaft	
Three courses in German literature and culture *		300
Total Units		600

- ‡ With approval of the Director of Undergraduate Studies, one third-year course can be replaced by the independent project in Vienna.
- * At least two must be taken in German. Of these one may be a departmental course with a Languages Across the Curriculum (LxC) session, and one may be an additional third-year course.

Minor Program in Norwegian Studies

See the Norwegian Studies page in this catalog for program requirements and courses for the minor in Norwegian Studies.

Yiddish Studies

Students may enroll in the beginning language sequence (YDDH 10100-10200-10300 Elementary Yiddish for Beginners I-II-III) as well as the intermediate sequence (YDDH 20100-20200 Intermediate Yiddish I-II). There are opportunities for independent study for students whose Yiddish is above the intermediate level. Courses in Yiddish literature taught in English are offered biannually through the Department of Germanic Studies and may also be available in the Department of Comparative Literature. Courses in Yiddish may also be applied to the major or minor in Jewish Studies.

Students interested in pursuing these degrees should consult Nancy Pardee (npardee@uchicago.edu). Students who study in the Yiddish program may be eligible for funding for supplemental Yiddish language study in the summers or for internships.

Undergraduates are eligible to apply for the Vladimir and Pearl Heifetz Memorial Fellowship and the Vivian Lefsky Hort Memorial Fellowship (for East European Jewish literature), and the Joseph Kremen Memorial Fellowship (for East European Jewish Arts, Music, and Theater) at the YIVO institute for Jewish Research. These are two–three-month in-residence (in New York) research grants: www.yivo.org/List-of-Fellowships (<https://www.yivo.org/List-of-Fellowships/>). Furthermore, the Greenberg Center for Jewish Studies offers undergraduate summer research grants: ccjs.uchicago.edu/undergraduate-summer-research-grants.

For further information on the Yiddish program and on opportunities, please contact Jessica Kirzane, Lecturer in Yiddish, jkirzane@uchicago.edu.

Yiddish Program Internship

Career Advancement and the Greenberg Center co-sponsor an undergraduate intern from the University of Chicago to work for *In geveb: A Journal of Yiddish Studies*.

German Courses (Language)

FIRST-YEAR SEQUENCE

GRMN 10100-10200-10300. Elementary German for Beginners I-II-III.

This sequence develops proficiency in reading, writing, listening, and speaking for use in everyday communication. Knowledge and awareness of the different cultures of the German speaking countries is also a goal.

GRMN 10100. Elementary German For Beginners-1. 100 Units.

This sequence develops proficiency in reading, writing, listening, and speaking for use in everyday communication. Knowledge and awareness of the different cultures of the German speaking countries is also a goal. No auditors permitted. Must be taken for quality grade.

Terms Offered: Autumn

Note(s): No auditors permitted. Must be taken for quality grade.

GRMN 10200. Elementary German For Beginners-2. 100 Units.

Terms Offered: Winter

Prerequisite(s): GRMN 10100 or placement

Note(s): No auditors permitted. Must be taken for quality grade.

GRMN 10300. Elementary German For Beginners-3. 100 Units.

This sequence develops proficiency in reading, writing, listening, and speaking for use in everyday communication. Knowledge and awareness of the different cultures of the German speaking countries is also a goal. Prerequisite(s): GRMN 10200 or 10201, or placement. No auditors permitted. Must be taken for quality grade.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): GRMN 10200 or 10201, or placement

Note(s): No auditors permitted. Must be taken for quality grade.

GRMN 10123. Summer Intensive Introductory German. 300 Units.

Summer Introductory German is a 7-week course designed for students wishing to develop intermediate proficiency in reading, writing, listening and speaking for use in everyday communication. Students will work with authentic materials as well as gain familiarity with the different cultures of the German-speaking countries. The course meets Monday through Thursday for three hours per day, with additional 90-minute meeting times in the afternoon. Summer Introductory German is the equivalent of the 10100-10200-10300 sequence offered during the regular academic year at the University of Chicago and satisfies the university competency requirement. During Summer 2020, this course will be offered online and it will be adjusted accordingly.

Instructor(s): Staff Terms Offered: Summer

GRMN 10201. Elementary German 2. 100 Units.

This is an accelerated version of the GRMN 10100-10200 sequence intended for students with previous knowledge of the language. Prerequisite(s): Placement or consent of language coordinator. No auditors permitted. Must be taken for a quality grade.

Terms Offered: Autumn, Winter

Prerequisite(s): Placement or consent of language coordinator

Note(s): No auditors permitted. Must be taken for a quality grade.

GRMN 12001-12002-12003. Intensive German I-II-III.

This intensive, three-quarter sequence brings students to high-intermediate levels in all four skills: reading, writing, speaking, and listening so that students can enter third-year level courses in German. Learners who are starting German late in their College careers or who wish to move forward swiftly will gain skills corresponding to two full years of study. NOTE: Each course is 200 units and corresponds in workload to taking two courses.

GRMN 12001. Intensive German I. 200 Units.

This intensive, three-quarter sequence brings students to high-intermediate levels in all four skills: reading, writing, speaking, and listening so that students can enter third-year level courses in German. Learners who are starting German

late in their College careers or who wish to move forward swiftly will gain skills corresponding to two full years of study. NOTE: Each course is 200 units and corresponds in workload to taking two courses.
Instructor(s): Staff Terms Offered: TBD

GRMN 12002. Intensive German II. 200 Units.

This intensive, three-quarter sequence brings students to high-intermediate levels in all four skills: reading, writing, speaking, and listening so that students can enter third-year level courses in German. Learners who are starting German late in their College careers or who wish to move forward swiftly will gain skills corresponding to two full years of study. NOTE: Each course is 200 units and corresponds in workload to taking two courses.
Instructor(s): Staff Terms Offered: TBD

GRMN 12003. Intensive German III. 200 Units.

This intensive, three-quarter sequence brings students to high-intermediate levels in all four skills: reading, writing, speaking, and listening so that students can enter third-year level courses in German. Learners who are starting German late in their College careers or who wish to move forward swiftly will gain skills corresponding to two full years of study. NOTE: Each course is 200 units and corresponds in workload to taking two courses.
Instructor(s): Staff Terms Offered: TBD

GRMN 13100. Reading German. 100 Units.

This course prepares students to read a variety of German texts. By the end of the quarter, students should have a fundamental knowledge of German grammar and a basic vocabulary. While the course does not teach conversational German, the basic elements of pronunciation are introduced.

Terms Offered: Spring

Note(s): Prior knowledge of German not required. No auditors permitted. This course does not prepare students for the competency exam. Must be taken for a quality grade.

SECOND-YEAR SEQUENCE

GRMN 20100-20201-20300. Deutsche Maerchen; Grünes Deutschland; Kurzprosa 20. Jahrhundert.

Second-Year Sequence

GRMN 20100. Deutsche Märchen. 100 Units.

This course is a comprehensive look at German fairy tales, including structure and role in German nineteenth-century literature, adaptation as children's books in German and English, and film interpretations. This course also includes a review and expansion of German grammar.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): GRMN 10300 or placement

Note(s): No auditors permitted. Must be taken for a quality grade.

GRMN 20201. Grünes Deutschland. 100 Units.

Over the past three decades Germany has become a global leader in environmentalism and sustainability practices. This course develops students' proficiency in all four skills (speaking, listening, reading, writing) and reviews basic grammar while exploring various aspects of 'Green Germany,' from recycling and transportation to renewable energies (die Energiewende) to the history of the green movement. We investigate environmental practices and attitudes in German-speaking countries while comparing them with those in the US and other countries. In doing so, we consider whether environmental practices in German-speaking countries represent positive and feasible models for other countries. Students work with authentic and current materials (articles, websites, videos) and pursue a variety of independent projects (research, creative), including a final project on how to make the university campus more sustainable.

Terms Offered: Autumn Spring Winter

Prerequisite(s): Prerequisite(s): GRMN 20100 or placement exam

GRMN 20300. Kurzprosa aus dem 20. Jahrhundert. 100 Units.

This course is a study of descriptive and narrative prose through short fiction and other texts, as well as media from the twentieth century, with a focus on grammatical issues that are designed to push toward more cohesive and idiomatic use of language.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): GRMN 20200 or placement

Note(s): No auditors permitted. Must be taken for a quality grade.

THIRD-YEAR SEQUENCE

GRMN 21103-21303-21403-21503-21603-21703. Drama; Erzählen; Film; Gedichte; Medien und Gesellschaft; Philosophie.

It is not necessary to take these courses in sequence. These courses serve as preparation for seminar-style classes. Students work with a variety of texts and learn to present and participate in instructor- and student-led discussions of relevant issues and topics. Student also write short essays and longer research papers. Work in grammar, structure, and vocabulary moves students toward more idiomatic use of German.

GRMN 21103. Erzaehlen. 100 Units.

It is not necessary to take these courses in sequence, but three of the four courses are required for the major. These courses serve as preparation for seminar-style classes. Students work with a variety of texts and learn to present and participate in instructor- and student-led discussions of relevant issues and topics. Student also write short essays and

longer research papers. Work in grammar, structure, and vocabulary moves students toward more idiomatic use of German. This course develops advanced German skills through the study of narratives of various authors from different periods. Prerequisite(s): GRMN 20300 or placement Note(s): No auditors permitted. Must be taken for a quality grade.

Terms Offered: Autumn

Prerequisite(s): GRMN 20300 or placement

Note(s): No auditors permitted. Must be taken for a quality grade.

GRMN 21303. Gedicht. 100 Units.

This course develops advanced German skills through the study of poetry of various authors from different periods.

Terms Offered: Spring

Prerequisite(s): GRMN 20300 or placement

Note(s): No auditors permitted. Must be taken for a quality grade.

GRMN 21403. Philosophie. 100 Units.

This course develops advanced German skills through the study of philosophical texts of various authors from different periods.

Terms Offered: Spring, Offered in even-numbered years.

Prerequisite(s): GRMN 20300 or placement

Note(s): No auditors permitted. Must be taken for a quality grade.

GRMN 21503. Film. 100 Units.

Instructor(s): Staff Terms Offered: TBD

GRMN 21603. Drama. 100 Units.

This course develops advanced German skill through the study of dramas and/or films of various authors/directors from different eras.

Instructor(s): Staff Terms Offered: TBD

GRMN 21703. Medien und Gesellschaft. 100 Units.

Instructor(s): Staff Terms Offered: TBD

GRMN 21203. Drama und Film. 100 Units.

This course develops advanced German skills through the study of dramas and/or films of various authors/directors from different eras.

Terms Offered: Winter

Prerequisite(s): GRMN 20300 or placement

Note(s): No auditors permitted. Must be taken for a quality grade.

GRMN 21803. Arbeitskulturen: Trends in the German-Speaking Working World. 100 Units.

This advanced language course will cover the economic and political bases of the European Union, an overview of the German-speaking world's largest industries, the contemporary emphasis on sustainable business practices, as well as the on-going process of Brexit. Brexit brings key questions, such as the value of the common currency, immigration mobility within the Bloc and Germany's role as economic and political leader of the group into focus. We will practice skills such as effective digital correspondence, presentations, and interviewing strategies. Students may tailor major assignments to their specific field or industry of interest with the aim of securing a summer internship or developing an in situ research project. All reading and discussion in German.

Instructor(s): Nicole Burgoyne Terms Offered: Autumn

Prerequisite(s): Prerequisite(s): GRMN 20300 or placement exam

Languages Across the Curriculum (LxC)

LxC courses have two possible formats: (1) an additional course meeting during which students read and discuss authentic source material and primary texts in German; or (2) a course in another discipline (such as history) that is taught entirely in German. Prerequisite German language skills depend on the course format and content. LxC courses maintain or improve students' German language skills while giving them a unique and broadened perspective into the regular course content.

German Courses (Literature and Culture)

All literature and culture courses are conducted in German unless otherwise indicated. Students who are majoring or minoring in German and take courses taught in English are expected to do the majority of their course work in German.

GRMN 22320. Das magische Wort: Knights and Nuns in the Middle Ages. 100 Units.

This course explores an array of medieval literature in order to describe its conceptions of magic and the mystical. We will consider the chivalric tradition, comparing texts such as the 'Nibelungenlied,' Wolfram von Eschenbach's 'Parzival' and Gottfried von Strassburg's 'Tristan' with an epic poem by Hartmann von Aue. Having characterized the kinds of magic operative in such texts, we will move onto religious texts ranging from the 'Heliand' to testimonies of religious ecstasy by Hildegard von Bingen and Mechthild von Magdeburg. Key contradictions to be considered include magic's permeation of everyday life, but also it's fantastic or even sacred status. To what extent could magic or sublime states be put to use by the protagonists of each of these texts and how did such forces function as an instrument of fate or divine will? All reading and discussion in German.

Instructor(s): Nicole Burgoyne Terms Offered: Spring

Prerequisite(s): Prerequisite(s): GRMN 20300 or placement exam

GRMN 22321. Aby Warburg and the Origins of Kulturwissenschaft. 100 Units.

This course explores Aby Warburg as a founder of Kulturwissenschaft in the context of other thinkers of the time such as Sigmund Freud and Walter Benjamin. Trained as an art historian with an expertise in Renaissance art, Warburg morphed into a historian of images (i.e., Bildwissenschaft) and - more broadly - into a historian of culture. We will trace Warburg's cultural historical method as it develops primarily from philology, but also art history, anthropology, the comparative study of religions, and evolutionary biology. How does Warburg read culture? What is his methodological approach for examining a wide variety of cultural artifacts ranging from Ovid's *Metamorphoses*, Poliziano's poetry, and Dürer's etchings to postal stamps and news photographs? How can these artifacts be vehicles for cultural memory? And how does the transmission of cultural memory in artworks manifest itself in different media such as literary texts, religious processions, astrological treatises, photography, and painting? Moreover, how does Warburg's work help us contextualize and historicize 'interdisciplinarity' today?

Instructor(s): Margareta Ingrid Christian Terms Offered: Autumn

Note(s): Conducted in English.

Equivalent Course(s): GRMN 32321

GRMN 24321. Literature of the Weimar Republic. 100 Units.

In this course, we will turn to the 'golden twenties' of the previous century to examine a series of texts from Germany's first republic, its first democratic period, between 1918 and 1933. The Weimar Republic was a period of political experimentation; of exceptional intellectual and artistic creativity; and of social upheaval. We will close-read texts, alongside a selection of films and artworks, and situate them in their turbulent historical context. Readings include: Walter Benjamin, Anna Seghers, Siegfried Kracauer, Ernst Bloch, Ricarda Huch, Alfred Döblin, Bertolt Brecht, Erich Kästner, Gertrud Kolmar. Readings and discussions in English. Those who read German will read the texts in the original.

Instructor(s): Margareta Ingrid Christian Terms Offered: Autumn

Equivalent Course(s): GRMN 34321

GRMN 24921. Robert Musil: Altered States. 100 Units.

This course is an introduction to the work of Robert Musil, one of the major novelists of the twentieth century. We will focus on Musil's idea of the 'Other Condition' [der andere Zustand], which he once described-in contrast to our normal way of life-as a 'secret rising and ebbing of our being with that of things and other people.' What is this 'Other Condition': what are its ethics and aesthetics, and how can it be expressed in literature? We will begin with readings from Musil's critical writings and early narrative prose, then devote the majority of the quarter to his unfinished magnum opus, *The Man without Qualities*. Particular attention will be paid to Musil's experimentations with narrative form and his development of the genre of 'essayism'. Readings and discussion in English.

Instructor(s): Sophie Salvo Terms Offered: Spring

Equivalent Course(s): FNDL 24921, GRMN 34921

GRMN 25421. Babylon Berlin: Politics and Culture in the Weimar Period. 100 Units.

This seminar will focus on the political and cultural turmoil of the Weimar Republic. Course material will include novels, poetry, political essays, philosophy, visual art, and film. Among authors and artists addressed: Ernst Jünger, Walter Benjamin, Alfred Döblin, Fritz Lang, Georg Grosz, Irmgard Keun, Hannah Höch, Bertold Brecht, Carl Schmitt.

Instructor(s): Eric Santner Terms Offered: Spring

Note(s): Advanced undergrad by consent only.

Equivalent Course(s): GRMN 35421

GRMN 25521. The Romantic Mountain. 100 Units.

Caspar David Friedrich's painting *Der Wanderer über dem Nebelmeer* (1818), in which a figure, back turned enigmatically to the viewer, gazes out on a vast foggy expanse from a craggy mountain, has become virtually synonymous with German Romanticism. The experience of standing on top of a mountain or of voyaging deep into its interior touches on aesthetics (particularly the sublime), science (the rise of geology), and, increasingly, industrialization, spoliation, and related modern phenomena such as alpinism and tourism. This course examines the Romantic fascination with mountains from a number of cultural perspectives, as well as its after-life in the early 20th-century Bergfilm genre. Readings of, among others: Kant, Tieck, Hoffmann, Heine, and Stifter. Readings and discussions in German

Instructor(s): Catriona MacLeod Terms Offered: Winter

GRMN 25721. Literature as Self Help: The Poetry of Rainer Maria Rilke. 100 Units.

Rainer Maria Rilke's writing is famous for its lyrical intensity. The pathos of his poetic language appears to 'move' and 'touch' readers in an unparalleled way. Soldiers going to fight in the Second World War carried volumes of Rilke's poetry in their knapsacks and letters of fallen soldiers contained quotes from his verse ('Who talks of victory? To endure is all.'). Recent editions of his writings, such as *Rilke on Love and Other Difficulties* (1994), *Rilke for the Stressed* (1998) or *Words of Consolation* (2017), attest to Rilke being viewed as someone from whom readers expect insight into the value or vanity of life. In this course, we will read selections of Rilke's poetry and correspondence alongside excerpts from his writings on art to critically examine his language's purported ability to express our innermost feelings and to offer solace. Along the way, we will also pay attention to situating his work in the context of 'modernism.' Other readings by: Paul de Man 'Tropes (Rilke),' Rita Felski 'Uses of Literature,' Beth Blum 'Self-Help Compulsion: Searching for Advice in Modern Literature,' among others. Readings and discussions in English. Those who read German will read the texts in the original.

Instructor(s): Margareta Ingrid Christian Terms Offered: Autumn

Equivalent Course(s): GRMN 35721, FNDL 25721

GRMN 28446. Apocalypse Now: Scripts of Eschatological Imagination. 100 Units.

Apocalyptic fantasies are alive and well today - in beach reads and blue chip fiction; in comic books and YA novels; in streaming TV shows, Hollywood blockbusters, and ironic arthouse cinema. These apocalyptic fantasies follow well-established scripts that often date back millennia. Apocalypse scripts allow their users to make sense of the current crisis and prepare for an uncertain future. The course will be divided into two parts. The first half will be devoted to texts, art, and movies that dwell on the expectation of the end and narratively measure out the time that remains. We will begin with examining the biblical ur-scripts of an apocalyptic imaginary, the Book of Daniel in the Old and the Book of Revelation in the New Testament, as well as Saint Paul's messianism in the Letter to the Romans; and then move on to medieval apocalyptic fantasies of the Joachim of Fiore and others; and end with the apocalypticism underlying the religious reforms of Girolamo Savonarola and Martin Luther. The second half will focus on life after the apocalypse - the new freedoms, and new forms of political life and sociality that the apocalyptic event affords its survivors. Readings will include the political theory of marionette, capabilities, and neoprimitivism; literary theory of speculative fiction; and post-apocalyptic narratives by Octavia Butler, Jean Hegland, Richard Jefferies, Cormac McCarthy, and Colson Whitehead. Readings and discussions in English.

Instructor(s): Chris Wild Mark Payne Terms Offered: Winter

Equivalent Course(s): RLST 28446, RLVC 38446, CMLT 28446, CMLT 38446, GRMN 38446

GRMN 29700. Reading and Research Course in German. 100 Units.

No description available. Prerequisite(s): Consent of instructor and director of undergraduate studies Note(s): Students must consult with the instructor by the eighth week of the preceding quarter to determine the subject of the course and the work to be done. Students are required to submit the College Reading and Research Course Form.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): Consent of instructor and director of undergraduate studies

Note(s): Students must consult with the instructor by the eighth week of the preceding quarter to determine the subject of the course and the work to be done. Students are required to submit the College Reading and Research Course Form.

GRMN 29900. BA Paper. 100 Units.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): Fourth-year standing. Consent of instructor and director of undergraduate studies.

Note(s): Students are required to submit the College Reading and Research Course Form.

Yiddish Courses**YDDH 10100-10200-10300. Elementary Yiddish for Beginners I-II-III.**

The goal of this sequence is to develop proficiency in Yiddish reading, writing, listening, and speaking skills. Touchstones of global Yiddish culture are also introduced through song, film, and contemporary Yiddish websites.

YDDH 10100. Elementary Yiddish I. 100 Units.

The goal of this sequence is to develop proficiency in Yiddish reading, writing, listening, and speaking skills.

Touchstones of global Yiddish culture are also introduced through song, film, and contemporary Yiddish websites.

Instructor(s): Jessica Kirzane Terms Offered: Autumn

Equivalent Course(s): JWSC 20300

YDDH 10200. Elementary Yiddish for Beginners-II. 100 Units.

In this course, students will extend basic Yiddish speaking, listening, reading, and writing skills. By the end of the course, students should have a basic understanding of regional Yiddish variations in pronunciation and spelling, be able to understand and participate in a conversation in an increasingly comfortable and complex way, read simple texts with ease, have experience tackling more complex texts with the aid of a dictionary, and write short compositions with grammatical complexity. In the course of language study, students will also be exposed to key topics in the history of the Yiddish language and culture.

Instructor(s): Jessica Kirzane Terms Offered: Winter

Prerequisite(s): YDDH 10100

Equivalent Course(s): YDDH 37400, JWSC 20400

YDDH 10300. Elementary Yiddish III. 100 Units.

In this course, students will acquire intermediate Yiddish speaking, listening, reading, and writing skills. By the end of the course, students should be able to conduct a conversation on a wide range of topics, be comfortable tackling complex texts with the aid of a dictionary, and write short compositions with grammatical complexity. In the course of language study, students will also be exposed to key topics in the history of the Yiddish language and culture. Students will also be introduced to basic Yiddish research skills.

Equivalent Course(s): JWSC 20500, YDDH 37500

YDDH 20100. Intermediate Yiddish I. 100 Units.

This course offers students the opportunity to study the Yiddish language at the intermediate level. It reviews and extends students' knowledge of the grammar of the Yiddish language, enhances vocabulary, and includes literary and cultural readings. Designed to further develop listening, speaking, reading comprehension, and writing skills.

Instructor(s): Jessica Kirzane Terms Offered: Autumn

Prerequisite(s): YDDH 10300 or consent of instructor. No auditors.

Equivalent Course(s): JWSC 27301

YDDH 20200. Intermediate Yiddish II: Archival Skills. 100 Units.

This course offers students the opportunity to study the Yiddish language at the intermediate level. The focus of this course is learning to navigate and study from a variety of archival materials including newspapers, music archives, and historical texts. The course is designed to further develop listening, speaking, reading comprehension, and writing skills and to give students tools to continue Yiddish reading and research independently.

Instructor(s): Jessica Kirzane Terms Offered: Winter

Prerequisite(s): YDDH 10300 or consent of instructor. No auditors.

Equivalent Course(s): JWSC 27401, YDDH 39600

YDDH 21000. Advanced Yiddish I: Readings in Yiddish Literature. 100 Units.

In this class, students will be exposed to essays, short stories, poetry and other writings by some of the great Yiddish writers of the twentieth century, including Abraham Reisin, Bella Chagall, Abraham Sutzkever, Esther Kreitman, and Dovid Bergelson. Students will write critical essays and creative responses, listen to excerpts read aloud, participate in discussions and debates. This course will be conducted entirely in Yiddish.

Instructor(s): Jessica Kirzane Terms Offered: Winter

Prerequisite(s): Prerequisite(s): Intermediate Yiddish I, or permission from the instructor.

Equivalent Course(s): YDDH 31000, JWSC 27610

YDDH 21721. Women Who Wrote In Yiddish. 100 Units.

This course explores memoirs, plays, essays, poetry, novels, and journalistic writing of women who wrote in Yiddish, as well as a discussion of the context in which they wrote and their reception and self-perception as 'women writers.' Among the writers whose work may be represented in this course are Glikl, Yente Mash, Kadya Molodowsky, Chava Rosenfarb, Yente Serdatsky, Rosa Palatnik, Anna Margolin, Celia Dropkin, Rokhl Korn, Beyle Shaechter-Gottesman, Gitl Shaechter-Viswanath, Bella Chagall, Blume Lempel, Esther Kreitman, Debora Vogel, Rokhl Brokhes, Sarah Hamer-Jacklyn, Malka Lee, Ida Maze, Roshelle Weprinski, Miriam Karpilove, Zina Rabinovitz, Rokhl Szabad, Rokhl Faygnberg, Paula Prilutsky, Shira Gorshman, Esther Shumiatscher-Hirshbein and Freydl Shtok. Many of these writers have been underexamined in the history of Yiddish literary studies and this course will bring renewed attention to their work. This course will be taught in English with readings translated from Yiddish.

Instructor(s): Jessica Kirzane Terms Offered: Spring

Equivalent Course(s): GNSE 31721, YDDH 31721, JWSC 27651, GNSE 21721

Global Studies

Department Website: <http://globalstudies.uchicago.edu>

Program of Study

The Global Studies major is an interdisciplinary major concerned with the interconnected and interdependent nature of the contemporary world. Its main task is to understand how sites, objects, and concepts contribute to worldwide connections, from ecological concerns to human rights campaigns. Students majoring in Global Studies will take courses throughout the College, often with particular interests in Anthropology, Environmental Studies, History, or a specific regional study.

Instead of beginning with “global” and “local,” the typical categories of globalization studies, the Global Studies program contends that the distinctions between sites and trends, between objects far and near, and between the cosmopolitan and the vernacular emerge from empirical studies. Students are encouraged to exercise close attention to mundane practices, everyday materialities, and lived experiences. With a good grounding in case studies, students in the program are expected to be able to reflect upon the implications of their research interests, both inside and outside the classroom. Students carry these interests on to a variety of careers and professional opportunities following graduation.

Program Requirements

Students must complete a total of 13 courses (including one approved elective and two BA seminars), a research activity, and a language requirement, broken down in the following manner:

Introductory Courses (2 courses)

All students are required to take the two-quarter introductory sequence to the major, GLST 23101-23102 Global Studies I-II. These courses are offered annually and in sequence in the Autumn and Winter Quarters. Students are expected to complete the sequence in their second year, if possible, especially if they plan to study abroad during their third year.

Thematic Tracks (8 courses)

The body of the major (eight courses in all) is comprised of courses selected from four overlapping thematic tracks of study. Students will select two tracks, a primary and a secondary one, and complete five courses in the former and three in the latter. The selection of the primary and secondary tracks should be linked to the student's BA research interests. The tracks are outlined below with *sample classes that might fall within each category*, but more detailed information about these tracks may be found on the Global Studies website (<http://globalstudies.uchicago.edu>).

Governance and Affiliations

This track focuses on politics and claims to authority within power relations. It tries to stand a middle ground between extremes of privileging nation-states and solely valuing micro-sites of governance. Themes could range from UN agencies to online protests, humanitarian intervention to surveillance and corporate governance.

CRES 22150 Contemporary African American Politics
PLSC 27016 Popular Culture, Art, and Autocracy
PLSC 29500 Drugs, Guns, and Money: The Politics of Criminal Conflict

Knowledge and Practice

This track focuses on the production and circulation of knowledge, with an eye towards how that process is situated. Often there will be a science and technology component, but other times habitual/instinctual know-how will be highlighted. Themes could range from regulatory standards, countercultural movements, and cultural artifacts to consumer politics and media studies.

HIST 24206 Medicine and Culture in Modern East Asia
ENGL 29202 Objects, Things, and Other Things
SOCI 20208 Internet and Society

Cultures at Work

This track focuses on the entanglements of culture, economics, and politics. It focuses on cultural production, often of a physical nature, as well as cultural modes of reception. Themes could range from global brands, sweatshops, and rituals of food production/consumption to gaming and consumer politics. Much of “everyday life” would also apply.

ANTH 21725 Mass Mediated Society and Japan
GLST 24101 Paperwork
ECON 22650 Creativity

Bodies and Nature

This track focuses on bodily nature (broadly construed) and ecological relationships. Particular attention is paid to environmental and health-related topics, and not always with a focus on human beings. Themes could range from sustainability, ecotourism, and pandemics to modern beauty practices, health movements, and animal studies.

BIOS 13140 The Public and Private Lives of Insects
ANTH 28210 Colonial Ecologies
GRMN 24416 Biocentrism: The Concept of Life in German Literature and Art

Elective (1 course)

Students will select one elective course to further their BA research, often late in their third or early in their fourth year. This course should be chosen after discussion with the program administrator, and can include:

- A regional studies course that furthers the student's cultural and historical knowledge in their BA research topic
- A research methodology course (e.g., ANTH 21420 Ethnographic Methods) that will equip the student for better collection of primary source materials
- An introductory course in another major that has a direct connection to the BA research topic
- A language course that will help the student read texts or interact with persons pertaining to their BA research topic

These options are not exhaustive and should only be used as guiding ideas for the elective requirement. Students should seek program approval for their choice of elective course before registering, and the elective should be completed before the Winter Quarter of the student's fourth year.

Research Activity Requirement

Students will be expected to complete a structured activity or program exploring global issues related to their intended BA project, often in an international setting.

This major activity might be:

- An internship (academic year or summer)
- Select study abroad programs, often through the Study Abroad office
- A volunteer opportunity
- A well-defined field research project

Students should work with the program administrator to identify appropriate opportunities and should have their activity approved ahead of the experience itself. Most activities should last no less than six weeks, though intensive programs with shorter durations may be considered.

The research activity should be linked to the student's BA thesis and serve as an introduction to that topic. International experiences are encouraged for the completion of this requirement, but the requirement may be met with domestic projects dealing with global issues (for example, an internship with a domestic NGO).

BA Seminars and Thesis (2 courses)

Students are required to take the two-quarter BA seminar (GLST 29800 BA Thesis Seminar I and GLST 29801 BA Thesis Seminar II) in Autumn and Winter Quarters of their fourth year. The first BA deadline occurs during the Spring Quarter of a student's third year. At that time, students must have submitted a topic proposal, secured a faculty reader, and completed a faculty reader form. The final version of the BA thesis is due by the second Friday of the quarter in which the student plans to graduate. Successful completion of the thesis requires a passing grade from the faculty reader.

The Global Studies major thesis must be clearly organized around a contemporary global issue. *Students may double-major*, but double-majoring with another program that also requires a BA thesis would entail (a) the second major's program accepting the Global Studies thesis as fulfilling that program's BA requirements or (b) the student completing an additional BA thesis for the second major.

Regardless of the requirements of the second major, Global Studies majors are required to complete both quarters of the fourth-year BA seminar. Thesis seminars from other major programs will *not* count toward the Global Studies BA Thesis Seminar requirement.

Foreign Language Requirement

The Global Studies language requirement can be completed in two ways:

1. Students may complete the equivalent of a seventh quarter of language study in a single language. Credit for the seventh and final quarter of the language must be earned by University of Chicago course registration. If the final term of study in a foreign language focuses on cultural studies, it may be used in an appropriate primary or secondary thematic track, as outlined above.
2. Students may obtain an Advanced Language Proficiency Certification, which is documentation of advanced functional ability in reading, writing, listening, and speaking. For details, visit the Foreign Language Proficiency Certifications (<https://languageassessment.uchicago.edu/flpc/>) page.

Summary of Requirements

GLST 23101-23102	Global Studies I-II	200
Five courses in a primary thematic track		500
Three courses in a secondary thematic track		300
GLST 29800	BA Thesis Seminar I	100
GLST 29801	BA Thesis Seminar II	100

One program elective	100
Total Units	1300

Honors

Students with an overall GPA of 3.2 or higher and an in-major GPA of 3.5 or higher will be eligible for honors. For the awarding of honors, the BA thesis must also be judged 'high pass' by the faculty reader.

Advising

Students should select their courses for the Global Studies major in close consultation with the program administrator. The Global Studies program publishes a list of courses approved for the major each quarter, both online and outside the Global Studies program office, Gates-Blake 119.

Students should meet with the program administrator early in their final year to be sure they have fulfilled all requirements.

Grading

Students who are majoring in Global Studies must receive quality grades in all courses meeting the requirements of the degree program (i.e., they cannot use Pass/Fail or audited courses for major requirements).

Global Studies Courses

GLST 20004. Introduction to Asian American Studies. 100 Units.

On May 6, 1882, the United States passed the Chinese Exclusion Act, the first major federal legislation of its kind to explicitly exclude an entire ethnic group. More than a century later, as the U.S. grappled with a deadly outbreak of COVID-19, President Donald Trump insisted upon referring to the virus as 'Chinese,' reigniting historical and racialized anxieties of 'Yellow Peril' and 'Asian invasion,' even as Asians across the country reported incidents of anti-Asian discrimination and violence. This course seeks to bridge these two moments by providing a critical examination of contemporary Asian American experience through the social, political, and historical contexts that come to bear upon it. Focusing on East and Southeast Asian communities, it will interrogate theories of race, class, and identity, alongside issues of immigration/migration, transnationalism, labor, citizenship, generational dissonance, and activism. Engaging a variety of historical events, social movements, racialized imaginaries, critical writings, and cultural representations, we will consider how Asian American history is vitally shaped by not only repression and assimilation, but also radicalism and innovation.

Instructor(s): Victoria Nguyen Terms Offered: Winter

Equivalent Course(s): ANTH 23608, CRES 20004

GLST 20150. Sustainable Urban Development. 100 Units.

The course covers concepts and methods of sustainable urbanism, livable cities, resiliency, and smart growth principles from a social, environmental and economic perspective.

Instructor(s): Evan Carver Terms Offered: Spring Winter

Note(s): ENST 21201 and 20150 are required of students who are majoring in Environmental and Urban Studies and may be taken in any order.

Equivalent Course(s): ENST 20150, ARCH 20150, PBPL 20150

GLST 21310. Water: Economics, Policy and Society. 100 Units.

Water is inextricably linked to human society. While modern advances in technology and new economic and policy mechanisms have emerged to address water stressors from overconsumption, development pressures, land use changes and urbanization, challenges continue to evolve across the globe. These problems, while rooted in scarcity, continue to become more complex due to myriad human and natural forces. In addition to water quality impairments, droughts and water shortages persist, putting pressure on agricultural production and urban water use, while the increased frequency and severity of rainfall and tropical storms, already being experienced globally, are only projected to grow in intensity and duration under climate change. Students will explore water from the perspective of the social sciences and public policy, with attention on behavioral dimensions of water use and water conservation. Qualitative and quantitative approaches to examining how humans use and affect water will be considered, and a case study using visualizations of campus water data will be conducted by students in the course.

Instructor(s): Sabina Shaikh Terms Offered: Spring

Note(s): No prerequisites but the following courses are recommended prior to enrollment in ENST 21310: one economics course and ENST/MENG 20300: The Science, History, Policy, and Future of Water (Winter 2020) ENST/MENG 20300: The Science, History, Policy, and Future of Water (Winter 2020)

Equivalent Course(s): ECON 16510, LLSO 21310, ENST 21310, PBPL 21310

GLST 21405. Inventing Race in the British Empire. 100 Units.

This course reveals how the British encounter with racial difference in the Caribbean, Australasia, and India could both validate and subvert the project of empire- building. We will begin by examining the ways in which ethnographical and anthropological societies in the metropole clashed over the question of racial differentiation in the nineteenth century. We will then determine how these 'scientific' theories of race were deployed in colonial settings; did they inform relations between colonized and settler populations, or did the local states innovate novel race-based policies to undergird their rule? By investigating how an array of actors instrumentally invoked race to accomplish specific objectives, we will further deconstruct the narrative of a unitary, overarching 'civilizing mission.' A host of primary sources, including anthropological treatises, missionary accounts, public speeches, and fictional works, will aid us in this pursuit.

Instructor(s): Z. Leonard Terms Offered: Spring

Equivalent Course(s): CRES 21405, SALC 21405, HIST 21405

GLST 21700. Applied Research in Environment, Development and Health. 100 Units.

This course engages students in collaborative research on topics that connect the environment, health, agriculture and development. After identifying a shared theme, students will design and commence a plan of research with the goal of producing content including reading lists, research and policy briefs, data visualizations, maps, blog posts and web content, as well as creative media such as podcasts. Students will also apply their findings to programming surrounding the Frizzell Speaker and Learning Series for 2020-21 by identifying possible keynote speakers and curating other events. Students are strongly encouraged but not required to enroll in both the autumn and winter courses to gain the full benefit of a sustained research experience.

Instructor(s): Shaikh, Sabina Terms Offered: Autumn

Equivalent Course(s): GEOG 21710, PBPL 21700, ENST 21700

GLST 22100. Contentious Natures: Race, Nature, and Power. 100 Units.

Drawing on anthropology, critical race theory, feminist studies, postcolonial studies, and STS, this course examines how race and nature work in tandem as domains of power. Tracking how race and nature are vitally intertwined, we interrogate the racial politics of climate, wilderness, local ecologies, biology, and space and place. Ultimately, the course considers how contested and essentialized notions of nature are crucial to environmental politics, as well as the formation of citizenship, territory, projects of development, and modern regimes of governance.

Instructor(s): Victoria Nguyen Terms Offered: Winter

Equivalent Course(s): CRES 12100, ANTH 23609

GLST 22105. Sex and Gender in The City. 100 Units.

This course is designed to introduce students to some of the key concerns at the intersection of gender studies and urban studies. In this course, we will take gender relations and sexuality as our primary concern and as a constitutive aspect of social relations that vitally shape cities and urban life. We will examine how gender is inscribed in city landscapes, how it is lived and embodied in relation to race, class, and sexuality, and how it is (re)produced through violence, inequality, and resistance. Over the course of the quarter, we will draw on an interdisciplinary scholarship that approaches the central question of how and why thinking about urban life in relation to gender and sex matters.

Instructor(s): Sneha Annavarapu Terms Offered: Spring

Note(s): This course counts as a Foundations course for GNSE majors

Equivalent Course(s): ARCH 22105, ENST 12105, SOCI 28088, GNSE 12105

GLST 22200. Introduction to Critical Race Studies: Historical, Global, and Intersectional Perspectives. 100 Units.

This course offers an introduction to the core theoretical foundations of critical race studies, with an emphasis on historical, global, and intersectional approaches to the study of race and ethnicity. Critical race studies, which posits that race is endemic to society, is an interdisciplinary study that calls us to address unequal relationships of power and domination by analyzing the historical and global construction, emergence, and consequences of race. Drawing on historical, global, and intersectional case studies, this course aims to establish a foundation of key terms, theories, and ideas in the field as well as familiarize students with a broad survey across time and world regions. It challenges us to question how race has informed ideas about power, oppression, and liberation in history and the modern world. Readings will draw on classic and contemporary texts from critical race theory, history, feminist studies, post-colonial studies, disability studies, and anthropology, as well as films, podcasts, and class excursions. Evaluation will be based on class participation, short papers, and an independent presentation.

Instructor(s): Deirdre Lyons Terms Offered: Autumn

Equivalent Course(s): LACS 13200, HIST 19010, CRES 12200, GNSE 15200

GLST 22855. Childhood, Migration, and Nation. 100 Units.

While the figure of mobile children is central to academic and public debates about migration worldwide, this course asks students to step back and reconsider a question that is frequently taken for granted: 'What is a child?' The intersections between childhood and other categories of personhood, such as migrant laborers and refugees, complicate our assumptions about what it means to be a 'child' and the ways children fit into the ideologies of nation-states. Ambiguous representations of migrant children also problematize human rights and humanitarian discourses that often depict them as vulnerable, passive, and inseparable from their family units. The analytical focus on young mobile subjects who are in the process of 'growing up' call our attention to questions of temporalities and different modes of imagination which come to mediate the ongoing socialization of the child by state, family, and schools. In this course, we will critically discuss both theoretical concerns, ethnographic projects, films, and contemporary news media in the US, Asia, and elsewhere which take '(im)migrant children' as an object of inquiry. We will examine 1) the intersection between childhood and other personhood categories along the citizen-migrant continuum, and 2) institutional interventions and everyday practices of the child which are mediated by different ideologies about being children and being (non)citizens of a particular state.

Instructor(s): Moodjalin Sudcharoen Terms Offered: Spring, Spring 2021

Equivalent Course(s): CHDV 22855, HMRT 22855, ANTH 22855

GLST 23083. A Latin American Anthropology of Violence and Conflict in Latin America. 100 Units.

This course explores the dynamics of conflict and organized violence in Latin America through a combination of Latin American fiction and documentary films and ethnographic and other relevant research. The following are some of the interrelated topics that we will cover, which draw primarily from scholars not only of Latin America, but also in Latin America: non-state armed groups, transnational criminal networks, international cooperation and humanitarian intervention, human rights abuses and activism, gendered experiences of violence and its aftermath, and the state. We will begin our work in contemporary conversations about these topics throughout the region and weave in readings from the globally dispersed

foundational thinkers who have informed these conversations. Students will develop a case study of their choosing over the quarter and receive in-class instruction on forming and managing effective writing groups to facilitate their projects. Significant flexibility is also possible for those who want to incorporate their coursework into the development of a larger research project.

Instructor(s): Erin McFee Terms Offered: Autumn, Autumn 2020

Prerequisite(s): PQ. Course materials and discussions will be in both Spanish and English; Spanish fluency required.)

Equivalent Course(s): LACS 23083, ANTH 23083, LACS 32335, HMRT 23083, ANTH 32335

GLST 23101-23102. Global Studies I-II.

This is the Global Studies program's core sequence, typically taken during a student's second year. Global Studies I is an orientation course for students interested in majoring in Global Studies, while Global Studies II seeks to impart important theories and research practices through intensive, critical readings.

GLST 23101. Global Studies I. 100 Units.

What is the 'globe' in Global Studies? This course introduces the Global Studies major by considering how people have organized and conceptualized political and social difference across space. From World Systems theory and coloniality to the movement of global capital and the problem of the nation-state, we will prioritize approaches offering insight into the unequal distribution and flow of power worldwide. This course will also provide brief introductions to the pressing issues confronting Global Studies today, including public health and infectious disease, borders and migration, climate change, and transnational religious and political movements.

Instructor(s): Callie Maidof Terms Offered: Autumn

GLST 23102. Global Studies II. 100 Units.

This second part of the introductory course sequence for Global Studies majors is focused on the development of students' own substantive research proposals. All new readings that Global Studies students encounter will help them to think theoretically through relevant multidisciplinary literatures - including from sociology, anthropology, and history, among many others - to begin asking their own distinct research questions. We will then develop relevant bibliographies and targeted empirical objectives attuned to diverse possible 'data' sources, including in material culture or in archives, in texts or in landscapes, in ethnographic or mass mediated narratives, or on burgeoning digital platforms. Discussion, writing assignments, and in-class workshops will help us discern and appreciate the craft of academic research, including the careful identification of sites, objects, potential interlocutors, primary and secondary materials. The course will leave students with a full draft of their thesis proposals

Instructor(s): Kohl, Owen Terms Offered: Winter

Prerequisite(s): GLST 23101

GLST 23129. Transnational Queer Politics and Practices. 100 Units.

This course aims to examine gender and sexual practices and identities in a transnational perspective. As people and ideas move across national, cultural, and racial borders, how is sexuality negotiated and redefined? How are concepts such as 'global queerness' and the globalization of sexualities leveraged for change? How are queer identities and practices translated, both culturally and linguistically? To explore transnational articulations of queerness we will draw on a range of theoretical perspectives, including postcolonial, feminist, queer, and indigenous approaches to the study of sexualities. We will engage with scholarship on the politics of global gay rights discourses, on the sexual politics of migration, and on the effects of colonialism and neoliberal capitalism. By analyzing queer experiences and practices in a transnational context, our goal is to decenter and challenge Western-centric epistemologies and to dive into the complexities of cultural representations of queerness around the globe.

Instructor(s): Cate Fugazzola Terms Offered: Spring

Equivalent Course(s): GNSE 33119, SOCI 30323, MAPS 33129, GNSE 23119

GLST 23317. To Preserve or Destroy: Anthropologies of Heritage. 100 Units.

Why do some monuments matter more than others? Why do we destroy some sites and preserve others? How do these objects and sites attain value? As witnessed in Charlottesville, heritage is at the heart of intense debates in politics and culture today. Questions of theft and colonial violence haunt museums, galleries, and other cultural institutions. Looting and repatriation-linked to archaeology's complex history and of equal concern to contemporary anthropology-force us to contend with the very meaning of heritage, including why it matters, what it does, and to whom it rightfully belongs. Bringing archaeology and anthropology together, this course attends to these complex questions, exploring how monuments, heritage sites, and material culture are enmeshed in power and condense contested histories. Drawing together ethnographies of heritage, theories of history and art, and accounts of dispossession and destruction, we will examine heritage as a conceptual formation, a set of social, political, and economic practices, and as a locus of both enchantment and endangerment. In doing so, students will gain a better sense of why the category of heritage seems to matter so much in the 21st century, paradoxically weaponized by both nationalist narratives and decolonial movements, and what futures heritage builds.

Instructor(s): Hilary Leatham Terms Offered: Winter. This course was offered Winter 2020

Equivalent Course(s): HIPS 21347, ARCH 21347, ANTH 21347

GLST 23403. Borders, (Im)mobilities and Human Rights. 100 Units.

What is the human cost of border control? To what extent do individuals possess the right to move to other states? How do different states with large populations of refugees and asylum seekers develop and enforce migration policies, and what do the differences in these policies reveal about the social histories and futures of these states? To address these questions, we will consider how borders, institutions, and categories of migrant groups mutually shape one another. We will explore the interrelationships between categories of migration-forced, economic, regular, and irregular-in order to understand the multiple and unequal forms of mobility experienced by those who inhabit these categories. By utilizing a

framework of human rights, this course will investigate how contemporary issues in migration—such as border management, illicit movement, and the fuzzy distinction between forced and economic migration—raise and reopen debates concerning the management of difference. We will draw on the work of anthropologists, sociologists, and geographers, as well as journalists, legal, and medical professionals. Our readings each week will include a mix of conceptual, ethnographic, long-form journalism, and policy texts. When possible, we will also invite representatives from different Chicago-based organizations that promote and protect the rights of people in various situations of migration to come to our class to discuss their work.

Equivalent Course(s): ANTH 25255, CHDV 23403, HMRT 23403

GLST 23404. Forced Exile: Displacement, Development and Disaster. 100 Units.

According to the International Organization for Migration (IOM), forced migration involves coercion, including threats to life and livelihood that arise from natural or human-induced causes. What constitutes coercion, and who deserves to migrate? How are threats to life and livelihood recognized and to what extent can they be minimized? In this course, we will examine the conditions of forced exile, ranging from violence and persecution, to environmental degradation and climate change, to the economic decimation of local communities. Moreover, we will critically examine how governments and international organizations respond to forced exile through securitization techniques and long term development projects to reduce the so called 'push factors' that compel people to migrate. We will draw on a range of materials, including ethnographies, policy documents, documentaries, and the perspectives of course visitors, to examine cases of forced migration in Syria, El Salvador, Bangladesh, Eritrea, Haiti, and elsewhere.

Instructor(s): D. Ansari Terms Offered: Winter

Prerequisite(s): N/A

Note(s): CHDV Distribution Area: C

Equivalent Course(s): HMRT 23404, CHDV 23404

GLST 24210. Politicizing the Passions: Emotions and Collective Action. 100 Units.

The first objective of this course is to develop a critical understanding of the different disciplinary and methodological approaches to emotion and its place in political life. To that end, we will begin by analyzing how rationality and emotion are conceptualized and theorized in different disciplines. Throughout the course we will consider the conceptions and methodologies of competing models of the place of emotion in politics, examining both macro and micro approaches, and considering questions such as: how do we measure emotions? Are emotions primarily physiological or cognitive? Are emotions at base universal or socially and culturally constructed? What are the processes by which private, individual emotions become public, collective, and politically relevant? The first half of the course is organized thematically by political effect. The second half of the course is designed to discern patterns and identify concrete ways that specific emotions—such as fear, shame, anger, and hope—shape politics.

Instructor(s): Mekawy, Yasmeen Terms Offered: Spring

Equivalent Course(s): PLSC 24210

GLST 24214. Cities in Modern China: History and Historiography. 100 Units.

China's shift from a predominantly rural country to an urban majority is one of the greatest social and demographic transformations in world history. This course begins with the roots of this story in the early modern history of China's cities and traces it through a series of momentous upheavals in the nineteenth and twentieth centuries. We will learn about how global ideas and practices contributed to efforts to make Chinese cities 'modern,' but also how urban experiences have been integral to the meaning of modernity itself. We will discuss urban space, administration, public health, commerce and industry, transportation, foreign relations, and material culture. In addition to tackling these important topics in urban history and tracing the general development of Chinese cities over time, another primary concern of our course will be the place of urban history in English-language scholarship on Chinese history more broadly. We will track this development from Max Weber's observations on Chinese cities through the rise of 'China-centered' scholarship in the 1970s to the 'global turn' of the 2000s. Students will develop the skills necessary for writing an effective historiography paper, i.e., doing background research, writing annotated bibliographies, and using citation-management software. Students will put these skills to work by writing a critical historiographical review of scholarship on a topic of their choice.

Instructor(s): D. Knorr Terms Offered: Spring

Prerequisite(s): Students taking ARCH 24214 should explain the relationship between their final projects and architectural studies.

Equivalent Course(s): ARCH 24214, HIST 24214, ENST 24214, EALC 24214

GLST 24233. Food Politics in a Global World. 100 Units.

Food Politics' means so many things: Trust, risk, danger. Safety, regulation, retail, and consumption across wildly different scales: global, (trans)national, urban, regional, local, distant, foreign. Diets, fasts, binges. Canning, refrigeration, cafeterias, farmers' markets, and the cold aisles of supermarkets. Educated consumers, mass panics, and the 'distant' bodies of humanitarian aid. In this class, ethnographic and comparative approaches to food politics will be our lens into recognizing, discussing, and thinking about food as a critical site of global politics. We will examine articulations of social differences, performances and performativities of bodies (gendered, migrant, public, private, clandestine, hungry, satiated, healthy, and criminal), transnational battles over regional and local 'purity,' and sensibilities that do or do not trust sites of economic and/or political authority positioned far away. Indeed, food politics are just as much a window into the investigative and critical potentials of ethnography in a global world as they are a way to recognize the moral, popular, imaginary, and experiential processes at work and constitutive of taken-for-granted political actor-abstractions such as 'the state' 'the economy' and 'the public.'

Instructor(s): Czarnecki, Natalja Terms Offered: Winter

Equivalent Course(s): ENST 24233, ANTH 25322

GLST 24302. Early Modern China: An Age of Global Transformation, 1500-1800. 100 Units.

The period between 1500 and 1800 was pivotal in the emergence of the modern world. We tend to focus on Europe and the Americas when we think of the changes that occurred in this period. However, this was also an age of dramatic transformation for China in ways that were connected and/or similar to changes unfolding elsewhere. After reviewing how the legacy of the Mongol conquests shaped early modern Eurasia, we will examine a series of intertwined developments that were characteristic of not only China but also global experiences in this period: population growth, expanded commercial activity, silver imports from the Americas, and the adoption of 'New World' crops, such as maize and sweet potatoes. We will then look at how new intellectual currents and major shifts in government policies responded to these new social and economic realities. We will examine two developments—print culture and colonialism—that play important roles in narratives of early modern European history but are no less applicable to Chinese history. Our course will end with a consideration of how the growth of the early modern period generated not only tremendous wealth but also considerable political and ecological challenges that modern actors would struggle to overcome. For the final project, students will design a museum exhibit that focuses on one aspect of China's early modern history and underscores the global interconnectedness of this period.

Instructor(s): D. Knorr Terms Offered: Winter

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): HIST 14302, ENST 24302, EALC 14302

GLST 24303. Modern Korean History. 100 Units.

This course focuses on the modern history of a country that is well known for shifting its course at dizzying speed. Beginning with the last monarchic dynasty's 'opening' to the world in the late nineteenth century, the course will move on to deal with radical transformations such as Japanese colonization and Korea's subsequent liberation in 1945; the civil war, national division, and dictatorship in the two Koreas; and the economic miracle and democratization in the South and nuclear development in the North. How do we understand recent events, such as the South Korean president's impeachment in 2017 and the North Korean leader's high-profile diplomatic detentes in 2018? Do they come out of nowhere, or can we find an underlying consistency based on an understanding of the long twentieth century? Through a careful study of Korea's modern history, this course is designed to reveal the longer trajectories of Korea's historical development, showing how the study of this contentious peninsula becomes a study of modern world history.

Instructor(s): J. Jeon Terms Offered: Winter

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): HIST 14303, EALC 14303

GLST 24340. Political Ecologies of Colonialism: Local and Global. 100 Units.

The rapidly warming planet makes it clear that the natural and human worlds are inseparable and that local ecologies are inextricable from global political and economic processes. While resulting devastation has more recently emerged as global crisis, the assimilation of local landscapes and ecologies into global social processes has a deep history. This class considers the development and intensification of such global connections through the lens of political ecology. It contextualizes local ecological changes wrought by expansive colonial powers - poisoned mountains, mono-cropped landscapes, and disappeared forests - within the emergence of a global economy in the early modern era. The course is roughly divided into two parts. First, it examines the political ecology of colonialism, considering links between extractive practices of land management and the imbalances of power typical of colonial contexts. Secondly, it assesses how the extraction and expansion inherent to colonial projects provided impetus to the emerging global economy from the 16th to 20th centuries, and considers how those historical processes continue to reverberate into the present. While historicizing contemporary environmental issues, students will be introduced to political ecology, environmental history, 'the Anthropocene' concept, theories of commodification and value, and world systems analysis.

Instructor(s): Raymond Hunter Terms Offered: Spring

Equivalent Course(s): ENST 24340, ANTH 28505

GLST 24406. Sovereign Rights: Decolonization and the Cold War in Image and Word. 100 Units.

This course explores two historical processes often discussed in isolation: decolonization and the Cold War. Through our particular emphasis on solidarity movements arising from the global South, we consider a point in time during which shouts for political and economic equality among nations envisioned potential futures that would alter the global landscape. What transformed perceptions of the 'Third World' from a loose coalition of governments that sought to upend contemporary global structures, into an amorphous constitution of states perpetually in need of humanitarian aid? Over the course of the quarter we will explore these trajectories through a mixture of primary documents and visual sources, contextualized by both foundational historical scholarship and more recent interventions. Short writing assignments, library and museum visits, and class discussions will culminate in an opportunity for students to use course themes to design their own exhibit according to their own interests.

Instructor(s): Eilin Rafael Pérez, Graduate Lecturer Terms Offered: Spring

Equivalent Course(s): CRES 21306, HMRT 23406

GLST 24425. Ships, Trains, and Planes: A Global History of Vessels and Voyagers, 18th Century to the Present. 100 Units.

From 'La Amistad' to the airplanes of September 11, vessels make history. And yet, we often take for granted the fact that they also contain history. Investigating the sociocultural pasts of vessels and the politics of mobility, this course poses two overarching questions. How have ships, trains, and airplanes shaped the behavior and outlooks of modern humans, and how has the experience of being in transit evolved over the past three centuries? Beginning with sailing ships of the eighteenth

century and winding its way to the airplane via steamships and railways, the course explores how vehicles and transit have inspired and coerced humans into unique forms of subjectivity. Through case studies and primary sources from across world history, vessels in transit will be analyzed as engines of modernity and sites of emancipation, but also as tools of terror and laboratories of power.

Instructor(s): C. Fawell Terms Offered: Spring

Equivalent Course(s): ANTH 22161, HIST 29425

GLST 24514. Colonial Power in East Asia. 100 Units.

This course takes a transnational and comparative approach to the study of colonialism in East Asia from the Opium Wars through the end of World War I. Using foundational theories of postcolonial scholarship as a starting template, we will explore the interrelationship of colonial power and ideologies of race and gender across China, Japan, and Korea during the nineteenth century. Critically evaluating both primary and secondary sources will help us contextualize the development of the Japanese empire within a larger narrative of the expansion of Euro-American colonial power into East Asia. In doing so, we will discover that sites of empire in East Asia often destabilize the most common binaries of postcolonial study: Occident/Orient, colonizer/colonized, white/other, and premodern/modern.

Instructor(s): J. Dahl Terms Offered: Winter

Equivalent Course(s): GNSE 24514, EALC 24514, CRES 24514, HIST 24514

GLST 24655. Are You Not Entertained? The Anthropology and Politics of 'Fun' 100 Units.

Spaces throughout our uncertain present have often been referred to as 'post-industrial.' However, many cities, regions, and laborers remain dedicated to bringing novel, entertaining product including films, music, and devices to diverse markets. Among skeptics, an old functionalist question has reemerged: Do seemingly lighthearted institutions, venues, and technogadgets enable capitalism's continued transnational primacy through their capacity to distract? Are pressing social problems including gross wealth imbalance, state surveillance, and punitive policing ignored in favor of never-ending amusement? No doubt, theoreticians from various walks of life have long deemed entertainers, gizmos, and the audiovisuals that they conjure critical in winning hearts, minds, and conflicts - both foreign and domestic. By following ambivalent, aspirational genres through a range of distinct, yet kindred 21st century industries, we will critically consider entertainment's capacity to reflect, challenge, and shape political economy. Our bi-weekly lectures, readings, and discussions will draw upon social practices and performances that have awkwardly aimed to do more than merely amuse by supposedly educating, enlightening, and benefitting consumers. We will first consider (post-) colonial and Cold War historical genealogies by looking closely at battlegrounds of fun such as the Soviet circus, the Yugoslav music and film industries, and the State Department's jazz 'jambassadors.'

Instructor(s): Kohl, Owen Terms Offered: Winter

Equivalent Course(s): ANTH 25920

GLST 24701. Political Anthropology. 100 Units.

This course introduces students to the anthropological study of politics and the political. Classes are seminar-style discussions with a mix of group discussions, mini-lectures, writing workshops, and in-class small group activities. In addition to reading major theoretical and empirical contributions to the field, students will also learn how to conduct meeting- and event-based ethnography and to compose ethnographic writing. Major assignments include conducting fieldwork, handing in periodic field notes journals, and a final paper assignment that weaves together field data with course readings. Authors include, but are not limited to the following: Abrams, Anderson, Aretxaga, Comaroff and Comaroff, Evans-Pritchard, Foucault, Mbembé, McGovern, Mitchell, Mosse, Nelson, Povinelli, Rabinow, Ramirez, Scott, Sharma and Gupta, Silverstein, Taussig, Trouillot, and Weber.

Instructor(s): Erin McFee Terms Offered: Winter. Course offered Winter 2020

Equivalent Course(s): ANTH 34701, ANTH 24701, PBPL 24702

GLST 24725. Humans After Violence. 100 Units.

What happens to individuals and societies after experiences with violence? This course takes a critical look at scholarship and practitioner efforts to understand and influence those who make and unmake violence and who are implicated in its aftermath. The four units - violence, trauma, subjectivity, and reconciliation - explore and problematize each of these domains of inquiry. Throughout the course, we will draw from both foundational and emerging texts in anthropology and related disciplines as we critically examine the 're' in contexts of violence: re-integration of ex-combatants, re-entry of the formerly incarcerated individuals, re-turn of displaced populations, and re-conciliation among war affected peoples. What are the reach and limits of these discourses in contexts of violence and physical and socioeconomic insecurity? How is social life in these settings differentially experienced according to gender and stages of the life course? The course will also include an examination of methodological approaches to studying violence-affected individuals and communities as well as issues of decolonizing research, non-extractive approaches, reflection on relations of power and inequality, and trauma-informed approaches to research and engagement. Students will develop a case study of their choosing over the quarter and receive dedicated classroom instruction on writing interdisciplinary literature reviews.

Instructor(s): Erin McFee Terms Offered: Winter. Winter 2021

Prerequisite(s): Open to 3rd or 4th year undergraduates and masters students

Equivalent Course(s): ANTH 24725, HMRT 34721, HMRT 24725, ANTH 34721

GLST 24741. Politics and Popular Culture in the Middle East. 100 Units.

This course will examine the relationship between popular culture and politics in the MENA. Pop culture, such as cinema, television, street art, music, and social media, has been a means of both resisting and shoring up authority, of affirming and subverting societal norms and taboos, and of motivating and expressing political action. We will critically examine examples of pop culture from societies throughout the region, analyzing their connection to power structures and changes in ideology and nationalism, gender/class/religious identity and practice, militarism and insurgency, and state power. This course will

draw on research approaches in anthropology, sociology, media studies, and political science to theorize the role of popular culture in reflecting, challenging, and expanding political horizons in the region.

Instructor(s): Mekawy, Yasmeen Terms Offered: Autumn

Equivalent Course(s): PLSC 24741

GLST 24801. Anthropological Approaches to Global Hip Hop(s) 100 Units.

In this course, our goal will be to further develop a series of tools with which to study hip hop in its local, regional, and transnational diversity. How do artists make affinities and draw distinctions along aesthetic, political, and other social lines? What symbolic status and importance do artists outside of urban North America accord the genre's US and African-American historical lineages? What role do states and industries play in mediating the forms that so-called global hip hops assume? Hip hop scholars have productively analyzed the genre and its associated messages and styles by way of analytics like post-industrialization, authenticity, resistance, 'flows,' and identity. We will also explore the ways in which hip hop relates to genre and semiotic ideology, subjectivity and publics/groups/nations. Toward these ends, seminar discussion will consider historical and audiovisual material from French, Senegalese, German, Russian, Mongolian, American, post-Yugoslav, and other scenes. Through a variety of screenings, listenings, and other activities, we will encounter a diverse range of hip hop's crafts in addition to rap, including beat-making, -boxing, and DJing/turntablism/controllerism. Course readings will address ethnographic, historical, journalistic, and artistic considerations of hip hop's creative practices, while situating these in more abstract, yet relevant debates within anthropology, ethnomusicology, and media studies.

Instructor(s): Owen Kohl Terms Offered: Spring

Equivalent Course(s): ANTH 25909

GLST 24901. The Politics of Plant Life: Edens, Plots, and Ruins. 100 Units.

How do plant ecologies materialize conflicted and incommensurate political formations? How are political ideals, collectivities, or anxieties reflected in the matter and meaning of plant life across its many social guises (as food, magic, medicine, drugs, industrial commodities, mortal enemies, alien invaders, and more)? How might radical attention to the complexities of our lives with plants help us to formulate ethical and political possibilities in the wake of conflicted histories and in midst of uncertain planetary futures? This course explores possibilities for understanding political imaginaries through the lens of plant life. We will attend to the history of social and natural scientific understandings of plant life as these shaped foundational concepts in social and political theory (including concepts of culture, race, gender and sexuality, economy, and history). We will examine how the scientific, military, and commercial transformation of plant natures was central to political projects from 18th century imperialism to 21st century counter-insurgency, from World War to the 'War on Drugs,' from colonization to climate crisis. This seminar brings together historical sources, classical theoretical texts, and contemporary ethnographic projects with experimental and multi-media materials to explore the history of plant life's entanglement with imagined political histories and futures--apocalyptic, utopian and revolutionary.'

Instructor(s): Amy McLachlan Terms Offered: Spring

Equivalent Course(s): ENST 24902, ANTH 23806, ANTH 33809

GLST 25132. Debate, Dissent, Deviate: Literary Modernities in South Asia. 100 Units.

This class introduces students to the modernist movement in post-independence South Asia. Modernism will be understood here as a radical experimental movement in literature, film, photography and other arts, primarily aimed at critiquing mainstream narratives of history and culture. Given its wide scope, we will analyze a variety of texts over the ten-week duration of the class. These include novels, short stories, manifestos, essays, photographs, and films. The chronological span of the class is from the 1930s to the 1970s. Our aim will be to understand the diverse meanings of modernism as we go through our weekly readings. Was it a global phenomenon that was adopted blindly by postcolonial artists? Or were there specifically South Asian innovations that enable us to think about the local story as formative of global modernism? What bearings do such speculations have on genre, gender, and medium, as well as on politics? I will help situate the readings of each week in their specific literary and political contexts. Students will be able to evaluate, experiment with, and analyze various forms of modernist literary expressions emerging out of South Asia. This class will provide them with critical tools to interpret, assess, compare, and contrast cultural histories of non-Western locations and peoples, with an eye for literary radicalism. No prior knowledge of any South Asian language is necessary.

Instructor(s): S. Dasgupta Terms Offered: Autumn

Equivalent Course(s): KNOW 25320, CRES 25320, SALC 25320, ENGL 25320, GNSE 25320

GLST 25209. Jews, Arabs, and Others: Nations from the Nile to the Jordan. 100 Units.

This course considers nationbuilding as an ongoing and recurring process in the Middle East, realigning identities and communities according to the political concerns of the time. In particular, we will examine how Arabs and Others have figured in the political imagination of both Egypt and Israel-Palestine. When can Egyptians, Palestinians, and Israelis consider themselves 'Arab'--and when not? What are the stakes of naming Arab-ness or claiming it for oneself? To answer these questions, this course will include readings on Arab nationalism and minorities in Egypt, the question of Jewish versus Israeli nationalism, Arab (or Mizrahi) Jews in Israel, and the relationship of Palestinian nationalism to the borders that have been drawn within the historic land of Palestine.

Instructor(s): Callie Maidhof Terms Offered: Autumn

Equivalent Course(s): ANTH 24110

GLST 25218. American Epidemics, Past and Present. 100 Units.

This course explores how disease epidemics have shaped watershed periods in US history from the late eighteenth century to the present. Through readings, lectures, and in-class discussions, we will employ different categories of analysis (e.g., race, gender, class, and citizenship) to answer a range of historical questions focused on disease, health, and medicine. For instance, to what extent did smallpox alter the trajectory of the American Revolution? How did cholera and typhoid affect the lived experiences of slaves and soldiers during the Civil War? In what ways did the US government capitalize on

fears over yellow fever and bubonic plague to justify continued interventions across the Caribbean and the Pacific? What do these episodes from the American past reveal about contemporary encounters with modern diseases like HIV/AIDS, Ebola, and COVID-19? Course readings will be drawn from book chapters and scholarly articles, as well as primary sources ranging from public-health reports, medical correspondence, and scientific journals to newspapers, political cartoons, maps, and personal diaries. Grades will be based on participation, weekly Canvas posts, peer review, and a series of written assignments (a proposal and an annotated bibliography, primary source analysis, book review, and rough draft) all of which will culminate in a ten-page final research paper.

Instructor(s): C. Kindell Terms Offered: Winter

Equivalent Course(s): CRES 25218, HIPS 25218, ENST 25218, GNSE 25210, HLTH 25218, HIST 25218, AMER 25218

GLST 25250. Global Disaster Ecologies: Interspecies Exposures and Immunities. 100 Units.

This class explores ecologies that thrive, transform, or collapse under severe anthropogenic pressures. Construing 'ecology' and 'disaster' broadly, it attends to human and nonhuman interdependencies in contexts at once different and related: (post)war landscapes, sites of modern agriculture and food production, and extreme weather events attributed to global climate change. The class asks: what social and ecological relations become possible, thinkable, and tenable when scientific and experiential facts of natural destruction meet optimistic ideologies of conservation, resilience, and climate finance? Interdisciplinary class readings will place special emphasis on honeybees' collapse and worldwide insect decline.

Instructor(s): Jasarevic, Larisa Terms Offered: Autumn

Equivalent Course(s): ENST 25250, ANTH 24835

GLST 25310. Extinction, Disaster, Dystopia: Environment and Ecology in the Indian Subcontinent. 100 Units.

This course aims to provide students an overview of key environmental and ecological issues in the Indian subcontinent. How have the unique precolonial, colonial, regional and national histories of this region shaped the peculiar nature of environmental issues? We will consider three major concepts- 'extinction', 'disaster' and 'dystopia' to see how they can be used to frame issues of environmental and ecological concern. Each concept will act as a framing device for issues such as conservation and preservation of wildlife, erasure of adivasi (first dwellers) ways of life, environmental justice, water scarcity and climate change. The course will aim to develop students' ability to assess the specificity of these concepts in different disciplines. For example: What methods and sources will an environmental historian use to write about wildlife? How does this differ from the approach an ecologist or literary writer might take? Students will analyze various media: both literary and visual, such as autobiographies of shikaris (hunters), graphic novels, photographs, documentary films, ethnographic accounts and environmental history.

Instructor(s): Joya John Terms Offered: Spring

Equivalent Course(s): ENGL 22434, CRES 25310, HIST 26806, SALC 25310

GLST 25311. Imperialism, Anti-colonialism, and Decolonization. 100 Units.

This course examines the impetus toward decolonization and the aftermath of independence of former British and French colonies. The course seeks to grasp decolonization as ambivalent and contradictory, that is, as simultaneously (if unexpectedly) the culmination of both imperialist ambitions and anti-colonial politics. It will consider: How and when did the demand for decolonization first come to be articulated? What underlying circumstances shaped the decolonization in the twentieth century? How are we to make sense of the 'post-coloniality' that resulted after decolonization? The syllabus, which moves chronologically (with some exceptions), starts with India, privileging it as the first and, in some respects, exemplary instance of the ideological debates on imperialism, but will also touch on examples from Africa and the Caribbean. The course will register the significance of the rise of the Soviet Union after World War I in shaping the development of nationalist movements worldwide in the twentieth century. It will conclude on the melancholic notes that express the failure of anti-colonial movements to secure their stated objectives of democratic self-determination and economic independence.

Instructor(s): Sunit Singh Terms Offered: Winter

Equivalent Course(s): CRES 25311

GLST 25316. Making a Home in the Colonial City: Insights from Literature, Films, and History. 100 Units.

The proposed course is an invitation to students to imagine the life-worlds, experiences, and spaces of the colonized populations of South Asia, particularly, from the perspective of city-dwellers. The objective of the course is three-fold: thematic, methodological, and epistemological. First, to introduce students to debates in colonial modernity using the narrative of the rise of modern cities in colonial India. Second, to equip students to handle different kinds of primary material in order to understand the interconnections between colonialism, urban space, and indigenous responses. Finally, to open up the exciting field of colonial and postcolonial studies to anyone interested in South Asia, its literature, its films, its history, and its people.

Instructor(s): Sanjukta Poddar Terms Offered: Autumn

Equivalent Course(s): GNSE 25316, SALC 25316

GLST 25320. Poverty and Urban Development: the Right to Housing in Latin America. 100 Units.

Bringing a wide variety of disciplinary texts into conversation, this course leads towards a holistic understanding of the historically rooted and globally entangled housing condition of Latin America's urban poor. It encourages students to read along the grain of developmental discourse at different stages of twentieth-century development, thus advancing students' capacity to critically situate and condition global and national policies. The course analytically foregrounds problems of governance, resource distribution, and sociopolitical complexity, providing students with a representative range of case studies from across the subcontinent and interrogating what it means for social and economic goods to be labeled human rights. Throughout the course, students will examine diverse housing arrangements and policies in the context of national, regional, and global development histories. Ultimately, this course advances comprehension of the particularities of contemporary Latin American societies, and that which they share with the Global South and the world at large.

Instructor(s): Gonzalez, Ines Escobar Terms Offered: Spring
Equivalent Course(s): ENST 25320, ANTH 23097

GLST 25350. The Arab Uprisings: Social Movements and Revolution in the MENA. 100 Units.

This course examines the reasons for and variations in contemporary uprisings in the Middle East. At once theoretical and empirical, the class focuses on events in Tunisia, Egypt, Yemen, Bahrain, Syria, Libya in the first wave, followed by Sudan, Algeria, Lebanon, and Iraq in the second wave, considering them in relation to prevailing social scientific theories of change and management. We will cover the following topics: the causes and meanings of 'revolution'; the rise of new social movements in a neoliberal era; authoritarianism and the various roles of the military; the importance of digital publics; popular culture and artistic practices in the context of ongoing tumult; cultural, generational, and gender dynamics; the causes of civil war; and the influence of regional and international super-powers. Throughout the class we will make connections between the Arab uprisings and theories of social movements and revolutions, evaluating different lenses of analysis, such as the state, class, and culture and ideology. In addition to academic texts, the course will also draw on a wide range of other materials such as memoirs, short films, documentaries, songs, and social media.

Instructor(s): Mekawy, Yasmeen Terms Offered: Autumn
Equivalent Course(s): PLSC 25350

GLST 25630. Religious Violence. 100 Units.

Are there 'proper' or 'improper' practices of religion? Is it at best a matter of private belief, to be kept separate from or protected by the state? Or is it something that at times requires the state's intervention? Does religion represent the last vestiges of the premodern world, or is it something that is integral to modern life? To answer these questions, we will call on anthropologists and other social scientists and theorists to understand, first, what is 'religion,' and then what is, can be, or should be its relationship to gender, the nation, and the modern state in various historical and geographical locations, with particular attention to the Middle East and South Asia.

Instructor(s): Callie Maidhof Terms Offered: Spring
Equivalent Course(s): ANTH 24730, RLST 26630

GLST 25701. Anthropology of Borders. 100 Units.

Today, the world may seem more connected than ever. Infectious disease, data, global capital, and even 'culture' seem to travel in the blink of an eye. At the same time, we're witnessing the fortification of borders, and a resurgence of rightwing ethnonationalist populism on both sides of the Atlantic. Borders take on new significance national debates and security policy, and for those who rarely come into contact with borders, they may seem like mere metaphor for how a nation positions itself with regard to immigration, public health, and trade. But beyond the party platforms of politicians in the world's capitol, borders are very real places, constituted by the practices of state and non-state actors alike, and creating new forms of life in response to the technologies that police them. In this course, we will take an anthropological view of borders in order to understand how they are created, policed, and inhabited, following and bucking trends in the micropractices of military, police, and bordercrossers both legal and illegal.

Instructor(s): Callie Maidhof Terms Offered: Winter
Equivalent Course(s): ANTH 25256

GLST 25841. Global Viral News Lab: Crises, Inequalities, and Pandemic Trajectories of Global news and info. 100 Units.

Through news portals, podcasts, and other media, students will track recent journalistic work on the political, economic, and other forms of social fallout from the COVID-19 pandemic. Ethnic and racial politics, class conflict, and the obsession with quantification have all consistently re-emerged as issues and frequently as dangerous tropes in coverage. Moreover, omnipresent 'crisis' narratives often slip into easy justifications for bipartisan corporate bailouts, surveillance, and the unequal access of intricate, amplified social hierarchies. How does clickbait news-making pose threats to an ideology of supposedly unmediated, unfiltered, 'just the facts' information-sharing (including in academia)? How do viruses, illness, and health emerge as both news stories and metaphors for understanding the contemporary media and social landscape? In this experimental lab, students will track reporting on the pandemic to think critically about the social construction of narrative.

Instructor(s): Kohl, Owen Terms Offered: Autumn
Equivalent Course(s): ENST 25841

GLST 26105. Methods: Ethnographic, Archival, and Otherwise Mediated. 100 Units.

In this seminar practicum, students will learn how to question, follow, and otherwise illuminate objects, sites, and subjects that researchers construct as 'data' sources. The first half of the course will be writing and reading intensive. Closely examining established researchers' work, we will unpack reflexive, ethical, embodied, and practical strategies that will improve our developing projects. We will sharpen the key questions of our thesis proposals or develop new plans formulated around social life in our city. How do traces of specific activities lurk, at times curiously under-acknowledged, behind scholarship geared toward different publics? What value should we accord scholarly research methods - ethnographic, archival, or otherwise - in a present laden with other powerful techniques and rhetorical technologies? The second half of the course is focused on honing an array of practical skills, including interviewing, participant observation, archival targeting, composing field notes and other forms of representational media. What are the affordances and constraints of these approaches and communication forms? Once cultivated, new ways of tuning our attentions will underscore how a) cultural knowledge is spatiotemporally specific; and b) the politics of media and method are necessarily entangled. Global Studies and other majors will develop transposable tools and valuable questions before they later embark on further data collection and rigorous research.

Instructor(s): Owen Kohl Terms Offered: Spring

GLST 26220. Virtual Ethnographic Field Research Methods. 100 Units.

'Virtual worlds are places of imagination that encompass practices of play, performance, creativity and ritual.' - Tom Boellstorff, from *Ethnography and Virtual Worlds: A Handbook of Method* This course is designed to provide students in the social sciences with a review of ethnographic research methods, exposure to major debates on ethnographic research, opportunities to try their hand at practicing fieldwork virtually, and feedback on a proposed study that employs ethnographic methods. By way of analyzing and problematizing enduring oppositions associated with ethnographic fieldwork - field/home, insider/outsider, researcher/research subject, expert/novice, 'being there'/removal - this seminar is a practicum in theoretically grounded and critically reflexive qualitative methods of research. By introducing students to participant observation and interviews in virtual worlds, ethics, data analysis and writing up, the course offers an opportunity to make sense of the current pandemic we're all experiencing in real time. An emphasis will be placed on multimedia, digital, and virtual ethnography.'

Terms Offered: Summer

Equivalent Course(s): ENST 20224, SOSC 30224, SOCI 20515, ANTH 31432, ANTH 21432, SOSC 20224

GLST 26225. Ethnographic Methods. 100 Units.

This is a course on how to do ethnographic research. While recent decades have seen scholars rightfully insist on the artistic and inherently personal quality of 'doing' and 'writing' ethnography, the course aims to illuminate the regulating structures of thought and practice underpinning every piece of original ethnographic work. The course is both a reading and a research workshop. As a reading workshop, it seeks to enable students to read ethnography like ethnographers: identifying and learning from the inner workings of the research project at the heart of each ethnographic text. As a research workshop, the course progressively leads students to construct and implement a research project of their own. Students will methodically enact the physical techniques and analytic practices emerging from their reading of ethnography. Throughout the course, we will grapple with the challenges facing an ethnographic researcher and identify the building blocks of an ethnographic project. In this effort, we will focus on the posing of a research question; the formulation of conceptual frameworks; constructing a statement of problem; actors and informants; the semiotics and pragmatics of interviewing; analysis of interactions qua participant-observer, and historical approaches in ethnography. Students will also experiment with forms of non-verbal visual representation.

Instructor(s): Gonzalez, Ines Escobar Terms Offered: Winter

Equivalent Course(s): ENST 26225

GLST 26230. The Craft of Research Design. 100 Units.

Research methodologies are the backbone of academic thinking and of sound arguing and yet they are too often taken for granted or unduly dismissed as mere technicalities. In the course of this class, the students will learn to discern intricacies of research design in exemplary pieces of scholarship. Students will also have a chance to develop essential elements of a research project designed in accordance with their own research interests. Aside from introducing students to examples of how some concrete research problems were investigated in the fields, in the libraries and archives, and on the Internet, the class readings focused on bodies, medicine, and health will help students conceptualize the most persistent research puzzle: human bodies and cultural subjectivities.

Instructor(s): Jasarevic, Larisa Terms Offered: Spring

Equivalent Course(s): ENST 26235

GLST 26244. Research Approaches to Global New Media. 100 Units.

The development of new media technology has prompted questions about and challenges to conceptions of power, knowledge, and subjectivity. In this course we will examine how different groups around the world use digital media in the construction of new identities, subcultures, virtual public spheres, and new forms of political participation. This course will equip students with methodological tools for studying new media, including discourse analysis, digital ethnography, and other interpretive methods. The goal of this course is not only to acquaint students with the theoretical and epistemological underpinnings of such methods, but to put them into practice through class exercises and a final multi-media research project.

Instructor(s): Mekawy, Yasmeen Terms Offered: Spring

Equivalent Course(s): ENST 26244, PLSC 26244

GLST 26275. Doing Fieldwork: Mobilizing Ethnography to Investigate a Radically Transforming Global World. 100 Units.

In the age of 'post-truth' politics; of globally-scaled and mediatized flows of information, bodies, and biological threats; of magnified uncertainties related to public safety, to conditions of geopolitical belonging, and to human rights themselves, how do we, as ethical researchers, approach emergent social issues in a radically transforming global world? In this course, students will explore the investigative and critical potentials of qualitative research, with a focus on ethnographic fieldwork and discursive analysis. How do we recognize, collect, and make sense of fieldwork data, when our questions deal with seemingly intangible concepts? What does 'home' mean, for immigrant and diasporic communities and what do concepts like 'place,' 'space,' and memory have to do with it? How do people in urban contexts, especially those who rely on mass transit, service and gig economy workers, and first responders in cities like Chicago manage daily life in conditions of existential, biological, and extreme economic threat in the age of COVID-19? How do we 'know' experiential categories like anxiety when we see them, and how do we, as ethical researchers, find answers to questions in our ethnographic materials, without imposing our own conceptual constructs on them? In this collaborative forum, students will practice, share, and critically engage with ethnographic methods, including participant observation, documentation, interviewing, historical research, and discourse analysis.

Instructor(s): Czarnecki, Natalia Terms Offered: Winter

Equivalent Course(s): ENST 26275

GLST 26801. The Global Urban. 100 Units.

This course was conceived with the aim of 'globalizing' urban scholarship. To this end, we will highlight different urban trajectories and forms and different ways of being urban around the world. We will focus on urban experiences in the Global South and in Southeast Asia particularly. We will spend the first week of the course discussing how and why Southern cities are different. We will talk about their explosive growth in the twentieth century, the precarious nature of urban employment, informal settlement as a major urban form, the housing divide as a social structure distinct to such cities, class formation, economic and spatial restructuring under neoliberalism, and the nature of urban citizenship. We will spend the second week examining two very different cases: Manila and Phnom Penh. In the third week, we will focus exclusively on Hong Kong, and students will be tasked with conducting their own urban fieldwork.

Instructor(s): Marco Garrido Terms Offered: Summer

Equivalent Course(s): ENST 26801

GLST 26804. Frontiers and Borders in South Asia. 100 Units.

Sometimes the frontline of empires and nation-states, sometimes neglected or inaccessible, peripheral spaces are often of core concern to the central state. The aim of this upper-level undergraduate seminar is to examine the history of borders, borderlands, and frontiers as political and social concepts and as produced spaces. We will examine an array of case studies in addition to more theoretical scholarship that spans the disciplines of history, environmental studies, political science, anthropology, and geography. While using South Asia (itself a rather recently invented 'area') as the primary geographic and historical focus this course will not be bound exclusively to it. The first goal of the course is to explore the evolution of key concepts such as space, territory, frontier, and borders/borderlands. The second goal is to develop methods for analyzing subjects that are simultaneously physical spaces and political, social, and historical ideas. Finally, it seeks to introduce students to areas that often fall beyond the penumbra of historical surveys centered on the nation-state. No prior knowledge of South Asian history is assumed. Weekly readings will average 150 pages. Note: No prior knowledge of South Asian history is assumed.

Equivalent Course(s): SALC 26804, GEOG 26400, HIST 26804

GLST 26807. The Science, History, Policy, and Future of Water. 100 Units.

Water is shockingly bizarre in its properties and of unsurpassed importance throughout human history, yet so mundane as to often be invisible in our daily lives. In this course, we will traverse diverse perspectives on water. The journey begins with an exploration of the mysteries of water's properties on the molecular level, zooming out through its central role at biological and geological scales. Next, we travel through the history of human civilization, highlighting the fundamental part water has played throughout, including the complexities of water policy, privatization, and pricing in today's world. Attention then turns to technology and innovation, emphasizing the daunting challenges dictated by increasing water stress and a changing climate as well as the enticing opportunities to achieve a secure global water future.

Instructor(s): Seth Darling Terms Offered: Winter. Not offered in 2020-2021

Prerequisite(s): None

Equivalent Course(s): ANTH 22131, MENG 20300, ENST 20300, HIPS 20301, HIST 25426

GLST 26810. A Global History of South Asia: Migration in the Age of Empire. 100 Units.

Departing from narratives that privilege the rise of a static, territorially bounded, Indian nation-state, this course will examine modern South Asian history (roughly 1600 to present) through the lens of migration and trans-regional encounters. Analyzing shifting perceptions of 'the global' as a spatial concept, we will study labor flows in the Indian Ocean, the colonial state's myriad efforts to circumscribe the movement of its subjects, and population transfers between various colonial sites. Entering the later nineteenth century, we will chart the influence of migration, both historical and contemporary, on nationalist thought; we will also discuss the issues posed by the international circulation of political dissenters. Finally, we will engage with fictional representations of the Partition of India and accounts of the social tensions stemming from South Asian immigration into Britain proper. Featuring moral reform literature, petitions, family histories, and anti-colonial tracts, this course will equip students with the skills to interrogate a range of primary sources and familiarize them with recent trends in global and colonial history.

Instructor(s): Z. Leonard Terms Offered: Autumn

Equivalent Course(s): HIST 26810, SALC 26810

GLST 27702. About Nature: From Science to Sense. 100 Units.

Consider mushrooms,' Anna Tsing (2012) suggests to those who are curious about human nature and she points to the relational and biological diversity found at the unruly edges of the global empire-the governmentalized, politicized, commoditized culture nature of capitalism. This class follows the suit, tracking the scent of what evidently remains, thrives, withdraws, overwhelms, and inspires wonder in the guises of the natural, wild, organic, or awesome.

Instructor(s): L. Jasarevic Terms Offered: Winter

Equivalent Course(s): ANTH 25117, INST 27702

GLST 27703. Earthbound Metaphysics: Speculations on Earths and Heavens. 100 Units.

Social thought has recently reopened the subject matter of the 'world': what is it made of, how does it hold together, who and what inhabits it? Proposals and inquiries generated in response are as imaginative as they are self-consciously urgent: written on the crest of the global ecological disaster, from within the zones of disturbance or the sites of extreme intervention into the living matter and forms of life, contemplating the end of the world and possibilities of extinction, redemption, cohabitation, or 'collateral survival' (Tsing 2015). All are variously political. Foregrounding the plurality of the material worlds and lived worldviews on the one hand, and of the shared historical predicament on the other, social thinkers question universal values and conceivable relations, and search for alternate forms of grasping, engaging, and representing the pluriverse. This course goes along with such interests in the 'worlds' and collects a number of compelling, contemporary texts that are variously oriented towards cosmopolitics, 'minimalist metaphysics,' 'new materialisms,' 'speculative realisms,

eco-theology, and multispecies coexistence. Readings will stretch out to examine some classic ethnographic texts and past theoretical excursions into the perennial problem of how to know and tell the unfamiliar, native, worlds, which are swept by, mingling with, or standing out in the more globalizing trends of capitalist, scientific, and secular materialism.

Terms Offered: Spring

Equivalent Course(s): ANTH 25118

GLST 27704. The End Tales: Recounting, Retrieving the Altering Worlds. 100 Units.

The class seeks to explore diverse modes of recounting contemporary more-than-human worlds in the face of the dire future of the planet. Working under the rubrics of 'environmental tragedy' (Foster 2015), Anthropocene (Nimmo 2015), the 'catastrophic times,' (Stengers 2015), and the 'death of a civilization' (Dibley 2015), thinkers across the humanities and social sciences are honing conceptual resources for comprehending and communicating the consequences of the global political economy and lifestyle that destabilizes the biosphere, endangers wildlife, and fails to instill genuine changes in the face of the 'dangerous, unpredictable, and potentially catastrophic climate change' (Foster 2015). The class joins the cause but shifts attention to the empirical materials that insistently thread together the ecological with cosmological, practical with eschatological and metaphysical concerns. How can scholars listen to these overtones with a fresh attention? Could we repurpose them responsibly and productively for the task of telling and teaching about the present and contemplating the future? The class endeavors to find room for the vernacular and textual reservoirs of compelling storytelling about metaphysical meaning and cosmological relations that make-up and ruin the Earth that might be otherwise (dis)missed.

Instructor(s): Jasarevic, Larisa Terms Offered: Autumn Spring

GLST 28092. Nations and Nationalism. 100 Units.

What is a Nation? How do nations come into being? What does it mean to be a part of a national group? These questions will be explored over the quarter through close readings and discussions of both classical theories of nationalism as well as the critiques that have been leveled against them. Studying both classical and contemporary approaches to nationalism, the class will consider how scholars have grappled with the from whence and how a nationalism over time. Over the course of the quarter we will critique ideas of nationalism; consider the efficacy of nation and nationalism as categories of analysis; and will use cases from post-Soviet and post-socialist spaces to ground our discussions in the later part of the quarter, exploring narrative, performative, and material aspects of nationalism in the contemporary period.

Instructor(s): M. O'Shea Terms Offered: Spring

Equivalent Course(s): SOCI 28092

GLST 29091. Governing the Global Economy. 100 Units.

How is the global economy governed? Through what institutions, legal mechanisms, and norms? What role do Anglo-American law, international law, and other legal regimes play in the flow of capital, goods, and people across state borders? Seeking to answer these questions, this three-week intensive course draws from history, law, economics, political science, and political philosophy in order to both understand the development of global economic governance over time and critically assess what paths it might take in the future.

Instructor(s): Jonathan Levy Terms Offered: Summer

Equivalent Course(s): LLSO 29091

GLST 29430. The Planned Economy: A Global History of Central Planning, from Bismarck to the Green New Deal. 100 Units.

This course will change the way you think about politics. One of the most urgent political questions for any modern society is what economic activity to leave to private actors and what economic activity to place under state control. Today we hear much political debate over whether capitalism or socialism is superior, and what these terms mean. This debate can obscure the historical fact that many different ideological systems around the globe have experimented with highly centralized, state-directed economic organization. In what contexts have these experiments succeeded and failed? What counts as success and failure? To what extent has one experiment in central planning studied and/or learned from examples that preceded it? This course pursues these questions beginning with the origins of modern central planning in Prussia and later during World War I. It goes on to assess other experiments in central planning, including the New Deal, the Soviet Union and Maoist China; the Axis Powers of Italy, the Third Reich, and Imperial Japan; and later in the postcolonial global south from India to Ghana. The class ends by contemplating the Green New Deal and the role of central planning in the future of the United States.

Instructor(s): M. Lowenstein Terms Offered: Autumn

Equivalent Course(s): EALC 29430, HIST 29430

GLST 29524. Approaches to World History. 100 Units.

What is world history? This seemingly simple question is a source of great debate, such as the heated responses to the College Board's recent decision to cut material prior to 1450 from AP World History. How we answer it says a great deal about how we view the world and history generally. This course introduces answers to this question by previous scholars and challenges students to assess how these answers relate to their own education and intellectual interests at the University of Chicago. We will touch on major approaches and trends in the growing field of world history, including civilizational studies, the 'great divergence' or 'rise of the West,' world-systems theory, environmental history, 'big history,' and the study of specific people, places, and objects in the context of world history. Students will leave with a solid grounding in one of the most vibrant and contentious fields of history today and a better understanding of the diversity of ways to situate historical narratives and current events into a global perspective.

Instructor(s): D. Knorr Terms Offered: Spring

Equivalent Course(s): HIST 29524

GLST 29525. The Global Life of Things. 100 Units.

We are often told that the market has taken over all aspects of our social lives. The effects of this process can be seen in the financialization of the economy, the deregulation of labor, and the exploitation of natural resources. Goods are produced on one side of the world and consumed in another. Even college students are seen as investments that accrue value. How did this happen? This course will examine the deep history of how so much of the world became commodities. Focusing primarily on the seventeenth to the nineteenth centuries, we will ask how work, time, land, money, and people were commodified. We will also consider how historians and anthropologists have told the history of global capitalism through particular commodities, including sugar, cotton, meat, grain and mushrooms. Readings will span western Europe, India, the Atlantic World, Chicago, and contemporary Japan. Periodically, we will reflect on how these histories bear on questions of labor, gender, and the environment in the present day.

Instructor(s): O. Cussen Terms Offered: Spring
Equivalent Course(s): ENST 29525, HIST 29525

GLST 29526. Politics of Commemoration. 100 Units.

Most of the time we pass in front of the statues, commemorative museums, monuments, and flags that inhabit our cities without noticing them. In recent years, however, they (along with pre-college history curricula) have become controversial across the globe. This course addresses those controversies primarily in Europe and the United States, but also in Latin America, West Africa, and South Africa. Through a series of case studies we will analyze the conditions of the creation of statues, monuments, and museums. Who conceptualized them and lobbied for their creation? Who paid for them? For whom were they originally intended? What message did they convey? What happened over time? How did their message change? Did they provoke controversy at the moment of their planning or inauguration or later and, if so, from whom? Equal attention will be paid to scholars' efforts to address the question of what these commemorative works actually do. If they really become unnoticeable, then why does the threat of their removal so often spark such intense controversy? Assignments: Active participation in class, one secondary text analysis, one analysis of a controversy, and one proposal for a monument, museum, or school curriculum.

Instructor(s): L. Auslander Terms Offered: Spring
Equivalent Course(s): HIST 29421, ARCH 29421, CRES 39421, ENST 29421, HIST 39421, LLSO 29421, CRES 29421, JWSC 29421

GLST 29527. The Spatial History of Nineteenth-Century Cities: Tokyo, London, New York. 100 Units.

The late-nineteenth century saw the transformation of cities around the world as a result of urbanization, industrialization, migration, and the rise of public health. This course will take a spatial history approach; that is, we will explore the transformation of London, Tokyo, and New York over the course of the nineteenth century by focusing on the material 'space' of the city. For example, where did new immigrants settle and why? Why were there higher rates of infectious disease in some areas than in others? How did new forms of public transportation shape the ability to move around the city, rendering some areas more central than others? To explore questions such as these, students will be introduced to ArcGIS in four lab sessions and asked to develop an original research project that integrates maps produced in Arc. No prior ArcGIS experience is necessary, although students will be expected to have familiarity with Microsoft Excel and a willingness to experiment with digital methods. Assignments: Discussion posts, homework (mapping), and a final research project.

Instructor(s): S. Burns Terms Offered: Autumn
Note(s): Making History courses forgo traditional paper assignments for innovative projects that develop new skills with professional applications in the working world. Open to students at all levels, but especially recommended for 3rd- and 4th-yr students.
Equivalent Course(s): ENST 29527, EALC 29527, HIST 39527, HIST 29527, EALC 39527

GLST 29700. Reading/Research: Global Studies. 100 Units.

This is a reading and research course for independent study not related to BA research or BA paper preparation. Note/Prerequisite: College Reading and Research Course form required, along with consent of instructor and program director.

Terms Offered: Autumn Spring Winter

Prerequisite(s): GLST 23101, GLST 23102; consent of instructor and program director

Note(s): Students are required to submit the College Reading and Research Course Form.

GLST 29800. BA Thesis Seminar I. 100 Units.

This weekly seminar, taught by GLST faculty is designed to aid students in their thesis research. Students are exposed to different conceptual frameworks and research strategies. Students must have approved topic proposals and faculty readers to participate in the seminar.

Instructor(s): Larisa Jasarevic, Amy Maclachlan Terms Offered: Autumn

Prerequisite(s): GLST 23101 and GLST 23102

Note(s): Required of students with fourth-year standing who are majoring in Global Studies. Students planning to graduate autumn quarter are not permitted to enroll.

GLST 29801. BA Thesis Seminar II. 100 Units.

This weekly seminar, taught by GLST faculty, offers students continued BA research and writing support. Students present drafts of their work and critique the work of their peers.

Instructor(s): Larisa Jasarevic and Amy Maclachlan Terms Offered: Winter

Prerequisite(s): GLST 29800

Note(s): Required of students with fourth-year standing who are majoring in Global Studies. Students planning to graduate winter quarter are not permitted to enroll.

GLST 29900. BA Thesis: Global Studies. 100 Units.

This is a reading and research course for independent study related to BA research and BA thesis preparation. Note/

Prerequisite: College Reading and Research Course form required, along with consent of instructor and program director.

Prerequisite(s): Consent of instructor and program director

Note(s): Students are required to submit the College Reading and Research Course Form.

Health and Society

Department Website: <https://voices.uchicago.edu/healthandsocietyminor/>

Program of Study

The Health and Society minor explores the social, political, and economic processes that shape individual and population health. Disability, experiences of illness, categories of disorder, ideals of well-being, and models of medical intervention can all vary between cultural settings and across history. Rapid changes in medicine and biotechnology create new understandings and expectations about illness, health, and well-being. At the same time, inequalities in access to care and in health outcomes across populations, in the United States and globally, have become important to conversations in policy and practice alike. At the individual level, how and where one lives may influence a range of conditions and outcomes including mental health, the onset of diabetes, and the length of life. Health is also influenced—in both positive and negative ways—by our relationships and social networks. Finally, people's life chances and health trajectories form within frameworks of health care policy and systems of provision and exposure to environments that reflect historical legacies, economic activity, and political choices. To understand health in its broader contexts, this minor encompasses a range of disciplines and methods in the social sciences, and differential emphases on theory, practice, and policy implications.

A minor in Health and Society will provide a background for medical school, the allied health professions, public health, health policy, health advocacy, the study of law with an emphasis on health, and doctoral work in a range of social science disciplines.

Application to the Health and Society Minor

College students in any field of study may complete a minor in Health and Society. The flexibility of this minor complements majors in any of the disciplines. Students who elect the minor program in Health and Society must contact the program administrator before the end of Spring Quarter of their third year to declare their intention to complete the minor. The program administrator must submit approval on the form provided by the College for the minor to a student's College adviser by the Spring Quarter of a student's third year.

Summary of Minor Requirements

The Health and Society minor requires a total of five courses, including HLTH 17000 Introduction to Health and Society, which provides exposure to a range of approaches and perspectives in the social sciences, and four approved courses designated as counting toward the Health and Society minor. Please see the Approved Courses list below.

HLTH 17000	Introduction to Health and Society	100
or HLTH 17001	Introduction to Health and Society II	
Four electives chosen from the list of Approved Courses *		400
Total Units		500

* Students may only include one of the following methods courses toward the minor: ANTH 21420 Ethnographic Methods, CHDV 20100 Human Development Research Design, CHDV 20101 Applied Statistics in Human Development Research, ECON 21010 Statistical Methods in Economics, PLSC 22913 The Practice of Social Science Research, SOCI 20001 Sociological Methods, SOCI 20004 Statistical Methods of Research, SOSC 20112 Introductory Statistical Methods and Applications for the Social Sciences, or SOSC 20223 Ethnographic Research Methods.

Approved Courses

These courses may be used to satisfy the minor course requirements. Additional approved courses will be updated annually. Please check the Health and Society website (<https://voices.uchicago.edu/healthandsocietyminor/>) for complete listings and for information about current course offerings.

Up to one of the following:

ANTH 21420	Ethnographic Methods	100
CHDV 20100	Human Development Research Design	100
CHDV 20101	Applied Statistics in Human Development Research	100
ECON 21010	Statistical Methods in Economics	100
PLSC 22913	The Practice of Social Science Research	100
SOCI 20001	Sociological Methods	100
SOCI 20004	Statistical Methods of Research	100
SOSC 20112	Introductory Statistical Methods and Applications for the Social Sciences	100
SOSC 20223	Ethnographic Research Methods	100

Any of the following:

ANTH 21333	The Lived Body: Anthropology, Materiality, Meaningful Practice	100
ANTH 21345	Living with Toxins: Anthropology of Environmental Health	100
ANTH 24309	Reproductive Worlds	100

ANTH 24335	Introduction to Medical Anthropology and Critical Studies of Global Health	100
ANTH 24341	Topics in Medical Anthropology	100
ANTH 24352	Health, Value, Politics	100
ANTH 25100	Anthropology of the Body	100
BPRO 22610	Medical Ethics: Who Decides and on What Basis?	100
BPRO 22800	Drinking Alcohol: Social Problem or Normal Cultural Practice?	100
BPRO 28300	Disability and Design	100
BPRO 28900	Inequality: Origins, Dimensions, and Policy	100
CCTS 20400	Health Disparities in Breast Cancer	100
CCTS 21007	Clinical and Health Services Research: Methods and Applications	100
CCTS 21008	Health Systems in Low- and Middle-Income Countries	100
CHDV 20000	Introduction to Human Development	100
CHDV 20440	Inequality, Health and the Life Course	100
CHDV 20805	Body & Soul: The Anthropology of Religion, Health, & Healing	100
CHDV 21500	Darwinian Health	100
CHDV 23204	Medical Anthropology	100
CHDV 23301	Culture, Mental Health, and Psychiatry	100
CHDV 23305	Critical Studies of Mental Health in Higher Education	100
CHDV 23405	Cultural Diversity, Structural Barriers, and Multilingualism in Clinical and Healing Encounters	100
CHDV 23440	Health, Medicine, and Human Rights	100
CHDV 25250	Disability in Local and Global Contexts	100
CHDV 27860	History of Evolutionary Behavioral Sciences	100
CHSS 32000	Introduction to Science Studies	100
ECON 24450	Inequality and the Social Safety Net: Theory, Empirics, and Policies	100
ECON 27720	Economics and Regulation of Health Care Markets: Theory and Empirics	100
GNSE 12103	Treating Trans-: Practices of Medicine, Practices of Theory	100
GNSE 21301	Global Mental Health	100
HIPS 17300	Science, Culture, and Society in Western Civilization I	100
HIPS 17402	Science, Culture, and Society in Western Civilization II: History of Medicine I	100
HIPS 17501	Science, Culture, and Society in Western Civilization III	100
HIPS 29629	Tutorial: Romantic Bodies: Theater in the History of Science and Medicine	100
HIPS 29635	Tutorial: Power and Medicine	100
HIST 20111	History of Death	100
HIST 25308	Lab, Field, and Clinic: History and Anthropology of Medicine and the Life Sciences	100
HIST 29678	History Colloquium: Medicine and Society	100
HLTH 17001	Introduction to Health and Society II	100
HMRT 21403	Health in a Changing America: Social Context and Human Rights	100
KNOW 21408	History of Medicine	100
KNOW 27015	Graphic Medicine	100
KNOW 29901	XCAP: The Experimental Capstone - The Art of Healing: Medical Aesthetics in Russia and the U.S.	100
KNOW 29971	XCAP: The Experimental Capstone - What is an Intervention (for Mental Health)?	100
MAPS 32800	Experiencing Madness: Empathic Methods in Cultural Psychiatry	100
MAPS 36900	Anthropology of Disability	100
PBHS 27450	Social Inequalities in Health: Race/Ethnicity & Class	100
PBHS 28010	Introduction to Health Economics	100
PBHS 30910	Epidemiology and Population Health	100
PBHS 31900	Global Health Metrics	100
PBHS 35100	Health Services Research Methods	100
PBHS 35500	Introduction to U.S. Health Policy and Politics	100
PBPL 26690	The Politics of Health Care	100
PBPL 28925	Health Impacts of Transportation Policies	100
PHIL 21609	Topics in Medical Ethics	100

PPHA 38300	Health Economics and Public Policy	100
PPHA 38310	Healthcare and Healthcare Reform	100
PSYC 21750	Biological Clocks and Behavior	100
PSYC 22350	Social Neuroscience	100
PSYC 22580	Child Development in the Classroom	100
PSYC 23800	Introduction to Learning and Memory	100
RLST 24103	Bioethics	100
RLST 28900	Magic, Science, and Religion	100
SOCI 20001	Sociological Methods	100
SOCI 20004	Statistical Methods of Research	100
SOCI 20107	Sociology of Human Sexuality	100
SOCI 20215	Urban Health	100
SOCI 20275	Sociology of Health and Aging	100
SOCI 28080	Sociology of Medicine	100
SOSC 18100	Topics in Behavioral and Social Sciences Relevant to Medicine	100

Advising and Grading

Students who elect the minor program in Health and Society must meet with the program director before the end of Spring Quarter of their third year to declare their intention to complete the minor. The director's approval for the minor program should be submitted to a student's College adviser by the Spring Quarter of a student's third year.

Courses in the minor may not be double counted with the student's major(s), other minors, or general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

History

Department Website: <https://history.uchicago.edu/content/undergraduate-programs> (<https://history.uchicago.edu/content/undergraduate-programs/>)

Program of Study

For decades the University of Chicago has been a leader in the study of history, through its pioneering civilization studies programs, its intensive research-based undergraduate curriculum, and its training of academic historians as both researchers and teachers. Majoring in history not only enables you to become a consumer of academic knowledge, it also prepares you to become a producer of knowledge. Undergraduate history courses first train you to explore large-scale social, cultural, and political processes by defining concrete, researchable questions. Subsequently, as a history major, you are taught how to locate the primary and secondary sources necessary to develop answers to these questions. Finally, faculty assist you in transforming your research into historical arguments that shed light on the multiple ways in which our world, our very reality, has transformed over time. History is excellent preparation for a wide field of endeavors—from law, government, and public policy to the arts and business.

Students interested in a history major should consult the associate director before the end of their second year; it is, however, possible to join the major as a third-year student.

Program Requirements

In addition to the civilization sequences, students can choose from more than eighty history courses that are offered each year to undergraduates. Some of these are introductory lectures ('Gateway courses'), others are small seminars devoted to the intense study of a particular historical moment, theme, or event. Students must take twelve courses for the history major.

Courses without a HIST number may be used only with departmental permission; students should submit a petition before the end of Winter Quarter of the fourth year to the associate director to have them considered (see Petitioning for Outside Credit). Students may use one civilization sequence (up to three courses in the same sequence) to count toward history major requirements, but only if these courses are not also being used to count toward general education requirements.

History majors currently have the option of pursuing one of two tracks: the Regular Track or the Research Track. Beginning with the Class of 2021, history majors will have the choice of three tracks: the Colloquium Track, the Capstone Track, and the BA Thesis Track. The Class of 2020 is not affected by this change.

Class of 2020 Requirements

Regular Track

Six courses in a major field	600
Six electives	600
One of the twelve courses above must be a Research Colloquium (HIST 29600s)	
Total Units	1200

Research Track

Six courses in a major field	600	
Four electives	400	
One of the ten courses above must be a Research Colloquium (HIST 29600s) §		
HIST 29801	BA Thesis Seminar I	100
HIST 29802	BA Thesis Seminar II	100
Total Units		1200

§ Students on the Research Track should complete their Research Colloquium before Spring Quarter of their third year.

Students wishing to pursue the Research Track must officially declare their intention to do so with the associate director by sixth week of Winter Quarter during their third year. Only students in the Research Track are eligible for honors.

Classes of 2021+ Requirements

Colloquium Track

Six courses in a major field	600	
Five electives	500	
One of the eleven courses above must be a Research Colloquium (HIST 29600s)§		
HIST 29803	Historiography	100
Total Units		1200

Capstone Track

Six courses in a major field	600	
Four electives	400	
One of the ten courses above must be a Research Colloquium (HIST 29600s)§		
HIST 29803	Historiography	100
HIST 29804	Capstone Seminar (Autumn)	100
Total Units		1200

BA Thesis Track

Six courses in a major field		600
Three electives		300
One of the nine courses above must be a Research Colloquium (HIST 29600s) §		
HIST 29803	Historiography	100
HIST 29801	BA Thesis Seminar I	100
HIST 29802	BA Thesis Seminar II	100
Total Units		1200

§ Students on the BA Thesis Track should complete their Research Colloquium before Spring Quarter of their third year.

Students wishing to pursue the Capstone Track or the BA Thesis Track must officially declare their intention to do so with the associate director by sixth week of Winter Quarter during their third year. Only students in the BA Thesis Track are eligible for honors.

Major Field

Students in all tracks are required to take six courses in, or directly related to, their chosen main field. Students construct the main field and choose their other courses in close consultation with the associate director, subject to final approval by the faculty chair of the Undergraduate Studies Committee.

The major field is usually defined by time and space. Examples are nineteenth- or twentieth-century US history, colonial Africa, the Atlantic world in the early modern or modern period, ancient Greece, or medieval Europe. Thematic major fields are also possible: for example, African American, Jewish, or gender history. Major fields may also be methodologically defined: for example, intellectual, economic, gender, political, or urban history. Students pursuing a major field in urban history might take courses ranging from 'Rome: The Eternal City' to 'Cities from Scratch: The History of Urban Latin America'; a focus on economic history might include 'Economic Change in China' and 'The History of US Capitalism.' In the case of thematically or methodologically defined major fields, it is particularly important to consult closely with the associate director to ensure coherence.

Electives

In addition to the six courses in the main field, students must also take a number of elective courses, which vary by track (see the summaries of requirements above). Electives should complement the main field, extend the range of your historical awareness, and explore varying approaches to historical analysis and interpretation. You are encouraged to take courses that introduce significant civilizational or chronological breadth into your studies, or a different methodology or theme than you are studying in your major field.

Research Colloquium (HIST 29600s)

Students who major in history must take at least one history colloquium, though they are welcome to take more than one. Depending on the topic, the colloquium may count as one of the six courses comprising the student's major field or as one of the history electives, depending on the relevance of the colloquium to the student's major field. Students interested in pursuing the Research/BA Thesis Track should take a colloquium prior to Spring Quarter of their third year, while those pursuing other tracks can take a colloquium at any point prior to graduation. The colloquia are offered on a variety of topics each year and enable advanced College students to pursue research projects.

These courses expose students to the methods and practice of historical research and writing. Students are required to compose an original research paper that is at least fifteen pages in length. For students who are planning to begin graduate study the year following graduation, the colloquium provides them with the opportunity to produce a writing sample based on primary sources that they can use for their applications.

Historiography (HIST 29803)

Beginning with the Class of 2021, all majors are required to take HIST 29803 Historiography. This course provides disciplinary training for majors and will be offered at least twice each academic year to ensure students are able to fulfill the requirement. It is recommended that students pursuing the Capstone Track or Research/BA Thesis Track take this course by the end of their third year. The Class of 2020 is not affected by this change.

Track Options

Regular Track (Class of 2020)/Colloquium Track (Classes of 2021+)

Students in the Class of 2020 who choose the Regular Track are required to complete twelve courses: six in a major field, and six electives. Students in the Classes of 2021+ also complete twelve courses: six in a major field, five electives, and Historiography. The Research Colloquium may count toward either the major field or the electives. These tracks are designed for students with broad-ranging interests who want to take more electives. These tracks also offer greater flexibility to take the Research Colloquium at any time before graduation.

Capstone Track

Students who choose the Capstone Track are required to complete twelve courses: six in a major field, four electives, Historiography, and one Capstone Seminar. The Research Colloquium may count toward either the major field or the electives. Capstone Track students develop and carry out an original research project that does not take the form of a BA thesis. This Capstone project allows students to draw on innovative trends within the historical discipline, such as digital history, spatial history, and public history. Projects such as a podcast, an online exhibit, or a documentary 'short' will cultivate new skills as well as new modes of communication and presentation with an eye to engaging wider audiences for students' scholarship.

Capstone Seminar (HIST 29804)

The Capstone Seminar is a one-quarter course spread out over Autumn and Winter Quarters of the fourth year. Like in the BA Thesis Track, students find and research a historical topic they find compelling, but Capstone students also determine and create the form in which they want to explore it. The seminar encourages students to think in the broadest possible terms about what form this project might take, by introducing them to historians and organizations that work in public history, documentary filmmaking, podcasts, museums, data, etc. The seminar will then guide students in the development of their individual Capstone projects.

Research Track (Class of 2020)

Students admitted to the Research Track are required to complete twelve courses for the major: six in a major field, four electives, and two BA seminars. The Research Colloquium may count toward either the major field or the elective field requirement. Students planning to pursue graduate study in history or those wishing to go into a research-intensive career, such as journalism, law, or policy analysis, are encouraged to pursue the Research Track.

BA Thesis Track (Classes of 2021+)

Students admitted to the BA Thesis Track are required to complete twelve courses for the major: six in a major field, three electives, Historiography, and two BA seminars. The Research Colloquium may count toward either the major field or the elective field requirement. Students planning to pursue graduate study in history or those wishing to go into a research-intensive career, such as journalism, law, or policy analysis, are encouraged to pursue the BA Thesis Track.

BA Thesis Seminars (HIST 29801 and HIST 29802)

With the approval of the faculty chair of the Undergraduate Studies Committee, the committee places students into a Spring Quarter BA thesis seminar before the end of Winter Quarter. In the seminar students develop a research proposal, which they submit at the end of Spring Quarter.

Students pursuing the Research/BA Thesis Track are required to take two BA thesis seminars and complete a BA thesis. The BA thesis is a three-quarter-long research project in which students develop a significant and original interpretation of a historical issue of their choosing. These are the culmination of the history program and range from forty to sixty pages in length. The BA thesis seminars assist students in formulating approaches and developing their research and writing skills, while providing a forum for group discussion and critiques.

Students formally register for two quarters, during the Spring Quarter of their third year (HIST 29801 BA Thesis Seminar I) and Winter Quarter of their fourth year (HIST 29802 BA Thesis Seminar II), though they are also expected to be actively engaged during the intervening Autumn Quarter. Students who are out of residence in Spring Quarter of their third year take BA Seminar I in Autumn Quarter of their fourth year (see Study Abroad below). BA Thesis Seminar I meets weekly in the Spring Quarter of the third year, but only every other week during the autumn and winter terms of the fourth year. Throughout the period of researching and writing the thesis, students benefit from the company of their peers and the guidance of their preceptor. A preceptor is an advanced history graduate student who serves as the seminar instructor and as the second reader of the thesis. The student must receive a B grade in BA Seminar I to continue in the Research/BA Thesis Track and enroll in BA Seminar II.

BA Thesis

The deadline for submission of the BA thesis is the second Friday of Spring Quarter. Students who wish to complete their papers in a quarter other than Spring Quarter must petition the department through the associate director. Students graduating in a quarter other than Spring Quarter must turn in their theses by Friday of seventh week of their final quarter. When circumstances justify, the department establishes individual deadlines and procedures.

With approval from the undergraduate faculty chairs in two departments, history students may be able to write a BA thesis that meets requirements for a dual major. Students must consult with both chairs before the end of Spring Quarter of their third year. A consent form, to be signed by both chairs, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Application to Research, Capstone, or BA Thesis Track

Students wishing to pursue one of these tracks must submit a major form indicating their plans as well as a short description of their proposed Capstone or BA thesis topic to the associate director by sixth week of Winter Quarter during their third year.

Students are eligible to apply for funding for summer research from the Department of History and the PRISM (Planning Resources and Involvement for Students in the Majors) program. Students are also encouraged to take advantage of funding that is available for language study abroad through the Foreign Language Acquisition Grant (FLAG) program. For details on available funding, students should consult the associate director.

Other Course Information

Course Numbering

History courses numbered 10000 to 29999 are intended primarily for College students; 10000-level courses are introductory. Some 20000-level courses have 30000-level equivalents when they are open to graduate students. To register for 20000/30000 cross-listed courses, undergraduates must use the undergraduate number (20000). History courses numbered 40000 to 49999 are intended primarily for graduate students, but are open to advanced College students with the consent of the instructor. Undergraduates registered for 40000-level courses are held to the graduate-level requirements.

Reading and Research Courses

Students interested in pursuing a program of study that cannot be met by means of regular courses have the option of devising a reading and research course (HIST 29700 Readings in History) that is taken individually and supervised by a member of the Department of History faculty. Such a course requires the approval of the associate director and the prior consent of the instructor with whom the student would like to study. Note: Enrollment in HIST 29700 is open only to students who are doing independent study that is not related to the research or writing of the BA thesis. As a general rule, only one reading and research course can be counted towards the history major.

Petitioning for Outside Credit

The Department of History offers a wide variety of courses each quarter, and majors are strongly encouraged to take history courses to fulfill the requirements of the major. In some instances, courses that originate outside the department can be used to fulfill the course requirements of the major. To receive history credit for nondepartmental courses, you must petition the Undergraduate Studies Committee for approval. A few things to keep in mind:

- Petitions must include a course description, a syllabus, and a statement of purpose that addresses the value of the course for your proposed course of study.
- Students should submit a petition before the end of Winter Quarter of the fourth year to the associate director.
- Courses taken abroad may also be used towards the major, pending approval of the petition, however more than half of the requirements for the major must be met by registering for courses bearing University of Chicago course numbers.
- Petitions for courses abroad must include course syllabi, descriptions, and course work.
- Generally, no more than two petitions per student will be approved.
- Documentation of approved petitions must be provided to the College adviser in a timely fashion for processing.

Grading

Courses counting towards the history major are normally taken for quality grades. The History Research Colloquium (HIST 29600s), HIST 29801 BA Thesis Seminar I, and HIST 29802 BA Thesis Seminar II must be taken for quality grades. In exceptional circumstances, students who are majoring in history may petition to allow a course taken for a pass/fail grade to count towards the requirements of the major. Students wishing to do so should consult with the associate director. A pass grade is to be given only for work of C- quality or higher. Students should also consult with their College adviser about the appropriateness of pass/fail grading options in their larger program of study.

Honors

Students pursuing the Research/BA Thesis Track who have done exceptionally well in their course work and have written an outstanding BA thesis are recommended for honors. Candidates must have an overall GPA of 3.0 or higher and a GPA of 3.7 or higher in the twelve courses counting towards the major. Readers submit BA theses for departmental honors that they judge to be of particular distinction. If the department concurs, the student is awarded honors. Students who fail to meet the deadline for submission of the BA thesis are not eligible for honors consideration.

Double Major

Students planning to double major in history and another discipline are encouraged to do so, with the following stipulations:

- Double counting: Courses that are cross-listed with another department may be used for both majors.
- BA thesis and seminar: Double majors pursuing the Research Track must fulfill the requirements pertaining to the BA thesis, including taking part in the BA seminar.

Minor in History

Students specializing in all disciplines are welcome to minor in history. Majors in such fields as global studies, political science, public policy studies, economics, and philosophy find that a history minor complements their major by providing a historical understanding of social, cultural, political, and economic issues, while those majoring in such disciplines as mathematics and the sciences use the minor to explore a different area of interest and to develop their humanistic understanding of the world. Students may choose to take courses in a variety of fields, time periods, and thematic topics, with the aim of developing a broad understanding of historical change across time and space, or they may choose to focus specifically on a more narrowly defined field of interest.

Students wishing to pursue the minor should contact the associate director and complete the minor declaration form no later than the end of the third year. The associate director's approval for the minor program should be submitted to a student's College adviser by the deadline above on a form obtained from the adviser.

Requirements

The history minor requires a total of six courses chosen in consultation with the associate director. All minors beginning with the Class of 2021 are required to take HIST 29803 Historiography, as one of their six courses. Courses in the minor (1) may not be double counted with the student's major(s) or with other minors; (2) may not be counted toward general education requirements; (3) may not be petitioned in from other departments; (4) must be taken for quality grades; and (5) must consist of more than half of the courses bearing University of Chicago course numbers.

Study Abroad

The Department of History strongly supports study abroad. The course work requirements have been arranged to make this possible, but prior planning is required, especially for those pursuing the Research Track. If at all possible, it is best to study abroad during Autumn and/or Winter Quarters of the third year. However, if a full-year study abroad experience is desired, that is still compatible with the Research/BA Thesis Track. One section of the BA seminar (combining requirements of BA Seminar I and II in an accelerated manner) meets in Autumn Quarter to accommodate fourth-year students who have been abroad third year; these students register for BA Seminar II with the rest of their third-year cohort. All Research/BA Thesis Track history majors are required to be on campus for Autumn and Winter Quarters of their fourth year in order to complete the BA thesis.

History Courses

HIST 10101-10102-10103. Introduction to African Civilization I-II-III.

African Civilization introduces students to African history in a three-quarter sequence. Taking these courses in sequence is recommended but not required; this sequence meets the general education requirement in civilization studies.

HIST 10101. Introduction to African Civilization I. 100 Units.

Part one considers literary, oral, and archeological sources to investigate African societies and states from the early Iron Age through the emergence of the Atlantic World. We will study the empires of Ghana and Mali, the Swahili Coast, Great Zimbabwe, and medieval Ethiopia. We will also explore the expansion of Islam, the origins and effects of European contact, and the trans-Atlantic slave trade.

Instructor(s): E. Osborn Terms Offered: Autumn

Equivalent Course(s): ANTH 20701, MDVL 10101, CRES 20701

HIST 10102. Introduction to African Civilization II. 100 Units.

Part two examines the transformations of African societies in the long nineteenth century. At the beginning of the era, European economic and political presence was mainly coastal, but by the end, nearly the entire continent was colonized. This course examines how and why this occurred, highlighting the struggles of African societies to manage internal reforms and external political, military, and economic pressures. Topics include the Egyptian conquest of Sudan, Omani colonialism on the Swahili coast, Islamic reform movements across the Sahara, and connections between the end of the transatlantic slave trade and the formal colonization of the African continent. Students will examine memoirs of African soldiers, religious texts, colonial handbooks, and visual and material sources, including ethnographic artifacts, photographs, and textiles. Assignments: team projects, document and material analyses, response papers, essays, and written exams. The course will equip students with a working knowledge of the struggles that created many of the political and social boundaries of modern Africa.

Instructor(s): K. Hickerson Terms Offered: Winter

Equivalent Course(s): CRES 20802, ANTH 20702

HIST 10103. Introduction to African Civilization III. 100 Units.

Part three uses anthropological perspectives to investigate colonial and postcolonial encounters in sub-Saharan Africa, with a particular focus on Southern Africa. The course is centered on the twentieth and twenty-first centuries. It begins with an examination of colonialism, the institutionalization of racism, and dispossession, before examining anti-colonialism and the postcolonial period. The class draws on scholarship on and by African writers: from poets to novelists, ethnographers, playwrights, historians, politicians, political theorists, and social critics. Over the course of the quarter, students will learn about forms of person-hood, subjectivity, gender, sexuality, kinship practices, governance, migration, and the politics of difference.

Instructor(s): K. Takabvirwa Terms Offered: Spring

Equivalent Course(s): ANTH 20703, CRES 20303

HIST 10800-10900. Introduction to the Civilizations of South Asia I-II.

This sequence introduces core themes in the formation of culture and society in South Asia from the early modern period until the present. This sequence meets the general education requirement in civilization studies. These courses must be taken in sequence.

HIST 10800. Introduction to the Civilizations of South Asia I. 100 Units.

The first quarter focuses on Islam in South Asia, Hindu-Muslim interaction, Mughal political and literary traditions, and South Asia's early encounters with Europe.

Instructor(s): M. Alam Terms Offered: Winter

Equivalent Course(s): ANTH 24101, MDVL 20100, SALC 30100, SOSC 23000, SALC 20100

HIST 10900. Introduction to the Civilizations of South Asia II. 100 Units.

The second quarter analyzes the colonial period (i.e., reform movements, the rise of nationalism, communalism, caste, and other identity movements) up to the independence and partition of India.

Instructor(s): Dipesh Chakrabarty Terms Offered: Spring

Prerequisite(s): SALC 20100, ANTH 24101, HIST 10800, SASC 20000, SOSC 23000

Equivalent Course(s): ANTH 24102, SOSC 23100, SALC 20200

HIST 11301. Global British Empire to 1784: War, Commerce, and Revolution. 100 Units.

This course traces the origins, development, and revolutionary transformation of the British Empire. Students will explore the English Civil War, King Philip's War, Bacon's Rebellion, the development of slavery, the Revolution of 1688, the making of British India, the rise of Irish discontent, the Scottish Jacobite Rebellions, the causes of the American Revolution, and the transformation of the British Empire into an authoritarian state. Students will read selections from Locke, Defoe, Swift, Franklin, Burke, and many others.

Instructor(s): S. Pincus Terms Offered: Winter

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): LLSO 21301

HIST 12001. Medieval History: Theories & Methods. 100 Units.

This course will introduce students to research methods and historical theories that are central to the field of medieval European history (500-1500 AD). The first section of the course is designed to give students a grounding in some of the most important historical narratives (political, social, economic, religious, intellectual, cultural) about the medieval period. Students will then spend the middle weeks of the quarter exploring the different types of original sources (written and non-written) that historians use to conduct research on the Middle Ages. This section of the course will include class time at the Regenstein Library's Special Collections Research Center. In the final weeks, we will concentrate on some of the scholarly debates that have shaped the modern field of medieval history. Grades will be determined on the basis of a midterm exam, a final exam, two short papers, and classroom discussion.

Instructor(s): J. Lyon Terms Offered: Autumn

Note(s): No prior knowledge of medieval European history is required; the course is open to all undergraduates.

Equivalent Course(s): MDVL 12001

HIST 12203. Italian Renaissance: Petrarch, Machiavelli, and the Wars of Popes and Kings. 100 Units.

Florence, Rome, and the Italian city-states in the age of plagues and cathedrals, Petrarch and Machiavelli, Medici and Borgia (1250-1600), with a focus on literature, philosophy, primary sources, the revival of antiquity, and the papacy's entanglement with pan-European politics. We will examine humanism, patronage, politics, corruption, assassination, feuds, art, music, magic, censorship, education, science, heresy, and the roots of the Reformation. Writing assignments focus on higher level writing skills, with a creative writing component linked to our in-class role-played reenactment of a Renaissance papal election (LARP). This is a History Department Gateway course. First-year students and non-History majors welcome.

Instructor(s): A. Palmer Terms Offered: Spring

Prerequisite(s): Graduate students by consent only; register for the course as HIST 90000 (sect 53) Reading and Research: History.

Note(s): History Gateways are introductory courses meant to appeal to first- through third-year students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): MDVL 12203, CLCV 22216, SIGN 26034, FNDL 22204, ITAL 16000, KNOW 12203, RLST 22203

HIST 12700-12800. Music in Western Civilization I-II.

This two-quarter sequence explores musical works of broad cultural significance in Western civilization. We study pieces not only from the standpoint of musical style but also through the lenses of politics, intellectual history, economics, gender, cultural studies, and so on. Readings are taken both from our music textbook and from the writings of a number of figures such as St. Benedict of Nursia and Martin Luther. In addition to lectures, students discuss important issues in the readings and participate in music listening exercises in smaller sections.

HIST 12700. Music In Western Civilization I: To 1750. 100 Units.

This course, part of the Social Sciences Civ core, looks at musics in different moments of Euro-American history and the social contexts in which they originated, with some comparative views on other world traditions. It aims to give students a better understanding of the social contexts of European music over this period; aids for the basic sound structures of pieces from these different moments; and convincing writing in response to prompts based on source readings or music pieces. Our first quarter (MUS 12100 etc.) spans roughly the period between Charlemagne's coronation as Holy Roman Emperor (800 CE) and the dissolution of the Empire (1806) with the triumph of Napoleon across Western Europe.

Instructor(s): R. Kendrick Terms Offered: Autumn

Note(s): Prior music course or ability to read music not required. Students must confirm enrollment by attending one of the first two sessions of class. This two-quarter sequence meets the general education requirement in civilization studies; it does not meet the general education requirement in the arts.

Equivalent Course(s): SOSC 21100, MUSI 12100

HIST 12800. Music In Western Civ II. 100 Units.

This course, part of the Social Sciences Civ core, looks at musics in different moments of Euro-American history and the social contexts in which they originated, with some comparative views on other world traditions. It aims to give students a better understanding of the social contexts of European music over this period; aids for the basic sound structures of pieces from these different moments; and convincing writing in response to prompts based on source readings or music pieces. Our second quarter (MUS 12200 etc.) runs from the beginning of European Romanticism around 1800 to the turn of the 21st century.

Terms Offered: Winter

Note(s): Prior music course or ability to read music not required. Students must confirm enrollment by attending one of the first two sessions of class. This two-quarter sequence meets the general education requirement in civilization studies; it does not meet the general education requirement in the arts.

Equivalent Course(s): MUSI 12200, SOSC 21200

HIST 13001-13002-13003. History of European Civilization I-II-III.

Has Europe ever been civilized? This sequence, which satisfies the general education requirement in civilization studies, invites students to discuss the simultaneously creative and destructive forces inherent in centuries of European history. While resisting shallow critiques and caricatures of Europe's role in the world, students examine in depth major themes in the history of European ideas about civilization, including the interplay of faith, reason, and secularism; the individual, family, and mass society; and monarchy, revolution, and democracy. Students not only grapple with big questions and transformative ideas but also consider unique perspectives and ordinary people by reading a variety of different kinds of historical evidence. The sequence provides students with foundational skills and knowledge for the University of Chicago general education core curriculum more broadly, which owes much of its intellectual project to European ideas of knowledge and education. In keeping with the traditions of the core curriculum, students contextualize and interrogate sources in small, rigorous, and textually immersive classes. Learn to think historically! There are three parts to this sequence. Parts I and II cover the period from approximately the fall of Rome to the present and should be taken in sequence in the Autumn-Winter or Winter-Spring Quarters. The optional Part III treats specialized topics in greater depth in the Spring Quarter.

HIST 13001. History of European Civilization I. 100 Units.

The first part of the sequence examines the period from approximately 500 to 1700 in European history. It challenges students to question two-dimensional, rigid narratives about the fall of Rome, the Dark Ages, the Renaissance and Reformation, and the early Enlightenment by reading historical sources with empathy and attention to their authors' own perspectives. For example, we explore the entanglement of the political, economic, and religious by reading a chronicle written by a monk; we examine gender relations and daily life by reading men's and women's personal letters; and we investigate the earliest contacts between Europeans and the peoples of the Americas by reading eyewitness accounts of their interactions. In the process of recovering the lived experiences of medieval and early modern Europeans, the course engages with the sophisticated societies and cultures of premodern Europe, which many subsequent generations post-1700 would come to label backwards and uncivilized.

Instructor(s): Staff Terms Offered: Autumn Winter

Prerequisite(s): Students must take a minimum of two quarters of European Civilization to fulfill the general education requirement; register for the same section each quarter.

HIST 13002. History of European Civilization II. 100 Units.

The second part of the sequence examines the period from approximately 1700 to the present in European history. Major topics include the Enlightenment, the French Revolution, industrialization, the world wars, and the European Union. This course challenges students to do more than simply define conceptual terms like imperialism, nationalism, liberalism, capitalism, and communism. We situate these and other grand narratives in new ideas of progress, new technologies and forms of knowledge production, and the material transformations of everyday life. Changes in media (newspapers, radio, films, etc.) and the rise of mass production and consumption in these centuries were both the cause and effect of many of the events we will be discussing. Sources include nineteenth-century novels, eyewitness accounts to revolution and the Holocaust, and speeches and manifestos of the political and cultural avant-garde. Throughout the course, we will continuously examine the paradoxes that have shaped modern Europe: its resilience and fragility, its great experiments in liberty and tragic acts of violence.

Instructor(s): Staff Terms Offered: Spring Winter

Prerequisite(s): HIST 13001

HIST 13003. History of European Civilization III. 100 Units.

Students who plan to complete a three-quarter sequence register for HIST 13003 in Spring Quarter after completing HIST 13001-13002. In the third part of the History of European Civilization sequence, students will have the opportunity to explore in greater depth a particular aspect of European history. Topics in recent years have included 'The Enlightenment: Foundations and Interpretations,' 'Women, Piety, and Heresy in Premodern Europe,' 'Crusades: History and Imagination,' 'Crossing the Channel: England and France,' and 'Church and State in European History.' Students should refer to <https://history.uchicago.edu/content/courses> for course titles and topic descriptions.

Instructor(s): A. Locking Terms Offered: Spring

Prerequisite(s): For the 3-qtr sequence register for HIST 13003 after completing HIST 13001-13002. Only HIST 13001-13002 complete the 2-qtr sequence.

Note(s): Students may not combine HIST 13003 with one other quarter of European Civilization to fulfill the general education requirement. Spring 2021 topics: (section 1) Women, Piety, and Heresy in Premodern Europe; (section 2) Crossing the Channel: England and France

HIST 13100-13200-13300. History of Western Civilization I-II-III.

Available as a three-quarter sequence (Autumn-Winter-Spring) or as a two-quarter sequence (Autumn-Winter or Winter-Spring). This sequence meets the general education requirement in civilization studies. The purpose of this sequence is threefold: (1) to introduce students to the principles of historical thought, (2) to acquaint them with some of the more important epochs in the development of Western civilization since the sixth century BC, and (3) to assist them in discovering connections between the various epochs. The purpose of the course is not to present a general survey of Western history. Instruction consists of intensive investigation of a selection of original documents bearing on a number of separate topics, usually two or three a quarter, occasionally supplemented by the work of a modern historian. The treatment of the selected topics varies from section to section. This sequence is currently offered twice a year. The amount of material covered is the same whether the student enrolls in the Autumn-Winter-Spring sequence or the Summer sequence.

HIST 13100. History of Western Civilization I. 100 Units.

This sequence fulfills the general education requirement in civilization studies. The purpose of this three-course sequence is (1) to introduce students to the principles of historical thought and to provide them with the critical tools for analyzing texts produced in the distant or near past, (2) to acquaint them with some of the more important epochs in the development of European civilization since the sixth century B.C.E, and (3) to assist them in discovering the developmental connections between these various epochs. 13100: The first course focuses on the history of Classical civilization, beginning with the world of Homer and ending with the world of St. Augustine. The sequence does not present a general survey of European history, but rather undertakes an intensive investigation of original documents bearing on a number of discrete topics in European civilization (e.g., the Roman Republic, or the origins of the First World War). These original documents are contained in the nine-volume series published by The University of Chicago Press, The University of Chicago Readings in Western Civilization. The course also draws on supplementary materials from the work of modern historians. This sequence fulfills the general education requirement in civilization studies. Students should log on to <https://canvas.uchicago.edu/> and check the page for this course for the first day's reading assignment; you will be expected to be prepared.

Instructor(s): K. Weintraub, Autumn; J. Boyer, Summer Terms Offered: Autumn Summer

Prerequisite(s): These courses must be taken in sequence.

HIST 13200. History of Western Civilization II. 100 Units.

This sequence fulfills the general education requirement in civilization studies. The purpose of this three-course sequence is (1) to introduce students to the principles of historical thought and to provide them with the critical tools for analyzing texts produced in the distant or near past, (2) to acquaint them with some of the more important epochs in the development of European civilization since the sixth century B.C.E, and (3) to assist them in discovering the developmental connections between these various epochs. 13200: The second course explores major themes in the Middle Ages, the Renaissance, and the Reformation. The sequence does not present a general survey of European history, but rather undertakes an intensive investigation of original documents bearing on a number of discrete topics in European civilization (e.g., the Roman Republic, or the origins of the First World War). These original documents are contained in the nine-volume series published by The University of Chicago Press, The University of Chicago Readings in Western Civilization. The course also draws on supplementary materials from the work of modern historians. This sequence fulfills the general education requirement in civilization studies. Students should log on to <https://canvas.uchicago.edu/> and check the page for this course for the first day's reading assignment; you will be expected to be prepared.

Instructor(s): K. Weintraub, Winter, Summer Terms Offered: Summer Winter

Prerequisite(s): These courses must be taken in sequence.

HIST 13300. History of Western Civilization III. 100 Units.

This sequence fulfills the general education requirement in civilization studies. The purpose of this three-course sequence is (1) to introduce students to the principles of historical thought and to provide them with the critical tools for analyzing texts produced in the distant or near past, (2) to acquaint them with some of the more important epochs in the development of European civilization since the sixth century B.C.E, and (3) to assist them in discovering the developmental connections between these various epochs. 13300: The third course undertakes a detailed study of the French Revolution and charts the rise of liberal, anti-liberal, and post-liberal states and societies in nineteenth- and twentieth-century European history. The sequence concludes with an appraisal of the condition of European politics, culture, and society at the end of the twentieth century. The sequence does not present a general survey of European history, but rather undertakes an intensive investigation of original documents bearing on a number of discrete topics in European civilization (e.g., the Roman Republic, or the origins of the First World War). These original documents are contained in the nine-volume series published by The University of Chicago Press, The University of Chicago Readings in Western Civilization. The course also draws on supplementary materials from the work of modern historians.

This sequence fulfills the general education requirement in civilization studies. Students should log on to <https://canvas.uchicago.edu/> and check the page for this course for the first day's reading assignment; you will be expected to be prepared.

Instructor(s): K. Weintraub, Spring; D. Koehler, Summer Terms Offered: Spring Summer

Prerequisite(s): These courses must be taken in sequence.

HIST 13500-13600-13700. America in World Civilization I-II-III.

The America in World Civilization sequence is nothing like your high school history class, for here we examine America as a contested idea and a contested place by reading and writing about a wide array of primary sources. In the process, students gain a new sense of historical awareness and of the making of America. The course is designed both for history majors and non-majors who want to deepen their understanding of the nation's history, encounter some enlightening and provocative voices from the past, and develop the qualitative methodology of historical thinking. It is recommended that students take this course in chronological sequence: HIST 13500-13600 (I and II) or HIST 13600-13700 (II and III). This sequence meets the general education requirement in civilization studies.

HIST 13500. America In World Civilization I. 100 Units.

America in World Civilization I examines foundational texts and moments in American culture, society, and politics, from early European incursions into the New World through the early republic of the United States, roughly 1500-1800. We will examine encounters between Native Americans and representatives of imperial powers (Spain, France, and England) as well as the rise of African slavery in North America before 1700. We will consider the development of Anglo-American society and government in the eighteenth century, focusing especially on the causes and consequences of the American Revolution.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): It is recommended that students take this course in chronological sequence: HIST 13500–13600 (I and II) or HIST 13600–13700 (II and III).

HIST 13600. America in World Civilization II. 100 Units.

The nineteenth-century segment of America in World Civilizations asks: What happens when democracy confronts inequality? We focus on themes that include indigenous-US relations; religious revivalism and reform; slavery, the Civil War, and emancipation; the intersection between women's rights and antislavery; the development of industrial capitalism; urbanism and social inequality.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): It is recommended that students take this course in chronological sequence: HIST 13500–13600 (I and II) or HIST 13600–13700 (II and III).

HIST 13700. America in World Civilization III. 100 Units.

The third quarter America in World Civilization focuses on multiple definitions of Americanism in a period characterized by empire, transnational formations, and America's role in the world. We explore the construction of social order in a multicultural society; culture in the shadow of war; the politics of race, ethnicity, and gender; the rise and fall of new social movements on the left and the right; the emergence of the carceral state and militarization of civil space; and the role of climate change and the apocalyptic in shaping imagined futures.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): It is recommended that students take this course in chronological sequence: HIST 13500–13600 (I and II) or HIST 13600–13700 (II and III).

HIST 13900-14000-14100. Introduction to Russian Civilization I-II-III.

This three-quarter sequence, which meets the general education requirement in civilization studies, provides an interdisciplinary introduction to Russian civilization.

HIST 13900. Introduction to Russian Civilization I. 100 Units.

The first quarter covers the ninth century to the 1870s; the second quarter continues on through the post-Soviet period. Working closely with a variety of primary sources—from oral legends to film and music, from political treatises to literary masterpieces—we will track the evolution of Russian civilization over the centuries and through radically different political regimes. Topics to be discussed include the influence of Byzantine, Mongol-Tataric, and Western culture in Russian civilization; forces of change and continuity in political, intellectual and cultural life; the relationship between center and periphery; systems of social and political legitimization; and symbols and practices of collective identity.

Instructor(s): E. Gilburd, W. Nickell Terms Offered: Autumn

Note(s): Taking these courses in sequence is recommended but not required.

Equivalent Course(s): SOSC 24000, REES 26011

HIST 14000. Introduction to Russian Civilization II. 100 Units.

The second quarter continues on through the post-Soviet period. Working closely with a variety of primary sources—from oral legends to film and music, from political treatises to literary masterpieces—we will track the evolution of Russian civilization over the centuries and through radically different political regimes. Topics to be discussed include the influence of Byzantine, Mongol-Tataric, and Western culture in Russian civilization; forces of change and continuity in political, intellectual and cultural life; the relationship between center and periphery; systems of social and political legitimization; and symbols and practices of collective identity.

Instructor(s): E. Gilburd, R. Bird Terms Offered: Winter

Note(s): Taking these courses in sequence is recommended but not required.

Equivalent Course(s): SOSC 24100, REES 26012

HIST 14100. Introduction to Russian Civilization III. 100 Units.

The third quarter of Russian Civilization is a new (2020) addition to the curriculum. When taken following Introduction to Russian Civilization I and II, Introduction to Russian Civilization III meets the general education requirement in Humanities, Civilization Studies, and the Arts. The course is thematic and will vary from year to year. In spring 2021 this course will explore the nature of state socialism, or 'communism'-the political and economic system that governed

much of the world's population during the twentieth century-and the transition from that system to alternative modes of governance. Course material will emphasize the experience of the (former) Soviet Union and Eastern Europe, where communism as a system has disappeared most completely, but many of the lessons of transition apply also to China, Vietnam, North Korea, and Cuba. A nontrivial portion of the course covers the nature of communism, as both the tasks and obstacles of transition are determined in part by the character of the previous system. However, the bulk of the material addresses postcommunist policies, institutions, and outcomes.

Instructor(s): S. Gehlbach Terms Offered: Spring

Note(s): Students who wish to take this course for Civilization Studies Core credit must also take Russ Civ I and II.

Equivalent Course(s): SOSC 24200, REES 26015

HIST 14302. Early Modern China: An Age of Global Transformation, 1500-1800. 100 Units.

The period between 1500 and 1800 was pivotal in the emergence of the modern world. We tend to focus on Europe and the Americas when we think of the changes that occurred in this period. However, this was also an age of dramatic transformation for China in ways that were connected and/or similar to changes unfolding elsewhere. After reviewing how the legacy of the Mongol conquests shaped early modern Eurasia, we will examine a series of intertwined developments that were characteristic of not only China but also global experiences in this period: population growth, expanded commercial activity, silver imports from the Americas, and the adoption of 'New World' crops, such as maize and sweet potatoes. We will then look at how new intellectual currents and major shifts in government policies responded to these new social and economic realities. We will examine two developments-print culture and colonialism-that play important roles in narratives of early modern European history but are no less applicable to Chinese history. Our course will end with a consideration of how the growth of the early modern period generated not only tremendous wealth but also considerable political and ecological challenges that modern actors would struggle to overcome. For the final project, students will design a museum exhibit that focuses on one aspect of China's early modern history and underscores the global interconnectedness of this period.

Instructor(s): D. Knorr Terms Offered: Winter

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): GLST 24302, ENST 24302, EALC 14302

HIST 14303. Modern Korean History. 100 Units.

This course focuses on the modern history of a country that is well known for shifting its course at dizzying speed. Beginning with the last monarchic dynasty's 'opening' to the world in the late nineteenth century, the course will move on to deal with radical transformations such as Japanese colonization and Korea's subsequent liberation in 1945; the civil war, national division, and dictatorship in the two Koreas; and the economic miracle and democratization in the South and nuclear development in the North. How do we understand recent events, such as the South Korean president's impeachment in 2017 and the North Korean leader's high-profile diplomatic *détentes* in 2018? Do they come out of nowhere, or can we find an underlying consistency based on an understanding of the long twentieth century? Through a careful study of Korea's modern history, this course is designed to reveal the longer trajectories of Korea's historical development, showing how the study of this contentious peninsula becomes a study of modern world history.

Instructor(s): J. Jeon Terms Offered: Winter

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): EALC 14303, GLST 24303

HIST 15100-15200-15300. Introduction to the Civilizations of East Asia I-II-III.

This sequence meets the general education requirement in civilization studies. This is a three-quarter sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present. Taking these courses in sequence is not required.

HIST 15100. Introduction to the Civilizations of East Asia I. 100 Units.

This sequence meets the general education requirement in civilization studies. This is a sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present.

Instructor(s): G. Alitto Terms Offered: Autumn Summer

Prerequisite(s): Open to undergraduates only; all students attend the MW lecture and register for one F discussion section.

Note(s): Taking these courses in sequence is not required.

Equivalent Course(s): EALC 10800, CRES 10800, SOSC 23500

HIST 15200. Introduction to the Civilizations of East Asia II. 100 Units.

This sequence meets the general education requirement in civilization studies. This is a three-quarter sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present

Instructor(s): J. Ketelaar Terms Offered: Winter

Prerequisite(s): Open to undergraduates only; all students attend the MW lecture and register for one F discussion section.

Note(s): Taking these courses in sequence is not required.

Equivalent Course(s): SOSC 23600, CRES 10900, EALC 10900

HIST 15300. Introduction to the Civilizations of East Asia III. 100 Units.

This sequence meets the general education requirement in civilization studies. This is a sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present.

Instructor(s): J. Jeon Terms Offered: Spring

Prerequisite(s): Open to undergraduates only; all students attend the MW lecture and register for one F discussion section.

Note(s): Taking these courses in sequence is not required.

Equivalent Course(s): EALC 11000, CRES 11000, SOSC 23700

HIST 15602-15603-15604. Ancient Empires I-II-III.

This sequence introduces three great empires of the ancient world. Each course in the sequence focuses on one empire, with attention to the similarities and differences among the empires being considered. By exploring the rich legacy of documents and monuments that these empires produced, students are introduced to ways of understanding imperialism and its cultural and societal effects—both on the imperial elites and on those they conquered. Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies.

HIST 15602. Ancient Empires I. 100 Units.

This course introduces students to the Hittite Empire of ancient Anatolia. In existence from roughly 1750-1200 BCE, and spanning across modern Turkey and beyond, the Hittite Empire is one of the oldest and largest empires of the ancient world. We will be examining their history and their political and cultural accomplishments through analysis of their written records - composed in Hittite, the world's first recorded Indo-European language - and their archaeological remains. In the process, we will also be examining the concept of 'empire' itself: What is an empire, and how do anthropologists, archaeologists, and historians study this unique kind of political formation?

Instructor(s): James Osborne Terms Offered: Winter

Note(s): Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies.

Equivalent Course(s): NEHC 20011, CLCV 25700

HIST 15603. Ancient Empires II. 100 Units.

The Ottomans ruled in Anatolia, the Middle East, South East Europe and North Africa for over six hundred years. The objective of this course is to understand the society and culture of this bygone Empire whose legacy continues, in one way or another, in some twenty-five contemporary successor states from the Balkans to the Arabian Peninsula. The course is designed as an introduction to the Ottoman World with a focus on the cultural history of the Ottoman society. It explores identities and mentalities, customs and rituals, status of minorities, mystical orders and religious establishments, literacy and the use of the public sphere.

Instructor(s): Hakan Karateke Terms Offered: Autumn

Equivalent Course(s): CLCV 25800, NEHC 20012, MDVL 20012

HIST 15604. Ancient Empires III. 100 Units.

For most of the duration of the New Kingdom (1550-1069 BC), the ancient Egyptians were able to establish a vast empire and becoming one of the key powers within the Near East. This course will investigate in detail the development of Egyptian foreign policies and military expansion which affected parts of the Near East and Nubia. We will examine and discuss topics such as ideology, imperial identity, political struggle and motivation for conquest and control of wider regions surrounding the Egyptian state as well as the relationship with other powers and their perspective on Egyptian rulers as for example described in the Amarna letters.

Instructor(s): Brian Muhs Terms Offered: Spring

Equivalent Course(s): CLCV 25900, NEHC 20013

HIST 15611. Islamicate Civilization I: 600-950. 100 Units.

This course covers the rise and spread of Islam, the Islamic empire under the Umayyad and early Abbasid caliphs, and the emergence of regional Islamic states from Afghanistan and eastern Iran to North Africa and Spain. The main focus will be on political, economic and social history.

Instructor(s): Ahmed El Shamsy Terms Offered: Autumn

Note(s): The Islamicate Civilization sequence does not fulfill the General Ed requirements

Equivalent Course(s): MDVL 20201, NEHC 30201, ISLM 30201, RLST 20201, HIST 35621, NEHC 20201

HIST 15612. Islamicate Civilization II: 950-1750. 100 Units.

This course, a continuation of Islamicate Civilization I, surveys intellectual, cultural, religious and political developments in the Islamic world from Andalusia to the South Asian sub-continent during the periods from ca. 950 to 1750. We trace the arrival and incorporation of the Steppe Peoples (Turks and Mongols) into the central Islamic lands; the splintering of the Abbasid Caliphate and the impact on political theory; the flowering of literature of Arabic, Turkic and Persian expression; the evolution of religious and legal scholarship and devotional life; transformations in the intellectual and philosophical traditions; the emergence of Shi'i states (Buyids and Fatimids); the Crusades and Mongol conquests; the Mamluks and Timurids, and the 'gunpowder empires' of the Ottomans, Safavids, and Moghuls; the dynamics of gender and class relations; etc. This class partially fulfills the requirement for MA students in CMES, as well as for NELC majors and PhD students.

Instructor(s): Franklin Lewis Terms Offered: Winter

Prerequisite(s): Islamicate Civilization I (NEHC 20201) or Islamic Thought & Literature-I (NEHC 20601), or the equivalent

Note(s): The Islamicate Civilization sequence does not fulfill the General Ed requirements

Equivalent Course(s): ISLM 30202, MDVL 20202, RLST 20202, NEHC 30202, HIST 35622, NEHC 20202

HIST 15613. Islamicate Civilization III: 1750-Present. 100 Units.

This course covers the period from ca. 1750 to the present, focusing on Western military, economic, and ideological encroachment; the impact of such ideas as nationalism and liberalism; efforts at reform in the Islamic states; the emergence of the 'modern' Middle East after World War I; the struggle for liberation from Western colonial and imperial control; the Middle Eastern states in the cold war era; and local and regional conflicts.

Instructor(s): Holly Shissler Terms Offered: Spring

Prerequisite(s): Islamicate Civilization II (NEHC 20202) or Islamic Thought & Literature-2 (NEHC 20602), or the equivalent

Note(s): The Islamicate Civilization sequence does not fulfill the General Ed requirements

Equivalent Course(s): ISLM 30203, HIST 35623, RLST 20203, NEHC 30203, NEHC 20203

HIST 16101-16102-16103. Introduction to Latin American Civilization I-II-III.

Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies. This sequence is offered every year. This course introduces the history and cultures of Latin America (e.g., Mexico, Central and South America, and the Caribbean Islands).

HIST 16101. Introduction to Latin American Civilization I. 100 Units.

Autumn Quarter examines the origins of civilizations in Latin America with a focus on the political, social, and cultural features of the major pre-Columbian civilizations of the Maya, Inca, and Aztec. The quarter concludes with an analysis of the Spanish and Portuguese conquest, and the construction of colonial societies in Latin America. The courses in this sequence may be taken in any order.

Instructor(s): Emilio Kourí Terms Offered: Autumn

Equivalent Course(s): CRES 16101, LACS 16100, HIST 36101, SOSC 26100, ANTH 23101, LACS 34600

HIST 16102. Introduction to Latin American Civilization II. 100 Units.

Winter Quarter addresses the evolution of colonial societies, the wars of independence, and the emergence of Latin American nation-states in the changing international context of the nineteenth century.

Instructor(s): D. Borges Terms Offered: Winter

Equivalent Course(s): PPHA 39770, CRES 16102, HIST 36102, ANTH 23102, LACS 34700, LACS 16200, SOSC 26200

HIST 16103. Introduction to Latin American Civilization III. 100 Units.

Spring Quarter focuses on the twentieth century, with special emphasis on the challenges of economic, political, and social development in the region.

Instructor(s): B. Fischer Terms Offered: Spring

Equivalent Course(s): HIST 36103, PPHA 39780, CRES 16103, LACS 34800, SOSC 26300, ANTH 23103, LACS 16300

HIST 16700-16800-16900. Ancient Mediterranean World I-II-III.

Available as a three-quarter sequence (Autumn-Winter-Spring) or as a two-quarter sequence (Autumn-Winter or Winter-Spring). This sequence meets the general education requirement in civilization studies. It surveys the social, economic, and political history of Greece to the death of Alexander the Great (323 BC), the Roman Republic (509 to 27 BC), and late antiquity (27 BC to the fifth century AD).

HIST 16700. Ancient Mediterranean World I: Greece. 100 Units.

This course surveys the social, economic, and political history of Greece from prehistory to the Hellenistic period. The main topics considered include the development of the institutions of the Greek city-state, the Persian Wars and the rivalry of Athens and Sparta, the social and economic consequences of the Peloponnesian War, and the eclipse and defeat of the city-states by the Macedonians.

Instructor(s): C. Kearns Terms Offered: Autumn

Equivalent Course(s): CLCV 20700

HIST 16800. Ancient Mediterranean World II: Rome. 100 Units.

Part II surveys the social, economic, and political history of Rome, from its prehistoric beginnings in the twelfth century BCE to the end of the Severan dynasty in 235 CE. Throughout, the focus will be upon the dynamism and adaptability of Roman society, as it moved from a monarchy to a republic to an empire. The course will also cover the questions of social organization (free and unfree people, foreigners), gender relations, religion, and specific forms of the way of life of the Romans. It will be based both on lectures and on discussions of textual or archaeological documents in smaller discussion groups.

Instructor(s): A. Bresson Terms Offered: Winter

Equivalent Course(s): CLCV 20800

HIST 16900. Ancient Mediterranean World III. 100 Units.

Part III examines late antiquity, a period of paradox. The later Roman emperors established the most intensive, pervasive state structures of the ancient Mediterranean, yet yielded their northern and western territories to Goths, Huns, Vandals, and, ultimately, their Middle Eastern core to the Arab Muslims. Imperial Christianity united the populations of the Roman Mediterranean in the service of one God, but simultaneously divided them into competing sectarian factions. A novel culture of Christian asceticism coexisted with the consolidation of an aristocratic ruling class notable for its insatiable appetite for gold. The course will address these apparent contradictions while charting the profound transformations of the cultures, societies, economies, and political orders of the Mediterranean from the conversion of Constantine to the rise of Islam.

Instructor(s): R. Payne Terms Offered: Spring
 Equivalent Course(s): CLCV 20900, MDVL 16900

HIST 17410–17411, HIST 17510–17512 (HIPS 18300, HIPS 18400–18403, and HIPS 18500–18503) Science, Culture, and Society in Western Civilization

These courses focus on the origins and development of science in the West. They aim to trace the evolution of the biological, psychological, natural, and mathematical sciences as they emerge from the culture and social matrix of their periods and, in turn, affect culture and social. In order to satisfy the general education requirement in civilization studies, students must take a course in two or three of the following chronological periods: ancient (numbered HIPS 18300), early modern (HIPS 18400–18403), and modern (HIPS 18500–18503). Taking these courses in sequence is recommended but not required. Only one course per category may count toward the requirement unless special approval is granted.

HIST 17310. Science, Culture, and Society in Western Civilization I: Greek & Roman Science. 100 Units.

This undergraduate core course represents the first quarter of the Science, Culture, and Society in Western Civilization sequence. Taking these courses in sequence is recommended but not required. This quarter will focus on aspects of ancient Greek and Roman intellectual history, their perceived continuities or discontinuities with modern definitions and practices of science, and how they were shaped by the cultures, politics, and aesthetics of their day. Topics surveyed include history-writing and ancient science, the cosmos, medicine and biology, meteorology, ethnography and physiognomics, arithmetic and geometry, mechanics, taxonomy, optics, astronomy, and mechanical computing.

Instructor(s): J. Wee Terms Offered: Autumn. Offered Autumn 2020
 Equivalent Course(s): HIPS 18300

HIST 17410. Science, Culture, and Society in Western Civilization II: Renaissance to Enlightenment. 100 Units.

This lecture-discussion course examines the development science and scientific philosophy from the mid-fifteenth to the mid-nineteenth centuries. The considerations begin with the recovery of an ancient knowledge in the works of Leonardo, Vesalius, Harvey, and Copernicus. Thereafter the course will focus on Enlightenment science, as represented by Galileo, Descartes, Newton, and Hume. The course will culminate with the work of Darwin, who utilized traditional concepts to inaugurate modern science. For each class, the instructor will provide a short introductory lecture on the texts, and then open discussion to pursue with students the unexpected accomplishments of the authors under scrutiny.

Instructor(s): R. Richards Terms Offered: Autumn. Course was offered in Autumn 2019.
 Equivalent Course(s): KNOW 18400, HIPS 18400

HIST 17411. Science, Culture, and Society in Western Civilization II: History of Medicine 1500 to 1900. 100 Units.

This course examines the theory and practice of medicine between 1500 and 1900. Topics include traditional early modern medicine; novel understandings of anatomy, physiology, and disease from the Renaissance on; and new forms of medical practice, training, and knowledge-making that developed in the eighteenth and nineteenth centuries.

Instructor(s): M. Rossi Terms Offered: Autumn. Course was offered in Autumn 2019
 Equivalent Course(s): HIPS 18401

HIST 17511. Science, Culture, and Society in Western Civilization III: History of Medicine 1900-Present. 100 Units.

This course is an examination of various themes in the history of medicine in Western Europe and America since 1900. Topics include key developments of medical theory (e.g., the circulation of the blood and germ theory), relations between doctors and patients, rivalries between different kinds of healers and therapists, and the development of the hospital and laboratory medicine.

Instructor(s): M. Rossi Terms Offered: Winter. Course was offered in Winter 2020
 Equivalent Course(s): HIPS 18501

HIST 17512. Science, Culture, and Society in Western Civilization III: The Environment. 100 Units.

This course charts the development of modern science and technology with special reference to the environment. Major themes include natural history and empire, political economy in the Enlightenment, the discovery of deep time and evolutionary theory, the dawn of the fossil fuel economy, Malthusian anxieties about overpopulation, the birth of ecology, the Cold War development of climate science, the postwar debates about the limits to growth, and the emergence of modern environmentalism. We will end with the new science of the Anthropocene.

Instructor(s): F. Albritton Jonsson Terms Offered: Spring. Course was offered in Spring 2020.
 Equivalent Course(s): HIPS 18502

HIST 17513. Science, Culture, and Society in Western Civilization III: History of Social Science. 100 Units.

'Social Science' now is generally used to refer to the various disciplines devoted to the study of humanity in its social manifestations: sociology, social and cultural anthropology, economics, political science, geography, and history. But these disciplines employ radically different methodologies, rooted in distinct histories. While positive social science and the application of statistics to society began in the context of French Revolutionary nation-building, ethnographic methods emerged in the very different context of British imperial encounters with 'exotic' cultures. In the midst of a growing interest in 'society' and 'culture,' distinct methodological schools with competing social and cultural ontologies and methodologies emerged across Europe. This course studies these traditions, and their development in the social and cultural contexts of revolution, empire, racial justice, and disciplinary institutionalization.

Instructor(s): P. Mostajir Terms Offered: Autumn Spring. Offered in Autumn and Spring 2021
 Equivalent Course(s): HIPS 18503

HIST 17606. American Revolutions. 100 Units.

In 1750, 'British America' was a diverse and fractious collection of colonies huddled along the eastern seaboard, on the margins of the churning waters of the Atlantic world. Forty years later, thirteen of those remote American settlements had become, through rebellion and war, into a revolutionary nation. The traumatic passage of this transformation established the world's first modern republic and set in motion an age of democratic revolutions that reverberated in Europe, the Caribbean, Latin America, and western North America. This course explores this remarkable epoch in early American history. Topics include the first global military struggle (the Seven Years War); the transformation from scattered urban riots against taxes into a rebellion against the world's strongest imperial power; the everyday experience of occupation, insurgency, and civil war; Black and Native American struggles for independence; experiments in women's rights, radical democracy, and religious freedom; the fragility of the new union and the ragged road toward a federal nation-state; and the revolutionary idealism that inspired revolutions in France, Haiti, and the Americas, with consequences that shaped the early United States and all its diverse peoples. Grades will be based on three short papers and one final paper. This lecture course is open to non-History majors and does not presume any previous history coursework.

Instructor(s): M. Krueger Terms Offered: Autumn

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): AMER 17606, CRES 17606, LLSO 27606

HIST 17805. America in the Twentieth Century. 100 Units.

This is a thematic lecture course on the past 115 years of US history. The main focus of the lectures will be politics, broadly defined. The readings consist of novels and nonfiction writing, with a scattering of primary sources. Assignments: Three 1,500-word papers.

Instructor(s): J. Dailey Terms Offered: Spring

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): AMER 17805, LLSO 25904

HIST 18101. Democracy in America? 100 Units.

This course will explore the unlikely career of democracy in US history. Throughout its past, the United States has been defined by endless and unpredictable struggles to establish and extend self-government of one kind or another—even as those struggles have encountered great resistance and relied on the exclusion or subordination of some portion of society to underwrite expanding freedom and equality for those enjoying the fullest benefits of citizenship. American democracy has also relied on a conceptual separation between state and society that has necessarily broken down in practice, as political institutions produced and sustained economic forms like slavery or the corporation, social arrangements like the family, and cultural values such as freedom—even as private interests worked their reciprocal influence over public institutions. Over the course of the quarter we will explore this contested history of democracy in America through a close reading of classic texts, including Tocqueville's famous study, contextualized by the most current historical scholarship. Small, incremental writing assignments and individual presentations will culminate in a final essay that can emphasize philosophical/theoretical or historical/empirical questions according to students' interests. Students will also have the option of conducting their own original research to satisfy some portion of the coursework, which may lead to subsequent internship opportunities with relevant faculty.

Instructor(s): J. Sparrow Terms Offered: Spring

Note(s): History in the World courses use history as a valuable tool to help students critically exam our society, culture, and politics. Preference given to 1st- and 2nd-yr students.

Equivalent Course(s): LLSO 28101

HIST 18301-18302-18303. Colonizations I-II-III.

This sequence meets the general education requirement in civilization studies. This three-quarter sequence approaches the concept of civilization from an emphasis on cross-cultural/societal connection and exchange. We explore the dynamics of conquest, slavery, colonialism, and their reciprocal relationships with concepts such as resistance, freedom, and independence, with an eye toward understanding their interlocking role in the making of the modern world.

HIST 18301. Colonizations I. 100 Units.

This sequence meets the general education requirement in civilization studies. This three-quarter sequence approaches the concept of civilization from an emphasis on cross-cultural/societal connection and exchange. We explore the dynamics of conquest, slavery, colonialism, and their reciprocal relationships with concepts such as resistance, freedom, and independence, with an eye toward understanding their interlocking role in the making of the modern world. Themes of slavery, colonization, and the making of the Atlantic world are covered in the first quarter. Note(s): This sequence meets the general education requirement in civilization studies. This course is offered every year. These courses can be taken in any sequence.

Terms Offered: Autumn

Note(s): This sequence meets the general education requirement in civilization studies. This course is offered every year. These courses can be taken in any sequence.

Equivalent Course(s): SOSC 24001, CRES 24001, ANTH 24001

HIST 18302. Colonizations II. 100 Units.

Modern European and Japanese colonialism in Asia and the Pacific is the theme of the second quarter.

Terms Offered: Winter

Note(s): This sequence meets the general education requirement in civilization studies. These courses can be taken in any sequence.

Equivalent Course(s): ANTH 24002, CRES 24002, SOSC 24002

HIST 18303. Colonizations III. 100 Units.

The third quarter considers the processes and consequences of decolonization both in the newly independent nations and the former colonial powers.

Terms Offered: Spring

Note(s): This sequence meets the general education requirement in civilization studies. These courses can be taken in any sequence.

Equivalent Course(s): ANTH 24003, SALC 20702, SOSC 24003, CRES 24003

HIST 18600. United States Labor History. 100 Units.

This course explores the history of labor and laboring people in the United States. It will consider the significance of work from the vantage points of law, culture, and political economy. Key topics will include working-class life, industrialization and corporate capitalism, slavery and emancipation, the role of the state and trade unions, race and sex difference in the workplace. The course is intended for freshmen through seniors, as well as majors in history and in other disciplines.

Instructor(s): A. Stanley Terms Offered: Autumn

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): HMRT 28600, LLSO 28000, GNSE 28603

HIST 18702. Race, Politics, and Sports in the United States. 100 Units.

Kneeling or standing for the national anthem? Breaking the glass ceiling, coming out of the closet, or crossing the color line in sports? This course will take up the question of why sports are so central to American identity and what historic role sports and athletes have played in American political life. Muhammad Ali, Billie Jean King, Jackie Robinson, and Bill Russell are only a few of the athletes who fought for freedom, inclusion, and equality in sports and American life. Through close critical readings of popular and scholarly writing, memoirs, and visual culture (film and television), we will examine the seminal overlapping events in sports history and American history to understand the collision and convergence of our politics and sports culture.

Instructor(s): M. Briones Terms Offered: Spring

Note(s): History in the World courses use history as a valuable tool to help students critically exam our society, culture, and politics. Preference given to 1st- and 2nd-yr students.

Equivalent Course(s): CRES 18702

HIST 18804. America in the Nineteenth Century. 100 Units.

This lecture course will examine major conflicts that shaped American life during the nineteenth century. Focusing on contemporaries' attempts to seize upon or challenge the nation's commitment to the ideals of liberty and equality, we will examine pivotal moments of contestation, compromise, and community building. Central questions that will frame the course include how were notions of freedom negotiated and reshaped? What were the political and socioeconomic conditions that prompted the emergence of reform movements, including antislavery, women's rights, temperance, and labor? How did individuals mobilize and stake claims on the state? How were the boundaries of American citizenship debated and transformed over the course of the century?

Instructor(s): N. Maor Terms Offered: Winter

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): CRES 18804, AMER 18804, GNSE 18804, LLSO 22106

HIST 18806. Introduction to Black Chicago, 1893-20. 100 Units.

This course surveys the history of African Americans in Chicago, from before the twentieth century to the near present. In referring to that history, we treat a variety of themes, including migration and its impact, the origins and effects of class stratification, the relation of culture and cultural endeavor to collective consciousness, the rise of institutionalized religions, facts and fictions of political empowerment, and the correspondence of Black lives and living to indices of city wellness (services, schools, safety, general civic feeling). This is a history class that situates itself within a robust interdisciplinary conversation. Students can expect to engage works of autobiography and poetry, sociology, documentary photography, and political science as well as more straightforward historical analysis. By the end of the class, students should have grounding in Black Chicago's history and an appreciation of how this history outlines and anticipates Black life and racial politics in the modern United States.

Instructor(s): A. Green Terms Offered: Autumn

Equivalent Course(s): CRES 18806, LLSO 28806, AMER 18806

HIST 18901. Inequality, Politics, and Government in US History. 100 Units.

This class explores the relationship between social inequality and political democracy in US history. How have American political institutions dealt with and reflected the contradictions of 'all men are created equal'? What is the meaning of political citizenship in a socially stratified society? How have social movements and conflicts shaped the institutions of state and the meaning of citizenship? The class touches on slavery and freedom; land and colonialism; racial discrimination; labor relations; gender and sexuality; social welfare policy; taxation and regulation; urban development; immigration; policing and incarceration. Assignments: One primary document analysis (2-3 pages), one secondary reading paper (3-5 pages), and a final paper analyzing a particular political movement, conflict, or policy (10-12 pages).

Instructor(s): G. Winant Terms Offered: Spring

Note(s): History in the World courses use history as a valuable tool to help students critically exam our society, culture, and politics. Preference given to 1st- and 2nd-yr students.

Equivalent Course(s): GNSE 18901, AMER 18901, LLSO 18901, CRES 18901

HIST 20110. Trans-Saharan Africa. 100 Units.

Should Mediterranean and sub-Saharan Africa be treated as one or two historical units? What was the global and regional significance of medieval and early modern trans-Saharan caravan trade? How are we to understand the vast empires that sprang up in the West and Central Sudan during this era? How and in what form did Islam and the broader culture that accompanied it spread across this entire region? What was the role of slavery in the economic and cultural development of both North and West-West Central Africa? To what extent did European colonial rule and its aftermath alter or encourage the social and cultural processes initiated by trans-Saharan contacts? We will consider these questions in this course, which will mix lectures on Tuesdays with discussion of readings on Thursdays. Assignments: Two short 3-5-page critical papers on specialized readings and one longer final essay of 10-12 pages.

Instructor(s): R. Austen Terms Offered: Spring

Equivalent Course(s): HIST 30110, CRES 30110, CRES 20110

HIST 20312. Imperialism before the Age of Empires? 100 Units.

This course offers a critical analysis of the use of concepts such as empire and imperialism in the historiography of ancient Mesopotamia to address political formations that developed (and vanished) from the Early to Late Bronze Ages (mid-3rd to late-2nd millennium BCE). Drawing from theoretical studies on imperialism and the imperial constructions that developed in the Iron Age and beyond (starting with the Neo-Assyrian and Neo-Babylonian empires), this seminar will explore the nature of power, control, and resource management in these early formations, and how they qualify (or not) as imperial policies. Students will address a substantial part of Mesopotamian history (from the Sargonic down to the Middle Assyrian and Babylonian periods) and study in depth some key historiographical issues for the history of Early Antiquity. Primary documents will be read in translation and the course has no ancient language requirements. However, readings of secondary literature in common academic languages (especially French and German) are to be expected. This course fulfills the requirements of a survey course in Mesopotamian civilization as defined by the Ancient PhD programs in NELC and MA program in the CMES.

Instructor(s): Hervé Reculeau Terms Offered: Winter

Equivalent Course(s): NEHC 20737, HIST 30312, NEHC 30737

HIST 20507. The Idea of Freedom in Antiquity. 100 Units.

Freedom may be the greatest of American values. But it also has a long history, a dizzying variety of meanings, and a huge literature. This course will be an introduction to critical thinking on freedom (primarily political freedom) with an emphasis on Greco-Roman texts. The first half of the class will focus on Greek authors, including Herodotus, Euripides, and Aristotle. The second half will focus on Roman authors, from Cicero to Livy to Tacitus. The ancient texts will be supplemented by modern literature on freedom, such as John Stuart Mill and Isaiah Berlin.

Instructor(s): A. Horne Terms Offered: Autumn

Equivalent Course(s): CLAS 34319, CLCV 24319, HIST 30507, LLSO 24319

HIST 20902. Empires and Peoples: Ethnicity in Late Antiquity. 100 Units.

Late antiquity witnessed an unprecedented proliferation of peoples in the Mediterranean and the Middle East. Vandals, Arabs, Goths, Huns, Franks, and Iranians, among numerous others, took shape as political communities within the Roman and Iranian empires or along their peripheries. Recent scholarship has undone the traditional image of these groups as previously undocumented communities of 'barbarians' entering history. Ethnic communities emerge from the literature as political constructions dependent on the very malleability of identities, on specific acts of textual and artistic production, on particular religious traditions, and, not least, on the imperial or postimperial regimes sustaining their claims to sovereignty. The colloquium will debate the origin, nature, and roles of ethno-political identities and communities comparatively across West Asia, from the Western Mediterranean to the Eurasian steppes, on the basis of recent contributions. As a historiographical colloquium, the course will address the contemporary cultural and political concerns—especially nationalism—that have often shaped historical accounts of ethnogenesis in the period as well as bio-historical approaches—such as genetic history—that sometimes sit uneasily with the recent advances of historians.

Instructor(s): R. Payne Terms Offered: Autumn

Prerequisite(s): Open to advanced undergraduates and graduate students.

Equivalent Course(s): LLSO 20902, CLCV 23718, HIST 30902, NEHC 20802, MDVL 20902, CLAS 33718, NEHC 30802

HIST 21404. Britain in the Age of Steam 1783-1914. 100 Units.

Britain in the Victorian era rose to global dominance by pioneering a new fossil fuel economy. This course explores the profound impact of coal and steam on every aspect of Victorian society, from politics and religion to industrial capitalism and the pursuit of empire. Our historical investigation also serves a second purpose by helping us see our own fossil-fuel economy with fresh eyes through comparison with Victorian energy use. Assignments include short essays based on energy 'field work' and explorations in material culture.

Instructor(s): F. Albritton Jonsson Terms Offered: Spring

Equivalent Course(s): LLSO 21404, HIST 31404, ENST 21404, CHSS 31404, HIPS 21404

HIST 21405. Inventing Race in the British Empire. 100 Units.

This course reveals how the British encounter with racial difference in the Caribbean, Australasia, and India could both validate and subvert the project of empire-building. We will begin by examining the ways in which ethnographical and anthropological societies in the metropole clashed over the question of racial differentiation in the nineteenth century. We will then determine how these 'scientific' theories of race were deployed in colonial settings; did they inform relations between colonized and settler populations, or did the local states innovate novel race-based policies to undergird their rule? By investigating how an array of actors instrumentally invoked race to accomplish specific objectives, we will further

deconstruct the narrative of a unitary, overarching 'civilizing mission.' A host of primary sources, including anthropological treatises, missionary accounts, public speeches, and fictional works, will aid us in this pursuit.

Instructor(s): Z. Leonard Terms Offered: Spring

Equivalent Course(s): CRES 21405, SALC 21405, GLST 21405

HIST 22019. Grey Zones: Ethics and Decision-Making in the Holocaust. 100 Units.

How do ordinary men become ruthless killers? What constitutes 'collaboration' or 'resistance' in the context of total war and genocide? How can we analyze human behavior in a world where normal rules of ethical conduct do not apply? Nearly 75 years after the liberation of Auschwitz, the Holocaust still stands as a touchstone in debates about ethics, morality, agency, historical memory, democracy, citizenship, and human rights. This course is foregrounded in the notion that human behavior during Holocaust cannot be understood through the extreme binaries of good and evil, or black versus white. Rather, we will explore the complexities and nuances of human behavior in extremis. Through a series of case studies, we will focus on the experience and behavior of six (sometimes overlapping) groups of people: perpetrators, victims, bystanders, collaborators, resisters, and rescuers. In doing so, we will pay close attention to the moral considerations and ethical dilemmas that influenced their decision-making, as well as the ways in which gender, class, age, ethnicity, and political and religious ideology influenced these choices. At the same time, we will examine the effects that strategic considerations, as well as actual, available options, had on human behavior during this momentous state-sponsored genocide. In grappling with the dilemmas of human agency, we will critically evaluate the changing meanings of human rights, choice, trauma, and survival throughout the course of the Holocaust.

Instructor(s): Anna Band, Graduate Lecturer Terms Offered: Autumn

Equivalent Course(s): JWSC 28315, HMRT 28315

HIST 22121. Despair and Consolation: Emotion and Affect in Late-Medieval and Reformation Christianity. 100 Units.

The course surveys major texts in Christian thought and culture from the fourteenth through the sixteenth centuries, and it focuses on how these authors understood despair—a central theme in the writings of many women and men, secular and religious—and how, if at all, despair may be remedied. We will think alongside these late-medieval and early-modern figures about the phenomenon of emotion, the relations between feeling and knowing, possible responses to (especially negative) affects, and how religious belief, practice, and experience shape and are shaped by emotional life. Major historical figures to be read include: Catherine of Siena, Jean Gerson, Christine de Pisan, Julian of Norwich, Heinrich Kramer, Martin Luther, John Calvin, Teresa of Ávila, and Michel de Montaigne. We will also read selected contemporary voices in affect theory and disability studies to hone our critical and analytical resources for interpreting the primary texts.

Instructor(s): M. Vanderpoel Terms Offered: Autumn

Equivalent Course(s): RLST 21330, MDVL 21330, GNSE 21330

HIST 22207. The Social History of Alcohol in Early Modern Europe. 100 Units.

This course will examine the multifaceted role that beer, wine, cider, and spirits played in European society and will challenge students to consider how a seemingly familiar commodity was a key component in shaping early modern social relations. It will focus on several major themes that have guided historical inquiry and show how hard drink intersects with and entangles these histories. Major themes will include alcohol and gender relations; state legality and taxation; moral policing; environmental projects and crises; labor and technology; and colonialism. Using both primary and secondary sources will push students to look below the surface to see how drink alternately challenged or reinforced social hierarchies, much as it continues to do in the present time.

Instructor(s): C. Rydell Terms Offered: Winter

Equivalent Course(s): HIPS 22207, HLTH 22207

HIST 22310. The Commons: Environment and Economy in Early Modern Europe. 100 Units.

Drawing on case studies from Europe and the Atlantic world, this course will track changes in land use and property rights over the early modern period (ca. 1500-1800), inviting students to reflect on the relationship between natural environments (woodlands, waterways, pasture) and histories of state formation, economic growth, rebellion, and colonialism. Organizing concepts and debates will include the tragedy of the commons, moral economies, sustainability and scarcity, the 'organic economy' of the old regime, primitive accumulation, and economic takeoff. Readings will encompass classic works in agrarian, environmental, and social history (i.e., Marc Bloch, E. P. Thompson, Silvia Federici, James Scott, Carolyn Merchant) as well as primary documents and contemporary texts (i.e., More, Bacon, Smith, Paine, Babeuf). We will also reflect on how these histories bear on debates about land use and natural resources in the present day.

Instructor(s): O. Cussen Terms Offered: Winter

Equivalent Course(s): HIPS 22310, ENST 22310, LLSO 22310

HIST 23103. East Central Europe, 1880-Present. 100 Units.

The past 150 years have brought democratization, mass politics, two violent world wars, and no less than four different political regimes to the lands between Germany and the Soviet Union. The focus of this course will be on the forces that have shaped Eastern European politics and society since the 1880s. How and why was a multinational and multilingual empire transformed into self-declared nation states? How has mass migration reshaped East European societies? What were the causes and consequences of ethnic cleansing in East Central Europe? How did the experience of total war transform the states and societies? How did citizens respond to and participate in the construction of socialist societies after the Second World War? And finally, what changes and challenges has the transition from socialism to capitalism brought to the region since 1989? The course will focus on the Habsburg Monarchy and its successor states, particularly Czechoslovakia, Poland, and Hungary, with occasional discussion of the former Yugoslavia and Romania. Assignments: Three short papers (5-6 pages).

Instructor(s): T. Zahra Terms Offered: Winter

Equivalent Course(s): LLSO 23103, HIST 33103

HIST 23210. Urban Core in Paris. 100 Units.

This course is both an introduction to how historians think about cities and a history of cities from the Middle Ages through the Cold War. Most of the examples are drawn from Europe, with a special focus for the version of the course taught in Paris on that city, but significant attention is given to Africa and the United States. The course is chronological in organization, but each class also focuses on a different theme, such as the place of politics, industrial development, migration, culture, and commerce in the transformation of urban forms and experiences.

Instructor(s): L. Auslander Terms Offered: Winter

Prerequisite(s): Admission to the Paris: Social Sciences Urbanism program

HIST 23400. Sex in Twentieth-Century Europe. 100 Units.

This course will examine the 'syncopated' history of sexuality across this tumultuous century. The period took Europeans from bourgeois norms of sexuality through the 1960s sexual revolution to same-sex marriages; genocide and the emergence of rape as a war crime; and the unprecedented regulation of sexuality and biomedical developments treating infertility. Since the history of sex and sexuality in Europe cannot be thought outside of European colonialism and the Cold War, the course will also examine how sexuality shaped and was shaped by political ideologies. In short, by examining the centrality of 'who can have sex with whom,' students will rethink 'standard' political narratives of twentieth-century Europe. Working with Dagmar Herzog's 'Sexuality in Europe: A Twentieth-Century History,' the main text of the course, and drawing on a variety of primary sources-including law and medical treatises, popular culture, and autobiographies-students will also gain an insight into the ways in which sexuality can be studied beyond archival sources.

Instructor(s): M. Appeltová Terms Offered: Winter

Equivalent Course(s): GNSE 23490, HLTH 23400, HIPS 23410, HMRT 23400

HIST 23414. Central Europe, 1740 to 1918. 100 Units.

The purpose of this course is to provide a general introduction to major themes in the political, social, and international history of Germany and of the Hapsburg Empire from 1740 until 1914. The course will be evenly balanced between consideration of the history of Prussia and later of kleindeutsch Germany, and of the history of the Austrian lands. A primary concern of the course will be to identify and to elaborate key comparative, developmental features common both to the German and the Austrian experience, and, at the same time, to understand the ways in which German and Austrian history manifest distinctive patterns, based on different state and social traditions. There is no language requirement, although students with a command of German will be encouraged to use it.

Instructor(s): J. Boyer Terms Offered: Spring

Prerequisite(s): Consent of instructor; third- and fourth-year undergraduates & first-year graduate students who have not yet had a general introduction to eighteenth- & nineteenth-century Central European history.

Equivalent Course(s): HIST 33414

HIST 23517. The Authoritarian Personality: History and Theory. 100 Units.

Can you pick a fascist out of a crowd? Can crowds turn ordinary people into authoritarian zombies? This course offers an overview of the development of psychological research into authoritarianism. Our inquiry will unfold in three stages. Part I (Weeks 1-3) examines the emergence of the authoritarian personality - in rumor and reality - in interwar Europe. Part II (4-7) looks at texts that prepared the ground for Adorno's infamous Authoritarian Personality (1950). Part III (7-10) deals with the search for anti-authoritarian personalities and scholars updating this research to respond to contemporary political developments.

Instructor(s): David Gutherz Terms Offered: Winter. This course will be taught winter 2020

Equivalent Course(s): SCTH 20667

HIST 23518. Colloquium: How to Be Good. 100 Units.

Medieval Christians understood virtue as both a habit and a gift of grace. In this course, we will test this understanding by comparison with the definitions of virtue found in three complementary traditions: Greek, Jewish, and Confucian. Readings will be taken from the New Testament, Thomas Aquinas, Aristotle, Plato, the Torah, the Talmud, and the Analects. Our purpose will be to discover how each of these systems of training the soul works, along with their similarities and differences.

Instructor(s): R. Fulton Brown Terms Offered: Spring

Equivalent Course(s): FNDL 23518, MDVL 23518, HIST 33518

HIST 23706. The Soviet Union. 100 Units.

This lecture course surveys the making and unmaking of the Soviet Union as a society, culture, economy, superpower, and empire from 1917 to 1991. The Soviet Union began as an unprecedented radical experiment in remaking society and economy, ethnic and gender relations, personal identities, even human nature, but in the course of its history, it came to resemble other (capitalist) societies, sharing, in turn, their violence, welfare provisions, and consumerism. The story of this transformation-from being unique and exhilarating to being much like everyone else, only poorer and more drab-will be at the center of our exploration. The main themes of the course include social and cultural revolutions; ideology and the role of Marxism; political violence from the birth of the socialist state to the end of the Stalin terror; origins, practices, aesthetics, legacies, and critiques of Stalinism; law, dissent, and human rights; nationality policies and the role of ethnic minorities; the economy of shortages and the material culture it created; institutions of daily life (communal apartments, courtyards, peasant markets, dachas, and boiler rooms); socialist realism and the Soviet dreamworld.

Instructor(s): E. Gilburd Terms Offered: Spring

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): REES 23706

HIST 24001. Love and Eros: Japanese History. 100 Units.

An examination of cultural forms of affection and the erotic throughout history on the Japanese archipelago. Materials from ancient myth-historical, aristocratic-literary, Buddhist-devout, Confucian-chaste, and commercialized-erotic imaginations (along with others) will be examined. Several film screenings required.

Instructor(s): J. Ketelaar Terms Offered: Winter

Note(s): Familiarity with Japanese history and language helpful but not required.

Equivalent Course(s): GNSE 34001, EALC 34001, GNSE 24001, HIST 34001, EALC 24001

HIST 24212. Family, State, and Community in China, 1750-Present. 100 Units.

Upper-level undergraduate course, combining lectures, discussions, and other formats (e.g., group projects) as appropriate. No previous background in Chinese history is required, but students who are complete novices in this area may find some additional reading helpful. Major themes include the breakdown of the Qing empire and the formation of a modern national state which had different expectations of its citizens than the Qing had had of their subjects; changes in kinship and family life; gender roles; notions of the individual; and changing bases of authority in local society.

Instructor(s): K. Pomeranz Terms Offered: Spring

Equivalent Course(s): EALC 24212

HIST 24214. Cities in Modern China: History and Historiography. 100 Units.

China's shift from a predominantly rural country to an urban majority is one of the greatest social and demographic transformations in world history. This course begins with the roots of this story in the early modern history of China's cities and traces it through a series of momentous upheavals in the nineteenth and twentieth centuries. We will learn about how global ideas and practices contributed to efforts to make Chinese cities 'modern,' but also how urban experiences have been integral to the meaning of modernity itself. We will discuss urban space, administration, public health, commerce and industry, transportation, foreign relations, and material culture. In addition to tackling these important topics in urban history and tracing the general development of Chinese cities over time, another primary concern of our course will be the place of urban history in English-language scholarship on Chinese history more broadly. We will track this development from Max Weber's observations on Chinese cities through the rise of 'China-centered' scholarship in the 1970s to the 'global turn' of the 2000s. Students will develop the skills necessary for writing an effective historiography paper, i.e., doing background research, writing annotated bibliographies, and using citation-management software. Students will put these skills to work by writing a critical historiographical review of scholarship on a topic of their choice.

Instructor(s): D. Knorr Terms Offered: Spring

Prerequisite(s): Students taking ARCH 24214 should explain the relationship between their final projects and architectural studies.

Equivalent Course(s): GLST 24214, ARCH 24214, ENST 24214, EALC 24214

HIST 24508. Human Rights in Japanese History. 100 Units.

This course examines how the modern concept of 'rights' and 'human rights' localized in Japan and how different parties in Japan have used the language of human rights in attempts to remake Japan's social, cultural, and legal landscape. We will explore a wide range of topics including the translation of Eurocentric rights talk in East Asia, colonization and decolonization, statelessness and migration, transitional justice and reconciliation, biopolitical rights and bio-citizenship, indigenous rights, and women and gender-specific rights. Throughout the course we pay special attention to the ways in which rights talk and human-rights politics in Japan intertwine with the country's efforts to modernize and build the 'nation within the empire' and, after its defeat in WWII, to close off its 'long postwar' and reconcile with its neighbors. This is an introductory course, and no previous knowledge of Japanese history or the international history of human rights is required. However, you should be prepared to read (and watch, browse, and listen to) a wide array of primary and secondary sources that destabilize the most common vocabulary and concepts we take for granted in contemporary human-rights talk such as race, state responsibility, and the very notion of universalism so central to the idea of human rights.

Instructor(s): K. Pan Terms Offered: Winter

Equivalent Course(s): HMRT 25408, EALC 24508

HIST 24513. Documentary Chinese. 100 Units.

This course guides students through critical readings of primary historical documents from approximately 1800 through 1950. These documents are translated sentence by sentence, and then historiographically analyzed. Most of these documents are from the nineteenth century. Genres include public imperial edicts, secret imperial edicts, secret memorials to the throne from officials, official reports to superiors and from superiors, funereal essays, depositions ('confessions'), local gazetteers (fangzhi), newspapers, and periodicals. To provide an introduction to these genres, the first six weeks of the course will use the Fairbank and Kuhn textbook 'The Rebellion of Chung Jen-chieh' (Harvard-Yenching Institute). The textbook provides ten different genres of document with vocabulary glosses and grammatical explanations; all documents relate to an 1841-42 rebellion in Hubei province. Assignments: Each week prior to class students electronically submit a written translation of the document or documents to be read; a day after the class they electronically submit a corrected translation of the document or documents read. A fifteen-page term paper based on original sources in documentary Chinese is also required.

Instructor(s): G. Alitto Terms Offered: Autumn

Prerequisite(s): A reading knowledge of modern (baihua) Chinese and some familiarity with classical Chinese (wenyan) or Japanese Kanbun. Other students may take the course with permission from the instructor.

Equivalent Course(s): HIST 34513, EALC 34513, EALC 24513

HIST 24602. Objects of Japanese History. 100 Units.

The collections of Japanese objects held at the University of Chicago's Smart Museum, the Field Museum of Natural History, and the Art Institute of Chicago will be examined as case studies in museum studies, collection research, and, more specifically, in the interpretation of things 'Japanese.' Individual objects will be examined, not only for religious, aesthetic, cultural, and historical issues, but also for what they tell us of the collections themselves and the relation of these collections to museum studies per se.

Instructor(s): C. Foxwell & J. Ketelaar Terms Offered: Spring

Prerequisite(s): We will make several study trips to the Smart Museum, the Field Museum of Natural History, and the Art Institute of Chicago during class time.

Equivalent Course(s): HIST 34602, ARTH 29505, EALC 39504, ARTH 39505, EALC 29504

HIST 24612. Chinese Frontier History, circa 1600-Present. 100 Units.

A study of frontier regions, migration, and border policies in Qing (1644-1912) and twentieth-century China, focusing on selected case studies. Cases will include both actual border regions (where the Qing/China was adjacent to some other polity it recognized), ethnically diverse internal frontiers, and places where migrants moved into previously uninhabited regions (e.g., high mountains). Topics include the political economy and geopolitics of migration and frontier regions, the formation of ethnic and national identities in frontier contexts, borderland society (e.g., marriage, social stratification, and social mobility), and the environmental effects of migration.

Instructor(s): K. Pomeranz Terms Offered: Autumn

Note(s): Friday discussion section registration is required, but only if you plan to attend. Discussions are optional and attendance is not required to receive course credit. Sect 1 (1.30) is for undergrads and sect 2 (2.30) is for grads.

Equivalent Course(s): HIST 34612, EALC 24712, EALC 34712

HIST 24700. Histories of Japanese Religion. 100 Units.

An examination of select texts, moments, and problems to explore aspects of religion, religiosity, and religious institutions of Japan's history.

Instructor(s): J. Ketelaar Terms Offered: Spring

Equivalent Course(s): RLST 22505, EALC 24700, EALC 34700, HIST 34700, HREL 34705

HIST 24905. Darwin's 'On the Origin of Species' and 'The Descent of Man' 100 Units.

This lecture-discussion class will focus on a close reading of Darwin's two classic texts. An initial class or two will explore the state of biology prior to Darwin's Beagle voyage, and then consider the development of his theories before 1859. Then we will turn to his two books. Among the topics of central concern will be the logical, epistemological, and rhetorical status of Darwin's several theories, especially his evolutionary ethics; the religious foundations of his ideas and the religious reaction to them; and the social-political consequences of his accomplishment. The year 2019 was the 210th anniversary of Darwin's birth and the 160th anniversary of the publication of *On the Origin of Species*. (B) (II)

Instructor(s): R. Richards Terms Offered: Winter

Equivalent Course(s): CHSS 38400, PHIL 23015, HIST 34905, FNDL 24905, PHIL 33015, HIPS 24901

HIST 25017. Tutorial: Antiquity, Archaeology, and Anthropology: Humanism and the Rise of Science in Germany. 100 Units.

What do Homeric poetry and human skulls have in common? What about the Old Testament and Mycenaean pottery shards? Or Roman ruins and entomology? They were all used to illuminate the course of human history and they all transformed pre-existing conceptions about the past. This course traces the development of the human sciences from a general and preparatory program of humanistic study into specialized research disciplines focused on the production of new knowledge. Through a focus on the study of antiquity, archaeology, and anthropology in Germany, students will examine how information about the humanity and its past was produced, what the function or purpose of such knowledge was, and how this changed over time. They will also investigate the ways in which broader political, social, and cultural concerns shaped scientific research and were, in turn, shaped (or not) by it. In so doing this class explores how, why, and in what ways the development of German science was fundamentally and intrinsically shaped by humanistic inquiries about history and humanity. It also challenges linear notions of disinterested, secular, scientific progress as well as the modern division between natural sciences, human sciences, and the humanities.

Instructor(s): K. Palmieri Terms Offered: Autumn. Autumn 2019

Equivalent Course(s): KNOW 28000, HIPS 29633

HIST 25021. TUT: The World's Columbian Exposition: Science, Race, Gender, & Music at the 1893 Chicago World Fair. 100 Units.

This course surveys the sights, sounds, and tastes that filled Jackson Park and the Midway Plaisance between May 1 and October 30, 1893. During those six months, over 27 million people flocked to Chicago's south side from across the United States and beyond the Atlantic to experience the marvels illuminating the World's Columbian Exposition. Visitors weaved their way through the newly-designed Midway Plaisance, where they passed exhibits of 'authentic villages of native peoples' in 'traditional' garb until they reached the entrance of the American White City-or, as it was presented, 'the apex of civilization'-where exhibits and lectures on the newest theories and innovations filled 200 Neoclassical buildings under 100,000 incandescent lights. Walking up the Midway demonstrated progress in human development in tune with the main topic of the White City's Congress of Evolution-Social Darwinism. In this course, students will learn about explicit displays of 'progress' during the Gilded Age and will be challenged to interrogate allegories of it at the Columbian Exposition. Together, we will practice close-reading of primary and secondary texts, close-looking of images and objects, and close-listening of music and sounds. We will investigate how 'progress' was staged and cogitated in terms of: Evolutionary theory, Race, Gender, Music, Architecture, and Technology.

Instructor(s): A. Clark Terms Offered: Autumn. Autumn 2020

Equivalent Course(s): GNSE 25021, CRES 25021, HIPS 29639

HIST 25022. TUTORIAL - Vitalism and Teleology in Biology: Historical and Philosophical Approaches. 100 Units.

Unsurprisingly, 'what is life?' has a claim to being one of the oldest questions in science, lagging only a little behind 'what is?' It may be more surprising to learn that arguably all major answers to the question-with materialism and epiphenomenalism on one end of the spectrum, holism and essentialism on the other-are about as old, and that the history of biology has been more a matter of recombining these answers than coming up with new ones. If biology is a game, its ground rules were laid early on. You may propose ingenious modifications of strategy, but go too far outside the box and your fellow players will likely accuse you of playing a different game altogether-if you haven't already been disqualified by the referees. We will approach these questions by considering the history of biology as the history of philosophical attempts at making sense of life, broadly conceived, from Aristotle to Darwin. Such 'philosophies' of life need not be held self-consciously-the most interesting ones often aren't. Rather, any scientific account of life necessarily entails making metaphysical commitments. By tracing the history of these commitments, we will consider which (if any) of their historical mutations have been novel, and where we currently stand. We will also consider the ways in which philosophies of life, with all their metaphysical entanglements, have themselves been entangled with politics and ideology.

Instructor(s): B. Deadman Terms Offered: Winter. Winter 2020

Equivalent Course(s): HIPS 29638

HIST 25023. Tutorial: Evolution Beyond Darwin. 100 Units.

One of the most identifiable images associated with evolution is the visage of Charles Darwin. Historical narratives of evolution center on Darwin's work, and scientific publications today still note whether or not Darwin pre-empted their ideas. This course aims to build a narrative of evolution that brings the story up to today, asking why so many see Darwin as a shorthand for evolution and what consequences that might have for the development and communication of the science. In addition, it will interrogate other 'iconic' images and narratives in evolution, like the tree of life. We will ask where our ideas about evolution have come from, how they are perpetuated, and what consequence that might have for the discipline of evolutionary biology. The course has three aims: 1) to provide a historical understanding of evolution after Darwin; 2) to reflect on how evolution is communicated between scientists and to the broader public, and to ask how 'icons' or Darwin himself suggest implicit meanings counter to the work of the scientists; and 3) to more broadly examine what is a science-a process or a body of knowledge?

Instructor(s): E. Kitchen Terms Offered: Spring. Spring 2021

Equivalent Course(s): HIPS 29637

HIST 25218. American Epidemics, Past and Present. 100 Units.

This course explores how disease epidemics have shaped watershed periods in US history from the late eighteenth century to the present. Through readings, lectures, and in-class discussions, we will employ different categories of analysis (e.g., race, gender, class, and citizenship) to answer a range of historical questions focused on disease, health, and medicine. For instance, to what extent did smallpox alter the trajectory of the American Revolution? How did cholera and typhoid affect the lived experiences of slaves and soldiers during the Civil War? In what ways did the US government capitalize on fears over yellow fever and bubonic plague to justify continued interventions across the Caribbean and the Pacific? What do these episodes from the American past reveal about contemporary encounters with modern diseases like HIV/AIDS, Ebola, and COVID-19? Course readings will be drawn from book chapters and scholarly articles, as well as primary sources ranging from public-health reports, medical correspondence, and scientific journals to newspapers, political cartoons, maps, and personal diaries. Grades will be based on participation, weekly Canvas posts, peer review, and a series of written assignments (a proposal and an annotated bibliography, primary source analysis, book review, and rough draft) all of which will culminate in a ten-page final research paper.

Instructor(s): C. Kindell Terms Offered: Winter

Equivalent Course(s): CRES 25218, HIPS 25218, ENST 25218, GNSE 25210, GLST 25218, HLTH 25218, AMER 25218

HIST 25304. Goethe: Literature, Science, Philosophy. 100 Units.

This lecture-discussion course will examine Johann Wolfgang von Goethe's intellectual development, from the time he wrote *Sorrows of Young Werther* through the final states of *Faust*. Along the way, we will read a selection of Goethe's plays, poetry, and travel literature. We will also examine his scientific work, especially his theory of color and his morphological theories. On the philosophical side, we will discuss Goethe's coming to terms with Kant (especially the latter's third Critique) and his adoption of Schelling's transcendental idealism. The theme uniting the exploration of the various works of Goethe will be unity of the artistic and scientific understanding of nature, especially as he exemplified that unity in 'the eternal feminine.'

Instructor(s): R. Richards Terms Offered: Autumn

Note(s): German would be helpful, but it is not required.

Equivalent Course(s): PHIL 30610, PHIL 20610, HIPS 26701, HIST 35304, GRMN 35304, GRMN 25304, CHSS 31202, KNOW 31302, FNLD 25315

HIST 25426. The Science, History, Policy, and Future of Water. 100 Units.

Water is shockingly bizarre in its properties and of unsurpassed importance throughout human history, yet so mundane as to often be invisible in our daily lives. In this course, we will traverse diverse perspectives on water. The journey begins with an exploration of the mysteries of water's properties on the molecular level, zooming out through its central role at biological and geological scales. Next, we travel through the history of human civilization, highlighting the fundamental part water has played throughout, including the complexities of water policy, privatization, and pricing in today's world. Attention then turns to technology and innovation, emphasizing the daunting challenges dictated by increasing water stress and a changing climate as well as the enticing opportunities to achieve a secure global water future.

Instructor(s): Seth Darling Terms Offered: Winter. Not offered in 2020-2021

Prerequisite(s): None

Equivalent Course(s): ANTH 22131, MENG 20300, ENST 20300, HIPS 20301, GLST 26807

HIST 25610. Islamic Thought and Literature I. 100 Units.

This sequence explores the thought and literature of the Islamic world from the coming of Islam in the seventh century C.E. through the development and spread of its civilization in the medieval period and into the modern world. Including historical framework to establish chronology and geography, the course focuses on key aspects of Islamic intellectual history: scripture, law, theology, philosophy, literature, mysticism, political thought, historical writing, and archaeology. In addition to lectures and secondary background readings, students read and discuss samples of key primary texts, with a view to exploring Islamic civilization in the direct voices of the people who participated in creating it. All readings are in English translation. No prior background in the subject is required. This course sequence meets the general education requirement in civilization studies.

Instructor(s): Ahmed El Shamsy Terms Offered: Autumn

Equivalent Course(s): SOSC 22000, MDVL 20601, NEHC 20601, RLST 20401

HIST 25616. Islamic Thought and Literature III. 100 Units.

This course covers the period from ca. 1700 to the present. It explores Muslim intellectuals' engagement with tradition and modernity in the realms of religion, politics, literature, and law. We discuss debates concerning the role of religion in a modern society, perceptions of Europe and European influence, the challenges of maintain religious and cultural authenticity, and Muslim views of nation-states and nationalism in the Middle East. We also give consideration to the modern developments of transnational jihadism and the Arab Spring. This course sequence meets the general education requirement in civilization studies.

Instructor(s): Orit Bashkin Terms Offered: Spring

Equivalent Course(s): NEHC 20603, RLST 20403, SOSC 22200

HIST 25704-25804-25904. Islamic History and Society I-II-III.

This sequence meets the general education requirement in civilization studies. This sequence surveys the main trends in the political history of the Islamic world, with some attention to economic, social, and intellectual history. Taking these courses in sequence is recommended but not required.

HIST 25704. Islamic History and Society I: The Rise of Islam and the Caliphate. 100 Units.

This course covers the period from ca. 600 to 1100, including the rise and spread of Islam, the Islamic empire under the Umayyad and Abbasid caliphs, and the emergence of regional Islamic states from Afghanistan and eastern Iran to North Africa and Spain.

Instructor(s): Ahmed El Shamsy Terms Offered: Autumn

Equivalent Course(s): HIST 35704, ISLM 30500, MDVL 20501, NEHC 30501, NEHC 20501, CMES 30501, RLST 20501

HIST 25804. Islamic History and Society II: The Middle Period. 100 Units.

This course covers the period from ca. 1100 to 1750, including the arrival of the Steppe Peoples (Turks and Mongols), the Mongol successor states, and the Mamluks of Egypt and Syria. We also study the foundation of the great Islamic regional empires of the Ottomans, Safavids, and Moghuls.

Instructor(s): J. Woods Terms Offered: Winter

Prerequisite(s): Not open to first-year students

Equivalent Course(s): HIST 35804, CMES 30502, NEHC 20502, NEHC 30502, MDVL 20502, ISLM 30600

HIST 25904. Islamic History and Society III: The Modern Middle East. 100 Units.

This course covers the period from ca. 1750 to the present, focusing on Western military, economic, and ideological encroachment; the impact of such ideas as nationalism and liberalism; efforts at reform in the Islamic states; the emergence of the 'modern' Middle East after World War I; the struggle for liberation from Western colonial and imperial control; the Middle Eastern states in the cold war era; and local and regional conflicts.

Instructor(s): Holly Shissler Terms Offered: Spring

Prerequisite(s): Not open to first-year students

Note(s): This course does not apply to the medieval studies major or minor.

Equivalent Course(s): HIST 35904, NEHC 30503, NEHC 20503

HIST 26130. History of Spain, 1876-Present. 100 Units.

The course is designed as a general introduction to the political, cultural, and social history of Spain from the Restauración to the 2000s. The course's fundamental aim is to sparkle students' curiosity to learn more and to think history-American, 'Latin,' European, African-with its indispensable ingredient revisited, namely, Spain.

Instructor(s): M. Tenorio Terms Offered: Spring

Equivalent Course(s): LACS 36130, HIST 36130, LACS 26130

HIST 26220. Brazil: Another American History. 100 Units.

Brazil is in many ways a mirror image of the United States: an almost continental democracy, rich in natural resources, populated by the descendants of three continents, shaped by colonialism, slavery, and sui generis liberal capitalism. Why, then, has Brazil's historical path been so distinct? To explore this question, this course will focus on the history of economic development, race, citizenship, urbanization, the environment, popular culture, violence, and the challenge of democracy. Assignments: Weekly reading, participation in discussions, weekly journal posts, and a final paper.

Instructor(s): B. Fischer Terms Offered: Winter

Equivalent Course(s): LACS 36220, HIST 36220, LACS 26220

HIST 26317. Development and Environment in Latin America. 100 Units.

This course will consider the relationship between development and the environment in Latin America and the Caribbean. We will consider the social, political, and economic effects of natural resource extraction, the quest to improve places and peoples, and attendant ecological transformations, from the onset of European colonialism in the fifteenth century, to state- and private-led improvement policies in the twentieth. Some questions we will consider are: How have policies affected the sustainability of land use in the last five centuries? In what ways has the modern impetus for development, beginning in the nineteenth century and reaching its current intensity in the mid-twentieth, shifted ideas and practices of sustainability in both environmental and social terms? And, more broadly, to what extent does the notion of development help us explain the historical relationship between humans and the environment?

HIST 26318. Indigenous Politics in Latin America. 100 Units.

This course examines the history of Indigenous policies and politics in Latin America from the first encounters with European empires through the 21st Century. Course readings and discussions will consider several key historical moments across the region: European encounters/colonization; the rise of liberalism and capitalist expansion in the 19th century; 20th-century integration policies; and pan-Indigenous and transnational social movements in recent decades. Students will engage with primary and secondary texts that offer interpretations and perspectives both within and across imperial and national boundaries.

Instructor(s): Diana Schwartz

 Terms Offered: Autumn

Equivalent Course(s): LACS 36322, HIST 36320, LACS 26322

HIST 26321. Greater Latin America. 100 Units.

What is 'Latin America,' who are 'Latin Americans' and what is the relationship among and between places and people of the region we call Latin America, on the one hand, and the greater Latinx diaspora in the US on the other? This course explores the history of Latin America as an idea, and the cultural, social, political and economic connections among peoples on both sides of the southern and eastern borders of the United States. Students will engage multiple disciplinary perspectives in course readings and assignments and will explore Chicago as a crucial node in the geography of Greater Latin America. Some topics we will consider are: the origin of the concept of 'Latin' America, Inter-Americanism and Pan-Americanism, transnational social movements and intellectual exchanges, migration, and racial and ethnic politics.

Instructor(s): Diana Schwartz
 Francisco Terms Offered: Autumn

Equivalent Course(s): LACS 26386, CRES 26386, ANTH 23003

HIST 26322. A History of Public Spaces in Mexico, 1520-2020. 100 Units.

Streets and plazas have been sites in which much of Mexican history has been fought, forged, and even performed. This course examines the history of public spaces in Mexico since the Spanish Conquest. By gauging the degree to which these sites were truly open to the public, it addresses questions of social exclusion, resistance, and adaptability. The course traces more than the role and evolution of built sites. It also considers the individuals and groups that helped to define these places. This allows us to read street vendors, prostitutes, students, rioters, and the 'prole' as central historical actors. Through case studies and primary sources, we will examine palpable examples of how European colonization, various forms of state building, and more recent neoliberal reforms have transformed ordinary Mexicans and their public spaces.

Instructor(s): C. Rocha
 Terms Offered: Spring

Equivalent Course(s): LACS 25322, ARCH 26322, ENST 26322

HIST 26409. Revolution, Dictatorship, & Violence in Modern Latin America. 100 Units.

This course will examine the role played by Marxist revolutions, revolutionary movements, and the right-wing dictatorships that have opposed them in shaping Latin American societies and political cultures since the end of World War II. Themes examined will include the relationship among Marxism, revolution, and nation building; the importance of charismatic leaders and icons; the popular authenticity and social content of Latin American revolutions; the role of foreign influences and interventions; the links between revolution and dictatorship; and the lasting legacies of political violence and military rule. Countries examined will include Guatemala, Cuba, Chile, Argentina, El Salvador, Nicaragua, Peru, Venezuela, Bolivia, and Mexico. Assignments: Weekly reading, a midterm exam or paper, a final paper, participation in discussion, and weekly responses or quizzes.

Equivalent Course(s): LLSO 26409, LACS 26409, LACS 36409, HIST 36409

HIST 26418. The Mexican Political Essay. 100 Units.

Alfonso Reyes famously described the essay as a centaur. A hybrid form of expression: part literature and part science. This course introduces students to the rich tradition of the Mexican political essay. Students will discover the value of these open approximations to history, institutions, culture, identity. As a literary form, it may elude the methodological rigours of political science, but it represents a peculiar perspective to understand change and continuity in Mexican history, to question authority and tradition, to offer guidelines to action. We will discuss the value of the essay form as opposed to the academic production of political science. Identity and democracy, the meaning of history and the urgency of action;

the role of intellectuals and the nature of Mexico's contradictions will be considered in the course through the imaginative observations of Emilio Rabasa, Luis Cabrera, Jorge Cuesta, Alfonso Reyes, Octavio Paz, Rosario Castellanos, Gabriel Zaid and other Mexican essayists.

Instructor(s): Jesús Silva-Herzog Márquez Terms Offered: Autumn

Equivalent Course(s): LACS 35123, HIST 36418, LACS 25123

HIST 26614. Making the Monsoon: The Ancient Indian Ocean. 100 Units.

The course will explore the human adaptation to a climatic phenomenon and its transformative impacts on the littoral societies of the Indian Ocean, circa 1000 BCE-1000 CE. Monsoon means season, a time and space in which favorable winds made possible the efficient, rapid crossing of thousands of miles of ocean. Its discovery-at different times in different places-resulted in communication and commerce across vast distances at speeds more commonly associated with the industrial than the preindustrial era, as merchants, sailors, religious specialists, and scholars made monsoon crossings. The course will consider the participation of Mediterranean, Middle Eastern, South Asian, and East African actors in the making of monsoon worlds and their relations to the Indian Ocean societies they encountered; the course is based on literary and archaeological sources, with attention to recent comparative historiography on oceanic, climatic, and global histories.

Equivalent Course(s): NEHC 36614, CLAS 36620, CLCV 26620, HIST 36614, SALC 36614, NEHC 26614, SALC 26614, MDVL 26614

HIST 26615. Time and its discontents: thinking and experiencing time in South Asia through the ages. 100 Units.

While we usually think of time and its relentless march as an immutable, universal and abstract category, this course will explore competing and contested notions of time and history and their periodization. This interdisciplinary seminar aims to introduce students to the sociocultural worlds of South Asia through the prism of Time. Instead of looking at the cultural, religious and scientific realms of ancient, medieval and colonial South Asia changing through time, we will explore the changes that time itself, as a concept but also as a lived reality has undergone throughout the convoluted history of South Asia. We will revisit key concepts and ideas pertaining to the cosmology of Ancient and Medieval South Asia, such as the eras of the world according to old scientific and religious treatises, and how these ideas shaped the understanding of the place of mankind in history and the world. We will also study the intellectual challenges that these notions of time posed to the first Europeans that encountered them, and how our modern notion of time and its periodization was forged in this encounter. Rather than thinking of Time and temporalities in South Asia as part of an outdated and disproved world-view, this course will strive to present South Asia and the non-European world not only as subjects to Western temporalities, but as important places where theoretical propositions were made about time-space and its divisions.

Instructor(s): E. Acosta Terms Offered: Autumn

Note(s): While the course relies heavily in South Asian world-views, a previous acquaintance with the histories and mythologies stemming from this part of the world is not necessary. This course will be of interest to students of different backgrounds. The approach is interdisciplinary, ranging from history, anthropology, religious studies, etc.

Equivalent Course(s): RLST 25321, SALC 25321

HIST 26810. A Global History of South Asia: Migration in the Age of Empire. 100 Units.

Departing from narratives that privilege the rise of a static, territorially bounded, Indian nation-state, this course will examine modern South Asian history (roughly 1600 to present) through the lens of migration and trans-regional encounters. Analyzing shifting perceptions of 'the global' as a spatial concept, we will study labor flows in the Indian Ocean, the colonial state's myriad efforts to circumscribe the movement of its subjects, and population transfers between various colonial sites. Entering the later nineteenth century, we will chart the influence of migration, both historical and contemporary, on nationalist thought; we will also discuss the issues posed by the international circulation of political dissenters. Finally, we will engage with fictional representations of the Partition of India and accounts of the social tensions stemming from South Asian immigration into Britain proper. Featuring moral reform literature, petitions, family histories, and anti-colonial tracts, this course will equip students with the skills to interrogate a range of primary sources and familiarize them with recent trends in global and colonial history.

Instructor(s): Z. Leonard Terms Offered: Autumn

Equivalent Course(s): SALC 26810, GLST 26810

HIST 26811. Enlightenment Modernity and Colonial South Asia. 100 Units.

In Kant's words, the work of public reasoning was the condition for 'man's exit from self-imposed immaturity.' In the colony, however, the critique of existing society as insufficiently reasonable came to be caught up in the justification of Britain's 'liberal' colonial project, and the obligation to Reason autonomously was embroiled in the case for empire. The Indian pursuit of enlightened reason was deeply aware of its uncomfortable proximity to empire, yet intellectuals of a variety of stripes advanced claims of 'enlightenment. Would the appeal to Reason bring about a new moral world or a derivatively imitative landscape? Could the Enlightenment be so truly universal that the colonized could claim it without disowning their past? What relationship would the moral resources of India's past share with the task social critique for a new generation of radical intellectuals? In order to address the promise and perils of colonial Enlightenment and its most controversial debates, this course will focus on a variety of primary and secondary sources. We will look at arguments penned by a range of Indian and British thinkers and at how the rich historiography of India's 19th century may be placed in productive dialogue with the normative theory produced by Europe's 'Enlightenment.' Turning to the history of 19th century India will help us complicate the history of the Enlightenment as a whole, and contribute to help draft a new and broader answer: what is 'Enlightenment?'

Instructor(s): T. Newbold Terms Offered: Spring

Equivalent Course(s): KNOW 25322, SALC 25322

HIST 26812. Tolerance and Intolerance in South Asia. 100 Units.

Few places in the world are as embroiled in the problem of diversity as South Asia, where sectarian violence-fought mainly along religious lines, but also along caste, gender, and linguistic lines-is at the center of political maneuvering. South Asia offers important lessons in how people manage to live together despite histories of mutual strife and conflict about communities and castes. Focusing on the period of British colonial rule, this class explores different instances and ideologies of toleration and conflict. How were South Asian discourses of toleration by such leaders as Gandhi and Nehru different from their European counterparts (e.g., John Locke and John Rawls)? How did their ideologies differ from those articulated by their minority peers such as Ambedkar, Azad, and Madani? We will analyze constitutive precepts, namely secularism, syncretism, toleration. Our attention here will be on the universal connotations of these ideas and their South Asian expression. Fifth week onward, we will turn our attention to select thinkers: Gandhi, Ambedkar, Azad, Madani. Our focus here will be on the ways that each intellectual negotiated the thorny issues of toleration, difference, ethnicity, and belonging. All the thinkers covered in this class had an active presence in nationalist era politics. Finally, we will read historical accounts of some of the most frequent causes of intolerance, namely cow slaughter, music played before the mosque, and desecration of sacred objects.

Instructor(s): T. Reza Terms Offered: Spring

Note(s): All reading materials will be available in English. No prior knowledge of South Asian history or South Asian languages is required.

Equivalent Course(s): CRES 25323, KNOW 25323, SALC 25323, RLST 25323

HIST 27001. Law and Society in Early America, 1600-1800. 100 Units.

This colloquium considers law, legal institutions, and legal culture within the lived experience of colonial and revolutionary America. It will emphasize the interaction of social development and legal development and will explore the breadth of everyday experience with legal institutions like the jury, with courts as institutions for resolving disputes, and with the prosecution of crime.

Instructor(s): E. Cook Terms Offered: Winter

Prerequisite(s): Upper-level undergraduates and early state graduate students.

Equivalent Course(s): HIST 37001, LLSO 26000

HIST 27006. Not Just the Facts: Telling About the American South. 100 Units.

The great jurist Oliver Wendell Holmes Jr. once observed: 'The main part of intellectual education is not the acquisition of facts but learning how to make facts live.' This course concerns itself with the various ways people have striven to understand the American South, past and present. We will read fiction, autobiography, and history (including meditations on how to write history). Main themes of the course include the difference between historical scholarship and writing history in fictional form; the role of the author in each and consideration of the interstitial space of autobiography; the question of authorial authenticity; and the tension between contemporary demands for truthfulness and the rejection of 'truth.'

Instructor(s): J. Dailey Terms Offered: Autumn

Prerequisite(s): Open to upper-level undergraduates.

Equivalent Course(s): AMER 37006, LLSO 25411, AMER 27006, HIST 37006

HIST 27117. Becoming Modern: American Religion in the 1920s. 100 Units.

Terms such as 'acids of modernity' and the 'modern temper' were commonly used in the 1920s to describe a new phenomenon in American history. Historians still regard the 1920s as a significant moment in US History, even while revising older narratives that viewed such changes as leading to a decline in church attendance and religious practice. In the 1920s, the nation struggled with the effects of massive immigration, decades of urbanization, and significant cultural and social changes that had profound implications for religious practice and belief. This course takes an extended look at the 1925 Scopes Trial, the fundamentalist modernist controversy, and the intellectual and cultural challenges to traditional religious beliefs and practices. Some attention is devoted to increasing religious and cultural diversity as a challenge to Protestant dominance.

Instructor(s): Curtis Evans Terms Offered: Winter

Equivalent Course(s): RLST 13302, HIST 37117, RAME 43302

HIST 27118. Christianity Confronts Capitalism: Natural Law, Economics, and Social Reform. 100 Units.

Christianity's relationship with commerce was fraught long before the industrial era. After all, it upheld property rights alongside the poor's beatitude. And, even as industrial capitalism's critics tied the faith to the economic system, Christian thinkers popularized ideas of social justice and the Social Gospel in response to laissez faire's limits. This course will combine intellectual, social, and legal history to examine how various Christian traditions have grappled with liberal capitalism-and its revolutionary critics. We will explore these traditions' competing visions of a moral political economy, how their adherents attempted to put them into action, and where these attempts placed them vis-à-vis society and civil authorities-especially when this place was the court room. After a brief unit on key Judeo-Christian texts bearing on political and economic activity, we will consider various churches' alternatives to liberal capitalism and revolutionary movements' materialism-including Catholic Social Thought from 1891's *Rerum novarum* to Pope Francis's *Laudato si'* and Abraham Kuyper's neo-Calvinist tradition. We will put these in dialogue with practical efforts from Social Gospel reformers, Catholic Workers, and Latin American Liberation Theology to Hobby Lobby or Chick-Fil-A's attempt at Evangelical business. Throughout, students will consider questions about the relationships between church and state, doctrine and practice, and natural law and the law of the market.

Instructor(s): Robert Kaminski Terms Offered: Winter

Equivalent Course(s): LLSO 29067

HIST 27308. The Aspirational City: Chicago's Multicultural Communities. 100 Units.

No city has meant more to the hopes and dreams of more divergent groups of Americans than Chicago. The Aspirational City: Chicago's Multicultural Communities will explore the histories of Chicago's various racial, ethnic and marginalized communities and the ways in which they have sought to fashion the destinies of themselves, their communities, and the city of Chicago. The course is a weekly seminar open to both undergraduate and graduate students.

Terms Offered: Spring

Equivalent Course(s): ENST 27534, CRES 27534

HIST 27309. Portals to the Past: Studying History through Chicago's Collections. 100 Units.

This course offers a rare opportunity to explore Chicago's world-class museums, libraries, and collections, as we learn to study history through objects. We will consider the history of slavery through silver teapots and mahogany furniture, the history of science through specimen collecting, the challenges of self-representation through oil-on-canvas portraiture and paper silhouettes, the culture of death through gravestones, and the role of space in religious life. To do this we will rarely be in a classroom, but rather 'on the road,' encountering real objects, discussing them with expert curators, librarians, and scholars. You will be challenged to look closely, see what others do not, and gather evidence. In an increasingly image and object saturated culture, this course will empower students to understand the arguments and ideas embedded in things and to critically engage how material objects actively shape our lives. This approach will enhance your ability to see, think, analyze, and argue a set of skills that can be transferred to any discipline or career path you may choose.

Instructor(s): C. Allison Terms Offered: Summer

HIST 27310. African American History, 1865-2016. 100 Units.

This class will introduce students to the key themes, events, problems and advances within African American history, after the end of slavery. Readings will include Reconstruction-era documents, Ida B. Wells, Ned Cobb, W. E. B. Du Bois, Howard Thurman, Septima Clark, Philippe Wamba, and Audre Lorde among others. Assignments will include two papers and a series of short response pieces.

Instructor(s): A. Green Terms Offered: Winter

Equivalent Course(s): CRES 27330, AMER 37310, HIST 37310, CRES 37330

HIST 27311. Race and Religion in Chicago. 100 Units.

This course is a chronological and thematic overview of a number of key themes and theoretical concerns in the study of race and religion in the U.S. from 1865 to the present. Taking Chicago as a case study, the course will introduce students to key topics in the study of race and religion in the U.S. Most of the course will focus on black-white racialization in Chicago during this period-interrogating the construction of and contestation over whiteness among Catholics, Protestants, Jews, and new religious movements from the late nineteenth century and through much of the twentieth century, as well as tracing the 'spiritual afterlife of slavery' in Chicago's churches, synagogues, mosques, and other places of worship, and also in the everyday lives of Chicago's religious citizens. The readings and class discussions will also open out to consider other religious issues and projects in Chicago (e.g., Latinx, Indian American, and Indigenous religious communities). Topics for class readings and discussions will be ordered by the week and will alternate between broader theoretical and historiographical issues pertaining to race and religion in the U.S. (first meeting of the week) and closer examinations of the same themes/questions in the context of the religious life of Chicago (second meeting of the week). In this way, Chicago provides a 'laboratory' for observing, testing, and refining historical and theoretical claims about race and religion in the United States.

Instructor(s): Joel Brown Terms Offered: Spring

Equivalent Course(s): CRES 27720, RLST 27720

HIST 27414. (Re)Producing Race and Gender through American Material Culture. 100 Units.

This course introduces students to the role of the material world in the production and reproduction of ideologies of race, gender, and their intersections. Objects around us are imbued with meaning through their design, construction, use, and disuse. Architecture, art, photography, clothing, quilts, toys, food, and even the body have all been used to define groups of people. Combining secondary literature, theory, documentary evidence, and material culture, this course guides students as they ask questions about how ideologies of race and gender are produced, how they are both historically specific and constantly in flux, and how human interaction with the material world creates, challenges, and changes their construction. The primary course objectives are to (1) provide students with an introduction to material culture as a theory and methodology and (2) teach them how to apply it to research on ideologies of gender and race in history.

Terms Offered: Winter

Equivalent Course(s): CRES 27530, GNSE 27530, ARTH 27530, ANTH 25214

HIST 27900. Asian Wars of the Twentieth Century. 100 Units.

This course examines the political, economic, social, cultural, racial, and military aspects of the major Asian wars of the twentieth century: the Pacific War, the Korean War, and the Vietnam War. At the beginning of the course we pay particular attention to just war doctrines and then use two to three books for each war (along with several films) to examine alternative approaches to understanding the origins of these wars, their conduct, and their consequences.

Instructor(s): B. Cumings Terms Offered: Spring

Equivalent Course(s): EALC 27907, EALC 37907, CRES 37900, CRES 27900, HIST 37900

HIST 27906. Capitalism, Gender, and Intimate Life. 100 Units.

What is the relationship between the capitalist economy and the gendered organization of society and identity of individuals? Are these two systems, or one? This class pursues these questions, seeking to understand capitalism as an everyday and intimate experience. How have markets and production shaped and been shaped by personal identity, and in particular gendered identity? We examine the historical interrelationships among practices of sexuality, marriage, family, reproduction, labor, and consumption and trace the economic dimensions of masculinity and femininity over time, focusing largely but not

exclusively on US history. Assignments: Midterm paper (8-10 pages) applying a theoretical reading to a secondary text, and a final paper (15 pages) based on secondary research.

Instructor(s): G. Winant Terms Offered: Winter

Equivalent Course(s): LLSO 27906, GNSE 30106, GNSE 20106, HIST 37906

HIST 28000. United States Latinos: Origins and Histories. 100 Units.

An examination of the diverse social, economic, political, and cultural histories of those who are now commonly identified as Latinos in the United States. Particular emphasis will be placed on the formative historical experiences of Mexican Americans and mainland Puerto Ricans, although some consideration will also be given to the histories of other Latino groups, i.e., Cubans, Central Americans, and Dominicans. Topics include cultural and geographic origins and ties; imperialism and colonization; the economics of migration and employment; legal status; work, women, and the family; racism and other forms of discrimination; the politics of national identity; language and popular culture; and the place of Latinos in US society. Equivalent Course(s): AMER 28001, CRES 28000, GNSE 28202, HIST 38000, LACS 28000, LACS 38000, CRES 38000, GNSE 38202, AMER 38001

HIST 28004. The Carceral State in Modern America. 100 Units.

In this course, we will examine the origins of mass incarceration in the United States—a country that only accounts for five percent of the world's population but nearly a quarter of its prison population. We will trace the ideologies and state apparatuses that have shaped the American carceral state from the post-Civil War era to the twenty-first century. Central themes will include: the criminalization of racialized and marginalized communities; the rise of new policing regimes, along with new methods of surveillance and confinement; and the connection between welfare programs and penal policies. Over the course of this quarter, we will also discuss the emergence of social movements that have advocated for the rights of incarcerated people, as well as the eradication of prison labor and the abolition of prisons altogether.

Instructor(s): N. Maor Terms Offered: Autumn

Equivalent Course(s): AMER 28004, CRES 28004, LLSO 21701, HMRT 28004

HIST 28305. Alcohol and American Society. 100 Units.

Contests about America's political economy and legal regime had long been tied to alcohol policy and drinking culture when the Sons of Liberty made Boston's Green Dragon Tavern their unofficial 'headquarters of the Revolution.' Americans' drinking habits have remained a key battleground ever since. This class will explore major themes in the development of America's political, economic, and sociocultural life and legal regime through its relationship with intoxicating beverages from the colonial era to the present. Topics covered will include rum's role in empire; the legacy of the common law doctrines regulating public houses in civil rights law; the role of colonial tavern culture in the Revolution; persistent conflicts over taxation; ethnoreligious conflict surrounding the temperance movement; Prohibition and organized crime; the brewing industry's roles in financialization, corporate consolidation, and labor struggles; the construction of homogenized consumer culture and the postmodern quest for 'authenticity;' and the legal regime shaping craft brewers' business environment. Through discussions drawing on primary sources as well as the history, social science, and law literatures, we will analyze how Americans defined the bounds of the political community, individual rights, and state power. Over the quarter students will incrementally build on these experiences toward their final projects: original research papers drawing on primary sources exploring these themes.

Instructor(s): Robert Kaminski Terms Offered: Spring

Equivalent Course(s): LLSO 28030

HIST 28811. American Conservatism since 1945. 100 Units.

American conservatism was at a low ebb in the early 1950s. It was politically irrelevant and, perhaps worse, boasted no coherent intellectual movement. Yet the conservative movement's path from the height of the (supposed) midcentury consensus through the rise of Reagan, the Tea Party, and Trump stands at the heart of America's modern political history. And conservative politicians could draw upon a vast new network of economists, lawyers, think tanks, and other organizations for support. This course will explore the American right's emergence from the wilderness to success at the ballot box, in public-policy debates, and in the courtroom. It will draw upon primary sources as well as the history and social science literatures to analyze conservatism as an intellectual, sociopolitical, and legal movement. We will examine the different traditions making up the American right, the institutions that brought them together, and the movement's history. Did conservatism represent a single coherent movement? What did it (aim to) conserve? What were the roles of corporate power, religion, libertarianism, populism, and racial bias in its ascendance? How did Chicago-School economists and the conservative legal movement shape the polity? The class will conclude with a unit exploring the present political moment. What are the origins of Trumpism? Is it a break with conservatism's past or an evolution of the movement? What do current debates bode for the future of American politics?

Instructor(s): Robert Kaminski Terms Offered: Autumn

Equivalent Course(s): LLSO 28020

HIST 28812. Struggle and Solidarity: The Politics of Chicago Labor in the 19th and 20th Centuries. 100 Units.

In this course we will question how and why Chicago was important to the way we think about 'work.' Employment, equity, wages, and security are certainly of debate throughout the nation today, but Chicago has been at the forefront of this contentious conversation for the last two hundred years. In order to better understand the relationship between advancing capitalism, labor politics, the workers' body, exploitation, and resistance we will analyze the Haymarket Massacre, the Chicago Stockyards, and the African-American Pullman Porters. To be sure, laborers built this city with broad shoulders, but also with a commitment to struggle and solidarity that changed the social, political, and economic landscape of the

United States and the world forever. What about the confluence of labor and capital sparked these events? How does union organization work on a pragmatic level as well in regards to ideological (re)formation? In what other ways can populations resist oppression? How do class, race, capital, and labor intersect in society over time and why do those relationships shift? What are the differences or similarities regarding labor issues between Chicago and other parts of the world?

Instructor(s): K. Bryce Lowry Terms Offered: Spring, Spring 2021

Equivalent Course(s): ANTH 25422, ENST 25422

HIST 29000. Latin American Religions, New and Old. 100 Units.

This course will consider select pre-twentieth-century issues, such as the transformations of Christianity in colonial society and the Catholic Church as a state institution. It will emphasize twentieth-century developments: religious rebellions; conversion to evangelical Protestant churches; Afro-diasporan religions; reformist and revolutionary Catholicism; new and New Age religions.

Instructor(s): D. Borges Terms Offered: Autumn

Equivalent Course(s): CRES 29000, MAPS 39200, HIST 39000, RLST 21401, LACS 39000, LACS 29000, CRES 39000, HCHR 39200

HIST 29007. Capitalism and Revolution in the Atlantic World. 100 Units.

What was the relationship between the 'Age of Revolutions' and the rise of capitalism? This course places the social and political upheavals in France, Haiti, and the Americas between 1776 and 1821 in the context of broader developments in the long eighteenth century, including innovations in finance (debt, credit, banks, corporations), the expansion of overseas commerce and colonial slavery, and the emergence of Enlightenment political economy. Above all, we will consider the extent to which the institutional and intellectual structures of the world economy determined both the causes and the outcomes of the revolutions. Readings will cover long-standing debates in the scholarship concerning social class and revolution; the imperial origins of national consciousness; humanitarian reform and the abolition of slavery; colonialism and industry; and the legacy of eighteenth-century revolutions in the twenty-first century.

Instructor(s): O. Cussen Terms Offered: Autumn

Equivalent Course(s): CRES 29007, LACS 29007, AMER 29007

HIST 29008. Slave Abolition and Its Afterlives. 100 Units.

In recent years scholars and activists have (re)turned to the abolitionist movement of the 19th century in order to gain critical traction on the interlocking operations of racism, capitalism, and patriarchy. The return of abolitionism reveals an aspiration to learn from the failures of the past in order to generate new strategies to overcome the structures of domination that pervade our social and political lives. This quarter we will read a series of texts produced before and after the formal end of slavery in the United States with particular attention paid to the revisions, retrospections, and reformulations made to conceptions of freedom. How did abolitionists understand the meaning of freedom before Emancipation? What political transformations did they endorse? Did formal emancipation actualize or reframe the abolitionist imaginary? We will also track two unfulfilled promises in the thought of black scholars and activists: the attempt to secure economic independence for freed slaves and critiques of patriarchal rule within the family. By tracking these political projects, we will raise questions about the re-emergence of abolitionist promises. How does the present trend to appropriate abolition occlude key political disagreements among early and mid-nineteenth century activists? Which strand of abolitionism are we inheriting in the twenty-first century? Why? These questions will anchor our course and help us think about the uses of history for our own political present.

Instructor(s): Larry Svabek Terms Offered: Winter

Equivalent Course(s): PLSC 21540, CRES 27540

HIST 29009. The Transatlantic Slave Trade & the Making of the Black Lusophone Atlantic, 1450-1888. 100 Units.

By the abolition of Brazilian slavery in 1888, an estimated 4.3 million men, women, and children had been imported from Africa to Brazil. Yet, the narratives of slavery and freedom in the North Anglophone and Francophone Atlantic often dominate the popular imagination. This course is aimed at increasing knowledge about how slavery and the transatlantic slave trade shaped the Atlantic World through an examination of the deeply intertwined histories of Brazil and West Africa. This course offers a critical 'genealogy of the present' by investigating the historical roots of racial, gendered, and social inequality that persist in Brazil and Lusophone West Africa today. It will focus on the diverse social, cultural, and political linkages that were forged as a result of the transatlantic trade with particular attention to the Portuguese in West Africa; the development and growth of the slave trade to Brazil; the relationship between slavery and gender; the continuity and adaptation of African social and cultural practices; and resistance, rebellion, and freedom. We will end the course with a look at how different communities, individuals, and nations continue to grapple with the memory and legacy of slavery today.

Instructor(s): Erin McCullugh Terms Offered: Spring

Equivalent Course(s): HMRT 27536, GNSE 27536, CRES 27536, LACS 27536

HIST 29201. Puerto Rico. 100 Units.

An examination of the current situation of Puerto Rico in historical perspective. Assignments: Short papers, quizzes, midterm exam, final paper.

Instructor(s): D. Borges Terms Offered: Winter

Equivalent Course(s): LACS 39201, LACS 29201, HIST 39201

HIST 29313. Childhood and Human Rights in the Twentieth Century. 100 Units.

How and when did we come to embrace the idea that children are innocent and defenseless? What are the implications of framing children's rights as human rights? In this course, we will explore key historical transformations in the legal, social, and cultural construction of childhood in modern Western societies. We will examine children's own experiences and how

adults rendered them the subjects of study and state regulation. Topics of discussion will include work, leisure, education, sexuality, criminality, consumerism, and censorship. Throughout, we will discuss how ideas about race, gender, class, and age have shaped the way that the public and the state had defined childhood: who was entitled to a protected period of nurture, care, and play; who was allowed to be disobedient, or even lawless, and still avoid legal consequences. We will explore how and why some children have been and continue to be excluded from this idealized vision.

Instructor(s): N. Maor Terms Offered: Spring

Equivalent Course(s): CRES 29313, AMER 29313, GNSE 29313, HMRT 29313, LLSO 20301

HIST 29318. Modern Disability Histories: Gender, Race, and Disability. 100 Units.

This course introduces students to the conceptual apparatus of disability studies and major developments in disability history since the late nineteenth century. The course will consider disability beyond physical impairment, centering the ways in which notions of gender, race, class, sexuality, and ability interact and shape subjects, and how these subject positions shift across political watersheds. Students will engage a variety of sources, such as autobiographies, pamphlets, visual material, laws, and medical texts, as well as historiographical sources. Topics will include late nineteenth-century female 'hysteria,' evolutionary approaches to sign language and orality, and the effects of industrialization on new impairments; early twentieth-century eugenics and the Nazi T4 program; postwar developments in prosthetics and discursive intersections between psychosis and civil rights movement. Students are encouraged to work on creative collective projects (e.g., an exhibit or a short video) in addition to written assignments.

Instructor(s): M. Appeltová Terms Offered: Winter

Equivalent Course(s): HIPS 29318, CHDV 29318, HMRT 29318, GNSE 23106, HLTH 29318, CRES 29318

HIST 29426. Lost Histories of the Left. 100 Units.

When most Americans think about 'the left,' Marxism, Soviet state socialism, or European social democracy spring to mind. This class will explore alternative-but now largely forgotten-blueprints for revolutionizing the political and social order that emerged in the nineteenth century. We will pay special attention to utopian socialism, early anticolonial movements, the Jewish Labor Bund, and anarchism. Examining the intellectual underpinnings of these movements, their influence on the modern world, and the factors that led to their demise, we will also consider what lessons they can teach to those committed to realizing a better future today.

Instructor(s): F. Hillis Terms Offered: Winter

Equivalent Course(s): JWSC 29626, HIST 39426, REES 36080, REES 26080

HIST 29427. Fashion, Empire, Capitalism. 100 Units.

Clothing, what anthropologist Terence Turner termed 'the social skin,' mediates between individuals and society. Chosen to articulate personal taste or assigned as uniforms to signify a collective identity, fashion is marked by politics, both historically and in the contemporary world. Today, the fashion industry employs one in six people on earth and is one of the largest contributors to global carbon emissions. Considering fashion in relation to empires and capitalism can shed light on the forces of the past and asks how these continue to animate the present. This course will include museum visits and object-centered analysis of specific kinds of dress, such as Nazi uniforms, the zoot suit, saris, and kanga cloth. It will analyze social difference articulated through fashion in colonial Lima and twentieth-century Khartoum; global and imperial competitions over fashion-related commodities, such as Dutch, French, and English imperial officials attempt to break the Spanish monopoly of Aztec cochineal, a brilliant red dye that was once one of the world's most prestigious commodities; and consumers' influence on markets, such as nineteenth-century Zanzibari women dictating styles and driving competition between Indian, American, and British cloth producers. Finally, the course, examines the place of fashion within the histories of imperialism and capitalism by examining the transformations in cotton production that ignited the Industrial Revolution.

Instructor(s): K. Hickerson Terms Offered: Winter

Note(s): Assignments: material analyses, essays, and an original research project.

Equivalent Course(s): GNSE 29427

HIST 29429. Writing History. 100 Units.

The course is designed to be an invitation to history reading and writing. It aims at introducing students to different history-writing traditions, with special, alas not exclusive, focus on the Iberian world. Do we need history? Why? How have different people written history? How and when did history become a profession and how did this take place in different countries? Why do nations and histories seem to be synonymous? These are the kinds of questions that will be addressed by the course.

Instructor(s): M. Tenorio Terms Offered: Spring

HIST 29430. The Planned Economy: A Global History of Central Planning, from Bismarck to the Green New Deal. 100 Units.

This course will change the way you think about politics. One of the most urgent political questions for any modern society is what economic activity to leave to private actors and what economic activity to place under state control. Today we hear much political debate over whether capitalism or socialism is superior, and what these terms mean. This debate can obscure the historical fact that many different ideological systems around the globe have experimented with highly centralized, state-directed economic organization. In what contexts have these experiments succeeded and failed? What counts as success and failure? To what extent has one experiment in central planning studied and/or learned from examples that preceded it? This course pursues these questions beginning with the origins of modern central planning in Prussia and later during World War I. It goes on to assess other experiments in central planning, including the New Deal, the Soviet Union and Maoist China; the Axis Powers of Italy, the Third Reich, and Imperial Japan; and later in the postcolonial global south from India to Ghana. The class ends by contemplating the Green New Deal and the role of central planning in the future of the United States.

Instructor(s): M. Lowenstein Terms Offered: Autumn

Equivalent Course(s): EALC 29430, GLST 29430

HIST 29506. Home and Empire: From Little House on the Prairie to Refugee Camps. 100 Units.

What can living rooms tell us about Empires? What did it mean to be a housewife in an imperial society? This course answers these and other questions by exploring the relationship between domesticity and imperialism over the past three hundred years. We will explore how Catholic Native Potawatomi women decorated their homes in the early 18th century, how black South African maids interacted with white employers during apartheid, and how young male refugees in contemporary France try to make homes in the land of their former colonial ruler. Through this work students will unpack the racial, gendered, spatial, and political logics of imperial rule. This course is organized around three thematic phases: conquest and expansion, rule and resistance, and decolonization. After introducing theoretical approaches to the study of domesticity and imperialism, we will use case studies from across the globe to work through these thematic groups. We will discuss cases from North America, the Caribbean, Asia, Africa, Oceania, and Europe. By combining secondary literature with films, memoirs, domestic objects, and visual sources we will evaluate the intersections of imperialism and home-life. Students will ultimately conduct a final research project on a topic of their choosing to explore this courses' themes in depth. Students will work to challenge notions of home as an idyllic or a historical space and see the power and struggles that took place within walls.

Instructor(s): Greg Valdespino Terms Offered: Winter

Note(s): This course counts as a Concepts Course for GNSE majors

Equivalent Course(s): GNSE 23128

HIST 29522. Europe's Intellectual Transformations, Renaissance through Enlightenment. 100 Units.

This course will consider the foundational transformations of Western thought from the end of the Middle Ages to the threshold of modernity. It will provide an overview of the three self-conscious and interlinked intellectual revolutions which reshaped early modern Europe: the Renaissance revival of antiquity, the 'new philosophy' of the seventeenth century, and the light and dark faces of the Enlightenment. It will treat scholasticism, humanism, the scientific revolution, Bacon, Descartes, Hobbes, Locke, Voltaire, Diderot, and Sade.

Instructor(s): A. Palmer Terms Offered: Autumn

Prerequisite(s): Students taking FREN 29322/39322 must read French texts in French.

Note(s): First-year students and non-History majors welcome.

Equivalent Course(s): SIGN 26036, FREN 29322, HCHR 39522, HIST 39522, KNOW 29522, FREN 39322, KNOW 39522, RLST 22605

HIST 29632. History Colloquium: The CIA and American Democracy. 100 Units.

This colloquium will examine all aspects of American intelligence and its influence on history, politics, society, and academe since the inception of the Office of Strategic Services during World War II. Particular attention will be paid to how intelligence is gathered and interpreted, intelligence failures and why they happened, the close association between top Ivy League universities and origins of US intelligence, the penetration of the early Central Intelligence Agency by British individuals spying for the Soviets, the wide influence of the CIA in the 1950s and 1960s on major aspects of American life, the crisis of US intelligence in the late 1960s and through the 1970s, the revival of intelligence vigor in the 1980s, and the uses and misuses of intelligence in the recent wars in Iraq and Afghanistan. Assignments: Six or seven books during the course of the colloquium, a few films outside of class time, a paper of roughly fifteen pages in the seventh week of the term, and a final exam (a mix of essay questions with questions on the reading). Outstanding participation in colloquium will merit an increment in the final grade, which otherwise will be determined equally by the outside paper and final exam.

Instructor(s): B. Cumings Terms Offered: Spring

Prerequisite(s): Priority registration is given to History majors.

HIST 29652. History Colloquium: Migration and Citizenship. 100 Units.

Looking through a broad interdisciplinary lens, this colloquium examines the history of migration and citizenship. The focus is largely on the United States, but, given its topic, the course will necessitate transnational and comparative histories. How did nineteenth- and early twentieth-century 'sojourners' become 'citizens'? What constituted the public's perception of some immigrants as unassimilable aliens and others as an ostensible 'model minority'? We will interrogate not only what it means to have been and to be an immigrant in America but also what it means to be a citizen in a multiracial democracy. The class is not a survey course. We will be taking on specific episodes and themes in immigration history. Assignments: An original research paper (15-20 pages) using primary and secondary sources.

Instructor(s): M. Briones Terms Offered: Winter

Prerequisite(s): Priority registration is given to History majors

HIST 29678. History Colloquium: Medicine and Society. 100 Units.

How does medical knowledge change? How do medical practices transform over time? What factors influence the ways in which doctors and patients-and-scientists, artists, politicians, legislators, activists, and educators, among others-understand matters of health and disease, of proper and improper interventions, of the rights of individuals and the needs of communities? This course treats these questions as a starting point for exploring the interactions of medicine and society from 1800 to the present. Through a combination of primary and secondary sources we will examine changing causes of morbidity and mortality, the development of new medical technologies and infrastructures, shifting patterns of disease and shifting ideas about bodies, and debates about health care policy, among other topics. Assignment: Students will be expected to conduct original research and produce an original research paper of fifteen to twenty pages.

Instructor(s): M. Rossi Terms Offered: Winter

Prerequisite(s): Priority registration is given to History majors.

Equivalent Course(s): HIPS 29678

HIST 29680. History Colloquium: The American Apocalypse. 100 Units.

This research colloquium explores the way people have imagined the end of the world in recent US history. Exploring specific apocalyptic visions such as evangelical ideas about the end of days, fears of a Y2K computer glitch, survivalist prediction of mass infrastructure breakdown, and predictions about climate change, we will consider what such imaginaries mean for American life, history, identity, and politics. We will focus on fictional texts, including *The Handmaid's Tale*, *The Turner Diaries*, *Left Behind*, *Parable of the Sower*, *On Such a Full Sea*. Students will complete a 12-15-page original research paper, engaging an apocalypse of their choice.

Instructor(s): K. Belew Terms Offered: Spring

Prerequisite(s): Consent of instructor; priority registration is given to History majors.

HIST 29681. History Colloquium: Radical America. 100 Units.

This undergraduate research colloquium explores various sorts of radicalisms (religious, political, sexual, environmental) from the eighteenth century to the present. Students will write a fifteen-page work of original historical research.

Instructor(s): J. Dailey Terms Offered: Autumn

Prerequisite(s): Priority registration is given to History majors.

HIST 29682. History Colloquium: The History of the Museum. 100 Units.

What do people do in museums and why does it matter? This junior colloquium addresses this question and the history of history museums from the emergence of the public museum in eighteenth-century Europe through its many iterations around the world to the present day. Throughout our attention will be on the historical relationship between museums and their publics. What role have public museums played in shaping communities of nation, gender, race, faith, and class? We will also take up how different communities have themselves shaped the role of museums in public life, defining their missions, determining their contents, and calling their purpose into question. Common readings, visits to local institutions, and close observation of objects and images will prepare students to write a final paper drawing on original primary source research on a museum-related topic of their choosing.

Instructor(s): A. Goff Terms Offered: Spring

Prerequisite(s): Priority registration is given to History majors.

HIST 29683. History Colloquium: Race, Slavery, and Nation. 100 Units.

This undergraduate research colloquium examines the relationship between slavery and republicanism in the early United States. With an interdisciplinary approach and transnational perspective, it considers the contested role of chattel slavery in the creation of US political systems, market relations, social hierarchies, and cultural productions. We will use primary sources and secondary literature to consider the possibilities and limits of archival research; contingent histories of race-making; the relationship between slavery and capitalism; the workings of domination, agency, and resistance; and black 'freedom dreams' in the antebellum United States. Assignment: an original research paper (15-20 pages) using primary and secondary sources.

Instructor(s): Course is taught by Rashauna Johnson, a new faculty member in the Department of History. Terms Offered: Autumn

Prerequisite(s): Priority registration is given to History majors.

HIST 29700. Readings in History. 100 Units.

Students are required to submit the College Reading and Research Course Form. Prerequisite(s): Consent of instructor and the History undergraduate advisor.

Terms Offered: Autumn Spring Summer Winter

Prerequisite(s): Consent of instructor and the associate director of History's Undergraduate Studies Committee.

HIST 29801-29802. BA Thesis Seminar I-II.

History students in the research track are required to take HIST 29801-29802. Third-year students in the research track and in residence in Chicago take BA Thesis Seminar I in Spring Quarter. Those who are out of residence take the seminar in Autumn Quarter of their fourth year.

HIST 29801. BA Thesis Seminar I. 100 Units.

History majors are required to take HIST 29801-29802. BA Thesis Seminar I provides a systematic introduction to historical methodology and approaches (e.g., political, intellectual, social, cultural, economic, gender, environmental history), as well as research techniques. It culminates in students' submission of a robust BA thesis proposal that will be critiqued in class. Guidance will also be provided for applications for research funding.

Instructor(s): P. O'Donnell (autumn); C. Kindell & C. Rydell (spring) Terms Offered: Autumn Spring

Prerequisite(s): All third-year history students in the research track and in residence in Chicago take HIST 29801 in spring quarter. Those who are out of residence take it in autumn quarter of their fourth year. You must receive a B grade in BA Seminar I to continue in the research track and enroll in BA Seminar II.

HIST 29802. BA Thesis Seminar II. 100 Units.

BA Seminar II is a forum to successfully complete the BA thesis, the topic of which was developed in BA Seminar I, in a structured forum that allows for ongoing discussion and peer review. Autumn Quarter is devoted to completing the research and beginning the writing of the thesis. By the end of the quarter students will have drafted 10-15 pages. Over the course of the Winter Quarter students will complete a draft of the thesis, which will be workshoped in the biweekly sessions. The final deadline for submission of the thesis is the second week of the Spring Quarter.

Instructor(s): C. Kindell & C. Rydell Terms Offered: Winter

Prerequisite(s): HIST 29801; students register for the seminar in both autumn and winter quarters; the seminar meets every other week in autumn and winter for 10-weeks total.

Note(s): Sections 1 & 3 meets on odd weeks of term and sections 2 & 4 meets on even weeks.

HIST 29803. Historiography. 100 Units.

The course provides a systematic introduction to historical methodology and approaches (e.g., political, intellectual, social, cultural, economic, gender, environmental history), as well as research techniques. Students will gain analytical, research, and writing tools that will assist them in their capstone projects, research colloquia, or BA theses. Assignments: Weekly response papers, short presentation and paper, take-home final exam.

Instructor(s): P. O'Donnell Terms Offered: Autumn Spring Winter

Prerequisite(s): Historiography is required for all majors, but open to all students.

Note(s): We recommend that Capstone and Research/BA Thesis students take Historiography in the 3rd year.

HIST 29804. Capstone Seminar (Autumn) 000 Units.

Capstone Seminar is a forum to create, discuss, and critique History capstone projects. Early weeks of the seminar will be devoted to exploring various forms historical work can take, from museum installations to podcasts and documentaries. In-process work will be shared and critiqued in workshops. The final deadline for submission of the Capstone Project is the second week of spring quarter.

Instructor(s): P. O'Donnell Terms Offered: Autumn

Prerequisite(s): Students register for the seminar in both autumn and winter quarters; the seminar meets every other week in autumn and winter for 10-weeks total.

History, Philosophy, and Social Studies of Science and Medicine (HIPS)

Program of Study

The BA program in the History, Philosophy, and Social Studies of Science and Medicine (HIPS) is designed for College students interested in studying science in terms of its historical development, conceptual structure, and social role. Students in the program must do sufficient work in one or more sciences to acquire a sound foundation for studying the nature of science. After securing this basis, they are expected to gain an understanding of how science arose, as well as how the content of scientific thought has changed and is changing, because of both its own internal dynamic and its interaction with the larger society in which it is embedded.

The HIPS program is designed to make possible the study of a wide range of social, historical, and conceptual issues relating to science. Students completing the program follow a number of different careers. Some pursue graduate study in the history and philosophy of science or in some field of science. Others find the program valuable preparation for the study of medicine, law, public policy, or science journalism. More generally, the goal of the program is to provide students with a sound basis on which to interpret and evaluate science and science policy. Some students choose to construct a degree program combining the requirements for the HIPS major with those for a major in the physical or biological sciences. Others, having met the HIPS program requirements, use electives to broaden their liberal arts education.

Students in other fields of study may also complete a minor in HIPS. Information follows the description of the major.

HIPS Sponsor

The Morris Fishbein Center for the History of Science and Medicine sponsors the HIPS program. Further information can be obtained in the center's office (SS 207) and at fishbein.uchicago.edu (<http://fishbein.uchicago.edu>).

Program Requirements

Elements of the Curriculum. The curriculum of the program contains five principal elements:

1. The Foundation. All students must:

- a. complete an approved sequence that fulfills the biological sciences general education requirement;
- b. complete the general education requirement in the physical sciences with a physics sequence (PHYS 12100-12200 General Physics I-II or equivalent) or a chemistry sequence (CHEM 11100-11200 Comprehensive General Chemistry I-II, CHEM 10100 Introductory General Chemistry I and CHEM 10200 Introductory General Chemistry II, or equivalent), or have earned a score of 5 on the AP Chemistry or Physics test or a score of 4 or 5 on the AP Physics C Mechanics and E&M test;
- c. complete a calculus sequence (MATH 13100-13200 Elementary Functions and Calculus I-II or higher), or have earned a score of 5 on the AP Calculus BC test;
- d. complete three courses on the origins and development of science in the West: one course in each of the following three chronological periods: ancient, early modern, and modern.

2. Advanced Science. In addition to the science courses typically taken as part of the general education requirements, students are expected to take three courses in science, social sciences, or mathematics beyond the introductory level. They select these advanced courses according to their special aims, their area of concentration, and the subject of their bachelor's thesis.

3. Areas of Concentration. All students in the program determine an area of concentration in the anthropology, ethics, history, philosophy, or sociology of science and medicine. In consultation with the program director and their program adviser, students select five courses to constitute this concentration area. For example, some students may be particularly interested in the intellectual and social interactions between changing scientific knowledge and institutions, on the one hand, and evolving social institutions, on the other; a second group may be concerned with either epistemological issues related to the growth of science or moral and political problems attending the employment of technology; and a third group may wish to emphasize the study of science as a social or cultural activity.

4. Tutorials. Students are required to take two tutorial courses; this is typically done early in their program. With a specific focus that changes each year, these tutorials are small classes (from three to ten students) that emphasize discussion and writing. An updated list of courses is available in the HIPS office (SS 207) or at registrar.uchicago.edu/classes (<http://registrar.uchicago.edu/classes>).

5. Bachelor's Thesis and Junior Seminar. Third-year students enroll in a designated one-quarter seminar (HIPS 29800 Junior Seminar: My Favorite Readings in the History and Philosophy of Science) that deals with general aspects of history, philosophy, and social studies of science and medicine. In Spring Quarter of their third year, students must discuss their proposal for their bachelor's thesis with the program director. In consultation with the program director, students then sign up for a reading and research course (HIPS 29700 Readings and Research in History, Philosophy, and Social Studies of Science and Medicine) with an appropriate faculty member. In their fourth year, this research course should lead to a bachelor's thesis (HIPS 29900 Bachelor's Thesis) that integrates each student's academic studies, bringing them to bear on

a significant question related to some historical, conceptual, ethical, or social aspect of science. Fourth-year students also enroll in a two-quarter HIPS 29810 Bachelor's Thesis Workshop, which is comprised of meetings that focus on organizing, researching, writing, and revising the thesis.

Summary of Requirements

GENERAL EDUCATION

Three courses: one from each of the following chronological periods:	300
Ancient: HIPS 18300	
Early Modern: HIPS 18400-18403	
Modern: HIPS 18500-18503	
An approved sequence that fulfills the biological sciences general education requirement	200
One of the following sequences:	200
CHEM 10100 & CHEM 10200	Introductory General Chemistry I and Introductory General Chemistry II (or equivalent) *
CHEM 11100-11200	Comprehensive General Chemistry I-II (or equivalent) *
PHYS 12100-12200	General Physics I-II (or higher) *
MATH 13100-13200	Elementary Functions and Calculus I-II (or higher) *
Total Units	900

MAJOR

Three courses in science, social sciences, or mathematics beyond the introductory level		300
Five courses in an area of concentration		500
Two tutorials		200
HIPS 29700	Readings and Research in History, Philosophy, and Social Studies of Science and Medicine	100
HIPS 29800	Junior Seminar: My Favorite Readings in the History and Philosophy of Science	100
HIPS 29900	Bachelor's Thesis	100
HIPS 29810	Bachelor's Thesis Workshop	100
Total Units		1400

* Credit may be granted by examination.

Examples of Concentrations

The following are meant to illustrate areas of concentration. They are not prescriptive, only suggestive. For the particular courses that might constitute their area of concentration, students should consult with the director of the program, examine this course catalog, and visit registrar.uchicago.edu/classes (<http://registrar.uchicago.edu/classes/>).

History and Philosophy of Biological Science

HIPS 23600	History and Theory of Human Evolution	100
BIOS 29321	Problem of Evil: Disease?	100
HIPS 23900	Biological and Cultural Evolution	100
HIPS 25801	Evolutionary Theory and Its Role in the Human Sciences	100
HIPS 27860	History of Evolutionary Behavioral Sciences	100
Total Units		500

Philosophy of Science

HIPS 20300	Scientific/Technological Change	100
HIPS 22000	Introduction to Philosophy of Science	100
HIPS 22708	Planetary Britain, 1600-1900	100
HIPS 24900	Natural Philosophy 1200-1800	100
HIPS 25400	Philosophy of Mind and Science Fiction	100
Total Units		500

History of Medicine and Medical Ethics

HIPS 21600	Advanced Medical Ethics: Health Care	100
HIPS 21911	Medical Ethics: Who Decides and on What Basis?	100
HIPS 25900	Darwinian Medicine	100
HIPS 26901	History and Philosophy of Psychology	100

HIPS 27300	Medicine and Culture	100
Total Units		500

Admission

To be eligible for admission, students should have completed at least two of the four foundation course sequences listed in the preceding section and should have maintained a 3.2 GPA or higher in previous course work. Students should apply for admission no later than Autumn Quarter of their third year to the director of the program. The director advises students about the requirements, arranges a preliminary plan of study, and discusses scheduling conflicts and special cases. Thereafter, a student chooses, in consultation with the director, a BA adviser from the staff.

Honors

Students who meet the following criteria are considered for graduation with honors: (1) overall GPA of 3.3 or higher, (2) completion of a bachelor's thesis of A quality, and (3) a majority vote by the faculty in favor of honors.

Grading

Students majoring in HIPS must receive quality grades in all courses meeting the requirements of the degree program, except HIPS 29810 Bachelor's Thesis Workshop, which must be taken for Pass/Fail grading. Nonmajors may take courses for Pass/Fail grading with consent of instructor.

Advisers

Drawn from many parts of the University, those listed in the Faculty Section of the HIPS program have direct responsibility for admitting students, formulating curriculum, and advising students.

Minor Program in History, Philosophy, and Social Studies of Science and Medicine

Students in other fields of study may complete a minor in HIPS, which offers students who are majoring in science the opportunity to gain an understanding of the conceptual, historical, and social contexts in which their disciplines are situated.

The minor requires a total of six courses. Courses in the minor (1) may not be double counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Students should take at least two courses focusing on the origins and development of science in the West (one course in each of two of the following chronological periods: ancient, early modern, and modern) to meet the general education requirement in civilization studies. Additional courses in these sequences that are not used to meet the general education requirement can count toward courses required for the minor.

Students must complete one tutorial course.

The remaining five courses for the minor program should constitute an area of concentration in the anthropology, ethics, history, philosophy, or sociology of science and medicine. Students select the courses that constitute this concentration in consultation with the program director and their program adviser.

Students who elect the minor program in HIPS should meet with the program director before the end of Spring Quarter of their third year to declare their intention to complete the program. The director's approval for the minor program should be submitted to the student's College adviser by the deadline above on a form obtained from the adviser.

The following groups of courses would satisfy the requirements for a minor in HIPS. They are only meant to illustrate possible plans of study; they are not prescriptive.

Group 1

Tutorial:		100
HIPS 29405	Tutorial: Evolution and Pragmatism	
Concentration in History and Philosophy of Biology:		500

History, Philosophy, and Social Studies of Science and Medicine Courses

HIPS 18300, HIPS 18400–18403, and HIPS 18500–18503 Science, Culture, and Society in Western Civilization

These courses focus on the origins and development of science in the West. They aim to trace the evolution of the biological, psychological, natural, and mathematical sciences as they emerge from the culture and social matrix of their periods and, in turn, affect culture and social. In order to satisfy the general education requirement in civilization studies, students must take a course in two or three of the following chronological periods: ancient (numbered HIPS 18300), early modern (HIPS 18400–18403), and modern (HIPS 18500–18503). Taking these courses in sequence is recommended but not required. Only one course per category may count toward the requirement unless special approval is granted.

HIPS 18300. Science, Culture, and Society in Western Civilization I: Greek & Roman Science. 100 Units.

This undergraduate core course represents the first quarter of the Science, Culture, and Society in Western Civilization sequence. Taking these courses in sequence is recommended but not required. This quarter will focus on aspects of ancient Greek and Roman intellectual history, their perceived continuities or discontinuities with modern definitions and practices of science, and how they were shaped by the cultures, politics, and aesthetics of their day. Topics surveyed include history-writing and ancient science, the cosmos, medicine and biology, meteorology, ethnography and physiognomics, arithmetic and geometry, mechanics, taxonomy, optics, astronomy, and mechanical computing.

Instructor(s): J. Wee Terms Offered: Autumn. Offered Autumn 2020

Equivalent Course(s): HIST 17310

HIPS 18400. Science, Culture, and Society in Western Civilization II: Renaissance to Enlightenment. 100 Units.

This lecture-discussion course examines the development science and scientific philosophy from the mid-fifteenth to the mid-nineteenth centuries. The considerations begin with the recovery of an ancient knowledge in the works of Leonardo, Vesalius, Harvey, and Copernicus. Thereafter the course will focus on Enlightenment science, as represented by Galileo, Descartes, Newton, and Hume. The course will culminate with the work of Darwin, who utilized traditional concepts to inaugurate modern science. For each class, the instructor will provide a short introductory lecture on the texts, and then open discussion to pursue with students the unexpected accomplishments of the authors under scrutiny.

Instructor(s): R. Richards Terms Offered: Autumn. Course was offered in Autumn 2019.

Equivalent Course(s): KNOW 18400, HIST 17410

HIPS 18401. Science, Culture, and Society in Western Civilization II: History of Medicine 1500 to 1900. 100 Units.

This course examines the theory and practice of medicine between 1500 and 1900. Topics include traditional early modern medicine; novel understandings of anatomy, physiology, and disease from the Renaissance on; and new forms of medical practice, training, and knowledge-making that developed in the eighteenth and nineteenth centuries.

Instructor(s): M. Rossi Terms Offered: Autumn. Course was offered in Autumn 2019

Equivalent Course(s): HIST 17411

HIPS 18501. Science, Culture, and Society in Western Civilization III: History of Medicine 1900-Present. 100 Units.

This course is an examination of various themes in the history of medicine in Western Europe and America since 1900. Topics include key developments of medical theory (e.g., the circulation of the blood and germ theory), relations between doctors and patients, rivalries between different kinds of healers and therapists, and the development of the hospital and laboratory medicine.

Instructor(s): M. Rossi Terms Offered: Winter. Course was offered in Winter 2020

Equivalent Course(s): HIST 17511

HIPS 18502. Science, Culture, and Society in Western Civilization III: The Environment. 100 Units.

This course charts the development of modern science and technology with special reference to the environment. Major themes include natural history and empire, political economy in the Enlightenment, the discovery of deep time and evolutionary theory, the dawn of the fossil fuel economy, Malthusian anxieties about overpopulation, the birth of ecology, the Cold War development of climate science, the postwar debates about the limits to growth, and the emergence of modern environmentalism. We will end with the new science of the Anthropocene.

Instructor(s): F. Albritton Jonsson Terms Offered: Spring. Course was offered in Spring 2020.

Equivalent Course(s): HIST 17512

HIPS 18503. Science, Culture, and Society in Western Civilization III: History of Social Science. 100 Units.

'Social Science' now is generally used to refer to the various disciplines devoted to the study of humanity in its social manifestations: sociology, social and cultural anthropology, economics, political science, geography, and history. But these disciplines employ radically different methodologies, rooted in distinct histories. While positive social science and the application of statistics to society began in the context of French Revolutionary nation-building, ethnographic methods emerged in the very different context of British imperial encounters with 'exotic' cultures. In the midst of a growing interest in 'society' and 'culture,' distinct methodological schools with competing social and cultural ontologies and methodologies emerged across Europe. This course studies these traditions, and their development in the social and cultural contexts of revolution, empire, racial justice, and disciplinary institutionalization.

Instructor(s): P. Mostajir Terms Offered: Autumn Spring. Offered in Autumn and Spring 2021
Equivalent Course(s): HIST 17513

HIPS 20003. Discovering Anthropology: Reading Race. 100 Units.

Before and since Anthropology became a discrete scientific field of study, questions about the biological reality, potential utility and misuse of the concept of race in *Homo sapiens* have been debated. We will read and discuss a sample of writings by 18th, 19th, and 20th century and contemporary authors who attempted to define human races and those who have promoted or debunked the utility of the concept of race with special attention to its role in retarding social progress, and the extermination and exploitation of some populations and individuals.

Instructor(s): R. Tuttle Terms Offered: Autumn. Autumn 2020
Equivalent Course(s): ANTH 38305, ANTH 20003, CRES 12300

HIPS 20300. Scientific/Technological Change. 100 Units.

Equivalent Course(s): PHIL 30300, CHSS 42300, PHIL 20300

HIPS 20301. The Science, History, Policy, and Future of Water. 100 Units.

Water is shockingly bizarre in its properties and of unsurpassed importance throughout human history, yet so mundane as to often be invisible in our daily lives. In this course, we will traverse diverse perspectives on water. The journey begins with an exploration of the mysteries of water's properties on the molecular level, zooming out through its central role at biological and geological scales. Next, we travel through the history of human civilization, highlighting the fundamental part water has played throughout, including the complexities of water policy, privatization, and pricing in today's world. Attention then turns to technology and innovation, emphasizing the daunting challenges dictated by increasing water stress and a changing climate as well as the enticing opportunities to achieve a secure global water future.

Instructor(s): Seth Darling Terms Offered: Winter. Not offered in 2020-2021
Prerequisite(s): None
Equivalent Course(s): ANTH 22131, MENG 20300, ENST 20300, GLST 26807, HIST 25426

HIPS 20401. Philosophy of Mind. 100 Units.

This is a survey of some of the central questions in the philosophy of mind. These questions include: What is consciousness? How can mental states represent things in the world? How do our minds relate to our bodies? Do we have free will? Can we blame someone for the beliefs or desires she has? What are the emotions? To help us with these questions, we will focus on 20th-century analytic work (by Putnam, Nagel, Searle, Jackson, Dennett, Chalmers, Block, Dretske, and others), but we will also read important historical texts on the nature of the mind by Aristotle, Descartes, and Hume.

Instructor(s): B. Callard Terms Offered: Autumn
Equivalent Course(s): PHIL 23501

HIPS 20500. Intermediate Logic. 100 Units.

This course provides a first introduction to mathematical logic for students of philosophy. In this course we will prove the soundness and completeness of deductive systems for both propositional and first-order predicate logic. (B) (II)

Instructor(s): A. Vasudevan Terms Offered: Winter
Prerequisite(s): Elementary Logic (PHIL 20100) or its equivalent.
Equivalent Course(s): PHIL 39600, CHSS 33600, PHIL 29400

HIPS 20700. Elementary Logic. 100 Units.

An introduction to the concepts and principles of symbolic logic. We learn the syntax and semantics of truth-functional and first-order quantificational logic, and apply the resultant conceptual framework to the analysis of valid and invalid arguments, the structure of formal languages, and logical relations among sentences of ordinary discourse. Occasionally we will venture into topics in philosophy of language and philosophical logic, but our primary focus is on acquiring a facility with symbolic logic as such.

Instructor(s): Autumn 2020: G. Schultheis; Winter 2021: M. Kremer Terms Offered: Autumn Winter
Equivalent Course(s): LING 20102, PHIL 20100, PHIL 30000, CHSS 33500

HIPS 20905. Advanced Logic. 100 Units.

Since Russell's discovery of the inconsistency of Frege's foundation for mathematics, much of logic has revolved around the question of to what extent we can or cannot prove the consistency of the basic principles with which we reason. This course will explore two main efforts in this direction. We will first look at proof-theoretic efforts towards demonstrating the consistency of various foundational systems, discussing the virtues and limitations of this approach. We will then closely examine Gödel's theorems, which are famous for demonstrating limits on the extent to which we can formulate consistency proofs. Much has been written on the implications of Gödel's theorems, and we will spend some time trying to carefully separate what they really entail from what they do not entail. Assessment will be by regular homework sets. Intermediate logic or prior equivalent required. (II) and (B).

Instructor(s): K. Davey Terms Offered: Spring
Prerequisite(s): Elementary Logic or equivalent
Equivalent Course(s): CHSS 39405, PHIL 39405, PHIL 29405

HIPS 21000. Introduction To Ethics. 100 Units.

In this course, we will read, write, and think about philosophical work meant to provide a systematic and foundational account of ethics. We will focus on close reading of two books, Immanuel Kant's *Groundwork of the Metaphysics of Morals* and John Stuart Mill's *Utilitarianism*, along with a handful of more recent essays. Throughout, our aim will be to engage in serious thought about good and bad in our lives. (A)

Instructor(s): C. Vogler Terms Offered: Winter

Equivalent Course(s): FNDL 23107, PHIL 21000

HIPS 21100. Celebrity and Science in Paleoanthropology. 100 Units.

This seminar explores the balance among research, 'showbiz' big business, and politics in the careers of Louis, Mary, and Richard Leakey; Alan Walker; Donald Johanson; Jane Goodall; Dian Fossey; and Biruté Galdikas. Information is gathered from films, taped interviews, autobiographies, biographies, pop publications, instructor's anecdotes, and samples of scientific writings.

Instructor(s): R. Tuttle Terms Offered: TBD

Prerequisite(s): This course qualifies as a Discovering Anthropology selection for Anthropology majors.

Equivalent Course(s): ANTH 21406, ANTH 38300

HIPS 21347. To Preserve or Destroy? Anthropologies of Heritage. 100 Units.

Why do some monuments matter more than others? Why do we destroy some sites and preserve others? How do these objects and sites attain value? As witnessed in Charlottesville, heritage is at the heart of intense debates in politics and culture today. Questions of theft and colonial violence haunt museums, galleries, and other cultural institutions. Looting and repatriation-linked to archaeology's complex history and of equal concern to contemporary anthropology-force us to contend with the very meaning of heritage, including why it matters, what it does, and to whom it rightfully belongs. Bringing archaeology and anthropology together, this course attends to these complex questions, exploring how monuments, heritage sites, and material culture are enmeshed in power and condense contested histories. Drawing together ethnographies of heritage, theories of history and art, and accounts of dispossession and destruction, we will examine heritage as a conceptual formation, a set of social, political, and economic practices, and as a locus of both enchantment and endangerment. In doing so, students will gain a better sense of why the category of heritage seems to matter so much in the 21st century, paradoxically weaponized by both nationalist narratives and decolonial movements, and what futures heritage builds.

Instructor(s): Hilary Leatham Terms Offered: Winter. This course was offered Winter 2020

Equivalent Course(s): ARCH 21347, ANTH 21347, GLST 23317

HIPS 21407. The Vocation of a Scientist. 100 Units.

Max Weber wrote that to be a scientist one needed a 'strange intoxication' with scientific work and a 'passionate devotion' to research as a calling. And yet, such passion seemed to conflict with the ideal of value-neutral inquiry. This class considers the vocation of science since the turn of the twentieth century. What political, economic, and cultural forces have shaped scientific professions in the United States? How are scientists represented in public culture? How was American science experienced during the colonization of the Philippines? By exploring these questions, this class will examine the values and norms that make science into a meaningful vocation.

Terms Offered: TBD

Equivalent Course(s): ANTH 22129, KNOW 21407

HIPS 21408. History of Medicine. 100 Units.

This course surveys the history of medicine from the medieval period to the present. How did medicine emerge as a defined body of knowledge? To what extent do diseases and disorders have an independent existence, and to what extent are they cultural constructs? How have social mores-particularly those related to religion, class, nationality, race, and gender-influenced the ways in which health was and is understood and maintained, and illness treated? What does it mean to practice medicine ethically, and how has that changed over time? Topics include the emergence and evolution of the medical profession, the history of medical research and method, the interpretation and treatment of the unhealthy and healthy alike, eugenics, euthanasia, the quest for immortality, and the changing relationship between technology and disease.

Equivalent Course(s): HIST 25314, CCTS 21408, KNOW 21408

HIPS 21409. History of Extraterrestrial Life. 100 Units.

In 2014, the Vatican Radio made a splash when it reported that the pontiff, Pope Francis, condoned the baptism of extraterrestrials-if they so desired it. 'Who are we to close doors?' he asked rhetorically. It was both a metaphor for spiritual inclusion and an accurate representation of the modern Vatican's position on the possibilities of modern astrobiology and the search for extrasolar planets, fields whose rapid growth over the past two decades make serious consideration of extraterrestrial life seem like a uniquely modern phenomena. Its history, however, is in fact many centuries old. In this course we will examine the development of beliefs concerning life in the universe from the sixteenth century to the present. How did historical actors understand the nature, abilities, and location of extraterrestrial life, and its relationship to man and god? We will analyze connections between these beliefs and contemporary political, social, scientific, and religious developments. These include the role of the plurality of worlds in the debates over heliocentrism, its impact and application in the context of deism and social and political freethought, its literary and artistic depictions and use as a tool of satire and social commentary, its influence on natural philosophy, its decline and the subsequent rise of alien conspiracists and their critics, and how and why conceptions of the extraplanetary other took a dark and sinister turn toward the early-to-mid twentieth century.

Equivalent Course(s): KNOW 21409, ECEV 31409, HIST 24917

HIPS 21410. Politics of Technoscience in Africa. 100 Units.

Euro-American discourse has often portrayed Africa as either a place without science and technology or as the home of deep and ancient wisdom. European imperialists used the alleged absence of science and technology as a justification for colonialism while pharmaceutical companies sought out African knowledge about healing plants. In addition to their practical applications, science and technology carry significant symbolic weight in discussions about Africa. In this class, we examine the politics of scientific and technical knowledge in Africa with a focus on colonialism and its aftermath. How have different people produced and used knowledge about the environment, medicine, and technology? What kinds of knowledge count as indigenous and who gets credit for innovation? How have independent African governments dealt with the imperial

legacies of science? From the interpretation of archaeological ruins to the design of new medical technologies, this class will examine science and technology as political practice in Africa.

Equivalent Course(s): KNOW 21410, ANTH 22165, CRES 21410

HIPS 21411. Sex, Race, and Empire. 100 Units.

This course surveys how science, race, and gender interacted in the early modern Atlantic world from 1500-1800. We will critically examine how new modes of scientific inquiry brought Africans, Americans, and Europeans into contact and conflict. Along the way, we will ask how, why, and with consequences imperial science created new knowledge claims about human inequality, especially racial and sexual difference. We will draw primarily on British, Iberian, and French imperial agendas in order to track the experiences of men and women from all corners of the Atlantic world, including indigenous peoples, enslaved black Africans, free people of color, and white Europeans. Through a variety of primary and secondary sources, we will uncover European aspirations to curate, control, and exploit the natural world and the agency of subjugated peoples in responding to and resisting these designs. Topics covered include natural history collecting and classification; the invention of racial theory; slavery and maroons; women, gender, and reproduction; consumption; and violence, resistance, and revolution.

Equivalent Course(s): GNSE 21411, HIST 25315, KNOW 21411, CRES 21411

HIPS 21413. Sex and Enlightenment Science. 100 Units.

What do a lifelike wax woman, a birthing dummy, and a hermaphrodite have in common? This interdisciplinary course seeks answers to this question by exploring how eighteenth-century scientific and medical ideas, technologies, and practices interacted with and influenced contemporary notions of sex, sexuality, and gender. In our course, the terms 'sex,' 'Enlightenment,' and 'science' will be problematized in their historic contexts using a variety of primary and secondary sources. Through these texts, as well as images and objects, we will see how emerging scientific theories about sex, sexuality, and gender contributed to new understandings of the human, especially female, body. We will also see how the liberating potential of Enlightenment thought gave way to sexual and racial theories that insisted on fundamental human difference. Topics to be covered include theories of generation, childbirth, homosexuality, monstrosities, race and procreation, and hermaphrodites and questions about the 'sex' of the enlightened scientist and the gendering of scientific practices.

Equivalent Course(s): GNSE 21413, CHSS 31413, HIST 22218, KNOW 21413

HIPS 21414. What is Technology? 100 Units.

In the nineteenth century, the word 'technology' referred to the science of the useful and industrial arts. While the term is today synonymous with machinery and other material tools, this contemporary usage dates only to the 1930s. A word once used to describe a specialist mode of writing about applied knowledge has come to refer to tools and their use.

Equivalent Course(s): KNOW 21414

HIPS 21419. Indigenous Knowledge and the Foundations of Modern Social Theory. 100 Units.

Indigenous people are often seen as 'objects' of social theory; this course considers their role as subjects of social theory-makers of modern knowledge who made foundational contributions to basic ideas about humanity. We will take up three case studies, each of which highlights an indigenous people who unleashed a cascade of fresh thinking: the Australian Aborigines who influenced the ideas of Émile Durkheim and Sigmund Freud; the Native peoples of the Northwest Coast of America who stimulated Franz Boas to reconstruct the concept of culture; and the indigenous peoples of the Trobriand Islands who shaped Bronisław Malinowski's ideas about gifts, hospitality, and reciprocity. As we will see, much of what we call social theory turns out to rely on a vast archive of nonstate knowledge generated by indigenous intellectuals.

Instructor(s): Isaiah Lorado Wilner Terms Offered: Spring

Equivalent Course(s): CRES 21419, KNOW 21419

HIPS 21428. Apes and Human Evolution. 100 Units.

This course is a critical examination of the ways in which data on the behavior, morphology, and genetics of apes have been used to elucidate human evolution. We emphasize bipedalism, hunting, meat eating, tool behavior, food sharing, cognitive ability, language, self-awareness, and sociability. Visits to local zoos and museums, film screenings, and demonstrations with casts of fossils and skeletons required.

Instructor(s): R. Tuttle Terms Offered: Spring, Spring 2021

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

Equivalent Course(s): ANTH 38600, EVOL 38600, ANTH 21428, BIOS 13253

HIPS 21609. Topics in Medical Ethics. 100 Units.

Decisions about medical treatment, medical research and medical policy often have profound moral implications. Taught by a philosopher, three physicians, and a medical lawyer, this course will examine such issues as paternalism, autonomy, assisted suicide, abortion, organ markets, research ethics, and distributive justice in health care. (A)

Instructor(s): D. Brudney; Staff Terms Offered: Autumn

Prerequisite(s): Third- or fourth-year standing. This course does not meet requirements for the Biological Sciences major.

Note(s): Philosophy majors: this course fulfills the practical philosophy (A) requirement.

Equivalent Course(s): HLTH 21609, PHIL 21609, BIOS 29314, BPRO 22612

HIPS 22000. Introduction to Philosophy of Science. 100 Units.

We will begin by trying to explicate the manner in which science is a rational response to observational facts. This will involve a discussion of inductivism, Popper's deductivism, Lakatos and Kuhn. After this, we will briefly survey some other important topics in the philosophy of science, including underdetermination, theories of evidence, Bayesianism, the problem of induction, explanation, and laws of nature. (B) (II)

Instructor(s): T. Pashby Terms Offered: Autumn

Equivalent Course(s): PHIL 32000, PHIL 22000, HIST 25109, HIST 35109, CHSS 33300

HIPS 22207. The Social History of Alcohol in Early Modern Europe. 100 Units.

This course will examine the multifaceted role that beer, wine, cider, and spirits played in European society and will challenge students to consider how a seemingly familiar commodity was a key component in shaping early modern social relations. It will focus on several major themes that have guided historical inquiry and show how hard drink intersects with and entangles these histories. Major themes will include alcohol and gender relations; state legality and taxation; moral policing; environmental projects and crises; labor and technology; and colonialism. Using both primary and secondary sources will push students to look below the surface to see how drink alternately challenged or reinforced social hierarchies, much as it continues to do in the present time.

Instructor(s): C. Rydell Terms Offered: Winter

Equivalent Course(s): HIST 22207, HLTH 22207

HIPS 22310. The Commons: Environment and Economy in Early Modern Europe. 100 Units.

Drawing on case studies from Europe and the Atlantic world, this course will track changes in land use and property rights over the early modern period (ca. 1500-1800), inviting students to reflect on the relationship between natural environments (woodlands, waterways, pasture) and histories of state formation, economic growth, rebellion, and colonialism. Organizing concepts and debates will include the tragedy of the commons, moral economies, sustainability and scarcity, the 'organic economy' of the old regime, primitive accumulation, and economic takeoff. Readings will encompass classic works in agrarian, environmental, and social history (i.e., Marc Bloch, E. P. Thompson, Silvia Federici, James Scott, Carolyn Merchant) as well as primary documents and contemporary texts (i.e., More, Bacon, Smith, Paine, Babeuf). We will also reflect on how these histories bear on debates about land use and natural resources in the present day.

Instructor(s): O. Cussen Terms Offered: Winter

Equivalent Course(s): ENST 22310, HIST 22310, LLSO 22310

HIPS 22401. Darwinian Health. 100 Units.

This course will use an evolutionary, rather than clinical, approach to understanding why we get sick. In particular, we will consider how health issues such as menstruation, senescence, pregnancy sickness, menopause, and diseases can be considered adaptations rather than pathologies. We will also discuss how our rapidly changing environments can reduce the benefits of these adaptations.

Instructor(s): K. Pagel Terms Offered: Winter

Prerequisite(s): Prerequisite(s): For BIOS Majors: Three quarters of a Biological Sciences Fundamentals sequence or consent of instructor.

Note(s): CHDV Distribution: A

Equivalent Course(s): GNSE 21500, CHDV 21500, HLTH 21500, BIOS 23405

HIPS 22708. Planetary Britain, 1600-1900. 100 Units.

What were the causes behind Britain's Industrial Revolution? In the vast scholarship on this problem, one particularly heated debate has focused on the imperial origins of industrialization. How much did colonial resources and markets contribute to economic growth and technological innovation in the metropole? The second part of the course will consider the global effects of British industrialization. To what extent can we trace anthropogenic climate change and other planetary crises back to the environmental transformation wrought by the British Empire? Topics include ecological imperialism, metabolic rift, the sugar revolution, the slave trade, naval construction and forestry, the East India Company, free trade and agriculture, energy use and climate change.

Equivalent Course(s): CHSS 32708, HIST 22708, KNOW 32808, KNOW 22708, HIST 32708, ENST 22708

HIPS 22709. Introduction to Philosophy of Quantum Mechanics. 100 Units.

In this class we examine some of the conceptual problems associated with quantum mechanics. We will critically discuss some common interpretations of quantum mechanics, such as the Copenhagen interpretation, the many-worlds interpretation and Bohmian mechanics. We will also examine some implications of results in the foundations of quantum theory concerning non-locality, contextuality and realism. (B) (II)

Instructor(s): T. Pashby Terms Offered: Spring

Prerequisite(s): Prior knowledge of quantum mechanics is not required since we begin with an introduction to the formalism. Only familiarity with high school geometry is presupposed but expect to be introduced to other mathematical tools as needed.

Equivalent Course(s): PHIL 32709, PHIL 22709, CHSS 32709, KNOW 22709

HIPS 22800. Experiencing Madness: Empathic Methods in Cultural Psychiatry. 100 Units.

This course provides students with an introduction to the phenomenological approach in cultural psychiatry, focusing on the problem of 'how to represent mental illness' as a thematic anchor. Students will examine the theoretical and methodological groundings of cultural psychiatry, examining how scholars working in the phenomenological tradition have tried to describe the lived experiences of various forms of 'psychopathology' or 'madness.' By the end of the course, students will have learned how to describe and analyze the social dimension of a mental health experience, using a phenomenologically-grounded anthropological approach, and by adopting a technical vocabulary for understanding the lived experiences of mental illness (for instance, phenomena, life-world, being-in-the-world, intentionality, epoché, embodiment, madness, psychopathology, melancholia/depression, schizophrenia, etc). In addition, given the ongoing problematic of 'how to represent mental illness,' students will also have the opportunity to think through the different ways of presenting their analysis, both in the form of weekly blog entries and during a final-week mock-workshop, where they will showcase their work in a creative medium appropriate to that analysis.

Equivalent Course(s): CHDV 32822, MAPS 32800, ANTH 24355, ANTH 35135, CHSS 32800

HIPS 23410. Sex in Twentieth-Century Europe. 100 Units.

This course will examine the 'syncopated' history of sexuality across this tumultuous century. The period took Europeans from bourgeois norms of sexuality through the 1960s sexual revolution to same-sex marriages; genocide and the emergence of rape as a war crime; and the unprecedented regulation of sexuality and biomedical developments treating infertility. Since the history of sex and sexuality in Europe cannot be thought outside of European colonialism and the Cold War, the course will also examine how sexuality shaped and was shaped by political ideologies. In short, by examining the centrality of 'who can have sex with whom,' students will rethink 'standard' political narratives of twentieth-century Europe. Working with Dagmar Herzog's 'Sexuality in Europe: A Twentieth-Century History,' the main text of the course, and drawing on a variety of primary sources-including law and medical treatises, popular culture, and autobiographies-students will also gain an insight into the ways in which sexuality can be studied beyond archival sources.

Instructor(s): M. Appeltová Terms Offered: Winter

Equivalent Course(s): HIST 23400, GNSE 23490, HLTH 23400, HMRT 23400

HIPS 24300. Foucault and The History of Sexuality. 100 Units.

This course centers on a close reading of the first volume of Michel Foucault's 'The History of Sexuality', with some attention to his writings on the history of ancient conceptualizations of sex. How should a history of sexuality take into account scientific theories, social relations of power, and different experiences of the self? We discuss the contrasting descriptions and conceptions of sexual behavior before and after the emergence of a science of sexuality. Other writers influenced by and critical of Foucault are also discussed.

Instructor(s): A. Davidson Terms Offered: Autumn

Prerequisite(s): One prior philosophy course is strongly recommended.

Equivalent Course(s): FNDL 22001, GNSE 23100, RLST 24800, KNOW 27002, CMLT 25001, PHIL 24800

HIPS 24341. Topics in Medical Anthropology. 100 Units.

This seminar will review theoretical positions and debates in the burgeoning fields of medical anthropology and science and technology studies (STS). We will begin this seminar exploring how 'disease' and 'health' in the early 19-century became inseparable from political, economic, and technological imperatives. By highlighting the epistemological foundations of modern biology and medicine, the remainder of this seminar will then focus on major perspectives in, and responses to, critical studies of health and medicine, subjectivity and the body, entanglements of ecology and health, humanitarianism, and psychoanalytic anthropology.

Instructor(s): P. Sean Brotherton Terms Offered: Winter. Winter 2021

Prerequisite(s): Strongly recommended: previous lower-division courses in the social studies of health and medicine through ANTH, HIPS, HLTH, or CHDV

Note(s): This is an advanced reading seminar. Among undergraduates, 3rd and 4th year students are given priority. Consent only: Use the online consent form via the registrar to enroll.

Equivalent Course(s): CHDV 40301, ANTH 40310, ANTH 24341, CRES 24341, CHDV 24341, CHSS 40310, HLTH 24341

HIPS 24352. Health, Value, Politics. 100 Units.

TBD

Instructor(s): Kaushik Sunder Rajan Terms Offered: TBD

Equivalent Course(s): HLTH 24352, ANTH 24352

HIPS 24401. Freud & Psychoan: Lec/Cse Stud. 100 Units.

TBD

Equivalent Course(s): PSYC 38501, PSYC 28501, FNDL 23302

HIPS 24706. Science in the South: Decolonizing the Study of Knowledge in Latin America & the Caribbean. 100 Units.

This seminar will bridge anthropologies and histories of science, technology, and medicine to Latin American decolonial thought. Throughout Latin America, techno-scientific objects and practices, with their presumed origin in the Euro-Atlantic North, are often complexly entangled with neo-imperial projects of development and modernization that elongate social forms of colonization into the present. Technoscience and its objects, however, can also generate new creative, political, and life-enhancing potentials beyond or despite their colonial resonances, or even provide tools to ongoing struggles for decolonization. Together, seminar participants will explore what a decolonial approach to the study of science, technology, and medicine in the Global South, particularly in Latin America, has been and could become and how decolonial theory can deflect our own disciplinary, conceptual, and political commitments as anthropologists of technoscience.

Instructor(s): S. Graeter Terms Offered: TBD

Equivalent Course(s): ANTH 23026, LACS 24706

HIPS 25001. Kant: Critique of Pure Reason. 100 Units.

This will be a careful reading of what is widely regarded as the greatest work of modern philosophy, Immanuel Kant's Critique of Pure Reason. Our principal aims will be to understand the problems Kant seeks to address and the significance of his famous doctrine of 'transcendental idealism'. Topics will include: the role of mind in the constitution of experience; the nature of space and time; the relation between self-knowledge and knowledge of objects; how causal claims can be justified by experience; whether free will is possible; the relation between appearance and reality; the possibility of metaphysics. (B) (V)

Instructor(s): M. Boyle Terms Offered: Autumn

Equivalent Course(s): CHSS 37901, PHIL 37500, FNDL 27800, PHIL 27500

HIPS 25011. Debating Science: Legitimacy, Authority, and Knowledge. 100 Units.

How can we tell what counts as science? That is, how does science make itself legible as science? Are the social sciences 'as scientific' as the natural sciences? By concerning itself with practices of legitimation, this course introduces students to the social study of science and linguistic anthropological theory. Students will consider the sociopolitical dimensions of scientific activity through a theoretical lens which takes language use as a form of social action. They will consider concepts such as reliability, reproducibility, and objectivity. Case studies will likely include climate change skepticism, education research, and neurodiversity. Students will end the quarter by writing and presenting on a current or historical topic of 'scientific' debate, that is, debate on the scientific status of a field or claim.C

Instructor(s): Lily Ye Terms Offered: Spring

Equivalent Course(s): CHDV 25011

HIPS 25014. Introduction to Environmental History. 100 Units.

How have humans interacted with the environment over time? This course introduces students to the methods and topics of environmental history by way of classic and recent works in the field: Crosby, Cronon, Worster, Russell, and McNeill, etc. Major topics of investigation include preservationism, ecological imperialism, evolutionary history, forest conservation, organic and industrial agriculture, labor history, the commons and land reform, energy consumption, and climate change. Our scope covers the whole period from 1492 with case studies from European, American, and British imperial history.

Instructor(s): F. Albritton Jonsson Terms Offered: Winter

Equivalent Course(s): HIST 25014, CHSS 35014, ENST 25014, HIST 35014

HIPS 25114. Natural History and Empire, circa 1500-1800. 100 Units.

This course will examine natural history—broadly defined as a systematic, observational body of knowledge devoted to describing and understanding the physical world of plants, animals, natural environments, and (sometimes) people—in the context of European imperial expansion during the early modern era. Natural history was upended by the first European encounters with the New World. The encounter with these new lands exposed Europeans for the first time to unknown flora and fauna, which required acute empirical observation, collection, cataloguing, and circulation between periphery and metropole in order to understand their properties and determine their usefulness. As the Spanish, Portuguese, British, French, and Dutch competed with one another to establish overseas trade and military networks in the sixteenth, seventeenth, and eighteenth centuries, they also competed over and shared information on natural resources. The course will combine lecture and discussion and mix primary source readings on natural history in the early modern world with modern historical writings. Though the readings skew a bit toward Britain and the British Atlantic world, every effort has been made to include texts and topics from multiple European and colonial locales. Topics and themes will include early modern sources of natural history from antiquity and their (re)interpretation in imperial context; early modern collecting cultures and cabinets of curiosities; Linnaeus and the origins of

Instructor(s): J. Niermeier-Dohoney Terms Offered: Autumn

Equivalent Course(s): ENST 25114, HIST 25114

HIPS 25121. The Brazil-Argentina Nuclear Cooperation Agreement and Thermoelectric Transition in Brazil. 100 Units.

In this course we present a history of Brazil-Argentina nuclear cooperation and how Brazil is planning the transition of its electric matrix from predominantly hydraulic towards a mix with increased share of nuclear power. Proliferation risks are a main concern of international community when nuclear programs expansion is considered. The Brazilian-Argentine Agency for Accounting and Control of Nuclear Materials, created in 1991, has been fundamental in assuring the international community (via the International Atomic Energy Agency) that the nuclear materials and facilities of both countries are being used for peaceful purposes. Domestically, the debate has been environmental in nature, and concerns topics ranging from mining to power generation, and from radioactive materials disposal to radiation effects in living organisms and major accidents. These diplomatic, environmental, social and political issues are in turn dependent on technical details of the thermoelectric generating process, and this nexus of issues provides the topics for the course.

Instructor(s): Ramos, Alexandre Terms Offered: Autumn

Note(s): Tinker Visiting Professor Autumn 2018

Equivalent Course(s): LACS 25121, PPHA 39921, CHSS 35121, LACS 35121

HIPS 25202. Feminist Perspectives on Science. 100 Units.

Feminist perspectives on science come from anthropology, sociology, history, and philosophy. What they have in common is a determination to uproot the deepest and least visible forms of oppression in our society: those pertaining to facts and methods we unquestioningly take to be true, known, and valid. We will first acquaint ourselves with the value-free ideal of science as an objective, rational process of discovery, and the ways this ideal has been wielded as an instrument of domination. We will spend the rest of the quarter challenging this dogma by (1) historically demonstrating science's symbiotic alliances with political ideologies of gender and race, (2) ethnographically examining structural and interactive practicalities of knowledge-construction and -circulation that reproduce social oppression, and (3) epistemologically deconstructing the very notions of objectivity and rationality that are used to insulate science from feminist critique. Works include but are not limited to authors Londa Schiebinger, Evelyn Hammonds, Emily Martin, Sharon Traweck, Susan Leigh Star, Joan Fijimura, Helen Longino, Heather Douglas, Donna Haraway, Elizabeth Anderson, Sandra Harding, and Susan Haack.

Instructor(s): P. Mostajir Terms Offered: Autumn. Autumn 2020

Equivalent Course(s): ANTH 22124, GNSE 25222, SOCI 20517

HIPS 25205. Computers, Minds, Intelligence & Data. 100 Units.

How are we co-evolving with our machines? How do we teach ourselves and our computers how to learn? What kinds of human intelligences do we promote in liberal education in comparison with artificial intelligence(s)? Through our distributed

cognition with tools of all kinds, as we engage in participatory culture using digital computers and networks, we provide information that generates the basis for big (and small) data. At the crux of our investigation-on the one hand into reading and conversation and on the other hand into algorithms and information theory-are issues about human action and the multifaceted agency of the universal Turing machine-as mobile phone, laptop, internet, robot.

Equivalent Course(s): MAAD 14205, HUMA 25205

HIPS 25206. Digital Culture: Artificial Intelligence, Algorithms, and the Web. 100 Units.

In contrast to print culture and electronic culture, yet embedded in them, contemporary digital culture engages us in human-computer systems empowered as media for mobile communication in the global network society. In our conjoined online and offline environments, we inhabit human-computer hybrids in which (for instance) we learn, imagine, communicate, pay attention, and experience affect. How can we understand and critique our theories, concepts, practices, and technologies of intelligence and information in relation to the capacities of these digital machines with which we co-evolve? For exploring this question, our case studies include comparing artificial and natural intelligences, as well as examining algorithms and their socio-political impacts, in current web functionalities such as search (Google) and social media (Facebook, Twitter).

Instructor(s): Browning, Margot Terms Offered: Course was not offered in 2019-20

Equivalent Course(s): HUMA 25206, LLSO 25206

HIPS 25207. Mindfulness: Experience and Media. 100 Units.

How do we experience media (of all kinds) with (or without) awareness? Methods of mindfulness offer principles and practices of awareness focusing on mind, body, and embodied mind. Mindfulness (a flexible, moment-to-moment, non-judging awareness) is an individual experience and at the same time, practices of mindfulness can be a mode of public health intervention. Mindfulness involves social epistemologies of how we know (or don't know) collectively, as we interact with immediate sensory experience as well as with mediated communication technologies generating various sorts of virtual realities (from books to VR). In addition to readings and discussions, this course teaches embodied practices of attention and awareness through the curriculum of Mindfulness-Based Stress Reduction.

Instructor(s): M. Browning Terms Offered: Winter

Equivalent Course(s): HLTH 25207, HUMA 25207, TAPS 20507

HIPS 25209. American Pragmatism: The Theory and Influence of a Philosophical Movement. 100 Units.

From a philosophical point of view, pragmatism is a tradition that seeks to overturn long-standing dogmas by reframing the relationship between subject and object, redefining the analytic category of 'experience,' and most famously, reconstructing theories of truth and meaning. It comprises a complete philosophical system, including metaphysics, philosophy of science, logic, social and political philosophy, ethics, and aesthetics. From a historical point of view, pragmatism was an intellectual movement which originated in a philosophy club in Harvard University in the late 19th century; became the predominant philosophical tradition in the United States for over half a century; influenced theories, practices, and styles across the arts, humanities, social sciences, education policy, and social work; clashed and conversed with the Germanophone tradition of logical positivism arriving from Europe during the inter-war years; and then all but vanished from American philosophy departments during the McCarthy era. This course will equip students with a theoretical, philosophical understanding of pragmatism, as well as an understanding of its historical context and lasting influence.

Instructor(s): P. Mostajir Terms Offered: Spring, Spring 2020

HIPS 25210. Medical Ethics in the Hospital and Clinic. 100 Units.

In this course, we depart from the ethical conversations that UChicago students may be used to having in the Core. Instead, we will examine the ethical quandaries that involve patients and families, doctors, nurses, researchers, and larger society by using a clinical perspective to frame our discussions. How is good medicine practiced? How should physicians think about conflicting social, professional, and personal duties? How do physicians integrate their knowledge with considerations about wider society to provide ethical care for patients? In the first week, we will introduce basic frameworks to organize our thinking around complex ethical problems in medical practice. We will use these frameworks to discuss general issues of ethical import to all fields of medicine: informed consent, decisional capacity, and end-of-life care. Most of our time will be spent exploring the big ethical questions in various medical specialties: surgery, psychiatry, obstetrics and gynecology, and pediatrics. Consideration will also be given to ethical research practices and global health service. Weekly, lectures regarding relevant clinical and basic medical scientific topics will be offered to inform students' ethical decision-making.

Instructor(s): S. Server Terms Offered: TBD Winter, Winter 2021

HIPS 25211. Computers, Minds, Intelligence and Data. 100 Units.

This course will cover the history of machine intelligence, with an emphasis on the sociological, philosophical, and ethical questions raised by this history up to our present moment. We'll look at how people throughout the last two hundred years have grappled with questions like: Can machines think? What is information? How does data relate to the 'real world'? Who is responsible for the actions of a machine? We will examine how developments in mathematical logic, electrical engineering, cybernetics, and statistics interact with each other and with the wider political and cultural context. This course does not require any specific technical background, though we will sometimes read and discuss technical materials together in class. Weekly reading, writing, and research assignments will culminate in an independent research project.

Instructor(s): J. Foley Terms Offered: Spring, Spring 2021

HIPS 25218. American Epidemics, Past and Present. 100 Units.

This course explores how disease epidemics have shaped watershed periods in US history from the late eighteenth century to the present. Through readings, lectures, and in-class discussions, we will employ different categories of analysis (e.g., race, gender, class, and citizenship) to answer a range of historical questions focused on disease, health, and medicine. For instance, to what extent did smallpox alter the trajectory of the American Revolution? How did cholera and typhoid affect the lived experiences of slaves and soldiers during the Civil War? In what ways did the US government capitalize on

fears over yellow fever and bubonic plague to justify continued interventions across the Caribbean and the Pacific? What do these episodes from the American past reveal about contemporary encounters with modern diseases like HIV/AIDS, Ebola, and COVID-19? Course readings will be drawn from book chapters and scholarly articles, as well as primary sources ranging from public-health reports, medical correspondence, and scientific journals to newspapers, political cartoons, maps, and personal diaries. Grades will be based on participation, weekly Canvas posts, peer review, and a series of written assignments (a proposal and an annotated bibliography, primary source analysis, book review, and rough draft) all of which will culminate in a ten-page final research paper.

Instructor(s): C. Kindell Terms Offered: Winter

Equivalent Course(s): CRES 25218, ENST 25218, GNSE 25210, GLST 25218, HLTH 25218, HIST 25218, AMER 25218

HIPS 25309. History of Perception. 100 Units.

Knowing time. Feeling space. Smelling. Seeing. Touching. Tasting. Hearing. Are these universal aspects of human consciousness, or particular experiences contingent upon time, place, and culture? How do we come to know about our own perceptions and those of others? This course examines these and related questions through detailed readings of primary sources, engagement in secondary scholarship in the history and anthropology of sensation, and through close work with participants' own sensations and perceptions of the world around them.

Equivalent Course(s): CHSS 35309, ANTH 34308, KNOW 31404, HIST 35309, KNOW 21404, ANTH 24308, HIST 25309

HIPS 25421. Censorship from the Inquisition to the Present. 100 Units.

Collaborative research seminar on the history of censorship and information control, with a focus on the history of books and information technologies. The class will meet in Special Collections, and students will work with the professor to prepare an exhibit, *The History of Censorship*, to be held in the Special Collections exhibit space in the spring. Students will work with rare books and archival materials, design exhibit cases, write exhibit labels, and contribute to the exhibit catalog. Half the course will focus on censorship in early modern Europe, including the Inquisition, the spread of the printing press, and clandestine literature in the Renaissance and Enlightenment. Special focus on the effects of censorship on classical literature, both newly rediscovered works like Lucretius and lost books of Plato, and authors like Pliny the Elder and Seneca who had been available in the Middle Ages but became newly controversial in the Renaissance. The other half of the course will look at modern and contemporary censorship issues, from wartime censorship, to the censorship of comic books, to digital-rights management, to free speech on our own campus. Students may choose whether to focus their own research and exhibit cases on classical, early modern, modern, or contemporary censorship. This course is part of the College Course Cluster, The Renaissance.

Equivalent Course(s): SIGN 26010, CLCV 25417, KNOW 21403, HIST 25421, HREL 34309, CHSS 35421, KNOW 31403, RLST 22121, CLAS 35417, HIST 35421

HIPS 25427. The Global Atomic Age. 100 Units.

The nuclear bombings of Hiroshima and Nagasaki 75 years ago was the advent of the atomic age. Paradoxically, the same technology that had unleashed infernos on the Japanese population was heralded in other contexts as utopia in waiting. This course examines how the atom transformed global politics and remade social life, culture, and even the way people experienced emotions. We will use a broad range of sources—including but not limited to historical scholarship, film, poetry, and architecture—to examine the global expansion of nuclear energy, weapons proliferation and militarization, gender and the politics of reproduction, decolonization, nuclear fear and disasters, labor at atomic facilities and in uranium mines, environmentalism and the problem of waste, and nuclear mass politics. Assignments: three essays (1,000-1,500 words each) due in weeks three, six, and nine, which use course-related materials to respond to an assigned prompt. In lieu of a final exam, a portfolio of work from the quarter and a short reflective essay (1,000-1,250 words).

Instructor(s): T. Kahle

Equivalent Course(s): HIST 25427, ENST 25427

HIPS 25600. History of Statistics. 100 Units.

This course covers topics in the history of statistics, from the eleventh century to the middle of the twentieth century. We focus on the period from 1650 to 1950, with an emphasis on the mathematical developments in the theory of probability and how they came to be used in the sciences. Our goals are both to quantify uncertainty in observational data and to develop a conceptual framework for scientific theories. This course includes broad views of the development of the subject and closer looks at specific people and investigations, including reanalyses of historical data.

Instructor(s): S. Stigler Terms Offered: Spring

Prerequisite(s): Prior statistics course

Equivalent Course(s): STAT 26700, CHSS 32900, STAT 36700

HIPS 25808. Lab, Field, and Clinic: History and Anthropology of Medicine and the Life Sciences. 100 Units.

In this course we will examine the ways in which different groups of people—in different times and places—have understood the nature of life and living things, bodies and bodily processes, and health and disease, among other notions. We will address these issues principally, though not exclusively, through the lens of the changing sets of methods and practices commonly recognizable as science and medicine. We will also pay close attention to the methods through which scholars in history and anthropology have written about these topics, and how current scientific and medical practices affect historical and anthropological studies of science and medicine.

Instructor(s): M. Rossi

Note(s): This course fulfills part of the KNOW core seminar requirement. PhD students should register for KNOW 40202 to be eligible to apply for the SIFK dissertation fellowship.

Equivalent Course(s): HIST 25308, HIST 35308, CHSS 35308, KNOW 25308, ANTH 24307, KNOW 40202, ANTH 34307

HIPS 26000. History of Philosophy II: Medieval and Early Modern Philosophy. 100 Units.

A survey of the thought of some of the most important figures of the period from the fall of Rome to the Scottish Enlightenment. The course will begin with an examination of the medieval hylomorphism of Aquinas and Ockham and then consider its rejection and transformation in the early modern period. Three distinct early modern approaches to philosophy will be discussed in relation to their medieval antecedents: the method of doubt, the principle of sufficient reason, and empiricism. Figures covered may include Ockham, Aquinas, Descartes, Avicenna, Princess Elizabeth, Émilie du Châtelet, Spinoza, Leibniz, Abelard, Berkeley, Hume, and al-Ghazali.

Instructor(s): D. Moerner Terms Offered: Winter

Prerequisite(s): Completion of the general education requirement in humanities required; PHIL 25000 recommended.

Equivalent Course(s): PHIL 26000, MDVL 26000

HIPS 26121. Nature, Science, and Empire in the Early Modern Iberian World, 1400-1800. 100 Units.

Full title: 'Nature, Science, and Empire in the Early Modern Iberian World, 1400-1800.' Historians have often relegated Iberia and its New World domains from accounts of the developments of modern science. They have traditionally claimed that strict censorship and a commitment to orthodox Catholicism prevented Spain, once the most powerful empire of the world, from embarking on the path towards scientific modernity in the eighteenth century. Modern scholars, however, have challenged this narrative by embracing more inclusive concepts of 'science' to explain the many ways in which early modern people related to nature. Some of these practices include the writing of natural histories, botanical research, and linguistic studies, all fields that Iberian scholars pioneered in their efforts to govern their vast domains. This course will introduce students to a diversity of scientific practices that flourished in the Hispanic world between 1400 and 1800.

Equivalent Course(s): HIST 26121, LACS 26121

HIPS 26230. Death Panels: Exploring dying and death through comics. 100 Units.

What do comics add to the discourse on dying and death? What insights do comics provide about the experience of dying, death, caregiving, grieving, and memorialization? Can comics help us better understand our own wishes about the end of life? This is an interactive course designed to introduce students to the field of graphic medicine and explore how comics can be used as a mode of scholarly investigation into issues related to dying, death, and the end of life. The framework for this course intends to balance readings and discussion with creative drawing and comics-making assignments. The work will provoke personal inquiry and self-reflection and promote understanding of a range of topics relating to the end of life, including examining how we die, defining death, euthanasia, rituals around dying and death, and grieving. The readings will primarily be drawn from a wide variety of graphic memoirs and comics, but will be supplemented with materials from a variety of multimedia sources including the biomedical literature, philosophy, cinema, podcasts, and the visual arts. Guest participants in the course may include a funeral director, chaplain, hospice and palliative care specialists, cartoonists, and authors. The course will be taught by a nurse cartoonist and a physician, both of whom are active in the graphic medicine community and scholars of the health humanities.

Instructor(s): Brian Callendar Terms Offered: Spring

Equivalent Course(s): KNOW 36230, ARTV 20018, KNOW 26230

HIPS 26382. Development and Environment in Latin America. 100 Units.

This course will consider the relationship between development and the environment in Latin America and the Caribbean. We will consider the social, political, and economic effects of natural resource extraction, the quest to improve places and peoples, and attendant ecological transformations, from the onset of European colonialism in the fifteenth century, to state- and private-led improvement policies in the twentieth. Some questions we will consider are: How have policies affected the sustainability of land use in the last five centuries? In what ways has the modern impetus for development, beginning in the nineteenth century and reaching its current intensity in the mid-twentieth, shifted ideas and practices of sustainability in both environmental and social terms? And, more broadly, to what extent does the notion of development help us explain the historical relationship between humans and the environment?

Instructor(s): Diana Schwartz Francisco Terms Offered: Winter

Equivalent Course(s): LACS 26382, HIST 36317, HIST 26317, LACS 36382, GEOG 26382, ENST 26382, ANTH 23094

Equivalent Course(s): LACS 26617, HIST 26107

HIPS 27004. Babylon and the Origins of Knowledge. 100 Units.

In 1946 the famed economist John Maynard Keynes declared that Isaac Newton 'was the last of the magicians, the last of the Babylonians.' We find throughout history, in the writings of Galileo, Jorge Luis Borges, Ibn Khaldun, Herodotus, and the Hebrew Bible, a city of Babylon full of contradictions. At once sinful and reverential, a site of magic and science, rational and irrational, Babylon seemed destined to resound in the historical imagination as the birthplace of knowledge itself. But how does the myth compare to history? How did the Babylonians themselves envisage their own knowledge? And is it reasonable to draw, as Keynes did, a line that begins with Babylon and ends with Newton? In this course we will take a cross comparative approach, investigating the history of the ancient city and its continuity in the scientific imagination.

Instructor(s): E. Escobar Terms Offered: Autumn

Equivalent Course(s): KNOW 27004, NEHC 20215, HIST 25617

HIPS 27005. Secrecy and Science. 100 Units.

This course traces the relationship between openness, secrecy, and the construction of scientific knowledge. Our sources span several millennia of intellectual history, from cuneiform tablets containing glassmaking recipes and the 'secrets of the gods,' to Medieval alchemical recipes, and to the first museums of natural history. We will investigate how and why science shifted from a subject intended for the elite few, to a more democratic ideal that embraced public demonstration. The role

of patronage in the development of scientific knowledge, and the complex interaction between science and religion will be central to our discussions. Writing assignments will respond to thematic questions based on the readings.

Equivalent Course(s): HIST 24918, RLST 27550, KNOW 27005

HIPS 27301. Medical Anthropology. 100 Units.

This course introduces students to the central concepts and methods of medical anthropology. Drawing on a number of classic and contemporary texts, we will consider both the specificity of local medical cultures and the processes which increasingly link these systems of knowledge and practice. We will study the social and political economic shaping of illness and suffering and will examine medical and healing systems-including biomedicine-as social institutions and as sources of epistemological authority. Topics covered will include the problem of belief; local theories of disease causation and healing efficacy; the placebo effect and contextual healing; theories of embodiment; medicalization; structural violence; modernity and the distribution of risk; the meanings and effects of new medical technologies; and global health.

Instructor(s): E. Raikhel Terms Offered: Winter

HIPS 28319. Ephron course: Imagining Nature among the Greeks. 100 Units.

The goal of this course is to gain an understanding of the historical roots of the concept of nature (Greek *physis*), while being attentive to the diversity of ancient Greek thought about nature even in its early history. In the texts we will read, numerous notions of 'nature' can be discerned: for instance, nature as the physical form of an individual, nature as an underlying reality of someone or something, nature as an autonomous thing distinct from human art and from the supernatural, nature as the all-encompassing natural order, or nature as the natural environment. The conceptual and ideological work done by these conceptions also varies wildly. Furthermore, the images associated with the concepts are similarly diverse, ranging from human bodies to magical plants and cosmic spheres, and with a comparable repertory of conceptual and ideological purposes. Yet discussions of the concept of nature typically deal almost exclusively in abstractions: this is true, for instance, of the standard study of *physis* written over a century ago as a U of C dissertation, which we will read in excerpt. Throughout this class, we will consider not only the explicit and abstract conceptualization of nature, but also a number of related images-especially in the form of metaphors, analogies and personifications-that ultimately fed into the literary and philosophical depictions of nature in the long traditions that have followed.

Instructor(s): L. Wash Terms Offered: Winter

Equivalent Course(s): CLCV 28319

HIPS 28350. XCAP: The Experimental Capstone - The Art of Healing: Medical Aesthetics in Russia and the U.S. 100 Units.

What makes a medical treatment look like it will work? What makes us feel that we are receiving good care, or that we can be cured? Why does the color of a pill influence its effectiveness, and how do placebos sometimes achieve what less inert medication cannot? In this course we will consider these problems from the vantage points of a physician and a cultural historian. Our methodology will combine techniques of aesthetic analysis with those of medical anthropology, history and practice. We will consider the narratology of medicine as we examine the way that patients tell their stories-and the way that doctors, nurses, buildings, wards, and machines enter those narratives. The latter agents derive their meaning from medical outcomes, but are also embedded in a field of aesthetic values that shape their apperception. We will look closely at a realm of medical experience that continues to evade the grasp of instruments: how the aesthetic experience shapes the phenomenon of medical treatment.

Instructor(s): William Nickell; Brian Callender; Elizabeth Murphy Terms Offered: Autumn

Prerequisite(s): for BIOS 29209: This course does not meet the requirements for the Biological Sciences major.

Note(s): This course is one of three offered in The Experimental Capstone (XCAP) in the 2019-20 academic year.

Enrollment in this course is restricted to 3rd and 4th year undergraduates in the College. For more information about XCAP, visit <https://sifk.uchicago.edu/courses/xcap/>

HIPS 29412. The Face in Western Culture from the Mona Lisa to the Selfie. 100 Units.

The course will approach the history of the human face from a variety of disciplinary perspectives, ranging across art history through to the history of science and technology. Topics will include the Mona Lisa and Renaissance portraiture; early modern identity and identity documents; the discipline of physiognomy; Johann Kaspar Lavater and the makings of racial science; the impact of photography; Alphonse Bertillon and the 'mug shot'; smiles in advertisements; biometrics to facial recognition technologies; and the art and science of the selfie. The course will draw on specialized readings from secondary literature alongside a wide range of literary and visual primary sources, including scientific texts, paintings, drawings,

identity documents, photographs, advertisements, cosmetics, and prosthetic parts. The subject offers a great deal of room for the selection of a topic for a research paper on a subject of students' choices.

Prerequisite(s): Open to upper-level undergraduates.

Equivalent Course(s): HIST 29412

HIPS 29637. Tutorial: Evolution Beyond Darwin. 100 Units.

One of the most identifiable images associated with evolution is the visage of Charles Darwin. Historical narratives of evolution center on Darwin's work, and scientific publications today still note whether or not Darwin pre-empted their ideas. This course aims to build a narrative of evolution that brings the story up to today, asking why so many see Darwin as a shorthand for evolution and what consequences that might have for the development and communication of the science. In addition, it will interrogate other 'iconic' images and narratives in evolution, like the tree of life. We will ask where our ideas about evolution have come from, how they are perpetuated, and what consequence that might have for the discipline of evolutionary biology. The course has three aims: 1) to provide a historical understanding of evolution after Darwin; 2) to reflect on how evolution is communicated between scientists and to the broader public, and to ask how 'icons' or Darwin himself suggest implicit meanings counter to the work of the scientists; and 3) to more broadly examine what is a science-a process or a body of knowledge?

Instructor(s): E. Kitchen Terms Offered: Spring, Spring 2021

Equivalent Course(s): HIST 25023

HIPS 29638. TUTORIAL - Vitalism and Teleology in Biology: Historical and Philosophical Approaches. 100 Units.

Unsurprisingly, 'what is life?' has a claim to being one of the oldest questions in science, lagging only a little behind 'what is?' It may be more surprising to learn that arguably all major answers to the question-with materialism and epiphenomenalism on one end of the spectrum, holism and essentialism on the other-are about as old, and that the history of biology has been more a matter of recombining these answers than coming up with new ones. If biology is a game, its ground rules were laid early on. You may propose ingenious modifications of strategy, but go too far outside the box and your fellow players will likely accuse you of playing a different game altogether-if you haven't already been disqualified by the referees. We will approach these questions by considering the history of biology as the history of philosophical attempts at making sense of life, broadly conceived, from Aristotle to Darwin. Such 'philosophies' of life need not be held self-consciously-the most interesting ones often aren't. Rather, any scientific account of life necessarily entails making metaphysical commitments. By tracing the history of these commitments, we will consider which (if any) of their historical mutations have been novel, and where we currently stand. We will also consider the ways in which philosophies of life, with all their metaphysical entanglements, have themselves been entangled with politics and ideology.

Instructor(s): B. Deadman Terms Offered: Winter, Winter 2020

Equivalent Course(s): HIST 25022

HIPS 29639. TUT: The World's Columbian Exposition: Science, Race, Gender, & Music at the 1893 Chicago World Fair. 100 Units.

This course surveys the sights, sounds, and tastes that filled Jackson Park and the Midway Plaisance between May 1 and October 30, 1893. During those six months, over 27 million people flocked to Chicago's south side from across the United States and beyond the Atlantic to experience the marvels illuminating the World's Columbian Exposition. Visitors weaved their way through the newly-designed Midway Plaisance, where they passed exhibits of 'authentic villages of native peoples' in 'traditional' garb until they reached the entrance of the American White City-or, as it was presented, 'the apex of civilization'-where exhibits and lectures on the newest theories and innovations filled 200 Neoclassical buildings under 100,000 incandescent lights. Walking up the Midway demonstrated progress in human development in tune with the main topic of the White City's Congress of Evolution-Social Darwinism. In this course, students will learn about explicit displays of 'progress' during the Gilded Age and will be challenged to interrogate allegories of it at the Columbian Exposition. Together, we will practice close-reading of primary and secondary texts, close-looking of images and objects, and close-listening of music and sounds. We will investigate how 'progress' was staged and cogitated in terms of: Evolutionary theory, Race, Gender, Music, Architecture, and Technology.

Instructor(s): A. Clark Terms Offered: Autumn, Autumn 2020

Equivalent Course(s): GNSE 25021, CRES 25021, HIST 25021

HIPS 29678. History Colloquium: Medicine and Society. 100 Units.

How does medical knowledge change? How do medical practices transform over time? What factors influence the ways in which doctors and patients-and-scientists, artists, politicians, legislators, activists, and educators, among others-understand matters of health and disease, of proper and improper interventions, of the rights of individuals and the needs of communities? This course treats these questions as a starting point for exploring the interactions of medicine and society from 1800 to the present. Through a combination of primary and secondary sources we will examine changing causes of morbidity and mortality, the development of new medical technologies and infrastructures, shifting patterns of disease and shifting ideas about bodies, and debates about health care policy, among other topics. Assignment: Students will be expected to conduct original research and produce an original research paper of fifteen to twenty pages.

Instructor(s): M. Rossi Terms Offered: Winter

Prerequisite(s): Priority registration is given to History majors.

Equivalent Course(s): HIST 29678

HIPS 29700. Readings and Research in History, Philosophy, and Social Studies of Science and Medicine. 100 Units.

Reading and Research for HIPS seniors working on their senior thesis.

Terms Offered: Autumn Spring Winter

Note(s): Students are required to submit the College Reading and Research Course Form.

HIPS 29318. Modern Disability Histories: Gender, Race, and Disability. 100 Units.

This course introduces students to the conceptual apparatus of disability studies and major developments in disability history since the late nineteenth century. The course will consider disability beyond physical impairment, centering the ways in which notions of gender, race, class, sexuality, and ability interact and shape subjects, and how these subject positions shift across political watersheds. Students will engage a variety of sources, such as autobiographies, pamphlets, visual material, laws, and medical texts, as well as historiographical sources. Topics will include late nineteenth-century female 'hysteria,' evolutionary approaches to sign language and orality, and the effects of industrialization on new impairments; early twentieth-century eugenics and the Nazi T4 program; postwar developments in prosthetics and discursive intersections between psychosis and civil rights movement. Students are encouraged to work on creative collective projects (e.g., an exhibit or a short video) in addition to written assignments.

Instructor(s): M. Appeltová Terms Offered: Winter

Equivalent Course(s): CHDV 29318, HIST 29318, HMRT 29318, GNSE 23106, HLTH 29318, CRES 29318

HIPS 29800. Junior Seminar: My Favorite Readings in the History and Philosophy of Science. 100 Units.

This course introduces some of the most important and influential accounts of science to have been produced in modern times. It provides an opportunity to discover how philosophers, historians, anthropologists, and sociologists have grappled with the scientific enterprise, and to assess critically how successful their efforts have been. Authors likely include Karl Popper, Thomas Kuhn, Robert Merton, Steven Shapin, and Bruno Latour.

Instructor(s): R. Richards Terms Offered: Autumn

Equivalent Course(s): HIST 25503

HIPS 29810. Bachelor's Thesis Workshop. 100 Units.

Thesis writing workshop for HIPS seniors.

Terms Offered: Autumn, Spring, Winter

HIPS 29900. Bachelor's Thesis. 100 Units.

This is a research course for independent study related to thesis preparation.

Terms Offered: Autumn, Winter, Spring

Note(s): Students are required to submit the College Reading and Research Course Form.

Human Rights

Department Website: <http://humanrights.uchicago.edu>

The Pozen Family Center for Human Rights

The Pozen Family Center for Human Rights, founded in 1997 as the Human Rights Program, supports innovative, interdisciplinary teaching and research projects that explore the theory and practice of human rights. The Pozen Center advances the global study of human rights through:

- A rigorous liberal arts curriculum that combines humanities and social sciences perspectives and analysis with practice-oriented teaching;
- Research initiatives that bring together faculty and students from across the University to address the challenges of human rights in a global world of diverse histories, politics, religions, and cultures;
- Programs designed to enhance the University community's engagement with local, national, and international human rights issues, practices, and organizations.

The Human Rights Internship Program (<http://humanrights.uchicago.edu/internships/>) provides funded summer fellowships to College, graduate, and professional students to gain hands-on experience at host organizations around the world and in the United States. The Pozen Center also advances human rights research through grants to faculty and doctoral students that support innovative scholarship, as well as conferences and symposia. Multi-year faculty initiatives develop projects such as health and human rights, philosophical approaches to labor rights, and changing norms of refugee protection. The Pozen Center fosters a human rights culture at the University of Chicago and in the broader community with public events (<http://humanrights.uchicago.edu/page/events/>) throughout the year. Conferences, lectures, workshops, performances, and exhibitions bring scholars and practitioners from around the world to explore human rights in theory and practice.

Human Rights Curriculum

The Human Rights Curriculum (<https://humanrights.uchicago.edu/page/curriculum/>) includes a College Human Rights civilization studies sequence, a College minor (<https://humanrights.uchicago.edu/collegeminor/>), an introduction to contemporary concepts and issues in human rights, a Spring Human Rights Study Abroad Program in Vienna (<https://study-abroad.uchicago.edu/programs/vienna-human-rights/>), and a variety of elective courses with distinct disciplinary, thematic, and/or regional perspectives.

HMRT 10100 Human Rights in World Civilizations I and HMRT 10200 Human Rights in World Civilizations II comprise a two-quarter sequence that explores how human rights have been constructed across transnational, imperial, national, and local spaces in a variety of civilizational vernaculars while exposing students to their contested genealogies, limits, and silences. The sequence is primary source driven and discussion based, with readings drawn from a range of texts from the political and the legal to the literary, aural, and visual. This sequence meets the general education requirement in civilization studies. These courses must be taken in sequence.

Undergraduate Minor in Human Rights

College students in any field of study may complete a minor in Human Rights. The minor is an interdisciplinary plan of study that provides students the opportunity to become familiar with the theoretical, historical, and comparative perspectives on human rights. The flexibility of this course of study complements majors in any of the disciplines. A minor in Human Rights will provide a background for graduate study in many disciplines or for careers that incorporate human rights analysis or advocacy, including medicine, law, film-making, social work, public policy, teaching, journalism, or government service.

The Human Rights minor requires a total of five courses, including:

1. One introductory course. Choose from one of the following:

HMRT 21001	Human Rights: Contemporary Issues	100
HMRT 21002	Human Rights: Philosophical Foundations	100
HMRT 20101	Human Rights I in Vienna: Philosophical Foundations of Human Rights	100
HMRT 20201	Human Rights II in Vienna: History and Theory	100
HMRT 20301	Human Rights III in Vienna: Contemporary Issues in Human Rights	100

2. Four approved Human Rights (HMRT) courses or cross-listed courses.

It is recommended but not required that students who minor in Human Rights take HMRT 10100-10200 Human Rights in World Civilizations I-II to fulfill their general education requirement in civilization studies.

Summary of Requirements for the Minor in Human Rights

One of the following:		100
HMRT 21001	Human Rights: Contemporary Issues	
HMRT 21002	Human Rights: Philosophical Foundations	

HMRT 20101	Human Rights I in Vienna: Philosophical Foundations of Human Rights	
HMRT 20201	Human Rights II in Vienna: History and Theory	
HMRT 20301	Human Rights III in Vienna: Contemporary Issues in Human Rights	
Four approved HMRT courses or cross-listed courses		400
Total Units		500

To apply for the minor, students must receive the Pozen Center Executive Director's approval on a form obtained from their College adviser. This form must then be returned to the College adviser by the end of Spring Quarter of their third year.

Courses in the minor program may not be (1) double counted with the student's major(s) or with other minors or (2) counted toward general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Due to recent changes in the Human Rights minor, students in the Classes of 2017 and 2018 who have enrolled in the minor as of July 1, 2016, can seek approval of other combinations of Human Rights courses from the Pozen Center Executive Director.

Human Rights Courses

HMRT 10100-10200. Human Rights in World Civilizations I-II.

This sequence meets the general education requirement in civilization studies. These courses must be taken in sequence.

HMRT 10100. Human Rights in World Civilizations I. 100 Units.

The first quarter begins with a set of conceptual problems and optics designed to introduce students to the critical study of human rights, opening up questions of the universal, human dignity, and the political along with the practices of witness and testimony. It is followed by two thematic clusters. 'Anti-Slavery, Humanitarianism, and Rights' focuses on the late eighteenth and early nineteenth centuries to historicize notions of dignity, sympathy, and witness. 'Declarations as a Human Rights Genre' examines revolutionary eighteenth-century rights declarations in France, the United States, and Haiti against the aspirations of the 1948 UN Universal Declaration of Human Rights.

Instructor(s): J. Ransmeier, B. Laurence, Staff Terms Offered: Autumn

Note(s): This sequence meets the general education requirement in civilization studies. These courses must be taken in sequence.

Equivalent Course(s): SOSC 24900

HMRT 10200. Human Rights in World Civilizations II. 100 Units.

Four thematic clusters structure the second quarter. 'Migration, Minorities, and Refugees' examines minority rights, the evolution of legal norms around refugees, and human trafficking. 'Late Twentieth Century Human Rights Talk' explores the contestations between rights claims in the political-civil and socio-economic spheres, calls for sexual rights, and cultural representations of human rights abuses. 'Global Justice' considers forms of international criminal law, transitional justice, and distributive justice. 'Indigenous Rights as Human Rights' takes up the relatively new domain of the rights of indigenous peoples and how they relate to contemporary human rights practice.

Instructor(s): B. Laurence, E. Osborn, Staff Terms Offered: Winter

Prerequisite(s): HMRT 10100

Note(s): This sequence meets the general education requirement in civilization studies. These courses must be taken in sequence; students must have taken HMRT 10100 to enroll in this course.

Equivalent Course(s): SOSC 24901

HMRT 20101-20201-20301. Human Rights I in Vienna: Philosophical Foundations of Human Rights; Human Rights II in Vienna: History and Theory; Human Rights III in Vienna: Contemporary Issues in Human Rights.

Human Rights in Vienna

HMRT 20101. Human Rights I in Vienna: Philosophical Foundations of Human Rights. 100 Units.

Human rights are claims of justice that hold merely in virtue of our shared humanity. In this course we will explore philosophical theories of this elementary and crucial form of justice. Among topics to be considered are the role that dignity and humanity play in grounding such rights, their relation to political and economic institutions, and the distinction between duties of justice and claims of charity or humanitarian aid. Finally we will consider the application of such theories to concrete, problematic, and pressing problems, such as global poverty, torture, and genocide. (V) (I)

Instructor(s): D. Brudney Terms Offered: Spring

HMRT 20201. Human Rights II in Vienna: History and Theory. 100 Units.

This course is concerned with the theory and the historical evolution of the modern human rights regime. It discusses the emergence of a modern 'human rights' culture as a product of the formation and expansion of the system of nation-states and the concurrent rise of value-driven social mobilizations. It proceeds to discuss human rights in two prevailing modalities. First, it explores rights as protection of the body and personhood and the modern, Western notion of individualism. Second, it inquires into rights as they affect groups (e.g., ethnicities and, potentially, transnational corporations) or states.

Instructor(s): T. Zahra Terms Offered: Spring

HMRT 20301. Human Rights III in Vienna: Contemporary Issues in Human Rights. 100 Units.

This interdisciplinary course presents a practitioner's overview of human rights problems as a means to explore the utility of human rights norms and mechanisms, as well as the advocacy roles of civil society organizations, legal and

medical professionals, traditional and new media, and social movements. The Vienna edition of the course will expose the students to issues in contemporary human rights relevant to Europe today. Topics will include the relationship between rights and citizenship in contemporary Europe, the balance between rights and security (including the prohibition against torture), and the recognition of children's rights as human rights.

Instructor(s): S. Gzesh Terms Offered: Spring

HMRT 20200. Human Rights II: History and Theory. 100 Units.

This course is concerned with the theory and the historical evolution of the modern human rights regime. It discusses the emergence of a modern 'human rights' culture as a product of the formation and expansion of the system of nation-states and the concurrent rise of value-driven social mobilizations. It proceeds to discuss human rights in two prevailing modalities. First, it explores rights as protection of the body and personhood and the modern, Western notion of individualism. Second, it inquires into rights as they affect groups (e.g., ethnicities and, potentially, transnational corporations) or states.

Instructor(s): TBA Terms Offered: Winter

Equivalent Course(s): CRES 29302, HIST 39302, HIST 29302, LLSO 27100, INRE 31700, HMRT 30200

HMRT 21001. Human Rights: Contemporary Issues. 100 Units.

This course examines basic human rights norms and concepts and selected contemporary human rights problems from across the globe, including human rights implications of the COVID pandemic. Beginning with an overview of the present crises and significant actors on the world stage, we will then examine the political setting for the United Nations' approval of the Universal Declaration on Human Rights in 1948. The post-World War 2 period was a period of optimism and fertile ground for the establishment of a universal rights regime, given the defeat of fascism in Europe. International jurists wanted to establish a framework of rights that went beyond the nation-state, taking into consideration the partitions of India-Pakistan and Israel-Palestine - and the rising expectations of African-Americans in the U.S. and colonized peoples across Africa and Asia. But from the beginning, there were basic contradictions in a system of rights promulgated by representatives of nation-states that ruled colonial regimes, maintained de facto and de jure systems of racial discrimination, and imprisoned political dissidents and journalists. Cross-cutting themes of the course include the universalism of human rights, problems of impunity and accountability, notions of 'exceptionalism,' and the emerging issue of the 'shamelessness' of authoritarian regimes. Students will research a human rights topic of their choosing, to be presented as either a final research paper or a group presentation.

Instructor(s): Susan Gzesh, Senior Lecturer, (The College) Terms Offered: Autumn Winter

Equivalent Course(s): LLSO 21001, HIST 29304, LACS 21001

HMRT 21002. Human Rights: Philosophical Foundations. 100 Units.

Human rights are claims of justice that hold merely in virtue of our shared humanity. In this course we will explore philosophical theories of this elementary and crucial form of justice. Among topics to be considered are the role that dignity and humanity play in grounding such rights, their relation to political and economic institutions, and the distinction between duties of justice and claims of charity or humanitarian aid. Finally we will consider the application of such theories to concrete, problematic and pressing problems, such as global poverty, torture and genocide. (A) (I)

Instructor(s): B. Laurence Terms Offered: Autumn

Equivalent Course(s): HIST 39319, HIST 29319, PHIL 21002, PHIL 31002, INRE 31602, MAPH 42002, HMRT 31002, LLSO 21002

HMRT 21005. Militant Democracy and the Preventative State. 100 Units.

Are states of exception still exceptional? The current debates and developments as well as the existential governmental crises has led to a securitization of rights. State security discourse narrates how states understand and mediate their legal obligations and has been used justify pre-emptive actions and measures which otherwise would not fit within an international law framework. When narrated in the public square, States often construct a discourse around a necessity defence-measures that may be extra-legal but argued to be necessary to protect democratic values and the democratic 'way of life.' This typifies what we refer to as 'militant democratic' language of the 'preventive state' and has been most visible in the raft of antiterrorism measures that were introduced after the events of September 11, 2001 and remain to date. This course will examine the impact of militant democracy and the preventative state on the current human rights landscape. It will look specifically how the narrative of prevention and protection has impacted normative changes to fundamental human rights and how the permanence of emergency is beginning to give the concept of 'securitization of rights' legal legs.

Instructor(s): Kathleen Cavanaugh, Senior Lecturer, Pozen Center for Human Rights Terms Offered: Autumn

HMRT 21007. The Politics of Human Rights Law. 100 Units.

In contrast to the notion that international law is a 'stable set of normative demands opposed to international politics,' it is 'better understood as an aspect of hegemonic contestation, a technique of articulating political claims in terms of legal rights and duties' (Koskeniemi 2004:197). As a hegemonic technique, law is a surface over which political struggles are waged, reflecting back the political uncertainties of the time. That international law is situated within, not apart from political realities is not in question and before we can begin to explain universal international law, we must first clarify 'what or whose view of international law is meant' (199). This course challenges a traditional reading of international law by examining the politics of law. Specific attention will be paid to the interface between emergency powers and international law. When are international law principles relevant? What guidance or constraints does international law impose on emergency powers? What is the relationship between national and international control mechanisms? How do international law mechanisms supervise or monitor the exercise of emergency powers-from the 'global war on terror' to Covid19-- and how effective are they? The course will provide students with a toolkit to [re]conceptualise international law in order to better understand the hegemonic contestation over the rights-based discourse.

Instructor(s): Kathleen Cavanaugh, Senior Lecturer, Pozen Center for Human Rights Terms Offered: Autumn

HMRT 21400. Health and Human Rights. 100 Units.

This course attempts to define health and health care in the context of human rights theory and practice. Does a 'right to health' include a 'right to health care'? We delineate health care financing in the United States and compare these systems with those of other nations. We explore specific issues of health and medical practice as they interface in areas of global conflict: torture, landmines, and poverty. Readings and discussions explore social determinants of health: housing, educational institutions, employment, and the fraying of social safety nets. We study vulnerable populations: foster children, refugees, and the mentally ill. Lastly, does a right to health include a right to pharmaceuticals? What does the big business of drug research and marketing mean for our own country and the world?

Instructor(s): R. Sherer, E. Lyon Terms Offered: Winter

Equivalent Course(s): MEDC 60405, HMRT 31400

HMRT 21499. Philosophy and Philanthropy. 100 Units.

Perhaps it is better to give than to receive, but exactly how much giving ought one to engage in and to whom or what? Recent ethical and philosophical developments such as the effective altruism movement suggest that relatively affluent individuals are ethically bound to donate a very large percentage of their resources to worthy causes—for example, saving as many lives as they possibly can, wherever in the world those lives may be. And charitable giving or philanthropy is not only a matter of individual giving, but also of giving by foundations, corporations, non-profits, non-governmental and various governmental agencies, and other organizational entities that play a very significant role in the modern world. How, for example, does an institution like the University of Chicago engage in and justify its philanthropic activities? Can one generalize about the various rationales for philanthropy, whether individual or institutional? Why do individuals or organizations engage in philanthropy, and do they do so well or badly, for good reasons, bad reasons, or no coherent reasons? This course will afford a broad, critical philosophical and historical overview of philanthropy, examining its various contexts and justifications, and contrasting charitable giving with other ethical demands, particularly the demands of justice. How do charity and justice relate to each other? Would charity even be needed in a fully just world? (A)

Instructor(s): B. Schultz Terms Offered: Winter

Note(s): This course will feature a number of guest speakers and be developed in active conversation with the work of the UChicago Civic Knowledge Project and Office of Civic Engagement. Students will also be presented with some practical opportunities to engage reflectively in deciding whether, why and how to donate a certain limited amount of (course provided) funding.

Equivalent Course(s): PLSC 21499, PHIL 21499, MAPH 31499

HMRT 21648. Languages of Migration: Literature, Law, and Language Justice. 100 Units.

For decades, human rights activists and lawmakers in the United States have been fighting for a person's right to speak their native language before the law, implying that language justice could be achieved through the use of interpreters. At the same time, a new generation of poets and fiction writers has been exercising alternative approaches to language justice, shifting the focus from speakers to listeners, and from the legal to the personal. This course brings these seemingly separate discourses into conversation in an attempt to trace the assumptions that undergird different formulations of language justice in the late 20th century and 21st century. Drawing on Edward Said's *The Public Role of Writers and Intellectuals*, we will examine NGO statements and immigration court hearings side by side with poetry and fiction by Monica de la Torre, Antonio Ruiz Camacho, Irena Klepfisz, Joseph Brodsky and others. As we analyze theories of identity, desire, language and responsibility and engage with thinkers such as Andrea Long Chu, Hannah Arendt and Aamir Mufti, we will consider the potential implications of bringing literature and law into conversation with one another.

Instructor(s): Yael Flusser Terms Offered: Spring

Equivalent Course(s): CMLT 21648, ENGL 21648

HMRT 21748. Global Human Rights Literature. 100 Units.

This course surveys key human rights texts (philosophical texts, literary works, and legal documents) of the 20th and 21st centuries. By reading global literatures alongside international human rights instruments, and by treating literature as an archive of ideas that circulate among a literary public invested in human rights, this course explores the importance of art and literature to legal and political projects and provides students with the opportunity to conceptualize the role of narrative for human rights advocacy and human rights imaginaries. We will chart the rise of the global human rights movement, beginning with the 1940s up to our contemporary moment, paying close attention to key human rights issues such as genocide, citizenship, enforced disappearance, detention, apartheid, refugee crises, and mass incarceration. Readings will include works by Anna Seghers, Primo Levi, Hannah Arendt, Jacobo Timerman, Aleksandr Solzhenitsyn, Rigoberta Menchú, Ngũgĩ wa Thiong'o, Antje Krog, Dave Eggers, and Albert Woodfox.

Instructor(s): Nory Peters Terms Offered: Winter

Equivalent Course(s): CRES 21748, CMLT 21748

HMRT 22210. Justice at Work. 100 Units.

In this class we will explore questions of justice that arise in and around work. We will consider concepts such as exploitation and domination as they apply to workers under capitalism. We will explore the foundation of the right to strike, and the right to form a union. We will consider the merits of different justifications for workplace democracy and worker control. We will explore the role of domestic injustice in sustaining wage inequality for women, and consider the relationship of race to capitalism. We explore these topics through a variety of normative lenses, drawing on cutting edge work in the liberal, neo-republican, Marxist, feminist, and human rights traditions. (A)

Instructor(s): B. Laurence Terms Offered: Winter

Equivalent Course(s): PHIL 21606

HMRT 22217. Reimagining Justice in the Chicago Police Torture Cases. 100 Units.

From 1972 to 1991, former Chicago police commander Jon Burge and white detectives under his command systematically tortured over 117 Black people in police custody. In May 2015, 43 years after the first known instance of torture, Chicago became the first municipality in the U.S. to provide reparations to those harmed by racially-motivated law enforcement violence, passing legislation for survivors of the Burge police torture regime. This course explores the evolution of decades of community activism and creative organizing undertaken in the Jon Burge torture cases. We will consider the following questions: What do these cases and the activism surrounding them reveal about policing and the criminal legal system? What role did torture survivors and those directly impacted by Burge torture play in struggles for justice? How can we reimagine systems of justice and accountability? How can society reckon with legacies of state violence and their ongoing impact in communities today?

Instructor(s): Alice Kim, Pozen Center for Human Rights Lab Director Terms Offered: Winter

HMRT 22235. Incarceration and Justice. 100 Units.

This course explores the impact of long-term sentencing practices in Illinois and nationwide. Largely neglected, even amid a robust and ongoing national conversation about mass incarceration, more than 200,000 people are serving life without parole (LWOP) or virtual life sentences in the United States. Current efforts to decarcerate often pit 'non-violent offenders' against 'violent offenders,' those deserving versus those undeserving of mercy or second chances. Nelson Mandela, who was imprisoned for twenty-seven years in South Africa, said: 'no one truly knows a nation until one has been inside its jails. A nation should not be judged by how it treats its highest citizens, but its lowest ones.' We will deploy Mandela's standard to explore the long reach of long-term sentencing as we engage multiple mediums (memoir, personal testimony, poetry, film, art) to take an up-close and personal look at the lived experiences of those who have faced long-term removal from their communities into prison and how individuals, groups and communities are challenging what has been termed 'death by incarceration.'

Instructor(s): Alice Kim, Pozen Center for Human Rights Lab Director Terms Offered: Spring

HMRT 22241. Human Rights Research and Writing I. 100 Units.

This course provides an introduction to human rights theory and method for students working on disciplinary or interdisciplinary BA thesis projects that examine human rights topics.

Instructor(s): Nathaniel Gonzalez, Alec Wang, Social Science Teaching Fellows Terms Offered: Autumn

Prerequisite(s): Consent Required.

Note(s): This is a Pass/Fail class

HMRT 22242. Human Rights Research and Writing II. 100 Units.

This course provides an introduction to human rights theory and method for students working on disciplinary or interdisciplinary BA thesis projects that examine human rights topics.

Instructor(s): Nathaniel Gonzalez, Alec Wang, Social Science Teaching Fellows Terms Offered: Winter

Prerequisite(s): Consent Required.

Note(s): This is a Pass/Fail class

HMRT 22243. Human Rights Research and Writing III. 100 Units.

This course provides an introduction to human rights theory and method for students working on disciplinary or interdisciplinary BA thesis projects that examine human rights topics.

Instructor(s): Nathaniel Gonzalez, Alec Wang - Social Science Teaching Fellows Terms Offered: Spring

Prerequisite(s): Consent Required.

Note(s): This is a Pass/Fail class

HMRT 22304. Constitutional Rights to Liberty and Procedural Due Process in Chicago. 100 Units.

This seminar builds toward the draft of a viable research project on how constitutional rights to liberty and procedural due process have been historically applied (or ignored) in Chicago. Over ten weeks, you will learn how the Fourth, Fifth, Sixth, Eighth and Fourteenth Amendments to the U.S. Constitution relate to local law enforcement practice. Today, debate is fierce as to whether, and to what extent, these procedural rights are upheld or ignored in criminal law enforcement at the local level. You will be expected to join this debate in your own Chicago-focused research projects.

Instructor(s): Kyla Bourne, Graduate Lecturer, Pozen Center for Human Rights Terms Offered: Autumn

HMRT 22855. Childhood, Migration, and Nation. 100 Units.

While the figure of mobile children is central to academic and public debates about migration worldwide, this course asks students to step back and reconsider a question that is frequently taken for granted: 'What is a child?' The intersections between childhood and other categories of personhood, such as migrant laborers and refugees, complicate our assumptions about what it means to be a 'child' and the ways children fit into the ideologies of nation-states. Ambiguous representations of migrant children also problematize human rights and humanitarian discourses that often depict them as vulnerable, passive, and inseparable from their family units. The analytical focus on young mobile subjects who are in the process of 'growing up' call our attention to questions of temporalities and different modes of imagination which come to mediate the ongoing socialization of the child by state, family, and schools. In this course, we will critically discuss both theoretical concerns, ethnographic projects, films, and contemporary news media in the US, Asia, and elsewhere which take '(im)migrant children' as an object of inquiry. We will examine 1) the intersection between childhood and other personhood categories along the citizen-migrant continuum, and 2) institutional interventions and everyday practices of the child which are mediated by different ideologies about being children and being (non)citizens of a particular state.

Instructor(s): Moodjalin Sudcharoen Terms Offered: Spring, Spring 2021

Equivalent Course(s): CHDV 22855, ANTH 22855, GLST 22855

HMRT 23083. A Latin American Anthropology of Violence and Conflict in Latin America. 100 Units.

This course explores the dynamics of conflict and organized violence in Latin America through a combination of Latin American fiction and documentary films and ethnographic and other relevant research. The following are some of the interrelated topics that we will cover, which draw primarily from scholars not only of Latin America, but also in Latin America: non-state armed groups, transnational criminal networks, international cooperation and humanitarian intervention, human rights abuses and activism, gendered experiences of violence and its aftermath, and the state. We will begin our work in contemporary conversations about these topics throughout the region and weave in readings from the globally dispersed foundational thinkers who have informed these conversations. Students will develop a case study of their choosing over the quarter and receive in-class instruction on forming and managing effective writing groups to facilitate their projects. Significant flexibility is also possible for those who want to incorporate their coursework into the development of a larger research project.

Instructor(s): Erin McFee Terms Offered: Autumn. Autumn 2020

Prerequisite(s): PQ. Course materials and discussions will be in both Spanish and English; Spanish fluency required.)

Equivalent Course(s): LACS 23083, GLST 23083, ANTH 23083, LACS 32335, ANTH 32335

HMRT 23114. A Kind of Wild Justice: Vengeance, Justice, and the Law. 100 Units.

How do we, in liberal democracies, distinguish between vengeance and justice? Does the law operate as an instrument solely of the latter, or of both, in turn? How do claims to human rights and towards the repair of historical injustices come to be cast as harboring a spirit of resentment and vengefulness? In this course, we consider the vexed relationship between vengeance, justice, and the law as these concepts have been understood in democratic theory and politics, with a particular focus on how claims to human rights come to register as either just or vengeful.

Instructor(s): Agatha Slupek, Graduate Lecturer Terms Offered: Spring

HMRT 23214. Ethnic Conflict in Comparative Perspective. 100 Units.

This course introduces students to contemporary debates on the significance and implications of group identification within the context of ethnic conflict. Specifically, students will come away from the course with a deep understanding of theories of group identity and will be able to use these theories to examine and compare contemporary cases of group-based violence. We will use these theories to ask questions like: are diverse societies more prone to group violence? what is the relationship between the economy and group conflict? and, what causes neighbors turn on each other? Throughout the course students will be exposed to research from around the globe, encouraging a deeply local but constantly comparative approach to social science. Note that we will grapple with difficult issues in this course such as lynching, ethnic riots, and genocide.

Instructor(s): Nathaniel Gonzalez, Postdoctoral Lecturer, Pozen Center for Human Rights Terms Offered: Winter

HMRT 23216. Cold War, Religion and Religious Freedom in East Asia. 100 Units.

Religious freedom' is enshrined in not only liberal democratic constitutions but also in constitutions of socialist nation-states such as North Korea, although the latter are frequently dismissed by the West as veneers of democracy. The concept of 'religious freedom' has been used by the West (i.e. United States) to categorize the world into 'modern' and 'anti-modern,' 'free' and 'communist' throughout the Cold War. Yet, how did 'religion' emerge as a category in East Asia? What did 'religious freedom' mean in the context of occupations, divisions and hot/cold war? How was religion managed by states, and how did religious communities negotiate with local and global political currents? By pivoting to East Asia as a privileged site of analysis, this course will interrogate the notions of 'religion' and 'religious freedom' as they were articulated and mobilized for various motives. Core areas of analysis will include the relationship between religion and state-building, religion and human rights, and religion and empire. Moreover, this course decouples the temporal qualifier 'Cold War' from 'East Asia' to challenge conventional demarcations of the Cold War (1945-1991), for its 'end' is still a contested discussion.

Instructor(s): Sandra Park, Graduate Lecturer Terms Offered: Spring

HMRT 23400. Sex in Twentieth-Century Europe. 100 Units.

This course will examine the 'syncopated' history of sexuality across this tumultuous century. The period took Europeans from bourgeois norms of sexuality through the 1960s sexual revolution to same-sex marriages; genocide and the emergence of rape as a war crime; and the unprecedented regulation of sexuality and biomedical developments treating infertility. Since the history of sex and sexuality in Europe cannot be thought outside of European colonialism and the Cold War, the course will also examine how sexuality shaped and was shaped by political ideologies. In short, by examining the centrality of 'who can have sex with whom,' students will rethink 'standard' political narratives of twentieth-century Europe. Working with Dagmar Herzog's 'Sexuality in Europe: A Twentieth-Century History,' the main text of the course, and drawing on a variety of primary sources-including law and medical treatises, popular culture, and autobiographies-students will also gain an insight into the ways in which sexuality can be studied beyond archival sources.

Instructor(s): M. Appeltová Terms Offered: Winter

Equivalent Course(s): HIST 23400, GNSE 23490, HLTH 23400, HIPS 23410

HMRT 24007. Human Rights in Asia. 100 Units.

TBD

Instructor(s): Johanna Ransmeier, History, Teng Biao, Pozen Visiting Professor Terms Offered: Winter

HMRT 24108. Reproductive Justice Beyond Rights. 100 Units.

This course surveys major debates and tactics of feminist and queer movements between global norths and souths, comparing visions of reproductive and sexual rights based on ideals of liberal individualism and private property with traditions of collective rights claims, practices of care and solidarity, and more expansive visions of reproductive wellbeing and justice. Some of our case studies include the Zika epidemic in Brazil, Mothers Reclaiming Our Children in the U.S., and movements for abortion access in Latin America. Hearing from guest speakers who work as lawyers, healthcare

practitioners, activists and community organizers, we will consider reproductive and sexual rights in a field of contestation that involves diverse state interests and social movement histories.

Instructor(s): Amy Krauss, Pozen Center for Human Rights Postdoctoral Instructor Terms Offered: Spring
Equivalent Course(s): HMRT 34108

HMRT 24208. Incarceration and Justice. 100 Units.

This course will examine long-term sentencing practices and policies in Illinois and nationwide. Policies implemented in the 1980s and 1990s—particularly life without the possibility of parole, mandatory minimums, and 'three strikes and you're out' laws—contributed to a prison population increase of more than 1.5 million people over the last thirty years. This seminar will explore the impact of these laws and policies, paying special attention to Illinois. In particular, we will explore who is serving life or virtual life sentences, efforts to reverse long-term sentencing policies, and a growing movement to decarcerate.

Instructor(s): Alice Kim Terms Offered: Autumn

Prerequisite(s): Human Rights in World Civilizations 1 or 2 (HMRT 10100/10200); or Contemporary Issues in Human Rights (HMRT 21001); or an HMRT listed elective course is required as a prerequisite. Undergrads Only.

HMRT 24506. Disability in East Asia: Past and Present. 100 Units.

Why does disability matter to East Asia? This course uses this overarching question to anchor discussions on the role disability plays in historical and contemporary issues of social inequality and human rights in China, Japan and Korea. Students will think critically about disability identities, institutions, theories, experiences, and interactions that have made disability what it is today. We will learn to narrate disability from a wide range of sources that represent bodily impairments (blindness, madness, autism, trauma, deformities etc.) in medicine, literature and film, and to relate disability narratives to theoretical debates over stigma, medicalization, the politics of inclusion and exclusion, and human rights. We will also to look more closely into the lives of 'disabled persons'—who they are, how they are disabled and by what circumstances, how they identify themselves and are represented in different media. More broadly, this course unsettles the concept of East Asia by making sense of disability as 'difference' and to think about how it may expand our 'mainstream' assumptions of body, culture and society.

Instructor(s): Alec Wang, Graduate Lecturer, Pozen Center for Human Rights Terms Offered: Spring

HMRT 24508. Social Outcasts: Exclusion and Discontent in Late Imperial and Modern China. 100 Units.

This course considers the often neglected presence of 'social outcasts' in Chinese history as a gateway to understanding ideas and practices of discrimination from the late Qing to modern-day China. It traces changes in the intersection of law, custom, and daily social practices, focusing on attempts aimed at legitimizing discrimination across class, territory, ethnicity, religion, gender and disability. Thus a theoretical objective of the course is to analyze legal and social dimensions of exclusion along the axis of empire and state building. Chronologically, this course begins with the collapse of status order in the late Qing and explores how the Republic and the PRC managed transgressive elements of society, from beggars, prostitutes, and the insane to ethnic and religious minorities. We will use legal documents, police records, and visual materials to explore how sociocultural processes shape the experience of discrimination and its resistance. Another focus of this course will be asking how disenfranchised groups might enhance our understanding of mainstream values. Through discussions, in-class presentations, and written assignments, students will develop skills to analyze historical evidence and critically reflect on its implication for cross-cultural issues.

Instructor(s): Alec Wang, Graduate Lecturer, Pozen Center for Human Rights Terms Offered: Spring

HMRT 24701. Human Rights: Migrant, Refugee, Citizen. 100 Units.

The fundamental principle underlying human rights is that they are inherent in the identity of all human beings, regardless of place and without regard to citizenship, nationality, or immigration status. Human rights are universal and must be respected everywhere and always. Human rights treaties and doctrines mandate that a person does not lose their human rights simply by crossing a border. While citizens enjoy certain political rights withheld from foreigners within any given nation-state, what ARE the rights of non-citizens in the contemporary world? Students will research a human rights topic of their choosing, to be presented as either a final research paper or a group presentation.

Instructor(s): Susan Gzesh, Senior Lecturer, (The College) Terms Offered: Autumn Winter

Prerequisite(s): A prior course in Human Rights or a migration-related topic would be desirable but not necessary
Equivalent Course(s): LACS 25303

HMRT 24720. Trust after Betrayal: Society-Building in the Aftermath of Atrocity. 100 Units.

In this course, students will learn about the moral philosophy and anthropology of trust, mistrust, and betrayal. The course will be structured through four cases: the Colombian Peace Process, Germany's Stasi, the Cultural Revolution in China, and the United States 2008 Financial Crisis. The class will tend towards the discussion seminar format with some short lectures to help students bridge the theoretical and empirical materials. Students will analyze laws, public discourses, literature, and ethnographic materials to write a final term paper on one of the four cases. As part of the course pedagogy, students will also learn how to form and manage productive writing groups and to write literature reviews that draw from multiple disciplines. The midterm will consist of their literature review for their final term paper. Authors will include, but are not limited to the following: Baier, Benedict, Carey, Corsín Jimenez, Darwall, Faulkner, Fukuyama, Gambetta, Govier, Hawley, Holton, Jamal, Jones, Kleinman, Lewicki, Luhmann, McAllister, Möllering, Simpson, Tilly, and Widner.

Instructor(s): Erin McFee Terms Offered: Autumn. This course was offered Autumn 2019

Equivalent Course(s): HMRT 34720, ANTH 24720, ANTH 34720

HMRT 24725. Humans After Violence. 100 Units.

What happens to individuals and societies after experiences with violence? This course takes a critical look at scholarship and practitioner efforts to understand and influence those who make and unmake violence and who are implicated in its

aftermath. The four units - violence, trauma, subjectivity, and reconciliation - explore and problematize each of these domains of inquiry. Throughout the course, we will draw from both foundational and emerging texts in anthropology and related disciplines as we critically examine the 're' in contexts of violence: re-integration of ex-combatants, re-entry of the formerly incarcerated individuals, re-turn of displaced populations, and re-conciliation among war affected peoples. What are the reach and limits of these discourses in contexts of violence and physical and socioeconomic insecurity? How is social life in these settings differentially experienced according to gender and stages of the life course? The course will also include an examination of methodological approaches to studying violence-affected individuals and communities as well as issues of decolonizing research, non-extractive approaches, reflection on relations of power and inequality, and trauma-informed approaches to research and engagement. Students will develop a case study of their choosing over the quarter and receive dedicated classroom instruction on writing interdisciplinary literature reviews.

Instructor(s): Erin McFee Terms Offered: Winter. Winter 2021

Prerequisite(s): Open to 3rd or 4th year undergraduates and masters students

Equivalent Course(s): ANTH 24725, GLST 24725, HMRT 34721, ANTH 34721

HMRT 25002. Queer and Trans Mutual Aid for Survival and Mobilization. 100 Units.

This course will examine contemporary and historical queer and trans-focused mutual aid projects, including support for migrants, prisoners, psychiatric survivors, people with HIV/AIDS, and violence survivors. We will look at why mutual aid projects are often under-celebrated in contemporary narratives of social change, when compared with media advocacy and law and policy reform work. Using materials created by activists engaged in building mutual aid projects, as well as scholarly analysis of such efforts, we will look at what principles and methods characterize politicized survival work and how it intentionally departs from charity frameworks.

Instructor(s): Dean Spade, Pozen Visiting Professor Terms Offered: Autumn

Equivalent Course(s): GNSE 25002, CRES 25001, HMRT 35002, GNSE 35002

HMRT 25203. Hong Kong and Human Rights in Asia. 100 Units.

The dynamic city of Hong Kong-a multicultural, special economic zone and a contested democracy with a vibrant popular press and a long history of support for regional grassroots politics-provides the setting for three weeks of investigation of human rights locally and across Asia. Students will become familiar with the human rights challenges facing Hong Kong and the region today. Topics as diverse as labor rights, gender and sexuality, democracy, access to health care and education, and freedom of expression will command our attention. We will also explore the relationship between art, exhibition practices, the media, and human rights. The University of Chicago's new Hong Kong campus will serve as our home base, but much of our time will be spent undertaking short field excursions to speak with human rights actors, journalists, curators, and artists in Hong Kong along with a tentative short trip to southern China. As the capstone of this intensive course, students will create digital, multimedia documentary projects to showcase their engagement with a particular regional or local human rights problem. These projects may combine interviews, photographs and videos, and the production of an original text or artwork.

Instructor(s): M. Bradley & J. Ransmeier

Prerequisite(s): Admission to the September Hong Kong: Human Rights in Asia program

Equivalent Course(s): EALC 24311, HIST 24311

HMRT 25210. Anthropology of Disability. 100 Units.

This seminar undertakes to explore 'disability' from an anthropological perspective that recognizes it as a socially constructed concept with implications for our understanding of fundamental issues about culture, society, and individual differences. We explore a wide range of theoretical, legal, ethical, and policy issues as they relate to the experiences of persons with disabilities, their families, and advocates. The final project is a presentation on the fieldwork.

Instructor(s): M. Fred Terms Offered: Autumn

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): HMRT 35210, CHDV 30405, SOSC 36900, MAPS 36900, CHDV 20505, ANTH 20405, ANTH 30405

HMRT 25270. Humanitarianism: Anthropological Perspectives. 100 Units.

Humanitarianism has emerged as one of the key principles used by states and non-state agencies to justify or call for interventions in contemporary global crisis situations. From health crises, natural disasters and even political instability, humanitarianism has gained an unprecedented global currency as a language of justice. In the last two decades, anthropologists have shown the complexities of humanitarian interventions and its intended and unintended effects. In this course we trace what humanitarianism means, its moral and ethical underpinnings and what are the consequences of humanitarian action. The course will interrogate some of the philosophical, conceptual underpinnings of the idea and their implications in the real world. We will read a range of ethnographies including refugee rehabilitation in France, military interventions in Iraq, philanthropy in India to understand the ways in which humanitarianism has emerged as a global language of justice. The course will help students understand the problem of humanitarianism at both the global and the local levels and also bridge the gap between the normative and the actual.

Instructor(s): S. Saha Roy Terms Offered: This course was offered Autumn 2019

Equivalent Course(s): ANTH 25270

HMRT 25408. Human Rights in Japanese History. 100 Units.

This course examines how the modern concept of 'rights' and 'human rights' localized in Japan and how different parties in Japan have used the language of human rights in attempts to remake Japan's social, cultural, and legal landscape. We will explore a wide range of topics including the translation of Eurocentric rights talk in East Asia, colonization and decolonization, statelessness and migration, transitional justice and reconciliation, biopolitical rights and bio-citizenship, indigenous rights, and women and gender-specific rights. Throughout the course we pay special attention to the ways in

which rights talk and human-rights politics in Japan intertwine with the country's efforts to modernize and build the 'nation within the empire' and, after its defeat in WWII, to close off its 'long postwar' and reconcile with its neighbors. This is an introductory course, and no previous knowledge of Japanese history or the international history of human rights is required. However, you should be prepared to read (and watch, browse, and listen to) a wide array of primary and secondary sources that destabilize the most common vocabulary and concepts we take for granted in contemporary human-rights talk such as race, state responsibility, and the very notion of universalism so central to the idea of human rights.

Instructor(s): K. Pan Terms Offered: Winter

Equivalent Course(s): EALC 24508, HIST 24508

HMRT 25503. Challenging Transitional Justice. 100 Units.

This course investigates transitional justice (TJ) as one of the dominant discourses of accountability of our times; one that is often understood as an exceptional regime of accountability that is relevant over there (far from the North-Atlantic) in places lacking peace, democracy or order. In contrast, this course will offer conceptual and critical tools to analyze - and problematize - TJ as a project that is essential to the reconfiguration of the paradigm of liberal justice in the 21st century.

Instructor(s): Alejandro Azuero, Graduate Lecturer Terms Offered: TBD. Offered Spring 2020

Equivalent Course(s): ANTH 25265

HMRT 26623. Anti-Corruption Politics in Latin America. 100 Units.

Calls for corporate accountability from civil society and widespread public anxieties concerning large scale corporate corruption scandals have become salient modes of articulating questions of power in contemporary Latin America & the Caribbean. This trend, while not homogeneous or new, denounces the relation between two modes of power -- state and corporate -- considered to be at the heart of the region's democracies. What is the relation between today's war against corruption and ongoing transformations of corporate and financial power? What has been the effect of anti-corruption discourse over horizons for emancipatory politics - such as Human Rights praxis? This course critically examines anti-corruption politics as constituting one of the region's most salient frameworks of accountability in the present. Crucially, we will situate it in relation to Latin America's robust trajectory of critiquing power through the analysis of corporate power as well as the mobilization of Human Rights discourse.

Instructor(s): Azuero Quijano, Alejandra

Equivalent Course(s): LACS 26623, ANTH 23071, GLST 26623

HMRT 27061. United States Legal History. 100 Units.

This course focuses on the connections between law and society in modern America. It explores how legal doctrines and constitutional rules have defined individual rights and social relations in both the public and private spheres. It also examines political struggles that have transformed American law. Topics to be addressed include the meaning of rights; the regulation of property, work, race, and sexual relations; civil disobedience; and legal theory as cultural history. Readings include legal cases, judicial rulings, short stories, and legal and historical scholarship.

Instructor(s): A. Stanley Terms Offered: Autumn

Equivalent Course(s): GNSE 27605, AMER 27605, CRES 27605, HIST 27605, GNSE 37605, CRES 37605, LLSO 28010, HIST 37605, HMRT 37605

HMRT 27205. Reproductive Rights as Human Rights. 100 Units.

This course examines human rights approaches to reproductive health and justice with critical grounding in ethnographic case studies. We will begin by surveying major debates and tactics of feminist movements in North and South Americas, comparing visions of reproductive rights based on ideals of liberal individualism and private property with traditions of collective claims for social and economic rights. Our case studies include the Zika epidemic in Brazil, immigration and reproductive health care access in the United States, the shackling of pregnant women in U.S. prisons, the politics of sterilization and birth control in Puerto Rico, and the legalization of abortion in Mexico City. Hearing from guest speakers who work as lawyers, healthcare practitioners, activists and community organizers, we will consider reproductive rights as human rights in a field of contestation that involves diverse actors, state interests, and social movement histories.

Instructor(s): Amy Krauss, Postdoctoral Lecturer Terms Offered: Spring

Equivalent Course(s): HLTH 27205, GNSE 37205, GNSE 27205, HMRT 37205

HMRT 27306. U.S. Women and Gender. 100 Units.

This course studies the history of women, gender relations, and ideas of sex difference from the emergence of the women's rights movement in the 1840s to the rise of women's liberation in the 1960s. Issues of work, rights, citizenship, race, and sexuality take center stage as we explore the social, political, and cultural forces that shaped women's lives and the aspirations and agency of women who sought to transform the rules and relations of gender in the United States. Readings include primary sources as well as classic and recent historical scholarship.

Instructor(s): A. Stanley Terms Offered: Winter

Equivalent Course(s): GNSE 27306, LLSO 27306, HIST 27306, CRES 23700

HMRT 27312. Pain and Representation. 100 Units.

How do people make sense of loss and pain? What is the relationship between bodily (somatic) and spiritual (psychic) forms of suffering? Why and how do we consider them separately? What languages do we have for expressing pain and how do we 'read' or share the suffering of the others? This course draws from anthropological approaches in dialogue with literature, philosophy, feminist theory, film, and photography to defamiliarize the category of suffering as a universal human experience and to think critically about how different modes of representation generate ethical and political responses (or fail to). For instance, we will consider the de-politicizing effects of humanitarian depictions of suffering in the context of war and immigration, the relationship between art and violence, and how histories of racism and colonial domination shape

empathetic imagination. Addressing a wide range of issues and contexts, we will pay special attention to the creative genres people engage in order to live with pain and loss, often in the margins of 'strong languages' of law, medicine and religion.

Instructor(s): Amy Krauss, Postdoctoral Instructor Terms Offered: Winter

HMRT 27380. The Ethics of Immigration. 100 Units.

In this course we'll investigate philosophical problems underlying contemporary political controversies about immigration. Together, we'll discuss questions such as the following: What gives one group of people the right to forcibly exclude other people from coming to reside somewhere? Is there such a right at all? What moral authority do existing borders have? What role should the idea of 'the nation' play in our thinking about immigration? Indeed, what exactly are nations? And is there a compelling case for the exclusion of immigrants that depends on a commitment to preserving a national culture? All of these questions touch on fundamental issues in political philosophy: the nature of citizenship and its relationship to culture, the source of legitimate authority, the justifiability of state coercion, the content and ground of human rights.

Instructor(s): T. Zimmer Terms Offered: Autumn

Equivalent Course(s): PHIL 27380

HMRT 27536. The Transatlantic Slave Trade & the Making of the Black Lusophone Atlantic, 1450-1888. 100 Units.

By the abolition of Brazilian slavery in 1888, an estimated 4.3 million men, women, and children had been imported from Africa to Brazil. Yet, the narratives of slavery and freedom in the North Anglophone and Francophone Atlantic often dominate the popular imagination. This course is aimed at increasing knowledge about how slavery and the transatlantic slave trade shaped the Atlantic World through an examination of the deeply intertwined histories of Brazil and West Africa. This course offers a critical 'genealogy of the present' by investigating the historical roots of racial, gendered, and social inequality that persist in Brazil and Lusophone West Africa today. It will focus on the diverse social, cultural, and political linkages that were forged as a result of the transatlantic trade with particular attention to the Portuguese in West Africa; the development and growth of the slave trade to Brazil; the relationship between slavery and gender; the continuity and adaptation of African social and cultural practices; and resistance, rebellion, and freedom. We will end the course with a look at how different communities, individuals, and nations continue to grapple with the memory and legacy of slavery today.

Instructor(s): Erin McCullugh Terms Offered: Spring

Equivalent Course(s): HIST 29009, GNSE 27536, CRES 27536, LACS 27536

HMRT 28310. Vulnerability and Human Rights. 100 Units.

The course discusses current theories of vulnerability and passivity in relation to human rights. It pays particular attention how human rights and social justice can be thought of in relation to people with severe disabilities, animals, and others who are not traditionally thought of as subjects of justice. We will discuss philosophical texts by Jacques Derrida, Emmanuel Levinas, John Rawls, Martha Nussbaum, and others, and sociological texts by scholars like Bryan Turner and Tom Shakespeare.

Instructor(s): D. Kulick Terms Offered: Winter

Equivalent Course(s): HMRT 38310, CHDV 26310

HMRT 28315. Grey Zones: Ethics and Decision-Making in the Holocaust. 100 Units.

How do ordinary men become ruthless killers? What constitutes 'collaboration' or 'resistance' in the context of total war and genocide? How can we analyze human behavior in a world where normal rules of ethical conduct do not apply? Nearly 75 years after the liberation of Auschwitz, the Holocaust still stands as a touchstone in debates about ethics, morality, agency, historical memory, democracy, citizenship, and human rights. This course is foregrounded in the notion that human behavior during Holocaust cannot be understood through the extreme binaries of good and evil, or black versus white. Rather, we will explore the complexities and nuances of human behavior in extremis. Through a series of case studies, we will focus on the experience and behavior of six (sometimes overlapping) groups of people: perpetrators, victims, bystanders, collaborators, resisters, and rescuers. In doing so, we will pay close attention to the moral considerations and ethical dilemmas that influenced their decision-making, as well as the ways in which gender, class, age, ethnicity, and political and religious ideology influenced these choices. At the same time, we will examine the effects that strategic considerations, as well as actual, available options, had on human behavior during this momentous state-sponsored genocide. In grappling with the dilemmas of human agency, we will critically evaluate the changing meanings of human rights, choice, trauma, and survival throughout the course of the Holocaust.

Instructor(s): Anna Band, Graduate Lecturer Terms Offered: Autumn

Equivalent Course(s): HIST 22019, JWSC 28315

HMRT 29120. Poverty Law and Policy Reform. 100 Units.

This seminar seeks to give students a comprehensive understanding of the major anti-poverty programs in the United States with an emphasis on current challenges and reform proposals. We will spend the first half of the course exploring the implementation and evaluation of the programs that make up the traditional safety net for poor Americans: income supports, health insurance, and housing assistance. We will spend the rest of the quarter exploring topics that complicate the traditional social policy regime, including how the safety net is more robust for some groups, such as the elderly and veterans, than others. We will explore how the legal systems of immigration and incarceration hamper anti-poverty policy and how safety net programs address the needs of rural and Native Americans. Finally, we will investigate two recent developments in the field: social entrepreneurship and the critique of procedural rights.

Instructor(s): Andrew Hammond

Prerequisite(s): No first year students; attendance on the first day of class is required.

Equivalent Course(s): LLSO 29120, PBPL 29120

HMRT 29313. Childhood and Human Rights in the Twentieth Century. 100 Units.

How and when did we come to embrace the idea that children are innocent and defenseless? What are the implications of framing children's rights as human rights? In this course, we will explore key historical transformations in the legal, social, and cultural construction of childhood in modern Western societies. We will examine children's own experiences and how adults rendered them the subjects of study and state regulation. Topics of discussion will include work, leisure, education, sexuality, criminality, consumerism, and censorship. Throughout, we will discuss how ideas about race, gender, class, and age have shaped the way that the public and the state had defined childhood: who was entitled to a protected period of nurture, care, and play; who was allowed to be disobedient, or even lawless, and still avoid legal consequences. We will explore how and why some children have been and continue to be excluded from this idealized vision.

Instructor(s): N. Maor Terms Offered: Spring

Equivalent Course(s): CRES 29313, AMER 29313, HIST 29313, GNSE 29313, LLSO 20301

HMRT 29318. Modern Disability Histories: Gender, Race, and Disability. 100 Units.

This course introduces students to the conceptual apparatus of disability studies and major developments in disability history since the late nineteenth century. The course will consider disability beyond physical impairment, centering the ways in which notions of gender, race, class, sexuality, and ability interact and shape subjects, and how these subject positions shift across political watersheds. Students will engage a variety of sources, such as autobiographies, pamphlets, visual material, laws, and medical texts, as well as historiographical sources. Topics will include late nineteenth-century female 'hysteria,' evolutionary approaches to sign language and orality, and the effects of industrialization on new impairments; early twentieth-century eugenics and the Nazi T4 program; postwar developments in prosthetics and discursive intersections between psychosis and civil rights movement. Students are encouraged to work on creative collective projects (e.g., an exhibit or a short video) in addition to written assignments.

Instructor(s): M. Appeltová Terms Offered: Winter

Equivalent Course(s): HIPS 29318, CHDV 29318, HIST 29318, GNSE 23106, HLTH 29318, CRES 29318

HMRT 29604. Topics in Critical Theory: Constitutionalism and Rights. 100 Units.

(Brief/keyword description) - Historicizing and theorizing constitutionalism, rights and the law from the South. Particular empirical focus on South Africa, will also draw on Indian, other African and Latin American material, and think Euro-American genealogies of law and rights from these global Southern locations.

Instructor(s): Kaushik Sunder Rajan Terms Offered: Autumn. Autumn 2020

Prerequisite(s): 3rd or 4th year standing

Note(s): This is a 3CT Capstone course.

Equivalent Course(s): ANTH 29604

Inequality, Social Problems, and Change

Minor in Inequality, Social Problems, and Change

The Inequality, Social Problems, and Change minor will offer students the opportunity to deepen their understanding of the nature of inequality as it takes shape in pivotal societal institutions and to formulate feasible pathways for reducing inequality and improving quality of life. The minor will prepare students to effect change by learning how to move from theory to action on social challenges related to their chosen profession. Course work in the minor is designed to complement the knowledge base students gain in their majors across disciplines. The minor will provide students with foundational knowledge about the causes and consequences of social inequality in its various forms, including economic, racial, gender, and class. All courses attend to social change, ranging from offering hands-on experience in addressing inequality on the ground level to interrogating the relative merits of concrete and empirical avenues for effecting change. Students will transform conceptual knowledge into action by learning about a range of strategies that can be used to address disparities. The minor will facilitate multilevel, multisystem thinking, with the explicit goal of effecting change to reduce social inequality and social problems.

Program Requirements

Students must take a total of five approved courses to complete the minor in Inequality, Social Problems, and Change, including one foundation course and four elective courses.

1. **One foundation course.** Students are required to take one of two foundation courses: Either SSAD 25810 Social Problems, Social Policy, and Social Change or SSAD 25002 Social Welfare Policy and Services. Both of these foundation courses provide students with an understanding of the historical context giving rise to different forms of inequality and strategies for change. Students are strongly encouraged to take one of these courses before taking elective courses in the minor.
2. **Four elective courses:** Students will take four approved elective courses. The list of approved electives changes every year. Examples of approved electives are listed below. The full list of approved courses for the current academic year can be found at ssa.uchicago.edu/college-minor (<http://ssa.uchicago.edu/college-minor/>). Elective courses are organized into specific domains of inequality (e.g., communities and cities; global and migration; law and social justice; poverty, family, and work; and health and mental health). In consultation with the faculty director, students may choose to take several courses in one domain to deepen their knowledge in a particular topic or take courses across several domains to broaden their understanding of inequality and social change across multiple areas.

Summary of Requirements

SSAD 25810	Social Problems, Social Policy, and Social Change	100
or SSAD 25002	Social Welfare Policy and Services	
Four SSAD electives *		400
Total Units		500

* One of these electives may be an SSAD graduate course.

Elective Courses

Communities and Cities Domain

SSAD 21000	Race & American Public Schools	100
SSAD 21100	How Things Get Done in Cities and Why	100
SSAD 28112	Community Organizing	100
CHDV 20305	Inequality in Urban Spaces	100
PBPL 24756	Exploring the Resilient City	100
SOCI 20269	Policing the City	100
SOCI 30233	Race in Contemporary American Society *	100

Global and Migration Domain

SSAD 21200	Policing, Citizenship, and Inequality in Comparative Perspective	100
SSAD 21300	Global Mental Health	100
SSAD 25003	Immigration, Law and Society	100
SSAD 25112	Contemporary Immigration Policy and Practice	100
SSAD 26922	Structuring Refuge: U.S. Refugee Policy and Resettlement Practice	100
CHDV 23403	Borders, (Im)mobilities and Human Rights	100
PBPL 24901	Trade, Development and Poverty in Mexico	100
PBPL 27809	Violence in the Early Years	100

PLSC 21820	Global Justice and the Ethics of Immigration	100
SOCI 20251	Trade, Development and Poverty in Mexico	100
Poverty, Family, and Work Domain		
SSAD 20550	Food Insecurity and Food Policy in the U.S.	100
SSAD 25005	Inequality at Work: The Changing Nature of Jobs and Prospects for Improvement	100
SSAD 25630	Poverty, Work, and Family Policy	100
Law and Social Justice Domain		
SSAD 25004	Punishment and Social Theory	100
SSAD 27452	Smart Decarceration: A Grand Challenge for Social Work	100
PBPL 25860	Crime, Justice, and Inequality in the American City	100
PLSC 29500	Drugs, Guns, and Money: The Politics of Criminal Conflict	100
Health and Mental Health Domain		
SSAD 22812	Examining Historical Trauma: Intergen Resp. to Holocaust	100
SSAD 25732	Prejudice and Discrimination: Individual Cost and Response	100
CHDV 23405	Cultural Diversity, Structural Barriers, and Multilingualism in Clinical and Healing Encounters	100

* Graduate-level course; permission of instructor is required

Advising and Grading

Courses in the minor may not be double counted with the student’s major(s), other minors, or general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Students who elect the minor must meet with the faculty director for the minor before the end of Spring Quarter of their third year to declare their intention to complete the minor. The director’s approval for the minor program should be submitted to a student’s College adviser by the deadline using a form available from the adviser.

Inequality, Social Problems, and Change Courses

Communities and Cities Courses

SSAD 21000. Race & American Public Schools. 100 Units.

This course explores the fundamental role that race and racism have played in the structure, stratification, and social functioning of American public schools. Working within and between historical perspectives, contemporary policy challenges, theory, and empirical research, we will explore questions of purpose, identity, otherness, and justice. What can the histories of Black and Indigenous schooling reveal about the educational project of the nation? How does the notion of whiteness as property shape public presumptions about what makes a ‘good’ school? Perhaps most fundamentally, can schools be engines for racial justice, and if so, how?
Equivalent Course(s): CRES 21000, EDSO 21000, HMRT 21000

SSAD 21100. How Things Get Done in Cities and Why. 100 Units.

Innovation. Prosperity. Democracy. Diversity. Cities long have been lauded as unique incubators of these social features. In contrast to the national level, the smaller scale and dense diversity of cities is thought to encourage the development of civic solutions that work for the many. But cities are inhabited by distinct groups of people with divergent interests and varied beliefs about how to address countless urban issues, such as creating jobs, delivering education, ensuring safe neighborhoods, promoting environmental sustainability, and taking care of the vulnerable. Many groups and organizations have an interest in the outcomes of these processes. Some take action to try to shape them to their own advantage, while others have few chances to make themselves heard. This course examines the social and political dynamics that undergird possible avenues for creating social change in cities, including interest representation, decision-making, and inclusion/exclusion. We will draw insights from multiple disciplines and explore a variety of substantive areas, such as housing, public safety, economic development, education, and the provision of social welfare. This course is part of the College Course Cluster program: Urban Design.

Terms Offered: TBD

Equivalent Course(s): ENST 25006, SOCI 20294, PBPL 25006, LLSO 21100

SSAD 25002. Social Welfare Policy and Services. 100 Units.

This course introduces students to the issues and problems associated with social welfare interventions at the policy level, including an overview of its history in the US. Students are expected to learn and develop competencies in analyzing the components of current social welfare policies; designing programmatic alternatives; anticipating substantive, operational, and political advantages and disadvantages; and weighing trade-offs of policy choices. Policy domains to be considered include education, health, employment, safety net programs, and housing. While focusing on public policies, the course will include consideration of the impact of policies and programs on individuals and families. This course is part of the College Course Cluster, Inequality.

Instructor(s): Marcy Ybarra Terms Offered: Autumn

SSAD 25810. Social Problems, Social Policy, and Social Change. 100 Units.

This course is designed to provide an analytic framework that enables students to understand how social problems are socially constructed, how social policies are created in response to those identified problems, and how social change efforts both shape and respond to the policy environment. During the quarter, we will examine how social problems, policies and programs are framed, re-framed, and addressed and how individuals, organizations, and relevant constituencies take part in social change. In addition to providing an overview of the relationship between social problems, social policy, and social change efforts, the course encourages critical thought about the role of and relationship between professional elites (philanthropists, advocates, researchers, etc.) and ground-level activists (affected populations, community leaders, etc.) in constructing and contesting social problems and promoting social change.

Instructor(s): J. Mosley Terms Offered: TBD

SSAD 28112. Community Organizing. 100 Units.

This is a class about community organizing and how organizing brings about collective action. Through analysis of both historical and contemporary community organizing efforts, students will learn how organizing mobilizes people to gain power and influence over public policy and decision-making that directly impact them. Students will be introduced to different conceptual models of organizing, as well as how these models employ different theories of social change. The course emphasizes the 'nuts-and-bolts' of organizing, ranging from strategic vision formulation to campaign development to one-on-one engagement. Students will have the opportunity to learn, discuss, and employ these different organizing skills and techniques through in-class exercises and group projects.

Equivalent Course(s): HMRT 34950, SSAD 48112

CHDV 20305. Inequality in Urban Spaces. 100 Units.

The problems confronting urban schools are bound to the social, economic, and political conditions of the urban environments in which schools reside. Thus, this course will explore social, economic, and political issues, with an emphasis on issues of race and class as they have affected the distribution of equal educational opportunities in urban schools. We will focus on the ways in which family, school, and neighborhood characteristics intersect to shape the divergent outcomes of low- and middle-income children residing with any given neighborhood. Students will tackle an important issue affecting the residents and schools in one Chicago neighborhood. This course is part of the College Course Cluster: Urban Design.

Instructor(s): M. Keels Terms Offered: Autumn

Note(s): CHDV Distribution: B; 2*

Equivalent Course(s): CRES 20305, EDSO 20305, EDSO 40315, PBPL 20305

PLSC 38200. Political Socialization. 100 Units.

SOCI 20269. Policing the City. 100 Units.

This course explores the historical origins, evolution, and current manifestations of policing the United States. Using a political sociological perspective, this course explores policing in ways that will provide broader lessons about societal issues of social control, social order, race, class, crime, social psychology, and politics. The course examines key issues in policing, such as police brutality, racial profiling, and the management of social protest. It also reviews the historical origins of the policy in order to understand that modern day policing issues is much more of a continuation of the past than most think. Reading and course material will be discussed in relation to current events.

Instructor(s): R. Vargas Terms Offered: Autumn

SOCI 30233. Race in Contemporary American Society. 100 Units.

This survey course in the sociology of race offers a socio-historical investigation of race in American society. We will examine issues of race, ethnic and immigrant settlement in the United States. Also, we shall explore the classic and contemporary literature on race and inter-group dynamics. Our investigative tools will include an analysis of primary and secondary sources, multimedia materials, photographic images, and journalism. While our survey will be broad, we will treat Chicago and its environs as a case study to comprehend the racial, ethnic, and political challenges in the growth and development of a city.

Instructor(s): S. Hicks-Bartlett Terms Offered: Autumn Spring. Autumn quarter offered at the Undergraduate level only and Spring offered at the Graduate level only

Equivalent Course(s): SOCI 20233, CRES 20233, MAPS 30233

Global and Migration Courses

SSAD 21200. Policing, Citizenship, and Inequality in Comparative Perspective. 100 Units.

Police provide an essential service for citizens - security and protection - without which the exercise of all other rights becomes heavily constrained. Police institutions are also the primary entity of the state with which most citizens come into direct contact. In practice, however, governments throughout the Americas (and beyond) have long struggled to organize police institutions such that they address societal demands for security, and that the deployment of coercion against citizens is applied equitably and constrained by law and external accountability. From São Paulo and Johannesburg to Chicago, police forces engage in widespread extrajudicial killings and torture that largely target marginalized sectors of society, including Afro-descendants, the poor, and those living in the urban periphery. At the same time, these groups are also underserved by their police, leaving them vulnerable to high rates of criminal violence. Through comparative analysis of police institutions in Latin America, the United States, and other regions, this course probes the ways in which police institutions shape the lived experiences of individuals and how police may help reproduce existing social inequalities.

Equivalent Course(s): HMRT 21201

SSAD 21300. Global Mental Health. 100 Units.

Global mental health has emerged as a priority for multilateral institutions like the World Health Organization and World Bank, for international non-governmental organizations, and for academic researchers alike. This course examines the foundations, practices, and critiques of this field. We will explore how sociocultural processes shape the experience of distress and mental illness; various cultures of healing, including Western psychiatry, and their power dynamics; gaps and inequalities in service provision; as well as approaches to and challenges of cross-cultural diagnosis/treatment/epidemiology. Specific attention will be paid to how mental health concerns and interventions affect women, racial/ethnic minorities, and other disadvantaged groups in different societies. Building on these explorations, we will then turn to the tools, programs, and practices that constitute the somewhat amorphous movement called 'Global Mental Health.' Ongoing debates of this movement will also be examined. This course will take an interdisciplinary approach, with readings drawn from psychiatry, public policy, anthropology, history, sociology, and so on. Through discussions and assignments, students will develop skills to design, evaluate, and critically reflect upon global mental health interventions.

Equivalent Course(s): GNSE 21301

SSAD 25003. Immigration, Law and Society. 100 Units.

Law is everywhere within the social world. It shapes our everyday lives in countless ways by permitting, prohibiting, protecting and prosecuting native-born citizens and immigrants alike. This course reviews the major theoretical perspectives and sociological research on the relationship between law and society, with an empirical focus on immigrants in the United States, primarily from Mexico and Central America. To begin, we explore the permeation of law in everyday life, legal consciousness, and gap between 'law on the books' and 'law on the ground.' The topic of immigration is introduced with readings on the socio-legal construction of immigration status, theories of international migration, and U.S. immigration law at the national and subnational levels. We continue to study the social impact of law on immigrants through the topics of liminal legality; children, families, and romantic partnerships; policing, profiling, and raids; detention and deportation; and immigrants' rights. This course adopts a 'law in action' approach centered on the social, political, and cultural contexts of law as it relates to immigration and social change. It is designed to expose you to how social scientists study and think about law, and to give you the analytical skills to examine law, immigration, and social change relationally.

Terms Offered: TBD

Equivalent Course(s): HMRT 25003, PBPL 25003, SOCI 28079, CRES 25003, LACS 25003

SSAD 25112. Contemporary Immigration Policy and Practice. 100 Units.

Today's immigration debates have brought to the fore conflicting visions regarding U.S. immigration policies, including the impacts and inequities faced by an estimated 11 million undocumented immigrants and their families. The debates as well impact who will be welcomed to migrate in the future and under what conditions. This course will start with a historical perspective and then take a deeper look at the ways in which our laws and accompanying systems shape the everyday lives of undocumented individuals and mixed-status families. We will look into the realities and consequences affecting multiple immigrant communities and cultures in the U.S. We will delve into the U.S. immigration policy debates and alternative visions. We'll consider how states and the federal government interface, collaborate and clash. As immigration, immigrants and refugees are today a central focus of U.S. politics and affected by these realities, we will explore related current and future political dynamics, advocacy, research and social movements upon the directions of immigration policies. Finally, we will explore the challenges faced in working within the intersection of immigration policy and people's lives, and how this work shapes our various roles as practitioners, policy makers, advocates and allies, including how social change is achieved at the local, statewide and national levels.

Equivalent Course(s): SSAD 45112, HMRT 45112

SSAD 26922. Structuring Refuge: U.S. Refugee Policy and Resettlement Practice. 100 Units.

At the end of 2017 there were over 68.5 million forcibly displaced people around the world, the highest number ever recorded (UNHCR, 2019). The number of newly displaced people in 2017 alone was 16.2 million, which is the equivalent of 44,400 new displacements every single day. Over 25.4 million registered refugees were among those displaced, and of these just 102,800 were admitted to third countries for permanent resettlement. Historically the United States has been the largest resettlement country in the world: since 1975 the US has resettled more than 3 million refugees. Refugees in the U.S. are entitled to an array of federal, state, and local supports that other immigrants must do without. At the same time, refugees in the U.S. are arguably subject to greater scrutiny and systems of social control than most other unincarcerated domestic populations. However, the terrain of U.S. refugee resettlement has shifted dramatically as a result of the Executive Orders introduced by the Trump Administration. This course asks the central questions: How is refugee status constructed as a political process; what are the interrelationships between institutional actors and refugee policies and what are the implications of these interrelationships for service delivery to refugees in the U.S.; what does research tell us about the resettlement outcomes of refugees in the U.S. and what drives these outcomes; and finally, what are the points of intervention for social workers in the refugee

Equivalent Course(s): HMRT 46922, SSAD 46922

CHDV 23403. Borders, (Im)mobilities and Human Rights. 100 Units.

What is the human cost of border control? To what extent do individuals possess the right to move to other states? How do different states with large populations of refugees and asylum seekers develop and enforce migration policies, and what do the differences in these policies reveal about the social histories and futures of these states? To address these questions, we will consider how borders, institutions, and categories of migrant groups mutually shape one another. We will explore the interrelationships between categories of migration-forced, economic, regular, and irregular-in order to understand the multiple and unequal forms of mobility experienced by those who inhabit these categories. By utilizing a framework of human rights, this course will investigate how contemporary issues in migration-such as border management, illicit movement, and the fuzzy distinction between forced and economic migration-raise and reopen debates concerning

the management of difference. We will draw on the work of anthropologists, sociologists, and geographers, as well as journalists, legal, and medical professionals. Our readings each week will include a mix of conceptual, ethnographic, long-form journalism, and policy texts. When possible, we will also invite representatives from different Chicago-based organizations that promote and protect the rights of people in various situations of migration to come to our class to discuss their work.

Equivalent Course(s): ANTH 25255, HMRT 23403, GLST 23403

PBPL 27809. Violence in the Early Years. 100 Units.

This course will address issues related to children's exposure to violence. Classes will cover topics including, but not limited to, the history of violence against children (infanticide, etc), children's literature, parental violence towards children, school-related violence, practices such as female genital mutilation, and other policy-relevant issues related to violence in children's lives. We will analyze policies and reforms, review relevant research on each topic, and examine implications of the findings to policy and practice.

Instructor(s): A. Adukia Terms Offered: TBD

Poverty, Family, and Work Courses

SSAD 25005. Inequality at Work: The Changing Nature of Jobs and Prospects for Improvement. 100 Units.

This course will consider sources of inequality in the labor market and in workplaces. Empirical evidence and theory on labor markets and job conditions will be analyzed to provide insights into the changing nature of work and workplace inequality for the majority of Americans -- who do not hold a four-year college degree. Although the course will consider ways to ready workers for good jobs in the economy, the emphasis will be on improving jobs themselves, through voluntary employer behavior, collective action, and public policy. The assignment for the course involves observing and/or interviewing workers in an occupation chosen by the student.

Instructor(s): Susan Lambert Terms Offered: TBD

Equivalent Course(s): PBPL 25005, LLSO 25005

SSAD 25630. Poverty, Work, and Family Policy. 100 Units.

This course examines contemporary policy questions regarding the dual spheres of work and family life, with a particular focus on economically impoverished families and communities. Students will analyze the relative merits of different policies designed to improve the conditions of work and family life and mitigate the effects of poverty on children's wellbeing.

Throughout the ten-week quarter, we will consider demographic, labor market, and policy trends contributing to family poverty and income inequality in American society; interrogate policy debates concerning the responsibility of government, corporate, and informal sectors to address these critical social problems; and examine specific policy and program responses directed at (1) improving employment and economic outcomes and (2) reconciling the competing demands of employment and parenting. Although our primary focus will be on policies that promote the wellbeing of low-income families in the United States, relevant comparisons will be made cross-nationally, across race/ethnicity, and across income. This course is part of the Inequality, Social Problems, and Change minor.

Equivalent Course(s): LLSO 25630, CRES 25630

Law and Social Justice Courses

SSAD 25004. Punishment and Social Theory. 100 Units.

How is the power to punish derived? How has the role of punishment been conceived? What do the practices of punishment produce? What do they tell us about ourselves? Are there alternatives? Taking up these questions, the course outlines major theories of punishment advanced by political philosophers, penologists and scholars who study the role of punishment in society, tracing the trajectory of our modern impulse to punish 'wrong doers.' We will interrogate the shifting terrain of crime control policy and attend to the ways that prison reformers, scholars, and activists have sought to bring about change. We examine the political economy, culture, and consequences of punishment through readings on the carceral state and conclude by raising new questions about punishment and its alternatives in the age of mass incarceration.

Terms Offered: TBD

Equivalent Course(s): HMRT 25004, PBPL 25004

PBPL 29050. Youth Law and Policy: Child Welfare and Juv. Just. in the U.S. 100 Units.

This course explores how legal institutions protect and punish children in the United States. We will spend the first part of the course exploring the child welfare system, which purports to protect children from abuse and neglect through various mechanisms including foster care and the termination of parental rights. We will spend the second part of the course exploring the juvenile justice system, which purports to prosecute and rehabilitate children for their criminal acts in a system separate from the criminal justice system. In the final part of the course, we will consider special topics in this area of law and policy including 'cross-over youth' (i.e. children involved in both systems), unaccompanied immigrant children, homeless and runaway youth, and the so-called 'school-to-prison-pipeline.' This course will place special emphasis on the judges, lawyers, law enforcement officers, and social workers that comprise these legal institutions.

Terms Offered: Not offered in 2020-21

Prerequisite(s): Course limited to 3rd and 4th year students only.

Equivalent Course(s): LLSO 29050, HMRT 29050

PLSC 29500. Drugs, Guns, and Money: The Politics of Criminal Conflict. 100 Units.

This course examines armed conflict between states and criminal groups, with a focus on Latin America's militarized drug wars. Why do states decide to crack down on cartels, and why do cartels decide to fight back? Are drug wars 'insurgencies'? If so, can they be won? Why does drug violence vary over time, over space, and between market sector? We will study

these issues from historical, economic, criminological, and cultural perspectives. Throughout, we focus on the interplay of domestic and international politics in formulating and enforcing drug policy.

Instructor(s): B. Lessing Terms Offered: Spring

Equivalent Course(s): LACS 29500, LLSO 27307

Health and Mental Health Courses

SSAD 25732. Prejudice and Discrimination: Individual Cost and Response. 100 Units.

This foundational diversity class explores the origins and practices of racial/ethnic prejudice, stereotypes, and discrimination, and how demographic factors such as class, gender, sexuality, and nationality intersect to solidify and perpetuate inequality. We will explore the resulting psychological, economic, and sociopolitical tolls on individuals, and also examine various individual responses that can mitigate the negative impacts of or engage in resistance towards such discrimination (such as racial/ethnic identity development, deliberate retention of heritage culture, and social/political mobilization). Moreover, we will examine how these individual responses together with organized and collective efforts can bring about social changes. This class consciously expands a dominant binary discourse of race to develop a more inclusive and complex paradigm that accurately reflects the diversity of contemporary America.

Equivalent Course(s): SSAD 45732, CRES 45732, CRES 25732

PBPL 21425. Health in a Changing America: Social Context and Human Rights. 100 Units.

In this interdisciplinary course, students will consider the social context of health and the social and political commitments necessary to protect health as a human right. We will analyze recent trends in population health, such as the obesity epidemic, the opioid crisis, and the large gaps in life expectancy between neighborhoods in urban centers. Using case studies, students will envision a human rights-based response to these and other health challenges. We will examine the ways that framing health as personal versus public responsibility is consequential for social policy.

Instructor(s): Alicia Riley, Graduate Lecturer in Human Rights Terms Offered: Spring

Equivalent Course(s): HMRT 21403

Inquiry and Research in the Humanities

Program of Study

The bachelor of arts degree program in Inquiry and Research in the Humanities (IRHUM) offers undergraduates the opportunity to pursue an individualized program of humanistic study in preparation of an independent, mentored research project, which will form the capstone experience of their college education at the University of Chicago. IRHUM is thus not defined by a particular discipline or field, but by the techniques and practices of humanistic inquiry and research. For individual students pursuing the IRHUM major, cohesion is provided by the program of humanistic study, formal research training, and the final research project they design in consultation with the Faculty Chair of IRHUM and their faculty mentor. While the IRHUM major can stand alone, it pairs well with other majors in the Humanities Collegiate Division and beyond.

Admission to IRHUM is by application, in which students must clearly articulate their interest in humanistic research and describe the area of humanistic inquiry and research that they plan to pursue. Students design their own program of humanistic study in close consultation with IRHUM's Faculty Chair and their individual faculty mentor (who will serve as the primary advisor of the student's BA research project). Centered in the humanities, the program of study may draw on subject areas, fields, and techniques from disciplines in the social, biological, and physical sciences. While IRHUM has no formal language requirement, students researching topics in other languages and cultures are highly encouraged to demonstrate proficiency in those languages by taking higher-level courses and pursuing a Practical and Advanced Proficiency Certification (<https://languageassessment.uchicago.edu/flpc/>). Students whose research would be enhanced by secondary sources in another language are highly recommended to take courses in reading a foreign language for research (e.g., GRMN 23333 Reading German for Research Purposes) early in their degree programs.

A student's program of inquiry culminates in a genuine research project, closely mentored by a faculty member from a humanistic discipline (including the humanistic social sciences). To prepare students for their capstone research project, they will be trained in techniques and practices of humanistic research and given the opportunity to engage in genuine research in the context of a collaborative project or in a directed setting. Students are encouraged to take advantage of the various initiatives underway at the University of Chicago (College Summer Institute in the Arts, Humanities, and Social Sciences, Smart Scholars Program, Archaeological Field School, etc.) or with our international partners (the University of Sussex International Junior Research Associates Program, etc.).

Curricular Goals

IRHUM majors will:

- understand the nature of humanistic inquiry and research;
- understand its relevance for professional and academic careers, as well as global citizenship;
- learn how to design and conduct an individualized program of humanistic study and inquiry;
- learn the conventions and codes of the disciplines on which their study and research program draws;
- learn basic research techniques of humanistic inquiry and the more advanced research practices relevant to their chosen research program;
- learn how to search and find sources;
- effectively engage with primary materials of study and research (visual and material objects, archival materials, texts, theories, arguments, etc.) and evaluate their relevance;
- learn how to find, identify, and evaluate relevant secondary scholarly literature;
- experience the thrill of genuine discovery and the rewards of humanistic knowledge production;
- learn how to effectively design, structure, and write an extended research paper, as well as research abstracts, proposals, and program applications; and
- learn to present and communicate their knowledge and research in a variety of genres and media (conference presentation, conference poster, gallery or museum talk, research article, etc.), both to a discipline-specific audience and to the wider public.

Program Requirements

- **Six Courses** in the self-designed program of humanistic study, developed in consultation with the Faculty Chair of IRHUM and a faculty mentor.
- **Academic and Professional Writing (ENGL 13000)**, recommended in the Winter or Spring Quarters of Year 2, or in the Autumn Quarter of Year 3.
- **Introduction to Humanistic Inquiry and Research Design (IRHU 20100)**, recommended in the Spring Quarter of Year 2 or Autumn Quarter of Year 3. This seminar will introduce majors to the basic tenets of humanistic inquiry, including the formulation and testing of research questions and lines of inquiry, and expose students to best practices

in research design. In partnership with the University Library, this course will train students in information literacy and introduce them to best practices in research design (feasibility, assessment of primary and secondary source material, collation of resources), as well as expose them to research ethics and the principles of culturally sensitive research practices. The course will also include training in data use and management, and introduce students to research tools and technology available to them through the University Library system, as well as other on- and off-campus resources.

- **Two Research Seminars** in the humanities or humanistic social sciences. This requirement may be fulfilled with Independent Study or Reading and Research courses.
- **Applied Mentored Research Experience**, undertaken in the context of a collaborative, faculty- or discipline-expert mentored project. This experience will not necessarily correlate to the students' own research project but instead expose them to the work of knowledge production as "apprentices" to experts in a humanistic field. This could include opportunities within a structured research experience with College partners (Smart Museum of Art, Oriental Institute Museum, archaeological fieldwork, the University of Sussex International Junior Research Associates Program, etc.) or a research assistantship for a faculty member. Majors will receive a stipend and, therefore, no course credit for this requirement. A mentored research experience in the biological, physical, or social sciences may count toward this requirement by petition.
- **Research Proposal Colloquium (IRHU 29600)** in the Spring Quarter of Year 3. Upon approval of their research proposal, students will receive the necessary financial support to pursue their research project over the summer between Years 3 and 4. Stipends cover living costs and may support travel and other necessary expenses in support of their research project. The College Summer Institute in the Arts, Humanities, and Social Sciences is aimed toward rising seniors and provides, thus, the ideal setting for IRHUM majors working on their research project.
- **BA Thesis Writing Colloquium (IRHU 29800)** in the Autumn Quarter of Year 4. Students are expected to complete their thesis by the end of the Autumn Quarter.
- In the Winter and Spring Quarters of Year 4, majors are expected to present their capstone research project to a wider audience by giving an academic talk at a conference, presenting a poster session, etc., for which IRHUM will provide the necessary financial support, as needed.
- Majors are strongly encouraged to consider the curricular offerings of the Parrhesia Program for Public Discourse, as well as the resources and training offered through the College Center for Research and Fellowships.

Note: Students double-majoring can double-count up to three of the six courses in the self-designed program of humanistic study between the two majors and write only a single BA thesis (counting for both majors). IRHU 29600 Research Proposal Colloquium and IRHU 29800 BA Thesis Writing Colloquium cannot be replaced by similar courses or seminars from other majors.

Summary of Requirements

Six courses of self-designed study		600
ENGL 13000	Academic and Professional Writing (The Little Red Schoolhouse)	100
IRHU 20100	Introduction to Humanistic Inquiry and Research Design	100
Two Humanistic Research Seminars		200
Applied Mentored Research Experience		000
IRHU 29600	Research Proposal Colloquium	100
IRHU 29800	BA Thesis Writing Colloquium	100
Total Units		1200

BA Paper Timeline

The final BA research project, usually taking the form of a written thesis, is carefully scaffolded. Students design their research project in consultation with their faculty mentor during the course of IRHU 29600 Research Proposal Colloquium in the Spring Quarter of Year 3. Upon approval of their research proposal, students receive full financial support to conduct their research over the summer between their junior and senior years. IRHU 29800 BA Thesis Writing Colloquium in the Autumn Quarter of Year 4 provides a structured and collaborative setting, in which students can complete their project in a timely and closely mentored manner.

This schedule is designed to avoid the usual Spring Quarter crunch of BA thesis writing and to make it easier for students to use their research thesis as a writing sample for fellowship or graduate school applications. The intentional design of the BA thesis (or, research capstone) experience ensures that students are fully equipped and able to put into practice the principles of academic research design. This elevates the value of the research thesis as a training experience, as well as a measurable academic output. Additionally, the enhanced structure of the thesis experience provides students with the opportunity to translate a portion of their project into a refined research and writing sample for the purposes of graduate school and/or any postgraduate experience that expects advanced research training (e.g., national fellowships like Fulbright, etc.). IRHUM also aims to train students in the dissemination of their research through written and oral communication to both expert and non-expert audiences. The final two quarters of Year 4 are reserved for attending undergraduate research conferences and symposia, writing up their research for publication, or preparing other forms of dissemination.

Sample Programs

While the potential for developing individual BA programs in Inquiry and Research in the Humanities is as great as the combined ingenuity, imagination, and interest of each student in consultation with the student's advisors, we have identified a few sample program plans below:

Studying Chicago's Cityscape

ARTH 24190	Imagining Chicago's Common Buildings	100
ARTH 24191	City Imagined, City Observed	100
ENST 22300	South Side Ecologies	100
GEOG 23500	Urban Geography	100
PBPL 28501	Process and Policy in State and City Government	100
TAPS 24500	Chicago Theater: Budgets and Buildings	100
ENGL 13000	Academic and Professional Writing (The Little Red Schoolhouse)	100
IRHU 20100	Introduction to Humanistic Inquiry and Research Design	100
Two Humanistic Research Seminars		200
Applied Mentored Research Experience		000
IRHU 29600	Research Proposal Colloquium	100
IRHU 29800	BA Thesis Writing Colloquium	100
Total Units		1200

Understanding Climate Change through Literature and Art

ENGL 12520	Climate Change in Literature, Art, and Film	100
ENST 28728	Climate Change and Society: Human Impacts, Adaptation, and Policy Solutions	100
GEOS 24220	Climate Foundations	100
GEOS 24705	Energy: Science, Technology, and Human Usage	100
PBPL 24756	Exploring the Resilient City	100
PHSC 13400	Global Warming: Understanding the Forecast	100
ENGL 13000	Academic and Professional Writing (The Little Red Schoolhouse)	100
IRHU 20100	Introduction to Humanistic Inquiry and Research Design	100
Two Humanistic Research Seminars		200
Applied Mentored Research Experience		000
IRHU 29600	Research Proposal Colloquium	100
IRHU 29800	BA Thesis Writing Colloquium	100
Total Units		1200

The History of Print

ARTH 18700	The Arts of Arabic and Persian Manuscripts	100
CLCV 21500	Medieval Book: History, Typology, Function	100
ENGL 45433	Book History: Methods, Practices, and Issues	100
GRMN 22312	Reforming Religious Media: Martin Luther and the Protestant Reformation	100
HIST 12203	Italian Renaissance: Petrarch, Machiavelli, and the Wars of Popes and Kings	100
HIST 25425	Censorship, Info Control, & Revolutions in Info Technology from the Printing Press to the Internet	100
ENGL 13000	Academic and Professional Writing (The Little Red Schoolhouse)	100
IRHU 20100	Introduction to Humanistic Inquiry and Research Design	100
Two Humanistic Research Seminars		200
Applied Mentored Research Experience		000
IRHU 29600	Research Proposal Colloquium	100
IRHU 29800	BA Thesis Writing Colloquium	100
Total Units		1200

Application

Interested students should apply for admission into the IRHUM program as soon as possible upon completion of general education requirements (typically by the end of the second year and, except in extraordinary circumstances, no later than the end of Autumn Quarter of the third year). Transfer students in particular are urged to apply at the earliest point that they can. An application is initiated by consulting with the IRHUM Faculty Chair and/or Co-Chair, to discuss the feasibility of designing and implementing the planned study and research program. After consultation, students who wish to pursue an

application to the IRHUM program must submit a recent course transcript (with a minimum B average in preceding course work) and a two-part written proposal according to the following guidelines. Applications must be written in error-free, succinct, and well-crafted language in order to receive full consideration.

Motivation Statement

The first part of the proposal consists of a 750-word motivation statement, explaining the student's intellectual motivation and academic preparation for embarking on an individualized program of humanistic inquiry, and describing in broad outlines the research interest(s), as well as the program of study to pursue those interests. While not required, a brief statement indicating the student's current plans for a BA project and potential mentor may be included. This will further clarify the student's intentions for the IRHUM major and its final research experience for the review committee.

Course Prospectus

The second part of the proposal consists of a list of courses that comprise the complete program of study described in the motivation statement. This list may include courses the student has already taken as well as courses the student intends to take. While a list of proposed courses is a required part of the application, it is understood that these will undergo modification contingent on the availability of courses from year to year. Any changes to the course prospectus must be discussed with and approved by the IRHUM Co-Chair and then forwarded to the student's College adviser.

After the application materials have been reviewed by the IRHUM Faculty Chair and Co-Chair, a twenty-minute interview will be scheduled with the IRHUM Faculty Chair and Co-Chair. The IRHUM Faculty Chair will inform the student via email of the result of the application.

Grading

All courses in the major must be taken for a quality grade, including ENGL 13000.

Honors

To be eligible for honors, a student must maintain an overall GPA of 3.25 or higher and a GPA in the major of 3.5 or higher. Honors are reserved for the student whose BA project shows exceptional intellectual merit in the judgment of the faculty mentor, the IRHUM Faculty Chair, and the Master of the Humanities Collegiate Division.

Advising

Close contact with the faculty and staff relevant to the student's career in IRHUM—including the student's College adviser, the IRHUM Faculty Chair, and the student's faculty mentor—is essential in a program that involves so much individual initiative and experimentation. Students are encouraged to seek their advice whenever they have an intellectual or practical concern about progress in the major.

Faculty

Since IRHUM is an interdisciplinary major whose field of study encompasses all the offerings in the various departments and programs of the University (particularly in the Humanities Division), all faculty members of these varied departments and programs are related to IRHUM. IRHUM students may approach any University of Chicago faculty member who works in the student's field of interest with a request to serve as faculty adviser for the BA paper. Similarly, IRHUM students may take courses with any faculty member from any department of the University.

Courses for IRHUM Majors

IRHUM majors can choose course offerings from across the College that fit into their program of study, provided they are approved by the IRHUM Faculty Chair and the student's faculty mentor. Methodology courses from other programs and departments may—upon petition—count toward the requirements of the IRHUM major.

Inquiry and Research in the Humanities Courses

IRHU 20100. Introduction to Humanistic Inquiry and Research Design. 100 Units.

This seminar will introduce majors to the basic tenets of humanistic inquiry, including the formulation and testing of research questions and lines of inquiry, and expose students to best practices in research design. In partnership with the University Libraries, this course will train students in information literacy, introduce them to best practices in research design (feasibility, assessment of primary and secondary source material, collation of resources), as well as expose them to research ethics and the principles of culturally sensitive research practices. The course will also include training in data use and management and introduce students to research tools and technology available to them through the University Library system, as well as other on- and off-campus resources.

Instructor(s): TBD Terms Offered: TBD

IRHU 29600. Research Proposal Colloquium. 100 Units.

Building on the research skills majors have learned in Introduction to Humanistic Inquiry and Research Design [IRHU 20100], the two Research Seminars, and the mandatory Applied Mentored Research Experience, the Research Proposal Colloquium helps majors identify a relevant research topic/questions, design a feasible research project, establish a research timeline and formulate a clear and compelling proposal. The collaborative setting of the Research Proposal Colloquium complements the individual mentoring provided by the Faculty Advisor and the IRHUM Co-Chair. Upon approval of their research proposal by their Faculty Advisor, the IRHUM Faculty Chair, and Co-Chair, students are eligible to receive full financial support to conduct a portion of their research over the summer between their junior and senior years, as merited.

Instructor(s): TBD Terms Offered: TBD

Note(s): All IRHUM majors are required to take the Research Proposal Colloquium in the Spring Quarter of their third year.

IRHU 29800. BA Thesis Writing Colloquium. 100 Units.

Building on the Research Proposal Colloquium and the research undertaken over the summer, the BA Thesis Writing Colloquium provides a structured and collaborative setting, in which IRHUM majors receive instruction on effectively writing about their findings, workshop their efforts with their peers, and, ultimately, complete their mentored research project in a timely and productive manner. Like the Research Proposal Colloquium, the BA Thesis Writing Colloquium complements the individual mentoring provided by the Faculty Advisor and IRHU Co-Chair. Furthermore, IRHUM majors will receive support translating their research experience and output into competitive applications for graduate programs, research grants, and national fellowships.

Instructor(s): TBD Terms Offered: TBD

Note(s): All IRHUM majors are required to take the Thesis Writing Colloquium in the Autumn Quarter of their fourth year.

Jewish Studies

Department Website: <http://ccjs.uchicago.edu>

Program of Study

The BA program in Jewish Studies provides a context in which College students may examine the texts, cultures, languages, and histories of Jews and Judaism over three millennia. The perspective is contextual, comparative, and interdisciplinary. The long and diverse history of Jews and Judaism affords unique opportunities to study modes of continuity and change, interpretation and innovation, and isolation and integration of a world historical civilization. Students are encouraged to develop appropriate skills (in texts, languages, history, and culture) for independent work.

Students in other fields of study may also complete a minor in Jewish Studies. Information follows the description of the major.

Jewish Civilization Sequence

A three-course Jewish Civilization sequence is offered in the Autumn, Winter, and Spring Quarters. The first course begins in antiquity and extends through the medieval period (JWSC 12000 Jewish Civilization I: Ancient Beginnings to Medieval Period). The second course begins in the early modern period and extends to the present (JWSC 12001 Jewish Civilization II: Early Modern Period to 21st Century). In the Spring Quarter, students have the option of taking a third unit of Jewish Civilization, a course whose topics will vary (JWSC 1200X). Jewish Civilization courses may be used to fulfill the College's general education requirement in civilization studies. It is recommended, though not required, that students take these courses in sequence. Students who register for the Autumn Quarter course will automatically be pre-registered for the Winter Quarter segment. In order for the Spring Quarter course to qualify for the general education requirement in civilization studies, the student must have completed Jewish Civilization I and II. The Spring Quarter course, however, may also be taken as an independent elective.

Note: Jewish Studies revised its civilization studies courses starting in academic year 2018–19. Students who began the requirement prior to Autumn Quarter 2018, under the previous course options, may complete it with those courses that remain available, or they may combine them with the new course options. However, students must have at least one course on the ancient/medieval period (JWSC 20120-20199 or JWSC 12000 Jewish Civilization I: Ancient Beginnings to Medieval Period) and at least one on the modern period (JWSC 20220-20299 or JWSC 12001 Jewish Civilization II: Early Modern Period to 21st Century). Students who began the requirement in Autumn Quarter 2018 or later may only use the new sequence to meet the general studies requirement in civilization studies.

Students may also fulfill the Jewish civilization requirement by participating in the "Jerusalem in Middle Eastern Civilizations" Study Abroad program, where they can earn credit for three courses in Jewish civilization (ancient, medieval, and modern) and one credit in modern Hebrew. (For more information about this program, please see the Study Abroad page of this catalog.)

Program Requirements

Advising

Students who have not completed the College's general education requirements before starting the major should do so during their first year as Jewish Studies majors. Students are required to meet with the director of undergraduate studies before declaring a major in Jewish Studies. Each student in the major will have as an adviser a faculty member who is affiliated with the Greenberg Center for Jewish Studies.

Major in Jewish Studies

The major requires twelve courses distributed according to the guidelines that follow. A full, constantly updated list of courses approved for the major and minor is available on the Greenberg Center for Jewish Studies website at ccjs.uchicago.edu (<http://ccjs.uchicago.edu/>).

Language

Students must take three quarters of Hebrew (classical or modern) or Yiddish. If the student's research project requires knowledge of a different language, the student may petition the committee to substitute that language in the place of Hebrew or Yiddish.

Jewish Civilization and Electives

Students in the major must take nine additional courses in Jewish Studies, for a total of twelve courses.

Jewish Civilization: Students in the major must complete either the first two quarters of the Jewish Civilization sequence or the 'Jerusalem in Middle Eastern Civilizations' Study Abroad program.

If students take one of these sequences to satisfy the general education requirement in civilization studies, one elective in the major must come from another civilization studies sequence pertinent to the area and period of the student's primary interest in Jewish Studies.

For students who take a sequence outside Jewish Studies to satisfy the general education requirement in civilization studies, the two- or three-course Jewish Civilization sequence (or three-course sequence offered in Jerusalem) will count among the JWSC electives required for the major.

Other Electives: The remaining courses must come from JWSC course offerings. These elective courses should normally focus in a specific area of concentration within Jewish Studies and should be chosen in consultation with the director of undergraduate studies. Students who complete the option BA thesis (as described under Optional BA Paper) may count JWSC 29900 BA Preparation Course among these courses.

Beyond the requirements for the major, students are encouraged to take at least one course in method or theory pertaining to their area of concentration in Jewish Studies, whether it is a JWSC course that can count in the major or is simply a general elective credit.

Summary of Requirements

Three courses in Hebrew (or other language, with approval)	300
Nine total JWSC courses	900
Note: Must include 2–3 Jewish Civilization courses, as described under the Program Requirements	
Total Units	1200

Optional BA Paper

Students who choose this option are to meet with their advisers by May 15 of their third year to determine the focus of the research project, and they are expected to begin reading and research for the BA paper during the summer before their fourth year. After further consultation, students are to continue guided readings and participate in a (formal or informal) tutorial during Autumn Quarter of their fourth year. Credit toward the major is received only for the Winter Quarter tutorial (JWSC 29900 BA Preparation Course), during which the BA paper is finally written and revised. The BA tutorial may count toward one of the courses related to Jewish Studies. The BA paper must be received by the primary reader by the end of fifth week of Spring Quarter. A BA paper is a requirement for consideration for honors.

This program may accept a BA paper or project used to satisfy the same requirement in another major if certain conditions are met and with the consent of the other program chair. Approval from both program chairs is required. Students should consult with the chairs by the earliest BA proposal deadline (or by the end of their third year, if neither program publishes a deadline). A consent form, to be signed by both chairs, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Honors

Honors are awarded to students who demonstrate excellence in their course work, as well as on the BA paper. Students must maintain an overall GPA of 3.25 or higher and a GPA of 3.5 or higher in the major, and the BA paper must be judged to be at least of A- quality.

Grading

Students take all courses required for the major for quality grades.

Minor in Jewish Studies

The minor in Jewish Studies provides a basic introduction to the texts, cultures, languages, and history of the Jews and Judaism. Six courses are required for the minor, two of which are JWSC 12000 Jewish Civilization I: Ancient Beginnings to Medieval Period and JWSC 12001 Jewish Civilization II: Early Modern Period to 21st Century. The other courses may be in any area of Jewish Studies, including languages such as Hebrew and Yiddish; such courses can be identified by their JWSC prefix. Students can earn credit for three courses in Jewish Civilization (ancient, medieval, and modern) and one credit in modern Hebrew by participating in the “Jerusalem in Middle Eastern Civilizations” Study Abroad program. (For more information about this program, please see the Study Abroad page of this catalog.)

Students who wish to do a minor in Jewish Studies must meet with the director of undergraduate studies before the end of the Spring Quarter of their third year to declare their intention to complete the minor. The director's approval for the minor program will then be communicated to the student's College adviser.

Courses taken to fulfill the requirements for the minor in Jewish Studies may not be double-counted with courses taken for the student's major(s) or courses taken for other minors. Courses taken for the minor in Jewish Studies must be taken for quality grades.

Jewish Studies Courses

JWSC 11000-11100-11200, Biblical Aramaic; Old Aramaic Inscriptions; Imperial Aramaic.

Three quarter sequence in Aramaic spanning Biblical Aramaic (Autumn), Old Aramaic (Winter), and Imperial Aramaic (Spring).

JWSC 11000, Biblical Aramaic, 100 Units.

This course provides a thorough introduction to the grammar of the Aramaic portions of the Hebrew Bible during the first few weeks. The remainder of the course is spent reading texts from the books of Daniel and Ezra.

Instructor(s): S. Creason Terms Offered: Autumn

Prerequisite(s): HEBR 10103 or equivalent.

Note(s): Instructor Consent Required

Equivalent Course(s): ARAM 10101

JWSC 11100. Old Aramaic Inscriptions. 100 Units.

Selected monumental inscriptions from the Old Aramaic period (c. 1000-600 BCE) are read with special attention to the dialectal differences among various subgroups of texts.

Instructor(s): S. Creason Terms Offered: Winter

Prerequisite(s): ARAM 10101 or equivalent.

Equivalent Course(s): ARAM 10102

JWSC 11200. Imperial Aramaic. 100 Units.

Selected letters and contracts from the Imperial Aramaic period (c. 600-200 BCE) are read with special attention to the historical development of the grammar of Aramaic during this time period.

Instructor(s): S. Creason Terms Offered: Spring

Prerequisite(s): ARAM 10102 or equivalent.

Equivalent Course(s): ARAM 10103

JWSC 12000-12001-12003. Jewish Civilization I-II-III.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts—biblical, Talmudic, philosophical, mystical, historical, documentary, and literary—students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The Autumn course will deal with antiquity to the medieval period; the Winter course will begin with the early modern period and continue to the present. The Spring course will vary as to special topic; for the Spring course to count towards the general education requirement in civilization studies, the student must also take the Autumn and Winter courses. Note: Jewish Studies revised its civilization studies courses in academic year 2018–19. Students who began the requirement prior to Autumn Quarter 2018 under the previous course options, may complete it with those courses that remain available, or (with prior approval from the JWSC director of undergraduate studies) they may combine them with the new course options, provided that they fulfill the requirement to take one JWSC course in the ancient or medieval period and one in the modern period. Only students who have taken JWSC courses prior to academic year 2018–19 are eligible to complete the program under the prior system.

JWSC 12000. Jewish Civilization I: Ancient Beginnings to Medieval Period. 100 Units.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts—biblical, Talmudic, philosophical, mystical, historical, documentary, and literary—students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The autumn course will deal with antiquity through the Middle Ages. Its readings will include material from the Bible and writings from the second temple, Hellenistic, rabbinic, and medieval periods. All sections of this course will share a common core of readings; individual instructors will supplement with other materials. It is recommended, though not required, that students take the three Jewish Civilization courses in sequence. Students who register for the Autumn Quarter course will automatically be pre-registered for the winter segment. In the Spring Quarter students have the option of taking a third unit of Jewish Civilization, a course whose topics will vary (JWSC 1200X).

Instructor(s): James Robinson Other TBA Terms Offered: Autumn

Equivalent Course(s): NEHC 22010, RLST 22010, MDVL 12000

JWSC 12001. Jewish Civilization II: Early Modern Period to 21st Century. 100 Units.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts—biblical, Talmudic, philosophical, mystical, historical, documentary, and literary—students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The Winter course will begin with the early modern period and continue to the present. It will include discussions of mysticism, the works of Spinoza and Mendelssohn, the nineteenth-century reform, the Holocaust and its reflection in writers such as Primo Levi and Paul Celan, and literary pieces from postwar American Jewish and Israeli authors. All sections of this course will share a common core of readings; individual instructors will supplement with other materials. It is recommended, though not required, that students take the three Jewish Civilization courses in sequence. Students who register for the Autumn Quarter course will automatically be pre-registered for the winter segment. In the Spring Quarter students have the option of taking a third unit of Jewish Civilization, a course whose topics will vary (JWSC 1200X).

Instructor(s): S. Hammerschlag J. Kirzane Terms Offered: Winter

Equivalent Course(s): NEHC 22011, RLST 22011

JWSC 12003. Jewish Civilization III - Language, Creation, and Translation in Jewish Thought and Literature. 100 Units.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts—biblical, Talmudic, philosophical, mystical, historical, documentary, and literary—students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The Spring course in 2021 will start with two stories from Genesis—the creation story and the story of the Tower of Babel in chapter 11—and consider the intertwined dynamics of language, creation, and translation in Jewish thought and literature. In addition to commentaries on both of these key texts, we will read philosophical and literary texts that illuminate the workings of language as a creative force and the dynamics

of multilingualism and translation in the creation of Jewish culture. Through this lens, we will consider topics such as gender and sexuality, Jewish national identity, Zionism, the revival of the Hebrew language, Jewish responses to the Holocaust, and contemporary American Jewish culture.

Instructor(s): Na'ama Rokem Terms Offered: Spring

Note(s): Students who wish to take this course for Civilization Studies credit, must also take Jewish Civilization I and II. The course may also be taken as an independent elective.

Equivalent Course(s): CMLT 12003, NEHC 12003, RLST 22012

JWSC 20120. Introduction to the Hebrew Bible. 100 Units.

The course will survey the contents of the Hebrew Bible, and introduce critical questions regarding its figures and ideas, its literary qualities and anomalies, the history of its composition and transmission, its relation to other artifacts from the biblical period, its place in the history and society of ancient Israel and Judea, and its relation to the larger culture of the ancient Near East.

Instructor(s): Simeon Chavel Terms Offered: Autumn

Note(s): This course counts as a Gateway course for RLST majors/minors.

Equivalent Course(s): NEHC 30504, NEHC 20504, RLST 11004, HIJD 31004, BIBL 31000

JWSC 20235. The Hebrew Bible and the Shoah. 100 Units.

This course explores the use of biblical literature in Holocaust and post-Holocaust works. The first part focuses on the work of religious thinkers from across the religious spectrum, from the Warsaw ghetto sermons of the orthodox rabbi Kalonymos Shapira to the unique interpretation of the 'suffering servant' by Reform rabbi Ignaz Maybaum. We will see that the question of God's whereabouts during the massacre produced an explosion of biblically-inspired theologies, stemming from Buber, Heschel, and Berkovits' different conceptions of a 'divine eclipse' (hester panim) to Melissa Raphael's audacious affirmation of the presence of the female divine face in Auschwitz. The traditional approach to the Hebrew Bible itself was radically questioned: Fackenheim argued that biblical exegesis had to be thoroughly revised, and André Neher sketched a hermeneutics of biblical silence. In the second part of the course we turn to the influence the Hebrew Bible had on the works of literarily oriented writers and how they reflected on the Shoah. In genres as distinct as poetry and testimony, in authors as different as Chava Rosenfarb and Primo Levi, one sees biblical characters, stories, motifs, and literary forms given unprecedented ambivalence and poignancy. This is true whether the biblical reference is deployed in ironic denunciations of the divine (Shayevitch, Modolowski), in appeals to a newfound hope (Wiesel, Agnon), or in psalmic hymns to the senselessness of it all (Sachs, Celan).

Instructor(s): Aslan Mizrahi Cohen Terms Offered: Winter

Equivalent Course(s): RLST 20235

JWSC 20300-20400-20500. Elementary Yiddish I-II-III.

The goal of this sequence is to develop proficiency in Yiddish reading, writing, listening, and speaking skills. Touchstones of global Yiddish culture are also introduced through song, film, and contemporary Yiddish websites.

JWSC 20300. Elementary Yiddish I. 100 Units.

The goal of this sequence is to develop proficiency in Yiddish reading, writing, listening, and speaking skills.

Touchstones of global Yiddish culture are also introduced through song, film, and contemporary Yiddish websites.

Instructor(s): Jessica Kirzane Terms Offered: Autumn

Equivalent Course(s): YDDH 10100

JWSC 20400. Elementary Yiddish for Beginners-II. 100 Units.

In this course, students will extend basic Yiddish speaking, listening, reading, and writing skills. By the end of the course, students should have a basic understanding of regional Yiddish variations in pronunciation and spelling, be able to understand and participate in a conversation in an increasingly comfortable and complex way, read simple texts with ease, have experience tackling more complex texts with the aid of a dictionary, and write short compositions with grammatical complexity. In the course of language study, students will also be exposed to key topics in the history of the Yiddish language and culture.

Instructor(s): Jessica Kirzane Terms Offered: Winter

Prerequisite(s): YDDH 10100

Equivalent Course(s): YDDH 37400, YDDH 10200

JWSC 20500. Elementary Yiddish III. 100 Units.

In this course, students will acquire intermediate Yiddish speaking, listening, reading, and writing skills. By the end of the course, students should be able to conduct a conversation on a wide range of topics, be comfortable tackling complex texts with the aid of a dictionary, and write short compositions with grammatical complexity. In the course of language study, students will also be exposed to key topics in the history of the Yiddish language and culture. Students will also be introduced to basic Yiddish research skills.

Equivalent Course(s): YDDH 10300, YDDH 37500

JWSC 20907. Contemporary Religion in Israel. 100 Units.

The complex relationship between religion and state is at the core of current social, cultural and political tensions in Israel. In this course we will explore the manifestation of these relations by focusing on selected ethnographies of religious performance and phenomena in modern Israel, including amongst others a 'Women of the Wall' first day of the month prayer, a LGBTQ community's reading of the book of Esther in Tel-Aviv, and a messianic group's attempt to reestablish the Passover sacrifice at the Temple Mount. By exploring these detailed ethnographies against the backdrop of contemporary theory, including secularization and post-secularization, lived religion, fundamentalism and social orthodoxy, this course aims to portray the variety and complexity of religious experience in Israel today.

Instructor(s): David Barak-Gorodetsky Terms Offered: Spring
Equivalent Course(s): RLST 27712

JWSC 21107. Readings in Maimonides' Guide of the Perplexed. 100 Units.

A careful study of select passages in Maimonides' Guide of the Perplexed, focusing on the method of the work and its major philosophical-theological themes, including: divine attributes, creation vs. eternity, prophecy, the problem of evil and divine providence, law and ethics, the final aim of human existence.

Instructor(s): James Robinson Terms Offered: Autumn

Equivalent Course(s): NEHC 40470, FNDL 24106, ISLM 45400, RLST 21107, HREL 45401, RLVC 45400, MDVL 25400, HIJD 45400

JWSC 21215. Abraham's Sacrifice of Isaac in Multiple Perspectives. 100 Units.

The story of Abraham's (near) sacrifice of his son, Isaac, found in Genesis 22:1-19, is one of the most influential and enduring stories in Western literature and art. It is part of the living tradition of Judaism, Christianity, and Islam and its meaning and implications have been repeatedly explored in the communities defined by these religions, and has, in turn, helped to shape the self-perception of those communities. This course will consider the multiple perspectives from which this story has been viewed and the multiple interpretations which this story has generated, starting with its earliest incorporation into the Hebrew Bible, moving to its role in Judaism, Christianity, and Islam, and concluding with its influence on modern works. No knowledge of Hebrew is required.

Instructor(s): Stuart Creason Terms Offered: Spring

Equivalent Course(s): NEHC 31215, RLST 21215, NEHC 21215, ISLM 31215, BIBL 31215, HIJD 31215

JWSC 22000-22100-22200. Elementary Classical Hebrew I-II-III.

The purpose of this three-quarter sequence is to enable the student to read biblical Hebrew prose with a high degree of comprehension. The sequence is divided into two segments: (1) the first two quarters are devoted to acquiring the essentials of descriptive and historical grammar (including translation to and from Hebrew, oral exercises, and grammatical analysis); and (2) the third quarter is spent examining prose passages from the Hebrew Bible and includes a review of grammar.

JWSC 22000. Elementary Classical Hebrew I. 100 Units.

The purpose of this three-quarter sequence is to enable the student to acquire a knowledge of the vocabulary and grammar of Classical Hebrew sufficient to read prose texts with the occasional assistance of a dictionary. The first quarter focuses on the inflection of nouns and adjectives and begins the inflection of verbs. It includes written translation to and from Hebrew, oral exercises, and grammatical analysis of forms.

Instructor(s): S. Creason Terms Offered: Autumn

Note(s): This class meets 5 times a week

Equivalent Course(s): HEBR 10101

JWSC 22100. Elementary Classical Hebrew II. 100 Units.

The purpose of this three-quarter sequence is to enable the student to acquire a knowledge of the vocabulary and grammar of Classical Hebrew sufficient to read prose texts with the occasional assistance of a dictionary. The second quarter focuses on verb inflection and verbal sequences and includes written translation to and from Hebrew, oral exercises, and grammatical analysis of forms.

Instructor(s): S. Creason Terms Offered: Winter

Prerequisite(s): HEBR 10101 or equivalent

Note(s): This class meets 5 times a week

Equivalent Course(s): HEBR 10102

JWSC 22200. Elementary Classical Hebrew III. 100 Units.

The purpose of this three-quarter sequence is to enable the student to acquire a knowledge of the vocabulary and grammar of Classical Hebrew sufficient to read prose texts with the occasional assistance of a dictionary. The first half of the third quarter concludes the study of verb inflection and the second half is spent reading prose narrative texts with specific attention to the grammatical analysis of those texts.

Instructor(s): S. Creason Terms Offered: Spring

Prerequisite(s): HEBR 10102

Note(s): This class meets 5 times a week

Equivalent Course(s): HEBR 10103, JWSG 30300

JWSC 22300-22400-22500. Intermediate Classical Hebrew I-II-III.

A continuation of Elementary Classical Hebrew. The first quarter consists of reviewing grammar, and of reading and analyzing further prose texts. The last two quarters are devoted to an introduction to Hebrew poetry with readings from Psalms, Proverbs, and the prophets.

JWSC 22300. Intermediate Classical Hebrew I. 100 Units.

The first quarter consists of reviewing grammar, and of reading and analyzing further prose texts.

Instructor(s): D. Pardee Terms Offered: Autumn

Prerequisite(s): HEBR 10103 or equivalent

Equivalent Course(s): HEBR 20104

JWSC 22400. Intermediate Classical Hebrew II. 100 Units.

The last two quarters are devoted to an introduction to Hebrew poetry with readings from Psalms, Proverbs, and the prophets.

Instructor(s): D. Pardee Terms Offered: Winter

Prerequisite(s): HEBR 20104 or equivalent
 Equivalent Course(s): HEBR 20105

JWSC 22500. Intermediate Classical Hebrew III. 100 Units.

The last two quarters are devoted to an introduction to Hebrew poetry with readings from Psalms, Proverbs, and the prophets.

Instructor(s): D. Pardee Terms Offered: Spring
 Prerequisite(s): HEBR 20105 or equivalent
 Equivalent Course(s): HEBR 20106

JWSC 24650. Introduction to Kabbalah. 100 Units.

A general introduction to the origins and development of Kabbalah, focusing on the classic period of the twelfth and thirteenth centuries. We will read samples from the major texts and most important movements, including the Bahir and Isaac the Blind in Provence, the Gerona circle (Ezra, Azriel, Nachmanides), and developments in Castile, from Ibn Latif and Ibn Sahula to Abraham Abulafia and Joseph Ibn Gikatilla to Moses de Leon and the Zohar.

Instructor(s): James T. Robinson Terms Offered: Autumn
 Equivalent Course(s): MDVL 25500, HJJD 35500, RLST 21205

JWSC 24788. Guilt, Atonement, and Forgiveness After WWII. 100 Units.

By what parameters should we assess guilt? What is required to atone for wrong done unto another? Under what circumstances should we forgive harm done to us? This course examines both foundational ethical models and arguments that emerged following the end of WWII concerning issues that arose in the war's wake. We begin the course by reading significant theological and philosophical accounts of ethics, including Genesis, Aristotle, Mill and Kant, and consider what constitutes 'guilt' in each. We then draw on these models as we examine significant questions of guilt and atonement that arose in the wake of the Second World War, and explore the particular concerns involved in wrestling with questions of national guilt, collaboration, and assignment of punishment post-war. We will conclude the course by reading arguments that wrestle with the ethics of forgiveness, exploring arguments by a range of theologians, philosophers and other thinkers both for and against forgiving those who have perpetrated harm.

Instructor(s): Bevin Blaber Terms Offered: Autumn
 Equivalent Course(s): RLST 24788

JWSC 25000-25100-25200. Introductory Modern Hebrew I-II-III.

This three-quarter sequence introduces students to reading, writing, and speaking modern Hebrew. All four language skills are emphasized: comprehension of written and oral materials; reading of nondiacritical text; writing of directed sentences, paragraphs, and compositions; and speaking. Students learn the Hebrew root pattern system and the seven basic verb conjugations in both the past and present tenses, as well as simple future. At the end of the year, students can conduct short conversations in Hebrew, read materials designed to their level, and write a short essay.

JWSC 25000. Introductory Modern Hebrew I. 100 Units.

This three quarter course introduces students to reading, writing, and speaking modern Hebrew. All four language skills are emphasized: comprehension of written and oral materials; reading of nondiacritical text; writing of directed sentences, paragraphs, and compositions; and speaking. Students learn the Hebrew root pattern system and the seven basic verb conjugations in both the past and present tenses, as well as simple future. At the end of the year, students can conduct short conversations in Hebrew, read materials designed to their level, and write short essay.

Instructor(s): A. Almog Terms Offered: Autumn
 Equivalent Course(s): HEBR 10501

JWSC 25100. Introductory Modern Hebrew II. 100 Units.

This three quarter course introduces students to reading, writing, and speaking modern Hebrew. All four language skills are emphasized: comprehension of written and oral materials; reading of nondiacritical text; writing of directed sentences, paragraphs, and compositions; and speaking. Students learn the Hebrew root pattern system and the seven basic verb conjugations in both the past and present tenses, as well as simple future. At the end of the year, students can conduct short conversations in Hebrew, read materials designed to their level, and write short essay.

Instructor(s): A. Almog Terms Offered: Winter
 Prerequisite(s): HEBR 10501 or equivalent
 Equivalent Course(s): HEBR 10502

JWSC 25200. Introductory Modern Hebrew III. 100 Units.

This three quarter course introduces students to reading, writing, and speaking modern Hebrew. JWSC 25149. Anthropology of Israel. 100 Units.

This seminar explores the dynamics of Israeli culture and society through a combination of weekly screenings of Israeli fiction and documentary films with readings from ethnographic and other relevant research. Among the (often overlapping) topics to be covered in this examination of the institutional and ideological construction of Israeli identity/ies: the absorption

of immigrants; ethnic, class, and religious tensions; the kibbutz; military experience; the Holocaust; evolving attitudes about gender and sexuality; the struggle for minorities' rights; and Arab-Jewish relations.

Instructor(s): Morris Fred Terms Offered: Spring

Equivalent Course(s): ANTH 35150, MAPS 35150, NEHC 25147, ANTH 25150, NEHC 35147, CMES 35150

JWSC 27610. Advanced Yiddish I: Readings in Yiddish Literature. 100 Units.

In this class, students will be exposed to essays, short stories, poetry and other writings by some of the great Yiddish writers of the twentieth century, including Abraham Reisin, Bella Chagall, Abraham Sutzkever, Esther Kreitman, and Dovid Bergelson. Students will write critical essays and creative responses, listen to excerpts read aloud, participate in discussions and debates. This course will be conducted entirely in Yiddish.

Instructor(s): Jessica Kirzane Terms Offered: Winter

Prerequisite(s): Prerequisite(s): Intermediate Yiddish I, or permission from the instructor.

Equivalent Course(s): YDDH 31000, YDDH 21000

JWSC 27651. Women Who Wrote In Yiddish. 100 Units.

This course explores memoirs, plays, essays, poetry, novels, and journalistic writing of women who wrote in Yiddish, as well as a discussion of the context in which they wrote and their reception and self-perception as 'women writers.' Among the writers whose work may be represented in this course are Gliki, Yente Mash, Kadya Molodwsky, Chava Rosenfarb, Yente Serdatsky, Rosa Palatnik, Anna Margolin, Celia Dropkin, Rokhl Korn, Beyle Shaechter-Gottesman, Gitl Shaechter-Viswanath, Bella Chagall, Blume Lempel, Esther Kreitman, Debora Vogel, Rokhl Brokhes, Sarah Hamer-Jacklyn, Malka Lee, Ida Maze, Roshelle Weprinski, Miriam Karpilove, Zina Rabinovitz, Rokhl Szabad, Rokhl Fayngberg, Paula Prilutsky, Shira Gershman, Esther Shumiatscher-Hirschbein and Freydl Shtok. Many of these writers have been underexamined in the history of Yiddish literary studies and this course will bring renewed attention to their work. This course will be taught in English with readings translated from Yiddish.

Instructor(s): Jessica Kirzane Terms Offered: Spring

Equivalent Course(s): GNSE 31721, YDDH 31721, GNSE 21721, YDDH 21721

JWSC 27940. The Political Theologies of Zionism. 100 Units.

The relationship between nationalism and religion has throughout history been a stormy one, often characterized by antagonisms and antipathy. In this course we will examine from various aspects the complex nexus of these two sources of repeated ideological and political dispute within Judaism, and more specifically within Zionism as its political manifestation. Zionism has mostly been considered a secular project, yet recently, Zionist theory is scrutinized to identify and unearth its supposedly hidden theological origins. In nowadays Israel, a rise in religious identification alongside an increasing religionization of the political discourse calls for the consideration of new theopolitical models of Zionism applicable in a post-secular environment. The aim of this course is to explore this intertwining of politics and religion in Israel from both historical and contemporary perspectives. The first part of the course will outline the theoretical foundation of post-secular and political-theological discourses. The second part will address the explicit and implicit political theologies of Zionism. The third part will outline contemporary aspects of political-theological thought in Israel, and their actual appearance in the political sphere.

Instructor(s): David Barak-Gorodetsky Terms Offered: Winter

Equivalent Course(s): RLST 25806

JWSC 29104. Antisemitism and Islamophobia, Historically and Today. 100 Units.

How are antisemitism and Islamophobia linked together? Are they two different modes of oppression and discrimination or are they part of a similar phenomenon? Moreover, are they religious, racial, or ethnic forms of discrimination? Throughout this course, we will complicate the media narrative that sees Jews and Arabs as perpetual enemies through a historical and philosophical exploration into the origins and development of Orientalism, Islamophobia, and antisemitism. Students will think historically about the construction of race, ethnicity, and religion, and the discriminatory modes by which these are employed; and they will use that knowledge to think critically about current depictions of anti-Jewish and anti-Islamic violence. In the first part of the course, we will consider the historical and conceptual underpinnings of antisemitism and Islamophobia. We will look to 14th and 15th century Spain in order to better understand how and where they originated; we will then track their development through modernity, paying close attention to how these discourses changed and evolved over time; finally, we will look at the impact of the Holocaust and the rise of the State of Israel and consider current iterations of Islamophobia and antisemitism in Europe and America today.

Instructor(s): Mendel Kranz Terms Offered: Spring

Equivalent Course(s): MDVL 29104, RLST 29104

JWSC 29500. Holocaust Object. 100 Units.

In this course, we explore various ontological and representational modes of the Holocaust material object world as it was represented during World War II. Then, we interrogate the post-Holocaust artifacts and material remnants, as they are displayed, curated, controlled, and narrated in the memorial sites and museums of former ghettos and extermination and concentration camps. These sites which-once the locations of genocide-are now places of remembrance, the (post)human, and material remnants also serve educational purposes. Therefore, we study the ways in which this material world, ranging from infrastructure to detritus, has been subjected to two, often conflicting, tasks of representation and preservation, which we view through a prism of authenticity. In order to study representation, we critically engage a textual and visual reading of museum narrations and fiction writings; to tackle the demands of preservation, we apply a neo-materialist approach. Of special interest are survivors' testimonies as appended to the artifacts they donated. The course will also equip you with salient critical tools for future creative research in Holocaust studies.

Instructor(s): Bozena Shallcross Terms Offered: Autumn

Equivalent Course(s): HIST 23413, ANTH 35035, REES 27019, REES 37019, HIST 33413, ANTH 23910

JWSC 29626. Lost Histories of the Left. 100 Units.

When most Americans think about 'the left,' Marxism, Soviet state socialism, or European social democracy spring to mind. This class will explore alternative-but now largely forgotten-blueprints for revolutionizing the political and social order that emerged in the nineteenth century. We will pay special attention to utopian socialism, early anticolonial movements, the Jewish Labor Bund, and anarchism. Examining the intellectual underpinnings of these movements, their influence on the modern world, and the factors that led to their demise, we will also consider what lessons they can teach to those committed to realizing a better future today.

Instructor(s): F. Hillis Terms Offered: Winter

Equivalent Course(s): HIST 29426, HIST 39426, REES 36080, REES 26080

JWSC 29700. Reading and Research Course. 100 Units.

TBD

Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of instructor and Undergraduate Program Adviser

Note(s): Students are required to submit the College Reading and Research Course Form.

JWSC 29900. BA Preparation Course. 100 Units.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): Consent of instructor and Undergraduate Program Adviser

Note(s): Students are required to submit the College Reading and Research Course Form. Required of honors candidates. May be taken for P/F grading with consent of instructor.

Latin American and Caribbean Studies

Department Website: <http://clas.uchicago.edu>

Major Program in Latin American and Caribbean Studies

Latin American and Caribbean Studies (LACS) is an interdisciplinary program for students who want to engage critical issues in the social sciences and humanities through deep immersion in the histories, cultures, economies, politics, and natural environments of Latin America and the Caribbean. In addition to gaining deep knowledge of a region closely tied to Chicago and the United States, LACS students will develop strong linguistic, research, and analytical skills; most also spend significant time studying or conducting fieldwork in a Latin American country.

The major requirements include: coursework; language proficiency in Spanish or Portuguese; experiential learning that aims to broaden students' appreciation of Latin American and Caribbean perspectives and deepen their cultural fluency; and a fourth-year BA colloquium and capstone project that allow students to develop their capacity for independent, creative, rigorous inquiry. Students can choose every year from dozens of course listings across the disciplines and can expect individualized mentorship and advising from our dedicated faculty and staff.

The Center for Latin American Studies supplements the program's academic offerings with dozens of public events each year, which help to build a strong Latin American Studies community. We also aim to expose students to Chicago's role as a significantly Latin American city and to prepare them for careers in government, journalism, law, business, teaching, the nonprofit sector, or academia.

Program Requirements

Students in the Class of 2022 and beyond will follow the requirements for the Latin American and Caribbean Studies major described below. Students in the Class of 2021 will continue under the previous requirements, which may be found on the Center for Latin American Studies website (<https://clas.uchicago.edu/>).

LACS majors are required to take 11 courses in addition to the Latin American Civilization prerequisite, distributed as follows:

Prerequisite: Introduction to Latin American Civilization

LACS majors should all complete the Introduction to Latin American Civilization sequence as a prerequisite to the major, either on campus (LACS 16100-16200-16300 Introduction to Latin American Civilization I-II-III) or in Oaxaca, México (SOSC 19019-19020-19021 Latin American Civilization in Oaxaca I-II-III). This sequence can be taken in order to fulfill the general education requirement in civilization studies, in which case none of the three courses will count toward the LACS major. Students who take Latin American Civilization separately from the general education requirement can count one of the three courses in the sequence as a content course toward the LACS major.

LACS Courses

Five courses in at least two divisions (e.g., Social Sciences, Humanities, Biological Sciences) that focus on Latin America and/or the Caribbean. This means that at least one course must be taken outside of the primary division of study.

Electives

Two elective courses that integrate research methodology and/or experiential learning, chosen in consultation with the program adviser. These courses are not required to focus on Latin America and the Caribbean, but should provide students with new ways of learning and thinking that could be applied to their study of the region. Language acquisition courses in a second regional language (beyond the one language a student chooses to fulfill the language requirement) may be counted toward this category.

Language

The LACS language requirement can be completed in one of two ways:

- Completion of three courses at the second-year level or above in one of the two major regional languages (Spanish or Portuguese). Students with strong language preparation may petition out of one of these courses, substituting it with a content course or a course in a second Latin American or Caribbean language.
- OR
- Earning the Practical Language Proficiency Certification (<https://languageassessment.uchicago.edu/practical-language-proficiency-assessment/>), which assesses listening, reading, speaking, and writing abilities. This certification documents students' ability to functionally use a foreign language in personal, academic, and professional settings. Students who fulfill the language requirement through the

proficiency certification must substitute with three LACS courses or three courses in a second regional language. Students who complete the language requirement by enrolling in coursework may also register to take the Practical Language Proficiency Assessment in order to document their language abilities.

Students who complete the Practical Language Proficiency Certification without enrolling in language courses at the University (e.g., native speakers, students who participated in language immersion programs, etc.) are strongly encouraged to study a second regional language, such as Portuguese, Haitian Kreyol, or an indigenous language that relates to their area of interest.

BA Capstone Project and BA Colloquium

All students who are majoring in Latin American and Caribbean Studies are required to complete a capstone project under the supervision of a faculty member. The capstone project may take the form of a BA thesis, an online exhibition, a documentary film, a podcast, or another intellectual or artistic endeavor; non-traditional projects must be accompanied by a critical piece of writing explaining the student's intellectual or artistic rationale and the process that led to the student's creation. The project is due Friday of fourth week of the Spring Quarter.

During the Winter and Spring Quarters of their third year, all LACS majors (double majors included) are required to participate in a workshop series (three to four sessions) focused on preparation for the capstone project. Students will be provided with information on the workshop series early in the Winter Quarter of their third year. The program adviser will work individually with students who are studying abroad during either or both quarters.

Fourth-year students are required to enroll in LACS 29801 BA Colloquium. Although students register for LACS 29801 only once, in Autumn Quarter, they participate for all three quarters and grades are issued at the end of the year. The colloquium assists students in formulating approaches to the BA capstone project and developing their research, communication, and project management skills, while providing a forum for group discussion and critiques.

Students have the option of taking LACS 29900 Preparation of the BA Essay in Winter or Spring Quarter to afford additional time for research or writing; this course is taught by arrangement between a student and the student's project adviser. Students who register for LACS 29900 may count it toward their five LACS content courses. The grade a student receives for this course depends on the successful completion of the BA capstone project.

This program may accept a BA project used to satisfy the same requirement in another major if certain conditions are met and with the consent of both program chairs/directors. Students should consult with the program chairs/directors by the earliest BA proposal deadline (or by the end of their third year, if neither program publishes a deadline). A consent form, to be signed by both chairs/directors, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Experiential Learning

As part of or in addition to their coursework, students are required to participate in an approved study abroad program, internship, or other experiential learning project with significant links to their program of study. The LACS program adviser and Center for Latin American Studies staff will work individually with each major to ensure that the student has access to opportunities that are appropriate to the student's background, skills, and plan of study.

Options for meeting the requirement include, but are not limited to:

- Taking Latin American Civilization in Oaxaca, enrolling in the Catholic University of Chile Exchange Program, or utilizing a Third Year International Travel Grant or Foreign Language Acquisition Grant (FLAG) in the region
- Completing a summer or academic year internship with an appropriate organization in Chicago, elsewhere in the United States, or in Latin America
- Participating in a research assistantship with a University of Chicago faculty member
- Completing an experiential learning project as part of an LACS course
- Developing an experience or project that has been approved by the LACS program adviser

Students must complete this requirement by the Spring Quarter of the year they plan to graduate.

Advising

Students who plan to declare a major in Latin American and Caribbean Studies should be in contact with the program adviser as early as possible to discuss their interest in the program and how to meet program requirements. Students should select their courses for the LACS major in close consultation with the program adviser. The Center for Latin American Studies publishes an online list of LACS courses (<https://clas.uchicago.edu/academic-programs/courses/>) every quarter.

Students should meet with the program adviser no later than the Winter Quarter of their third year to discuss their major progress and to discuss the BA Colloquium and the BA capstone project. Students who plan to study abroad during the Winter and/or Spring Quarter of their third year should meet with the program adviser before leaving campus.

Summary of Requirements: Latin American and Caribbean Studies Major (11 courses)

PREREQUISITES		
One of the following: *		300
LACS 16100-16200-16300	Introduction to Latin American Civilization I-II-III	
SOSC 19019-19020-19021	Latin American Civilization in Oaxaca I-II-III	
Total Units		300
MAJOR		
LACS Courses: Five courses, in at least two divisions (e.g., Social Sciences, Humanities, Biological Sciences), that focus on Latin America and/or the Caribbean		500
Electives: Two elective courses that integrate research methodology and/or experiential learning **		200
Language: Three courses in 20000-level or higher Spanish or Portuguese ***		300
LACS 29801	BA Colloquium	100
Additional Requirements: BA Capstone Project and Experiential Learning		
Total Units		1100

- * This sequence can be taken in order to fulfill the general education requirement in civilization studies, in which case none of the three courses will count toward the LACS major. Students who take Latin American Civilization separately from the general education requirement can count one of the three courses in the sequence as a content course toward the LACS major.
- ** These courses are not required to focus on Latin America and the Caribbean, but should provide students with new ways of learning and thinking that could be applied to their study of the region.
- *** Students with strong language preparation may petition out of one of these courses, substituting it with a content course or a course in a second Latin American or Caribbean language. Students may also fulfill the language requirement by earning the Practical Language Proficiency Certification (<https://languageassessment.uchicago.edu/practical-language-proficiency-assessment/>). Students who fulfill the language requirement through the proficiency certification must substitute with three LACS courses or three courses in a second regional language.

Grading

Each of the required courses for the LACS major must be taken for a quality grade.

Honors

Students who have done exceptionally well in their coursework and on their BA capstone project are considered for honors. Candidates must have a GPA of 3.0 or higher overall and 3.25 or higher in the major.

Minor Program in Latin American and Caribbean Studies

Latin American and Caribbean Studies (LACS) is an interdisciplinary program for students who want to engage critical issues in the social sciences and humanities through study of the histories, cultures, economies, politics, and natural environments of Latin America and the Caribbean.

The minor requirements include coursework, language proficiency in Spanish or Portuguese, and the submission of a research paper from a LACS course. Students can choose every year from dozens of course listings across the disciplines.

The Center for Latin American Studies supplements the program's academic offerings with dozens of public events each year, which help to build a strong Latin American Studies community. We also aim to expose students to Chicago's role as a significantly Latin American city and to prepare them for careers in government, journalism, law, business, teaching, the nonprofit sector, or academia.

No courses in the minor can be double counted with the student's major(s) or with other minors, nor can they be counted toward general education requirements. They must be taken for quality grades and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Program Requirements

LACS minors are required to take five courses in addition to the Latin American Civilization prerequisite, distributed as follows:

Prerequisite: Introduction to Latin American Civilization

LACS minors should all complete the Introduction to Latin American Civilization sequence as a prerequisite to the major, either on campus (LACS 16100-16200-16300 Introduction to Latin American Civilization I-II-III) or in Oaxaca, México (SOSC 19019-19020-19021 Latin American Civilization in Oaxaca I-II-III). This sequence can be taken in order to fulfill the general education requirement in civilization studies, in which case none of the

three courses will count toward the LACS minor. Students who take Latin American Civilization separately from the general education requirement can count one of the three courses in the sequence as a content course toward the LACS minor.

LACS Courses

Three courses that focus on Latin America and/or the Caribbean. Students may find listings of quarterly approved courses on the Center for Latin American Studies website (<https://clas.uchicago.edu/academic-programs/courses/>).

Language

The LACS language requirement can be completed in one of two ways:

- Completion of two courses at the second-year level or above in one of the two major regional languages (Spanish or Portuguese). Students with strong language preparation may petition out of one of these courses, substituting it with a content course or a course in a second Latin American or Caribbean language.
- OR
- Earning the Practical Language Proficiency Certification (<https://languageassessment.uchicago.edu/practical-language-proficiency-assessment/>), which assesses listening, reading, speaking, and writing abilities. This certification documents students' ability to functionally use a foreign language in personal, academic, and professional settings. Students who fulfill the language requirement through the proficiency certification must substitute with two LACS courses or two courses in a second regional language. Students who complete the language requirement by enrolling in coursework may also register to take the Practical Language Proficiency Assessment in order to document their language abilities.

Research Paper

Students must submit a research paper treating a Latin American and/or Caribbean topic written for one of their LACS content courses. The research paper should be of intermediate length (10–15 pages). The student is responsible for making appropriate arrangements with the course instructor. Completion of the research paper must be demonstrated to the LACS program adviser.

Advising

Students who elect the minor program should meet with the LACS program adviser before the end of Spring Quarter of their third year to declare their intention to complete the program. The student must submit the LACS program adviser's approval for the minor to their College adviser, on a form obtained from the College, no later than the end of the third year.

Additional Requirement: Submission of a research paper treating a Latin American and/or Caribbean topic for one of the LACS content courses	
Total Units	500

* The Introduction to Latin American Civilization sequence can be taken in order to fulfill the general education requirement in civilization studies, in which case none of the three courses will count toward the LACS minor. Students who take Latin American Civilization separately from the general education requirement can count one of the three courses in the sequence as a content course toward the LACS minor.

** Students with strong language preparation may petition out of one of these courses, substituting it with a content course or a course in a second Latin American or Caribbean language. Students may also fulfill the language requirement by earning the Practical Language Proficiency Certification (<https://languageassessment.uchicago.edu/practical-language-proficiency-assessment/>). Students who fulfill the language requirement through the proficiency certification must substitute with two LACS courses or two courses in a second regional language.

Latin American and Caribbean Studies Courses

The following courses are for reference only. See Class Search at registrar.uchicago.edu/classes (<http://registrar.uchicago.edu/classes/>) for specific offerings. See the Center for Latin American Studies Courses webpage at clas.uchicago.edu (<https://clas.uchicago.edu/>) for further information on quarterly offerings.

LACS 11008. Introduction to Latinx Literature. 100 Units.

From the activist literature of the Chicano Civil Rights Movement to contemporary fiction and poetry, this course explores the forms, aesthetics, and political engagements of U.S. Latinx literature in the 20th and 21st centuries. Theoretical readings are drawn from Chicanx Studies, Latinx Studies, American Studies, Latin American Studies, Hemispheric Studies, Indigenous Studies, and Postcolonial Studies, as we explore Latinx literature in the context of current debates about globalization, neoliberalism, and U.S. foreign policy; Latinx literature's response to technological and socio-political changes and its engagement with race, gender, sexuality, class, and labor; and its dialogues with indigenous, Latin American, North American, and European literatures. (Poetry, 1830-1940, Theory)

Instructor(s): Rachel Galvin Terms Offered: Winter

Equivalent Course(s): CMLT 11008, ENGL 11008, SPAN 21008

LACS 12200. Portuguese For Spanish Speakers. 100 Units.

This course is intended for speakers of Spanish to develop competence quickly in spoken and written Portuguese. In this intermediate-level course, students learn ways to apply their Spanish language skills to mastering Portuguese by concentrating on the similarities and differences between the two languages.

Terms Offered: Autumn Spring

Prerequisite(s): SPAN 10300 or consent of instructor

Equivalent Course(s): PORT 12200

LACS 16100-16200-16300. Introduction to Latin American Civilization I-II-III.

Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies. This sequence is offered every year. This course introduces the history and cultures of Latin America (e.g., Mexico, Central and South America, and the Caribbean Islands).

LACS 16100. Introduction to Latin American Civilization I. 100 Units.

Autumn Quarter examines the origins of civilizations in Latin America with a focus on the political, social, and cultural features of the major pre-Columbian civilizations of the Maya, Inca, and Aztec. The quarter concludes with an analysis of the Spanish and Portuguese conquest, and the construction of colonial societies in Latin America. The courses in this sequence may be taken in any order.

Instructor(s): Emilio Kouri Terms Offered: Autumn

Equivalent Course(s): CRES 16101, HIST 36101, SOSC 26100, ANTH 23101, HIST 16101, LACS 34600

LACS 16200. Introduction to Latin American Civilization II. 100 Units.

Winter Quarter addresses the evolution of colonial societies, the wars of independence, and the emergence of Latin American nation-states in the changing international context of the nineteenth century.

Instructor(s): D. Borges Terms Offered: Winter

Equivalent Course(s): PPHA 39770, HIST 16102, CRES 16102, HIST 36102, ANTH 23102, LACS 34700, SOSC 26200

LACS 16300. Introduction to Latin American Civilization III. 100 Units.

Spring Quarter focuses on the twentieth century, with special emphasis on the challenges of economic, political, and social development in the region.

Instructor(s): B. Fischer Terms Offered: Spring

Equivalent Course(s): HIST 36103, PPHA 39780, CRES 16103, LACS 34800, SOSC 26300, ANTH 23103, HIST 16103

LACS 19880. Inhabiting the Borderlands: Latinx Embodiment in Literature, Art, and Popular Culture. 100 Units.

How does a Latinx cultural identity become legible? What are the conditions of its recognition? What kinds of embodied practices and performances serve to point to the particular intersections of race, ethnicity, class, sexuality, and gender that can be termed 'Latinx'? To approach these questions, this course will explore critical texts by Diana Taylor, Gloria Anzaldúa, Julia Alvarez, Coco Fusco, José Esteban Muñoz, and Tomás Ybarra-Frausto, among others, as well as performances, artwork, and literature by La Lupe, Walter Mercado, Yalitza Aparicio, Cherríe Moraga, Judith Baca, Carmen Maria Machado, and more. (Theory)

Instructor(s): Carmen Merport Terms Offered: Winter

Equivalent Course(s): GNSE 19880, ENGL 19880, CRES 19880

LACS 20046. Introduction to Caribbean Studies. 100 Units.

Why have critics, writers, and artists described the Caribbean as 'ground zero' of Western modernity? Beginning with the period before European settlement, we will study slavery and emancipation, Asian indentureship, labor and social movements, decolonization, debt and tourism, and today's digital Caribbean. We will survey literary and visual cultures, primary source documents, and thought across the English, French, Spanish, and Dutch-speaking Caribbean. All readings will be available in translation. (Fiction, Theory)

Instructor(s): Kaneesha Parsard Terms Offered: Spring

Equivalent Course(s): GNSE 22046, CRES 20046, ENGL 20046

LACS 20500. Cultura do Mundo Lusófono. 100 Units.

In this course students will explore the culture of the Lusophone world through the study of a wide variety of contemporary literary and journalistic texts from Brazil, Portugal, Angola and Mozambique, and unscripted recordings. This advanced language course targets the development of writing skills and oral proficiency in Portuguese. Students will review problematic grammatical structures, write a number of essays, and participate in multiple class debates, using authentic readings and listening segments as linguistic models on which to base their own production.

Terms Offered: Winter

Prerequisite(s): PORT 20100 or consent of the instructor.

Equivalent Course(s): PORT 20500

LACS 20600. Composição e Conversação Avançada. 100 Units.

The objective of this course is to help students acquire advanced grammatical knowledge of the Portuguese language through exposure to cultural and literary content with a focus on Brazil. Students develop skills to continue perfecting their oral and written proficiency and comprehension of authentic literary texts and recordings, while also being exposed to relevant sociocultural and political contemporary topics. Students read, analyze, and discuss authentic texts by established writers from the lusophone world; they watch and discuss videos of interviews with writers and other prominent figures to help them acquire the linguistic skills required in academic discourse. Through exposure to written and spoken authentic materials, students learn the grammatical and lexical tools necessary to understand such materials as well as produce their own written analysis, response, and commentary. In addition, they acquire knowledge on major Brazilian authors and works.

Terms Offered: Winter

Prerequisite(s): PORT 20100 or consent of instructor.

Equivalent Course(s): PORT 20600

LACS 21100. Las regiones del español. 100 Units.

This sociolinguistic course expands understanding of the historical development of Spanish and awareness of the great sociocultural diversity within the Spanish-speaking world and its impact on the Spanish language. We emphasize the interrelationship between language and culture as well as ethno-historical transformations within the different regions of the Hispanic world. Special consideration is given to identifying lexical variations and regional expressions exemplifying diverse sociocultural aspects of the Spanish language, and to recognizing phonological differences between dialects. We also examine the impact of indigenous cultures on dialectal aspects. The course includes literary and nonliterary texts, audio-visual materials, and visits by native speakers of a variety of Spanish-speaking regions.

Terms Offered: Spring Winter

Prerequisite(s): SPAN 20300 or placement

Equivalent Course(s): SPAN 21100

LACS 21150. El español en los Estados Unidos. 100 Units.

This sociolinguistic course expands understanding of both the historical and the contemporary development of Spanish in parts of the United States, and awareness of the great sociocultural diversity within the Spanish-speaking communities in the United States and its impact on the Spanish language. This course emphasizes the interrelationship between language and culture as well as ethno-historical transformations within the different regions of the United States. Special consideration is given to identifying lexical variations and regional expressions exemplifying diverse sociocultural aspects of the Spanish language, and to recognizing phonological differences between dialects. We also examine the impact of English on dialectal aspects. The course includes sociolinguistic texts, audio-visual materials, and visits by native speakers of a variety of Spanish-speaking regions in the United States.

Instructor(s): L. van den Hout Terms Offered: Spring Winter

Prerequisite(s): SPAN 20300

Equivalent Course(s): SPAN 21150

LACS 21619. From Lorca to Lin-Manuel Miranda: Staging Latinidad. 100 Units.

In this course, we will delve into ten significant theater plays written in the last century by Spanish, Latin American and Latinx playwrights. We will examine how latinidad, with its multiple definitions and contradictions, emerges in these plays; and also, which questions these works pose regarding the different historic and cultural contexts in which they were written. As a discipline that aims to explore and embody social practices and identities, theater has become a place where these questions articulate themselves in a critical manner. A physical space where bodies and languages explore, sometimes through its mere unfolding on the page and the stage, unforeseen limits of class, identity, and ethnicity. Each week, we will discuss one play and one or two significant critical essays, and the discussion will be conducted through a set of questions and crossed references. To which extent does the domestic exploration and the all-women cast of Lorca's 'La casa de Bernarda Alba' resonate in Fornés' 'Fefu And Her Friends'? How does the experience of immigration affect the characters of Marqués' 'La carreta,' and how do Chiara Alegria Hudes and Lin-Manuel Miranda echo this foundational fiction in 'In the Heights'? How was the success of plays such as Valdez's 'Zoot Suit' or Cruz's 'Anna in The Tropics' received within the Latino community, and how did it affect the general reception of Latino plays?

Instructor(s): I. Fanlo Terms Offered: Autumn

Note(s): Taught in English. Readings available in both English and Spanish. Spanish majors & minors must do the readings and/or writings in Spanish.

Equivalent Course(s): GNSE 21619, SPAN 21619, TAPS 25219

LACS 21720. Histoire, superstitions et croyances dans le roman francophone contemporain. 100 Units.

Superstitions and traditional beliefs are an integral part of African and Caribbean cultural identities. Based on myths, legends and proverbs, they were usually passed down orally. This course explores and critically analyzes their literary representations: how do contemporary authors rethink, reframe and rewrite myths and legends that primarily stems from

an oral tradition? How are these stories used as a framing device to interrogate contemporary historical events? The course emphasizes cultural and socio-political connections through some close readings and discussions. Readings include texts by Mariama Bâ, René Depestre, Véronique Lordinot, Gisèle Pineau and Véronique Tadjo.

Instructor(s): M. Kenfack Terms Offered: Autumn

Prerequisite(s): FREN 20500 or 20503. This is an introductory-level course.

Note(s): Readings and discussion in French.

Equivalent Course(s): FREN 21720

LACS 22024. Literatura y cartografía: Visiones del Caribe en el Siglo de Oro español. 100 Units.

Durante el siglo XVI aparecen las primeras representaciones cartográficas y literarias del Caribe. Estas articulan el deseo de las grandes potencias europeas por codificar territorialmente esta región del mundo para conocerla y en última instancia dominarla. Así, la cuenca caribeña emerge como escenario de tensiones políticas y económicas, que se extienden hasta el día de hoy. Este curso tiene como objetivo explorar la relación de las representaciones del Caribe en la literatura y cartografía producida durante los siglos XVI y XVII con los discursos de poder asociados a los procesos de conquista y colonización implementados por el Imperio Español. El curso está dividido en cuatro unidades. Primero, examinaremos las representaciones cartográficas del Caribe producidas entre los siglos XVI y XVII. Segundo, abordaremos la descripción y delimitación del Caribe y sus habitantes en las crónicas de conquista producidas por Colón, de las Casas y Pané. Tercero, discutiremos los poemas 'Discurso del capitán Francisco Drake' y 'La Dragontea' para explorar el rol de la piratería en la articulación del espacio caribeño como escenario de contiendas políticas y económicas. Finalmente, nos acercaremos a otros ejemplos representativos de la literatura aurisecular que de manera indirecta aluden al Caribe como sustrato literario. Se explorarán también la cultura material de la producción cartográfica y literaria de la época, y la relación que existe entre texto e imagen.

Instructor(s): M. Rosario Terms Offered: Winter

Note(s): Taught in Spanish.

Equivalent Course(s): SPAN 22020

LACS 22521. ¿Qué onda, Siri? Ciencia Ficción Latinoamericana. 100 Units.

Intercambio de cartas entre México y la luna, exploradores planetarios argentinos, hackers activistas en Bolivia y viajes en el tiempo para salvar el Caribe. Aunque a lo largo de su historia no haya gozado del mismo prestigio que otros géneros literarios, la ciencia ficción en América Latina tiene ejemplos que datan del siglo XVIII. Sin embargo, no es hasta los 1950s que el género empieza a ganar impulso editorial y, más tarde, académico. Ya en el siglo XXI, autores como Rita Indiana, Pola Oloixarac y Edmundo Paz Soldán han utilizado los variados elementos constitutivos del género y alcanzando incluso reconocimiento internacional. Frente a tal histórico, este curso busca contestar las siguientes preguntas: ¿De qué manera se asemeja y se difiere la ciencia ficción latinoamericana, de país a país, y en comparación al resto del mundo? ¿Cómo se mezclan los elementos tradicionales del género con las culturas nacionales y regionales del subcontinente? ¿Qué particularidades sociales, políticas, económicas, raciales y de género se manifiestan en estos textos que nos ayudan a pensar la realidad de esta región y que la ficción realista históricamente privilegiada no llega a escenificar? Para ello, nos ocuparemos de novelas, cuentos, poemas, películas, series de televisión y performances de América Latina, desde sus principios decimonónicos hasta el presente, enfocándonos en los elementos característicos del género y las representaciones culturales puestas en escena por estos artistas.

Instructor(s): E. Leao Terms Offered: Winter

Prerequisite(s): SPAN 20300.

Note(s): Taught in Spanish.

Equivalent Course(s): SPAN 22521

LACS 23025. Vidas Infames: Sujetos heterodoxos en el mundo hispánico (1500-1800) 100 Units.

En este curso leeremos y discutiremos las vidas de varias mujeres y hombres comunes perseguidos por la Inquisición hispánica entre 1500 y 1800, aproximadamente, tanto en Europa y el Mediterráneo como en las Américas. La mayoría de estas vidas fueron dichas por los mismos acusados frente a un tribunal eclesiástico. Estas autobiografías orales, producidas en condiciones de máxima dureza y precariedad, revelan la forma en que la vida cotidiana es moldeada e interrumpida por el poder. Leeremos las historias de hombres transgénero, mujeres criptojudías, campesinos moriscos, renegados, profetas y monjas acusadas de sodomía, entre otras; y discutiremos temas como la relación entre poder y subjetividad, heterodoxia y cultura popular, las formas narrativas del yo o la articulación biográfica de la clase, la raza y el género en la primera modernidad. Estas 'vidas infimas', a pesar de su concreta individualidad, permiten ofrecer un amplio panorama de la historia cultural y social de España y América en la era de la Inquisición.

Instructor(s): M. Martínez Terms Offered: Spring

Note(s): Taught in Spanish.

Equivalent Course(s): SPAN 33025, SPAN 23025, LACS 33025

LACS 23083. A Latin American Anthropology of Violence and Conflict in Latin America. 100 Units.

This course explores the dynamics of conflict and organized violence in Latin America through a combination of Latin American fiction and documentary films and ethnographic and other relevant research. The following are some of the interrelated topics that we will cover, which draw primarily from scholars not only of Latin America, but also in Latin America: non-state armed groups, transnational criminal networks, international cooperation and humanitarian intervention, human rights abuses and activism, gendered experiences of violence and its aftermath, and the state. We will begin our work in contemporary conversations about these topics throughout the region and weave in readings from the globally dispersed foundational thinkers who have informed these conversations. Students will develop a case study of their choosing over the quarter and receive in-class instruction on forming and managing effective writing groups to facilitate their projects.

Significant flexibility is also possible for those who want to incorporate their coursework into the development of a larger research project.

Instructor(s): Erin McFee Terms Offered: Autumn, Autumn 2020

Prerequisite(s): PQ. Course materials and discussions will be in both Spanish and English; Spanish fluency required.)

Equivalent Course(s): GLST 23083, ANTH 23083, LACS 32335, HMRT 23083, ANTH 32335

LACS 24110. Ecocritical Perspectives in Latin American Literature and Film. 100 Units.

This course provides a survey of of ecocritical studies in Latin America. Through novels, poems, and films, we will examine a range of trends and problems posed by Latin American artists concerning environmental issues, from mid-nineteenth century to contemporary literature and film. Readings also include works of ecocritical criticism and theory that have been shaping the field in the past decades.

Instructor(s): V. Saramago Terms Offered: Autumn

Equivalent Course(s): PORT 24110, SPAN 24110, LACS 34110, PORT 34110, SPAN 34110

LACS 24821. Krik...KraK! Contemporary Cross-Atlantic Storytelling: Tradition, Resistance and Empowerment. 100 Units.

Africa and Afro-Caribbean people's oral tradition can be traced back to slavery, when Black slaves turned to storytelling as a means of expression and resistance. With the advent of writing, storytelling flourished, and became associated with entertainment, cultural preservation, and education as well as identity and moral values. Through storytelling, history was conveyed, questions were answered, and lifelong lessons were taught and learned. In this seminar we will explore written storytelling traditions from Africa and Caribbean French-speaking countries through the lens of history, with a focus on contemporary writers. How have writers adapted oral stories to new historical contexts? What are the implications of these adaptations? How has storytelling been streamlined to deal with new challenges, especially political and social status quo? How does storytelling contribute to empowerment and agency? Students will engage in close readings and collaborative discussions to analyze and interpret folktales from Ivory Coast, Haiti, French Guiana, among others.

Instructor(s): M. Kenfack Terms Offered: Winter

Prerequisite(s): FREN 20500 or 20503.

Note(s): Readings in French. Class discussions in French and English.

Equivalent Course(s): FREN 24821

LACS 25322. A History of Public Spaces in Mexico, 1520-2020. 100 Units.

Streets and plazas have been sites in which much of Mexican history has been fought, forged, and even performed. This course examines the history of public spaces in Mexico since the Spanish Conquest. By gauging the degree to which these sites were truly open to the public, it addresses questions of social exclusion, resistance, and adaptability. The course traces more than the role and evolution of built sites. It also considers the individuals and groups that helped to define these places. This allows us to read street vendors, prostitutes, students, rioters, and the 'prole' as central historical actors. Through case studies and primary sources, we will examine palpable examples of how European colonization, various forms of state building, and more recent neoliberal reforms have transformed ordinary Mexicans and their public spaces.

Instructor(s): C. Rocha Terms Offered: Spring

Equivalent Course(s): ARCH 26322, HIST 26322, ENST 26322

LACS 25805. Popol Vuh, Epic of the Americas. 100 Units.

One of the oldest and grandest stories of world creation in the native Americas, the Mayan Popol Vuh has been called 'the Bible of America.' It tells a story of cosmological origins and continued historical change, spanning mythic, classic, colonial, and contemporary times. In this class, we'll read this full work closely (in multiple translations, while engaging its original K'iche' Mayan language), attending to the important way in which its structure relates myth and history, or foundations and change. In this light, we'll examine its mirroring in Genesis, Odyssey, Beowulf, Ovid's Metamorphoses, and Dine Bahane' to consider how epics struggle with a simultaneity of origins and historiography. In highlighting this tension between cosmos and politics, we'll examine contemporary adaptations of the Popol Vuh by Miguel Ángel Asturias, Ernesto Cardenal, Diego Rivera, Dennis Tedlock, Humberto Ak'ab'al, Xpetra Ermandex, Patricia Amlin, Gregory Nava, and Werner Herzog. As we cast the Guatemalan Popul Vuh as a contemporary work of hemispheric American literature (with North American, Latin American, Latinx, and Indigenous literary engagement), we will take into account the intellectual contribution of Central America and the diaspora of Central Americans in the U.S. today. As a capstone, we will visit the original manuscript of the Popol Vuh held at the Newberry Library in Chicago, thinking about how this story of world creation implicates us to this day. (Poetry, Fiction)

Instructor(s): Edgar García Terms Offered: Autumn

Prerequisite(s): Note: students who cross-list from RLL will read Spanish-language texts in their original Spanish

Equivalent Course(s): ENGL 25805, FNLD 25805

LACS 26322. Latin American Historiography, 19th-21st Century. 100 Units.

Review of recent trends in the history of the regions. Weekly reviews.

Instructor(s): M. Tenorio Terms Offered: Autumn

Equivalent Course(s): LACS 36322, HIST 36320, HIST 26320

LACS 26330. Making the Maya World. 100 Units.

What do we know about the ancient Maya? Pyramids, palaces, and temples are found from Mexico to Honduras, texts in hieroglyphic script record the histories of kings and queens who ruled those cities, and painted murals, carved stone stelae, and ceramic vessels provide a glimpse of complex geopolitical dynamics and social hierarchies. Decades of archaeological research have expanded that view beyond the rulers and elites to explore the daily lives of the Maya people, networks of trade and market exchange, and agricultural and ritual practices. Present-day Maya communities attest to the dynamism and

vitality of languages and traditions, often entangled in the politics of archaeological heritage and tourism. This course is a wide-ranging exploration of ancient Maya civilization and of the various ways archaeologists, anthropologists, linguists, historians, and indigenous communities have examined and manipulated the Maya past. From tropes of long-hidden mysteries rescued from the jungle to New Age appropriations of pre-Columbian rituals, from the thrill of decipherment to painstaking and technical artifact studies, we will examine how models drawn from astrology, ethnography, classical archaeology and philology, political science, and popular culture have shaped current understandings of the ancient Maya world, and also how the Maya world has, at times, resisted easy appropriation and defied expectations.

Instructor(s): Sarah Newman Terms Offered: Autumn, Autumn 2020

Equivalent Course(s): ANTH 26330, ANTH 36330, LACS 36330

LACS 26380. Indigenous Politics in Latin America. 100 Units.

This course examines the history of Indigenous policies and politics in Latin America from the first encounters with European empires through the 21st Century. Course readings and discussions will consider several key historical moments across the region: European encounters/colonization; the rise of liberalism and capitalist expansion in the 19th century; 20th-century integration policies; and pan-Indigenous and transnational social movements in recent decades. Students will engage with primary and secondary texts that offer interpretations and perspectives both within and across imperial and national boundaries.

Instructor(s): Diana Schwartz Francisco Terms Offered: Winter

Equivalent Course(s): ANTH 23077, HIST 26318

LACS 26382. Development and Environment in Latin America. 100 Units.

This course will consider the relationship between development and the environment in Latin America and the Caribbean. We will consider the social, political, and economic effects of natural resource extraction, the quest to improve places and peoples, and attendant ecological transformations, from the onset of European colonialism in the fifteenth century, to state- and private-led improvement policies in the twentieth. Some questions we will consider are: How have policies affected the sustainability of land use in the last five centuries? In what ways has the modern impetus for development, beginning in the nineteenth century and reaching its current intensity in the mid-twentieth, shifted ideas and practices of sustainability in both environmental and social terms? And, more broadly, to what extent does the notion of development help us explain the historical relationship between humans and the environment?

Instructor(s): Diana Schwartz Francisco Terms Offered: Winter

Equivalent Course(s): HIST 36317, HIST 26317, LACS 36382, GEOG 26382, ENST 26382, HIPS 26382, ANTH 23094

LACS 26384. Art and the Archive in Greater Latin America. 100 Units.

How and why do artists engage records of the past in their work? What are the politics of both creating archives and culling from them to visually render or represent the past? Focusing on artists, art-making, and archives in Greater Latin America (including the United States), this course will consider the process of collecting and creating in artistic production from the perspectives of both theory and practice. Students in the course will work directly with archival materials in Chicago and collaborate on contemporary artistic projects that consider issues of relevance to people and places of the Western Hemisphere.

Instructor(s): Diana Schwartz-Francisco Terms Offered: Spring

Equivalent Course(s): ARTH 26384, ARTV 20017, HIST 26319

LACS 26386. Greater Latin America. 100 Units.

What is 'Latin America,' who are 'Latin Americans' and what is the relationship among and between places and people of the region we call Latin America, on the one hand, and the greater Latinx diaspora in the US on the other? This course explores the history of Latin America as an idea, and the cultural, social, political and economic connections among peoples on both sides of the southern and eastern borders of the United States. Students will engage multiple disciplinary perspectives in course readings and assignments and will explore Chicago as a crucial node in the geography of Greater Latin America. Some topics we will consider are: the origin of the concept of 'Latin' America, Inter-Americanism and Pan-Americanism, transnational social movements and intellectual exchanges, migration, and racial and ethnic politics.

Instructor(s): Diana Schwartz Francisco Terms Offered: Autumn

Equivalent Course(s): CRES 26386, ANTH 23003, HIST 26321

LACS 26388. Food Justice and Biodiversity in Latin America. 100 Units.

This course asks how the relationships between food production and consumption, economic justice, and biodiversity have changed over the last century in Latin America. As a region known both for its ecological diversity and as a producer of tropical foods regularly consumed in the United States, Latin America is also a site in which plantation style agriculture has often undermined such celebrated biodiversity. In centering the role of workers and consumers, it considers the layered relationships- ecological, social, political, economic and cultural-between the production and consumption of food from Latin America.

Instructor(s): Diana Schwartz Francisco Terms Offered: Spring

Note(s): Preferred: some background in Latin American history, geography and/or contemporary issues

LACS 26416. Latin American Extractivisms. 100 Units.

This course will survey the historical antecedents and contemporary politics of Latin American extractivisms. While resource extraction in Latin America is far from new, the scale and transnational scope of current 'neoextractivisms' have unearthed unprecedented rates of profit as well as social conflict. Today's oil wells, open-pit mines, and vast fields of industrial agriculture have generated previously unthinkable transformations to local ecologies and social life, while repeating histories of indigenous land dispossession in the present. Yet parallel to neo-extractive regimes, emergent Latin American social movements have unleashed impassioned and often unexpected forms of local and transnational resistance.

Readings in the course will contrast cross-regional trends of extractive economic development and governance with fine-grained accounts of how individuals, families, and communities experience and respond to land dispossession, local and transregional conflict, and the ecological and health impacts of Latin American extractivisms.

Equivalent Course(s): ANTH 23093, PBPL 26416

LACS 26510. Cities from Scratch: The History of Urban Latin America. 100 Units.

Latin America is one of the world's most urbanized regions, and its urban heritage long predates European conquest. And yet the region's cities are most often understood through the lens of North Atlantic visions of urbanity, many of which fit poorly with Latin America's historical trajectory, and most of which have significantly distorted both Latin American urbanism and our understandings of it. This course takes this paradox as the starting point for an interdisciplinary exploration of the history of Latin American cities in the nineteenth and twentieth centuries, focusing especially on issues of social inequality, informality, urban governance, race, violence, rights to the city, and urban cultural expression. Readings will be interdisciplinary, including anthropology, sociology, history, fiction, film, photography, and primary historical texts.

Instructor(s): B. Fischer Terms Offered: Winter

Prerequisite(s): Some knowledge of Latin America or urban studies helpful.

Equivalent Course(s): LACS 36510, HIST 36511, HIST 26511, ENST 26511, ARCH 26511

LACS 26623. Anti-Corruption Politics in Latin America. 100 Units.

Calls for corporate accountability from civil society and widespread public anxieties concerning large scale corporate corruption scandals have become salient modes of articulating questions of power in contemporary Latin America & the Caribbean. This trend, while not homogeneous or new, denounces the relation between two modes of power -- state and corporate -- considered to be at the heart of the region's democracies. What is the relation between today's war against corruption and ongoing transformations of corporate and financial power? What has been the effect of anti-corruption discourse over horizons for emancipatory politics - such as Human Rights praxis? This course critically examines anti-corruption politics as constituting one of the region's most salient frameworks of accountability in the present. Crucially, we will situate it in relation to Latin America's robust trajectory of critiquing power through the analysis of corporate power as well as the mobilization of Human Rights discourse.

Instructor(s): Azuero Quijano, Alejandra

Equivalent Course(s): HMRT 26623, ANTH 23071, GLST 26623

LACS 26624. Extractivism in Latin America. 100 Units.

From the elusive search for El Dorado to the growing transition to renewable energy, extractivism has defined and continues to produce effects on the everyday lives, economic possibilities, and political horizons of Latin Americans in different historic and geographic settings. This course critically explores the social and material worlds built around resource extraction in Latin America. By focusing on key episodes of 20th and 21st century energy development, the course will examine how extractivism has enabled and foreclosed certain configurations of political power, especially in relation to the state, (anti-)imperialism, the left, and indigenous social movements. We will also explore the rise of anti-extractivist struggles and critiques, with a particular emphasis on indigenous peoples' mobilization of human rights discourse. Course readings will be interdisciplinary (from anthropology and economics to history and film), drawing on cases from Venezuela, Paraguay, Brazil, Mexico, and Bolivia.

Instructor(s): Steven Schwartz Terms Offered: Spring

Equivalent Course(s): ANTH 23024

LACS 27526. Race and Gender in the Making of the Modern Atlantic World(s), c. 1700-1990s. 100 Units.

This colloquium-style course proposes that the development of race, racial ideologies, and gender in the Atlantic is central to understanding the formation of the modern world. The course mobilizes race and gender as analytic categories that shaped encounters with and relations between colonized and colonizer. By adopting this approach, we will use the lens of race and gender to explore how they shaped various historical experiences: such the circulation of peoples and goods in transatlantic contexts; the formation and establishment of slavery, the slave trade, and the plantation complex; antislavery, abolitionism, and emancipation; immigration and post-slavery labor; citizenship and nationhood; reproduction; post-colonial LGBTQ rights, and twentieth-century racial politics. We will also problematize race and gender as flexible categories that historical actors formulated and implemented to establish, maintain, and contest hierarchies of political, economic, and social power. We will use a combination of primary texts, novels, and secondary sources to explore the comparative and intersecting historical experiences of African, Amerindian, Chinese, Creole, European, and Indian experiences in the Atlantic world from early encounters and exploration to twentieth-century decolonization and postcolonialism- thereby challenging traditional racial binaries that have previously informed our understanding of transatlantic empires.

Instructor(s): Lyons, Deirdre Terms Offered: Autumn

Equivalent Course(s): CRES 27526, HIST 29104, GNSE 27526

LACS 27536. The Transatlantic Slave Trade & the Making of the Black Lusophone Atlantic, 1450-1888. 100 Units.

By the abolition of Brazilian slavery in 1888, an estimated 4.3 million men, women, and children had been imported from Africa to Brazil. Yet, the narratives of slavery and freedom in the North Anglophone and Francophone Atlantic often dominate the popular imagination. This course is aimed at increasing knowledge about how slavery and the transatlantic slave trade shaped the Atlantic World through an examination of the deeply intertwined histories of Brazil and West Africa. This course offers a critical 'genealogy of the present' by investigating the historical roots of racial, gendered, and social inequality that persist in Brazil and Lusophone West Africa today. It will focus on the diverse social, cultural, and political linkages that were forged as a result of the transatlantic trade with particular attention to the Portuguese in West Africa; the development and growth of the slave trade to Brazil; the relationship between slavery and gender; the continuity and adaptation of African social and cultural practices; and resistance, rebellion, and freedom. We will end the course with a

look at how different communities, individuals, and nations continue to grapple with the memory and legacy of slavery today.

Instructor(s): Erin McCullugh Terms Offered: Spring

Equivalent Course(s): HIST 29009, HMRT 27536, GNSE 27536, CRES 27536

LACS 27720. Races, Castes, and Their Relationships in Latin American Colonial Music. 100 Units.

The course will undertake a critical survey of repertoires, institutions, and social practices related to musical practices in Spain and Portugal's American territories between 1558 and ca. 1800. The missions of the Jesuits and other orders, the constitution of the musical chapels of the cathedrals, the 'villancico de negros,' and the emergence of local popular music will be some of the topics examined, with a critical assessment of recent views of the role of Colonial music in current musical life.

Instructor(s): Leonardo Waisman Terms Offered: Winter

Equivalent Course(s): LACS 37720, PORT 27720, SPAN 27720, MUSI 27720

LACS 27724. Material Constructions of State and Nation: Latin America, 1800-1850. 100 Units.

Covering the wars of Independence and the transition to Republican statehood, this course will address the continuities and ruptures affecting the visual traditions and material cultures of the Colonial period in this crucial period in Latin American history. Intended as a broad survey of the region, the course attempts to think through a political history of objects and images as a way to understand the process of nation-state formation.

Terms Offered: Spring

Equivalent Course(s): LACS 37724, ARTH 37724, ARTH 27724

LACS 27726. Body Modifications, Sociocultural Meanings, and Beauty in Ancient Mesoamerica. 100 Units.

The course will introduce past and current anthropological discussions of embodiment and beauty and then explore culturally born body concepts from the perspective of native Mesoamerican thought and ritual practice. A methodological unit will embrace reconstructions of ancient body modifications at the intersection between (bio) archaeology, ethnohistory, semiotics, and imagery. We will also review and discuss basic visual, behavioral, and social aspects of native Mesoamerican body works, focusing on head shaping, dental modification, and skin ornaments. A number of case studies target such forms of physical embodiment among the Olmecs, Maya, and the Aztecs. Finally, we will cover the evolving roles of body modifications past the European contact in Mexico, providing food-for-thought in discussing Novohispanic domination strategies, native resilience, and transformation.

Instructor(s): Vera Tiesler Terms Offered: Spring

Equivalent Course(s): ANTH 23028, LACS 37726

LACS 28000. United States Latinos: Origins and Histories. 100 Units.

An examination of the diverse social, economic, political, and cultural histories of those who are now commonly identified as Latinos in the United States. Particular emphasis will be placed on the formative historical experiences of Mexican Americans and mainland Puerto Ricans, although some consideration will also be given to the histories of other Latino groups, i.e., Cubans, Central Americans, and Dominicans. Topics include cultural and geographic origins and ties; imperialism and colonization; the economics of migration and employment; legal status; work, women, and the family; racism and other forms of discrimination; the politics of national identity; language and popular culture; and the place of Latinos in US society. Equivalent Course(s): AMER 28001, CRES 28000, GNSE 28202, HIST 38000, LACS 28000, LACS 38000, CRES 38000, GNSE 38202, AMER 38001

Instructor(s): R. Gutiérrez Terms Offered: Autumn

Equivalent Course(s): HIST 38000, CRES 28000, GNSE 38202, AMER 28001, HIST 28000, AMER 38001, LACS 38000, GNSE 28202, CRES 38000

LACS 29101. Archive [Yellow] Fever. 100 Units.

Archive [Yellow] Fever reads Black Feminist approaches to the archive of slavery in the Caribbean in order to ask questions about the scholar's embodied relationship in the present to historical documents and artifacts produced in the context of Atlantic world slave societies. How is a scholar affected by and implicated in the production such an archive? This class explores this and other questions produced by this scholarship, with a particular focus on historical and contemporary concerns about what enslavement does to the physical body and the affective impacts of institutionalized bondage. The course also provides an introduction in methods of working in historical and contemporary archives. We will explore themes of contagion, sex, birth, and death by reading fictional, archival, methodological and theoretical texts, including the work of, Saidiya Hartman, Marisa Fuentes, Jacques Derrida, Carolyn Steedman, Jennifer L. Morgan, Jenny Sharpe, Robin Coste Lewis, Alexis Pauline Gumbs, Mary Prince, Mary Seacole, Bryan Edwards, James Grainger. The class will make two trips to special collections, one to view archival texts from the period and another to find an archival object of the student's choosing (relevant to their own research interests) that will provide the topic of their final paper. This course is offered as part of the Migrations Research Sequence. (1650-1830, 1830-1940) This is a research and criticism seminar intended for third- and fourth-year English majors.

Instructor(s): Sarah Johnson Terms Offered: Autumn

Prerequisite(s): This course is limited to 15 third- and fourth-year students who have already fulfilled the Department's Genre Fundamentals (formerly Gateway) requirement and taken at least two further English courses.

Equivalent Course(s): ENGL 29101, CRES 29101, GNSE 29103

LACS 29700. Reading and Research in Latin American Studies. 100 Units.

Students and instructors can arrange a Reading and Research course in Latin American Studies when the material being studied goes beyond the scope of a particular course, when students are working on material not covered in an existing course or when students would like to receive academic credit for independent research.

Instructor(s): Staff Terms Offered: Autumn, Spring, Summer, Winter

Prerequisite(s): Consent of undergraduate thesis/project adviser required

Note(s): College students are required to submit the College Reading and Research Course Form. Must be taken for a quality grade.

LACS 29801. BA Colloquium. 100 Units.

This colloquium, which is led by the LACS BA Program Adviser, assists students in formulating approaches to the BA essay and developing their research and writing skills, while providing a forum for group discussion and critiques. Graduating students present their BA essays in a public session of the colloquium during the spring quarter.

Instructor(s): Diana Schwartz Francisco Terms Offered: Autumn

Prerequisite(s): For fourth year (graduating) students majoring in Latin American and Caribbean Studies.

Note(s): Required of students who are majoring in Latin American Studies. Students must participate in all three quarters but register only in autumn quarter.

LACS 29900. Preparation of the BA Essay. 100 Units.

Independent study course intended to be used by 4th year BA students who are writing the BA thesis.

Terms Offered: Autumn Spring Summer Winter

Prerequisite(s): Consent of undergraduate thesis/project adviser required

Note(s): Typically taken for a quality grade.

Law, Letters, and Society

Program of Study

The program in Law, Letters, and Society is concerned with law in civilian and customary legal systems, both historically and contemporaneously. The program is designed to develop the student's analytical skills to enable informed and critical examination of law broadly construed. The organizing premise of the program is that law is a tool of social organization and control, not simply an expression of will or aspiration, and that it is best understood by careful study of both rhetorical artifacts and empirical consequences of its application. Program requirements are constructed to support the organizing premise, and, because of the nature of the requirements, transfer students are not eligible to register as Law, Letters, and Society majors.

The program requires course work in three areas, although there is a reasonably broad latitude both expected and permitted in satisfaction of the distributional requirement. There is a substantial writing requirement for all majors; majors are expected to produce substantial written work (sometimes called 'the BA Paper') under the close supervision of a faculty member whose area of scholarly concern is related to the broad objectives of the program.

Application to the Program

Students will apply in their second year. Application materials will be made available electronically on Friday of third week of Winter Quarter and must be submitted by noon on Friday of the fourth week of Winter Quarter. Admitted students will be notified of the Selection Committee's decision by Friday of the sixth week of Winter Quarter. Students are evaluated on the basis of the application statement and previous performance in the College. Because of the nature of the requirements of the program, a limited number of students can be admitted per year.

Once admitted to the program, students may declare their major officially by meeting with their College adviser.

Program Requirements

Course work is required in three areas. After successfully completing the Introductory Course, students must take two courses in Letters and two courses in Society. In addition, students must complete six other courses that, while not necessarily offered or listed formally under either rubric, are substantively supportive of the topics, areas, skills, or concerns of the two areas. Courses satisfying the additional requirement are identified on a quarterly basis, and final approval of additional required course work is made by consultation between the student and either the Associate Director or the Faculty Director.

LLSO courses completed during first and second year will count toward the major.

The Introductory Course

The Introductory Course establishes the intellectual moorings of the program. The importance of the Introductory Course lies not in its content (indeed, its precise focus and scope may be different from time to time) but on its approach to the nature of law. Recently, for example, the Introductory Course has been LLSO 24200 Legal Reasoning, a study, based primarily on cases, of the classic conventions of legal argument in the Anglo-American legal system. In other years, the Introductory Course might be Roman Law or Greek Law, Medieval Law, or a text-based course on ancient legal philosophy, or a comparison of modern legal categories and policies with those of former societies and cultures. The objective is not so much to establish a historical foundation for modern studies as to demonstrate that legal systems are culturally rooted; that urgent, present concerns may obscure important characteristics of legal ideas and behavior; and that many recurrent themes in Western legal thought are shaped or driven by both common and uncommon features. Unlike many legal studies programs that attempt to orient study of the law primarily in contemporary debates, usually in the field of American constitutional law, the program seeks to organize its exploration of law as a system rather than as a forum or an instrument.

Other Course Work

Students must also take two courses each in the Letters and Society divisions of the program, plus six other courses complementary to the required work, as outlined previously (the other six courses may be ones cross listed in the program or may be from other disciplines). Letters and Society are not meant as fixed or self-defining fields, but instead as organizational categories emphasizing two fundamental modes of examining law in a systemic fashion. Courses under the rubric of Letters (whether based in the program or in English, philosophy, or political theory) tend to be based on the study of literary and historical artifacts, such as cases, tracts, conventional literature, or other texts, and emphasize the ways in which law formally constitutes itself. Questions of interpretative and normative theory, rhetorical strategy, and the like are central to such courses. Society serves to organize studies from a variety of different disciplines (including history, political science, economics, and sociology) that try to measure, with different techniques and at different times, the effect of law on society. The combined objective is to treat law as an intellectual activity and as a phenomenon, and to emphasize that both occur in contexts that help to shape them, whether ancient or modern.

Research

In addition to satisfying the course requirements, each student in the program must produce evidence of sustained research in the form of a substantial research paper during either the junior or senior year and obtain approval of a member of the faculty, although not necessarily a member of the program faculty. Papers may be written in conjunction with Law, Letters, and Society courses, under the auspices of reading and research courses, or in a Research Seminar. (The paper is an independent requirement, however, and need not be accomplished in conjunction with enrollment in a specific course.)

The scope, method, and objective of the paper, as well as its length, are subject to negotiation between the student and the instructor.

Summary of Requirements

LLSO 24200	Legal Reasoning (Introductory Course)	100
Two Letters courses		200
Two Society courses		200
Six Complementary courses *		600
Total Units		1100

* Complementary courses are courses from other departments that support work done in the major. Some students prefer to concentrate their work on a specific issue or problem, e.g., urban politics and policy, historic societal discrimination, or the role of international institutions in policy implementation. Other students prefer to examine a series of discrete topics that are not directly related but that concern the operation of regimes of social control. Lists of pre-approved complementary courses are published quarterly, and students who believe that a course not so listed nonetheless supports work in the major may petition the program chair for approval at any time while enrolled in the course or within one quarter of completing the course. Courses taken in Autumn Quarter of the second year simultaneously with the Introductory Course may count as Complementary courses.

Honors

Students who wish to be considered for honors must notify the Faculty Director, Associate Director, and their faculty supervisor in writing no later than two quarters before the quarter in which they expect to receive their degree. Eligible students must maintain a GPA of at least 3.50 both overall and in the major, and they must write a distinguished research paper. The paper must be submitted by noon on Friday of fifth week in the quarter of proposed graduation (other papers must be submitted by noon on Friday of seventh week), and the student's faculty supervisor and a second reader must agree that honors are merited. It should be noted that honors are awarded sparingly.

Students are not able to choose which courses count toward their major GPA.

Reading and Research Courses

For students with a legitimate interest in pursuing study that cannot be met by means of regular courses, there is an option of devising a reading and research course to be supervised by a member of the faculty and taken for a quality grade. Such courses may not be used to satisfy the requirements of either the two-course Letters or two-course Society requirements, but may be used to satisfy part of the other six required courses, with the written permission of the Faculty Director or the Associate Director obtained in advance of initiation of the work. Only two research courses may be used within the major. LLSO 29400 BA Seminar I may also be used as one of the six Complementary Courses.

Grading

Two of the six complementary courses required in the program may, with consent of instructor, be taken for Pass/Fail grading. Students who enroll in LLSO 29400 BA Seminar I, offered annually, beginning Autumn 2010, are graded on a P/F basis, and the seminar counts as one of the two P/F-graded complementary courses.

Advising

Students who wish to major in Law, Letters, and Society must register for LLSO 24200 Legal Reasoning in Spring Quarter of their second year. *This requirement is not negotiable.* Students should note that, as an interdisciplinary major, the program has a strictly limited enrollment. Upon deciding to major in Law, Letters, and Society, students should arrange to consult with the Faculty Director and the Associate Director on their course of study in the program. Students should continue to consult with their College advisers on general education degree requirements.

Please refer to the quarterly Class Search (<http://registrar.uchicago.edu/classes/>) for the most up-to-date list of course offerings.

Law, Letters, and Society Courses

LLSO 18901. Inequality, Politics, and Government in US History. 100 Units.

This class explores the relationship between social inequality and political democracy in US history. How have American political institutions dealt with and reflected the contradictions of 'all men are created equal'? What is the meaning of political citizenship in a socially stratified society? How have social movements and conflicts shaped the institutions of state and the meaning of citizenship? The class touches on slavery and freedom; land and colonialism; racial discrimination; labor relations; gender and sexuality; social welfare policy; taxation and regulation; urban development; immigration; policing and incarceration. Assignments: One primary document analysis (2-3 pages), one secondary reading paper (3-5 pages), and a final paper analyzing a particular political movement, conflict, or policy (10-12 pages).

Instructor(s): G. Winant Terms Offered: Spring

Note(s): History in the World courses use history as a valuable tool to help students critically exam our society, culture, and politics. Preference given to 1st- and 2nd-yr students.

Equivalent Course(s): GNSE 18901, HIST 18901, AMER 18901, CRES 18901

LLSO 20001. Theories of Sexuality and Gender. 100 Units.

This is a one-quarter, seminar-style course for undergraduates. Its aim is triple: to engage scenes and concepts central to the interdisciplinary study of gender and sexuality; to provide familiarity with key theoretical anchors for that study; and to provide skills for deriving the theoretical bases of any kind of method. Students will produce descriptive, argumentative, and experimental engagements with theory and its scenes as the quarter progresses.

Instructor(s): C. Riley Snorton Terms Offered: Autumn

Prerequisite(s): Prior course experience in gender/sexuality studies (by way of the general education civilization studies courses or other course work) is strongly advised.

Equivalent Course(s): GNSE 20001, CHDV 20001, ENGL 20001, SOCI 20290

LLSO 20019. Mesopotamian Law. 100 Units.

Ancient Mesopotamia--the home of the Sumerians, Babylonians, and Assyrians who wrote in cuneiform script on durable clay tablets--was the locus of many of history's firsts. No development, however, may be as important as the formations of legal systems and legal principles revealed in contracts, trial records, and law collections (codes), among which The Laws of Hammurabi (r. 1792-1750 BC) stands as most important for understanding the subsequent legal practice and thought of Mesopotamia's cultural heirs in the Middle East and Europe until today. This course will explore the rich source materials of the Laws and relevant judicial and administration documents (all in English translations) to investigate topics of legal, social, and economic practice, including family formation and dissolution, crime and punishment (sympathetic or talionic eye for an eye, pecuniary, corporal), and procedure (contracts, trials, ordeals).

Instructor(s): M. Roth Terms Offered: Winter

Equivalent Course(s): SIGN 26022, NEHC 30019, NEHC 20019

LLSO 20116. Global-Local Politics. 100 Units.

Globalizing and local forces are generating a new politics in the United States and around the world. This course explores this new politics by mapping its emerging elements: the rise of social issues, ethno-religious and regional attachments, environmentalism, gender and life-style identity issues, new social movements, transformed political parties and organized groups, and new efforts to mobilize individual citizens.

Instructor(s): T. Clark Terms Offered: Winter

Equivalent Course(s): PBPL 27900, GEOG 30116, SOCI 20116, SOCI 30116, HMRT 20116, GEOG 20116, HMRT 30116

LLSO 20301. Childhood and Human Rights in the Twentieth Century. 100 Units.

How and when did we come to embrace the idea that children are innocent and defenseless? What are the implications of framing children's rights as human rights? In this course, we will explore key historical transformations in the legal, social, and cultural construction of childhood in modern Western societies. We will examine children's own experiences and how adults rendered them the subjects of study and state regulation. Topics of discussion will include work, leisure, education, sexuality, criminality, consumerism, and censorship. Throughout, we will discuss how ideas about race, gender, class, and age have shaped the way that the public and the state had defined childhood: who was entitled to a protected period of nurture, care, and play; who was allowed to be disobedient, or even lawless, and still avoid legal consequences. We will explore how and why some children have been and continue to be excluded from this idealized vision.

Instructor(s): N. Maor Terms Offered: Spring

Equivalent Course(s): CRES 29313, AMER 29313, HIST 29313, GNSE 29313, HMRT 29313

LLSO 20601. American Revolution, 1763 to 1789. 100 Units.

This lecture and discussion course explores the background of the American Revolution and the problem of organizing a new nation. The first half of the course uses the theory of revolutionary stages to organize a framework for the events of the 1760s and 1770s, and the second half of the course examines the period of constitution making (1776-1789) for evidence on the ways in which the Revolution was truly revolutionary.

Instructor(s): E. Cook Terms Offered: Winter

Equivalent Course(s): HIST 35300, HIST 25300

LLSO 20602. Early American Political Culture, 1600-1820. 100 Units.

This colloquium examines the culture and practice of political participation in early America, with a comparative look at early modern England. It traces the formation of a deferential, nonpartisan politics in the colonies, and its replacement in the Revolutionary era with politics that increasingly used political party as a means of democratic participation.

Instructor(s): E. Cook Terms Offered: Winter

Equivalent Course(s): HIST 38301, HIST 28301

LLSO 20775. Jewish Law from the Hebrew Bible to Jesus. 100 Units.

This course explores the key role of law in the development of Second Temple Judaism and the place of Jesus traditions within this charged sphere. Debates concerning the interpretation and purpose of biblical law, as well as the issues of tradition, revelation and authority shaped the image of Jewish society and marked the dividing lines between ideological parties (e.g. Pharisees, Sadducees and Essenes). The emergence of distinct legal ideologies nurtured the development of both rabbinic Judaism and the Jesus movement towards the end of the period. The course will consist of three sections: (1) Survey of the history of legal discourse during this period and acquaintance with the relevant works on law from Qumran (2) A thorough investigation of scholarly trends on Jesus and the law and close readings of major sources on law in the Gospels (3) Introduction to the study of early rabbinic literature and its relevance for the study of Second Temple traditions. Meetings will consist of introductory lectures, discussions of scholarship and readings of select ancient sources (in translation).

Instructor(s): Yair Furstenberg (staff) Terms Offered: Spring

Equivalent Course(s): RLST 20175, HIJD 30175

LLSO 20803. Aristophanes's Athens. 100 Units.

The comedies of Aristophanes are as uproarious, biting, and ribald today as they were more than 2,400 years ago. But they also offer a unique window onto the societal norms, expectations, and concerns as well as the more mundane experiences of Athenians in the fifth century BCE. This course will examine closely all eleven of Aristophanes's extant plays (in translation) in order to address topics such as the performative, ritual, and political contexts of Attic comedy, the constituency of audiences, the relationship of comedy to satire, the use of dramatic stereotypes, freedom of speech, and the limits of dissent. Please note that this course is rated Mature for adult themes and language.

Instructor(s): J. Hall Terms Offered: Winter

Equivalent Course(s): HIST 30803, CLCV 23608, CLAS 33608, FNDL 23608, HIST 20803, ANCM 33900

LLSO 21001. Human Rights: Contemporary Issues. 100 Units.

This course examines basic human rights norms and concepts and selected contemporary human rights problems from across the globe, including human rights implications of the COVID pandemic. Beginning with an overview of the present crises and significant actors on the world stage, we will then examine the political setting for the United Nations' approval of the Universal Declaration on Human Rights in 1948. The post-World War 2 period was a period of optimism and fertile ground for the establishment of a universal rights regime, given the defeat of fascism in Europe. International jurists wanted to establish a framework of rights that went beyond the nation-state, taking into consideration the partitions of India-Pakistan and Israel-Palestine - and the rising expectations of African-Americans in the U.S. and colonized peoples across Africa and Asia. But from the beginning, there were basic contradictions in a system of rights promulgated by representatives of nation-states that ruled colonial regimes, maintained de facto and de jure systems of racial discrimination, and imprisoned political dissidents and journalists. Cross-cutting themes of the course include the universalism of human rights, problems of impunity and accountability, notions of 'exceptionalism,' and the emerging issue of the 'shamelessness' of authoritarian regimes. Students will research a human rights topic of their choosing, to be presented as either a final research paper or a group presentation.

Instructor(s): Susan Gzesh, Senior Lecturer, (The College) Terms Offered: Autumn Winter

Equivalent Course(s): HMRT 21001, HIST 29304, LACS 21001

LLSO 21002. Human Rights: Philosophical Foundations. 100 Units.

Human rights are claims of justice that hold merely in virtue of our shared humanity. In this course we will explore philosophical theories of this elementary and crucial form of justice. Among topics to be considered are the role that dignity and humanity play in grounding such rights, their relation to political and economic institutions, and the distinction between duties of justice and claims of charity or humanitarian aid. Finally we will consider the application of such theories to concrete, problematic and pressing problems, such as global poverty, torture and genocide. (A) (I)

Instructor(s): B. Laurence Terms Offered: Autumn

Equivalent Course(s): HMRT 21002, HIST 39319, HIST 29319, PHIL 21002, PHIL 31002, INRE 31602, MAPH 42002, HMRT 31002

LLSO 21100. How Things Get Done in Cities and Why. 100 Units.

Innovation. Prosperity. Democracy. Diversity. Cities long have been lauded as unique incubators of these social features. In contrast to the national level, the smaller scale and dense diversity of cities is thought to encourage the development of civic solutions that work for the many. But cities are inhabited by distinct groups of people with divergent interests and varied beliefs about how to address countless urban issues, such as creating jobs, delivering education, ensuring safe neighborhoods, promoting environmental sustainability, and taking care of the vulnerable. Many groups and organizations have an interest in the outcomes of these processes. Some take action to try to shape them to their own advantage, while others have few chances to make themselves heard. This course examines the social and political dynamics that undergird possible avenues for creating social change in cities, including interest representation, decision-making, and inclusion/exclusion. We will draw insights from multiple disciplines and explore a variety of substantive areas, such as housing, public safety, economic development, education, and the provision of social welfare. This course is part of the College Course Cluster program: Urban Design.

Terms Offered: TBD

Equivalent Course(s): ENST 25006, SOCI 20294, PBPL 25006, SSAD 21100

LLSO 21301. Global British Empire to 1784: War, Commerce, and Revolution. 100 Units.

This course traces the origins, development, and revolutionary transformation of the British Empire. Students will explore the English Civil War, King Philip's War, Bacon's Rebellion, the development of slavery, the Revolution of 1688, the making of British India, the rise of Irish discontent, the Scottish Jacobite Rebellions, the causes of the American Revolution, and the transformation of the British Empire into an authoritarian state. Students will read selections from Locke, Defoe, Swift, Franklin, Burke, and many others.

Instructor(s): S. Pincus Terms Offered: Winter

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): HIST 11301

LLSO 21310. Water: Economics, Policy and Society. 100 Units.

Water is inextricably linked to human society. While modern advances in technology and new economic and policy mechanisms have emerged to address water stressors from overconsumption, development pressures, land use changes and urbanization, challenges continue to evolve across the globe. These problems, while rooted in scarcity, continue to become more complex due to myriad human and natural forces. In addition to water quality impairments, droughts and water shortages persist, putting pressure on agricultural production and urban water use, while the increased frequency and severity of rainfall and tropical storms, already being experienced globally, are only projected to grow in intensity and

duration under climate change. Students will explore water from the perspective of the social sciences and public policy, with attention on behavioral dimensions of water use and water conservation. Qualitative and quantitative approaches to examining how humans use and affect water will be considered, and a case study using visualizations of campus water data will be conducted by students in the course.

Instructor(s): Sabina Shaikh Terms Offered: Spring

Note(s): No prerequisites but the following courses are recommended prior to enrollment in ENST 21310: one economics course and ENST/MENG 20300: The Science, History, Policy, and Future of Water (Winter 2020) ENST/MENG 20300: The Science, History, Policy, and Future of Water (Winter 2020)

Equivalent Course(s): ECON 16510, GLST 21310, ENST 21310, PBPL 21310

LLSO 21403. The British Empire on Trial: Corruption, Scandal, Dissent. 100 Units.

Throughout the long nineteenth century, British empire building remained a contentious pursuit. It threatened to shatter Britons' moral compasses, destabilize social hierarchies, squander tax revenue, and inflict untold miseries upon foreign populations. To legitimize their expansionism, colonial policy makers claimed that they were introducing benighted regions to the benefits of a universal rule of law. This course will examine how this legalistic form of governing actually functioned by probing the trials of three classes of offenders: 'insurgent' and nationalist agitators, reformist critics of colonial misrule, and despotic officials themselves. Focusing on cases in England, the Caribbean, India, and Egypt, readings will reveal the shortcomings of the British judicial apparatus and identify the loopholes that enabled a proudly 'free' nation to subjugate and silence dissidents with near impunity. By participating in mock trials, students will gain familiarity with historical legal processes and the rhetorical tactics that actors employed both in the courtroom and in the public sphere.

Instructor(s): Z. Leonard Terms Offered: Winter

Equivalent Course(s): HIST 21403, SALC 26612

LLSO 21404. Britain in the Age of Steam 1783-1914. 100 Units.

Britain in the Victorian era rose to global dominance by pioneering a new fossil fuel economy. This course explores the profound impact of coal and steam on every aspect of Victorian society, from politics and religion to industrial capitalism and the pursuit of empire. Our historical investigation also serves a second purpose by helping us see our own fossil-fuel economy with fresh eyes through comparison with Victorian energy use. Assignments include short essays based on energy 'field work' and explorations in material culture.

Instructor(s): F. Albritton Jonsson Terms Offered: Spring

Equivalent Course(s): HIST 21404, HIST 31404, ENST 21404, CHSS 31404, HIPS 21404

LLSO 21701. The Carceral State in Modern America. 100 Units.

In this course, we will examine the origins of mass incarceration in the United States—a country that only accounts for five percent of the world's population but nearly a quarter of its prison population. We will trace the ideologies and state apparatuses that have shaped the American carceral state from the post-Civil War era to the twenty-first century. Central themes will include: the criminalization of racialized and marginalized communities; the rise of new policing regimes, along with new methods of surveillance and confinement; and the connection between welfare programs and penal policies. Over the course of this quarter, we will also discuss the emergence of social movements that have advocated for the rights of incarcerated people, as well as the eradication of prison labor and the abolition of prisons altogether.

Instructor(s): N. Maor Terms Offered: Autumn

Equivalent Course(s): AMER 28004, HIST 28004, CRES 28004, HMRT 28004

LLSO 22106. America in the Nineteenth Century. 100 Units.

This lecture course will examine major conflicts that shaped American life during the nineteenth century. Focusing on contemporaries' attempts to seize upon or challenge the nation's commitment to the ideals of liberty and equality, we will examine pivotal moments of contestation, compromise, and community building. Central questions that will frame the course include how were notions of freedom negotiated and reshaped? What were the political and socioeconomic conditions that prompted the emergence of reform movements, including antislavery, women's rights, temperance, and labor? How did individuals mobilize and stake claims on the state? How were the boundaries of American citizenship debated and transformed over the course of the century?

Instructor(s): N. Maor Terms Offered: Winter

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): CRES 18804, AMER 18804, GNSE 18804, HIST 18804

LLSO 22205. Utopia's Eclipse? The Horizon of Political Hope in the Wake of Empire and Revolution. 100 Units.

The twentieth century was a time of extraordinary political hope associated with socialist and anti-colonial struggles that promised to usher in new forms of human freedom. However, by the 1980s, this hope had given way to catastrophe as the horizons of revolutionary aspiration characterizing these struggles collapsed. How do we reckon with this collapse, and what does it mean to make a life for oneself in the wake of these failed emancipatory projects? This course explores this question by examining the place of utopian thinking, broadly understood, in the projects of anticolonial and socialist struggle in the twentieth century and by reading this strain of thought in light of the doubts that certain thinkers have raised about the possibility of attaining utopia's promise. Taking as a starting point the idea that utopian thinking—at least in its modern, universalistic form—has always existed in a complex relationship to the figure of the 'savage Other' and the project of Western imperialism, the first half of the course invites students to test this claim against the aspirations advanced by certain anti-colonial and left revolutionaries. In the second half of the course, we turn to recent reflections on the postcolonial predicament and to arguments for renewed utopian thinking to consider what we might learn from the revolutionary failures of the twentieth century and what critical resources this history has yielded to us.

Instructor(s): D. Grant Terms Offered: Winter

Equivalent Course(s): PLSC 22205

LLSO 22214. The Legal Tender of Gender: Paradigms of Equality & Realities of Inequality in Gender & the Law. 100 Units.

This course will provide an introduction to the concrete legal contexts in which issues of gender and sexuality have been articulated and contested. Students will be asked to think critically about the intersections of law, society, and gender while considering both the potential and the limitations of our legal system. Students will explore how gender constructs law, and how law constructs gender. Through engaging with readings that span law and society, feminist legal theory, constitutional scholarship, and case law, students will be able to identify, situate, and debate some of the basic premises of what constitutes justice and equality in a liberal democracy. Readings will draw from primary and secondary resources related to gender & law in the US. While some court cases/case law will be read, our focus is on the broader relationship between law and society (no technical legal knowledge is required). We will study the evolution of our legal system's stance on topics including marriage/divorce, violence, discrimination, contraception/abortion, sexual orientation, privacy, Title IX, and more. Students will be invited to bring to bear a variety of feminist, queer, critical race, and intersectional tools on our discussions of the historical evolution of these issues and their current trends. Students will develop an original research paper, which will be workshopped throughout the quarter and will culminate in a symposium of students' original research on gender & law.

Instructor(s): Lara Janson Terms Offered: Spring

Equivalent Course(s): GNSE 22213

LLSO 22310. The Commons: Environment and Economy in Early Modern Europe. 100 Units.

Drawing on case studies from Europe and the Atlantic world, this course will track changes in land use and property rights over the early modern period (ca. 1500-1800), inviting students to reflect on the relationship between natural environments (woodlands, waterways, pasture) and histories of state formation, economic growth, rebellion, and colonialism. Organizing concepts and debates will include the tragedy of the commons, moral economies, sustainability and scarcity, the 'organic economy' of the old regime, primitive accumulation, and economic takeoff. Readings will encompass classic works in agrarian, environmental, and social history (i.e., Marc Bloch, E. P. Thompson, Silvia Federici, James Scott, Carolyn Merchant) as well as primary documents and contemporary texts (i.e., More, Bacon, Smith, Paine, Babeuf). We will also reflect on how these histories bear on debates about land use and natural resources in the present day.

Instructor(s): O. Cussen Terms Offered: Winter

Equivalent Course(s): HIPS 22310, ENST 22310, HIST 22310

LLSO 22401. Topics in Judicial Studies. 100 Units.

This seminar examines three topics in current judicial studies: the appointment process, judicial reputation, and ideological 'drift.' Two short papers are required.

Instructor(s): Dennis Hutchinson Terms Offered: Spring

Prerequisite(s): Consent only

LLSO 22403. Free Speech and the First Amendment. 100 Units.

This course will examine the Supreme Court's First Amendment jurisprudence, focusing on such issues as speech critical of the government, the hostile audience, classified information, libel, commercial advertising, obscenity, symbolic expression, campaign finance regulation and the freedom of the press

Instructor(s): Geoffrey Stone Terms Offered: TBD

LLSO 22710. Electoral Politics In America. 100 Units.

This course explores the interactions of voters, candidates, the parties, and the media in American national elections, chiefly in the campaign for the presidency, both in nominating primaries and in the November general election. The course will examine how voters learn about candidates, how they perceive candidates, how they come to turn out to vote, and how they decide among the candidates. It will examine the strategies and techniques of electoral campaigns, including the choices of campaign themes and the impact of campaign advertising. It will consider the role of campaign contributors and volunteers, the party campaign organizations, campaign and media polls, and the press. Finally, it will assess the impact of campaigns and elections on governing and policymaking.

Instructor(s): M. Hansen Terms Offered: Autumn

Equivalent Course(s): PLSC 22710, AMER 22710

LLSO 23100. Environmental Law. 100 Units.

This course will examine the bases and assumptions that have driven the development of environmental law, as well as the intersection of this body of law and foundational legal principles (including standing, liability, and the Commerce Clause). Each form of lawmaking (statutes, regulations, and court decisions) will be examined, with emphasis on reading and understanding primary sources such as court cases and the laws themselves. The course also analyzes the judicial selection process in order to understand the importance of how the individuals who decide cases that determine the shape of environmental law and regulations are chosen.

Instructor(s): R. Lodato Terms Offered: Winter

Prerequisite(s): Third- or fourth-year standing, or consent of instructor

Equivalent Course(s): ENST 23100, PBPL 23100

LLSO 23103. East Central Europe, 1880-Present. 100 Units.

The past 150 years have brought democratization, mass politics, two violent world wars, and no less than four different political regimes to the lands between Germany and the Soviet Union. The focus of this course will be on the forces that have shaped Eastern European politics and society since the 1880s. How and why was a multinational and multilingual empire transformed into self-declared nation states? How has mass migration reshaped East European societies? What were

the causes and consequences of ethnic cleansing in East Central Europe? How did the experience of total war transform the states and societies? How did citizens respond to and participate in the construction of socialist societies after the Second World War? And finally, what changes and challenges has the transition from socialism to capitalism brought to the region since 1989? The course will focus on the Habsburg Monarchy and its successor states, particularly Czechoslovakia, Poland, and Hungary, with occasional discussion of the former Yugoslavia and Romania. Assignments: Three short papers (5-6 pages).

Instructor(s): T. Zahra Terms Offered: Winter

Equivalent Course(s): HIST 23103, HIST 33103

LLSO 23420. The Civil Rights Movement in the United States, 1865-Present. 100 Units.

This class examines the history of the African American Freedom Struggle in the United States from emancipation to the present. Although the course will move chronologically, our emphasis will be thematic, covering such topics as voting rights and political participation, sex and marriage rights, criminal justice reform, the role of courts, and the relationship between law and social movements. A series of research papers will be required for this class (20-25 pages). Participation may be considered in final grading.

Instructor(s): Jane Dailey Terms Offered: Winter

Prerequisite(s): None

LLSO 24102. Environmental Politics. 100 Units.

Politics determines not only which particular faction holds power, but the parameters upon which contests for power are conducted. At present, the desirability of economic growth is the universal consensus principle that actors across the political spectrum and national borders agree upon despite their disagreement on the shape that this should take and the beneficiaries of it. This principle overrides any other consideration, including environmental protection and restoration, regardless of the political beliefs of the leader or party in question. This course undertakes a term-long discussion of how the assumptions and practices of politics, policy, and activism would be changed if the protection of the environment was the central organizing principle of the international system, with particular attention to theories that challenge conventional ways of organizing society, economics, and politics.

Instructor(s): R. Lodato Terms Offered: Spring

Equivalent Course(s): PBPL 24102, ENST 24102

LLSO 24106. Introduction to Environmental Ethics. 100 Units.

This course will examine answers to four questions that have been foundational to environmental ethics: Are religious traditions responsible for environmental crises? To what degree can religions address environmental crises? Does the natural world have intrinsic value in addition to instrumental value to humans, and does the type of value the world has imply anything about human responsibility? What point of view (anthropocentrism, biocentrism, theocentrism) should ground an environmental ethic? Since all four of the above questions are highly contested questions, we will examine a constellation of responses to each question. During the quarter we will read texts from a wide variety of religious and philosophical perspectives, though I note that the questions we are studying arose out of the western response to environmental crises and so often use that language. Some emphasis will be given to particularly influential texts, thinkers, and points of view in the scholarship of environmental ethics. As the questions above indicate, the course prioritizes theoretical issues in environmental ethics that can relate to many different applied subjects (e.g. energy, water, animals, climate change) rather than emphasizing these applied issues themselves. Taking this focus will give you the background necessary to work on such issues.

Instructor(s): Sarah Fredericks Terms Offered: Autumn

Equivalent Course(s): KNOW 20702, PBPL 20702, RETH 30702, ENST 24106, RLST 24106, KNOW 30702

LLSO 24200. Legal Reasoning. 100 Units.

Statutory law comprises the vast majority of American law today, and cases involving how to interpret statutes are the basis of most modern legal practice. This legal reasoning course is an introduction to the legal doctrines and theories of statutory interpretation. This introduction comprises an overview of the modern regulatory state-of legislation, administrative implementation, and statutory interpretation by judges and agencies. The course draws from a variety of legal materials, although the case method is emphasized.

Instructor(s): David Lebow Terms Offered: Spring

Prerequisite(s): Open only to second-year students who are beginning the LLSO major.

LLSO 24711. Lincoln: Slavery, War & the Constitution. 100 Units.

This course is a study of Abraham Lincoln's view of the Constitution, based on close readings of his writings, plus comparisons to judicial responses to Lincoln's policies.

Instructor(s): Dennis Hutchinson Terms Offered: Autumn

Note(s): Consent Only

Equivalent Course(s): HIST 27102, FNDL 24411

LLSO 24901. U.S. Environmental Policy. 100 Units.

Making environmental policy is a diverse and complex process. Environmental advocacy engages different governmental agencies, congressional committees, and courts, depending on the issue. This course examines how such differentiation has affected policy making over the last several decades.

Instructor(s): R. Lodato Terms Offered: Autumn

Equivalent Course(s): ENST 24701, PBPL 24701

LLSO 25005. Inequality at Work: The Changing Nature of Jobs and Prospects for Improvement. 100 Units.

This course will consider sources of inequality in the labor market and in workplaces. Empirical evidence and theory on labor markets and job conditions will be analyzed to provide insights into the changing nature of work and workplace inequality for the majority of Americans -- who do not hold a four-year college degree. Although the course will consider ways to ready workers for good jobs in the economy, the emphasis will be on improving jobs themselves, through voluntary employer behavior, collective action, and public policy. The assignment for the course involves observing and/or interviewing workers in an occupation chosen by the student.

Instructor(s): Susan Lambert Terms Offered: TBD

Equivalent Course(s): SSAD 25005, PBPL 25005

LLSO 25411. Not Just the Facts: Telling About the American South. 100 Units.

The great jurist Oliver Wendell Holmes Jr. once observed: 'The main part of intellectual education is not the acquisition of facts but learning how to make facts live.' This course concerns itself with the various ways people have striven to understand the American South, past and present. We will read fiction, autobiography, and history (including meditations on how to write history). Main themes of the course include the difference between historical scholarship and writing history in fictional form; the role of the author in each and consideration of the interstitial space of autobiography; the question of authorial authenticity; and the tension between contemporary demands for truthfulness and the rejection of 'truth.'

Instructor(s): J. Dailey Terms Offered: Autumn

Prerequisite(s): Open to upper-level undergraduates.

Equivalent Course(s): HIST 27006, AMER 37006, AMER 27006, HIST 37006

LLSO 25610. Authority, Obligation, and Dissent. 100 Units.

What is the basis of political authority? What, if anything, makes it legitimate? Under what conditions are we obliged to follow the laws and orders of government authorities? Under what conditions can we legitimately disobey such laws or orders, or even engage in violent rebellion? How have some of the most influential political thinkers answered such questions historically and which of their theories are most helpful for illuminating these issues for us today? Readings include classic writings by Plato, Hobbes, Locke, Burke, Paine, Kant, Thoreau, Gandhi, Fanon, and Martin Luther King, Jr.

Instructor(s): S. Muthu Terms Offered: Winter

Equivalent Course(s): PLSC 25610

LLSO 25630. Poverty, Work, and Family Policy. 100 Units.

This course examines contemporary policy questions regarding the dual spheres of work and family life, with a particular focus on economically impoverished families and communities. Students will analyze the relative merits of different policies designed to improve the conditions of work and family life and mitigate the effects of poverty on children's wellbeing. Throughout the ten-week quarter, we will consider demographic, labor market, and policy trends contributing to family poverty and income inequality in American society; interrogate policy debates concerning the responsibility of government, corporate, and informal sectors to address these critical social problems; and examine specific policy and program responses directed at (1) improving employment and economic outcomes and (2) reconciling the competing demands of employment and parenting. Although our primary focus will be on policies that promote the wellbeing of low-income families in the United States, relevant comparisons will be made cross-nationally, across race/ethnicity, and across income. This course is part of the Inequality, Social Problems, and Change minor.

Equivalent Course(s): SSAD 25630, CRES 25630

LLSO 25904. America in the Twentieth Century. 100 Units.

This is a thematic lecture course on the past 115 years of US history. The main focus of the lectures will be politics, broadly defined. The readings consist of novels and nonfiction writing, with a scattering of primary sources. Assignments: Three 1,500-word papers.

Instructor(s): J. Dailey Terms Offered: Spring

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): AMER 17805, HIST 17805

LLSO 26000. Law and Society in Early America, 1600-1800. 100 Units.

This colloquium considers law, legal institutions, and legal culture within the lived experience of colonial and revolutionary America. It will emphasize the interaction of social development and legal development and will explore the breadth of everyday experience with legal institutions like the jury, with courts as institutions for resolving disputes, and with the prosecution of crime.

Instructor(s): E. Cook Terms Offered: Winter

Prerequisite(s): Upper-level undergraduates and early state graduate students.

Equivalent Course(s): HIST 27001, HIST 37001

LLSO 26201. Economics and Environmental Policy. 100 Units.

This course combines basic microeconomic theory and tools with contemporary environmental and resources issues and controversies to examine and analyze public policy decisions. Theoretical points include externalities, public goods, common-property resources, valuing resources, benefit/cost analysis, and risk assessment. Topics include pollution, global climate change, energy use and conservation, recycling and waste management, endangered species and biodiversity, nonrenewable resources, congestion, economic growth and the environment, and equity impacts of public policies.

Instructor(s): S. Shaikh Terms Offered: Autumn

Prerequisite(s): ECON 19800 or higher, or PBPL 20000

Note(s): Not offered in Autumn of the 2020-21 academic year.

Equivalent Course(s): ENST 21800, ECON 16520, PBPL 21800

LLSO 26409. Revolution, Dictatorship, & Violence in Modern Latin America. 100 Units.

This course will examine the role played by Marxist revolutions, revolutionary movements, and the right-wing dictatorships that have opposed them in shaping Latin American societies and political cultures since the end of World War II. Themes examined will include the relationship among Marxism, revolution, and nation building; the importance of charismatic leaders and icons; the popular authenticity and social content of Latin American revolutions; the role of foreign influences and interventions; the links between revolution and dictatorship; and the lasting legacies of political violence and military rule. Countries examined will include Guatemala, Cuba, Chile, Argentina, El Salvador, Nicaragua, Peru, Venezuela, Bolivia, and Mexico. Assignments: Weekly reading, a midterm exam or paper, a final paper, participation in discussion, and weekly responses or quizzes.

Instructor(s): B. Fischer Terms Offered: Winter

Note(s): Some background in Latin American studies or Cold War history useful.

Equivalent Course(s): LACS 26409, LACS 36409, HIST 36409, HIST 26409

LLSO 26500. History of Mexico, 1876 to Present. 100 Units.

From the Porfiriato and the Revolution to the present, this course is a survey of Mexican society and politics, with emphasis on the connections between economic developments, social justice, and political organization. Topics include fin de siècle modernization and the agrarian problem; causes and consequences of the Revolution of 1910; the making of the modern Mexican state; relations with the United States; industrialism and land reform; urbanization and migration; ethnicity, culture, and nationalism; economic crises, neoliberalism, and social inequality; political reforms and electoral democracy; violence and narco-trafficking; the end of PRI rule; and AMLO's new government. Assignments: Class presentations, take-home midterm, and final essays.

Instructor(s): E. Kourí Terms Offered: Autumn

LLSO 26509. Law and Citizenship in Latin America. 100 Units.

This course will examine law and citizenship in Latin America from the nineteenth to the twenty-first centuries. We will explore the development of Latin American legal systems in both theory and practice, examine the ways in which the operation of these systems has shaped the nature of citizenship in the region, discuss the relationship between legal and other inequalities, and analyze how legal documents and practices have been studied by scholars in order to gain insight into questions of culture, nationalism, violence, inequality, gender, and race.

Instructor(s): B. Fischer Terms Offered: Spring

Prerequisite(s): Some background in either Latin American studies or legal history.

Equivalent Course(s): HIST 36509, LACS 36509, HIST 26509, LACS 26509

LLSO 26615. Democracy's Life and Death. 100 Units.

How are democracies founded and maintained? What are their advantages and disadvantages with respect to stability, security, liberty, equality, and justice? Why do democracies decline and die? This course addresses these questions by examining democracies, republics, and popular governments in both the ancient and modern worlds. We will read and discuss primary texts from and social scientific analyses of Athenian democracy, the Roman Republic, the United States, and modern representative governments throughout the globe.

Instructor(s): J. McCormick, D. Kasimis Terms Offered: Autumn

Equivalent Course(s): PLSC 26615

LLSO 26802. Public Opinion. 100 Units.

What is the relationship between the mass citizenry and government in the U.S.? Does the public meet the conditions for a functioning democratic polity? This course considers the origins of mass opinion about politics and public policy, including the role of core values and beliefs, information, expectations about political actors, the mass media, economic self-interest, and racial attitudes. This course also examines problems of political representation, from the level of political elites communicating with constituents, and from the possibility of aggregate representation.

Instructor(s): J. Brehm Terms Offered: Spring

Equivalent Course(s): PLSC 22400, CRES 22400

LLSO 26901. African American History to 1883. 100 Units.

A lecture course discussing selected topics in the African American experience (economic, political, social) from African origins through the Supreme Court decision invalidating Reconstruction Era protections of African American civil rights. Course evaluations via online quizzes and take-home essays.

Instructor(s): T. Holt Terms Offered: Winter

Equivalent Course(s): HIST 27200, CRES 27200, HIST 37200, CRES 37200

LLSO 26920. Freedom, Justice and Legitimacy. 100 Units.

In this course we will explore two main questions, which are central to both contemporary political theory and political discourse: (1) how different concepts and conceptions of freedom ground different theories of social justice and political legitimacy and (2) how to understand the relationship between justice and legitimacy. To what extent are justice and legitimacy separate ideas? Does legitimacy require justice? Are just states necessarily legitimate? We will critically analyze and normatively assess how different contemporary theories have answered, whether explicitly or implicitly, such questions. The course will focus on five major contemporary theories: liberal-egalitarianism as represented by the work of John Rawls; libertarianism, as represented by the work of Robert Nozick, neo-Lockean theories as represented by the work of John Simmons, neo-republicanism as represented by the work of Philip Pettit, and neo-Kantian theories as represented by the work of Arthur Ripstein.

Instructor(s): C. Cordelli, J. Wilson Terms Offered: Autumn
Equivalent Course(s): PLSC 36920, PLSC 26920

LLSO 27100. Human Rights II: History and Theory. 100 Units.

This course is concerned with the theory and the historical evolution of the modern human rights regime. It discusses the emergence of a modern 'human rights' culture as a product of the formation and expansion of the system of nation-states and the concurrent rise of value-driven social mobilizations. It proceeds to discuss human rights in two prevailing modalities. First, it explores rights as protection of the body and personhood and the modern, Western notion of individualism. Second, it inquires into rights as they affect groups (e.g., ethnicities and, potentially, transnational corporations) or states.

Instructor(s): TBA Terms Offered: Winter
Equivalent Course(s): CRES 29302, HMRT 20200, HIST 39302, HIST 29302, INRE 31700, HMRT 30200

LLSO 27101. Democracy and the Information Technology Revolution. 100 Units.

The revolution in information technologies has serious implications for democratic societies. We concentrate, though not exclusively, on the United States. We look at which populations have the most access to technology-based information sources (the digital divide), and how individual and group identities are being forged online. We ask how is the responsiveness of government being affected, and how representative is the online community. Severe conflict over the tension between national security and individual privacy rights in the U.S., United Kingdom, and Ireland will be explored as well. We analyze both modern works (such as those by Turkle and Gilder) and the work of modern democratic theorists (such as Habermas).

Instructor(s): M. Dawson Terms Offered: Spring
Equivalent Course(s): PLSC 23100

LLSO 27250. The Trials of Religion. 100 Units.

The rhetoric and practice of 'trial' -- as testing and as adjudication -- is central to religious thought and religious practice. This course will examine the idea and the act of 'trial' comparatively, via the classics of the religious literatures of Judaism and of Christianity (Genesis 22, Job, the Gospel of Mark, 'The Pilgrim's Progress,' Kafka), and also cinema (Dreyer's 'Joan of Arc,' R. & S. Elkabetz's 'Gelt').

Instructor(s): Richard Rosengarten Terms Offered: Winter
Equivalent Course(s): RLST 27250

LLSO 27606. American Revolutions. 100 Units.

In 1750, 'British America' was a diverse and fractious collection of colonies huddled along the eastern seaboard, on the margins of the churning waters of the Atlantic world. Forty years later, thirteen of those remote American settlements had become, through rebellion and war, into a revolutionary nation. The traumatic passage of this transformation established the world's first modern republic and set in motion an age of democratic revolutions that reverberated in Europe, the Caribbean, Latin America, and western North America. This course explores this remarkable epoch in early American history. Topics include the first global military struggle (the Seven Years War); the transformation from scattered urban riots against taxes into a rebellion against the world's strongest imperial power; the everyday experience of occupation, insurgency, and civil war; Black and Native American struggles for independence; experiments in women's rights, radical democracy, and religious freedom; the fragility of the new union and the ragged road toward a federal nation-state; and the revolutionary idealism that inspired revolutions in France, Haiti, and the Americas, with consequences that shaped the early United States and all its diverse peoples. Grades will be based on three short papers and one final paper. This lecture course is open to non-History majors and does not presume any previous history coursework.

Instructor(s): M. Kruer Terms Offered: Autumn
Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.
Equivalent Course(s): AMER 17606, CRES 17606, HIST 17606

LLSO 27815. Politics and Public Policy in China. 100 Units.

This course offers a historical and thematic survey of Chinese politics and of salient issues in China's public policy. We review the patterns and dynamics of political development or lack thereof in the Mao and reform eras, including the Great Leap Forward, the Cultural Revolution, and the politics of reforms. Later sections of the course look at China's political institutions, leadership, as well as various issues of governance and public policy, including state-society relations, the relationship between Beijing and the provinces, corruption, population and environment. Emphasis is on how institutions have provided the incentives for change as well as how institutions have been transformed.

Instructor(s): D. Yang Terms Offered: Winter
Equivalent Course(s): PLSC 27815

LLSO 27906. Capitalism, Gender, and Intimate Life. 100 Units.

What is the relationship between the capitalist economy and the gendered organization of society and identity of individuals? Are these two systems, or one? This class pursues these questions, seeking to understand capitalism as an everyday and intimate experience. How have markets and production shaped and been shaped by personal identity, and in particular gendered identity? We examine the historical interrelationships among practices of sexuality, marriage, family, reproduction, labor, and consumption and trace the economic dimensions of masculinity and femininity over time, focusing largely but not exclusively on US history. Assignments: Midterm paper (8-10 pages) applying a theoretical reading to a secondary text, and a final paper (15 pages) based on secondary research.

Instructor(s): G. Winant Terms Offered: Winter
Equivalent Course(s): HIST 27906, GNSE 30106, GNSE 20106, HIST 37906

LLSO 27950. The Declaration of Independence. 100 Units.

This course explores important intellectual, political, philosophical, legal, economic, social, and religious contexts for the Declaration of Independence. We begin with a consideration of the English Revolution, investigating the texts of the Declaration of Rights of 1689 and Locke's Second Treatise and their meanings to American revolutionaries. We then consider imperial debates over taxation in the 1760s and 1770s, returning Benjamin Franklin's Autobiography to its original context. Reading Paine's Common Sense and the letters of Abigail Adams and John Adams we look at the multiple meanings of independence. We study Jefferson's drafting process, read the Declaration over the shoulders of people on both sides of the Atlantic, and consider clues to contemporary meanings beyond the intentions of Congress. Finally, we briefly engage the post-revolutionary history of the place and meaning of the Declaration in American life. (1650-1830, 1830-1940) This is a 2018-19 College Signature Course.

Instructor(s): Eric Slauter Terms Offered: Winter

Note(s): This was a 2018–19 College Signature Course.

Equivalent Course(s): ENGL 17950, HMRT 17950, HIST 17604, SIGN 26039, FNDL 27950

LLSO 28000. United States Labor History. 100 Units.

This course explores the history of labor and laboring people in the United States. It will consider the significance of work from the vantage points of law, culture, and political economy. Key topics will include working-class life, industrialization and corporate capitalism, slavery and emancipation, the role of the state and trade unions, race and sex difference in the workplace. The course is intended for freshmen through seniors, as well as majors in history and in other disciplines.

Instructor(s): A. Stanley Terms Offered: Autumn

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): HMRT 28600, GNSE 28603, HIST 18600

LLSO 28020. American Conservatism since 1945. 100 Units.

American conservatism was at a low ebb in the early 1950s. It was politically irrelevant and, perhaps worse, boasted no coherent intellectual movement. Yet the conservative movement's path from the height of the (supposed) midcentury consensus through the rise of Reagan, the Tea Party, and Trump stands at the heart of America's modern political history. And conservative politicians could draw upon a vast new network of economists, lawyers, think tanks, and other organizations for support. This course will explore the American right's emergence from the wilderness to success at the ballot box, in public-policy debates, and in the courtroom. It will draw upon primary sources as well as the history and social science literatures to analyze conservatism as an intellectual, sociopolitical, and legal movement. We will examine the different traditions making up the American right, the institutions that brought them together, and the movement's history. Did conservatism represent a single coherent movement? What did it (aim to) conserve? What were the roles of corporate power, religion, libertarianism, populism, and racial bias in its ascendance? How did Chicago-School economists and the conservative legal movement shape the polity? The class will conclude with a unit exploring the present political moment. What are the origins of Trumpism? Is it a break with conservatism's past or an evolution of the movement? What do current debates bode for the future of American politics?

Instructor(s): Robert Kaminski Terms Offered: Autumn

Equivalent Course(s): HIST 28811

LLSO 28030. Alcohol and American Society. 100 Units.

Contests about America's political economy and legal regime had long been tied to alcohol policy and drinking culture when the Sons of Liberty made Boston's Green Dragon Tavern their unofficial 'headquarters of the Revolution.' Americans' drinking habits have remained a key battleground ever since. This class will explore major themes in the development of America's political, economic, and sociocultural life and legal regime through its relationship with intoxicating beverages from the colonial era to the present. Topics covered will include rum's role in empire; the legacy of the common law doctrines regulating public houses in civil rights law; the role of colonial tavern culture in the Revolution; persistent conflicts over taxation; ethnoreligious conflict surrounding the temperance movement; Prohibition and organized crime; the brewing industry's roles in financialization, corporate consolidation, and labor struggles; the construction of homogenized consumer culture and the postmodern quest for 'authenticity;' and the legal regime shaping craft brewers' business environment. Through discussions drawing on primary sources as well as the history, social science, and law literatures, we will analyze how Americans defined the bounds of the political community, individual rights, and state power. Over the quarter students will incrementally build on these experiences toward their final projects: original research papers drawing on primary sources exploring these themes.

Instructor(s): Robert Kaminski Terms Offered: Spring

Equivalent Course(s): HIST 28305

LLSO 28035. Marx, Revolution, and the Law. 100 Units.

To what extent can we change our world by changing our laws? We will explore this question through an intensive study of Karl Marx's writings. Although Marx is most widely known for his arguments about political economy and revolution, his earliest scholarly energies were devoted to jurisprudence and throughout his life he frequently returned to questions about the law's nature, possibilities, and limits. He did so not only in his analyses of the modern state and capitalism, but also in his efforts to document the goals, victories, and set-backs of democratic movements, labor unions, and political radicals as they navigated repressive legal systems, fought for legal reforms, and developed alternative visions of how to regulate social life. We will therefore draw on diverse genres of writing from across Marx's life-including letters, newspaper articles, pamphlets, and speeches-as we explore the relationship between law and social transformation.

Instructor(s): Sarah Johnson Terms Offered: Spring

LLSO 28040. Introduction to Law, Letters, and Society. 100 Units.

This is an introductory lecture course intended for freshman and sophomores considering the Law, Letters, and Society (LLSO) major. The course will introduce major frameworks, themes, and methods in the study of law as a social, philosophical, and doctrinal object. Topics surveyed include: systems of legal practice; substantive areas of law; sources of lawmaking and tiers of law; paradigms of jurisprudence; constitutional structure and rights; controversies in legal interpretation; legal history; law and society; and the law/politics relation.

Instructor(s): David Lebow Terms Offered: Autumn

LLSO 28050. The American Constitution. 100 Units.

This is a survey of the main themes of the American Constitution—popular sovereignty, separation of powers, federalism, and rights—and of the basic techniques of constitutional interpretation. The course introduces the history and doctrines of American constitutional law primarily through the analysis of cases.

Instructor(s): David Lebow Terms Offered: Winter

LLSO 28101. Democracy in America? 100 Units.

This course will explore the unlikely career of democracy in US history. Throughout its past, the United States has been defined by endless and unpredictable struggles to establish and extend self-government of one kind or another—even as those struggles have encountered great resistance and relied on the exclusion or subordination of some portion of society to underwrite expanding freedom and equality for those enjoying the fullest benefits of citizenship. American democracy has also relied on a conceptual separation between state and society that has necessarily broken down in practice, as political institutions produced and sustained economic forms like slavery or the corporation, social arrangements like the family, and cultural values such as freedom—even as private interests worked their reciprocal influence over public institutions. Over the course of the quarter we will explore this contested history of democracy in America through a close reading of classic texts, including Tocqueville's famous study, contextualized by the most current historical scholarship. Small, incremental writing assignments and individual presentations will culminate in a final essay that can emphasize philosophical/theoretical or historical/empirical questions according to students' interests. Students will also have the option of conducting their own original research to satisfy some portion of the coursework, which may lead to subsequent internship opportunities with relevant faculty.

Instructor(s): J. Sparrow Terms Offered: Spring

Note(s): History in the World courses use history as a valuable tool to help students critically exam our society, culture, and politics. Preference given to 1st- and 2nd-yr students.

Equivalent Course(s): HIST 18101

LLSO 28204. Histories of Racial Capitalism. 100 Units.

What is the relationship between race and capitalism? This course introduces students to the concept of racial capitalism, which rejects treatments of race as external to a purely economic project and counters the idea that racism is an externality, cultural overflow, or aberration from the so-called real workings of capitalism. Spanning the colonization of North America to the era of mass incarceration, topics include the slave trade, indigenous dispossession, antebellum slavery, the Mexican-American War, 'new imperialism,' the welfare state, and civil rights. This class neither presumes a background in economics, nor previous coursework in history.

Instructor(s): D. Jenkins Terms Offered: Winter

Equivalent Course(s): AMER 18202, CRES 18202, HIST 18202

LLSO 28703. Early America, 1492-1815. 100 Units.

This course explores the development of American culture, society, and politics from the first contact between Native Americans and Europeans to the emergence of a stable American nation by the end of the War of 1812. It emphasizes the diverse experiences of the many kinds of Americans and the different meanings that they attached to the events in their lives. Topics include the meeting of Indigenous, African, and European peoples, the diversity of colonial projects, piracy and the Atlantic slave trade, the surprising emergence of a strong British identity, the coming of the American Revolution, the range of Americans' struggles for independence, and the role of the trans-Appalachian West in shaping the early republic. This lecture course is open to nonmajors and does not presume any previous history coursework. Assignments: Two papers.

Instructor(s): M. Kruer Terms Offered: Autumn

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): CRES 18703, AMER 18703, HIST 18703

LLSO 28800. African American History since 1883. 100 Units.

A lecture course discussing selected topics in the African American experience (economic, political, social) from Reconstruction Era protections of African American civil rights through social and political movements in the twentieth and twenty-first centuries seeking their restoration. Course evaluations via online quizzes and take-home essays.

Instructor(s): T. Holt Terms Offered: Spring

Equivalent Course(s): CRES 27300, HIST 37300, HIST 27300, CRES 37300

LLSO 28806. Introduction to Black Chicago, 1893-20. 100 Units.

This course surveys the history of African Americans in Chicago, from before the twentieth century to the near present. In referring to that history, we treat a variety of themes, including migration and its impact, the origins and effects of class stratification, the relation of culture and cultural endeavor to collective consciousness, the rise of institutionalized religions, facts and fictions of political empowerment, and the correspondence of Black lives and living to indices of city wellness (services, schools, safety, general civic feeling). This is a history class that situates itself within a robust interdisciplinary conversation. Students can expect to engage works of autobiography and poetry, sociology, documentary photography, and

political science as well as more straightforward historical analysis. By the end of the class, students should have grounding in Black Chicago's history and an appreciation of how this history outlines and anticipates Black life and racial politics in the modern United States.

Instructor(s): A. Green Terms Offered: Autumn

Equivalent Course(s): HIST 18806, CRES 18806, AMER 18806

LLSO 29030. Totalitarianism, Law and Revolution. 100 Units.

In the final chapter of her seminal *The Origins of Totalitarianism*, Hannah Arendt argued that, far from being a lawless form of government, totalitarianism is an attempt to impose some notion of ultimate law directly on the world, with no mediation through positive law and no regard for the lived particularity of human communities. In this course we will examine some seminal attempts at theorizing about totalitarianism, as well as primary sources and some secondary sources on the history of totalitarian movements, all with an eye toward understanding what relationship totalitarianism bears both to forms of legality and to attempts at overturning prior legal, social, and political regimes.

Instructor(s): David Lyons Terms Offered: Not offered in 2020-21

Prerequisite(s): None

LLSO 29040. Wars of Religion and Regimes of Toleration. 100 Units.

There is a standard narrative that the brutality and instability of the sixteenth and seventeenth-century wars of religion gave rise to regimes of religious toleration and, eventually, separation of church and state. This narrative continues, arguing that the civil peace enjoyed today in much of the developed world depends upon barring religious commitments from the political sphere. This course will seek to interrogate this narrative and its assumptions through readings and discussions of primary sources, classic and contemporary historiography, and works of political and social theory. In doing so, students will be exposed not only to alternative understandings of the wars of religions and the origins of regimes of toleration, but will also be asked to consider some possible limits to and blind spots of liberal democracy.

Instructor(s): David Lyons Terms Offered: Not offered in 2020-21

Prerequisite(s): None

Equivalent Course(s): RLST 29040

LLSO 29050. Youth Law and Policy: Child Welfare and Juv. Just. in the U.S. 100 Units.

This course explores how legal institutions protect and punish children in the United States. We will spend the first part of the course exploring the child welfare system, which purports to protect children from abuse and neglect through various mechanisms including foster care and the termination of parental rights. We will spend the second part of the course exploring the juvenile justice system, which purports to prosecute and rehabilitate children for their criminal acts in a system separate from the criminal justice system. In the final part of the course, we will consider special topics in this area of law and policy including 'cross-over youth' (i.e. children involved in both systems), unaccompanied immigrant children, homeless and runaway youth, and the so-called 'school-to-prison-pipeline.' This course will place special emphasis on the judges, lawyers, law enforcement officers, and social workers that comprise these legal institutions.

Terms Offered: Not offered in 2020-21

Prerequisite(s): Course limited to 3rd and 4th year students only.

Equivalent Course(s): HMRT 29050, PBPL 29050

LLSO 29060. Freedom of Religion. 100 Units.

This course will consider the place of religious freedom in the modern pluralistic liberal order and introduce students to some of the interpretive issues and legal doctrines associated with the Religion Clauses of the First Amendment to the U.S. Constitution. Readings will come from a mixture of classical writings from Hobbes to Tocqueville on the relationship between religion and civil government, more recent scholarly works on the place of religious commitments and religious diversity in the liberal political order, scholarly works on the Religion Clauses, and U.S. case law on the freedom of religion.

Instructor(s): David Lyons Terms Offered: Winter

Prerequisite(s): none

Equivalent Course(s): RLST 29060

LLSO 29065. Early Theories of Capitalism. 100 Units.

This course introduces students to classic texts in the history of economic thought. Our readings will focus, in particular, on eighteenth and nineteenth century debates about value. What, for example, determines the value of a commodity, and what is the relationship between its value and its price? Yet as we investigate how ideas about value changed across the eighteenth and nineteenth centuries, we will also explore the diverse ways in which economics, as both a field of inquiry and a domain of human life, was understood during that period of time. To this end, we will examine arguments about the nature, aims, and methods of economics, along with arguments about the origin and force of economic laws. Readings may include works by Richard Cantillon, Adam Smith, David Ricardo, William Forster Lloyd, William Stanley Jevons, and Alfred Marshall.

Instructor(s): Sarah Johnson Terms Offered: Winter

LLSO 29066. Economics in the Twentieth Century. 100 Units.

This course will introduce students to classic texts in the history of economic thought from the early-twentieth century to the emergence of the new neoclassical synthesis that dominates mainstream economics today. Our readings will focus on key debates shaping the development of economic methodology and assumptions—as well as some notable critiques of reigning economic orthodoxy. What, for example, is the relation between commodities' prices, goods' values, and information? What roles do individual actors, such as the entrepreneur, play relative to impersonal market forces? How have crises and methodological debates shaped economists' understandings of expectations and uncertainty? What is the relationship between microeconomics and macroeconomics? How has the scope and object of economic analysis changed through the twentieth century? How have the development of concepts such as 'the economy' or economics as a science

shaped academic study and the public discourse? Finally, we will consider what sources of value prevailing economic methodologies obscure. Readings may include works by Joseph Schumpeter, Frank Knight, John Maynard Keynes, F.A. Hayek, James Buchanan, Robert Lucas, Mancur Olson, Elinor Ostrom, and Amartya Sen.

Instructor(s): Robert Kaminski Terms Offered: Spring

LLSO 29067. Christianity Confronts Capitalism: Natural Law, Economics, and Social Reform. 100 Units.

Christianity's relationship with commerce was fraught long before the industrial era. After all, it upheld property rights alongside the poor's beatitude. And, even as industrial capitalism's critics tied the faith to the economic system, Christian thinkers popularized ideas of social justice and the Social Gospel in response to laissez faire's limits. This course will combine intellectual, social, and legal history to examine how various Christian traditions have grappled with liberal capitalism and its revolutionary critics. We will explore these traditions' competing visions of a moral political economy, how their adherents attempted to put them into action, and where these attempts placed them vis-à-vis society and civil authorities—especially when this place was the court room. After a brief unit on key Judeo-Christian texts bearing on political and economic activity, we will consider various churches' alternatives to liberal capitalism and revolutionary movements' materialism—including Catholic Social Thought from 1891's *Rerum novarum* to Pope Francis's *Laudato si'* and Abraham Kuyper's neo-Calvinist tradition. We will put these in dialogue with practical efforts from Social Gospel reformers, Catholic Workers, and Latin American Liberation Theology to Hobby Lobby or Chick-Fil-A's attempt at Evangelical business. Throughout, students will consider questions about the relationships between church and state, doctrine and practice, and natural law and the law of the market.

Instructor(s): Robert Kaminski Terms Offered: Winter

Equivalent Course(s): HIST 27118

LLSO 29071. Great Books of the Founding Fathers: Revolution and Constitution. 100 Units.

In contemporary arguments about the meaning of the U.S. Constitution, participants often make claims about what the Framers of the Constitution and their opponents thought and said about topics like the powers of Congress and the President, the strengths and weaknesses of federalism, and the role of the judiciary in a republican form of government. This course will seek to provide students with the means of evaluating the strengths of such claims. To that end, we will examine the emergence of the U.S. Constitution in three phases. First, we will look at discussions of liberty and self-government in the imperial crisis of the 1760s and 1770s that led to the American Revolution. Second, we will look at the concerns that animated the calling of what became the Constitutional Convention of 1787 and read Madison's Notes of Debates in the Federal Convention. Third, we will look at the debates over ratification of the Constitution between the Federalists and Anti-Federalists.

Instructor(s): David P. Lyons Terms Offered: Spring

LLSO 29080. Modernity and Its Discontents from Dawn to Decline. 100 Units.

One need look neither too long nor too hard before recognizing that the project of modernity seems to be under considerable strain: the stability and perhaps even the desirability of secularism, mass democracy, individualism, cosmopolitanism, and technological and bureaucratic rationalism have all been increasingly challenged by worldwide political events and processes as well as by postmodern, radical, conservative, and religious intellectuals. In this course we will read some classical statements of the project as a means of best understanding modernity and its features. We will then move on to a consideration of classical and more contemporary critiques of modernity with an eye toward both identifying the limits of the modern project and possible avenues for the retrieval and reconstitution at least some features of modernity.

Instructor(s): David Lyons Terms Offered: Autumn

Prerequisite(s): no prerequisites

Equivalent Course(s): HIST 26222, RLST 29080

LLSO 29090. Topics in International and Comparative Law. 100 Units.

Based in Paris, the three week course will explore historical and contemporary European institutions that focus on economy, law and globalization.

Instructor(s): Cliff Ando, Kimberly Kay Hoang Terms Offered: Summer

Prerequisite(s): Admission to the Paris September Program

Note(s): Instructor Consent

LLSO 29091. Governing the Global Economy. 100 Units.

How is the global economy governed? Through what institutions, legal mechanisms, and norms? What role do Anglo-American law, international law, and other legal regimes play in the flow of capital, goods, and people across state borders? Seeking to answer these questions, this three-week intensive course draws from history, law, economics, political science, and political philosophy in order to both understand the development of global economic governance over time and critically assess what paths it might take in the future.

Instructor(s): Jonathan Levy Terms Offered: Summer

Equivalent Course(s): GLST 29091

LLSO 29400. BA Seminar I. 100 Units.

This seminar guides students through the process of designing a BA thesis project. Through a series of weekly assignments and in-class workshops, students will develop a compelling and manageable research question, identify the sources and research methods that their project requires, and determine how their project contributes to existing scholarly debates. This work will help students to prepare a substantial BA thesis proposal by the end of the term.

Instructor(s): Sarah Johnson Terms Offered: Autumn

Note(s): Offered in Autumn

LLSO 29401. BA Seminar II. 100 Units.

This seminar guides students through the process of writing and revising a BA thesis. Students will have multiple opportunities to present and receive feedback on their work in progress, including a complete draft of the thesis, which will be due at the end of the term. We will also discuss the novel challenges of writing a thesis, such as managing a large writing project and conveying specialized knowledge to non-expert readers.

Instructor(s): Sarah Johnson Terms Offered: Winter

LLSO 29421. Politics of Commemoration. 100 Units.

Most of the time we pass in front of the statues, commemorative museums, monuments, and flags that inhabit our cities without noticing them. In recent years, however, they (along with pre-college history curricula) have become controversial across the globe. This course addresses those controversies primarily in Europe and the United States, but also in Latin America, West Africa, and South Africa. Through a series of case studies we will analyze the conditions of the creation of statues, monuments, and museums. Who conceptualized them and lobbied for their creation? Who paid for them? For whom were they originally intended? What message did they convey? What happened over time? How did their message change? Did they provoke controversy at the moment of their planning or inauguration or later and, if so, from whom? Equal attention will be paid to scholars' efforts to address the question of what these commemorative works actually do. If they really become unnoticeable, then why does the threat of their removal so often spark such intense controversy? Assignments: Active participation in class, one secondary text analysis, one analysis of a controversy, and one proposal for a monument, museum, or school curriculum.

Instructor(s): L. Auslander Terms Offered: Spring

Equivalent Course(s): HIST 29421, ARCH 29421, GLST 29526, CRES 39421, ENST 29421, HIST 39421, CRES 29421, JWSC 29421

LLSO 29505. Social Reform in the United States 1890-1980. 100 Units.

This seminar charts organized efforts to transform and reconfigure the social and economic fabric of American life through a focus on five distinct periods of reform: the agrarian Populist movement at the end of the nineteenth century; the Progressive movement in the early twentieth century; the New Deal during the 1930s and early 1940s; the Civil Rights movement and the Great Society in the 1960s; and the rise of the New Right in the postwar period. By looking at continuities, connections, and ruptures within and between these reform movements, we will explore a range of defining topics in twentieth century US history: capitalism and risk; gender and labor; economic citizenship and security; law and the state; immigration and ethnicity; and race and (in)equality.

Instructor(s): Ben Zdencanovic Terms Offered: Winter

Prerequisite(s): None

Note(s): Not offered in 2020-21

Equivalent Course(s): AMER 29505, CRES 29505

LLSO 29506. Social and Economic Rights in History. 100 Units.

This seminar charts the historical development of social and economic rights - the right to healthcare, to education, to social security, to an adequate standard of living - from the French Revolution to our own era of austerity and market fundamentalism. Our focus will not only be on how social and economic rights have been theorized, codified, and contested, but also how social and economic rights have transformed politics, markets, and legal regimes in practice. In the process, we will explore how struggles over the meaning of social and economic rights have shaped some of the most defining historical themes of the past two centuries: slavery and emancipation; wage labor and unionization; communism and the welfare state; decolonization and civil rights.

Instructor(s): Ben Zdencanovic Terms Offered: Winter

Prerequisite(s): None

Note(s): Not offered in 2020-21

Equivalent Course(s): AMER 29506, HMRT 39507, HMRT 29507

LLSO 29507. The Politics of Healthcare Policy in the United States, 1900 - 2020. 100 Units.

In the modern history of United States social politics, there have been few issues as enduring, divisive, and consequential as that of healthcare policy. This seminar examines the political, economic, legal, and social origins of the modern U.S. system of healthcare financing and delivery. Our discussion and analysis will be organized around a series of key turning points in the history of U.S. healthcare politics, from the first push for 'workingmen's insurance' in the Progressive Era to the debate over Obamacare and 'Medicare for All' since 2008. We will learn to view healthcare policy as contested terrain fought over by labor unions, insurance companies, physicians, think tanks, policymakers, grassroots activists, trade associations, and corporate employers. In the process, we will explore themes such as the rise of the modern corporation, public interest law, welfare capitalism and business conservatism, and the politics of race- and class-based healthcare inequality.

Instructor(s): Ben Zdencanovic Terms Offered: Spring. Not offered in 2020-21

Prerequisite(s): None

Equivalent Course(s): HIPS 27507, HLTH 29507, PBPL 29507, HIST 25319

LLSO 29528. Property and the Public Interest. 100 Units.

In this colloquium, drawing from law, history, philosophy, and social science, we examine the conflicted relationship between property and the public interest. Topics include the basis and evolution of private property rights, reasons for the state, and the relationship between property rights and the public interest. Assignments: Two short essays and a final paper.

Instructor(s): J. Levy Terms Offered: Winter

Prerequisite(s): Consent of instructor. Course is required of LLSO juniors.

Equivalent Course(s): HIST 29528

Linguistics

Department Website: <http://linguistics.uchicago.edu>

Program of Study

The purpose of the BA program in linguistics is to provide a solid, integrated introduction to the scientific study of language through course work in the core subdisciplines of linguistics, as well as to ensure that the student has a language background sufficient to provide a complement to the theoretical parts of the program and for an understanding of the complexities of human language. This program provides students with a general expertise in the field and prepares them for productive advanced study in linguistics.

Students who are majoring in linguistics may visit linguistics.uchicago.edu (<http://linguistics.uchicago.edu>) to learn about events and resources on and off campus and for links to information on employment opportunities.

Students who are majoring in other fields of study may also complete a minor in linguistics. Information follows the description of the major.

Program Requirements

The BA in linguistics requires thirteen courses, which fall into two categories: courses that provide expertise in linguistics and courses that ensure breadth of study in a non-Indo-European language. Students have flexibility to construct a course of study that accords with their interests, but their final tally of thirteen courses must include the following:

LING 20001	Introduction to Linguistics	100
LING 20101	Introduction to Phonetics and Phonology	100
LING 20201	Introduction to Syntax	100
LING 20301	Introduction to Semantics and Pragmatics	100
Study of a non-Indo-European language		

The language requirement is designed to ensure breadth of study in a non-Indo-European language. This requirement can be met in four different ways:

1. Registration in a three-quarter course in a non-Indo-European language on campus
2. Examination credit in a non-Indo-European language for which the University offers placement examinations
3. Registration for an intensive one-quarter course in the structure of a non-Indo-European language offered by a member of the linguistics faculty (or by another faculty member upon approval by the director of undergraduate studies)
4. Completion of an approved intensive language program taken elsewhere for languages not offered or tested for at the University of Chicago.

Students who fulfill the non-Indo-European language requirement with fewer than three quarters of study must substitute elective courses for the language course quarters not taken. At least six electives for the major must be courses offered by the Department of Linguistics (i.e., courses whose numbers begin with LING). For any further electives, a student may petition the department to substitute a related course that does not have a LING number.

The complete list of available languages can be viewed at humanities.uchicago.edu/about/languages-uchicago (<http://humanities.uchicago.edu/about/languages-uchicago/>).

Summary of Requirements

LING 20001	Introduction to Linguistics	100
LING 20101	Introduction to Phonetics and Phonology (core course)	100
LING 20201	Introduction to Syntax (core course)	100
LING 20301	Introduction to Semantics and Pragmatics (core course)	100
Nine courses from the following:		900
0-3 courses in a non-Indo-European language *		
6-9 Linguistics electives **		
Total Units		1300

* Credit may be granted by examination. When any part of the language requirement is met by examination, the equivalent number of electives in linguistics must be substituted for quarter credit granted. With prior approval of the director of undergraduate studies, such electives may be taken in other departments.

** A minimum of six must be courses with LING numbers.

Grading

All courses used to satisfy requirements for the major and minor must be taken for quality grades. With consent of the instructor, nonmajors may take linguistics courses for P/F grading.

NOTE: Students who entered the University prior to Autumn 2009 may choose to fulfill either the requirements stated here or those that were in place when they entered the University.

Honors

In order to receive the degree in linguistics with honors, a student must write an honors essay. At the end of a student's third year, any student who has maintained a 3.0 or better overall GPA and a 3.5 or better GPA in linguistics courses may consult with the director of undergraduate studies about submitting an honors essay. The honors essay must be submitted by fifth week of the quarter in which the student plans to graduate. Complete guidelines and requirements for the honors essay can be obtained from the director of undergraduate studies.

Students wishing to write an honors essay are required to take two graduate-level courses (numbered 30000 or above) in areas most relevant to their thesis work, as determined in consultation with their adviser(s) and approved by the director of undergraduate studies.

This program may accept a BA paper or project used to satisfy the same requirement in another major with the consent of both program chairs. Students should consult with the chairs by the earliest BA proposal deadline (or by the end of their third year, when neither program publishes a deadline). A consent form, to be signed by both chairs, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Minor Program in Linguistics

Students in other fields of study may complete a minor in linguistics. The minor in linguistics requires a total of seven courses, which must include three linguistics electives (courses whose numbers begin with LING) and the following four courses:

LING 20001	Introduction to Linguistics	100
LING 20101	Introduction to Phonetics and Phonology	100
LING 20201	Introduction to Syntax	100
LING 20301	Introduction to Semantics and Pragmatics	100

Students who elect the minor program in linguistics must contact the director of undergraduate studies before the end of Spring Quarter of their third year to declare their intention to complete the minor. The adviser's approval for the minor program should be submitted to a student's College adviser by the deadline above on a form obtained from the College adviser. Courses in the minor (1) may not be double counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for quality grades (not P/F), and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Linguistics Courses

LING 20001. Introduction to Linguistics. 100 Units.

This course offers a brief survey of how linguists analyze the structure and the use of language. Looking at the structure of language means understanding what phonemes, words, and sentences are, and how each language establishes principles for the combinations of these things and for their use; looking at the use of language means understanding the ways in which individuals and groups use language to declare their social identities and the ways in which languages can change over time. The overarching theme is understanding what varieties of language structure and use are found across the world's languages and cultures, and what limitations on this variety exist.

Terms Offered: Autumn Spring Winter

LING 20100. Intro To Linguistics-1. 100 Units.

TBD

Equivalent Course(s): LING 30100, ANTH 37001, SOSCI 21700, ANTH 27001

LING 20101. Introduction to Phonetics and Phonology. 100 Units.

This course is an introduction to the study of speech sounds and their patterning in the world's languages. The first half of the course focuses on how speech sounds are described with respect to their articulatory, acoustic, and perceptual structures. There are lab exercises both in phonetic transcription and in the acoustic analysis of speech sounds. The second half focuses on fundamental notions that have always been central to phonological analysis and that transcend differences between theoretical approaches: contrast, neutralization, natural classes, distinctive features, and basic phonological processes (e.g., assimilation).

Instructor(s): Jason Riggle, STAFF Terms Offered: Autumn

Prerequisite(s): LING 20001

LING 20150. Language and Communication. 100 Units.

This course can also be taken by students who are not majoring in Linguistics but are interested in learning something about the uniqueness of human language, spoken or signed. It covers a selection from the following topics: What is the position of spoken language in the usually multimodal forms of communication among humans? In what ways does spoken language differ from signed language? What features make spoken and signed language linguistic? What features distinguish linguistic means of communication from animal communication? How do humans communicate with animals? From an evolutionary point of view, how can we account for the fact that spoken language is the dominant mode of communication

in all human communities around the world? Why cannot animals really communicate linguistically? What do the terms 'language acquisition' and 'transmission' really mean? What factors account for differences between 'language acquisition' by children and by adults? Are children really perfect language learners? What factors bring about language evolution, including language speciation and the emergence of new language varieties? How did language evolve in mankind? This is a general education course without any prerequisites. It provides a necessary foundation to those working on language at the graduate and undergraduate levels.

Instructor(s): Salikoko Mufwene Terms Offered: Autumn

Equivalent Course(s): LING 30150, CHDV 20150, CHDV 30150, EDSO 20150

LING 20201. Introduction to Syntax. 100 Units.

This course is an introduction to basic goals and methods of current syntactic theory through a detailed analysis of a range of phenomena, with emphasis on argumentation and empirical justification. Major topics include phrase structure and constituency, selection and subcategorization, argument structure, case, voice, expletives, and raising and control structures.

Instructor(s): Amy Dahlstrom Terms Offered: Winter

Prerequisite(s): LING 20001

LING 20202. Advanced Syntax. 100 Units.

This course is a continuation of Introduction to Syntax (LING 20201).

Instructor(s): Erik Zyman Terms Offered: Spring

Prerequisite(s): LING 20201

LING 20301. Introduction to Semantics and Pragmatics. 100 Units.

This course familiarizes students with what it means to study meaning and use in natural language. By 'meaning' we refer to the (for the most part, logical) content of words, constituents, and sentences (semantics), and by 'use' we intend to capture how this content is implemented in discourse and what kinds of additional dimensions of meaning may then arise (pragmatics). Some of the core empirical phenomena that have to do with meaning are introduced: lexical (i.e., word) meaning, reference, quantification, logical inferencing, presupposition, implicature, context sensitivity, cross-linguistic variation, speech acts. Main course goals are not only to familiarize students with the basic topics in semantics and pragmatics but also to help them develop basic skills in semantic analysis and argumentation.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): LING 20001

Equivalent Course(s): LING 30310

LING 20302. Advanced Semantics. 100 Units.

Description TBD

Instructor(s): Michael Tabatowski Terms Offered: Winter

Prerequisite(s): LING 20001, LING 20201

LING 20400. Iconicity/Sounds Symbolism. 100 Units.

Course Description TBD

Instructor(s): Natalia Bermudez

Equivalent Course(s): LING 30400

LING 21000. Morphology. 100 Units.

Looking at data from a wide range of languages, we will study the structure of words. We will consider the nature of the elements out of which words are built and the principles that govern their combination. The effects of word structure on syntax, semantics, and phonology will be examined. We will think critically about the concepts of morpheme, inflection, derivation, and indeed, the concept of word itself.

Instructor(s): Laura Stigliano Terms Offered: Autumn

Prerequisite(s): LING 20001

LING 21310. Introduction to Indo-European Linguistics. 100 Units.

An introduction to the comparative study of the Indo-European languages. We will survey the major branches of the Indo-European family and discuss various aspects of PIE grammar as it is currently reconstructed.

Instructor(s): Yaroslav Gorbachov Terms Offered: Spring

Equivalent Course(s): LING 31310

LING 21611. Linguistic Ethnographies. 100 Units.

In this seminar, we read a set of new ethnographic writings that focus on linguistic practices, using those to explore wider cultural patterns and the project of writing cultural description. In the first weeks we discuss fieldwork and some classic questions about genre, voice, rhetoric and persuasion in analytic writing. Seminar members will do their own ethnographic project and write it up for a final paper. Questions to be discussed: What is the role of linguistic practices in constituting culture, power, identity? How do people 'do' ethnographic fieldwork; how is that work transformed into writing? How should one evaluate ethnographic texts? Who are the text's addressees; what are its blindspots? What counts as theory? How is the 'object' of analysis delineated? How is authority achieved (or not)?

Instructor(s): Susan Gal Terms Offered: Autumn, Autumn 2020

Equivalent Course(s): ANTH 21610

LING 21720. Sociophonetics. 100 Units.

Variation is a ubiquitous feature of speech, yet most variations observed are non-random. This course will examine this type of structured heterogeneity (Weinreich et al. 1968) from the point of view of sociophonetics. We will focus on the interrelationships between phonetic/phonological form and social factors such as speaking style and the background of the

speaker, with a particular interest in explaining the origins and transmission of linguistic change. Our goals will be to (a) acquire the phonetic and phonological foundation necessary to conduct sociophonetic research through practical exercises; (b) survey new sociolinguistic research that addresses issues in phonetic and phonological theories; and (c) locate and explain phonetic variation in its social context while drawing on current approaches to the relationship between language and society. This course will give students hands-on experience with designing and conducting experiments. As part of the empirical foundation of this course, we will focus on sociophonetic variation across Chicago neighborhoods. For a final project, students are required to conduct a small-scale study investigating a research question of relevance to sociophonetic research. LING 20101 or graduate student standing.

Instructor(s): Alan Yu Terms Offered: Winter

Equivalent Course(s): LING 31720

LING 21920. The Evolution of Language. 100 Units.

How did language emerge in the phylogeny of mankind? Was its evolution saltatory or gradual? Did it start late or early and then proceed in a protracted way? Was the emergence monogenetic or polygenetic? What were the ecological prerequisites for the evolution, with the direct ecology situated in the hominine species itself, and when did the prerequisites obtain?

Did there ever emerge a language organ or is this a post-facto construct that can be interpreted as a consequence of the emergence of language itself? What function did language evolve to serve, to enhance thought processes or to facilitate rich communication? Are there modern 'fossils' in the animal kingdom that can inform our scholarship on the subject matter? What does paleontology suggest? We will review some of the recent and older literature on these questions and more.

Instructor(s): Salikoko Mufwene Terms Offered: Winter

Equivalent Course(s): CHDV 41920, CHSS 41920, CHDV 21920, EVOL 41920, PSYC 41920, ANTH 47305, LING 41920

LING 22750. Laboratory Phonology. 100 Units.

This course is intended to provide a foundation for students to pursue the quantitative study of phonology in the context of human interaction, and of speech and perception in the context of language. Specifically, this course focuses on how to design, conduct, and analyze a phonological experiment. We will approach laboratory phonology from the perspectives of both the speaker and the listener, with each perspective constituting roughly half the course. In the process, we will gain and practice skills in experimental phonetic and psycholinguistic work, while testing aspects of current phonological theory.

Instructor(s): Alan Yu Terms Offered: Winter

Equivalent Course(s): LING 32750

LING 23115. Old Church Slavonic. 100 Units.

This course is an introduction to the language of the oldest Slavic texts. It begins with a brief historical overview of the relationship of Old Church Slavonic to Common Slavic and the other Slavic languages. This is followed by a short outline of Old Church Slavonic inflectional morphology. The remainder of the course is spent in the reading and grammatical analysis of original texts in Cyrillic or Cyrillic transcription of the original Glagolitic.

Equivalent Course(s): LING 35100, REES 23115, MDVL 25100, REES 33115

LING 23200. Topics in Semantics and Pragmatics. 100 Units.

This focus of this course is conversational implicature. We will take the classic characterization of implicature in Grice as our starting point, and spend the rest of the quarter working through subsequent proposals that refine, rethink and/or reject it, and the empirical and theoretical concerns that motivate them. Topics to be discussed include: the relation between implicature and semantic composition; the nature and calculation of alternatives to what is said; game theoretic approaches to implicature and their relatives; Bayesian pragmatics; free choice inferences; manner implicature; pragmatic weakening vs. pragmatic strengthening.

Equivalent Course(s): LING 42010

LING 23450. Language and Violence. 100 Units.

Language is generally associated with the abstract realm of thought, representation and expression, a realm that contrasts sharply with the material realm in which we tend to place violence. Language is furthermore often seen as antithetical to violence: violence is outburst that comes when the rational order of language fails. In fact, however, questions of language, and especially of speech, surface in every aspect of thinking about violence. Speech is a medium within which violence is performed, and is part of the modern machinery of war. It is also a medium through which systems of oppression and subordination are articulated and registered by groups and individuals, socially and psychically. Violence relies on speech for its justification, rationalization, and sustenance. At the same time, the rawness of violence challenges our fundamental faith in the representational and expressive capacities of language, in both destructive and creative ways. This intensive reading seminar explores the relation between speech and violence through scholarly and literary texts from a variety of humanistic fields and traditions.

Instructor(s): Itamar Francez Terms Offered: Winter

LING 23750. Language and Violence. 100 Units.

Instructor(s): Itamar Francez Terms Offered: Winter. Winter 2021

Equivalent Course(s): LING 33750

LING 23850. Sociolinguistic Typology. 100 Units.

Course Description TBD

Instructor(s): Jessica Kantarovich Terms Offered: Winter. Winter 2021

Equivalent Course(s): LING 33850

LING 23920. The Language of Deception and Humor. 100 Units.

In this course we will examine the language of deception and humor from a variety of perspectives: historical, developmental, neurological, and cross-cultural and in a variety of contexts: fiction, advertising, politics, courtship, and everyday conversation. We will focus on the (linguistic) knowledge and skills that underlie the use of humor and deception and on what sorts of things they are used to communicate.

Instructor(s): Jason Riggle Terms Offered: Winter

Equivalent Course(s): LING 33920, SIGN 26030

LING 26020. Truth. 100 Units.

Alternative facts" and "fake news" have fueled growing concerns that we are entering a "post-truth" society. But what exactly is truth, and why should we care about it? We will address this question over the course of this quarter by examining contemporary views on the role of truth in meaning and communication; challenges to these views from uncertainty and subjectivity; arguments for and against different conceptions of truth; expressions of skepticism about the value of truth; different categories of non-truth (lies vs. b.s.); and how all of these issues bear on the relation between truth, belief and decision making. Along the way, we will consider whether our claims to know certain things are always limited because they come from a particular perspective, and what value (if any) truth contributes to the well-lived life.

Instructor(s): Chris Kennedy Terms Offered: Spring

Equivalent Course(s): SIGN 26007

LING 26030. American Deaf Community: Language, Culture, and Society. 100 Units.

This course will focus on the Deaf community that uses American Sign Language (ASL) as a lens into the disciplines of linguistics, psychology, and cultural studies, and how the use of ASL contributes to individual identity and identity within society. In addition to these disciplinary foci, topics of Deaf literature and art forms will figure in the discussion and readings, which come from a variety of sources and include seminal works in the field from historical and contemporary perspectives.

Instructor(s): Diane Brentari Terms Offered: Winter

Equivalent Course(s): SIGN 26018

LING 26310. Contact Linguistics. 100 Units.

Course Description TBD

Instructor(s): Lenore Grenoble Terms Offered: Spring

Prerequisite(s): LING 20001 or consent of instructor

Equivalent Course(s): REES 23108, LING 36310

LING 26550. Battle in the Mind Fields. 100 Units.

The goal of this course is to better understand both the ruptures and the continuity that we find in the development of linguistics, psychology, and philosophy over the period from early in the 19th century up until around 1960. Among the topics we will look at are the emergence of 19th century linguistics through the methods developed to reconstruct Proto Indo-European, and at the same time, the emergence of two wings of German psychology (exemplified by Brentano and by Wundt); the transplanting of both of these disciplines to the United States at the end of the 19th century; the rise of behaviorism in psychology and its interaction with Gestalt psychology as German scholars were forced to leave their homes in Europe in the years before World War II; the development of an American style of linguistics associated with the Linguistic Society of America; and the interactions after World War II of cybernetics, cognitively-oriented psychology, and a new style of linguistic theory development, and the relationship between generative grammar and the work in phonology and syntax during the 1950s in the United States.

Instructor(s): John Goldsmith Terms Offered: Autumn

Equivalent Course(s): KNOW 40104, LING 36555

LING 26601. Intro Programming for Linguists. 100 Units.

In this class we will cover computational techniques for collecting linguistic data. We will also cover various methods for using algorithms to analyze that data and some basic computational theory to understand the complexity and efficiency of our algorithms. We will use the programming language Python and focus on real-world applications to gain experience in gathering, manipulating, and analyzing data from sources such as field-work, corpora, or experiments. No previous knowledge of programming is required.

Instructor(s): Jason Riggle

Equivalent Course(s): LING 36601

LING 27010. Psycholinguistics. 100 Units.

This is a survey course in the psychology of language. We will focus on issues related to language comprehension, language production, and language acquisition. The course will also train students on how to read primary literature and conduct original research studies.

Instructor(s): Eszter Ronai (Autumn), Jason Riggle (Spring) Terms Offered: Autumn Spring
Equivalent Course(s): PSYC 27010

LING 27980. Structure of Turkish. 100 Units.

Modern (Istanbul) Turkish is a language of the Altaic family and is the most widely spoken Turkic language with an estimated total of 88 million L1 and L2 speakers. In this course we will study the phonology, morphology, and syntax of Turkish and their interfaces in three 3-week modules. Turkish is an SOV language with pro-drop and displays an intricate phonological system of vowel and consonant harmonies as well as a highly agglutinative morphology. The course aims to familiarize students with a non-Indo-European linguistic system and to show how linguistic generalizations can be made differently if one studies a non-Western language. The course will be taught by a native speaker of Turkish and will also allow students to improve their Turkish although it is not a language course in the traditional sense. The language of instruction is English and no prior knowledge of Turkish is required.

Instructor(s): Emre Hakguder Terms Offered: Winter

Prerequisite(s): Preferably, the students must have taken some intro level linguistics courses prior to enrollment, however feel free to reach out to the instructor if you have questions about this prerequisite.

Note(s): This course fulfills the non-Indo-European language requirement for undergraduate students.

Equivalent Course(s): LING 37980

LING 28355. A Linguistic Introduction to Swahili I. 100 Units.

Spoken in ten countries of Eastern and Central Africa, Swahili has more speakers than any other language in the Bantu family, a group of more than 400 languages most prevalent in sub-equatorial Africa. Based on Swahili Grammar and Workbook, this course helps the students master key areas of the Swahili language in a fast yet enjoyable pace. Topics include sound and intonation patterns, noun class agreements, verb moods, and sentence structures. Additionally, this course provides important listening and expressive reading skills. For advanced students, historical interpretations are offered for exceptional patterns observed in Swahili, in relation with other Bantu languages. This is a general introduction course with no specific prerequisites.

Instructor(s): Fidèle Mpiranya Terms Offered: Winter

Equivalent Course(s): LING 38355

LING 28356. Linguistic Introduction to Swahili II. 100 Units.

Based on Swahili Grammar and Workbook, this course is a continuation of Linguistic Introduction to Swahili I. It addresses complex issues related to grammatical agreement, verb moods, noun and verb derivation, non-typical adjectives and adverbs, double object constructions, subordinate / coordinated clause constructions, and dialectal variation. Additionally, this course provides important listening and expressive reading skills. For advanced students, historical interpretations are offered for exceptional patterns observed in Swahili, in relation with other Bantu languages. This course allows fulfilling the non-Indo-European language requirement.

Instructor(s): Fidele Mpiranya Terms Offered: Spring

Equivalent Course(s): LING 38356

LING 28610. Computational Linguistics I. 100 Units.

This course is an introduction to topics at the intersection of computation and language. We will study computational linguistics from both scientific and engineering angles: the use of computational modeling to address scientific questions in linguistics and cognitive science, as well as the design of computational systems to solve engineering problems in natural language processing (NLP). The course will combine analysis and discussion of these approaches with training in the programming and mathematical foundations necessary to put these methods into practice. The course is designed to accommodate students both with and without prior programming experience. Our goal is for all students to leave the course able to engage with and evaluate research in cognitive/linguistic modeling and NLP, and to be able to implement intermediate-level computational models.

Instructor(s): Allyson Ettinger Terms Offered: Autumn

Prerequisite(s): At least two courses in linguistics or other cognitive science field (or permission of instructor)

Equivalent Course(s): CMSC 25610

LING 28620. Computational Linguistics II. 100 Units.

This is the second in a two-course sequence providing an introduction to topics at the intersection of computation and language, oriented toward linguists and cognitive scientists. In this quarter we will cover more advanced topics in cognitive/linguistic modeling and natural language processing (NLP), applying more complex programming and mathematical foundations. Our goal in this quarter is for students to leave the course able to implement advanced models and conduct novel research in cognitive/linguistic modeling and NLP.

Instructor(s): Allyson Ettinger Terms Offered: Winter

Prerequisite(s): Computational Linguistics I or permission of instructor

Equivalent Course(s): CMSC 25620, CMSC 35620, LING 38620

LING 28630. Geometric Models of Meaning. 100 Units.

This course is an introduction to geometric approaches to meaning in natural language. We will discuss methods which represent the meaning of linguistic entities (words, paragraphs, etc.) as objects in Euclidean space, and seek to find meaningful patterns in the relative positions of these objects. The course will motivate the approach, examine its strengths and limitations, and prepare students for further study in an active field of research.

Instructor(s): Daniel Edmiston Terms Offered: Autumn

Prerequisite(s): LING 20001

LING 28710. Undergraduate Experimental Methods. 100 Units.

Linguists use a variety of different tools to answer a diverse set of questions. This course will focus on the experimental methodologies linguists use in the laboratory, and will address all aspects of experimentation, including design, data collection and analysis. First, this course will provide a foundational overview to the different experimental paradigms from across the subfields of linguistics. Then, as a class, we will workshop a phonetics experiment using eye-tracking, with hands-on opportunities for students through each step of the process. By the end of the quarter, students will have the tools to propose and pilot an experiment of their own design in any area of linguistics.

Instructor(s): Jacob Phillips Terms Offered: Autumn

Prerequisite(s): LING 20001 & LING 20101 recommended; students who have not taken this course should contact the instructor.

LING 28750. Undergraduate Field Methods. 100 Units.

Course Description TBD

Instructor(s): Jessica Katarovich Terms Offered: Spring

American Sign Language Courses**ASLG 10100-10200-10300. American Sign Language I-II-III.**

American Sign Language is the language of the deaf in the United States and much of Canada. It is a full-fledged autonomous language, unrelated to English or other spoken languages. This introductory course teaches the student basic vocabulary and grammatical structure, as well as aspects of deaf culture.

ASLG 10100. American Sign Language-I. 100 Units.

American Sign Language is the language of the deaf in the United States and much of Canada. It is a full-fledged autonomous language, unrelated to English or other spoken languages. This introductory course teaches the student basic vocabulary and grammatical structure, as well as aspects of deaf culture.

Instructor(s): David Reinhart Terms Offered: Autumn

ASLG 10200. American Sign Language II. 100 Units.

American Sign Language is the language of the deaf in the United States and much of Canada. It is a full-fledged autonomous language, unrelated to English or other spoken languages. This introductory course teaches the student basic vocabulary and grammatical structure, as well as aspects of deaf culture.

Instructor(s): David Reinhart Terms Offered: Winter

Prerequisite(s): ASLG 10100

ASLG 10300. American Sign Language-III. 100 Units.

American Sign Language is the language of the deaf in the United States and much of Canada. It is a full-fledged autonomous language, unrelated to English or other spoken languages. This is the third course in the introductory series that teaches the student basic vocabulary and grammatical structure, as well as aspects of deaf culture.

Instructor(s): David Reinhart Terms Offered: Spring

Prerequisite(s): ASLG 10200

ASLG 10400-10500-10600. Intermediate American Sign Language I-II-III.

This course continues to increase grammatical structure, receptive and expressive skills, conversational skills, basic linguistic convergence, and knowledge of idioms. Field trip required.

ASLG 10400. Intermediate American Sign Language I. 100 Units.

This course continues to increase grammatical structure, receptive and expressive skills, conversational skills, basic linguistic convergence, and knowledge of idioms. Field trip required

Instructor(s): David Reinhart Terms Offered: Autumn

Prerequisite(s): ASLG 10300

ASLG 10500. Intermediate American Sign Language II. 100 Units.

This course continues to increase grammatical structure, receptive and expressive skills, conversational skills, basic linguistic convergence, and knowledge of idioms. Field trip required

Instructor(s): David Reinhart Terms Offered: Winter

Prerequisite(s): ASLG 10400

ASLG 10600. Intermediate American Sign Language III. 100 Units.

This is the third course in the Intermediate series. In this course we continue to increase grammatical structure, receptive and expressive skills, conversational skills, basic linguistic convergence, and knowledge of idioms. Field trip required.

Instructor(s): David Reinhart Terms Offered: Spring

Prerequisite(s): ASLG 10500

Modern Greek Courses**MOGK 10100-10200-10300. Elementary Modern Greek I-II-III.**

Sequence description not available.

MOGK 10100. Elementary Modern Greek I. 100 Units.

This course aims to develop elementary proficiency in spoken and written Modern Greek and to introduce elements of cultural knowledge. The course will familiarize the students with the Greek alphabet, Modern Greek pronunciation

rules and the basic morphology and syntax, with an emphasis on reading and conversational skills. The students will be able to communicate minimally with formulaic and rote utterances and produce words, phrases and lists.

Instructor(s): Stefanos Katsikas Terms Offered: Autumn

Equivalent Course(s): MOGK 30100

MOGK 10200. Elementary Modern Greek II. 100 Units.

This course offers a rapid review of the basic patterns of the language and expands the material presented in MOGK 10100/30100.

Instructor(s): Stefanos Katsikas Terms Offered: Winter

Prerequisite(s): MOGK 10100/30100 or consent of instructor

Equivalent Course(s): MOGK 30200

MOGK 10300. Elementary Modern Greek III. 100 Units.

This course expands on the material presented in MOGK 10200/30200, reviewing and elaborating the basic patterns of the language.

Instructor(s): Stefanos Katsikas Terms Offered: Spring

Prerequisite(s): MOGK 10200/30200 or consent of instructor

Equivalent Course(s): MOGK 30300

MOGK 20100-20200-20300. Intermediate Modern Greek I-II-III.

No sequence description available.

MOGK 20100. Intermediate Modern Greek I. 100 Units.

This course aims to enable students to attain conversational fluency and to become independent users of Modern Greek language.

Instructor(s): Stefanos Katsikas Terms Offered: Autumn

Prerequisite(s): MOGK 10300/30300

MOGK 20200. Intermediate Modern Greek II. 100 Units.

This course expands on the material presented in MOGK 20100, enabling students to speak about topics related to employment, current events and issues of public and community interest.

Instructor(s): Stefanos Katsikas Terms Offered: Winter

Prerequisite(s): MOGK 20100 or placement

MOGK 20300. Intermediate Modern Greek III. 100 Units.

This course aims to enable students to attain conversational fluency and to become independent users of the language who deal effectively and with a good deal of accuracy.

Instructor(s): Chrysanthi Koutsiviti Terms Offered: Spring

Prerequisite(s): MOGK 20200

MOGK 21001. Greece and the Balkans in the Age of Nationalism. 100 Units.

This course is an introduction to the history of Southeastern Europe since the 1790s. Each week's work will examine a key topic in the Balkan affairs through a combination of lectures, readings and discussion of associated issues. The class will not follow the history of any one Balkan country comprehensively. Instead, the course will direct students' attention to relevant developments which address questions like these: 1. How does Balkan history related to European history? 2. What is a nation, a nationality, and an ethnic group? 3. What has nationalism meant in the Balkans? The course emphasizes the history of Greece, Albania, Bulgaria, Romania and Yugoslavia, with some attention to events in the Ottoman Empire, the Habsburg Monarchy and Hungary as appropriate. The course aims to offer a historical background that will enable students to better understand the recent history of Greece and the Balkans.

Instructor(s): Stefanos Katsikas Terms Offered: Spring

Swahili Courses

SWAH 25200-25300-25400. Swahili I-II-III.

No sequence description available.

SWAH 25200. Swahili I. 100 Units.

Swahili is the most popular language of Sub-Saharan Africa, spoken in most countries of Eastern and Central Africa by more than 50 million people. Swahili is characterized by the typical complex Bantu structure. However, it is particularly easy to pronounce and fast learned. The Elementary Swahili series is designed to help students acquire communicative competence in Swahili and a basic understanding of its structures. The course presents basic phonological, grammatical, and syntactic patterns of Kiswahili. Through a variety of exercises, students develop communicative functionality in listening, speaking, reading and writing. Emphasis is put on dialogues and role-plays, individual and group presentations, and the use of audiovisual and web-based resources. Swahili culture and African culture in general are an important component of the course. At the end of the elementary course series, the students are able to communicate efficiently in everyday life situations, write and present short descriptive notes about elementary pieces of verbal creation (documentaries and video series in Swahili). This course allows fulfilling the non-Indo-European language requirement.

Instructor(s): Fidele Mpiranya Terms Offered: Autumn

Equivalent Course(s): SWAH 35200

SWAH 25300. Swahili II. 100 Units.

SWAH 25400. Swahili III. 100 Units.

Swahili is the most popular language of Sub-Saharan Africa, spoken in most countries of Eastern and Central Africa by more than 50 million people. Swahili is characterized by the typical complex Bantu structure. However, it is particularly easy to pronounce and fast learned. The Elementary Swahili series is designed to help students acquire communicative competence in Swahili and a basic understanding of its structures. The course presents basic phonological, grammatical, and syntactic patterns of Kiswahili. Through a variety of exercises, students develop communicative functionality in listening, speaking, reading and writing. Emphasis is put on dialogues and role-plays, individual and group presentations, and the use of audiovisual and web-based resources. Swahili culture and African culture in general are an important component of the course. At the end of the elementary course series, the students are able to communicate efficiently in everyday life situations, write and present short descriptive notes about elementary pieces of verbal creation (documentaries and video series in Swahili). This course allows fulfilling the non-Indo-European language requirement.

Instructor(s): F. Mpiranya Terms Offered: Spring

Prerequisite(s): SWAH 25300 or consent of instructor

Equivalent Course(s): SWAH 35400

Mathematics

Department Website: <http://math.uchicago.edu>

Program of Study

The Department of Mathematics provides an environment of research and comprehensive instruction in mathematics and applied mathematics at both undergraduate and graduate levels. Both a BA and a BS program in mathematics are offered, including a BS degree in applied mathematics and a BS degree in mathematics with a specialization in economics. Students in other fields of study may also complete a minor in mathematics; information follows the description of the major.

The requirements for a degree in mathematics or in applied mathematics express the educational intent of the Department of Mathematics; they are drawn with an eye toward the cumulative character of an education based in mathematics, the present emerging state of mathematics, and the scholarly and professional prerequisites of an academic career in mathematics.

Requirements for each bachelor's degree look to the advancement of students' general education in modern mathematics and their knowledge of its relation with the other sciences (BS) or with the other arts (BA).

Descriptions of the detailed requirements that give meaning to these educational intentions follow. Students should understand that any particular degree requirement can be modified if persuasive reasons are presented to the department; petitions to modify requirements are submitted in person to the director of undergraduate studies or to one of the departmental counselors. Students should note that only one undergraduate degree may be earned from the Department of Mathematics.

Placement

At what level does an entering student begin mathematics at the University of Chicago? The College and the Department of Mathematics offer several placement exams to help determine the correct starting point for all entering students. During the summer and through Orientation Week, there are three such exams:

- The Online Mathematics Placement Test (must be taken by all entering students)
- The Higher-Level Mathematics Placement Exam
- The Calculus Accreditation Exam

The **Online Mathematics Placement Test** must be taken (once) by **all** entering students in the summer prior to matriculation. The other two exams are offered during Orientation Week, and students are invited to take one or the other on the basis of their success on the Online Mathematics Placement Test.

Solely on the basis of the Online Mathematics Placement Test, the following mathematics courses are the possible placements for each student:

- MATH 11200 Studies In Mathematics I
- MATH 13100 Elem Functions and Calculus I
- MATH 15100 Calculus I
- MATH 15200 Calculus II
- MATH 15300 Calculus III

For physical sciences students interested in the MATH 18300-18400-18500-18600 Mathematical Methods in the Physical Sciences I-II-III-IV sequence of courses, success on the Online Mathematics Placement Test can also earn an invitation to begin MATH 18300 Mathematical Methods in the Physical Sciences I. Specifically, all students who have placement into MATH 15300 Calculus III and some students with placement into MATH 15200 Calculus II will earn this invitation.

Additionally, students who receive a sufficiently high score on the Online Mathematics Placement Test, as well as students who earn scores of 5 on the AP Calculus BC exam or 7 on the International Baccalaureate HL exam, will also receive an invitation to enroll in MATH 16100 Honors Calculus I or MATH 16110 Honors Calculus I (IBL). These are the first courses in the MATH 16100-16200-16300 Honors Calculus I-II-III and MATH 16110-16210-16310 Honors Calculus I (IBL); Honors Calculus II (IBL); Honors Calculus III (IBL) sequences, which are highly theoretical courses that best prepare students for further study in pure mathematics, although they are taken by many students from all disciplines and not just mathematics majors. Students who begin in MATH 16100 Honors Calculus I or MATH 16110 Honors Calculus I (IBL) forgo credit for MATH 15100 Calculus I and/or MATH 15200 Calculus II.

On the basis of the Online Mathematics Placement Test results, students may also be invited to take one of the on-campus exams. The **Calculus Accreditation Exam** is for students who do not plan to take further mathematics at the University of Chicago but who wish to earn credit for MATH 15100-15200 Calculus I-II. The **Higher-Level Mathematics Placement Exam** is for students who would like to begin their mathematics coursework at Chicago in a higher-level course than MATH 15300 Calculus III. On the basis of this exam, a student may receive placement into:

- MATH 15910 Introduction to Proofs in Analysis
- MATH 19520 Mathematical Methods for Social Sciences
- MATH 19620 Linear Algebra
- MATH 20250 Abstract Linear Algebra
- MATH 20300 Analysis in Rn I

A small number of students each year receive an invitation to enroll in MATH 20700 Honors Analysis in Rn I. Admission to this course is by invitation only to those first-year students with superior performance on the Higher-Level Mathematics Placement Exam or to those sophomores who receive a strong recommendation from their instructor in MATH 16100-16200-16300 Honors Calculus I-II-III or MATH 16110-16210-16310 Honors Calculus I (IBL); Honors Calculus II (IBL); Honors Calculus III (IBL). Students who are granted three quarters of calculus placement on the basis of the Higher-Level Mathematics Placement Exam and who do not qualify for admission to MATH 20700 Honors Analysis in Rn I will place into MATH 15910 Introduction to Proofs in Analysis or MATH 20250 Abstract Linear Algebra/MATH 20300 Analysis in Rn I. (This former option includes the possible starting points of MATH 19520 Mathematical Methods for Social Sciences or MATH 19620 Linear Algebra.) Such students may also consult with one of the departmental counselors about the option of beginning with MATH 16100 Honors Calculus I/MATH 16110 Honors Calculus I (IBL) so that they would be eligible for admission to Honors Analysis the following year.

Students who submit a score of 5 on the Calculus AB Advanced Placement exam in mathematics receive placement into MATH 15100 Calculus I. Students who submit scores of 4 or 5 on the AP Calculus BC exam or a 7 on the International Baccalaureate Higher Level Calculus exam receive placement into MATH 15200 Calculus II. Currently no course credit or placement is offered in the Department of Mathematics at the University of Chicago for British A-level or O-level examinations.

Program Requirements

Undergraduate Programs

Four bachelor's degrees are available in the Department of Mathematics: the BA in mathematics, the BS in mathematics, the BS in applied mathematics, and the BS in mathematics with specialization in economics. Programs qualifying students for the degree of BA provide more elective freedom. Programs qualifying students for the degrees of BS require more emphasis in the physical sciences, while the BS in mathematics with specialization in economics has its own set of specialized courses with more electives in economics in place of electives in the physical sciences. All degree programs, whether qualifying students for a degree in mathematics or in applied mathematics, require fulfillment of the College's general education requirements. The general education sequence in the physical sciences must be selected from either first-year chemistry or first-year physics.

Except for the BS in mathematics with specialization in economics, each degree requires at least five courses outside mathematics (detailed descriptions follow for each degree). These courses must be within the Physical Sciences Collegiate Division (PSCD) or from Computational Neuroscience (CPNS). One of these courses must complete the three-quarter sequence in basic chemistry or basic physics. At least two of these courses must be from a single department and all must be chosen from among Astronomy (20000 or above), Chemistry, Computer Science (12000s or above), Physics (12000s or above), Geophysical Sciences, Statistics (22000 or above), Computational Neuroscience, or Molecular Engineering. Graduate courses from these departments may also be used to fulfill these requirements. Please note in particular the different requirements outside of mathematics described below in the degree program for the BS in mathematics with specialization in economics.

Degree Programs in Mathematics

Students who are majoring in mathematics are required to complete: a 10000-level sequence in calculus (or to demonstrate equivalent competence on the higher-level mathematics placement test); either MATH 16300 Honors Calculus III or MATH 16310 Honors Calculus III (IBL) as the third quarter of the calculus sequence or MATH 15910 Introduction to Proofs in Analysis; the linear algebra course MATH 20250 Abstract Linear Algebra; a three-quarter sequence in analysis (MATH 20300-20400-20500 Analysis in Rn I-II-III or MATH 20310-20410-20510 Analysis in Rn I (accelerated); Analysis in Rn II (accelerated); Analysis in Rn III (accelerated) or MATH 20700-20800-20900 Honors Analysis in Rn I-II-III); and one quarter of an algebra sequence (MATH 25400-25500 Basic Algebra I-II or MATH 25700-25800-25900 Honors Basic Algebra I-II-III). Students may not use both MATH 15910 Introduction to Proofs in Analysis and (MATH 16300 Honors Calculus III/MATH 16310 Honors Calculus III (IBL)) to meet major or minor requirements. For students whose first mathematics course at the University of Chicago is MATH 20700 Honors Analysis in Rn I, the MATH 15910 Introduction to Proofs in Analysis/MATH 16300 Honors Calculus III/MATH 16310 Honors Calculus III (IBL) requirement is waived. For students who complete MATH 20700 Honors Analysis in Rn I, the MATH 20250 Abstract Linear Algebra requirement is waived, but the student must then take an additional course from the List of Approved Courses.

Candidates for the BA and BS in mathematics take at least one course in basic algebra. BA candidates may opt for the first quarter of either the regular or the honors sequence (or MATH 25700-25800-25900 Honors Basic Algebra I-II-III), whereas candidates for the BS degree must take the first two quarters of one of the two sequences. MATH 25700-25800-25900 Honors Basic Algebra I-II-III is designated as an honors version of Basic Algebra. Registration for this course is the option of the individual student, but consultation with one of the departmental counselors is strongly advised.

The remaining mathematics courses needed in the programs (three for the BA, two for the BS) must be selected, with due regard for prerequisites, from the following list of approved mathematics courses. Note that STAT 25100 Introduction

to Mathematical Probability or STAT 25150 Introduction to Mathematical Probability-A also meet the requirement. BA candidates may include MATH 25500 Basic Algebra II or MATH 25800 Honors Basic Algebra II. Mathematics courses in the Paris Mathematics program each Spring Quarter may also be used to meet this requirement.

List of Approved Courses

MATH 17500	Basic Number Theory	100
MATH 17600	Basic Geometry	100
MATH 21100	Basic Numerical Analysis	100
MATH 21200	Advanced Numerical Analysis	100
MATH 23500	Markov Chains, Martingales, and Brownian Motion	100
MATH 23700	Introduction to Modelling	100
MATH 24100	Topics in Geometry	100
MATH 24200	Algebraic Number Theory	100
MATH 24300	Intro To Algebraic Curves	100
MATH 24400	Introduction to Algebraic Geometry	100
MATH 25900	Honors Basic Algebra III	100
MATH 26200	Point-Set Topology	100
MATH 26300	Introduction to Algebraic Topology	100
MATH 26500	Introduction to Riemannian Geometry	100
MATH 26700	Introduction to Representation Theory of Finite Groups	100
MATH 26800	Introduction to Commutative Algebra	100
MATH 27000	Basic Complex Variables	100
MATH 27100	Measure and Integration	100
MATH 27200	Basic Functional Analysis	100
MATH 27300	Basic Theory of Ordinary Differential Equations	100
MATH 27400	Introduction to Differentiable Manifolds and Integration on Manifolds	100
MATH 27500	Basic Theory of Partial Differential Equations	100
MATH 27600	Dynamical Systems	100
MATH 27700	Mathematical Logic I	100
MATH 27800	Mathematical Logic II	100
MATH 28000	Introduction to Formal Languages	100
MATH 28100	Introduction to Complexity Theory	100
MATH 28410	Honors Combinatorics	100
MATH 29700	Proseminar in Mathematics *	100
MATH 30200	Computability Theory I	100
MATH 30300	Computability Theory II	100
MATH 30900	Model Theory I	100
MATH 31000	Model Theory II	100
MATH 31200	Analysis I	100
MATH 31300	Analysis II	100
MATH 31400	Analysis III	100
MATH 31700	Topology and Geometry I	100
MATH 31800	Topology and Geometry II	100
MATH 31900	Topology and Geometry III	100
MATH 32500	Algebra I	100
MATH 32600	Algebra II	100
MATH 32700	Algebra III	100
STAT 25100	Introduction to Mathematical Probability	100
STAT 25150	Introduction to Mathematical Probability-A	100

* as approved

No course from any professional school or program—including the University of Chicago Booth School of Business, the University of Chicago Harris School of Public Policy, Toyota Technological Institute at Chicago, and Financial Mathematics—may be used to satisfy requirements for the undergraduate degree in mathematics.

BS candidates are further required to select a minor field, which consists of three additional courses that are outside the Department of Mathematics and either are within the same department in the Physical Sciences Collegiate Division (PSCD) or are among Computational Neuroscience (CPNS) courses. These courses must be chosen in consultation with one of the departmental counselors.

Summaries of Requirements

Summary of Requirements: Mathematics BA

GENERAL EDUCATION		
One of the following sequences:		200
CHEM 10100 & CHEM 10200	Introductory General Chemistry I and Introductory General Chemistry II	
CHEM 11100-11200	Comprehensive General Chemistry I-II (or equivalent) *	
PHYS 12100-12200	General Physics I-II (or higher) * +	
One of the following sequences:		200

Total Units	1700

* Credit may be granted by examination.

** Students who complete (or receive credit for) MATH 13300 Elementary Functions and Calculus III or MATH 15300 Calculus III must use these courses as general electives, and MATH 15910 Introduction to Proofs in Analysis must be completed for the major.

*** May include ASTR 13300 Introduction to Astrophysics, BIOS 24231 Methods in Computational Neuroscience and BIOS 24232 Computational Approaches to Cognitive Neuroscience, or AP credit for STAT 22000 Statistical Methods and Applications, CHEM 11100 Comprehensive General Chemistry I, and/or PHYS 12100-12200 General Physics I-II. May include any CMSC course numbered 12100 or above. May not include any PHSC course.

+ The sequence PHYS 13100-13200 Mechanics; Electricity and Magnetism is recommended for mathematics majors.

^ Students who complete MATH 20700 Honors Analysis in Rn I will not be required to take MATH 20250 Abstract Linear Algebra; in its place they will take an additional course from the List of Approved Courses.

Degree Program in Applied Mathematics

Candidates for the BS in applied mathematics all take prescribed courses in numerical analysis, algebra, complex variables, ordinary differential equations, and partial differential equations. In addition, candidates are required to select, in consultation with one of the departmental counselors, a secondary field, which consists of three additional courses from a single department that is outside the Department of Mathematics but within the Physical Sciences Collegiate Division or among Computational Neuroscience (CPNS) courses.

Summary of Requirements: BS in Applied Mathematics

Degree Program in Mathematics with Specialization in Economics

This program is a version of the BS in mathematics. The BS degree is in mathematics with the designation 'with specialization in economics' included on the final transcript. Candidates are required to complete a yearlong sequence in calculus, MATH 15910 Introduction to Proofs in Analysis if the calculus sequence did not terminate with MATH 16300 Honors Calculus III/MATH 16310 Honors Calculus III (IBL), the one-quarter course MATH 20250 Abstract Linear Algebra, a yearlong sequence in analysis (MATH 20300-20400-20500 Analysis in Rn I-II-III or MATH 20310-20410-20510 Analysis in Rn I (accelerated); Analysis in Rn II (accelerated); Analysis in Rn III (accelerated) or MATH 20700-20800-20900 Honors Analysis in Rn I-II-III), and one quarter of abstract algebra (MATH 25400 Basic Algebra I or MATH 25700 Honors Basic Algebra I), and earn a grade of at least C- in each course. Students must also take STAT 25100 Introduction to Mathematical Probability or STAT 25150 Introduction to Mathematical Probability-A. The remaining two mathematics courses must be among the following five: MATH 27000 Basic Complex Variables, MATH 27100 Measure and Integration, MATH 27200 Basic Functional Analysis, MATH 27300 Basic Theory of Ordinary Differential Equations, or MATH 23500 Markov Chains, Martingales, and Brownian Motion. A C average or higher must be earned in these two courses.

In addition to the third quarter of basic chemistry or basic physics, the eight courses required outside the Department of Mathematics must include STAT 23400 Statistical Models and Methods or STAT 24400 Statistical Theory and Methods I. The remaining seven courses should be in the Department of Economics and must include ECON 20000-20100-20200 The Elements of Economic Analysis I-II-III or ECON 20010-ECON 20110-ECON 20210 The Elements of Economic Analysis: Honors I-II-III and either ECON 20900 Econometrics: Honors or ECON 21000 Econometrics A. The remaining two courses may be chosen from any undergraduate economics course numbered higher than ECON 20210 The Elements of Economic Analysis III Honors. A University of Chicago Booth School of Business course may be considered for elective credit if the course requires the equivalent of ECON 20100 as a prerequisite and is numbered as a Chicago Booth 40000 or higher course. Additionally, the course needs to pertain to the application of economic theory to a course subject that is not offered by the Department of Economics. Courses such as accounting, investments, and entrepreneurship will not be considered for economics elective credit. Consideration for elective credit must be done by petition before a student registers for the course. There will be no retroactive consideration for credit. Students must earn a grade of C or higher in each course taken in economics to be eligible for this degree.

It is recommended that students considering graduate work in economics use some of their electives to include at least one programming course (CMSC 15100 Introduction to Computer Science I is strongly recommended) and an additional course in statistics (STAT 24400-24500 Statistical Theory and Methods I-II or STAT 24410 Statistical Theory and Methods Ia and STAT 24500 Statistical Theory and Methods II are appropriate two-quarter sequences). Students planning to apply to graduate economics programs are strongly encouraged to meet with one of the economics undergraduate program directors before the beginning of their third year.

Summary of Requirements: BS in Mathematics with Specialization in Economics

GENERAL EDUCATION

One of the following sequences:	200
CHEM 10100 & CHEM 10200	Introductory General Chemistry I and Introductory General Chemistry II
CHEM 11100-11200	Comprehensive General Chemistry I-II (or equivalent) *
PHYS 12100-12200	General Physics I-II (or higher) * +
One of the following sequences:	200

One of the following:		100
ECON 21020	Econometrics	
ECON 21030	Econometrics - Honors	
Three Economics courses numbered higher than 20210		300
Total Units		1800

- * Credit may be granted by examination.
- ** See restrictions on certain courses listed under earlier summary.
- + The sequence PHYS 13100-13200 Mechanics; Electricity and Magnetism is recommended for mathematics majors.

Grading

Subject to College grading requirements and grading requirements for the major and with consent of instructor, students (except students who are majoring in mathematics or applied mathematics) may take any mathematics course beyond the second quarter of calculus for either a quality grade or for P/F grading. A Pass grade is given only for work of C- quality or higher.

All courses taken to meet requirements in the mathematics major must be taken for quality grades. A grade of C- or higher must be earned in each calculus, analysis, or algebra course; and an overall grade average of C or higher must be earned in the remaining mathematics courses that a student uses to meet requirements for the major. Students must earn a grade of C or higher in each course taken in economics for the degree in mathematics with a specialization in economics. Mathematics or applied mathematics students may take any 20000-level mathematics courses elected beyond program requirements for P/F grading.

Incompletes are given in the Department of Mathematics only to those students who have completed most of the course work at passing quality and who are unable to complete some small portion of the course work by the end of the quarter. Arrangements are made between the instructor and the student.

Honors

The BA or BS with honors is awarded to students who, while meeting requirements for one of the mathematics degrees, also meet the following requirements: (1) a GPA of 3.25 or higher in mathematics courses and a 3.0 or higher overall; (2) no grade below C- and no grade of W in any mathematics course; (3) completion of at least one honors sequence (either MATH 20700-20800-20900 Honors Analysis in Rn I-II-III or MATH 25700-25800-25900 Honors Basic Algebra I-II-III) with grades of B- or higher in each quarter; and (4) completion with a grade of B- or higher of at least five mathematics courses chosen from the list that follows so that at least one course comes from each group (i.e., algebra, analysis, and topology). No course may be used to satisfy both requirement (3) and requirement (4). If both honors sequences are taken, one sequence may be used for requirement (3) and one sequence may be used for up to three of the five courses in requirement (4).

Algebra Courses

MATH 24100	Topics in Geometry	100
MATH 24200	Algebraic Number Theory	100
MATH 24300	Intro To Algebraic Curves	100
MATH 24400	Introduction to Algebraic Geometry	100
MATH 25700	Honors Basic Algebra I	100
MATH 25800	Honors Basic Algebra II	100
MATH 25900	Honors Basic Algebra III	100
MATH 26700	Introduction to Representation Theory of Finite Groups	100
MATH 26800	Introduction to Commutative Algebra	100
MATH 27700	Mathematical Logic I	100

MATH 27800	Mathematical Logic II	100
MATH 28410	Honors Combinatorics	100
MATH 32500	Algebra I	100
MATH 32600	Algebra II	100
MATH 32700	Algebra III	100
Analysis Courses		
MATH 20700	Honors Analysis in Rn I	100
MATH 20800	Honors Analysis in Rn II	100
MATH 20900	Honors Analysis in Rn III	100
MATH 23500	Markov Chains, Martingales, and Brownian Motion	100
MATH 27000	Basic Complex Variables	100
MATH 27100	Measure and Integration	100
MATH 27200	Basic Functional Analysis	100
MATH 27300	Basic Theory of Ordinary Differential Equations	100
MATH 27500	Basic Theory of Partial Differential Equations	100
MATH 27600	Dynamical Systems	100
MATH 31200	Analysis I	100
MATH 31300	Analysis II	100
MATH 31400	Analysis III	100
Topology Courses		
MATH 26200	Point-Set Topology	100
MATH 26300	Introduction to Algebraic Topology	100
MATH 26500	Introduction to Riemannian Geometry	100
MATH 27400	Introduction to Differentiable Manifolds and Integration on Manifolds	100
MATH 31700	Topology and Geometry I	100
MATH 31800	Topology and Geometry II	100
MATH 31900	Topology and Geometry III	100

With departmental approval, MATH 29700 Proseminar in Mathematics, or any course(s) in the Paris Mathematics Program, may be chosen so that it falls in one of the three groups. One of the three Paris courses each year will be designated as a replacement for MATH 25500 Basic Algebra II for students wishing to complete the BS degree. Additionally, one of the three Paris courses each year will be designated as a replacement for MATH 25900 Honors Basic Algebra III for candidates who are working toward graduation with honors. Courses taken for the honors requirements (3) and (4) also may be counted toward courses taken to meet requirements for the major. Students who wish to be considered for honors should consult with one of the departmental counselors no later than Spring Quarter of their third year.

Minor Program in Mathematics

The minor in mathematics requires a total of six or seven courses in mathematics, depending on whether or not MATH 15910 Introduction to Proofs in Analysis, MATH 16300 Honors Calculus III or MATH 16310 Honors Calculus III (IBL) is required in another degree program. If it is not used elsewhere, MATH 15910 Introduction to Proofs in Analysis, MATH 16300 Honors Calculus III or MATH 16310 Honors Calculus III (IBL) must be included in the minor, for a total of seven courses. The remaining six courses must include the linear algebra course MATH 20250 Abstract Linear Algebra, a three-course sequence in analysis MATH 20300-20400-20500 Analysis in Rn I-II-III or MATH 20310-20410-20510 Analysis in Rn I (accelerated); Analysis in Rn II (accelerated); Analysis in Rn III (accelerated) or MATH 20700-20800-20900 Honors Analysis in Rn I-II-III, and the first course in one of the algebra sequences (MATH 25400 Basic Algebra I or MATH 25700 Honors Basic Algebra I). The sixth course may be chosen from either the second course in one of the algebra sequences (MATH 25500 Basic Algebra II or MATH 25800 Honors Basic Algebra II) or a mathematics course numbered 23000 or higher chosen in consultation with the director of undergraduate studies or one of the departmental counselors. A student who completes MATH 20700 Honors Analysis in Rn I is not obligated to take MATH 20250 Abstract Linear Algebra, but should instead select another mathematics course numbered 23000 or higher. Under special circumstances and to avoid double counting, students may also use mathematics courses numbered 23000 or higher to substitute for up to two quarters of analysis or algebra, if these are required in another degree program.

No course in the minor can be double counted with the student's major(s) or with other minors; nor can it be counted toward general education requirements. Students must earn a grade of at least C- in each of the courses in the mathematics minor. More than one-half of the requirements for a minor must be met by registering for courses bearing University of Chicago course numbers.

Students must meet with the director of undergraduate studies or one of the departmental counselors by Spring Quarter of their third year to declare their intention to complete a minor program in mathematics and to obtain approval for the

minor on a form obtained from their College adviser. Courses for the minor are chosen in consultation with the director of undergraduate studies or one of the departmental counselors.

Paris Mathematics Program (<http://study-abroad.uchicago.edu/programs/paris-mathematics/>)

Each Spring Quarter, the Department of Mathematics offers a study abroad opportunity for students to take upper-level mathematics electives at the University's Center in Paris. Departmental faculty offer three successive three-week courses in specialized topics, and students also take a French language course from local French faculty. Students should have completed one of the analysis sequences (MATH 20300-20400-20500 Analysis in Rn I-II-III or MATH 20310-20410-20510 Analysis in Rn I (accelerated); Analysis in Rn II (accelerated); Analysis in Rn III (accelerated) or MATH 20700-20800-20900 Honors Analysis in Rn I-II-III) and at least one quarter of one of the algebra sequences (MATH 25400 Basic Algebra I or MATH 25700 Honors Basic Algebra I) before attending the Paris program. First round applications are due the prior Spring Quarter and should be submitted to the Study Abroad office. If the program does not reach maximum capacity, second round applications will also be accepted in the Autumn Quarter.

Joint Degree Programs

BA/MS or BS/MS in Mathematics

Qualified College students may receive both a bachelor's and a master's degree in mathematics concurrently at the end of their studies in the College. Qualification consists of satisfying all requirements of both degrees in mathematics. To be eligible for the joint program, a student must begin MATH 20700 Honors Analysis in Rn I in the Autumn Quarter of the student's first year. By following a program of prescribed undergraduate course sequences in mathematics and succeeding in all courses with grades no lower than A-, the student becomes eligible to enroll in graduate courses in mathematics in the student's third year. While only a few students complete the joint bachelor's/master's program, many undergraduates enroll in graduate-level mathematics courses. Admission to all mathematics graduate courses requires prior written consent of the director of undergraduate studies. This consent is based on an assessment by the director that it is in the student's best interest to enroll in the graduate course.

Students should submit their application for the joint program to one of the co-directors of undergraduate studies in the Department of Mathematics as soon as possible, but no later than the Winter Quarter of their third year.

Mathematics Courses

MATH 11200-11300. Studies in Mathematics I-II.

MATH 11200 AND 11300 cover the basic conceptual foundations of mathematics by examining the ideas of number and symmetry. MATH 11200 addresses number theory, including a study of the rules of arithmetic, integral domains, primes and divisibility, congruences, and modular arithmetic. MATH 11300's main topic is symmetry and geometry, including a study of polygons, Euclidean construction, polyhedra, group theory, and topology. These courses emphasize the understanding of ideas and the ability to express them through rigorous mathematical arguments. While students may take MATH 11300 without having taken MATH 11200, it is recommended that MATH 11200 be taken first. Either course in this sequence meets the general education requirement in mathematical sciences. These courses are at the level of difficulty of the MATH 13100-13200-13300 calculus sequence.

MATH 11200. Studies In Mathematics I. 100 Units.

MATH 11200 AND 11300 cover the basic conceptual foundations of mathematics by examining the ideas of number and symmetry. MATH 11200 addresses number theory, including a study of the rules of arithmetic, integral domains, primes and divisibility, congruences, and modular arithmetic. These courses emphasize the understanding of ideas and the ability to express them through rigorous mathematical arguments. While students may take MATH 11300 without having taken MATH 11200, it is recommended that MATH 11200 be taken first. Either course in this sequence meets the general education requirement in mathematical sciences. These courses are at the level of difficulty of the MATH 13100-13200-13300 calculus sequence.

Terms Offered: Autumn

MATH 11300. Studies In Mathematics-2. 100 Units.

MATH 11200 AND 11300 cover the basic conceptual foundations of mathematics by examining the ideas of number and symmetry. MATH 11200 addresses number theory, including a study of the rules of arithmetic, integral domains, primes and divisibility, congruences, and modular arithmetic. These courses emphasize the understanding of ideas and the ability to express them through rigorous mathematical arguments. While students may take MATH 11300 without having taken MATH 11200, it is recommended that MATH 11200 be taken first. Either course in this sequence meets the general education requirement in mathematical sciences. These courses are at the level of difficulty of the MATH 13100-13200-13300 calculus sequence.

Terms Offered: Winter

Prerequisite(s): MATH 11200 recommended

MATH 13100-13200-13300. Elementary Functions and Calculus I-II-III.

MATH 13100-13200-13300 is a sequence in calculus for students who need some precalculus reinforcement. The sequence completes the necessary background and covers basic calculus in three quarters. This is achieved through three regular one-hour class meetings and two mandatory one-and-one-half-hour tutorial sessions each week. A class is divided into tutorial groups of about eight students each, and these meet with an undergraduate junior tutor for problem solving related to the course. Students completing MATH 13100-13200-13300 have a command of calculus equivalent to that obtained in MATH 15100-15200-15300. Students may not take the first two quarters of this sequence for P/F grading. MATH 13100-13200 meets the general education requirement in the mathematical sciences.

MATH 13100. Elem Functions and Calculus I. 100 Units.

MATH 13100 gives a careful treatment of limits, the continuity and differentiability of algebraic functions, and applications of the derivative.

Terms Offered: Autumn Winter

Prerequisite(s): Invitation only, based on adequate performance on the mathematics placement test

MATH 13200. Elem Functions and Calculus II. 100 Units.

Topics examined in MATH 13200 include applications of differentiation; exponential, logarithmic, and trigonometric functions; the definite integral and the Fundamental Theorem of Calculus, and applications of the integral.

Terms Offered: Spring Winter

Prerequisite(s): MATH 13100

MATH 13300. Elementary Functions and Calculus III. 100 Units.

In MATH 13300, subjects include more applications of the definite integral, an introduction to infinite sequences and series and Taylor expansions. MATH 13300 also includes an introduction to multivariable calculus, such as functions of several real variables, partial derivatives, gradients, and the total derivative, and integration of functions of several variables.

Terms Offered: Spring

Prerequisite(s): MATH 13200

MATH 15100-15200-15300. Calculus I-II-III.

This is the regular calculus sequence in the department. Students entering this sequence are to have mastered appropriate precalculus material and, in many cases, have had some previous experience with calculus in high school or elsewhere. All Autumn Quarter offerings of MATH 15100, 15200, and 15300 begin with a rigorous treatment of limits and limit proofs. Students may not take the first two quarters of this sequence for P/F grading. MATH 15100-15200 meets the general education requirement in mathematical sciences.

MATH 15100. Calculus I. 100 Units.

This is the first course in the regular calculus sequence in the department. Students entering this sequence are to have mastered appropriate precalculus material and, in many cases, have had some previous experience with calculus in high school or elsewhere. MATH 15100 undertakes a careful treatment of limits, the differentiation of algebraic and transcendental functions, applications of differentiation, and the Mean Value Theorem. All Autumn Quarter offerings of MATH 15100 begin with a rigorous treatment of limits and limit proofs. Students may not take the first two quarters of this sequence for P/F grading. MATH 15100-15200 meets the general education requirement in mathematical sciences.

Terms Offered: Autumn

Prerequisite(s): Superior performance on the mathematics placement test

MATH 15200. Calculus II. 100 Units.

This is the second course in the regular calculus sequence in the department. Students entering this sequence are to have mastered appropriate precalculus material and, in many cases, have had some previous experience with calculus in high school or elsewhere. MATH 15200 covers integration, techniques of integration, applications of the integral, and transcendental functions. All Autumn Quarter offerings of MATH 15200 begin with a rigorous treatment of limits and limit proofs. Students may not take the first two quarters of this sequence for P/F grading. MATH 15100-15200 meets the general education requirement in mathematical sciences.

Terms Offered: Autumn Winter

Prerequisite(s): MATH 15100; or placement based on the mathematics placement test(s) or appropriate AP score or IB score

MATH 15300. Calculus III. 100 Units.

This is the third course in the regular calculus sequence in the department. MATH 15300 covers applications of integration, an introduction to infinite sequences and series and Taylor expansions, and an introduction to multivariable calculus including functions of several real variables, partial derivatives, gradients, and the total derivative, and integration of functions of several variables. All Autumn Quarter offerings of MATH 15300 begin with a rigorous treatment of limits and limit proofs.

Terms Offered: Autumn Spring Winter

Prerequisite(s): MATH 15200; or placement based on the mathematics placement test(s)

MATH 15910. Introduction to Proofs in Analysis. 100 Units.

This course is intended for students who are making the transition from MATH 13300 or 15300 to MATH 20250 and MATH 20300, or for students who need more preparation in learning to read and write proofs. This course covers the fundamentals of theoretical mathematics and prepares students for upper-level mathematics courses beginning with MATH 20250 and MATH 20300. Topics include the axioms for the real numbers, completeness and the least upper bound property, the topology of the real line, and sequences and series of real and complex numbers. Students who are majoring or minoring in mathematics may not use both MATH 15910 and MATH 16300 to meet program requirements.

Terms Offered: Autumn Spring Winter

Prerequisite(s): MATH 15300 or MATH 13300 or superior performance on the mathematics placement test(s)

MATH 16100-16200-16300. Honors Calculus I-II-III.

MATH 16100-16200-16300 is an honors version of MATH 15100-15200-15300. A student with a strong background in the problem-solving aspects of one-variable calculus may, by suitable achievement on the Calculus Accreditation Exam, be invited to register for MATH 16100-16200-16300. This sequence emphasizes the theoretical aspects of one-variable analysis.

and, in particular, the consequences of completeness in the real number system. MATH 16300 also includes an introduction to multivariable calculus. At least one section of this sequence is offered as an inquiry-based learning (IBL) course. Students interested in IBL should have fluency in spoken English and an AP score of 5 on the BC Calculus exam or placement into MATH 15300. Students may not take the first two quarters of this sequence for P/F grading. MATH 16100-16200 meets the general education requirement in mathematical sciences.

MATH 16100. Honors Calculus I. 100 Units.

MATH 16100-16200-16300 is an honors version of MATH 15100-15200-15300. A student with a strong background in the problem-solving aspects of one-variable calculus may, by suitable achievement on the Calculus Accreditation Exam, be invited to register for MATH 16100-16200-16300. This sequence emphasizes the theoretical aspects of one-variable analysis and, in particular, the consequences of completeness in the real number system. MATH 16300 also includes an introduction to multivariable calculus. At least one section of this sequence is offered as an inquiry-based learning (IBL) course. Students interested in IBL should have fluency in spoken English and an AP score of 5 on the BC Calculus exam or placement into MATH 15300. Students may not take the first two quarters of this sequence for P/F grading. MATH 16100-16200 meets the general education requirement in mathematical sciences. MATH 16100 emphasizes the theoretical aspects of one-variable analysis and, in particular, the consequences of completeness in the real number system. Topics include a rigorous treatment of the real numbers and the least upper bound property, limits, continuity, uniform continuity, and differentiation. Prerequisite(s): Invitation only based on superior performance on the Calculus Accreditation Examination

Terms Offered: Autumn

Prerequisite(s): Invitation only based on superior performance on the mathematics placement test(s) or appropriate AP score or IB score

MATH 16200. Honors Calculus II. 100 Units.

MATH 16200 covers integration, the Fundamental Theorem of Calculus, transcendental functions, and other topics.

Terms Offered: Winter

Prerequisite(s): MATH 16100

MATH 16300. Honors Calculus III. 100 Units.

MATH 16300 covers sequences and series, power series, and Taylor series. It also includes an introduction to multivariable calculus, such as functions of several real variables, partial derivatives, gradients, and the total derivative, and integration of functions of several variables.

Terms Offered: Spring

Prerequisite(s): MATH 16200

MATH 16110-16210-16310. Honors Calculus I (IBL); Honors Calculus II (IBL); Honors Calculus III (IBL)

This sequence is an Inquiry Based Learning version of MATH 16100-16200-16300 Honors Calculus I-II-III. In this alternate version of Honors Calculus, rather than having lectures from instructors, students are given 'scripts' of carefully ordered theorems whose proofs they prepare outside of class and then present in class for comment and discussion. MATH 16110-16210 meets the general education requirement in mathematical sciences.

MATH 16110. Honors Calculus I (IBL) 100 Units.

MATH 16110 gives a rigorous axiomatic treatment of the continuum and its topological properties.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): Invitation only based on superior performance on the mathematics placement test(s) or appropriate AP score or IB score

MATH 16210. Honors Calculus II (IBL) 100 Units.

MATH 16210 puts an arithmetic structure on the continuum, and constructs the real numbers via Dedekind cuts. There follows a rigorous treatment of limits, continuity, differentiability, integrability, and the Fundamental Theorem of Calculus.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): MATH 16110

MATH 16310. Honors Calculus III (IBL) 100 Units.

MATH 16310 continues the rigorous treatment of single-variable Calculus with a discussion of infinite series. There follows an introduction to the main ideas of multivariable Calculus, including functions of several real variables, partial derivatives, gradients, the total derivative, and integration of functions of several variables.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): MATH 16210

MATH 17500. Basic Number Theory. 100 Units.

This course covers basic properties of the integers following from the division algorithm, primes and their distribution, and congruences. Additional topics include existence of primitive roots, arithmetic functions, quadratic reciprocity, and transcendental numbers. The subject is developed in a leisurely fashion, with many explicit examples.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): MATH 16300 or MATH 16310 or MATH 15910 or MATH 15900 or MATH 19900

MATH 17600. Basic Geometry. 100 Units.

This course covers advanced topics in geometry, including Euclidean geometry, spherical geometry, and hyperbolic geometry. We emphasize rigorous development from axiomatic systems, including the approach of Hilbert. Additional topics include lattice point geometry, projective geometry, and symmetry.

Instructor(s): Staff Terms Offered: Winter. Offered every other year

Prerequisite(s): MATH 16300 or MATH 16310 or MATH 15910 or MATH 15900 or MATH 19900

MATH 18300-18400-18600. Mathematical Methods in the Physical Sciences I-II-III-IV.

This is the full four-quarter sequence of mathematics courses for physical sciences majors.

MATH 18300. Mathematical Methods in the Physical Sciences I. 100 Units.

This is the first in a sequence of mathematics courses for physical sciences majors. The first part of the course covers infinite sums: convergence of infinite sequences and series, Maclaurin and Taylor series, complex numbers and Euler's formula. The second part covers elementary linear algebra: linear equations, vectors and matrices, dot products, cross products and determinants, applications to 3D geometry, eigenvectors and diagonalization.

Terms Offered: Autumn Spring Winter

Prerequisite(s): MATH 15200 or placement

MATH 18400. Mathematical Methods in the Physical Sciences II. 100 Units.

This is the second in a sequence of mathematics courses for physical sciences majors. It covers multivariable calculus: functions of more than one variable, parameterized curves and vector fields, partial derivatives and vector derivatives (div/grad/curl), double and triple integrals, line and surface integrals, and the fundamental theorems of vector calculus in two and three dimensions (Green/Gauss/Stokes).

Terms Offered: Autumn Spring Winter

Prerequisite(s): MATH 18300 or (MATH 15300 and (MATH 19620 or MATH 20250 or STAT 24300))

MATH 18500. Mathematical Methods in the Physical Sciences III. 100 Units.

This is the third in a sequence of mathematics courses for physical sciences majors. It covers differential equations: first and second order ODE, systems of ODE, damped oscillators and resonance, Fourier series and Fourier transforms, Laplace transforms, and solutions of the heat and wave equations.

Terms Offered: Autumn Spring Winter

Prerequisite(s): MATH 18400

MATH 18600. Mathematics of Quantum Mechanics. 100 Units.

This course covers the mathematical foundations of quantum mechanics, including abstract linear algebra (vector spaces, bases, linear operators, inner products and orthogonality) and partial differential equations (with an emphasis on techniques relevant to solving Schrödinger's equation: series solutions of second order ODE, orthogonal functions, eigenfunctions and Sturm-Liouville theory, separation of variables).

Terms Offered: Autumn Spring Winter

Prerequisite(s): MATH 18500

MATH 19520. Mathematical Methods for Social Sciences. 100 Units.

MATH 19520 is a course in mathematical techniques for students in the social sciences. It covers the basic topics of multivariable calculus including vectors and vector functions, partial derivatives, multiple integrals, and Lagrange multipliers. It also covers an introduction to optimization, including linear programming, the simplex method, the duality theorem, and the Kuhn-Tucker theorem.

Terms Offered: Autumn, Spring, Winter

Prerequisite(s): MATH 13300 or MATH 15300 or MATH 16300 or MATH 16310

MATH 19620. Linear Algebra. 100 Units.

This course takes a concrete approach to the basic topics of linear algebra. Topics include vector geometry, systems of linear equations, vector spaces, matrices and determinants, and eigenvalue problems. Prerequisite(s): MATH 13300 or MATH 15200 or MATH 16200. Note(s): Recommended sequence for ECON majors: MATH 19620, STAT 23400, ECON 21000 in consecutive quarters.

Instructor(s): Staff Terms Offered: Autumn, Spring, Winter

Prerequisite(s): MATH 13200 or MATH 15200 or MATH 16200 or MATH 16210.

Note(s): Recommended sequence for ECON majors: MATH 19620, STAT 23400, ECON 21000 in consecutive quarters.

MATH 20000. Mathematical Methods for Physical Sciences I. 100 Units.

MATH 20000 covers multivariable calculus, including the algebra and geometry of Euclidean space, differentiation and integration of functions of several variables, vector valued functions and the classical theorems of vector analysis (i.e., theorems of Green, Gauss, and Stokes), and sequences and series of numbers and functions, including an introduction to Fourier series.

Terms Offered: Autumn Spring Winter

Prerequisite(s): MATH 13300 or 15300 or 16300 or 16310; entering students by invitation only, based on superior performance on the mathematics placement tests

MATH 20100. Mathematical Methods for Physical Sciences II. 100 Units.

MATH 20100 introduces ordinary differential equations (e.g., first and second order linear differential equations, series solutions, and the Laplace transform) and complex analysis (i.e., basic properties of the complex plane and analytic functions through Cauchy's theorem).

Terms Offered: Autumn Spring Winter

Prerequisite(s): MATH 20000 or (MATH 19520 and MATH 19620)

MATH 20250. Abstract Linear Algebra. 100 Units.

This is a theoretical course in linear algebra intended for students taking higher level mathematics courses. Topics include vector spaces and linear transformations, matrices and the algebra of matrices, determinants and their properties, the geometry of \mathbb{R}^n and \mathbb{C}^n , bases, coordinates and change of basis, eigenvalues, eigenvectors, characteristic polynomial, diagonalization, special forms including QR factorization and Singular Value Decomposition, and applications.

Terms Offered: Autumn, Spring, Winter

Prerequisite(s): MATH 16300 or MATH 16310 or MATH 15910 or MATH 15900 or MATH 19900

MATH 20300-20400-20500. Analysis in \mathbb{R}^n I-II-III.

This three-course sequence is intended for students who plan to major in mathematics or who require a rigorous treatment of analysis in several dimensions. Both theoretical and problem solving aspects of multivariable calculus are treated carefully. All courses in the sequence require experience with a theoretical treatment of the real numbers, and hence MATH 20300 has a prerequisite of either MATH 16300 or MATH 15910. Additionally, MATH 20400 requires a serious treatment of linear algebra, and thus has a prerequisite of either MATH 20250 or STAT 24300. MATH 20300 covers the construction of the real numbers, the topology of \mathbb{R}^n including the Bolzano-Weierstrass and Heine-Borel theorems, and a detailed treatment of abstract metric spaces, including convergence and completeness, compact sets, continuous mappings, and more. MATH 20400 covers differentiation in \mathbb{R}^n including partial derivatives, gradients, the total derivative, the Chain Rule, optimization problems, vector-valued functions, and the Inverse and Implicit Function Theorems. MATH 20500 covers integration in \mathbb{R}^n including Fubini's Theorem and iterated integration, line and surface integrals, differential forms, and the theorems of Green, Gauss, and Stokes. This sequence is the basis for all advanced courses in analysis and topology.

MATH 20300. Analysis in \mathbb{R}^n I. 100 Units.

MATH 20300 covers the construction of the real numbers, the topology of \mathbb{R}^n including the Bolzano-Weierstrass and Heine-Borel theorems, and a detailed treatment of abstract metric spaces, including convergence and completeness, compact sets, continuous mappings, and more.

Instructor(s): Staff Terms Offered: Autumn, Spring, Winter

Prerequisite(s): MATH 16300 or MATH 16310 or MATH 15910 or MATH 15900 or MATH 19900

MATH 20400. Analysis in \mathbb{R}^n II. 100 Units.

MATH 20400 covers differentiation in \mathbb{R}^n including partial derivatives, gradients, the total derivative, the Chain Rule, optimization problems, vector-valued functions, and the Inverse and Implicit Function Theorems.

Terms Offered: Autumn Spring Winter

Prerequisite(s): MATH 20700 or (MATH 20300 or MATH 20310) AND (MATH 20250 or STAT 24300))

MATH 20500. Analysis in \mathbb{R}^n III. 100 Units.

MATH 20500 covers integration in \mathbb{R}^n including Fubini's Theorem and iterated integration, line and surface integrals, differential forms, and the theorems of Green, Gauss, and Stokes

Terms Offered: Autumn Spring Winter

Prerequisite(s): MATH 20400 or MATH 20410 or MATH 20800

MATH 20310-20410-20510. Analysis in \mathbb{R}^n I (accelerated); Analysis in \mathbb{R}^n II (accelerated); Analysis in \mathbb{R}^n III (accelerated)

This sequence is an accelerated version of MATH 20300-20400-20500 Analysis in \mathbb{R}^n I-II-III.

MATH 20310. Analysis in \mathbb{R}^n I (accelerated) 100 Units.

This is an accelerated version of MATH 20300.

Instructor(s): Staff Terms Offered: Autumn, Spring, Winter

Prerequisite(s): MATH 16300 or MATH 16310 or MATH 15910 or MATH 15900 or MATH 19900. Students must have received a grade of B+ or better in MATH 16300, 16310, 15900, or 15910 in order to register for the accelerated Analysis sequence.

MATH 20410. Analysis in \mathbb{R}^n II (accelerated) 100 Units.

This is an accelerated version of MATH 20400.

Instructor(s): Staff Terms Offered: Spring Winter

Prerequisite(s): MATH 20700 or (MATH 20310 AND (MATH 20250 or STAT 24300))

MATH 20510. Analysis in \mathbb{R}^n III (accelerated) 100 Units.

This is an accelerated version of MATH 20500.

Instructor(s): Staff Terms Offered: Autumn Spring

Prerequisite(s): MATH 20800 or MATH 20410

MATH 20700-20800-20900. Honors Analysis in \mathbb{R}^n I-II-III.

This highly theoretical sequence in analysis is intended for the most able students. Topics include the real number system, metric spaces, basic functional analysis, and the Lebesgue integral.

MATH 20700. Honors Analysis in \mathbb{R}^n I. 100 Units.

This is the first course in a highly theoretical sequence in analysis, and is intended for the most able students. Topics include the real number system, metric spaces, basic functional analysis, and the Lebesgue integral.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): Invitation only

MATH 20800. Honors Analysis in \mathbb{R}^n II. 100 Units.

This is the second course in a highly theoretical sequence in analysis. Topics include the real number system, metric spaces, basic functional analysis, and the Lebesgue integral.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): MATH 20700

MATH 20900. Honors Analysis in \mathbb{R}^n III. 100 Units.

This is the third course in a highly theoretical sequence in analysis. Topics include the real number system, metric spaces, basic functional analysis, and the Lebesgue integral.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): MATH 20800

MATH 21100. Basic Numerical Analysis. 100 Units.

This course covers direct and iterative methods of solution of linear algebraic equations and eigenvalue problems. Topics include numerical differentiation and quadrature for functions of a single variable, approximation by polynomials and piecewise polynomial functions, approximate solution of ordinary differential equations, and solution of nonlinear equations.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): MATH 20000 or 20250 or 20400 or 20410

MATH 21200. Advanced Numerical Analysis. 100 Units.

This course covers topics similar to those of Math 21100 but at a more rigorous level. The emphasis is on proving all of the results. Previous knowledge of numerical analysis is not required. Programming is also not required. The course makes extensive use of the material developed in the analysis sequence (ending in Math 20500 or Math 20900) and provides an introduction to other areas of analysis such as functional analysis and operator theory.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): MATH 20500 or 20510 or 20900

MATH 23500. Markov Chains, Martingales, and Brownian Motion. 100 Units.

This course discusses three of the most important types of stochastic processes: Markov chains (in both discrete and continuous time), martingales (the mathematical model of 'fair games'), and Brownian motion (random continuous motion). Applications will include random walk, queueing theory, and branching processes, and may also include other areas such as optimal stopping or stochastic integration.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): STAT 25100 or STAT 25150, or STAT 24400, or MATH 20500/MATH 20510/MATH 20900 and permission of the instructor

MATH 23700. Introduction to Modelling. 100 Units.

This class presents applications of mathematics to biology, chemistry, economics, engineering, and physics. Students work in groups to explore mathematical and computation tools. The course consists of a sequence of modules, one for each key concept. Each module consists of roughly three lectures. The first lecture briefly explains the motivation and practical context before quickly moving to describe the methodology and mathematical notions. The second lecture explains the heart of the modelling process. The third lecture solves the problem. Examples of mathematics that will be included are dynamics (discrete, continuous (ode), spatial dependence (pde)), optimization (linear programming, dynamic programming), discrete probability, and statistics (data analysis). Examples of models are problems from biology, ecology, economics, finance, physics (atomistic models, electric circuits), mechanics (bars under tension), car traffic, tracking problems, astronomy, etc.

Terms Offered: Autumn

Prerequisite(s): MATH 20500 or MATH 20510 or MATH 20520 or MATH 20900

MATH 24100. Topics in Geometry. 100 Units.

This course focuses on the interplay between abstract algebra (group theory, linear algebra, and the like) and geometry.

Several of the following topics are covered: affine geometry, projective geometry, bilinear forms, orthogonal geometry, and symplectic geometry.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): MATH 25500 or 25800

Note(s): This course is offered in alternate years.

MATH 24200. Algebraic Number Theory. 100 Units.

Topics include factorization in Dedekind domains, integers in a number field, prime factorization, basic properties of ramification, and local degree.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): MATH 25500 or 25800

MATH 24300. Intro To Algebraic Curves. 100 Units.

This course covers the projective line and plane curves, both affine and projective. We also study conics and cubics, as well as the group law on the cubic. Abstract curves associated to function fields of one variable are discussed, along with the genus of a curve and the Riemann-Roch theorem. Curves of low genus are emphasized. Although the formal prerequisite is MATH 25500 or 25800, MATH 25600 or 25900 is strongly recommended.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): MATH 25500 or 25800, or consent of instructor

Note(s): This course is offered in alternate years.

MATH 24400. Introduction to Algebraic Geometry. 100 Units.

This is a first course in algebraic geometry. Topics include: affine and projective varieties; coordinate rings; the Zariski topology; Nullstellensatz; Hilbert basis Theorem; the dictionary between algebraic geometry and commutative algebra; rational functions and morphisms; smoothness; theory of dimension. Other possible topics might include: the classification of plane cubics; elliptic curves; 27 lines on a cubic surface; introduction to the theory of curves (degree, divisors, Bezout's Theorem, etc.). Although the formal algebra prerequisite is MATH 25500 or MATH 25800, in fact MATH 25600 or MATH 25900 is strongly recommended. Additionally, MATH 27000 and MATH 26200 are strongly recommended. Prerequisite(s): (MATH 20500 or MATH 20900) and (MATH 25500 or MATH 25800) Note(s): This course is offered in alternate years.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): (MATH 20500 or MATH 20510 or MATH 20900) and (MATH 25500 or MATH 25800)

Note(s): This course is offered in alternate years.

MATH 25400-25500. Basic Algebra I-II.

This is the sequence in basic algebra. It requires a prior serious treatment of linear algebra and thus has a prerequisite of MATH 20250. MATH 25400 covers groups, subgroups, permutation groups, group actions, and Sylow Theorems. MATH 25500 covers rings and ideals, PIDs, Euclidean domains, UFDs, fields and field extensions, and the fundamentals of Galois theory.

MATH 25400. Basic Algebra I. 100 Units.

This course covers groups, subgroups, permutation groups, group actions, and the Sylow theorems.

Terms Offered: Autumn Winter

Prerequisite(s): MATH 20250 or MATH 20700

MATH 25500. Basic Algebra II. 100 Units.

This course covers rings and ideals, PIDs, Euclidean domains, UFDs, fields and field extensions, modules and canonical forms of matrices, quadratic forms, and multilinear algebra.

Terms Offered: Spring Winter

Prerequisite(s): MATH 25400 or MATH 25700

MATH 25700-25800-25900. Honors Basic Algebra I-II-III.

This sequence is an accelerated version of MATH 25400-25500-25600 that is open only to students who have achieved a B- or better in prior mathematics courses. Topics include the theory of finite groups, commutative and noncommutative ring theory, modules, linear and multilinear algebra, and quadratic forms. We also cover basic field theory, the structure of p-adic fields, and Galois theory.

MATH 25700. Honors Basic Algebra I. 100 Units.

Topics in MATH 25700 include the theory of finite groups, up through and including the proofs of the Sylow Theorems.

Terms Offered: Autumn

Prerequisite(s): MATH 20700 or MATH 20250; no entering student may begin this sequence in their first term.

MATH 25800. Honors Basic Algebra II. 100 Units.

Topics in MATH 25800 include commutative and noncommutative ring theory, modules, and field extensions.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): MATH 25700

MATH 25900. Honors Basic Algebra III. 100 Units.

Topics in this course include basic field theory, the structure of p-adic fields, and Galois theory.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): MATH 25800

MATH 26200. Point-Set Topology. 100 Units.

This course examines topology on the real line, topological spaces, connected spaces and compact spaces, identification spaces and cell complexes, and projective and other spaces. With MATH 27400, it forms a foundation for all advanced courses in analysis, geometry, and topology.

Instructor(s): Staff Terms Offered: Autumn Winter

Prerequisite(s): MATH 20300 or 20310 or 20700, and 25400 or 25700

MATH 26300. Introduction to Algebraic Topology. 100 Units.

Topics include the fundamental group of a space; Van Kampen's theorem; covering spaces and groups of covering transformation; existence of universal covering spaces built up out of cells; and theorems of Gauss, Brouwer, and Borsuk-Ulam.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): MATH 26200

MATH 26500. Introduction to Riemannian Geometry. 100 Units.

The study of curves and surfaces is an ideal place to learn the beginnings of Riemannian Geometry. After a basic introduction, topics to be covered include Gaussian curvature, second fundamental form, Gauss's Theorem Egregium, Gauss-Bonnet Theorem, and Rigidity of spheres.

Terms Offered: Winter

Prerequisite(s): MATH 20500 or 20510 or 20900

MATH 26700. Introduction to Representation Theory of Finite Groups. 100 Units.

Topics include group algebras and modules, semisimple algebras and the theorem of Maschke; characters, character tables, orthogonality relations and calculation; and induced representations and characters. Applications to permutation groups and solvability of groups are also included

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): MATH 25800 or 25500

MATH 26800. Introduction to Commutative Algebra. 100 Units.

Topics include basic definitions and properties of commutative rings and modules, Noetherian and Artinian modules, exact sequences, Hilbert basis theorem, tensor products, localizations of rings and modules, associated primes and primary decomposition, Artin-Rees Lemma, Krull intersection theorem, completions, dimension theory of Noetherian rings, integral extensions, normal domains, Dedekind domains, going up and going down theorems, dimension of finitely generated algebras over a field, Affine varieties, Hilbert Nullstellensatz, dimension of affine varieties, product of affine varieties, and the dimension of intersection of subvarieties.

Instructor(s): Staff Terms Offered: Winter. This course is offered in alternate years.

Prerequisite(s): MATH 25800 or 25500

MATH 27000. Basic Complex Variables. 100 Units.

Topics include complex numbers, elementary functions of a complex variable, complex integration, power series, residues, and conformal mapping.

Instructor(s): Staff Terms Offered: Autumn, Spring, Winter

Prerequisite(s): MATH 20500 or 20510 or 20900

MATH 27100. Measure and Integration. 100 Units.

Construction of Lebesgue measure, measurable sets and functions. The Lebesgue integral, convergence theorems. Relationship between Lebesgue and Riemann integral. The L^p spaces, completeness and duality. Other related topics time permitting.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): MATH 20500 or MATH 20510

MATH 27200. Basic Functional Analysis. 100 Units.

Review of metric spaces, normed spaces and inner product spaces. Banach spaces and Hilbert spaces. Bounded linear operators. The 3 basic principles of functional analysis: the closed graph theorem, the open mapping theorem and the uniform boundedness principle. Duality and weak topologies. Weak and weak star compactness. Hilbert spaces, orthogonal expansions and spectral theorem. Applications of these concepts.

Terms Offered: Spring

Prerequisite(s): MATH 27000 and (MATH 20900 or MATH 27100)

MATH 27300. Basic Theory of Ordinary Differential Equations. 100 Units.

This course is an introduction to the theory of ordinary differential equations in Euclidean space. Topics covered include: first-order equations of one variable, solving higher order systems via reduction of order, linear ODEs in arbitrary dimension, real Jordan form and the matrix exponential, variation of parameters, existence and uniqueness of solutions for Lipschitz vector fields, local analysis near equilibria, stability of solutions, introduction to dynamical systems and the global analysis of flows.

Instructor(s): Staff Terms Offered: Autumn, Winter

Prerequisite(s): MATH 20500 or MATH 20510 or MATH 20900 or PHYS 22100

MATH 27400. Introduction to Differentiable Manifolds and Integration on Manifolds. 100 Units.

Topics include exterior algebra; differentiable manifolds and their basic properties; differential forms; integration on manifolds; and the theorems of Stokes, DeRham, and Sard. With MATH 26200, this course forms a foundation for all advanced courses in analysis, geometry, and topology.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): MATH 26200

MATH 27500. Basic Theory of Partial Differential Equations. 100 Units.

This course covers classification of second-order equations in two variables, wave motion and Fourier series, heat flow and Fourier integral, Laplace's equation and complex variables, second-order equations in more than two variables, Laplace operators, spherical harmonics, and associated special functions of mathematical physics.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): MATH 27000 and MATH 27300

MATH 27600. Dynamical Systems. 100 Units.

An introduction to concepts and examples in the study of dynamical systems. The key notions of recurrence, classification, stability, entropy and chaos will be introduced and illustrated in model examples derived from differential equations, algebra, complex analysis, and modeling. A variety of areas of dynamics will be covered, and may include: topological dynamics, symbolic dynamics, ergodic theory, and smooth and complex dynamics.

Terms Offered: Winter

Prerequisite(s): MATH 20900 OR MATH 27100

MATH 27700-27800. Mathematical Logic I-II.

Mathematical Logic I-II

MATH 27700. Mathematical Logic I. 100 Units.

This course introduces mathematical logic. Topics include propositional and predicate logic and the syntactic notion of proof versus the semantic notion of truth (e.g., soundness, completeness). We also discuss the Gödel completeness theorem, the compactness theorem, and applications of compactness to algebraic problems. Prerequisite(s): MATH 25400 or MATH 25700 or (CMSC 15400 and (MATH 15910 or MATH 15900 or MATH 19900 or MATH 16300))

Equivalent Course(s): CMSC 27700

Terms Offered: Autumn

Prerequisite(s): MATH 25400 or 25700; open to students who are majoring in computer science who have taken CMSC 15400 along with MATH 16300 or MATH 16310 or Math 15910 or MATH 15900 or MATH 19900

Equivalent Course(s): CMSC 27700

MATH 27800. Mathematical Logic II. 100 Units.

Topics include number theory, Peano arithmetic, Turing compatibility, unsolvable problems, Gödel's incompleteness theorem, undecidable theories (e.g., the theory of groups), quantifier elimination, and decidable theories (e.g., the theory of algebraically closed fields).

Terms Offered: Winter

Prerequisite(s): MATH 27700 or equivalent

Equivalent Course(s): CMSC 27800

MATH 28000. Introduction to Formal Languages. 100 Units.

This course is a basic introduction to computability theory and formal languages. Topics include automata theory, regular languages, context-free languages, and Turing machines.

Instructor(s): S. Kurtz Terms Offered: Spring

Prerequisite(s): CMSC 12300 or CMSC 15400, or MATH 15900 or MATH 25500.

Equivalent Course(s): CMSC 28000

MATH 28100. Introduction to Complexity Theory. 100 Units.

Computability topics are discussed (e.g., the s-m-n theorem and the recursion theorem, resource-bounded computation).

This course introduces complexity theory. Relationships between space and time, determinism and non-determinism, NP-completeness, and the P versus NP question are investigated.

Instructor(s): K. Mulmuley Terms Offered: Autumn

Prerequisite(s): CMSC 27100, or MATH 15900 or MATH 25500; experience with mathematical proofs.

Equivalent Course(s): CMSC 28100

MATH 28410. Honors Combinatorics. 100 Units.

Methods of enumeration, construction, and proof of existence of discrete structures are discussed in conjunction with the basic concepts of probability theory over a finite sample space. Enumeration techniques are applied to the calculation of probabilities, and, conversely, probabilistic arguments are used in the analysis of combinatorial structures. Other topics include basic counting, linear recurrences, generating functions, Latin squares, finite projective planes, graph theory, Ramsey theory, coloring graphs and set systems, random variables, independence, expected value, standard deviation, and Chebyshev's and Chernoff's inequalities.

Instructor(s): L. Babai Terms Offered: Spring

Prerequisite(s): MATH 15900 or MATH 25400, or CMSC 27100, or by consent. Experience with mathematical proofs.

To request enrollment in this course, please add yourself to the waitlist at <waitlist.cs.uchicago.edu>. If you do not have the prerequisites for this course and want to request permission to enroll without the prerequisites, please submit a waitlist request at <waitlist.cs.uchicago.edu>.

Note(s): This course is offered in alternate years.

Equivalent Course(s): CMSC 27410

MATH 29520. Introduction to Error-Correcting Codes. 100 Units.

Cyclic codes, BCH codes, Golay codes, Shannon's Theorem, and codes approaching Shannon's bounds will be covered.

Applications to electrical engineering, combinatorics, and group theory will be discussed.

Instructor(s): Staff Terms Offered: Winter. in alternate years

Prerequisite(s): MATH 25500 or 25800

MATH 29700. Proseminar in Mathematics. 100 Units.

Consent of instructor and departmental counselor. Students are required to submit the College Reading and Research Course Form. Must be taken for a quality grade.

Instructor(s): Staff Terms Offered: Autumn, Spring, Winter

Prerequisite(s): Completion of general education mathematics sequence

Media Arts and Design

In the early twenty-first century, “media” and “design” have become central terms. *Media* often refers to a wide range of storage and communication technologies. *Design* is no longer a term used simply to describe surface aesthetics or ornamentation, but now encompasses a wide range of human interactions with technical devices, environments, and communities that shape daily life. Overall, designed digital and networked media inspire feelings of attachment as well as frustration with few rivals in any contemporary cultural sphere. If you consider the number of screens in your immediate vicinity, it becomes evident how substantial an impact media arts and design have on the ways we learn, work, play, think, act, and communicate.

This minor focuses on these rapid developments in media and design that have changed the character of contemporary life, opening these phenomena up to historical study, theoretical critique, and hands-on experimentation. The minor offers possible pathways through video game design, transmedia puzzle development, digital filmmaking, electronic sound design, digital storytelling, algorithmic theater, podcast development, data visualization, computational imaging, speculative design, and media history and theory.

Minor in Media Arts and Design Distribution Requirement

The minor is comprised of six courses. Of those six courses, students must take at least one course in each of the following core areas: (1) Media Theory, (2) Media History, and (3) Media Practice and Design.

Courses that qualify for each distribution requirement are listed here (http://collegecatalog.uchicago.edu/thecollege/MediaArtsandDesign/18-19_Media_Arts_Design_Course_List.pdf).

Electives

Students will also need two elective courses from offerings in such areas as video game design, electronic sound design, computational imaging, or speculative design. Any MAAD course may count; students may use outside courses with approval of the director.

Senior Colloquium and Portfolio

To complete the minor, students must enroll in MAAD 29400 Media Arts and Design Capstone Colloquium. As part of the colloquium, each member of this student cohort prepares a portfolio of digital media artworks and/or historical and theoretical writing that they submit by the end of Winter Quarter of their final year.

Summary of Requirements

One Media Theory course	100
One Media History course	100
One Media Practice and Design course	100
Two electives	200
MAAD 29400 Capstone Colloquium	100
Portfolio	000
Total Units	600

Advising and Grading

Prospective minors should meet with the program director as soon as possible to discuss their interests and course plans and to obtain advice and approval. In order to declare the minor, students must complete the Consent to Complete a Minor Program form (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf) and have the form signed by the program director. This form must then be returned to the student's College adviser by the end of Spring Quarter of the student's third year.

Courses in the minor program may not be (1) double counted with the student's major(s) or with other minors or (2) counted toward general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Media Arts and Design Courses

MAAD 10904. Media Wars. 100 Units.

Media practices and discourses evoking war or violence are common today, such as the 'weaponization' of social media; 'cyber warfare' and attacks; 'online battlefields'; 'guerilla' media tactics; 'The Great Meme War' and 'Infowars.com,' to name a few. In relationship with terms suggesting that we live in an age of 'post-truth' dominated by 'fake news' or 'fact-challenged' journalism, the media wars of today may seem unique to the twenty-first century. But in fact, the history of the use of media to either combat or spread ideas dates back centuries to the earliest phases of mass media and communication. In this class, we will proceed historically, broadly conceiving of media to include print and visual, cultural, and artistic forms, cinema, television, and the internet. While we will explore how media have historically been used to construct or counter dominant systems of representation, we will also discuss how different media forms function formally, learning to analyze how they construct discourses of truth as texts (documentary; propaganda). This class will also function as a

contemporary research laboratory where students will be asked to track, evaluate, and theorize contemporary or historical media that are taking part in a so-called 'media war.'

Instructor(s): Jennifer Wild Terms Offered: Spring

Note(s): Please note: Students who have previously completed the course "Problems in the Study of Gender and Sexuality: Media Wars" are not eligible to receive credit for this class.

Equivalent Course(s): GNSE 30114, CMST 30904, SIGN 26061, CMST 20904, GNSE 20114

MAAD 12320. Critical Videogame Studies. 100 Units.

Since the 1960s, games have arguably blossomed into the world's most profitable and experimental medium. This course attends specifically to video games, including popular arcade and console games, experimental art games, and educational serious games. Students will analyze both the formal properties and sociopolitical dynamics of video games. Readings by theorists including Ian Bogost, Roger Caillois, Nick Dyer-Witheford, Mary Flanagan, Jane McGonigal, Lisa Nakamura, and Katie Salen will help us think about the growing field of video game studies. This is a 2019-20 Signature Course in the College. (Theory)

Instructor(s): Patrick Jagoda Terms Offered: Autumn

Equivalent Course(s): GNSE 22320, CMST 27916, ENGL 12320, SIGN 26038

MAAD 15620. Japanese Animation: The Making of a Global Media. 100 Units.

This course offers an introduction to Japanese animation, from its origins in the 1910s to its emergence as global culture in the 1990s. The goal is not only to provide insight into Japanese animation within the context of Japan but also to consider those factors that have transformed it into a global cultural form with a diverse, worldwide fanbase. As such, the course approaches Japanese animation from three distinct perspectives on Japanese animation, which are designed to introduce students to three important methodological approaches to contemporary media - film studies, media studies, and fan studies or cultural studies. As we look at Japanese animation in light of these different conceptual frameworks, we will also consider how its transnational dissemination and 'Asianization' challenge some of our basic assumptions about global culture, which have been shaped primarily through the lens of Americanization.

Instructor(s): Thomas Lamarre Terms Offered: Autumn

Equivalent Course(s): CMST 25620, EALC 25620, SIGN 26070

MAAD 15630. Television in an Age of Change. 100 Units.

As streaming options proliferate, we think of television today as a medium in flux, but the history of television-and American television in particular-has been one of change. This course will look at core television concepts both today and in the past, exploring major shifts in television history through its relationships to audiences, technology, and other media.

Instructor(s): Ilana Emmett Terms Offered: Spring

Equivalent Course(s): CMST 28730

MAAD 18500-18600-18700. History of International Cinema I: Silent Era; History of International Cinema II: Sound Era to 1960; History of International Cinema, Part III: 1960 to Present.

This sequence is required of students majoring in Cinema and Media Studies. Taking these courses in sequence is strongly recommended but not required.

MAAD 18500. History of International Cinema I: Silent Era. 100 Units.

This course provides a survey of the history of cinema from its emergence in the mid-1890s to the transition to sound in the late 1920s. We will examine the cinema as a set of aesthetic, social, technological, national, cultural, and industrial practices as they were exercised and developed during this 30-year span. Especially important for our examination will be the exchange of film techniques, practices, and cultures in an international context. We will also pursue questions related to the historiography of the cinema, and examine early attempts to theorize and account for the cinema as an artistic and social phenomenon.

Instructor(s): A. Field Terms Offered: Autumn

Prerequisite(s): Prior or concurrent registration in CMST 10100 required. Required of students majoring or minoring in Cinema and Media Studies.

Note(s): For students majoring in Cinema and Media Studies, the entire History of International Cinema three-course sequence must be taken.

Equivalent Course(s): ENGL 29300, CMLT 22400, CMST 28500, CMLT 32400, MAPH 33600, ARTH 38500, ENGL 48700, CMST 48500, ARTH 28500, ARTV 20002

MAAD 18600. History of International Cinema II: Sound Era to 1960. 100 Units.

The center of this course is film style, from the classical scene breakdown to the introduction of deep focus, stylistic experimentation, and technical innovation (sound, wide screen, location shooting). The development of a film culture is also discussed. Texts include Thompson and Bordwell's *Film History: An Introduction*; and works by Bazin, Belton, Sitney, and Godard. Screenings include films by Hitchcock, Welles, Rossellini, Bresson, Ozu, Antonioni, and Renoir.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): Prior or concurrent registration in CMST 10100 required. Required of students majoring or minoring in Cinema and Media Studies.

Note(s): CMST 28500/48500 strongly recommended

Equivalent Course(s): REES 45005, REES 25005, ENGL 29600, CMST 28600, ENGL 48900, CMST 48600, ARTH 28600, ARTV 20003, MAPH 33700, ARTH 38600, CMLT 22500, CMLT 32500

MAAD 18700. History of International Cinema, Part III: 1960 to Present. 100 Units.

This course will continue the study of cinema around the world from the late 1950s through the 1990s. We will focus on New Cinemas in France, Czechoslovakia, Germany, the United States, the United Kingdom, and other countries. We

will pay special attention to experimental stylistic developments, women directors, and well-known auteurs. After the New Cinema era we will examine various developments in world cinema, including the rise of Bollywood, East Asian film cultures, and other movements.

Instructor(s): J. Lastra Terms Offered: Spring

Note(s): This course follows the subject matter taught in CMST 28500/48500 and CMST 28600/48600, but these are not prerequisites.

Equivalent Course(s): CMST 28700, CMST 38700

MAAD 20500. ARTGAMES. 100 Units.

This studio course playfully explores the methods, tools, and poetics of video games as art. Develop interactive new media art, machinima, and experimental 3D environments by using (and misusing) contemporary game engines. Projects will include hypertext adventures, walking simulators, abstract platformers, and metagames. By hacking, modding, and recontextualizing existing game assets, we will challenge the rules, mechanics, and interfaces of video games.

Instructor(s): J. Satrom Terms Offered: Winter

Equivalent Course(s): ARTV 25403

MAAD 21011. Experimental Captures. 100 Units.

This production-based class will explore the possibilities and limits of capturing the world with imaging approaches that go beyond the conventional camera. What new and experimental image-based artworks can be created with technologies such as laser scanning, structured light projection, time of flight cameras, photogrammetry, stereography, motion capture, sensor augmented cameras or light field photography? This hands-on course welcomes students with production experience while being designed to keep established tools and commercial practices off-kilter and constantly in question.

Instructor(s): M. Downie Terms Offered: Autumn

Equivalent Course(s): CMST 37011, ARTV 27923, ARTV 37923, CMST 27011

MAAD 21500. Metamedia. 100 Units.

Computers dynamically simulate the details of any other medium. This course looks past traditional media to engage with the computer as a 'metamedium'; an environment with infinite degrees of representation. Relationships between form and content will be explored and exploited through deconstructing, augmenting, and experimenting with the data that makes up digital media. Studio time will be spent digitally improvising with expanded approaches to creating new media art. Topics surveyed will include: algorithms as art, metadata as content, and our digital shadows. In addition to making new media art, we will consider our relationship to contemporary media and the politics of digital agency in our connected world.

Instructor(s): J. Satrom

Equivalent Course(s): ARTV 25402

MAAD 21900. Climate Change in Media and Design. 100 Units.

If meteorological data and models show us that climate change is real, art and literature explore what it means for our collective human life. This is the premise of many recent films, novels, and artworks that ask how a changing climate will affect human society. In this course, we will examine the aesthetics of climate change across media, in order to understand how narrative, image, and even sound help us witness a planetary disaster that is often imperceptible. Rather than merely analyzing or theorizing various futures, this course will prepare students in hands-on methods of 'speculative design' and 'critical making.' Each Tuesday, we will study how art and literature draw on the specific capacities of written and visual media to represent climate impacts, and how new humanities research is addressing climate change. Each Thursday, we will participate in short artistic exercises that explore futures of each area. These exercises include future object design, bodymapping and story circles, tabletop gameplay, and serious game design. Throughout the quarter, guest speakers from across the humanities, sciences, and social sciences will visit the class to speak about how their disciplines are working to understand and mitigate climate impacts. The most substantial work of the quarter will be an ambitious multimedia or transmedia project about one of the core course topics to be completed in a team.

Instructor(s): P. Jagoda, B. Morgan Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): BPRO 27900, ENGL 27904, ENST 27900, CMST 27814

MAAD 22911. Augmented Reality Production. 100 Units.

Focusing on experimental moving-image approaches at a crucial moment in the emerging medium of augmented reality, this class will explore and interrogate each stage of production of AR works. Students in this production-based class will examine the techniques and opportunities of this new kind of moving image. During this class we'll study the construction of examples across a gamut from locative media, journalism, and gameplay-based works to museum installations. Students will complete a series of critical essays and sketches towards a final augmented reality project using a custom set of software tools developed in and for the class.

Instructor(s): M. Downie Terms Offered: Winter

Equivalent Course(s): CMST 37911, ARTV 27921, CMST 27911, ARTV 37921

MAAD 23220. Inventing, Engineering and Understanding Interactive Devices. 100 Units.

A physical computing class, dedicated to micro-controllers, sensors, actuators and fabrication techniques. The objective is that everyone creates their own, custom-made, functional I/O device.

Terms Offered: Spring

Prerequisite(s): CMSC 15400

Equivalent Course(s): CMSC 23220

MAAD 24550. Evolution of Improvisation in Chicago. 100 Units.

This course traces the history of improvisation for performance, beginning with the 'High Priestess' Viola Spolin's work exploring the educational and social benefits of play at Hull House through Paul Sill's development of The Compass Players in Hyde Park to include current companies including Second City, The Neo Futurists, The Annoyance, and IO. The course will include attendance at performances, student presentations, and practice-based workshops.

Instructor(s): H. Coleman Terms Offered: Spring

Equivalent Course(s): TAPS 24550, TAPS 34550

MAAD 24920. Virtual Reality Production. 100 Units.

Focusing on experimental moving-image approaches at a crucial moment in the emerging medium of virtual reality, this class will explore and interrogate each stage of production for VR. By hacking their way around the barriers and conventions of current software and hardware to create new optical experiences, students will design, construct and deploy new ways of capturing the world with cameras and develop new strategies and interactive logics for placing images into virtual spaces. Unpinning these explorations will be a careful discussion, dissection and reconstruction of techniques found in the emerging VR 'canon' that spans new modes of journalism and documentary, computer games, and narrative 'VR cinema.' Film production and computer programming experience is welcome but not a prerequisite for the course. Students will be expected to complete short 'sketches' of approaches in VR towards a final short VR experience.

Instructor(s): M. Downie Terms Offered: Spring

Note(s): Film production and computer programming experience is welcome but not a prerequisite for the course. Students will be expected to complete short 'sketches' of approaches in VR towards a final short VR experience.

Equivalent Course(s): CMST 27920, ARTV 27920, CMST 37920, ARTV 37920

MAAD 26210. Media Art and Design Practice. 100 Units.

This studio-based course explores the practice, conventions, and boundaries of contemporary media art and design. This can encompass areas as diverse as interactive installation, app design, and the Internet meme. Through projects and critical discussion, students engage with the problems and opportunities of digitally driven content creation. Fundamental elements of digital production are introduced, including basic properties of image, video, and the global network. Further topics as varied as--though not limited to--web production, digital fabrication, interfaces, the glitch, and gaming may be considered. Sections will vary based on the instructor's fields of expertise.

Instructor(s): J. Satrom Terms Offered: Spring

Prerequisite(s): HUMA 16000 and HUMA 16100 or instructor consent

Note(s): This course meets the general education requirement in the arts. This course may not double count for general education requirements and the Media Arts and Design minor.

Equivalent Course(s): ARTV 16210

MAAD 27558. No Future: Visual Media and Contemporary Life. 100 Units.

No Future seeks to establish the grounds by which we might examine both contemporary and classic theories of the FUTURE --and its perhaps its negation -- through visual media and the production of art in the age of algorithmic capital. We will use this course as a means to consider new forms of subjectivity that arise as effect and response to mutating forms of power and control--and more importantly, how we might refuse these mechanisms. Speeding through (art) history with stops at such examples as the Italian Futurists and their violent reimagining of the human as a productive machine to the Situationists who vowed never to produce again, we will examine the fluxes and flows of subjectivity in the movement from factory Taylorization and Fordist production to the immaterial labor of late stage capitalism. We will discuss issues of work and automation, image production and the labor of the artist, climate change, gender and sexuality, punk, and the economies of inhuman desire that drive our contemporary and future societies. But what is left of the future? Is it already over?

Instructor(s): Andrew Pettinelli Terms Offered: Winter

Note(s): This class will present theory that might be new to us; yet, it should remain our goal to work together to think through these texts and visual texts collectively, utilizing the classroom as a space for collaboration and experimentation.

Equivalent Course(s): CMST 27558

MAAD 29400. Media Arts and Design Capstone Colloquium. 100 Units.

In this capstone colloquium, students will prepare a portfolio of digital media artworks and/or historical and theoretical writing that reflect their interests.

Instructor(s): J. Satrom

Prerequisite(s): Consent of instructor.

Note(s): This course is required for students completing a minor in Media Arts and Design and must be completed no later than Winter Quarter of the fourth year. The course will meet weekly throughout the quarter.

Medieval Studies

Department Website: <http://medieval.uchicago.edu>

Program of Study

The undergraduate program in medieval studies offers an interdisciplinary major that allows students to explore the history, philosophy, theology, and cultural production of the Middle Ages in an integrated and nuanced fashion, through engagement with a diverse array of textual and material artifacts.

Program Requirements

Students interested in majoring in medieval studies must consult the program director as early as possible in order to design a program of study that meets the student's intellectual interests and goals. Twelve courses are required, including at least two courses in history; two courses in language or literature; two courses in art, archeology, architecture, or music; two courses in philosophy or theology; one course in methods and materials; and at least two electives. Students should determine these courses in consultation with the program coordinator.

The program also requires all students to participate in a one-quarter reading and research course, usually in Autumn or Winter Quarter of their fourth year. This course is typically conducted as an independent study with the student's BA paper advisor. The program requires completion of a BA paper of around 25 pages to be submitted by the sixth week of the quarter in which the student is graduating. All papers require a faculty director and a second reader.

Summary of Requirements

Two courses in history	200
Two courses in medieval language or literature *	200
Two courses in art, archeology, architecture, or music	200
Two courses in philosophy or theology	200
Two electives	200
One course in methods and materials **	100
One reading and research course	100
BA paper	000
Total Units	1200

* Medieval language may include such courses as Old French, Old English, Occitan, or Medieval Latin. Students may also enroll in literature courses taught in the target language or in translation. Students who think they may wish to apply to graduate school in a field related to medieval studies are strongly advised to acquire reading competence in at least one medieval language.

** Students may take courses such as paleography, codicology, manuscript studies, or epigraphy, that will allow them to engage directly with medieval source materials and objects. Alternatively, students may enroll in a course like literary theory, aesthetics, or historiography that will help them develop their methodological orientation.

Grading

All courses must be taken for a quality grade.

Honors

Consideration for honors is individually arranged with the program coordinator. For candidacy, a student must have completed a BA paper of the highest quality, and have a GPA of at least 3.0 overall and at least 3.5 within the major.

Minor Program in Medieval Studies

The undergraduate program in medieval studies offers an interdisciplinary minor that allows students to explore the history, philosophy, theology, and cultural production of the Middle Ages in an integrated and nuanced fashion, through engagement with a diverse array of textual and material artifacts.

Students interested in the minor in medieval studies should consult the program director as early as possible in order to design a program of study that meets the student's intellectual interests and goals. The minor requires six courses chosen from the College Catalog or the program website (medieval.uchicago.edu/baCourses.shtml (<http://medieval.uchicago.edu/baCourses.shtml/>)), divided among subject areas as follows:

One course in history	100
One course in medieval language or literature *	100
One course in art, archeology, architecture, or music	100
One course in philosophy or theology	100
Two electives	200
Total Units	600

- * Medieval language may include such courses as Old French, Old English, Occitan, or Medieval Latin. Students may also enroll in literature courses taught in the target language or in translation. Students who think they may wish to apply to graduate school in a field related to medieval studies are strongly advised to acquire reading competence in at least one medieval language.

Students choose courses in consultation with the program director. Students must complete an approval form for the minor program (available on the program website, at medieval.uchicago.edu/minor_consent_form.pdf (http://medieval.uchicago.edu/minor_consent_form.pdf)), which requires the signature of the director of the undergraduate program in medieval studies. Students must submit a copy of the signed approval form to their College adviser by the deadline on the form.

Courses in the minor (1) may not be double counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for a quality grade, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Medieval Studies Courses

Students completing a major or minor in medieval studies may take courses from across the University. Course offerings may include those listed below. For an updated listing of courses being offered in a given quarter, please consult medieval.uchicago.edu/baCourses.shtml (<http://medieval.uchicago.edu/baCourses.shtml>).

MDVL 10030. Introduction to the Qur'an. 100 Units.

This course introduces the historical context, thematic and literary features, major biblical figures, and exegetical literature on the Qur'an, with a focus on the early (8th-10th century CE) and medieval periods (11th - 15th century CE). We will read select English translations from the Qur'an and its commentators, accompanied by academic secondary literature that emphasize the Qur'an's literary structure, theological underpinnings, historical, geographical, social, political and cultural contexts in early and medieval Islamic civilization, and the role of the Qur'an as both a fixed and a living and dynamic text in Muslim devotional life.

Instructor(s): Yousef Casewit Terms Offered: Autumn

Prerequisite(s): Knowledge of Arabic is not a prerequisite, but general knowledge about Islam or an 'Introduction to Islam' course is highly recommended.

Equivalent Course(s): NEHC 30030, ISLM 30030, RLST 11030

MDVL 10101. Introduction to African Civilization I. 100 Units.

Part one considers literary, oral, and archeological sources to investigate African societies and states from the early Iron Age through the emergence of the Atlantic World. We will study the empires of Ghana and Mali, the Swahili Coast, Great Zimbabwe, and medieval Ethiopia. We will also explore the expansion of Islam, the origins and effects of European contact, and the trans-Atlantic slave trade.

Instructor(s): E. Osborn Terms Offered: Autumn

Equivalent Course(s): ANTH 20701, HIST 10101, CRES 20701

MDVL 10105. Introduction to Old Turkic I. 100 Units.

An introductory course in the written language of the Orkhon Inscriptions, dating back to the 5th-8th Century K6k Turk State of Central Eurasia, and of related inscriptions from the Yenisei River area, Mongolia, Central Asia and Eastern Europe. The language of the inscriptions is considered to be the ancestor of the majority of Turkic languages spoken today, and uses a distinctive alphabet sometimes known as the Old Turkic Runiform Alphabet. The course covers a brief historic overview, basic grammar, reading selections from the inscriptions in the original and in translation, and familiarization with the alphabet itself. K. Arik, Autumn.

Instructor(s): K. Arik Terms Offered: Autumn

Prerequisite(s): One year of a Turkic language or the equivalent, and/or consent of the instructor

Equivalent Course(s): TURK 10105

MDVL 12000. Jewish Civilization I: Ancient Beginnings to Medieval Period. 100 Units.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts-biblical, Talmudic, philosophical, mystical, historical, documentary, and literary-students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The autumn course will deal with antiquity through the Middle Ages. Its readings will include material from the Bible and writings from the second temple, Hellenistic, rabbinic, and medieval periods. All sections of this course will share a common core of readings; individual instructors will supplement with other materials. It is recommended, though not required, that students take the three Jewish Civilization courses in sequence. Students who register for the Autumn Quarter course will automatically be pre-registered for the winter segment. In the Spring Quarter students have the option of taking a third unit of Jewish Civilization, a course whose topics will vary (JWSC 1200X).

Instructor(s): James Robinson Other TBA Terms Offered: Autumn

Equivalent Course(s): NEHC 22010, RLST 22010, JWSC 12000

MDVL 12001. Medieval History: Theories & Methods. 100 Units.

This course will introduce students to research methods and historical theories that are central to the field of medieval European history (500-1500 AD). The first section of the course is designed to give students a grounding in some of the most important historical narratives (political, social, economic, religious, intellectual, cultural) about the medieval period. Students will then spend the middle weeks of the quarter exploring the different types of original sources (written and non-

written) that historians use to conduct research on the Middle Ages. This section of the course will include class time at the Regenstein Library's Special Collections Research Center. In the final weeks, we will concentrate on some of the scholarly debates that have shaped the modern field of medieval history. Grades will be determined on the basis of a midterm exam, a final exam, two short papers, and classroom discussion.

Instructor(s): J. Lyon Terms Offered: Autumn

Note(s): No prior knowledge of medieval European history is required; the course is open to all undergraduates.

Equivalent Course(s): HIST 12001

MDVL 12203. Italian Renaissance: Petrarch, Machiavelli, and the Wars of Popes and Kings. 100 Units.

Florence, Rome, and the Italian city-states in the age of plagues and cathedrals, Petrarch and Machiavelli, Medici and Borgia (1250-1600), with a focus on literature, philosophy, primary sources, the revival of antiquity, and the papacy's entanglement with pan-European politics. We will examine humanism, patronage, politics, corruption, assassination, feuds, art, music, magic, censorship, education, science, heresy, and the roots of the Reformation. Writing assignments focus on higher level writing skills, with a creative writing component linked to our in-class role-played reenactment of a Renaissance papal election (LARP). This is a History Department Gateway course. First-year students and non-History majors welcome.

Instructor(s): A. Palmer Terms Offered: Spring

Prerequisite(s): Graduate students by consent only; register for the course as HIST 90000 (sect 53) Reading and Research: History.

Note(s): History Gateways are introductory courses meant to appeal to first- through third-year students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): CLCV 22216, SIGN 26034, FNDL 22204, ITAL 16000, HIST 12203, KNOW 12203, RLST 22203

MDVL 12500. Introduction to the New Testament: Texts and Contexts. 100 Units.

An immersion in the texts of the New Testament with the following goals: 1. through careful reading to come to know well some representative pieces of this literature; 2. to gain useful knowledge of the historical, geographical, social, religious, cultural and political contexts of these texts and the events they relate; 3. to learn the major literary genres represented in the canon ('gospels,' 'acts,' 'letters,' and 'apocalypses') and strategies for reading them; 4. to comprehend the various theological visions and cultural worldviews to which these texts give expression; 5. to situate oneself and one's prevailing questions about this material in the history of research, and to reflect on the goals and methods of interpretation; 6. to raise questions for further study.

Instructor(s): Margaret Mitchell Terms Offered: Winter

Prerequisite(s): Interest in this literature, and willingness to enter into conversation with like-minded and non-like-minded others on the texts and the issues involved in their interpretation.

Note(s): This course counts as a Gateway course for RLST majors/minors.

Equivalent Course(s): FNDL 28202, RLST 12000, BIBL 32500

MDVL 15240. Medieval Death. 100 Units.

This course will examine late medieval representations of death and dying, considering it in terms of both a conceptual problematic and a practice, especially as it appears in the literature and art of fourteenth and fifteenth century England. In addition to reading poetic, theological, and philosophical texts from the medieval period, students will examine visual art, architecture, and other media to the end of asking questions about how people and cultures understand and prepare themselves for death. (Pre-1650)

Instructor(s): Jack Dragu Terms Offered: Spring

Equivalent Course(s): ENGL 15240

MDVL 16900. Ancient Mediterranean World III. 100 Units.

Part III examines late antiquity, a period of paradox. The later Roman emperors established the most intensive, pervasive state structures of the ancient Mediterranean, yet yielded their northern and western territories to Goths, Huns, Vandals, and, ultimately, their Middle Eastern core to the Arab Muslims. Imperial Christianity united the populations of the Roman Mediterranean in the service of one God, but simultaneously divided them into competing sectarian factions. A novel culture of Christian asceticism coexisted with the consolidation of an aristocratic ruling class notable for its insatiable appetite for gold. The course will address these apparent contradictions while charting the profound transformations of the cultures, societies, economies, and political orders of the Mediterranean from the conversion of Constantine to the rise of Islam.

Instructor(s): R. Payne Terms Offered: Spring

Equivalent Course(s): HIST 16900, CLCV 20900

MDVL 20012. Ancient Empires II. 100 Units.

The Ottomans ruled in Anatolia, the Middle East, South East Europe and North Africa for over six hundred years. The objective of this course is to understand the society and culture of this bygone Empire whose legacy continues, in one way or another, in some twenty-five contemporary successor states from the Balkans to the Arabian Peninsula. The course is designed as an introduction to the Ottoman World with a focus on the cultural history of the Ottoman society. It explores identities and mentalities, customs and rituals, status of minorities, mystical orders and religious establishments, literacy and the use of the public sphere.

Instructor(s): Hakan Karateke Terms Offered: Autumn

Equivalent Course(s): HIST 15603, CLCV 25800, NEHC 20012

MDVL 20201. Islamic Civilization I: 600-950. 100 Units.

This course covers the rise and spread of Islam, the Islamic empire under the Umayyad and early Abbasid caliphs, and the emergence of regional Islamic states from Afghanistan and eastern Iran to North Africa and Spain. The main focus will be on political, economic and social history.

Instructor(s): Ahmed El Shamsy Terms Offered: Autumn

Note(s): The Islamicate Civilization sequence does not fulfill the General Ed requirements

Equivalent Course(s): HIST 15611, NEHC 30201, ISLM 30201, RLST 20201, HIST 35621, NEHC 20201

MDVL 20202. Islamicate Civilization II: 950-1750. 100 Units.

This course, a continuation of Islamicate Civilization I, surveys intellectual, cultural, religious and political developments in the Islamic world from Andalusia to the South Asian sub-continent during the periods from ca. 950 to 1750. We trace the arrival and incorporation of the Steppe Peoples (Turks and Mongols) into the central Islamic lands; the splintering of the Abbasid Caliphate and the impact on political theory; the flowering of literature of Arabic, Turkic and Persian expression; the evolution of religious and legal scholarship and devotional life; transformations in the intellectual and philosophical traditions; the emergence of Shi'i states (Buyids and Fatimids); the Crusades and Mongol conquests; the Mamluks and Timurids, and the 'gunpowder empires' of the Ottomans, Safavids, and Moghuls; the dynamics of gender and class relations; etc. This class partially fulfills the requirement for MA students in CMES, as well as for NELC majors and PhD students.

Instructor(s): Franklin Lewis Terms Offered: Winter

Prerequisite(s): Islamicate Civilization I (NEHC 20201) or Islamic Thought & Literature-1 (NEHC 20601), or the equivalent

Note(s): The Islamicate Civilization sequence does not fulfill the General Ed requirements

Equivalent Course(s): HIST 15612, ISLM 30202, RLST 20202, NEHC 30202, HIST 35622, NEHC 20202

MDVL 20501. Islamic History and Society I: The Rise of Islam and the Caliphate. 100 Units.

This course covers the period from ca. 600 to 1100, including the rise and spread of Islam, the Islamic empire under the Umayyad and Abbasid caliphs, and the emergence of regional Islamic states from Afghanistan and eastern Iran to North Africa and Spain.

Instructor(s): Ahmed El Shamsy Terms Offered: Autumn

Equivalent Course(s): HIST 35704, ISLM 30500, NEHC 30501, CMES 30501, HIST 25704, RLST 20501

MDVL 20502. Islamic History and Society II: The Middle Period. 100 Units.

This course covers the period from ca. 1100 to 1750, including the arrival of the Steppe Peoples (Turks and Mongols), the Mongol successor states, and the Mamluks of Egypt and Syria. We also study the foundation of the great Islamic regional empires of the Ottomans, Safavids, and Moghuls.

Instructor(s): J. Woods Terms Offered: Winter

Prerequisite(s): Not open to first-year students

Equivalent Course(s): HIST 35804, CMES 30502, NEHC 20502, NEHC 30502, HIST 25804, ISLM 30600

MDVL 20505. Pagans and Christians: Greek Background to Early Christianity. 100 Units.

This course will examine some of the ancient Greek roots of early Christianity. We will focus on affinities between Christianity and the classical tradition as well as ways in which the Christian faith may be considered radically different from it. Some of the more important issues that we will analyze are: 'The spell of Homer.' How the Homeric poems exerted immeasurable influence on the religious attitudes and practices of the Greeks. The theme of creation in Greek and Roman authors such as Hesiod and Ovid. The Orphic account of human origins. The early Christian theme of Christ as Creator/Savior. Greek, specifically Homeric conceptions of the afterlife. The response to the Homeric orientation in the form of the great mystery cults of Demeter, Dionysus, and Orpheus. The views of the philosophers (esp. Plato) of the immortality of the soul compared with the New Testament conception of resurrection of the body. Ancient Greek conceptions of sacrifice and the crucifixion of Christ as archetypal sacrifice. The attempted synthesis of Jewish and Greek philosophic thought by Philo of Alexandria and its importance for early Christianity.

Instructor(s): David Martinez Terms Offered: Spring

Equivalent Course(s): CLCV 26216, RLST 20505

MDVL 20530. Introduction to Islamic Archaeology. 100 Units.

This course is intended as a survey of the regions of the Islamic world from Arabia to North Africa, from Central Asia to the Gulf. The aim will be a comparative stratigraphy for the archaeological periods of the last millennium. A primary focus will be the consideration of the historical archaeology of the Islamic lands, the interaction of history and archaeology, and the study of patterns of cultural interaction over this region, which may also amplify understanding of ancient archaeological periods in the Near East.

Instructor(s): D. Whitcomb Terms Offered: Winter

Equivalent Course(s): NEAA 20501, NEAA 30501

MDVL 20522. Archaeology of Islamic Syria-Palestine. 100 Units.

This course is an exploration of the cultural patterns in the Levant from the late Byzantine period down to modern times, a span of some 1500 years. While the subject matter is archaeological sites of this period in Syria, Lebanon, Jordan, and Israel, the focus is on the role of medieval archaeology in amplifying the history of economic and social systems. It is this connective quality of Islamic archaeology that contributes to an understanding of the earlier history and archaeology of this region.

Instructor(s): D. Whitcomb Terms Offered: Spring

Prerequisite(s): Introductory course in archaeology

Equivalent Course(s): NEAA 30522, NEAA 20522

MDVL 20601. Islamic Thought and Literature I. 100 Units.

This sequence explores the thought and literature of the Islamic world from the coming of Islam in the seventh century C.E. through the development and spread of its civilization in the medieval period and into the modern world. Including historical framework to establish chronology and geography, the course focuses on key aspects of Islamic intellectual history: scripture, law, theology, philosophy, literature, mysticism, political thought, historical writing, and archaeology. In

addition to lectures and secondary background readings, students read and discuss samples of key primary texts, with a view to exploring Islamic civilization in the direct voices of the people who participated in creating it. All readings are in English translation. No prior background in the subject is required. This course sequence meets the general education requirement in civilization studies.

Instructor(s): Ahmed El Shamsy Terms Offered: Autumn

Equivalent Course(s): SOSC 22000, NEHC 20601, RLST 20401, HIST 25610

MDVL 20602. Islamic Thought and Literature II. 100 Units.

This course covers the period from ca. 950 to 1700, surveying works of literature, theology, philosophy, sufism, politics, history, etc., written in Arabic, Persian and Turkish, as well as the art, architecture and music of the Islamicate traditions. Through primary texts, secondary sources and lectures, we will trace the cultural, social, religious, political and institutional evolution through the period of the Fatimids, the Crusades, the Mongol invasions, and the 'gunpowder empires' (Ottomans, Safavids, Mughals).

Instructor(s): Franklin Lewis Terms Offered: Winter

Note(s): Taking these courses in sequence is recommended but not required. This sequence meets the general education requirement in civilization studies.

Equivalent Course(s): RLST 20402, HIST 25615, NEHC 20602, SOSC 22100

MDVL 20605. Colloquium: Sources for the Study of Islamic History. 100 Units.

This course is designed to acquaint the student with the basic problems and concepts as well as the sources and methodology for the study of premodern Islamic history. Sources will be read in English translation and the tools acquired will be applied to specific research projects to be submitted as term papers.

Instructor(s): J. Woods Terms Offered: Winter

Equivalent Course(s): HIST 26005, HIST 36005, ISLM 30605, NEHC 30605, NEHC 20605

MDVL 20902. Empires and Peoples: Ethnicity in Late Antiquity. 100 Units.

Late antiquity witnessed an unprecedented proliferation of peoples in the Mediterranean and the Middle East. Vandals, Arabs, Goths, Huns, Franks, and Iranians, among numerous others, took shape as political communities within the Roman and Iranian empires or along their peripheries. Recent scholarship has undone the traditional image of these groups as previously undocumented communities of 'barbarians' entering history. Ethnic communities emerge from the literature as political constructions dependent on the very malleability of identities, on specific acts of textual and artistic production, on particular religious traditions, and, not least, on the imperial or postimperial regimes sustaining their claims to sovereignty. The colloquium will debate the origin, nature, and roles of ethno-political identities and communities comparatively across West Asia, from the Western Mediterranean to the Eurasian steppes, on the basis of recent contributions. As a historiographical colloquium, the course will address the contemporary cultural and political concerns-especially nationalism-that have often shaped historical accounts of ethnogenesis in the period as well as bio-historical approaches-such as genetic history-that sometimes sit uneasily with the recent advances of historians.

Instructor(s): R. Payne Terms Offered: Autumn

Prerequisite(s): Open to advanced undergraduates and graduate students.

Equivalent Course(s): LLSO 20902, CLCV 23718, HIST 20902, HIST 30902, NEHC 20802, CLAS 33718, NEHC 30802

MDVL 21100. A Medieval Menagerie: Animal Spirituality in the Middle Ages. 100 Units.

In contemporary philosophy, ethics, and literature, a subject attracting more and more attention is animals - human animals, non-human animals, and the complex relation between these paradigmatic others. The aim of this course is to consider many of the same problems and questions raised in modern discourse from the perspective of ancient and medieval sources. Drawing from a diverse corpus of texts - Aristotelian, Neoplatonic, Hindu, Jewish, Christian, Muslim - the course will explore the richness of the medieval traditions of animal symbolism, and the complexity of medieval human beings' understanding of themselves in relationship to their familiar and immanently present confreres in the world of nature.

Instructor(s): James Robinson Terms Offered: Winter

Equivalent Course(s): ISLM 41100, HREL 41101, JWSC 26252, RLVC 41100, HIJD 31100, RLST 22406

MDVL 21330. Despair and Consolation: Emotion and Affect in Late-Medieval and Reformation Christianity. 100 Units.

The course surveys major texts in Christian thought and culture from the fourteenth through the sixteenth centuries, and it focuses on how these authors understood despair-a central theme in the writings of many women and men, secular and religious-and how, if at all, despair may be remedied. We will think alongside these late-medieval and early-modern figures about the phenomenon of emotion, the relations between of feeling and knowing, possible responses to (especially negative) affects, and how religious belief, practice, and experience shape and are shaped by emotional life. Major historical figures to be read include: Catherine of Siena, Jean Gerson, Christine de Pisan, Julian of Norwich, Heinrich Kramer, Martin Luther, John Calvin, Teresa of Ávila, and Michel de Montaigne. We will also read selected contemporary voices in affect theory and disability studies to hone our critical and analytical resources for interpreting the primary texts.

Instructor(s): M. Vanderpoel Terms Offered: Autumn

Equivalent Course(s): HIST 22121, RLST 21330, GNSE 21330

MDVL 21703. Introducción a las literaturas hispánicas: textos españoles clásicos. 100 Units.

This course involves careful reading and discussion of significant works from the Spanish Middle Ages, Renaissance, and the Golden Age, including Juan Manuel's *Conde Lucanor*, Jorge Manrique's *Coplas*, the anonymous *Lazarillo de Tormes*, and the theater of Calderón.

Terms Offered: Autumn Winter

Prerequisite(s): SPAN 20300 or consent of instructor.

Note(s): Taught in Spanish.

Equivalent Course(s): SPAN 21703

MDVL 21900. Dante's Divine Comedy 1: Inferno. 100 Units.

This is the first part of a sequence focusing on Dante's masterpiece. We examine Dante's *Inferno* in its cultural (i.e., historical, artistic, philosophical, sociopolitical) context. In particular, we study Dante's poem alongside other crucial Latin and vernacular texts of his age. They include selections from the Bible, Virgil's *Aeneid*, Augustine's *Confessions*, Ovid's *Metamorphoses*, and the stilnovist and Siculo-Tuscan poets. Political turmoil, economic transformation, changing philosophical and theological paradigms, and social and religious conflict all converge in the making of the *Inferno*.

Instructor(s): J. Steinberg Terms Offered: Winter

Note(s): Taught in English.

Equivalent Course(s): FNDL 27200, ITAL 31900, ITAL 21900

MDVL 22101. Dante's Divine Comedy III: Paradiso. 100 Units.

An in-depth study of the third cantica of Dante's masterpiece, considered the most difficult but in many ways also the most innovative. Read alongside his scientific treatise the *Convivio* and his political manifesto the *Monarchia*.

Instructor(s): J. Steinberg Terms Offered: Spring

Prerequisite(s): Completion of the previous courses in the sequence not required, but students should familiarize themselves with the *Inferno* and the *Purgatorio* before the first day of class.

Note(s): Taught in English.

Equivalent Course(s): ITAL 32101, ITAL 22101, FNDL 21804

MDVL 22350. Speaking Truth to Power in Medieval Iberia. 100 Units.

In the multilingual and multireligious environment of the Iberian middle ages, poetry can express many things. And while literary history has granted a prestigious space to some of these things, such as love or spirituality, it has consistently neglected others, such as socio-political satire or vulgarity. This class will be paying attention to that other less talked-about poetry that gets into the political struggles of the period, that talks in profanities about profane things. In other words, the poetry that does not speak to the eternity of existence, but that gets its hands dirty with earthly matters. The poetry that savagely mocks and cuts through social conventions in a way that makes seem contemporary Twitter trolls benevolent in comparison. For this class we will be reading authors who wrote in Galician-Portuguese such as Joao Soares de Paiva or King Alfonso X, authors who wrote in Catalan such as Guillem de Bergueda or Ramon Vidal de Besalu, and authors who wrote in Spanish such as Juan Ruiz or Juan de Mena. Translations to Spanish will be provided or worked through class discussion.

Instructor(s): N. Blanco Mourelle Terms Offered: Autumn

Equivalent Course(s): SPAN 32350, PORT 22350, CATA 32350, CATA 22350, SPAN 22350, PORT 32350

MDVL 23407. Comparative Kingship: Rulers in 12th-Century Europe. 100 Units.

The purpose of this course is to examine the different forms that kingship took in the Latin Christian kingdoms of Europe during the twelfth century. In the first half of the course, we will read and discuss a broad range of primary and secondary sources that will give us the opportunity to analyze critically kingship in England, France and Germany (the Holy Roman Empire). In the second half of the course, we will broaden our discussion to consider how other kingdoms in Europe—including Scotland, Norway, Denmark, Poland, Hungary, Sicily, Aragon and Castile—do and do not conform to more general models of 12th-century European kingship.

Instructor(s): J. Lyon Terms Offered: Winter

Equivalent Course(s): HIST 23407, HIST 33407

MDVL 23510. The Arts of Language in the Middle Ages: The Trivium. 100 Units.

Throughout the Middle Ages, formal education began with the study of language: grammar, including the study of literature as well as the practical mastery of the mechanics of language (here, Latin); logic or dialectic, whether narrowly defined as the art of constructing arguments or, more generally, as metaphysics, including the philosophy of mind; and rhetoric, or the art of speaking well, whether to praise or to persuade. In this course, we will be following this medieval curriculum insofar as we are able through some of its primary texts, many only recently translated, so as to come to a better appreciation of the way in which the study of these arts affected the development of medieval European intellectual and artistic culture.

Instructor(s): R. Fulton Brown Terms Offered: Spring

Equivalent Course(s): HIST 23510, FNDL 23902, HIST 33510

MDVL 23518. Colloquium: How to Be Good. 100 Units.

Medieval Christians understood virtue as both a habit and a gift of grace. In this course, we will test this understanding by comparison with the definitions of virtue found in three complementary traditions: Greek, Jewish, and Confucian. Readings will be taken from the New Testament, Thomas Aquinas, Aristotle, Plato, the Torah, the Talmud, and the *Analects*. Our purpose will be to discover how each of these systems of training the soul works, along with their similarities and differences.

Instructor(s): R. Fulton Brown Terms Offered: Spring

Equivalent Course(s): FNDL 23518, HIST 23518, HIST 33518

MDVL 24202. Indian Philosophy II: The Classical Traditions. 100 Units.

This course follows the first module on Indian philosophy by exploring the debates between several classical 'schools' or 'viewpoints' (*darśanas*) of Indian philosophy. In addition to expanding upon the methods of systematized reasoning inaugurated by the Nyāya and Buddhist epistemological traditions, particular attention will be given to systems of scriptural hermeneutics -- *Mīmāṃsā* and *Vedānta* -- and their consequences for the philosophy of language, theories of cognitive error, and even poetics.

Instructor(s): Anand Venkatkrishnan, Andrew Ollett Terms Offered: Spring
Equivalent Course(s): SALC 20902, HREL 30300, RLST 24202, SALC 30902, DVPR 30302

MDVL 25110. Maimonides and Hume on Religion. 100 Units.

This course will study in alternation chapters from Maimonides' Guide of the Perplexed and David Hume's Dialogues concerning Natural Religion, two major philosophical works whose literary forms are at least as important as their contents. Topics will include human knowledge of the existence and nature of God, anthropomorphism and idolatry, religious language, and the problem of evil. Time permitting, we shall also read other short works by these two authors on related themes. (B) (III)

Instructor(s): J. Stern Terms Offered: Winter
Equivalent Course(s): PHIL 35110, PHIL 25110, RLST 25110, HIJD 35200, FNDL 25110, JWSC 26100

MDVL 25400. Readings in Maimonides' Guide of the Perplexed. 100 Units.

A careful study of select passages in Maimonides' Guide of the Perplexed, focusing on the method of the work and its major philosophical-theological themes, including: divine attributes, creation vs. eternity, prophecy, the problem of evil and divine providence, law and ethics, the final aim of human existence.

Instructor(s): James Robinson Terms Offered: Autumn
Equivalent Course(s): NEHC 40470, FNDL 24106, ISLM 45400, RLST 21107, HREL 45401, RLVC 45400, JWSC 21107, HIJD 45400

MDVL 26002. Philosophical Petrarchism. 100 Units.

This course is a close reading of Petrarch's Latin corpus. Readings include the Coronation Oration, The Secret, and selections from Remedies for Fortune Fair and Foul, On Illustrious Men, On Religious Leisure, and The Life of Solitude. Special attention is devoted to Petrarch's letter collections (Letters on Familiar Matters, Letters of Old Age, Book without a Name, etc.) and his invectives. The aim of the course is to familiarize the student with the new and complete Petrarch that emerged in 2004 on the occasion of the 700th anniversary of his birth. Discussion will focus on Petrarch's self-consciousness as the 'father of humanism,' his relationship to Dante, autobiography, dialogical inquiry, anti-scholasticism, patriotism, and Petrarch's 'civic' reception in the Quattrocento as well as on a comparative evaluation of the nineteenth-century Petrarchs of Alfred Mézières, Georg Voigt, and Francesco De Sanctis.

Instructor(s): R. Rubini Terms Offered: Autumn
Note(s): Taught in English.
Equivalent Course(s): ITAL 36002, FNDL 25802, ITAL 26002

MDVL 26250. Buddhist Poetry in India. 100 Units.

The substantial Buddhist contribution to Indian poetry is of interest for what it teaches us of both Buddhism and the broad development of Indian literature. The present course will focus upon three phases in this history, with attention to what changes of language and literary genre tell us of the transformations of Indian religious culture from the last centuries B.C.E. to about the year 1000. Readings (all in translation) will include the Ther#g#th#, a collection of verses written in Pali and the most ancient Indian example of womens' literature, selections from the work of the great Sanskrit poets A#vagho#a, #rya#ra, and M#t#ceta, and the mystical songs, in the Apabhra##a language, of the Buddhist tantric saints.

Instructor(s): Matthew Kapstein Terms Offered: Spring
Prerequisite(s): General knowledge of Buddhism is desirable.
Equivalent Course(s): RLST 26250, RLVC 34300, SALC 34300, DVPR 34300, HREL 34300

MDVL 26614. Making the Monsoon: The Ancient Indian Ocean. 100 Units.

The course will explore the human adaptation to a climatic phenomenon and its transformative impacts on the littoral societies of the Indian Ocean, circa 1000 BCE-1000 CE. Monsoon means season, a time and space in which favorable winds made possible the efficient, rapid crossing of thousands of miles of ocean. Its discovery-at different times in different places- resulted in communication and commerce across vast distances at speeds more commonly associated with the industrial than the preindustrial era, as merchants, sailors, religious specialists, and scholars made monsoon crossings. The course will consider the participation of Mediterranean, Middle Eastern, South Asian, and East African actors in the making of monsoon worlds and their relations to the Indian Ocean societies they encountered; the course is based on literary and archaeological sources, with attention to recent comparative historiography on oceanic, climatic, and global histories.

Instructor(s): R. Payne Terms Offered: Spring
Equivalent Course(s): NEHC 36614, CLAS 36620, CLCV 26620, HIST 36614, SALC 36614, NEHC 26614, SALC 26614, HIST 26614

MDVL 27020. Christianity and Islam in the Western Mediterranean World during the Late Middle Ages. 100 Units.

El curso analizará los contactos mantenidos entre mundo cristiano y mundo islámico en el Mediterráneo bajomedieval, tomando la Corona de Aragón y sus ricas fuentes documentales como observatorio privilegiado. Las particularidades de la Corona de Aragón se compararán con las de otros estados cristianos del Occidente mediterráneo que mantuvieron relaciones sostenidas con los musulmanes. Tras la definición de la naturaleza y de las especificidades de los contactos político-diplomáticos, mercantiles y pirático-corsarios entre Cristiandad e Islam, las clases se focalizarán en la identificación y caracterización de colectivos y personas que actuaron como mediadores lingüísticos y culturales entre ambas realidades. Se determinarán las circunstancias y motivos que permitieron que agentes diplomáticos, mercaderes, mercenarios, piratas-corsarios o cautivos-esclavos vehicularan los contactos. Y se analizarán y compararán las distintas tipologías documentales que son plasmación de todos esos intercambios y contactos culturales y humanos.

Instructor(s): R. Salicrú i Lluç Terms Offered: Spring
Note(s): Taught in Spanish.
Equivalent Course(s): CATA 27020, RLST 27020, SPAN 37020, SPAN 27020, CATA 37020

MDVL 28404. Introduction to Old English. 100 Units.

Moððe word fræt.' These are the first words of a riddle that students will learn how to read in this course. As the first part of the Medieval Research Series, this course introduces students to the Old English language, the literary history of early medieval England, and current research tools and scholarship in the field of Old English. In studying the language, we will explore its diverse and exciting body of literature, including poems of heroic violence and lament, laws, medical recipes, and humorously obscene riddles. Successful completion of the course will give students a rich sense not only of the earliest period of English literary culture, but also of the structure of the English language as it is written and spoken today. (Pre-1650; Med/Ren) This course is the first in a two quarter Medieval Research sequence. No prior experience with Old or Middle English is required. The second course in the Medieval Research sequence (Beowulf) will be offered in the Spring Quarter.

Instructor(s): Benjamin Saltzman Terms Offered: Autumn

Equivalent Course(s): ENGL 38404, ENGL 28404

MDVL 28405. Old English Riddles (Med. Research Sequence II) 100 Units.

In this course, we will read and translate all of the Exeter Book Riddles from Old English, attending closely to issues of language, paleography, textual cruxes, and-of course-interpretation. In an effort to understand these riddles within a broader early medieval tradition of enigmatic poetry, we will also read several Old English charms as well as Anglo-Latin riddles in translation. Emphasis will also be placed on the history of scholarship on early medieval riddles, and over the course of the term, each student will produce a piece original scholarly research that engages with a riddle or set of riddles and the critical tradition. (Pre-1650, Poetry); (Med/Ren).

Instructor(s): Benjamin Saltzman Terms Offered: Winter

Prerequisite(s): This course is the second in a two-quarter Medieval Research Sequence and prior knowledge of Old English will be required.

Equivalent Course(s): ENGL 28405, ENGL 38405

MDVL 28705. Christian Iconography. 100 Units.

In Christian culture, visual images have for many centuries played a pivotal role in ritual, devotion, intellectual thought, and religious instruction. The most important aims of this course are that students understand images convey meaning in very unique ways and learn how to decode their visual messages. The study of iconography encompasses a variety of methods used to identify the subject matter of a pictorial image, describe its contents, and analyze its discursive strategies in view of its original cultural context. We will cover some of the most important themes visualized in the arts of Christianity by analyzing imagery spanning different periods, geographical regions, pictorial media, and artistic techniques. While special emphasis is placed on the intersections of art and literature, we will also examine pictorial themes that are independent of a specific textual basis. Alongside the study of Christian iconography, this course will address broader issues of visual inquiry, such as patronage, viewer response, emotions, and gender roles. In this course, students will acquire a 'visual literacy' that will enable them to explore all kinds of works of art fruitfully as primary sources in their own right.

Instructor(s): Karin Krause Terms Offered: Winter

Prerequisite(s): P/Q: This course is open to all undergraduate students who are interested in the course topic. You certainly do not need to be an adherent of the Christian faith to take this course. However, a basic familiarity with some of the foundational texts of Christianity (esp. the Bible) and its main (Biblical) protagonists is not a disadvantage.

Equivalent Course(s): ARTH 28705, RLST 28705

MDVL 29104. Antisemitism and Islamophobia, Historically and Today. 100 Units.

How are antisemitism and Islamophobia linked together? Are they two different modes of oppression and discrimination or are they part of a similar phenomenon? Moreover, are they religious, racial, or ethnic forms of discrimination? Throughout this course, we will complicate the media narrative that sees Jews and Arabs as perpetual enemies through a historical and philosophical exploration into the origins and development of Orientalism, Islamophobia, and antisemitism. Students will think historically about the construction of race, ethnicity, and religion, and the discriminatory modes by which these are employed; and they will use that knowledge to think critically about current depictions of anti-Jewish and anti-Islamic violence. In the first part of the course, we will consider the historical and conceptual underpinnings of antisemitism and Islamophobia. We will look to 14th and 15th century Spain in order to better understand how and where they originated; we will then track their development through modernity, paying close attention to how these discourses changed and evolved over time; finally, we will look at the impact of the Holocaust and the rise of the State of Israel and consider current iterations of Islamophobia and antisemitism in Europe and America today.

Instructor(s): Mendel Kranz Terms Offered: Spring

Equivalent Course(s): RLST 29104, JWSC 29104

MDVL 35418. Figura, Persona, Vox: Prosopopoeia in the Middle Ages. 100 Units.

This course considers fictional persons, tropes of anthropomorphism and vivification, and personificational allegory as these operate in the theory and practice of medieval imaginative writing. In addition, it places practices of prosopopoeia within ongoing scholarly conversations about lyric voice, literary character, affect, the ontology of fiction, and the relation of speech to writing. (Med/Ren)

Instructor(s): Julie Orlemanski Terms Offered: Winter

Equivalent Course(s): ENGL 35418

Molecular Engineering

Department Website: <https://pme.uchicago.edu/academics/undergraduate-program-molecular-engineering> (<https://pme.uchicago.edu/academics/undergraduate-program-molecular-engineering/>)

Overview of Molecular Engineering

Engineering is the science of solving complex technological problems and, in the case of molecular engineering, applying molecular-level science to the design of advanced devices, processes, and technologies. The Pritzker School of Molecular Engineering (PME) is at the forefront of emerging approaches to address fundamental societal challenges in such areas as quantum engineering, biotechnology and immunoengineering, advanced materials, energy storage, and a clean global water supply.

Program of Study in Molecular Engineering

The BS degree in Molecular Engineering offers undergraduates a cutting-edge engineering curriculum built on a strong foundation in mathematics, physics, chemistry, and biology. Courses in the major are designed to develop quantitative reasoning and problem-solving skills; to introduce engineering analysis of biological, chemical, and physical systems; and to address open-ended technological questions across a spectrum of disciplines. The aim is to introduce invention and design, along with inquiry and discovery, as fruitful and complementary intellectual activities.

The program prepares undergraduates for leadership roles in a technology-driven society. Graduates will be positioned to follow traditional engineering paths in research, technology development, and manufacturing, or to pursue further postgraduate study in such fields as engineering, science, medicine, business, or law. Other graduates may successfully leverage the quantitative and problem-solving skills gained in their training as engineers towards careers in technical and management consulting, finance, public policy, or entrepreneurship.

What's New in Molecular Engineering in 2020–21?

- **Seven new minors in Molecular Engineering.** Students majoring in Molecular Engineering or other closely related scientific disciplines can further broaden and deepen their engineering and scientific knowledge by completing a specialized minor composed of advanced coursework. The new minors are offered in Quantum Information Science; Molecular, Cellular, and Tissue Engineering; Immunoengineering; Systems Bioengineering; Molecular Science and Engineering of Polymers and Soft Materials; Molecular Engineering of Sustainable Energy and Water Resources; and Computational Molecular Engineering.
- **New mathematics requirements for Molecular Engineering majors** (for students matriculating in 2020 or later). Developed specifically for molecular engineers and other students in the physical sciences, students are now required to complete the sequence MATH 18300-18400-18500-18600.
- **New major curriculum and track requirements.** Students in the Class of 2023 or later should pursue the new major requirements outlined here in the 2020–21 College Catalog. Third- and fourth-year MENG majors should follow the requirements for their year of matriculation.
 - Notable changes include: the first course in Molecular Engineering for majors can be accessed in the Autumn Quarter of second year; all majors take a shared set of seven courses in Molecular Engineering, including topics in engineering analysis, quantum mechanics, thermodynamics, molecular transport phenomena, and engineering design; and majors choose between well-defined and distinguishable tracks in bioengineering, chemical engineering, and quantum engineering.
- **New course numbering and scheduling.** Course numbers and, in some cases, course titles and content, have been updated. There have also been some changes to scheduling of courses throughout the academic year. Of particular note, rising third-year students should register for:
 - MENG 21200 Principles of Engineering Analysis II in Winter Quarter 2021 to satisfy their Engineering Analysis requirement (previously MENG 26030)
 - MENG 21400 Molecular Engineering Thermodynamics in Spring Quarter 2021 to satisfy their first Thermodynamics requirement (previously MENG 26201)
 - MENG 24100 Molecular Engineering Thermodynamics of Phase Equilibria in Autumn Quarter 2021 to satisfy their second Thermodynamics requirement (previously MENG 26202)

Major Program Requirements

1. A strong and broad background in mathematics, physics, chemistry, and biology. It is imperative for a modern engineer to have a strong and broad background in the sciences, and the highly interdisciplinary nature of molecular engineering requires a foundation built across the mathematical, physical, and biological sciences.

Completing mathematics, chemistry, and physics course work during the first year at the University of Chicago is necessary for students interested in taking advantage of specializations in Molecular Engineering (for example, in polymers and soft materials, sustainable energy and water resources, immunoengineering, or quantum information science), advanced electives, research and design projects, and other opportunities beyond the required major course work. Completion of at least MATH 18400, CHEM 11300, and PHYS 13300, or approved equivalents, by the end of the first year **is a prerequisite for Molecular Engineering course work** during a student's second year. Therefore, **all students majoring in Molecular Engineering are strongly advised to take mathematics, chemistry, and physics courses concurrently during their first**

year at the University. Students also are advised to start the mathematics, chemistry, and physics sequences at the highest level for which they are prepared, and to complete their general education requirements as early as possible.

Students who satisfy the mathematics, chemistry, and physics requirements during their second year will be able to complete the Molecular Engineering major during their third and fourth years, but may be unable to avail themselves of advanced engineering opportunities.

2. Starting the program. All students begin their Molecular Engineering coursework by enrolling in MENG 21100 Principles of Engineering Analysis I once they have satisfied the mathematics, chemistry, and physics prerequisites. This course is offered in the Autumn Quarter only. Students are encouraged to take this course during their second year of studies, which enables them to access the new minors and advanced specializations in Molecular Engineering, advanced electives, research and design projects, and other opportunities beyond the required major coursework.

3. Foundations in Molecular Engineering. All Molecular Engineering majors take a set of five courses as a cohort that develop a shared skill set essential for engineering at the atomistic, molecular, and nano scales. These courses include MENG 21100-21200 Principles of Engineering Analysis I and II which provide applied mathematical and computational methods critical to solving numerical problems across all engineering fields, as well as MENG 21300 Engineering Quantum Mechanics, MENG 21400 Molecular Engineering Thermodynamics, and MENG 21500 Molecular Engineering Transport Phenomena.

4. Three Molecular Engineering tracks. Another strength of the Molecular Engineering program is that students select one of three tracks—bioengineering, chemical engineering, or quantum engineering—to concentrate and deepen knowledge in the area that interests them the most. Designed to reflect the research and education themes of the Pritzker School of Molecular Engineering, each track consists of six courses, as follows:

- **Bioengineering Track** includes courses in organic chemistry, biochemistry, quantitative physiology, systems biology, and cellular engineering.
- **Chemical Engineering Track** includes courses in organic chemistry, fluid mechanics, kinetics and reaction engineering, the thermodynamics of mixtures, and molecular modeling.
- **Quantum Engineering Track** includes courses in quantum mechanics and engineering, electricity and magnetism, optics, electrodynamics, quantum computation, and laboratory instrumentation.

5. MENG 21800-21900 Engineering Design I-II (200-unit capstone sequence). The design course is a two-quarter sequence that teaches students how to combine fundamental science and engineering to address open-ended, real-world challenges. Engineers from industry, the national laboratories, and academia, including PME faculty and fellows, propose real-world projects for which they serve as mentors. Students work together in small teams throughout the two quarters to address the diverse engineering challenges that arise. Examples of recent design projects that have been undertaken by Molecular Engineering majors include developing self-cleaning textiles that photocatalytically degrade microbial contaminants; applying machine learning to analyze ultrafast X-ray images of liquid jets and sprays; and evaluating the technical and economic barriers of emerging approaches to plastic recycling.

The design course also serves as a vehicle to teach other equally important non-technical skills, including:

- Problem identification: technology analysis, competitive analysis, market analysis, stakeholder analysis, product definition
- Impact of the project, including sociological and engineering ethics
- Project planning
- Project economics: costs, value/investment analysis, risk analysis and adjustment
- Prototyping, experimental design, data analysis, error analysis
- IP: patenting, prior art, patentability
- Legal and regulatory analysis
- Proposing, presenting, and reporting
- Teamwork

6. Laboratory skills and hands-on experience. Molecular engineers should develop the ability to apply their knowledge of mathematics, science, and engineering; to design and conduct experiments; and to analyze and interpret data. Molecular Engineering majors develop these skills through laboratory components associated with the required courses in the physical and biological sciences, as well as Molecular Engineering courses including MENG 24100 Molecular Engineering Thermodynamics of Phase Equilibria, MENG 24200 Molecular Transport Phenomena II, and MENG 26200 Instrumentation Laboratory. In addition, Molecular Engineering students are strongly encouraged to undertake advanced laboratory experiences by pursuing undergraduate research projects with faculty in the PME, at Argonne National Laboratory, or across the University of Chicago.

Summary of Requirements for the Major in Molecular Engineering: Bioengineering Track

GENERAL EDUCATION

CHEM 10100 & CHEM 10200	Introductory General Chemistry I and Introductory General Chemistry II (or higher) ¹	200
----------------------------	--	-----

One of the following sequences:

200

BIOS 20186-20187	Fundamentals of Cell and Molecular Biology; Fundamentals of Genetics ²	
BIOS 20234 & BIOS 20235	Molecular Biology of the Cell and Biological Systems ³	

Total Units

400

MAJOR

CHEM 11300	Comprehensive General Chemistry III (or higher) ¹	100
PHYS 13100-13200-13300	Mechanics; Electricity and Magnetism; Waves, Optics, and Heat (or higher)	300
MATH 18500 & MATH 18600	Mathematical Methods in the Physical Sciences III and Mathematics of Quantum Mechanics ⁴	200
MENG 21100	Principles of Engineering Analysis I	100
MENG 21200	Principles of Engineering Analysis II	100
MENG 21300	Engineering Quantum Mechanics	100
MENG 21400	Molecular Engineering Thermodynamics	100
MENG 21500	Molecular Engineering Transport Phenomena	100

MENG 22200	Cellular Engineering	
MENG 22300	Quantitative Systems Biology	
MENG 22400	Bioengineering Kinetics	

Total Units

1900

¹ Credit may be granted by examination.² Molecular Engineering majors can take these courses without the Biological Sciences prerequisites (BIOS 20150-20151) unless they pursue a double major in the Biological Sciences. They are expected to show competency in mathematical modeling of biological phenomena covered in BIOS 20151 Introduction to Quantitative Modeling in Biology (Basic).³ Open only to students with a 4 or 5 on the AP Biology exam. Upon completion of BIOS 20234-20235-20236, students will be awarded a total of 200 units to be counted toward the general education requirement in the biological sciences.⁴ MATH 20400 Analysis in Rn II-MATH 20500 Analysis in Rn III or MATH 20800 Honors Analysis in Rn II-MATH 20900 Honors Analysis in Rn III may be used to fulfill this requirement.

Summary of Requirements for the Major in Molecular Engineering: Chemical Engineering Track

GENERAL EDUCATION

CHEM 10100 & CHEM 10200	Introductory General Chemistry I and Introductory General Chemistry II (or higher) ¹	200
----------------------------	--	-----

One of the following sequences:

200

BIOS 20186-20187	Fundamentals of Cell and Molecular Biology; Fundamentals of Genetics ²	
BIOS 20234 & BIOS 20235	Molecular Biology of the Cell and Biological Systems ³	

Total Units

400

MAJOR

CHEM 11300	Comprehensive General Chemistry III (or higher) ¹	100
PHYS 13100-13200-13300	Mechanics; Electricity and Magnetism; Waves, Optics, and Heat (or higher)	300
MATH 18500 & MATH 18600	Mathematical Methods in the Physical Sciences III and Mathematics of Quantum Mechanics ⁴	200
MENG 21100	Principles of Engineering Analysis I	100
MENG 21200	Principles of Engineering Analysis II	100
MENG 21300	Engineering Quantum Mechanics	100

MENG 21400	Molecular Engineering Thermodynamics	100
MENG 21500	Molecular Engineering Transport Phenomena	100
MENG 29511-29512	Engineering Design I-II	200
CHEM 22000 & CHEM 22100	Organic Chemistry I and Organic Chemistry II	200
MENG 24100	Molecular Engineering Thermodynamics of Phase Equilibria	100
MENG 24200	Molecular Transport Phenomena II	100
MENG 24300	Molecular Modeling	100
MENG 24400	Chemical Kinetics and Reaction Engineering	100
Total Units		1900

- ¹ Credit may be granted by examination.
- ² Molecular Engineering majors can take these courses without the Biological Sciences prerequisites (BIOS 20150-20151) unless they pursue a double major in the Biological Sciences. They are expected to show competency in mathematical modeling of biological phenomena covered in BIOS 20151 Introduction to Quantitative Modeling in Biology (Basic).
- ³ Open only to students with a 4 or 5 on the AP Biology exam. Upon completion of BIOS 20234-20235-20236 Molecular Biology of the Cell; Biological Systems; Biological Dynamics, students will be awarded a total of 200 units to be counted toward the general education requirement in the biological sciences.
- ⁴ MATH 20400 Analysis in Rn II-MATH 20500 Analysis in Rn III or MATH 20800 Honors Analysis in Rn II-MATH 20900 Honors Analysis in Rn III may be used to fulfill this requirement.

Summary of Requirements for the Major in Molecular Engineering: Quantum Engineering Track

GENERAL EDUCATION

CHEM 10100 & CHEM 10200	Introductory General Chemistry I and Introductory General Chemistry II (or higher) ¹	200
One of the following sequences:		200
BIOS 20186-20187	Fundamentals of Cell and Molecular Biology; Fundamentals of Genetics ²	
BIOS 20234 & BIOS 20235	Molecular Biology of the Cell and Biological Systems ³	
Total Units		400

MAJOR

CHEM 11300	Comprehensive General Chemistry III (or higher) ¹	100
MATH 18500 & MATH 18600	Mathematical Methods in the Physical Sciences III and Mathematics of Quantum Mechanics ⁴	200
PHYS 13100-13200-13300	Mechanics; Electricity and Magnetism; Waves, Optics, and Heat (or higher)	300
MENG 21100	Principles of Engineering Analysis I	100
MENG 21200	Principles of Engineering Analysis II	100
MENG 21300	Engineering Quantum Mechanics	100
MENG 21400	Molecular Engineering Thermodynamics	100
MENG 21500	Molecular Engineering Transport Phenomena	100
MENG 29511-29512	Engineering Design I-II	200
PHYS 22500-22700	Intermediate Electricity and Magnetism I-II	200
MENG 26100	Intermediate Quantum Engineering	100
MENG 26200	Instrumentation Laboratory	100
Two of the following:		200
MENG 26300	Engineering Electrodynamics	
MENG 26400	Quantum Computation	
MENG 26500	Foundations of Quantum Optics	
MENG 26510	Optics and Photonics	
MENG 26600	Electronic and Quantum Materials for Technology	
MENG 26610	Science of Materials	
MENG 26620	Physics of Solid State Semiconductor Devices	
MENG 26630	Introduction to Nanofabrication	
Total Units		1900

Credit may be granted by examination; consult the director of undergraduate studies.

Note: PHYS 27900 requires, and CHEM 26200 expects, prior experience with intermediate quantum mechanics; these options are well-suited to, but not exclusively for, students double-majoring in Physics or Chemistry.

Students should seek approval from the director of undergraduate studies for their major electives before registering for and completing the courses.

MATH 20400 Analysis in Rn II-MATH 20500 Analysis in Rn III or MATH 20800 Honors Analysis in Rn II-MATH 20900 Honors Analysis in Rn III may be used to fulfill this requirement.

Sample Major Programs

Below is a sample four-year program for the Bioengineering Track. Students should rely on relevant placement tests and on the direction of the Molecular Engineering and College advisers in creating a personal four-year program that accommodates their individual backgrounds and interests. It is recommended that students complete the background mathematics, chemistry, and physics sequences during their first year at the University and start these sequences at the highest level for which they are prepared.

First Year

Autumn Quarter	Winter Quarter	Spring Quarter
MATH 18300	MATH 18400	MATH 18500
CHEM 10100	CHEM 10200	CHEM 11300
PHYS 13100	PHYS 13200	PHYS 13300

Second Year

Autumn Quarter	Winter Quarter	Spring Quarter
MATH 18600	MENG 21200	BIOS 20186
MENG 21100	MENG 21300	MENG 21400
CHEM 22000	CHEM 22100	

Third Year

Autumn Quarter	Winter Quarter	Spring Quarter
BIOS 20187	MENG 24200	BIOS 20200
MENG 21500	MENG elective	MENG elective

Fourth Year

Autumn Quarter	Winter Quarter
MENG 29511	MENG 29512

Below is a sample four-year program for the Chemical Engineering Track. Students should rely on relevant placement tests and on the direction of the Molecular Engineering and College advisers in creating a personal four-year program that accommodates their individual backgrounds and interests. It is recommended that students complete the background mathematics, chemistry, and physics sequences during their first year at the University and start these sequences at the highest level for which they are prepared.

MENG 29511	MENG 29512	

Grading

In order to qualify for the BS degree, a GPA of 2.0 or higher (with no grade lower than C-) is needed in all courses required in the major. Students majoring in Molecular Engineering must receive quality grades in all courses required in the degree program. All courses in the minors must be taken for quality grades. Non-majors and non-minors may take Molecular Engineering courses on a P/F basis; only grades of C- or higher constitute passing work.

Honors

Students who pursue a substantive research project with a faculty member of the Pritzker School of Molecular Engineering are encouraged to write and defend an honors thesis based on their work. Often students initiate this research program during their third year and continue through their fourth year. Students who wish to be considered for honors are expected to complete their arrangements with the Director of Undergraduate Studies (Mark Stoykovich, stoykovich@uchicago.edu) before the end of their third year and to register for one quarter of MENG 29700 Undergraduate Research for Molecular Engineering during their third or fourth years.

To be eligible to receive honors, students in the BS degree program must write an honors paper describing their research and defend their thesis with an oral presentation. The honors paper and oral defense must be approved by faculty of the Pritzker School of Molecular Engineering and have deadlines established by the PME. The research paper or project used to meet this requirement may not be used to meet the BA/BS paper or project requirements in another major.

In addition, students must also have an overall GPA of 3.0 or higher to earn a BS degree with honors in Molecular Engineering.

Specialized Minors in Molecular Engineering

Students majoring in Molecular Engineering or other closely related scientific disciplines can further broaden and deepen their engineering and scientific knowledge by completing specialized minors in Molecular Engineering. Seven new minors composed of advanced coursework will be offered starting in the 2020–21 academic year in the specialized areas of Quantum Information Science; Molecular, Cellular, and Tissue Engineering; Immunoengineering; Systems Bioengineering; Molecular Science and Engineering of Polymers and Soft Materials; Molecular Engineering of Sustainable Energy and Water Resources; and Computational Molecular Engineering.

Minor Program in Quantum Information Science

Quantum science, which harnesses the strange rules of physics that govern the smallest particles in nature, is shifting paradigms in fundamental and applied physics, chemistry, biology, and computer science. The minor leverages the unique strengths of the faculties of Molecular Engineering, Physics, and Computer Science to provide students with a foundation to understand and contribute to quantum sciences and technologies. The minor focuses on both the theory of quantum information processing as well as the physical systems and principles that comprise quantum technology.

Summary of Requirements for the Minor in Quantum Information Science

MENG 26400	Quantum Computation *	000-100
MENG 26500	Foundations of Quantum Optics	100
MENG 26600	Electronic and Quantum Materials for Technology	100
MENG 31400	Advanced Quantum Engineering	100
MENG 37100	Implementation of Quantum Information Processors	100
MENG 37200	Quantum Dissipation and Quantum Measurement	100
Total Units		500-600

* For students majoring in Molecular Engineering, this course must be taken as an elective within the major and will not be counted toward minor totals. No substitution is required.

Minor Program in Molecular, Cellular, and Tissue Engineering

The minor in Molecular, Cellular, and Tissue Engineering provides a strong background in cell and molecular biology to allow molecular engineering innovation in the engineering areas of biomaterials, regenerative medicine, and stem cell

bioengineering. Courses are offered in these basic areas as well as microfluidics, synthetic biology, molecular imaging, immunoengineering, and nanomedicine to develop novel cellular and molecular therapies. The course of study emphasizes both basic aspects of physical and cellular biology and translational applications in medicine. In addition, courses on quantitative aspects of cell biology and systems biology are offered, building upon biological fundamentals with quantitative analysis.

Summary of Requirements for the Minor in Molecular, Cellular, and Tissue Engineering

MENG 22200	Cellular Engineering *	000-100
MENG 22100	Quantitative Physiology	100
MENG 23100	Biological Materials	100
MENG 23110	Stem Cell Biology, Regeneration, and Disease Modeling	100
Two of the following:		200
MENG 22300	Quantitative Systems Biology	
MENG 22400	Bioengineering Kinetics	
MENG 23120	The Structural Basis of Biomolecular Engineering	
MENG 23130	Proteomics and Genomics in Biomolecular Engineering	
MENG 23140	Biodiagnostics and Biosensors	
MENG 23150	Nanomedicine	
MENG 23500	Synthetic Biology	
MENG 23510	Microfluidics and Its Applications	
Total Units		500-600

* For students majoring in Molecular Engineering, this course must be taken as an elective within the major and will not be counted toward minor totals. No substitution is required.

Minor Program in Immunoengineering

Immunoengineering is an emerging discipline at the intersection of engineering and immunology. Immunoengineering applies engineering principles and methods to quantitatively study and manipulate the complex immune system. It is becoming a powerful approach to understand, manipulate, stimulate, and eventually control immune molecules and cells to treat a broad range of health conditions, including cancer, infection, and autoimmunity. Immunoengineering not only drives innovation in immunological research, but also advances technological development in immunotherapies. Recent developments in immunotherapy have shifted the paradigm for cancer treatment, and immunotherapy is considered the future of disease treatment.

Summary of Requirements for the Minor in Immunoengineering

MENG 22100	Quantitative Physiology *	000-100
BIOS 25256	Immunobiology	100
MENG 23300	Quantitative Immunobiology	100
Two of the following:		200
MENG 22200	Cellular Engineering	
MENG 22300	Quantitative Systems Biology	
MENG 23100	Biological Materials	
MENG 23140	Biodiagnostics and Biosensors	
MENG 23310	Immunoengineering Laboratory	
MENG 23510	Microfluidics and Its Applications	
One of the following:		100
BIOS 25108	Cancer Biology	
BIOS 25216	Molecular Basis of Bacterial Disease	
BIOS 25258	Immunopathology	
BIOS 25260	Host Pathogen Interactions	
BIOS 25266	Molecular Immunology	
BIOS 27811	Global Health Sciences II: Microbiology	
Total Units		500-600

* For students majoring in Molecular Engineering, this course must be taken as an elective within the major and will not be counted toward minor totals. No substitution is required.

Minor Program in Systems Bioengineering

The minor in Systems Bioengineering will provide students with strong knowledge and applied skills in the use of quantitative methods for the analysis, manipulation, and computational modeling of complex biological systems, and will introduce them to some of the most important problems and applications in quantitative and systems biology. The students will survey theoretical concepts and tools for analysis and modeling of biological systems like biomolecules, gene networks, single cells, and multicellular systems. Concepts from information theory, biochemical networks, control theory, and linear systems will be introduced. Mathematical modeling of biological interactions will be discussed and implemented in the laboratory. Quantitative experimental methods currently used in systems biology will be introduced. These methods include single cell genomic, transcriptomic, and proteomic analysis techniques, in vivo and in vitro quantitative analysis of cellular and molecular interactions, single molecule methods, live cell imaging, high throughput microfluidic analysis, and gene editing.

Summary of Requirements for the Minor in Systems Bioengineering

MENG 22300	Quantitative Systems Biology *	000-100
MENG 23300	Quantitative Immunobiology	100
MENG 23500	Synthetic Biology	100
Two of the following:		200
MENG 22100	Quantitative Physiology	
MENG 22200	Cellular Engineering	
MENG 23510	Microfluidics and Its Applications	
BIOS 20249	Genome Informatics: Genome Org, Expression & Transmission	
One of the following:		100
BIOS 21306	Human Genetics and Evolution	
BIOS 21360	Advanced Molecular Biology	
BIOS 23258	Molecular Evolution I: Fundamentals and Principles	
BIOS 28407	Genomics and Systems Biology	
Total Units		500-600

* For students majoring in Molecular Engineering, this course must be taken as an elective within the major and will not be counted toward minor totals. No substitution is required.

Minor Program in Molecular Science and Engineering of Polymers and Soft Materials

The plastic in molded bottles and food packaging . . . Synthetic rubber in tires . . . Scratch-resistant coatings that are chemically and thermally stable . . . Bulletproof materials in lightweight vests . . . Super-absorbent materials such as those in diapers . . . Synthetic polymers are ubiquitous in the 21st century, with such engineered materials exhibiting unique properties and enabling novel applications relative to traditional materials. The minor in Molecular Science and Engineering of Polymers and Soft Materials is designed to prepare students to enter diverse fields in the polymer and soft material sciences. A sophisticated understanding of the molecular-level interactions and structure is required to work with polymers and ultimately provides the opportunity to predict and control material behaviors at the macroscale. Students in the minor will study the chemistry, physics, thermophysical properties, modeling, and processing of polymers, as well as other classes of soft materials including liquid crystals and colloids. Applications of polymers and soft matter in lightweight composites, smart or responsive materials, bioinspired and biomedical materials, advanced lithography, and energy-related materials will be examined.

Summary of Requirements for the Minor in Molecular Science and Engineering of Polymers and Soft Materials

MENG 26101 or MENG 24200	Transport Phenomena I: Forces and Flows *	0-100
MENG 25100	Molecular Transport Phenomena II	100
MENG 25130	Introduction to Polymer Science	100
Soft Matter Characterization Laboratory		100
One of the following pairs:		200
MENG 25110 & MENG 25120	Polymer Synthesis and Polymer Physics	
CHEM 22200 & MENG 25110	Organic Chemistry III and Polymer Synthesis	
MENG 25500 & MENG 25120	Classical Molecular and Materials Modeling and Polymer Physics	
One of the following:		100
MENG 23100	Biological Materials	
MENG 25110	Polymer Synthesis	
MENG 25120	Polymer Physics	

MENG 25320	Electrochemical Principles and Methods
MENG 25500	Classical Molecular and Materials Modeling
PHYS 36700	Soft Condensed Matter Phys

Total Units

500-600

* For students majoring in Molecular Engineering, this course must be taken as an elective within the major and will not be counted toward minor totals. No substitution is required.

Minor Program in Molecular Engineering of Sustainable Energy and Water Resources

Climate change and finite resources for an ever-growing global population mandate major initiatives on achieving a better and more sustainable future. Access to clean water and the development of sustainable energy technologies are at the heart of this global challenge. The minor in Molecular Engineering of Sustainable Energy and Water Resources is tailored for students interested in gaining a deeper understanding of the science, conservation, and management of energy and water resources. Concepts of emphasis include fundamental electrochemistry, materials and devices for energy conversion and storage (e.g., batteries, solar cells, wind turbines, geothermal), the molecular behavior of water, climate change and its impacts, and energy and water policy.

Summary of Requirements for the Minor in Molecular Engineering of Sustainable Energy and Water Resources

MENG 26102	Transport Phenomena II *	000-100
or MENG 21500	Molecular Engineering Transport Phenomena	
MENG 25300	Molecular Science and Engineering of Water	100
MENG 25310	Energy Storage and Conversion Devices	100
One of the following:		100
MENG 25320	Electrochemical Principles and Methods	
MENG 25330	Materials and Characterization Tools to Address Challenges in Energy and Water	
Two of the following:		200
MENG 20300	The Science, History, Policy, and Future of Water	
ENST 21310	Water: Economics, Policy and Society	
ENST 24705	Energy: Science, Technology, and Human Usage	
PBPL 29000	Energy and Energy Policy	
PPHA 51700	Energy Policy Practicum	
ENSC 23900	Environmental Chemistry	
ENSC 25200	Global Warming: Understanding the Forecast	

Total Units

500-600

* For students majoring in Molecular Engineering, this course must be taken as an elective within the major and will not be counted toward minor totals. No substitution is required.

Minor Program in Computational Molecular Engineering

The minor in Computational Molecular Engineering will provide students with expertise in mathematics, numerical algorithms, computational methods, and molecular and multiscale modeling techniques. The minor will introduce concepts from materials design, device design, and computational interpretation of experimental data, and provide training in tools for materials modeling ranging from electronic structure-level quantum mechanical calculations to molecular modeling methods at scales ranging from angstroms to meters.

Summary of Requirements for the Minor in Computational Molecular Engineering

MENG 24300	Molecular Modeling *	000-100
MENG 31200	Thermodynamics and Statistical Mechanics	100
MENG 25500	Classical Molecular and Materials Modeling	100
MENG 25510	Quantum Molecular and Materials Modeling	100
One of the following:		100
MENG 23100	Biological Materials	
MENG 25100	Introduction to Polymer Science	
MENG 25120	Polymer Physics	
CHEM 36800	Quantum Molecular and Materials Modeling	
BCMB 31358	Simulation, Modeling, and Computation in Biophysics	
PHYS 25000	Computational Physics	
One of the following:		100
CMSC 11800	Introduction to Data Science I	

CMSC 25025	Machine Learning and Large-Scale Data Analysis
CMSC 25400	Machine Learning
CMSC 23710	Scientific Visualization
CMSC 23900	Data Visualization
TTIC 31020	Introduction to Machine Learning

Total Units

500-600

* For students majoring in Molecular Engineering, this course must be taken as an elective within the major and will not be counted toward minor totals. No substitution is required.

Additional Requirements for Minor in Molecular Engineering

Before a student can declare a minor in Molecular Engineering, the student must complete the general education requirements in mathematics, physical sciences, and biological sciences. Following completion of these requirements, students must meet with the Director of Undergraduate Studies for Molecular Engineering, Mark Stoykovich (stoykovich@uchicago.edu), to plan a course of study for the minor program. A student must then receive approval of the minor program on a Consent to Complete a Minor Program (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf) form. The signed form must then be returned to the student's College adviser by the end of the Spring Quarter of the student's third year. Deviations from the course plan agreed upon in the Consent to Complete a Minor Program form require the approval of Dr. Stoykovich and submission of a revised Consent to Complete a Minor Program form prior to their implementation.

Other Minors in Molecular Engineering

For those students not majoring in Molecular Engineering or a related field, the College offers two additional minors in Molecular Engineering. The minors complement various major programs and better prepare students for STEM fields, equipping each with basic engineering tools to discover new ways to think about cutting-edge technologies and problem solving.

Minor Program in Molecular Engineering

The minor in Molecular Engineering introduces the technical fundamentals of molecular engineering, including in quantum mechanics, molecular thermodynamics, transport phenomena, and the application of such concepts to advanced technologies. Primarily targeted to students majoring in the physical or biological sciences, this minor provides a strong preparation for careers or postgraduate studies in engineering fields.

Summary of Requirements for the Minor in Molecular Engineering

MENG 21100	Principles of Engineering Analysis I	100
MENG 21200	Principles of Engineering Analysis II	100
Two to four of the following:		200-400
MENG 21300	Engineering Quantum Mechanics	
MENG 21400	Molecular Engineering Thermodynamics	
MENG 21500	Molecular Engineering Transport Phenomena	
MENG 24100	Molecular Engineering Thermodynamics of Phase Equilibria	
MENG 24200	Molecular Transport Phenomena II	
MENG 26100	Intermediate Quantum Engineering	
Zero to two of the following:		000-200
Advanced electives in MENG (courses numbered 22000 or higher)		
Advanced electives selected in consultation with the Director of Undergraduate Studies *		
Total Units		600

* Students must secure approval before enrolling in courses they wish to use as advanced electives in the minor program.

Minor Program in Molecular Engineering Technology and Innovation

The minor in Molecular Engineering Technology and Innovation is intended for students majoring in economics, business, policy, or related fields, and presents basic engineering concepts as they relate to evolving technologies, scientific innovation and entrepreneurship, scientific policy, and the broader impacts of engineering in society.

Summary of Requirements for the Minor in Molecular Engineering Technology and Innovation

MENG 20000	Introduction to Emerging Technologies	100
MENG 20200	Introduction to Materials Science and Engineering	100
One elective course in MENG selected in consultation with the Director of Undergraduate Studies		100

Three elective courses selected in consultation with the Director of Undergraduate Studies *	300
Total Units	600

* All courses in Molecular Engineering are pre-approved as advanced electives for the minor. The following courses are pre-approved for the minor: BIOS 11140, BUSF 34103, BUSF 34106, BUSF 42703, ECON 22600, ECON 22650, ENST 23900, ENST 24705, ENST 26420, HIPS 17502, HIPS 21301, HIPS 25506, PBPL 21800, PBPL 23100, PBPL 24701, PBPL 29000, PHSC 12400, PHSC 12500. Students must secure approval before enrolling in courses that they wish to use as electives in the minor program and that are not on this pre-approved list.

Minor Program Requirements for Molecular Engineering and Molecular Engineering Technology and Innovation

Before a student can declare a minor in Molecular Engineering, the student must complete the general education requirements in mathematics, physical sciences, and biological sciences. Following completion of these requirements, students must meet with the Director of Undergraduate Studies for Molecular Engineering, Mark Stoykovich (stoykovich@uchicago.edu), to plan a course of study for the minor program. A student must then receive approval of the minor program on a Consent to Complete a Minor Program (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf) form. The signed form must then be returned to the student's College adviser by the end of the Spring Quarter of the student's third year. Deviations from the course plan agreed upon in the Consent to Complete a Minor Program form require the approval of Dr. Stoykovich and submission of a revised Consent to Complete a Minor Program form prior to their implementation.

Courses in the minor program may not be (1) double counted with the student's major(s) or with other minors, or (2) counted toward general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Molecular Engineering Courses

MENG 20000. Introduction to Emerging Technologies. 100 Units.

This course will examine five emerging technologies (stem cells in regenerative medicine, quantum computing, water purification, new batteries, etc.) over two weeks each. The first of the two weeks will present the basic science underlying the emerging technology; the second of the two weeks will discuss the hurdles that must be addressed successfully to convert a good scientific concept into a commercial product that addresses needs in the market place.

Instructor(s): Matthew Tirrell Terms Offered: Autumn

Prerequisite(s): Completion of the general education requirements in mathematics and physical or biological sciences

Note(s): May not be counted toward PME doctoral requirements

Equivalent Course(s): MENG 30000

MENG 20200. Introduction to Materials Science and Engineering. 100 Units.

Synthesis, processing and characterization of new materials are the pervasive, fundamental necessities for molecular engineering. Understanding how to design and control the structure and properties of materials at the nanoscale is the essence of our research and education program. This course will provide an introduction to molecularly engineered materials and material systems. The course starts with atomic-level descriptions and means of thinking about the structure of materials, and then builds towards understanding nano- and meso-scale materials architectures and their structure-dependent thermal, electrical, mechanical, and optical properties. Strategies in materials processing (heat treatment, diffusion, self-assembly) to achieve desired structure will also be introduced. In the latter part of the course, applications of the major concepts of the course will be studied in quantum materials, electronic materials, energy-related materials, and biomaterials.

Instructor(s): Shuolong Yang Terms Offered: Spring

Prerequisite(s): Completion of the general education requirements in mathematics and physical or biological sciences

MENG 20300. The Science, History, Policy, and Future of Water. 100 Units.

Water is shockingly bizarre in its properties and of unsurpassed importance throughout human history, yet so mundane as to often be invisible in our daily lives. In this course, we will traverse diverse perspectives on water. The journey begins with an exploration of the mysteries of water's properties on the molecular level, zooming out through its central role at biological and geological scales. Next, we travel through the history of human civilization, highlighting the fundamental part water has played throughout, including the complexities of water policy, privatization, and pricing in today's world. Attention then turns to technology and innovation, emphasizing the daunting challenges dictated by increasing water stress and a changing climate as well as the enticing opportunities to achieve a secure global water future.

Instructor(s): Seth Darling Terms Offered: Winter. Not offered in 2020-2021

Prerequisite(s): None

Equivalent Course(s): ANTH 22131, ENST 20300, HIPS 20301, GLST 26807, HIST 25426

MENG 20400. Commercializing Products with Molecular Engineering. 100 Units.

Many technologies and products that have been successfully commercialized benefit from engineering at the molecular scale. This course will present case studies of such technologies and products, including those drawn from the fields of pharmaceuticals (e.g., biologics, nanoparticle-based drugs, and excipients for enhanced drug solubility), food products (e.g., Cavamax by Wacker Chemie that applies beta-cyclodextrin for molecular encapsulation to improve flavor solubility), and industrial products (e.g., Febreze Air freshener, sunscreens with UV protection, photographic films, and slurries for polishing surfaces). Each case study will examine: the unmet market need addressed by the product, the science behind the molecular engineering of the technology, the background/history of the technology, and key attributes/decisions made by inventors along the pathway to commercialization. Upon completion of the course, students will be able to understand the overall process for developing a new technology/product, outline the steps to design the key critical-to-quality (CTQ)

attributes, describe how to monetize a technology/product, and recognize the avenues available to protect the technology/product or create barriers to entry to the market.

Instructor(s): Atul Khare Mark Stoykovich Terms Offered: Winter

Prerequisite(s): MENG 21100 or MENG 20000

MENG 21100-21200. Principles of Engineering Analysis I and II.

The courses in Engineering Analysis provide a foundation for engineering problem solving and quantitative analysis. Skills in developing mathematical models that describe biological, chemical, or physical systems will be acquired, including defining the system and system boundaries, simplifying complex systems through the application and justification of engineering assumptions, and implementing engineering data. Applied mathematical and computational tools to solve such models will be introduced. Also emphasized will be the topics of dimensions and units, scaling analyses, and data representation and visualization.

MENG 21100. Principles of Engineering Analysis I. 100 Units.

The first quarter of Engineering Analysis introduces engineering students to the derivation and solution of balance equations for intensive properties such as mass, energy, momentum, and charge in a system. Students will develop algebraic, differential, and integral balances for continuous, transient and steady-state processes. Material balances will be considered for systems with multiple inlets/outlets and with recycle, multicomponent mixtures, and systems with phase changes and chemical reactions. Energy balances in open and closed steady-state systems will be introduced, as will mechanical energy and momentum balances of importance in the flow of fluids in the derivation and application of Bernoulli's equation. Skills in basic structured programming and data visualization in Python will be acquired, and simple algorithm development will be emphasized for numerical methods such as root finding.

Instructor(s): Jeff Hubbell, Paul Nealey, Mark Stoykovich Terms Offered: Autumn

Prerequisite(s): PHYS 13300 or PHYS 14300, and CHEM 11300 or CHEM 12300

MENG 21200. Principles of Engineering Analysis II. 100 Units.

The second quarter of Engineering Analysis considers advanced energy balances for isothermal and adiabatic processes, systems with chemical reactions and phase changes, and systems under non-steady state conditions. In addition, the conservation of charge, Kirchhoff's current and voltage laws, and dynamic systems of charge and electrical energy will be discussed. Throughout the course, students will learn advanced numerical and computational methods in Python for solving systems of linear and non-linear equations, general minimization techniques, optimization strategies, and regression analysis. Numerical integration including the Euler and Runge-Kutta methods, as well as methods for solving ODEs (i.e., initial value problems and boundary value problems), will also be introduced.

Instructor(s): Mark Stoykovich Terms Offered: Winter

Prerequisite(s): MENG 21100 and MATH 18600 (or concurrent)

MENG 21300. Engineering Quantum Mechanics. 100 Units.

Quantum mechanics is a fundamental physical theory describing the behavior of systems on small length scales, and underlies a variety of basic phenomena in physics, chemistry and biology. It also is the basis of some of the most revolutionary technologies of the 20th century (e.g., the transistor and the laser), and will likely form the basis of even more radical quantum technologies. This course will provide students with a broad introduction to quantum mechanics, and will emphasize both a qualitative and quantitative appreciation of many of its main principles and its relevance to technology and engineering. Topics to be covered include the quantization of light and atomic orbitals, wavefunctions and probability amplitudes, the Schrodinger equation, and the basic quantum mechanics of atoms and molecules. A basic introduction to quantum bits and quantum information technology will also be provided.

Instructor(s): Aashish Clerk, Peter Maurer Terms Offered: Winter

Prerequisite(s): PHYS 13300 or 14300, AND MATH 201 or PHYS 221 or concurrent

MENG 21400. Molecular Engineering Thermodynamics. 100 Units.

Molecular thermodynamics integrates concepts from classical thermodynamics, statistical mechanics, and chemical physics to describe the properties of matter and behavior of systems at equilibrium. This course introduces thermodynamics for molecular engineers starting with the postulates of thermodynamics and the thermodynamic properties of pure substances. The concept of thermodynamic stability and the molecular origins of phase transitions will be developed to predict the phase diagrams of pure substances. Engineering applications relying on thermodynamic cycles involving flow or phase changes, including engines, heat pumps, and refrigeration, will be analyzed. Finally, an introduction to statistical thermodynamics will be provided to establish the relationship between intermolecular forces and macroscopic properties through the definition of ensembles, probability distribution functions, and partition functions, as well as the consideration of fluctuations in thermodynamic variables.

Instructor(s): Chong Liu Terms Offered: Spring

Prerequisite(s): MENG 21300

MENG 21500. Molecular Engineering Transport Phenomena. 100 Units.

This course will be offered starting in the 2021-2022 academic year.

Terms Offered: Autumn

MENG 22100. Quantitative Physiology. 100 Units.

TBD

Terms Offered: TBD. This course will be offered starting in the 2021-2022 academic year

MENG 22200. Cellular Engineering. 100 Units.

Cellular engineering is a field that studies cell and molecule structure-function relationships. It is the development and application of engineering approaches and technologies to biological molecules and cells. This course provides a bridge between engineers and biologists that quantitatively study cells and molecules and develop future clinical applications. Topics include fundamental cell and molecular biology; immunology and biochemistry; receptors, ligands, and their interactions; nanotechnology/biomechanics; enzyme kinetics; molecular probes; cellular and molecular imaging; single-cell genomics and proteomics; genetic and protein engineering; and drug delivery and gene delivery.

Instructor(s): Jun Huang Terms Offered: Winter

Prerequisite(s): Completion of the first two quarters of a Biological Sciences Fundamentals Sequence

Equivalent Course(s): MENG 32200, MOMN 34310, BIOS 21508

MENG 22300. Quantitative Systems Biology. 100 Units.

This course aims to provide students with knowledge on the use of modern methods for the analysis, manipulation, and modeling of complex biological systems, and to introduce them to some of the most important applications in quantitative and systems biology. We will first survey theoretical concepts and tools for analysis and modeling of biological systems like biomolecules, gene networks, single cells, and multicellular systems. Concepts from information theory, biochemical networks, control theory, and linear systems will be introduced. Mathematical modeling of biological interactions will be discussed. We will then survey quantitative experimental methods currently used in systems biology. These methods include single cell genomic, transcriptomic, and proteomic analysis techniques, in vivo and in vitro quantitative analysis of cellular and molecular interactions, single molecule methods, live cell imaging, high throughput microfluidic analysis, and gene editing. Finally, we will focus on case studies where the quantitative systems approach made a significant difference in the understanding of fundamental phenomena like signaling, immunity, development, and diseases like infection, autoimmunity, and cancer.

Instructor(s): Savas Tay Terms Offered: Autumn

Prerequisite(s): Completion of the first two quarters of a Biological Sciences Fundamentals Sequence

Equivalent Course(s): MENG 32300

MENG 22400. Bioengineering Kinetics. 100 Units.

This course focuses on the kinetics of biochemical reactions at the molecular level and addresses basic questions at the interface between molecular engineering and cell biology. This course will equip students with the knowledge and tools to quantitatively solve problems in biochemical systems and molecular reactions that are dynamic or at equilibrium.

Instructor(s): Jun Huang Terms Offered: Spring

Prerequisite(s): Completion of the first two quarters of a Biological Sciences Fundamentals Sequence

Equivalent Course(s): BIOS 21359

MENG 23100. Biological Materials. 100 Units.

In this course, students will gain an understanding of the science and application of biomaterials, a field that utilizes fundamental principles of materials science with cell biology for applications in therapeutics and diagnostics. The course will introduce the basic classes of biomaterials, considering metals used in medicine, ceramics and biological inorganic materials such as hydroxyapatite, and polymers used in medicine. The basis of protein adsorption modulating biological interactions with these materials will be elaborated. Examples to be covered in the course will include polymers used in drug delivery, polymers used in protein therapeutics, polymers used in degradable biomaterial implants, polymers used in biodiagnostics, and hybrid and polymeric nanomaterials used as bioactives and bioactive carriers. An emphasis in the course will be placed on bioactive materials development. Students will be assessed through in-class discussions, take-home assignments and exams, and an end-of-term project on a topic of the student's choice.

Instructor(s): Jeffrey Hubbell, Mustafa Guler Terms Offered: Autumn

Prerequisite(s): BIOS 20186 and BIOS 20187, or BIOS 20234 and BIOS 20235

Note(s): This course does not meet the requirements for the Biological Sciences major.

Equivalent Course(s): MENG 33100, BIOS 29328

MENG 23110. Stem Cell Biology, Regeneration, and Disease Modeling. 100 Units.

In this course, students will gain an understanding of the science and application of tissue engineering, a field that seeks to develop technologies for restoring lost function in diseased or damaged tissues and organs. The course will first introduce the underlying cellular and molecular components and processes relevant to tissue engineering: extracellular matrices, cell/matrix interactions such as adhesion and migration, growth factor biology, stem cell biology, inflammation, and innate immunity. The course will then discuss current approaches for engineering a variety of tissues, including bone and musculoskeletal tissues, vascular tissues, skin, nerve, and pancreas. Students will be assessed through in-class discussions, take-home assignments and exams, and an end-of-term project on a topic of the student's choice.

Instructor(s): Joyce Chen Terms Offered: Spring. This course will be offered starting in the 2021-2022 academic year

Prerequisite(s): BIOS 20186 or BIOS 20234

Equivalent Course(s): BIOS 21507, MPMM 34300, MENG 33110

MENG 23120. The Structural Basis of Biomolecular Engineering. 100 Units.

In this highly practical course, students will learn different approaches to interrogate the structure-function relationship of proteins. Essential skills in identifying related protein sequences, performing multiple sequence alignments, and visualizing and interpreting conservation in the context of available structures will be acquired. The most basic method of biomolecular engineering is based on rationale design which uses such knowledge of sequence and structure to predict or explore changes in function in a low throughput manner. Advanced methods that employ evolutionary platforms, such as phage-, ribosome-, and yeast display, will also be introduced for screening large libraries of biomolecules to find variants with a specific function of interest. Additional biomolecular engineering topics to be covered may include computational tools to model and

design proteins, protein fusions, enzymatic or chemical modifications to change function, and pharmacokinetics. Students will be assessed through in-class discussion, take-home assignments, exams, and an end-of-term project chosen by the student with approval from the instructor(s).

Instructor(s): Juan Mendoza Terms Offered: Spring

Prerequisite(s): BIOS 20200

Equivalent Course(s): MENG 33120

MENG 23130. Proteomics and Genomics in Biomolecular Engineering. 100 Units.

Modern genomic and proteomic technologies are transforming the analysis and engineering of biological systems. One part of the course will introduce the molecular biology of genomics, including how and why next-generation sequencing is used to measure DNA, RNA, and epigenetic patterns. In addition to experimental tools, it will cover key computational concepts for transforming raw genomic data into biologically meaningful data, as well as the application of those results to analyze biological systems. Specific topics will vary but will include single-cell RNA-sequencing and its analysis in different settings. The other part of the course will focus on technologies that enable the identification of proteins and their dysregulation in disease. Examples include mass spectrometry techniques to determine the exact number of proteins in cells, as well as techniques that identify the types and locations of post-translational protein modifications, such as histone methylation, that are frequently associated with diseases such as cancer. Additionally, the course will review methods to discover protein-protein interactions using computational and experimental screening methods. Student assessments will be made through in-class discussion, take-home assignments, exams, and an end-of-term project chosen by the student with approval from the instructor(s).

Instructor(s): Juan Mendoza Samantha Riesenfeld Terms Offered: Autumn

Prerequisite(s): BIOS 20200 or equivalent, and experience with data analysis and computation in R or Python (e.g., MENG 26030, BIOS 20151/20152, STAT/CMSC 11800, or STAT 22000).

Equivalent Course(s): MENG 33130

MENG 23140. Biodiagnostics and Biosensors. 100 Units.

This course focuses on the biological and chemical interactions that are important for the diagnosis of diseases and the design of new assays. The principles and mechanisms of molecular diagnostics and biosensors, as well as their applications in disease diagnosis, will be discussed. Bioanalytical methods including electrochemical, optical, chemical separation, and spectroscopic will be described. Surface functionalization and biomolecular interactions will be presented for the development of protein and DNA based biosensor applications. The goals for the course are to introduce the fundamental mechanisms of bioanalytical methods/tools, examples of specific methods for diagnostic purposes, and analytical methods necessary for developing new precision medicine tools.

Instructor(s): Mustafa Guler Terms Offered: Spring

Prerequisite(s): Completion of the first two quarters of a Biological Sciences Fundamentals Sequence

Equivalent Course(s): BIOS 28700, MENG 33140

MENG 23150. Nanomedicine. 100 Units.

This course focuses on the applications of nanotechnology in medicine. The chemical, physical and biological features of the nanomaterials will be discussed for applications in medicine. A survey of concepts in therapeutic drug delivery methods, diagnostic imaging agents and cell-materials interactions will be discussed.

Instructor(s): Mustafa Guler Terms Offered: Winter

Equivalent Course(s): MENG 33150

MENG 23300. Quantitative Immunobiology. 100 Units.

The science of immunology was born at the end of the 19th century as a discipline focused on the body's defenses against infection. The following 120+ years has led to the discovery of a myriad of cellular and molecular players in immunity, placing the immune system alongside the most complex systems such as Earth's global climate and the human brain. The functions and malfunctions of the immune system have been implicated in virtually all human diseases. It is thought that cracking the complexity of the immune system will help manipulate and engineer it against some of the most vexing diseases of our times such as AIDS and cancer. To tackle this complexity, immunology in the 21st century - similar to much of the biological sciences - is growing closer to mathematics and data sciences, physics, chemistry and engineering. A central challenge is to use the wealth of large datasets generated by modern day measurement tools in biology to create knowledge, and ultimately predictive models of how the immune system works and can be manipulated. The goal of this course is to introduce motivated students to the quantitative approaches and reasoning applied to fundamental questions in immunology.

Instructor(s): Nicolas Chevrier Terms Offered: Spring

Prerequisite(s): Completion of the first two quarters of a Biological Sciences Fundamentals Sequence. Knowledge of R is recommended but not required. Courses in immunology and microbiology are an advantage but not required (e.g., BIOS 25256 Immunobiology; BIOS 25206 Fundamentals of Bacterial Physiology).

Equivalent Course(s): IMMU 34800, BIOS 26403, MENG 33300

MENG 23310. Immunoengineering Laboratory. 100 Units.

The goal of this course is to provide students with an original and hands-on research experience in the fields of immunoengineering and synthetic immunology, whereby new molecules will be designed and tested by students in the lab to probe or control immune processes.

Instructor(s): Nicolas Chevrier Terms Offered: Spring

Equivalent Course(s): MENG 33310

MENG 23500. Synthetic Biology. 100 Units.

The objective of this course is to provide an overview of the fundamentals of synthetic biology by exploration of published and primary literature. Synthetic biology is an interdisciplinary area that involves the application of engineering principles to biology. It aims at the (re-)design and fabrication of biological components and systems that do not already exist in the natural world. Our goal in the course will be to examine how to apply design principles to biological systems. This will require understanding how biological systems operate, what design principles are successful in biology, and a survey of current approaches in the field to tackle these challenges. Topics will include genetic manipulation, pathway engineering, protein design, cellular engineering, and tools for information input and output in biological systems.

Instructor(s): Aaron Esser-Kahn Terms Offered: Spring

Prerequisite(s): Completion of the first two quarters of a Biological Sciences Fundamentals Sequence. MENG 26102, BIOS 20236, and BIOS 20200 are recommended but not required.

Equivalent Course(s): MENG 33500

MENG 23510. Microfluidics and Its Applications. 100 Units.

Precision control of fluids at the micrometer scale (hence microfluidics) provides unprecedented capabilities in manipulation and analysis of cells and proteins. Moreover, fluids and particles behave in fundamentally different ways when confined to small dimensions, making microfluidics an interesting topic of basic research. This course aims to provide students with theoretical knowledge and practical skills on the use of microfluidics for the manipulation and analysis of physical, chemical, and biological systems. We will first survey theoretical concepts regarding microfluidics. We will then focus on design considerations and fabrication methods for multi-layer microfluidic chips using PDMS soft-lithography. We will learn how to fabricate, multiplex, and control PDMS membrane valves and integrate them into high-throughput analytical systems. We will survey recent developments in microfluidics and its scientific and industrial applications.

Biological systems analysis in cell sorting, culture, cell signaling, single molecule detection, digital nucleic acid and protein quantification, and biosensing are some of the applications we will cover. This course will have a laboratory component where students will design, fabricate, and use microfluidic devices and therefore acquire hands-on skills in microfluidic engineering.

Instructor(s): Savas Tay Terms Offered: Spring

Prerequisite(s): MATH 13300 (or higher), or MATH 13200 (or higher) plus BIOS 20151 or BIOS 20152 or BIOS 20236

Equivalent Course(s): MENG 33510

MENG 24100. Molecular Engineering Thermodynamics of Phase Equilibria. 100 Units.

This course addresses the thermodynamics of mixtures and their phase equilibria (e.g., vapor-liquid, liquid-liquid, and solid-liquid equilibria). It includes an introduction to the theory of phase equilibria and stability for mixtures, the concepts of activity and fugacity for describing non-ideal systems, an introduction to molecular models and the prediction of thermodynamic properties from such models, as well as the importance of such topics for engineering applications including separation processes such as distillation, extraction, and membrane osmosis. The course has a laboratory component that includes characterizing vapor-liquid equilibria in distillation processes, experimentation with surface adsorption, and measurements of solubility. (Lab)

Instructor(s): Chibueze Amanchukwu Terms Offered: Autumn. This course will be offered starting in the 2021-2022 academic year.

Prerequisite(s): MENG 21400 or CHEM 26200 or PHYS 27900

MENG 24200. Molecular Transport Phenomena II. 100 Units.

TBD

Terms Offered: TBD. This course will be offered starting in the 2021-2022 academic year

MENG 24300. Molecular Modeling. 100 Units.

TBD

Instructor(s): Andrew Ferguson Terms Offered: Spring. This course will be offered starting in the 2021-2022 academic year.

Prerequisite(s): MENG 21400 and MENG 21500, or instructor consent

MENG 24400. Chemical Kinetics and Reaction Engineering. 100 Units.

This course introduces the fundamental concepts of reaction kinetics, from the molecular mechanisms and reaction rates of chemical reactions to its applied aspects in the reaction engineering of complex chemical systems. Course topics will include elementary reactions and rate laws, collision theory, transition state theory, reaction dynamics, complex reacting systems, the steady-state hypothesis, heterogeneous catalysis, and diffusion-limited systems. The course will draw upon examples of industrial-scale chemical processes to consider the impact of kinetics on the engineering of batch and continuous-flow reactors.

Instructor(s): Xiaoying Liu Terms Offered: Spring

Prerequisite(s): MENG 26102 and MENG 26201

MENG 25100. Introduction to Polymer Science. 100 Units.

This course introduces the basics of polymer materials and their behavior and properties. The course will cover a general overview to polymers, basic terminology and definitions, their classification, and their applications. The mechanistic and kinetic behavior of the major classes of polymerization reactions (step-growth, chain addition, and "living" polymerizations) will be introduced with respect to control over polymer structure/architecture, size, and properties. The course will also discuss polymer properties, polymer thermodynamics, and basic structure-property relationships that provide polymers with their unique characteristics compared to small molecules. Techniques for characterizing the chemical and physical properties of polymer solutions will be introduced, including osmometry, viscometry, and gel permeation chromatography.

Instructor(s): Paul Nealey, Stuart Rowan Terms Offered: Autumn

Prerequisite(s): MENG 26201 or CHEM 26200

Equivalent Course(s): MENG 35100

MENG 25110. Polymer Synthesis. 100 Units.

This course introduces the most important polymerization reactions, focusing on their reaction mechanisms and kinetic aspects. Topics include free radical and ionic chain polymerization, step-growth polymerization, ring-opening, insertion, controlled living polymerization, crosslinking, copolymerization, and chemical modification of preformed polymers.

Instructor(s): Stuart Rowan Terms Offered: Winter

Prerequisite(s): CHEM 22000 and CHEM 22100

Equivalent Course(s): CHEM 39100, MENG 35110

MENG 25120. Polymer Physics. 100 Units.

This course is an advanced introduction to polymer physics taught at a level suitable for senior undergraduates and graduate students in STEM fields. Topics that will be covered include the statistics and conformations of linear chain molecules; polymer brushes; thermodynamics and dynamics of polymers, polymer blends and polymer solutions; phase equilibria; networks, gels, and rubber elasticity; linear viscoelasticity; and thermal and mechanical properties.

Instructor(s): Paul Nealey Terms Offered: Spring

Prerequisite(s): MENG 22500

Equivalent Course(s): MENG 35120

MENG 25130. Soft Matter Characterization Laboratory. 100 Units.

The goal of this course is to train students in the fundamental experimental approaches to polymer and soft materials characterization. The course will cover both the theory and practice of techniques focused on three themes: molar mass determination (size exclusion chromatography, laser light scattering, NMR spectroscopy); morphology and structure (x-ray scattering, electron microscopy, atomic force microscopy); and thermo-mechanical properties (calorimetry, thermogravimetry, dynamic mechanical analysis, rheometry, tensile testing). Contextual application of these characterization techniques to modern research problems will be introduced. Through this course, students will develop foundational experimental skills necessary for addressing research challenges in modern polymer and soft materials science and engineering.

Instructor(s): Philip Griffin Terms Offered: Winter

Prerequisite(s): MENG 25100

Equivalent Course(s): MENG 35130

MENG 25300. Molecular Science and Engineering of Water. 100 Units.

This course will cover the properties of the water molecule, hydrogen bonding, clusters, supercritical water, condensed phases, solutions, confined and interfacial water, clathrates, and nucleation. In addition, methods of water purification, water splitting and fuel cells, water in atmospheric and climate science, and water in biology, health and medicine will be discussed.

Instructor(s): James Skinner, Chong Liu Terms Offered: Autumn

Prerequisite(s): MENG 26201 or CHEM 26200 or PHYS 27900 (or concurrent)

Equivalent Course(s): MENG 35300

MENG 25310. Energy Storage and Conversion Devices. 100 Units.

Course Description: Addressing the challenges of a sustainable energy future requires a foundational knowledge of current and emerging energy conversion and storage technologies. Energy conversion devices such as solar cells, wind turbines, and fuel cells to energy storage systems such as lithium-ion batteries and redox-flow batteries will be covered. Devices related to thermal energy harvesting and management will be introduced as well. Applying basic principles of chemistry, thermodynamics, and transport phenomena, this course will provide a deep understanding of the operational mechanisms, resources, and material properties of each device and the synergies between them.

Instructor(s): Chibueze Amanchukwu Terms Offered: Winter. This course will be offered starting in the 2021-2022 academic year

Prerequisite(s): MENG 21400 (or CHEM 26200 or PHYS 27900) AND MENG 21500

Equivalent Course(s): MENG 35310

MENG 25320. Electrochemical Principles and Methods. 100 Units.

This course will cover topics related to basic electrochemical principles, methodologies, and systems. In particular, students will be given an overview of fundamental concepts related to electrochemical potential, electric double layer, electrode kinetics, and mass transport processes. In addition, the application of key electrochemical experimental methods will be covered. A few examples include cyclic voltammetry, AC impedance spectroscopy, and the rotating disk electrode. Throughout the course, students will apply basics principles of thermodynamics, kinetics, and transport phenomena. Lastly, a brief overview of traditional electrochemical systems and emerging technologies related to energy storage and conversion (e.g., lithium-ion batteries, flow batteries, and fuel cells) and bioelectronics applications will be discussed.

Instructor(s): Shrayesh Patel Terms Offered: Spring

Prerequisite(s): MENG 26102 and MENG 26201

Equivalent Course(s): MENG 35320

MENG 25330. Materials and Characterization Tools to Address Challenges in Energy and Water. 100 Units.

The development of new materials, as well as understanding the materials' structure and dynamics, are at the heart of addressing the challenges in energy and water technologies. This course will introduce students to the design and development of advanced functional materials that enable energy and water related technologies. The importance of all classes of materials spanning metals, alloys, ceramics, polymers, glasses, and their combinations as composite materials

will be covered. To understand material properties and function, students will learn about essential characterization tools including microscopy, spectroscopy and mechanical testing techniques. In addition, the course will convey the importance of advanced characterization tools available at X-ray and neutron facilities that are essential in revealing unique physical properties.

Instructor(s): Junhong Chen Terms Offered: Spring

Prerequisite(s): MENG 21400 (or CHEM 26200 or PHYS 27900)

Equivalent Course(s): MENG 35330

MENG 25500. Classical Molecular and Materials Modeling. 100 Units.

This course will introduce students to the methods of molecular modeling. The topics covered will include an introduction to the origin of molecular forces, a brief introduction to statistical mechanics and ensemble methods, and an introduction to molecular dynamics and Monte Carlo simulations. The course will also cover elements of advanced sampling techniques, including parallel tempering, umbrella sampling, and other common biased sampling approaches. Students will also establish expertise in scientific programming in Python 3.

Instructor(s): Andrew Ferguson Terms Offered: Winter

Prerequisite(s): MENG 21400 or CHEM 26200 or PHYS 27900, AND MATH 20100 or PHYS 22100. MENG 21300, or prior course work or research experience with elementary programming, is strongly recommended.

Equivalent Course(s): MENG 35500

MENG 25510. Quantum Molecular and Materials Modeling. 100 Units.

Quantum mechanical methods, including quantum chemistry, density functional theory (DFT), and many body perturbation theory, for simulating the properties of molecules and materials will be explored in this course. Numerical algorithms and techniques will be introduced that allow for solution of approximate forms of the Schrodinger and Boltzmann Equations that model structural and transport properties of molecules and materials. The coupling of DFT with molecular dynamics will be detailed for determining finite temperature properties. Coupling of DFT with spin Hamiltonians to study dynamical spin correlations in materials will also be described. Examples of the application of quantum mechanical methods to materials for energy conversion and quantum information technologies will be provided.

Instructor(s): Giulia Galli Terms Offered: Spring

Prerequisite(s): PHYS 23400 or CHEM 26100 or instructor consent

Equivalent Course(s): CHEM 36800, CHEM 26800, MENG 35510

MENG 25610. Applied Scientific Computing in Molecular Engineering. 100 Units.

This course provides hands-on practical training in scientific computing with a focus on applications to molecular engineering. The first third of the course will provide training in core programming concepts, including a broad introduction to Python programming and use of key scientific libraries. The second third of the course will cover advanced programming topics in CPU and GPU parallel programming and quantum computing, exploring their use through practical examples drawn from a range of scientific and engineering disciplines. The final portion of the class will engage particular applications in computational molecular engineering, including electronic structure calculations of molecules and materials, highlighting the use of modern computing platforms to enable modeling of complex phenomena at unprecedented scales. Students will develop proficiency in making effective use of the diverse landscape of programming models, open-source tools, and computing architectures for high performance computing. Hands-on immersive praxis, mostly using electronic notebooks, will introduce students to the efficient use of several computational resources such as pre-exascale and quantum computers, with the goal of providing them with the confidence and expertise to independently use these tools.

Instructor(s): Marco Govoni Terms Offered: Winter

Prerequisite(s): Prior programming experience and familiarity with Linux/bash are useful but not required. Prior coursework in quantum mechanics is useful but not required.

Equivalent Course(s): MENG 35610

MENG 25620. Applied Artificial Intelligence for Materials Science and Engineering. 100 Units.

Machine learning and other artificial intelligence tools are quickly becoming commonplace in the computational design of materials. This course is intended to introduce the concepts and practical skills needed to employ machine learning techniques across many areas of computational materials science. The course will cover topics including the management of materials data, the creation of surrogate models for costly computations, building predictive models for material properties without known physical models, and using AI to enhance characterization tools. The content of the course will focus both on the theoretical underpinnings of these technologies, as well as the practical skills needed for successful use of AI in an applied setting. Particular application areas include machine learning tools for atomistic simulations, convolutional neural networks for materials image analysis, Bayesian techniques for material property estimation, and generative methods for molecular design.

Instructor(s): Logan Ward Terms Offered: Winter

Prerequisite(s): Familiarity in object-oriented programming in Python is preferred. Prior coursework or experience in machine learning is recommended but not required.

Equivalent Course(s): MENG 35620

MENG 25630. Design, Processing, and Scale-Up of Advanced Materials. 100 Units.

The course will cover the scientific background needed to design and optimize advanced materials for scalable synthesis. We will introduce the physics-based understanding needed to simulate the non-equilibrium conditions in reacting gas-phase and complex fluids. The course will use in situ measurement data for validation and acceleration of simulations will allow students to experiment and build the conceptual connections to the background theories and simulations. In particular, we will cover examples of scalable material synthesis such as gas-phase combustion synthesis of lithium ion battery materials, atomic layer deposition (ALD) for porous membranes and coatings, Taylor Vortex Reactors (TVR) for the synthesis of

industrial catalysts, additive manufacturing of metals using laser sintering, and microfluidic continuous flow reactors for the synthesis of organic crystals for pharmaceutical applications. Data generated using sensors, imaging cameras, spectroscopic probes, and Argonne APS measurements will be combined with machine-learning approaches for decision making, process optimization and steering of synthesis conditions. This course will include optional hands-on sessions at the Argonne National Laboratory's Materials Engineering and Research Facility, and allow the students to leverage the Manufacturing Data and Machine Learning (MDML) platform and Argonne Leadership Computing Facility (ALCF) supercomputing environment for physics based simulations.

Instructor(s): Santanu Chaudhuri Terms Offered: Spring

Prerequisite(s): MENG 21400 or CHEM 26200 or PHYS 27900, MENG 24200, and MENG 24400 or CHEM 26300. Some background in a programming language like C, C++ or python, databases, and ability to launch computing jobs in Linux environment is preferred

Equivalent Course(s): MENG 35630

MENG 26100. Intermediate Quantum Engineering. 100 Units.

TBD

Terms Offered: TBD. This course will be offered starting in the 2021-2022 academic year

MENG 26101-26102. Transport Phenomena I: Forces + Flows; Transport Phenomena II.

The Transport sequence exposes students to basic topics in continuum mechanics, with a focus on momentum transfer (part I) and energy and mass transfer (part II).

MENG 26101. Transport Phenomena I: Forces and Flows. 100 Units.

This course will expose students to basic topics in continuum mechanics, with a focus on momentum transfer. Course topics include an overview of tensor mathematics, forces and inertia, Bernoulli's Equation, Navier-Stokes Equations, and standard examples of Navier-Stokes flows, including Poiseuille flow, falling films, and flow around a sphere.

For each of these topics, examples will be provided with dimensionless and scaling analysis to accompany problem solution. Analysis will include computation of approximate solutions, determination of when an approximate solution is adequate and, given the assumptions made, what the limitations of any solution are. Laboratory exercises in microfluidics will be included. (L)

Instructor(s): Shrayesh Patel Terms Offered: Autumn

Prerequisite(s): MENG 26010

MENG 26102. Transport Phenomena II. 100 Units.

This course exposes students to basic topics in continuum mechanics, with a focus on energy and mass transfer. Course topics include an overview of the physical and mathematical basis of diffusion, Fick's law and the definition of fluxes for description in the form of differential equations, a reminder of the Reynolds Transport Theorem and differential forms for mass and energy transfer, mass balances in non-reacting systems (with multiple examples), mass balances with chemical reactions, energy balances, and combined energy and mass balances with chemical reactions.

Instructor(s): Melody Swartz, Aaron Esser-Kahn Terms Offered: Winter

Prerequisite(s): MENG 26101

MENG 26200. Instrumentation Laboratory. 100 Units.

TBD

Terms Offered: TBD. This course will be offered starting in the 2021-2022 academic year

MENG 26300. Engineering Electrodynamics. 100 Units.

This is an advanced course in electromagnetism with an engineering focus. Requires good preparation in freshman-level, calculus-based, electrostatics and magnetostatics; also preparation in vector calculus.

Instructor(s): Andrew Cleland Terms Offered: Spring

Prerequisite(s): PHYS 13300 or PHYS 14300, and MATH 20100 or PHYS 22100 or concurrent enrollment in MATH 20500 or MATH 20900

MENG 26400. Quantum Computation. 100 Units.

This course provides an introduction to the fundamentals of quantum information to students who have not had training in quantum computing or quantum information theory. Some knowledge of linear algebra is expected, including matrix multiplication, matrix inversion, and eigenvector-eigenvalue problems. Students will learn how to carry out calculations and gain a fundamental grasp of topics that will include some or all of: entanglement, teleportation, quantum algorithms, cryptography, and error correction.

Instructor(s): Andrew Cleland Terms Offered: Winter

Prerequisite(s): MATH 19620 or PHYS 22100 or equivalent

Equivalent Course(s): MENG 36400

MENG 26500. Foundations of Quantum Optics. 100 Units.

Quantum optics seeks to illuminate the fundamental quantum mechanics of the interaction of light and matter. These principles can form the basis for quantum technologies in areas such as cryptography, computation, and metrology. This course provides a foundation in the fundamental principles and applications of quantum optics. Topics to be discussed may include Fermi's Golden Rule, interaction of two-level atoms and light, spontaneous emission, Rabi oscillations, classical and non-classical photon statistics, beam splitters, atom cavity interaction, vacuum-Rabi splitting, coherence, entanglement, and teleportation. The course will assume that students are comfortable with single-particle quantum mechanics at the level of a typical introductory graduate-level course.

Instructor(s): Alex High Terms Offered: Autumn

Prerequisite(s): PHYS 23400-23500 strongly recommended but not required

Equivalent Course(s): MENG 36500

MENG 26510. Optics and Photonics. 100 Units.

Electromagnetic radiation in the optical spectrum, or light, plays a fundamentally important role in modern physics and engineering. This introductory course covers the basic properties of light, its propagation in and interactions with matter, and techniques for generating, guiding, and detecting light. Photonic technologies including lasers, optical fibers, integrated optics, optoelectronic devices, and optical modulators will be introduced with selected demonstrations of real-world devices.

Instructor(s): Tian Zhong Terms Offered: Winter

Prerequisite(s): PHYS 13300 or PHYS 14300

Equivalent Course(s): MENG 36510

MENG 26600. Electronic and Quantum Materials for Technology. 100 Units.

This is a one-quarter introductory course on the science and engineering of electronic and quantum materials. The intended audience is upper-level undergraduate students and first-year graduate students in Molecular Engineering and other related fields, including Chemistry and Physics. We will learn the basics of electrical and optical properties of electronic materials, including semiconductors, metals, and insulators starting from a simple band picture, and will discuss how these materials enable modern electronic and optoelectronic devices and circuitry. We will also explore the modern synthesis techniques for these materials and the effects of reduced dimensions and emergent quantum properties. No comprehensive exposure to quantum mechanics, thermodynamics, or advanced mathematical skills will be assumed, even though working knowledge of these topics will be helpful.

Instructor(s): Jiwoong Park Terms Offered: Spring

Prerequisite(s): CHEM 26200 or PHYS 23500 or instructor consent

Equivalent Course(s): MENG 36600, CHEM 39300

MENG 26610. Science of Materials. 100 Units.

TBD

Terms Offered: TBD. This course will be offered starting in the 2021-2022 academic year

MENG 26620. Physics of Solid State Semiconductor Devices. 100 Units.

This course covers the fundamental concepts needed to understand nanoelectronic solid state semiconductor devices. After an overview of the basic properties of semiconductors and electronic transport in semiconductors, we will explore the device physics behind some of the major semiconductor devices that have changed our lives. These include the p-n junction diode, the metal-oxide-semiconductor transistor (MOSFET), the photovoltaics cell (solar cell), the semiconductor light emitting diode (LED) and injection laser, dynamic random access memory (DRAM), and Flash memory. These devices collectively form the backbone behind all computing, communications, and sensing systems used today.

Instructor(s): Supratik Guha Terms Offered: Autumn

Prerequisite(s): MENG 21300 (or PHYS 23500 or CHEM 26100) or PHYS 22700 or PHYS 23600

Equivalent Course(s): MENG 36620

MENG 26630. Introduction to Nanofabrication. 100 Units.

This course will cover the fundamentals of nanofabrication from a practical viewpoint and will be useful for students planning to pursue research involving semiconductor processing technology, as well as broader topics such as microelectromechanical systems (MEMS), quantum devices, optoelectronics, and microfluidics. This course will cover the theory and practice of lithographic patterning; physical and chemical vapor deposition; reactive plasma etching; wet chemical processing; characterization techniques; and other special topics related to state-of-the-art processes used in the research and development of nanoscale devices. A solid grounding in introductory chemistry and physics is expected.

Instructor(s): Peter Duda Terms Offered: Winter

Prerequisite(s): PHYS 13300 and CHEM 10200, or equivalent

Equivalent Course(s): MENG 36630

MENG 27300. Experimental Techniques and Advanced Instrumentation. 100 Units.

This course aims to provide students with a knowledge of state-of-the-art experimental measurement techniques and laboratory instrumentation for applications in broad scientific research environments, as well as industrial and general engineering practice. Topics include atomic-scale structural and imaging methods, electronic transport in low dimensional matter, magnetic and optical characterization of materials. Basic concepts in electronic measurement such as lock-in amplifiers, spectrum and network analysis, noise reduction techniques, cryogenics, thermometry, vacuum technology, as well as statistical analysis and fitting of data will also be discussed.

Instructor(s): David Awschalom Terms Offered: Spring

Equivalent Course(s): MENG 37300

MENG 29511-29512. Engineering Design I-II.

The project-based design courses combine fundamental science and engineering skills to solve open-ended and challenging engineering problems selected among those encountered in the biology, chemical and soft materials, and quantum fields. Specific objectives for the courses include learning how to define a technical problem and how to propose solutions, applying scientific and engineering knowledge to solve real-world problems, and developing an operating plan with defined sub-tasks and project timelines. Additional emphasis will be placed on enhancing skills to communicate results clearly and concisely to various audiences, access and manage resources to achieve objectives, work as part of a team, and interact with external mentors and project managers. These courses also serve as a vehicle to teach other equally important non-technical skills, such as professional and ethical responsibilities in engineering and the impact of engineering in a societal context.

MENG 29511. Engineering Design I. 100 Units.

First quarter of Engineering Design.

Instructor(s): Mark Stoykovich, Xiaoying Liu, Mustafa Guler Terms Offered: Autumn

Prerequisite(s): Instructor consent required

MENG 29512. Engineering Design II. 100 Units.

Second quarter of Engineering Design.

Instructor(s): Mark Stoykovich, Xiaoying Liu, Mustafa Guler Terms Offered: Winter

Prerequisite(s): MENG 29511

MENG 29700. Undergraduate Research for Molecular Engineering. 100 Units.

IME faculty offer one-quarter research experiences for interested MENG students. A quality grade will be given based on performance in this course. In order to assign a quality grade, an agreement between the sponsoring IME faculty member and each student will be made that includes: (1) the content and scope of the project, (2) expectations for time commitment, (3) a well-defined work plan with timelines for particular experiments or calculations to be accomplished, and (4) a summary of academic goals such as demonstrating knowledge of the literature and developing communication skills (e.g., through presentations at group meetings).

Instructor(s): PME Faculty Terms Offered: Autumn Spring Winter

Prerequisite(s): Faculty consent required

Note(s): Students interested in MENG 29700 should contact the adviser for Molecular Engineering (Dr. Mark Stoykovich, stoykovich@uchicago.edu) and complete a "College Reading and Research Course Form" available from the College advisers.

Music

Department Website: <http://music.uchicago.edu>

Program of Study

The Department of Music aims to broaden the exposure to and enrich the understanding of the various Western, non-Western, and vernacular musical traditions of the world. Courses develop students' ability to analyze works and their structures; to understand music within historical lineages and socio-cultural practices; and to engage in the creative practice of music via composition and performance. The BA program in music provides a critical foundation for graduate work in music studies, careers in media production, education, or research, and provides an artistic, humanistic complement to study in other fields. The department also sponsors a music minor as well as a number of courses, performance organizations, and concert experiences available to the non-major.

Courses for Non-Majors

General Education

General education courses listed here are open to all students, regardless of previous musical background; in most cases reading music notation is not required.

The following courses satisfy the general education requirement in **the arts**:

MUSI 10100	Introduction to Western Art Music	100
MUSI 10200	Introduction to World Music	100
MUSI 10300	Introduction to Music: Materials and Design	100
MUSI 10400	Introduction to Music: Analysis and Criticism	100

Students seeking to meet the general education requirement in **civilization studies** may select the following two-quarter sequence:

MUSI 12100-12200	Music in Western Civilization I-II	200
------------------	------------------------------------	-----

Other Courses for Non-Majors

For additional electives, non-majors may wish to consider courses in such interdisciplinary programs as Signature Courses in the College (SIGN) or Big Problems (BPRO), and other MUSI electives that do not require score reading. Performance ensembles are also open to all students regardless of major by audition.

BA Program Requirements

The program for the bachelor's degree in music offers a balance of academic and practice-based approaches to music study. Majors are required to earn at least 1100 units of music course work divided between analytical, historical, cultural, and creative practices. Students have considerable agency to design a major that accords with their own interests, with an additional option to write a BA thesis or composition eligible for special honors. Students plan and formalize their major program of study in consultation with the Director of Undergraduate Studies (see Advising).

Summary of Requirements: BA in Music

The music major requires 1100 units of study. Six 'foundation' courses are chosen from the following areas: Analysis and Techniques, Histories and Cultures, and Creative Practices. Five additional elective courses are also required, which should be chosen in consultation with the Director of Undergraduate Studies.

Analysis and Techniques	200
Histories and Cultures	300
Creative Practices	100
Electives	500
Total Units	1100

Foundation Courses

Analysis and Techniques

Choose two courses: 200

MUSI 14300	Music Theory Fundamentals
MUSI 15100	Harmony and Voice Leading I
MUSI 15200	Harmony and Voice Leading II
MUSI 15300	Harmony and Voice Leading III

It is advisable for students to begin Analysis and Techniques courses as soon as possible, since these are often prerequisites for electives. A placement exam given on the first day of MUSI 15100 advises students on where to enter the

music theory and analysis sequence. Majors should enroll in MUSI 15100, take the placement exam, and be advised on whether to take MUSI 14300, to stay in MUSI 15100, or to begin with MUSI 15200. The Director of Undergraduate Studies can provide additional guidance.

Histories and Cultures

Students choose three courses, including MUSI 23300 Introduction to the Social and Cultural Study of Music, which is required of all majors.

Choose two courses:		200
MUSI 27100	Topics in the History of Western Music I	
MUSI 27200	Topics in the History of Western Music II	
MUSI 27300	Topics in the History of Western Music III	
MUSI 23300	Introduction to the Social and Cultural Study of Music	100

Creative Practices

Choose one course:		100
MUSI 26100	Introduction to Composition §	
MUSI 26600	Intro: Computer Music	
Performance Ensemble +		

- § Students must take two group composition courses before inquiring about private study in music composition (MUSI 24000 Composition Lessons).
- + Students must fulfill three quarters of a performance ensemble to receive major credit. Students wishing to count ensemble participation in the major or the minor must enroll for credit on a Pass/Fail basis. A maximum of three units of ensemble participation (one unit as foundations + two units as electives) count toward the major. Students can participate in ensembles on a not-for-credit basis by enrolling for zero credit. For more information, see Performance Program below.

Electives

Electives should be chosen in consultation with the Director of Undergraduate Studies according to individual goals. Options include:

- **Academic Courses**, additional foundations-level courses count as electives.
- **Performance Ensembles**, up to two additional units (a maximum of three units of performance ensembles in total may count toward the major).
- **BA Thesis**, MUSI 29500 Undergraduate Honors Seminar and MUSI 29900 Senior Essay or Composition

Students are invited to write an essay or composition on the topic of their choosing as a BA thesis. Enrollment in MUSI 29500 Undergraduate Honors Seminar, typically offered each Spring Quarter, is designed to prepare third-year students to write a BA thesis. Thesis writers should enroll in MUSI 29900 Senior Essay or Composition during either the Autumn or Winter Quarter of the fourth year. MUSI 29500 and 29900 count toward electives in the major. The thesis topic can be interdisciplinary, but cannot jointly be submitted as a BA thesis in another major. Depending upon GPA, writing a BA thesis may make students eligible for Special Honors. Prospective thesis writers should speak with the Director of Undergraduate Studies about possible topics, advisers, and research plans in Autumn, Winter, and Spring Quarters of the third year.

Special Honors

Students may be recommended for special honors if they (1) have a GPA of at least 3.0 overall, (2) have a GPA of at least 3.5 in the music major, and (3) present an outstanding BA thesis or composition, as judged by the Department of Music faculty, under the approved supervision of a Department of Music faculty member.

Minor Program in Music

The program for the minor requires 700 units, including two analysis courses, one historical or cultural course, one creative practice course, and three electives in accord with the student's interests. Students can begin the minor in any of the three columns (Analysis and Techniques, Histories and Cultures, or Creative Practices). Students plan and formalize their minor program of study in consultation with the Director of Undergraduate Studies (see Advising).

Summary of Requirements: Minor in Music

Students wishing to minor in music must take 700 units total, comprising four foundational courses and three elective courses chosen in consultation with the Director of Undergraduate Studies.

Analysis & Techniques	200
Histories & Cultures	100
Creative Practices	100

Electives	300
Total Units	700

Foundation Courses for the Minor

Analysis and Techniques

Choose two of the following:

MUSI 14300	Music Theory Fundamentals	100
MUSI 15100	Harmony and Voice Leading I	100
MUSI 15200	Harmony and Voice Leading II	100
MUSI 15300	Harmony and Voice Leading III	100

Histories and Cultures

Choose one of the following:

MUSI 23300	Introduction to the Social and Cultural Study of Music	100
MUSI 27100	Topics in the History of Western Music I	100
MUSI 27200	Topics in the History of Western Music II	100
MUSI 27300	Topics in the History of Western Music III	100

Creative Practices

Choose one of the following:

MUSI 26100	Introduction to Composition	100
MUSI 26600	Intro: Computer Music	100
Performance Ensemble ⁺		100

⁺ Students must fulfill three quarters of a performance ensemble to receive minor credit. Students wishing to count ensemble participation in the major or the minor must enroll for credit on a Pass/Fail basis. A maximum of two units of ensemble participation (one unit as foundations + one unit as electives) count toward the minor. Students can participate in ensembles on a not-for-credit basis by enrolling for zero credit. For more information, see Performance Program below.

Electives

Electives should be chosen in consultation with the Director of Undergraduate Studies according to individual goals and may include:

- **Academic Courses** (additional foundations-level courses count as electives).
- **Performance Ensembles**, up to one additional unit (a maximum of two units of performance ensembles in total may count toward the minor).

Performance Program

Ensembles are open to all qualified students from all areas of the University through competitive auditions held at the beginning of Autumn Quarter. Participation in consecutive quarters (Autumn, Winter, Spring) is expected, unless there are extenuating circumstances (in which case, students may speak with the ensemble director and the Director of Undergraduate Studies). Beginners are welcome in non-Western ensembles, where previous experience is not assumed or required. Most organizations rehearse weekly. Ensemble directors establish their own standards of attendance, participation, repertoire amounts, and performances, within ranges approved by the Music Department faculty, in their individual syllabi.

Music majors and minors who complete a year of performance work in an ensemble with a passing grade will receive 100 units of credit upon completion, by request with the Director of Undergraduate Studies in the Department of Music. A maximum of three years (300 units) is allowed toward the major, and two years (200 units) towards the minor. Students who are participating in an ensemble enroll on a Pass/Fail basis. There is no option to take an ensemble for a quality grade. Majors and minors who have completed their desired or allowed for-credit units are encouraged to continue participating in an ensemble without requesting additional units of credit. Non-majors and non-minors cannot request credit.

MUSI 17000	University Chorus
MUSI 17001	Motet Choir
MUSI 17002	Women's Ensemble
MUSI 17003	Rockefeller Chapel Choir
MUSI 17010	University Symphony Orchestra
MUSI 17011	University Chamber Orchestra
MUSI 17012	University Wind Ensemble
MUSI 17020	Early Music Ensemble
MUSI 17021	Jazz X-tet

MUSI 17022	Jazz Combo
MUSI 17023	Middle East Music Ensemble
MUSI 17025	South Asian Music Ensemble
MUSI 17026	Chamber Music Performance
MUSI 17027	Piano Performance Studio
MUSI 17028	Vocal Performance Studio
MUSI 17029	Percussion Ensemble

Other Performance Activities

Students may wish to pursue additional musical activities at the University, including Tea Time Concert Series, Gilbert and Sullivan Opera Company (<http://www.gilbertandsullivanoperacompany.org/>), and many other campus opportunities (<https://music.uchicago.edu/additional-performance-opportunities/>). *These activities do not earn credit or satisfy the Creative Practice requirement for the music major or minor.*

For further information, students are welcome to visit the University of Chicago Music Performance Program website at music.uchicago.edu/page/ensembles-and-programs-overview (<https://music.uchicago.edu/performance-opportunities/>) or contact Barbara Schubert, Director of Performance Programs, at bschuber@uchicago.edu.

Advising

Students have considerable flexibility to design their own major or minor, but benefit from regular consultation with the Director of Undergraduate Studies.

Prospective majors are *required* to consult with the Director of Undergraduate Studies before declaring. After consultation, declaration is formalized with the student’s College adviser via my.uchicago.edu (<https://my.uchicago.edu/>). Majors are advised to meet with the Director of Undergraduate Studies at least yearly to design and execute their program of study. Third-year majors should meet with the Director of Undergraduate Studies *quarterly* to discuss a BA thesis option and to ensure timely completion of degree requirements.

Prospective minors are *required* to consult with the Director of Undergraduate Studies before declaring, ideally before the end of Spring Quarter of their third year. During the consultation, the student and the Director of Undergraduate Studies will complete the Consent to Complete a Minor Program (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf) worksheet, available from the College adviser. The student will submit the completed minor form, with the signature of the Director of Undergraduate Studies, to the College adviser.

Grading

Courses used to meet the general education requirement in the arts must be taken for a quality grade. Courses taken to meet requirements in the major or minor also must be taken for quality grades with the exception of performance ensembles, which are taken Pass/Fail.

Courses in the major or minor may not be double counted with the student’s major(s), other minors, or general education requirements. More than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Music Courses

MUSI 10100. Introduction to Western Art Music. 100 Units.

This one-quarter course is designed to enrich the listening experience of students, particularly with respect to the art music of the Western European and American concert tradition. Students are introduced to the basic elements of music and the ways that they are integrated to create works in various styles. Particular emphasis is placed on musical form and on the potential for music to refer to and interact with aspects of the world outside.

Terms Offered: Autumn Spring Winter

Note(s): Background in music not required. Students must confirm enrollment by attending one of the first two sessions of class. This course meets the general education requirement in the arts.

MUSI 10200. Introduction to World Music. 100 Units.

This course is a selected survey of classical, popular, and folk music traditions from around the world. The goals are not only to expand our skills as listeners but also to redefine what we consider music to be and, in the process, stimulate a fresh approach to our own diverse musical traditions. In addition, the role of music as ritual, aesthetic experience, mode of communication, and artistic expression is explored.

Terms Offered: Autumn Spring Winter

Note(s): Background in music not required. Students must confirm enrollment by attending one of the first two sessions of class. This course meets the general education requirement in the arts.

Equivalent Course(s): CRES 10200

MUSI 10300. Introduction to Music: Materials and Design. 100 Units.

This introductory course in music is intended for students who are interested in exploring the language, interpretation, and meaning of music through coordinated listening, analysis, and creative work. By listening to and comprehending the structural and aesthetic considerations behind significant written and improvised works, from the earliest examples of notated Western music to the music of living composers and performers, students will be prepared to undertake analytical

and ultimately creative projects. The relationship between cultural and historical practices and the creation and reception of music will also be considered. The course is taught by a practicing composer, whose experience will guide and inform the works studied. No prior background in music is required.

Terms Offered: Autumn Spring Winter

Note(s): Background in music not required. Students must confirm enrollment by attending one of the first two sessions of class. This course meets the general education requirement in the arts.

MUSI 10400. Introduction to Music: Analysis and Criticism. 100 Units.

This course aims to develop students' analytical and critical tools by focusing on a select group of works drawn from the Western European and American concert tradition. The texts for the course are recordings. Through listening, written assignments, and class discussion, we explore topics such as compositional strategy, conditions of musical performance, interactions between music and text, and the relationship between music and ideology as they are manifested in complete compositions.

Terms Offered: Autumn Spring Winter

Note(s): Background in music not required. Students must confirm enrollment by attending one of the first two sessions of class. This course meets the general education requirement in the arts.

MUSI 12100-12200. Music in Western Civilization I-II.

This two-quarter sequence explores musical works of broad cultural significance in Western civilization. We study pieces not only from the standpoint of musical style but also through the lenses of politics, intellectual history, economics, gender, cultural studies, and so on. Readings are taken both from our music textbook and from the writings of a number of figures such as St. Benedict of Nursia and Martin Luther. In addition to lectures, students discuss important issues in the readings and participate in music listening exercises in smaller sections.

MUSI 12100. Music In Western Civilization I: To 1750. 100 Units.

This course, part of the Social Sciences Civ core, looks at musics in different moments of Euro-American history and the social contexts in which they originated, with some comparative views on other world traditions. It aims to give students a better understanding of the social contexts of European music over this period; aids for the basic sound structures of pieces from these different moments; and convincing writing in response to prompts based on source readings or music pieces. Our first quarter (MUS 12100 etc.) spans roughly the period between Charlemagne's coronation as Holy Roman Emperor (800 CE) and the dissolution of the Empire (1806) with the triumph of Napoleon across Western Europe.

Instructor(s): R. Kendrick Terms Offered: Autumn

Note(s): Prior music course or ability to read music not required. Students must confirm enrollment by attending one of the first two sessions of class. This two-quarter sequence meets the general education requirement in civilization studies; it does not meet the general education requirement in the arts.

Equivalent Course(s): SOSC 21100, HIST 12700

MUSI 12200. Music In Western Civ II. 100 Units.

This course, part of the Social Sciences Civ core, looks at musics in different moments of Euro-American history and the social contexts in which they originated, with some comparative views on other world traditions. It aims to give students a better understanding of the social contexts of European music over this period; aids for the basic sound structures of pieces from these different moments; and convincing writing in response to prompts based on source readings or music pieces. Our second quarter (MUS 12200 etc.) runs from the beginning of European Romanticism around 1800 to the turn of the 21st century.

Terms Offered: Winter

Note(s): Prior music course or ability to read music not required. Students must confirm enrollment by attending one of the first two sessions of class. This two-quarter sequence meets the general education requirement in civilization studies; it does not meet the general education requirement in the arts.

Equivalent Course(s): HIST 12800, SOSC 21200

MUSI 14300. Music Theory Fundamentals. 100 Units.

This one-quarter elective course covers the basic elements of music theory, including music reading, intervals, chords, meter, and rhythm.

Instructor(s): Various Terms Offered: Autumn. This course will meet asynchronously; attendance at any scheduled lectures and tutorials is completely optional and will have no bearing upon the student's grade. Lectures will be given live and scheduled at times that accommodate the majority of students' schedules. They may be attended via Zoom, but they will be recorded and made available for viewing at each student's leisure. Further optional tutorials will be scheduled at student's best convenience. Once again, attendance is not compulsory and will have no bearing upon the course grade.

MUSI 15100-15200-15300. Harmony and Voice Leading.

This three-quarter sequence serves as an introduction to the materials and structure of Western tonal music. The first quarter focuses on fundamentals: scale types, keys, basic harmonic structures, voice-leading and two-voice counterpoint. The second quarter explores extensions of harmonic syntax, the basics of classical form, further work with counterpoint, and nondiatonic seventh chords. The third quarter undertakes the study of modulation, sequences, and additional analysis of classical forms. Musicianship labs in ear training and keyboard skills required.

MUSI 15100. Harmony and Voice Leading I. 100 Units.

The first quarter focuses on fundamentals: scale types, keys, basic harmonic structures, voice-leading and two-voice counterpoint. Musicianship labs in ear training and keyboard skills required.

Instructor(s): Olga Sanchez-Kisieleska (both sections and labs) Terms Offered: Autumn

Prerequisite(s): Ability to read music.

MUSI 15200. Harmony and Voice Leading II. 100 Units.

The second quarter explores extensions of harmonic syntax, the basics of classical form, further work with counterpoint, and nondiatonic seventh chords. Musicianship labs in ear training and keyboard skills required.

Instructor(s): Olga Sanchez-Kisielevska Terms Offered: Winter

Prerequisite(s): MUSI 15100

MUSI 15300. Harmony and Voice Leading III. 100 Units.

The third quarter undertakes the study of modulation, sequences, and additional analysis of classical forms. Musicianship labs in ear training and keyboard skills required.

Instructor(s): Olga Sanchez-Kisielevska (both class sections and labs) Terms Offered: Spring

Prerequisite(s): MUSI 15200

MUSI 21800. Conducting. 100 Units.

MUSI 23300. Introduction to the Social and Cultural Study of Music. 100 Units.

This course provides an introduction to ethnomusicology and related disciplines with an emphasis on the methods and contemporary practice of social and cultural analysis. The course reviews a broad selection of writing on non-Western, popular, vernacular, and 'world-music' genres from a historical and theoretical perspective, clarifying key analytical terms (i.e., 'culture,' 'subculture,' 'style,' 'ritual,' 'globalization') and methods (i.e., ethnography, semiotics, psychoanalysis, Marxism). In the last part of the course, students learn and develop component skills of fieldwork documentation and ethnographic writing.

Instructor(s): Robert Kendrick Terms Offered: Spring, Tues/Thurs 11:00-12:20 in GoH 205

Note(s): Enrollment limit: 17

MUSI 23410. Music of the Middle East. 100 Units.

No description available.

Instructor(s): P. Bohlman Terms Offered: Various

Prerequisite(s): 100-level music course or consent of instructor.

Equivalent Course(s): MUSI 33410

MUSI 23706. Music of South Asia. 100 Units.

The course explores some of the music traditions that hail from South Asia—a region defined by the countries of India, Pakistan, Sri Lanka, Nepal, Bhutan, Afghanistan, Maldives, and their diasporas. The course will study music and some of its inextricably linked forms of dance and theatre through the lens of ethnomusicology, where music is considered in its social and cultural contexts. Students will develop tools to listen, analyze, watch, and participate in South Asian forms of music-making, using case-study based inquiries as guides along the way.

Instructor(s): Ameera Nimjee Terms Offered: Spring

Equivalent Course(s): MUSI 33706, SALC 20800, RLST 27700, SALC 30800

MUSI 23804. Rock. 100 Units.

This course has as its focus the varied social agents, discourses, processes and institutions that contribute to current and historical understandings of rock. Issues of musical style, questions of historiography, the technologies and techniques of audio recording, the structures of the recording industry, the status of so-called subcultures and mainstreams, and the politics of gender, race and sexuality are among the items which our readings, class discussions and assignments will explore.

As such, the inculcation of an 'appreciation' of rock, the transmission of a canon and the validation of individual musical tastes are projects that are antithetical to our inquiry. Students will also be encouraged, through select readings and listening assignments, to contextualize rock within a broad field of twentieth- and twenty-first century music-making and attendant social, political and economic processes.

Instructor(s): travieso Terms Offered: Autumn

Equivalent Course(s): MUSI 33804

MUSI 24416. Opera as Idea and As Performance. 100 Units.

Is opera an archaic and exotic pageant for fanciers of overweight canaries, or a relevant art form of great subtlety and complexity that has the power to be revelatory? In this course of eight sessions, jointly taught by Professor Martha Nussbaum and Anthony Freud, General Director of Lyric Opera of Chicago, we explore the multi-disciplinary nature of this elusive and much-maligned art form, with its four hundred-year-old European roots, discussing both historic and philosophical contexts and the practicalities of interpretation and production in a very un-European, twenty-first century city. Anchoring each session around a different opera, we will be joined by a variety of guest experts, one each week, including a director, a conductor, a designer and two singers, to enable us to explore different perspectives. The list of operas to be discussed include Monteverdi's *The Coronation of Poppea*, Mozart's *Don Giovanni*, Rossini's *La Cenerentola*, Verdi's *Don Carlos*, Puccini's *Madama Butterfly*, Wagner's *Die Meistersinger*, Strauss's *Elektra*, and Britten's *Billy Budd*. (A) (I)

Instructor(s): A. Freud; M. Nussbaum Terms Offered: Spring

Prerequisite(s): Remark: students do not need to be able to read music, but some antecedent familiarity with opera in performance or through recordings would be extremely helpful. Ph.D. students in the Philosophy Department and the Music Department and all law students (both J. D. and LL.M.) may enroll without permission. All other students will be selected by lottery up to the number feasible given CA arrangements.

Note(s): Ph.D. students and law students will write one long paper at the end (20-25 pages), based on a prospectus submitted earlier. Other students will write one shorter paper (5-7 pages) and one longer paper (12-15 pages), the former due in week 4 and the latter during reading period.

Equivalent Course(s): PHIL 21102, PHIL 31102, MUSI 30716

MUSI 25020. Opera Across Media. 100 Units.

Open to all undergraduates. Over the course of the last hundred and twenty years, opera and cinema have been sounded and seen together again and again. Where opera is commonly associated with extravagant performance and production, cinema is popularly associated realism. Yet their encounter not only proves these assumptions wrong but produces some extraordinary third kinds-media hybrids. It also produces some extraordinary love affairs. Thomas Edison wanted a film of his to be 'a grand opera,' and Federico Fellini and Woody Allen wanted opera to saturate their films. Thinking about these mutual attractions, 'Opera across Media' explores different operatic and cinematic repertoires as well as other media forms. Among films to be studied are Pabst's *Threepenny Opera* (1931), Visconti's *Senso* (1954), Powell and Pressburger's *Tales of Hoffmann* (1951), Zeffirelli's *La traviata* (1981), De Mille's *Carmen* (1915), Losey's *Don Giovanni* (1979), Bergman's *The Magic Flute* (1975), and Fellini's *E la nave va* (1983). No prior background in music performance, theory, or notation is needed. Students may write papers based on their own skills and interests relevant to the course. Required work includes attendance at all screenings and classes; weekly postings on Canvas about readings and viewings; attendances at a Met HD broadcast and a Lyric Opera live opera; a short 'think piece' midway through the course; and a final term paper of 8-10 pages.

Instructor(s): Martha Feldman Terms Offered: Autumn

Note(s): Open to all undergraduates

Equivalent Course(s): SIGN 26058, CMST 24617, ITAL 25020, TAPS 26516

MUSI 25100. Analysis of Music of the Classical Period. 100 Units.

This course focuses on the analysis of music by composers associated with the Viennese classical period, including Haydn, Mozart, and Beethoven. Topics include classical phrase structure, standard tonal forms such as sonata-allegro, and basic chromatic harmony. Participants present model compositions and write analytical papers.

Instructor(s): Various Terms Offered: Winter

Prerequisite(s): MUSI 15300 or equivalent

Note(s): This course is typically offered in alternate years.

Equivalent Course(s): MUSI 30809

MUSI 25200. Analysis of Nineteenth-Century Music. 100 Units.

This course focuses on the tonal language of nineteenth-century European composers, including Schubert, Chopin, Brahms, and Wagner. Students confront analytical problems posed by these and other composers' increasing uses of chromaticism and extended forms through both traditional (classical) models of tonal harmony and form, as well as alternative approaches specifically tailored to this repertoire. We will also address the ways in which these analytical perspectives might impinge on or influence matters of performance; students with a performance background will be invited to propose a final project that involves both performance and analysis.

Instructor(s): Various Terms Offered: Spring

Prerequisite(s): MUSI 15300 or equivalent

MUSI 25300. Analysis of Twentieth-Century Music. 100 Units.

This course introduces theoretical and analytical approaches to twentieth-century music. The core of the course involves learning a new theoretical apparatus—often called 'set theory'—and exploring how best to apply that apparatus analytically to pieces by composers such as Schoenberg, Bartók, and Stravinsky. We also explore the relevance of the theoretical models to music outside of the high-modernist canon, including some jazz. The course provides an opportunity to confront some foundational questions regarding what it means to 'theorize about music.'

Instructor(s): Various Terms Offered: Various

Prerequisite(s): MUSI 15300 or equivalent

Note(s): This course typically is offered in alternate years.

MUSI 26100. Introduction to Composition. 100 Units.

Designed for beginning composers to practice and hone the nuances of their musical craft, this course introduces some of the fundamentals of music composition through a series of exercises as well as several larger creative projects. Professional musicians will perform students' exercises and compositions. This is primarily a creative, composing course. Through a combination of composition assignments, listening, discussion, analysis, and reading, we will explore and practice the fundamental aspects of music composition. Repertoire study, harmony, counterpoint, rhythm, orchestration, timbre, form, transformation, and several other pertinent essentials are included in the curriculum. This laboratory-style, practical course is interactive and discussion-based.

Terms Offered: Autumn

Prerequisite(s): Any two quarters of music theory, inclusive of 14300 and 15153, or permission from the instructor

MUSI 26217. Analyzing Popular Music. 100 Units.

This class will explore different theoretical approaches to the analysis of twentieth and twenty-first century popular music. This will include examinations of phrase structure, form, pitch, timbre, harmonic syntax, meter and rhythm, transcription, and music-text relations. Students will analyze songs from a variety of popular music genres and participate in discussions about song interpretation, situating examples within broader contexts of time period, politics, and popular culture.

Equivalent Course(s): MUSI 36217

MUSI 26618. Electronic Music I. 100 Units.

Electronic Music I presents an open environment for creativity and expression through composition in the electronic music studio. The course provides students with a background in the fundamentals of sound and acoustics, covers the theory and practice of digital signal processing for audio, and introduces the recording studio as a powerful compositional tool.

The course culminates in a concert of original student works presented in multi-channel surround sound. Enrollment gives students access to the Electronic Music Studio in the Department of Music. No prior knowledge of electronic music is necessary.

Instructor(s): Sam Pluta Terms Offered: Autumn

Equivalent Course(s): MAAD 24618, MUSI 36618

MUSI 26718. Approaches to Live Electronics. 100 Units.

Hand-built circuits, tape loops, feedback, filters, ring modulators, turntables, live-processing software environments, microphones, and human-machine interface designs. In this course, we will study current and historical approaches to the performative use of hardware and software environments in music, and will follow the practice as it continues to redefine music composition and improvisation in the 21st century. Study will be repertoire-based, drawing from the work of artists ranging from David Tudor to Herbie Hancock to Grandmaster Flash to Kaija Saariaho.

Instructor(s): Sam Pluta Terms Offered: Autumn

Equivalent Course(s): MAAD 16718, MUSI 36718

MUSI 27100-27200-27300. Topics in the History of Western Music I-II-III.

This sequence is a three-quarter investigation into Western art music, with primary emphasis on the vocal and instrumental repertoires of Western Europe and the United States. This sequence is now offered every year, allowing students to complete the music major within the space of two years.

MUSI 27100. Topics in the History of Western Music I. 100 Units.

Part I of a three-quarter investigation into Western art music, with primary emphasis on the vocal and instrumental repertoires of Western Europe and the United States. MUSI 27100 begins with the earliest notated music and considers monophonic liturgical chant and the development of sacred and secular vocal polyphony through the sixteenth century.

This course is part of the College Course Cluster, The Renaissance.

Instructor(s): Martha Feldman Terms Offered: Autumn

Prerequisite(s): MUSI 14300 or 15300. Open to nonmajors with consent of instructor.

MUSI 27200. Topics in the History of Western Music II. 100 Units.

MUSI 27200 addresses topics in music from 1600 to 1800, including opera, sacred music, the emergence of instrumental genres, the codification of tonality, and the Viennese classicism of Haydn and Mozart.

Terms Offered: Winter

Prerequisite(s): MUSI 14300 or 15300. Open to nonmajors with consent of instructor.

MUSI 27300. Topics in the History of Western Music III. 100 Units.

MUSI 27300 treats music since 1800. Topics include the music of Beethoven and his influence on later composers; the rise of public concerts, German opera, programmatic instrumental music, and nationalist trends; the confrontation with modernism; and the impact of technology on the expansion of musical boundaries.

Terms Offered: Spring

Prerequisite(s): MUSI 14300 or 15300. Open to nonmajors with consent of instructor.

MUSI 28500. Musicianship Skills. 000 Units.

This is a yearlong course in ear training, keyboard progressions, realization of figured basses at the keyboard, and reading of chamber and orchestral scores. Classes each week consist of one dictation lab (sixty minutes long) and one keyboard lab (thirty minutes long).

Instructor(s): Olga Sánchez-Kisielewska Terms Offered: Autumn Spring Winter

Prerequisite(s): MUSI 15300. Open only to students who are majoring in music.

Note(s): 100 units credit is granted only after successful completion of the year's work.

MUSI 29500. Undergraduate Honors Seminar. 100 Units.

The seminar guides students through the preliminary stages of selecting and refining a topic, and provides an interactive forum for presenting and discussing the early stages of research, conceptualization, and writing. The course culminates in the presentation of a paper that serves as the foundation of the honors thesis. The instructors work closely with honors project supervisors, who may be drawn from the entire music faculty.

Terms Offered: Spring

Prerequisite(s): Consent of instructor. Open only to third years who are majoring in music and wish to develop a research project and prepare it for submission for departmental honors.

Near Eastern Languages and Civilizations

Department Website: <http://nelc.uchicago.edu>

Program of Study

Majors in Near Eastern Languages and Civilizations (NELC) at the University of Chicago pursue rigorous knowledge about a region of the world that is known as “the cradle of civilization” and the home of several important religious and cultural traditions, as well as one of the most important geopolitical areas of our contemporary world. NELC majors acquire languages; learn how archaeologists, economists, historians, linguists, literary scholars, and careful readers of legal, religious, economic, and other kinds of texts critically evaluate evidence; and acquire, largely in small class settings, analytical writing, thinking, and research skills that will help prepare them for a variety of careers.

Geographically centered on the Nile to Oxus and Danube to Indus region, NELC also embraces North Africa and Islamic Spain, as well as Central Asia and the Balkans in its ambit, from the early Bronze Age to the recent era of revolutions. Students can gain expertise in a wide variety of languages, including the living spoken tongues of the modern Middle East and Central Asia (Arabic, Armenian, modern Hebrew, Kazakh, Persian, Turkish, and Uzbek) or languages that open gateways onto the ancient past (Aramaic, Babylonian, Biblical Hebrew, Coptic, Egyptian Hieroglyphics, Elamite, Ge'ez, Hittite, Middle and Old Persian, Ottoman, Syriac, Ugaritic, etc.).

In an interdisciplinary area studies department like NELC, majors learn about the region through primary sources (material, oral, or textual) and scholarly analysis, structuring their curriculum around various disciplines and methodologies, including stratigraphy and paleobotany, comparative literature, cultural and civilizational studies, economics and numismatics, gender studies, history (economic, political, religious, and social), human rights, public policy, and digital humanities approaches.

Areas of specialization within NELC include:

- Arabic Studies
- Armenian Studies
- Archaeology and Art of the Ancient Near East
- Classical Hebrew Language and Civilization
- Cuneiform Studies (including Assyriology, Hittitology, and Sumerology)
- Egyptian Languages and Civilization
- History (Ancient Near East, Islamic History, Modern Middle Eastern History)
- Islamic Thought (including Law, Sufism)
- Israeli and Jewish Studies (including Biblical and Modern Hebrew, Aramaic, Syriac)
- Persian and Iranian Studies (Culture, Language, Literature, History, Religion)
- Semitic Languages and Literatures (Comparative Semitics, Northwest Semitics)
- Turkish and Ottoman Studies (Culture, History, Languages, Literatures)

Students who major in NELC who are interested in learning one or more of the primary native languages as a means of access to the cultures of the ancient Near East and/or the modern Middle East can do so in the **Language and Culture Track** of the NELC major, while students who are more interested in developing their knowledge of the material cultures of the Near East and of the concepts and techniques of archaeology can do so in the **Archaeology Track** of the NELC major. In consultation with the Director of Undergraduate Studies, each student chooses an area of specialization and devises a program of study that provides a sound basis for graduate work in that area or for a career in business, education, government, journalism, law, museology, public policy, public service, or a variety of other disciplines and professions.

Major Requirements

Requirements for the NELC major vary quite substantially between the **Language and Culture Track** on the one hand, and the **Archaeology Track** on the other hand. Specific requirements for each track are described below. The Director of Undergraduate Studies and the Department Administrator are available to answer questions, discuss programs of study, and support students as they make their way through the major in NELC. Students are encouraged to track their progress through requirements by using our major worksheet (available on the NELC website (<http://nelc.uchicago.edu/undergraduate/>)). NELC strongly encourages students to study abroad if they are able. Civilization sequences offered in the Study Abroad programs at Rabat, Istanbul (Granada), Cairo, and Jerusalem (300 units in one quarter) fulfill the requirements of the NELC major in terms of civilization courses. Language courses taken abroad can also be counted towards the major, after evaluation by the NELC coordinator for the language and approval by the Director of Undergraduate Studies. Students should consult the website of the Study Abroad program study-abroad.uchicago.edu (<https://study-abroad.uchicago.edu/>) for further details.

Thirteen courses and a Research Project are required for a NELC major.

Summary of Requirements: Language and Culture Track

Two or three quarters of one of the following civilization sequences: *		200-300
NEHC 20004-20005-20006	Ancient Near Eastern Thought and Literature I-II-III	
NEHC 20011-20012-20013	Ancient Empires I-II-III	
NEHC 20201-20202-20203	Islamicate Civilization I-II-III	
NEHC 20501-20502-20503	Islamic History and Society I-II-III	
NEHC 20601-20602-20603	Islamic Thought and Literature I-II-III	
JWSC 12000-12001-12003	Jewish Civilization I-II-III ⁺	
Six courses in one, or three courses each in two of the Near Eastern languages (e.g., Arabic, Armenian, Babylonian, Egyptian, Hebrew, Kazakh, Persian, Turkish, Uzbek) **		600
Three or four elective courses in the student's area of specialization ⁺⁺		300-400
NEHC 29899	Research Colloquium	100
Total Units in the Major		1300

- * Note that the course sequence on “Islamicate Civilization” does not fulfill the general education requirement in civilization studies. All of the other NELC civilization sequences do fulfill the general education requirement. ‘Islamic History and Society’ will not be offered in 2020–21. If a Near Eastern civilization sequence is used to meet the College general education requirement, a second Near Eastern civilization sequence is required for the NELC major. Students who took NEHC 20001-20002-20003 Ancient Near Eastern History and Society I-II-III prior to 2020–21 may continue to apply these courses toward NELC requirements. Students who took NEAA 20001-20002-20003-20006 Ancient Near Eastern History and Society I-II-III-VI prior to 2020–21 may continue to apply these courses toward the Language and Culture Track.
- + Students who began taking Jewish Civilization courses prior to Autumn 2018 may continue to use the courses that previously satisfied the civilization studies requirement. See the Jewish Studies page for details.
- ** Credit for language courses may not be granted by examination or petition.
- ++ These may consist of any NELC courses, including additional language courses, an additional civilization sequence, or NELC courses in areas such as archaeology, art, literature in translation, history, and religion. NEHC 29995 Research Project may be counted towards the elective requirement. Contact the NELC Director of Undergraduate Studies for questions about course requirements.

Summary of Requirements: Archaeology Track

One archaeological methods course		100
NEAA 20100	Archaeological Methods and Interpretations	
One course in geographic information science		100
NEAA 20061 or GEOG 28202	Ancient Landscapes I Geographic Information Science I	
Three methodologically oriented courses, chosen from among the following: *		300
NEAA 10020	Ceramic Analysis in Archaeology	
NEAA 20027	New Approaches to Old Stones: Chipped & Ground Stone Analysis	
NEAA 20035	Introduction to Zooarchaeology	
NEAA 20062	Ancient Landscapes II	
GEOG 28402 & GEOG 28602	Geographic Information Science II and Geographic Information Science III	
ANTH 26900	Archaeological Data Sets	
ANTH 28400	Bioarchaeology and the Human Skeleton	
BIOS 22265	Human Origins: Milestones in Human Evolution and the Fossil Record	
Three courses in the archaeology, history, or culture of the region(s) of interest offered by NELC or another department, for example: ⁺		300
NEAA 20001-20002-20003-20006	Archaeology of the Ancient Near East I-II-V-VI	
NEAA 20501	Introduction to Islamic Archaeology	
HIST 16700-16800-16900	Ancient Mediterranean World I-II-III	
EALC 28010	Archaeology of Anyang: Bronzes, Inscriptions, and World Heritage	

EALC 28015	Archaeology of Bronze Age China	
Two courses in a relevant foreign language, ancient or modern, chosen in consultation with the NELC Director of Undergraduate Studies.		200
One course in statistical methods		100
STAT 22000 or DIGS 20002	Statistical Methods and Applications ** Data Analysis for the Humanities I	
NEAA 20091	Field Archaeology ++	100
NEHC 29899	Research Colloquium	100
Total Units		1300

* Students can also choose other approved undergraduate courses in archaeological methods or in the application of social theory in archaeological interpretation that may be offered in NELC or another department (e.g., archaeobotany, archaeometallurgy, archaeological conservation, ancient DNA, epigraphic methods, etc.)

+ This list is purely indicative. Students should discuss with the Director of Undergraduate Studies to establish a coherent list of electives in their areas and periods of interest.

** Students who have taken statistics to fulfill other requirements may substitute an approved elective.

++ This course entails participation in archaeological fieldwork with a University of Chicago faculty member or in an approved field school sponsored by another university. The fieldwork requirement for the major will often be fulfilled during the Summer Session for course credit from the University of Chicago or for transfer credit from another school. If the fieldwork is done without earning course credit, the student will substitute an additional elective chosen among the methodologically oriented courses or the courses in the archaeology, history, or culture of the region(s) of interest quoted above, or an additional language course. In any case, the student must engage in approved archaeological fieldwork as a requirement of the major.

Grading

All courses used to meet requirements in the major must be taken for quality grades with the exception of the NEHC 29899 Research Colloquium, which is taken for P/F grading.

Advising

As soon as they declare their major in NELC, students must consult the Director of Undergraduate Studies to plan their programs of study. In Autumn Quarter of their fourth year, all NELC students must see the Director of Undergraduate Studies with an updated degree program and transcript.

BA Research Project

NELC majors are required to elaborate a substantial Research Project during their fourth year. In most cases, students choose to write a BA thesis, in the form of an original academic essay of approximately 30 to 50 pages. Upon agreement with instructors and the Director of Undergraduate Studies, the NELC major Research Project also allows for less traditional forms of knowledge production, such as (but not exclusively limited to) artistic expressions supported by a research question, various forms of research-oriented endeavors using computational methods (including geographic information systems), etc.

The timeline below assumes a Spring Quarter graduation. Students who expect to graduate in other quarters should consult the Director of Undergraduate Studies.

Year 3: Spring Quarter

NELC majors in their third year should discuss possible topics for their Research Project with NELC faculty members with whom they have worked or who have expertise in their topic. This may grow out of a paper written from a course or may be an entirely new project.

After choosing a topic and narrowing down its focus, students are responsible to request a member of the NELC faculty to serve as their research adviser, who will help them further conceive the scope and aims of the project and provide guidance about methods and sources for carrying out their research. Students must formally file their proposed Research Project topic with their faculty adviser's signature in the NELC department office before the end of their third year (by Monday of tenth week of Spring Quarter). Forms to register the topic are available on our website (<http://nelc.uchicago.edu/undergraduate/>).

Year 4: Autumn Quarter

Students are required to register for NEHC 29899 Research Colloquium in Autumn Quarter of their fourth year on a P/F basis. NEHC 29899 is a workshop course designed to survey the fields represented by NELC and to assist students in researching and finalizing their Research Projects. The course is run by a BA preceptor, typically an advanced PhD student in NELC. Preceptors work closely with students and their faculty advisers to assist in all aspects of conceiving, researching, and writing. A passing grade (P) for NEHC 29899 depends on full attendance and participation throughout the quarter.

Year 4: Winter Quarter

NELC majors are strongly encouraged to register for an optional one-quarter independent study course NEHC 29995 Research Project with their BA preceptor that will allow time in their schedules over Winter Quarter to work on and revise their projects under the guidance of their BA preceptor. Students will receive a quality grade for this course, equivalent to the final Research Project grade, reported in the Spring Quarter.

Year 4: Spring Quarter

The completed Research Project must be submitted to the Department Administrator by Monday of third week in Spring Quarter. For theses, students should submit two bound hard copies and one pdf of the paper; for digital projects and other non-traditional projects, students are responsible for discussing in advance with their faculty adviser and the Department Administrator the format under which their work should be submitted. The Department Administrator will distribute the Research Projects to the faculty adviser. Students who fail to meet the deadline will not be eligible for honors and may not be able to graduate in that quarter.

The faculty adviser will grade the Research Project and submit grades and honors recommendations to the Director of Undergraduate Studies by Monday of fifth week in Spring Quarter.

Double Majors

Students intending to double major may, with the permission of the NELC Director of Undergraduate Studies, write a single Research Project that is designed to meet the requirements of both majors, provided that the faculty research adviser is a member of the NELC faculty. Approval from both Directors of Undergraduate Studies is required. A consent form, to be signed by the Directors of Undergraduate Studies, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Research Funding

Students are encouraged to begin the reading and research for their Research Project in the summer before their fourth year. Research grants are available to undergraduates. Please discuss the availability of grants with the Department Administrator and/or Director of Undergraduate Studies early in the third year and visit the department website for updated information.

NELC is a participant in the PRISM program (<https://careeradvancement.uchicago.edu/jobs-internships-research/prism-grants/>) and majors are encouraged to apply for PRISM grants.

Honors

Students who complete their course work and their Research Project with distinction are considered for honors. To be eligible for honors, students must have an overall GPA of 3.25 or higher, they must have a NELC GPA of 3.5 or higher, and they must have earned a grade of A on the Research Project.

Prizes

The department awards the Justin Palmer Prize annually to the Research Project judged to be the most outstanding. The Director of Undergraduate Studies makes this determination in consultation with the department chair and faculty members. This monetary prize is made possible by a generous gift from the family of Justin Palmer, AB'04, who completed a minor in NELC.

Minor Program in Near Eastern Languages and Civilizations

Students in the College with an interest in the languages, cultures, and archaeology of the Middle East or of the ancient Near East may pursue a minor in NELC. Completion of this minor certifies that students' undergraduate course work at the University of Chicago has prepared them with language skills, field-specific knowledge and methods, and cultural competency that can give them an advantage on the job market for a wide variety of careers—in business, in medicine or law, in the public sector, or in museums and cultural heritage.

Students who wish to take a minor in NELC must meet with the Director of Undergraduate Studies before the end of Spring Quarter of their third year to declare their intention to complete the minor. Students must submit the Consent to Complete a Minor Program (<https://college.uchicago.edu/advising/tools-forms/>) form to their College adviser by the deadline above. The Director of Undergraduate Studies and the Department Administrator are available to answer questions, discuss programs of study, and support students as they make their way through the minor in NELC. Students are encouraged to track their progress through requirements by using our minor worksheet, which can be found on our website (<http://nelc.uchicago.edu/undergraduate/>).

Program Requirements for the Minor

Students may choose one of three tracks: Language, Culture, or Archaeology. The first two tracks require a two- or three-quarter NELC civilization sequence which can be taken on campus or in one of the Study Abroad programs focusing on the Middle East (see Major Requirements for more detail on civilization sequences). In addition, the **Language Track** requires three courses of one NELC language at any level. Students using a NELC sequence to satisfy the general education requirement in civilization studies may seek approval from the department to substitute additional language course work in place of the civilization requirement in the minor. The **Culture Track** allows students to focus on such topics as history, religion, or literature in translation and does not have a language requirement. The **Archaeology Track** requires NEAA 20100 Archaeological Methods and Interpretations, one introductory course in geographical systems analysis (either NEAA 20061 Ancient Landscapes I or GEOG 28202 Geographic Information Science I), two methodologically oriented courses

(see Major Requirements for more detail on these courses), and two elective courses in the archaeology, history, or culture of the region(s) of interest offered by NELC or another department.

The six courses in the minor may not be double counted with a student's major(s) or with other minors, and they may not be counted toward general education requirements. Courses in the minor must be taken for quality grades.

Language Track Sample Minor

NEHC 20004-20005-20006	Ancient Near Eastern Thought and Literature I-II-III	300
HEBR 10101-10102-10103	Elementary Classical Hebrew I-II-III	300
Total Units		600

Language Track Sample Minor

ARAB 20101-20102-20103	Intermediate Arabic I-II-III	300
NEHC 20601-20602-20603	Islamic Thought and Literature I-II-III	300
Total Units		600

Culture Track Sample Minor

NEHC 20011-20012-20013	Ancient Empires I-II-III	300
NEHC 20004-20005-20006	Ancient Near Eastern Thought and Literature I-II-III	300
Total Units		600

Archaeology Track Sample Minor

NEAA 20100	Archaeological Methods and Interpretations	100
GEOG 28202	Geographic Information Science I	100
NEAA 10020	Ceramic Analysis in Archaeology	100
NEAA 20035	Introduction to Zooarchaeology	100
NEAA 20003	Archaeology of the Ancient Near East III: Levant	100
NEAA 20006	Archaeology of the Ancient Near East VI: Egypt	100
Total Units		600

All undergraduate courses being offered in the 2019–20 academic year are listed below, by subject. Upper-level courses and the most up-to-date course information can be found in the NELC section of Class Search (<http://registrar.uchicago.edu/classes/>).

Akkadian Courses

AKKD 10501-10502-10503. Introduction to Babylonian I-II-III.

Introduction to Babylonian

AKKD 10501. Introduction to Babylonian I. 100 Units.

Introduction to the grammar of Akkadian, specifically to the Old Babylonian dialect. The class covers the first half of the Old Babylonian grammar, an introduction to the cuneiform script, and easy translation exercises.

Instructor(s): Susanne Paulus Terms Offered: Autumn

AKKD 10502. Introduction to Babylonian II. 100 Units.

This course is the second quarter of the annual introductory sequence to the Babylonian language and the Cuneiform script. Students will further explore the grammar of Babylonian in its Old Babylonian dialect (19th-16th c. BCE) and read ancient inscriptions (especially the Laws of Hammu-rabi) in the Old Babylonian monumental script. They will also be introduced to the Old Babylonian cursive used in letters and the documents of everyday life.

Instructor(s): Herve Reculeau Terms Offered: Winter

Prerequisite(s): AKKD 10501 or equivalent

AKKD 10503. Introduction to Babylonian III: Divinatory Texts. 100 Units.

Akkadian readings in a wide variety of divinatory cuneiform texts, including omens from extispicy, teratology, libanomancy, medical diagnosis, and lunar eclipses, among others. Students are graded based on their preparation and mastery of cuneiform script-Old Babylonian cursive, in particular-and Akkadian philology.

Instructor(s): John Wee Terms Offered: Spring

Prerequisite(s): AKKD 10502 or equivalent

AKKD 20352. Nuzi: Documents from a Late Bronze Age Town. 100 Units.

More than 6000 cuneiform documents from a single Late Bronze Age site, ancient Nuzi, dating to a period of only about 150 years, yield unparalleled insights into everyday life in the ancient world. This course will use these resources to explore a series of legal and social phenomena, both private and public, including family/status (marriage, divorce, inheritance, adoption), judicial process (trials, lawsuits), public corruption, political events, and more.

Instructor(s): Martha Roth Terms Offered: Spring

Prerequisite(s): 2 years Akkadian or permission of instructor

Equivalent Course(s): AKKD 30350

AKKD 20601. Intermediate Akkadian: Myths of Creation and Destruction. 100 Units.

Akkadian readings of passages, mainly from the Babylonian Creation Epic (Enuma Elish) and the Babylonian Flood Story (Atrahasis), as well as from the Babylonian Theodicy, Gilgamesh, and the Myth of Seven Sages. Students are expected to master grammatical and narratorial content, become familiar with the use of modern dictionaries and other Assyriological resources, and improve their proficiency in reading directly from Assyrian and Babylonian cursive cuneiform scripts.

Instructor(s): Wee, John Terms Offered: Autumn

Prerequisite(s): 1 Year of Akkadian

AKKD 20900. Old Assyrian Letters and Documents. 100 Units.

This course introduces students to the Assyrian dialect of the early second millennium BCE, as witnessed in the archives of Assyrian merchants operating in the ancient city of Kaneš (modern Kültepe, Turkey). Students will read through a selection of letters, legal texts and administrative documents pertaining to the merchants' activities between Northern Mesopotamia and Anatolia. They will be exposed to the earliest known attestation of the Northern dialect of Akkadian, which differs sensibly from the contemporary Old Babylonian and later Standard Babylonian dialects that are introduced in elementary and intermediate Akkadian courses. Similarly, Old Assyrian cursive paleography has its own rules for sign shapes and values, with some marked differences with contemporary Old Babylonian. Knowledge of the Old Babylonian grammar and cursive cuneiform script are therefore required to take this course, and knowledge of Standard Babylonian and the associated scripts are highly recommended. Due to the restrictions in classroom availabilities imposed by the current pandemic, this course will be offered remotely via Zoom. Evaluation will be based on participation (30%), a midterm take-home exam (30%) and a final take-home exam (40%).

Instructor(s): Hervé Reculeau Terms Offered: Autumn

Prerequisite(s): Intermediate Akkadian (exceptions possible with instructor's consent).

Equivalent Course(s): AKKD 30900

Ancient Anatolian Languages Courses

AANL 10101-10102-10103. Elementary Hittite I-II-III.

This three-quarter sequence covers the basic grammar and cuneiform writing system of the Hittite language. It also familiarizes students with the field's tools (i.e., dictionaries, lexica, sign list). Readings come from all periods of Hittite history (1650 to 1180 BC).

AANL 10101. Elementary Hittite I. 100 Units.

As part of a three-quarter sequence, this course familiarizes the student with about 3/4 of Hittite grammar. The principles of the cuneiform writing system are taught and the student will learn some 100 signs of the basic syllabary and most important logograms. Also, a begin is made of introducing the student to the basic tools of the field.

Instructor(s): Theo Van Den Hout Terms Offered: Autumn

AANL 10102. Elementary Hittite II. 100 Units.

As part of a three-quarter sequence, this second quarter we finish the grammar and start reading Hittite texts, introducing the student to the various genres that Hittite literature has to offer. We will continue the introduction of important tools of the field and students will acquire further routine in reading cuneiform.

Instructor(s): Theo Van Den Hout Terms Offered: Winter

Prerequisite(s): AANL 10101 or equivalent

AANL 10103. Elementary Hittite III. 100 Units.

This is the third in a three-quarter sequence that covers the basic grammar and cuneiform writing system of the Hittite language. It also familiarizes the student with the field's tools (i.e., dictionaries, lexica, sign list). Readings come from all periods of Hittite history (1650 to 1180 B.C.).

Instructor(s): Petra Goedegebuure Terms Offered: Spring

Prerequisite(s): AANL 10102 or equivalent

AANL 20125. Advanced Readings in Hittite. 100 Units.

This course focuses on a particular genre of Hittite texts. The Hittite texts are read in cuneiform and placed in their social-historical context and the reading hones the student's philological skills.

Instructor(s): Theo Van Den Hout Terms Offered: Autumn

Prerequisite(s): AANL 10101, 10102, 10103

AANL 20225. Readings: Palaic. 100 Units.

TBD

AANL 20302. Luwian-2: Second Millennium Texts. 100 Units.

This course focuses on the Hieroglyphic Luwian inscriptions of the second millennium BC. Since Hieroglyphic Luwian I (AANL 20301) is required this course will not offer a grammatical overview but start with the texts immediately.

Instructor(s): Goedegebuure, Petra Terms Offered: Winter

Prerequisite(s): AANL 20301/1 Hieroglyphic Luwian I

AANL 20501. Lycian. 100 Units.

This course introduces the grammar and writing system of the Lycian language of the first millennium BC (ca. 500 to 300). After reading a series of tomb inscriptions, we venture into the larger historical inscriptions that include the Lycian-Greek-Aramaic trilingual of Xanthos.

Instructor(s): P. Goedegebuure Terms Offered: Spring

Prerequisite(s): Elementary Hittite or consent from instructor

Equivalent Course(s): ANCM 30800, AANL 30501

AANL 20601. Carian/Pisidian/Sidetic. 100 Units.

TBD

Equivalent Course(s): ANCM 30200

AANL 20901. Introduction to Hurrian. 100 Units.

This class introduces the student to the grammar and texts of the Hurrian language. In addition we will read a number of representative texts in Hurrian.

Instructor(s): Theo van den Hout Terms Offered: Spring

Note(s): For College students with second-year standing

Arabic Courses

ARAB 10101-10102-10103. Elementary Arabic I-II-III.

This sequence concentrates on the acquisition of speaking, reading, and aural skills in modern formal Arabic. The class meets for six hours a week.

ARAB 10101. Elementary Arabic I. 100 Units.

This sequence concentrates on the acquisition of speaking, reading, and aural skills in modern formal Arabic. The class meets for six hours a week. Note(s): The class meets for six hours a week

Instructor(s): Osama Abu-Eledam, Zainab Hermes, Aidan Kaplan, TBA Terms Offered: Autumn Spring Winter

ARAB 10102. Elementary Arabic II. 100 Units.

This sequence concentrates on the acquisition of speaking, reading, and aural skills in modern formal Arabic.

Instructor(s): Osama Abu-Eledam, Lakhdar Choudar, Zainab Hermes, TBA, TBA Terms Offered: Winter

Prerequisite(s): ARAB 10101 or equivalent

ARAB 10103. Elementary Arabic III. 100 Units.

This sequence concentrates on the acquisition of speaking, reading, and aural skills in modern formal Arabic.

Instructor(s): Osama Abu-Eledam, Lakhdar Choudar, Zainab Hermes, TBA Terms Offered: Spring

Prerequisite(s): ARAB 10102 or equivalent

ARAB 10123. Summer Intensive Arabic Level 1. 300 Units.

Summer Intensive Arabic Level I is an eight-week course designed to introduce complete novices to the fundamentals of Arabic in the four language skills (speaking, listening, reading, and writing). Classes are small and use the Alif Baa' and al-Kitaab textbook (2nd edition), supplemented by authentic materials, both to learn the language and to experience the culture. Cultural proficiency is an integral part of the language instruction (forms of address, youth phrases, phrases used among intimate friends, etc.). Students will spend 4-5 hours per day practicing using Arabic in classroom activities and should plan on studying an additional 3-4 hours most afternoons and evenings. In addition to class time, a full day trip to an Arab neighborhood in Chicago provides an opportunity to use Arabic in an authentic cultural context. Cultural exposure will also be supplemented through guest speakers, songs, and films. At the conclusion of the course, students can expect to have mastered the sounds and shapes of the Arabic alphabet and to be able to speak about themselves and their world in Modern Standard Arabic, as well as to engage in conversations about familiar topics with native speakers, to comprehend basic texts, and to use some common phrases in colloquial Egyptian and Shaami.

Instructor(s): Staff Terms Offered: Summer

ARAB 10250. Colloquial Levantine Arabic. 100 Units.

Spoken Levantine Arabic is a proficiency-based course designed to develop the linguistic skills necessary for personal day-to-day life. The course focuses on spoken rather than Standard written Arabic, and will therefore target primarily the oral/aural skills. Through the knowledge of Modern Standard Arabic and the introduction of colloquial vocabulary, expressions and grammar, the course will build the students' competence in spoken Arabic. Students will also be introduced to the Levantine culture of Syria, Lebanon, Jordan, and Palestine.

Instructor(s): O. abu-Eledam Terms Offered: Autumn

ARAB 10257. Colloquial Levantine Arabic II. 100 Units.

Colloquial Levantine Arabic is a proficiency-based course designed to develop the linguistic skills necessary for personal day-to-day life. The course focuses on spoken rather than Standard written Arabic, and will therefore target primarily the oral/aural skills. Through the knowledge of Modern Standard Arabic and the introduction of colloquial vocabulary, expressions and grammar, the course will build the students' competence in spoken Arabic. Students will also be introduced to the Levantine culture.

ARAB 20101-20102-20103. Intermediate Arabic I-II-III.

This sequence concentrates on speaking, reading, and aural skills at the intermediate level of modern formal Arabic.

ARAB 20101. Intermediate Arabic I. 100 Units.

The first quarter of Intermediate Arabic

Instructor(s): Osama Abu Eledam, Zainab Hermes, TBA, TBA Terms Offered: Autumn Spring Winter

Prerequisite(s): ARAB 10103 or equivalent

ARAB 20102. Intermediate Arabic II. 100 Units.

The second quarter of Intermediate Arabic

Instructor(s): Osama Abu Eledam, Lakhdar Choudar, Zainab Hermes, TBA Terms Offered: Winter

Prerequisite(s): ARAB 20101 or equivalent

ARAB 20103. Intermediate Arabic III. 100 Units.

ARAB 20103 is the spring quarter continuation of the Intermediate Arabic sequence that began with ARAB 20101 last fall, and continued with ARAB 20102 in the winter. We will continue to work through the second half of Al-Kitaab Part 2. As in any language course, we address all four of the fundamental skills: reading, writing, listening, and speaking. A particular focus of this sequence, however, is ensuring that students have a solid, comprehensive understanding of the rules of Arabic syntax. In addition to readings and exercises from the textbook, we will increasingly make use of articles from Arabic-language news media.

Instructor(s): Osama Abu Eledam, Zainab Hermes, TBA, TBA Terms Offered: Spring

Prerequisite(s): ARAB 20102 or equivalent

ARAB 20123. Summer Intensive Arabic Level II. 300 Units.

Summer Intensive Arabic Level 2 is designed for students who have completed the equivalent of Alif Baa' and al-Kitaab Part One. In this 8-week summer course in Arabic, instructors will make full use of the abundant online resources and real-time interactions with native speakers to achieve the course objective of intermediate high proficiency in the four skills. Students will improve and refine their language skills using al-Kitaab part 2 (3rd edition), along with authentic film and video clips, social media posts, songs, stories, poems, and articles. Cultural proficiency is an integral part of the language instruction, as students immerse themselves in readings (literary and journalistic) and engage in conversations with their classmates and with guest lecturers/presenters. Students will also extend their language and cultural skills by working on songs and film extracts. The class will help students develop their ability to initiate and sustain discussion on topics of general interest and to present information and simple narratives in Modern Standard Arabic; to understand a wide range of written genres in Arabic, including formal writing, journalistic texts, and less formal styles; to write and speak with increasing accuracy and fluency; and to carry out basic research with non-technical texts.

Instructor(s): Staff Terms Offered: Summer

ARAB 20390. Arabic in Social Context. 100 Units.

This is a course for the advanced student of Arabic, focusing on improving listening comprehension and instilling an awareness of the social associations accompanying different speech styles. Through intensive exposure to a variety of authentic oral texts (talk shows, songs, soap operas, films, news shows, ads, comedy skits, etc.), students will delve into current social and political issues, as well as become sensitive to code switching between MSA and colloquial (all the major dialects). Through these texts, we will examine the themes of diglossia and code-switching; gendered discourse; urban-rural differences; class differences; youth language. A heavily aural course, class activities will involve student presentations (group and solo), discussion groups, and a final oral presentation project.

Instructor(s): N. Forster Terms Offered: Winter

Prerequisite(s): Two Years of Arabic study or consent of instructor

Equivalent Course(s): ARAB 30390

ARAB 20588. Media Arabic. 100 Units.

Media Arabic is a course designed for the advanced student of Modern Standard Arabic. The course objective is to improve students' listening comprehension and writing skills. Students will advance toward this goal through listening to and reading a variety of authentic materials from Arabic Media (on politics, literature, economics, education, women, youth, etc.).

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): At least two years of Modern Standard Arabic

Equivalent Course(s): ARAB 30588

ARAB 20658. Narrating Conflict in Modern Arabic Literature. 100 Units.

This course is an exploration of conflict in the Arab world through literature, film and new media. In this course, we will discuss the influence of independence movements, wars, and revolts on Arabic literature: how do writers write about, or film, conflict? How does conflict affect language itself? How do these texts engage with issues of trauma and bearing witness? To answer these questions, we will look at a number of key moments of conflict in the Arab world, including the Arab-Israeli conflicts, the Algerian war of independence, the 2011 Egyptian revolution, the Lebanese and Iraq wars, and the ongoing war in Syria. Rather than follow a historical chronology of these events, we will read these texts thematically, beginning with texts that seek to present themselves as direct, sometimes eye-witness, accounts and then moving on to narratives that complicate the relationship between conflict and its narration.

Instructor(s): G. Hayek Terms Offered: Spring

Equivalent Course(s): ARAB 30658, NEHC 20658, NEHC 30658

Aramaic Courses**ARAM 10101-10102-10103. Biblical Aramaic; Old Aramaic Inscriptions; Imperial Aramaic.**

Three quarter sequence in Aramaic spanning Biblical Aramaic (Autumn), Old Aramaic (Winter), and Imperial Aramaic (Spring).

ARAM 10101. Biblical Aramaic. 100 Units.

This course provides a thorough introduction to the grammar of the Aramaic portions of the Hebrew Bible during the first few weeks. The remainder of the course is spent reading texts from the books of Daniel and Ezra.

Instructor(s): S. Creason Terms Offered: Autumn

Prerequisite(s): HEBR 10103 or equivalent.

Note(s): Instructor Consent Required

Equivalent Course(s): JWSC 11000

ARAM 10102. Old Aramaic Inscriptions. 100 Units.

Selected monumental inscriptions from the Old Aramaic period (c. 1000-600 BCE) are read with special attention to the dialectal differences among various subgroups of texts.

Instructor(s): S. Creason Terms Offered: Winter

Prerequisite(s): ARAM 10101 or equivalent.

Equivalent Course(s): JWSC 11100

ARAM 10103. Imperial Aramaic. 100 Units.

Selected letters and contracts from the Imperial Aramaic period (c. 600-200 BCE) are read with special attention to the historical development of the grammar of Aramaic during this time period.

Instructor(s): S. Creason Terms Offered: Spring

Prerequisite(s): ARAM 10102 or equivalent.

Equivalent Course(s): JWSC 11200

Armenian Courses

ARME 10101-10102-10103. Elementary Modern Armenian I-II-III.

This three-quarter sequence utilizes the most advanced computer technology and audio-visual aids enabling the students to master a core vocabulary, the alphabet and basic grammatical structures and to achieve a reasonable level of proficiency in modern formal and spoken Armenian (one of the oldest Indo-European languages). A considerable amount of historical-political and social-cultural issues about Armenia are skillfully built into the course for students who have intention to conduct research in Armenian Studies or to pursue work in Armenia.

ARME 10101. Elementary Modern Armenian I. 100 Units.

This three-quarter sequence focuses on the acquisition of basic speaking, listening, reading and writing skills in modern formal and spoken Armenian. The course utilizes the most advanced computer technology and audio-visual aids enabling students to master the alphabet, a core vocabulary, and some basic grammatical structures in order to communicate their basic survivor's needs in Armenian, understand simple texts and to achieve a minimal level of proficiency in modern formal and spoken Armenian. A considerable amount of historical-political and social-cultural issues about Armenia are skillfully built into the course for students who have intention to conduct research in Armenian Studies or related fields, to visit or to pursue work in Armenia. A language competency exam is offered at the end of spring quarter for those taking this course as college language requirement.

Instructor(s): H. Haroutunian Terms Offered: Autumn

ARME 10102. Elementary Modern Armenian II. 100 Units.

This three-quarter sequence focuses on the acquisition of basic speaking, listening, reading and writing skills in modern formal and spoken Armenian. The course utilizes the most advanced computer technology and audio-visual aids enabling students to master the alphabet, a core vocabulary, and some basic grammatical structures in order to communicate their basic survivor's needs in Armenian, understand simple texts and to achieve a minimal level of proficiency in modern formal and spoken Armenian. ARME 10501. Intro To Classical Armenian. 100 Units.

The course focuses on the basic grammatical structure and vocabulary of the Classical Armenian language, Grabar (one of the oldest Indo-European languages). It enables students to achieve basic reading skills in the Classical Armenian language. Reading assignments include a wide selection of original Armenian literature, mostly works by 5th century historians, as well as passages from the Bible, while a considerable amount of historical and cultural issues about Armenia are discussed and illustrated through the text interpretations. Recommended for students with interests in Armenian Studies, Classics, Divinity, Indo-European or General Linguistics.

Instructor(s): Hripsime Haroutunian Terms Offered: Winter

Prerequisite(s): Knowledge of modern Armenian is not required though preferred

Equivalent Course(s): ANCM 32212, MDVL 10501

ARME 20101-20102-20103. Intermediate Modern Armenian I-II-III.

The goal of this three-quarter sequence is to enable students to reach an advanced level of proficiency in the Armenian language. This sequence covers a rich vocabulary and complex grammatical structures in modern formal and colloquial Armenian. Reading assignments include a selection of original Armenian literature and excerpts from mass media.

ARME 20101. Intermediate Modern Armenian i. 100 Units.

The course is aiming to enable students to reach a reasonable level of proficiency in the Armenian language. The curriculum is heavily based on real life situations. Each class session includes a healthy balance of real-life like conversations (shopping, placing an order in a restaurant, asking directions, talking with natives, getting around in the city, banking, etc.), readings (dialogues, jokes, stories, news, etc.) and writings (essays on selected topics, filling forms, etc.). The students can also communicate in Armenian well beyond basic needs about the daily life and obtain some level of fluency in their professional interests. This sequence covers a wider-range vocabulary and more complex grammatical structures in modern formal and colloquial Armenian. Reading assignments also include a selection of

simple original Armenian literature. A considerable amount of historical-political and social-cultural issues about Armenia are skillfully built into the course for students who have intention to conduct research in Armenian Studies or related fields, or to pursue work in Armenia.

Egyptian Courses

EGPT 10101-10102. Introduction to Middle Egyptian Hieroglyphs I-II.

This sequence examines hieroglyphic writing and the grammar of the language of classical Egyptian literature.

EGPT 10101. Introduction to Middle Egyptian Hieroglyphs I. 100 Units.

This course and its sequel EGPT 10102 provide an introduction to the hieroglyphic writing system, vocabulary and grammar of Middle Egyptian, the 'classic' phase of the Egyptian language developed during the Middle Kingdom (circa 2025-1773 BCE) and used until the disappearance of hieroglyphs over two thousand years later.

Instructor(s): Jan Johnson Terms Offered: Autumn

Prerequisite(s): None

Equivalent Course(s): ANCM 30500

EGPT 10102. Introduction to Middle Egyptian Hieroglyphs II. 100 Units.

This course completes an introduction to the hieroglyphic writing system, vocabulary and grammar of Middle Egyptian, the 'classic' phase of the Egyptian language developed during the Middle Kingdom (circa 2025-1773 BCE) and used until the disappearance of hieroglyphs over two thousand years later. It also begins an introduction to ancient Egyptian culture and society through a close reading of its 'classic' literature.

Instructor(s): Jan Johnson Terms Offered: Winter

Prerequisite(s): EGPT 10101 or consent of the instructor

Equivalent Course(s): ANCM 30501

EGPT 10103. Middle Egyptian Texts I. 100 Units.

This course continues an introduction to ancient Egyptian culture and society through a close reading of its 'classic' literature from the Middle Kingdom (circa 2025-1773 BCE) and beyond, until the disappearance of hieroglyphs over two thousand years later.

Instructor(s): Brian Muhs Terms Offered: Spring

Prerequisite(s): EGPT 10101-10102 or consent of the instructor

Equivalent Course(s): ANCM 30502

EGPT 20101. Middle Egyptian Texts II. 100 Units.

This course features readings in a variety of genres, including historical, literary, and scientific texts.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): EGPT 10101-10102-10103 or consent of the instructor

EGPT 20110. Introduction to Old Egyptian. 100 Units.

This course provides an introduction to the hieroglyphic writing system, vocabulary and grammar of Old Egyptian, the phase of the Egyptian language used during the Old Kingdom (circa 2686-2181 BCE). It also provides an introduction to the culture and society of Egypt's 'Pyramid Age' through a close reading of monumental texts from private tombs, royal and private stelae, administrative decrees, economic documents, and Pyramid texts. Some attention is given to Old Egyptian texts written in cursive Hieratic.

Instructor(s): Janet Johnson Terms Offered: Autumn

Prerequisite(s): EGPT 10101-10103 or equivalent

EGPT 20220. Texts and Society in the Nubian Kingdom of Napata. 100 Units.

This course examines the culture and society of the Nubian kingdom of Napata (circa 750-350 BCE) through a close reading of its texts written in the ancient Egyptian language and hieroglyphic script. We will also review the language and script of the Nubian kingdom of Meroe (circa 350 BCE - 350 CE), in order to look for possible language contact in the Napatan texts written in ancient Egyptian.

Instructor(s): Brian Muhs Terms Offered: Autumn

Prerequisite(s): EGPT 10101-10103 or equivalent

Ge'ez Courses**Hebrew Courses****HEBR 10101-10102-10103. Elementary Classical Hebrew I-II-III.**

The purpose of this three-quarter sequence is to enable the student to read biblical Hebrew prose with a high degree of comprehension. The course is divided into two segments: (1) the first two quarters are devoted to acquiring the essentials of descriptive and historical grammar (including translation to and from Hebrew, oral exercises, and grammatical analysis); and (2) the third quarter is spent examining prose passages from the Hebrew Bible and includes a review of grammar.

HEBR 10101. Elementary Classical Hebrew I. 100 Units.

The purpose of this three-quarter sequence is to enable the student to acquire a knowledge of the vocabulary and grammar of Classical Hebrew sufficient to read prose texts with the occasional assistance of a dictionary. The first quarter focuses on the inflection of nouns and adjectives and begins the inflection of verbs. It includes written translation to and from Hebrew, oral exercises, and grammatical analysis of forms.

Instructor(s): S. Creason Terms Offered: Autumn

Note(s): This class meets 5 times a week

Equivalent Course(s): JWSC 22000

HEBR 10102. Elementary Classical Hebrew II. 100 Units.

The purpose of this three-quarter sequence is to enable the student to acquire a knowledge of the vocabulary and grammar of Classical Hebrew sufficient to read prose texts with the occasional assistance of a dictionary. The second quarter focuses on verb inflection and verbal sequences and includes written translation to and from Hebrew, oral exercises, and grammatical analysis of forms.

Instructor(s): S. Creason Terms Offered: Winter

Prerequisite(s): HEBR 10101 or equivalent

Note(s): This class meets 5 times a week

Equivalent Course(s): JWSC 22100

HEBR 10103. Elementary Classical Hebrew III. 100 Units.

The purpose of this three-quarter sequence is to enable the student to acquire a knowledge of the vocabulary and grammar of Classical Hebrew sufficient to read prose texts with the occasional assistance of a dictionary. The first half of the third quarter concludes the study of verb inflection and the second half is spent reading prose narrative texts with specific attention to the grammatical analysis of those texts.

Instructor(s): S. Creason Terms Offered: Spring

Prerequisite(s): HEBR 10102

Note(s): This class meets 5 times a week

Equivalent Course(s): JWSC 30300, JWSC 22200

HEBR 10501-10502-10503. Introductory Modern Hebrew I-II-III.

This three quarter course introduces students to reading, writing, and speaking modern Hebrew. All four language skills are emphasized: comprehension of written and oral materials; reading of nondiacritical text; writing of directed sentences, paragraphs, and compositions; and speaking. Students learn the Hebrew root pattern system and the seven basic verb conjugations in both the past and present tenses, as well as simple future. At the end of the year, students can conduct short conversations in Hebrew, read materials designed to their level, and write short essay.

HEBR 10501. Introductory Modern Hebrew I. 100 Units.

This three quarter course introduces students to reading, writing, and speaking modern Hebrew. All four language skills are emphasized: comprehension of written and oral materials; reading of nondiacritical text; writing of directed sentences, paragraphs, and compositions; and speaking. Students learn the Hebrew root pattern system and the seven basic verb conjugations in both the past and present tenses, as well as simple future. At the end of the year, students can conduct short conversations in Hebrew, read materials designed to their level, and write short essay.

HEBR 15001. Elementary Hebrew in Jerusalem. 100 Units.**HEBR 15002. Elementary Hebrew in Jerusalem. 100 Units.****HEBR 15003. Intermediate Hebrew in Jerusalem. 100 Units.****HEBR 15004. Intermediate Hebrew in Jerusalem. 100 Units.****HEBR 15005. Advanced Hebrew in Jerusalem. 100 Units.****HEBR 15006. Advanced Hebrew in Jerusalem. 100 Units.****HEBR 20104-20105-20106. Intermediate Classical Hebrew I-II-III.**

A continuation of Elementary Classical Hebrew. The first quarter consists of reviewing grammar, and of reading and analyzing further prose texts. The last two quarters are devoted to an introduction to Hebrew poetry with readings from Psalms, Proverbs, and the prophets.

HEBR 20104. Intermediate Classical Hebrew I. 100 Units.

The first quarter consists of reviewing grammar, and of reading and analyzing further prose texts.

Instructor(s): D. Pardee Terms Offered: Autumn

Prerequisite(s): HEBR 10103 or equivalent

Equivalent Course(s): JWSC 22300

HEBR 20105. Intermediate Classical Hebrew II. 100 Units.

The last two quarters are devoted to an introduction to Hebrew poetry with readings from Psalms, Proverbs, and the prophets.

Instructor(s): D. Pardee Terms Offered: Winter

Prerequisite(s): HEBR 20104 or equivalent

Equivalent Course(s): JWSC 22400

HEBR 20106. Intermediate Classical Hebrew III. 100 Units.

The last two quarters are devoted to an introduction to Hebrew poetry with readings from Psalms, Proverbs, and the prophets.

Instructor(s): D. Pardee Terms Offered: Spring

Prerequisite(s): HEBR 20105 or equivalent

Equivalent Course(s): JWSC 22500

HEBR 20202. Reading Hebrew for Research Purposes. 100 Units.

The main objective is to teach students a broad range of skills necessary to read scholarly articles and primary materials in students' fields of study, written in Modern Hebrew. Due to the fact that the background of each student is different as far as his or hers past experience with Hebrew, a grammar survey is going to be the first step. The goal of this course is for the students to achieve high comprehension level. (Please note: This course does not intend to teach official rules and forms of translation). By the end of the course, students should feel confident in their ability to read any given Hebrew text, fiction and non-fiction.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): Students should have at least two years of Modern Hebrew and/or one year of Biblical Hebrew. Students should be able to read Hebrew texts without vowels as well as cursive Hebrew.

Equivalent Course(s): RLST 16102

HEBR 20502. Intermediate Modern Hebrew II. 100 Units.

This course is designed for students who possess a basic knowledge of modern# #and/or Biblical Hebrew# (#either the first year course or the placement exam# #are prerequisites#). #The main objective is to provide students with the# #skills necessary to approach Modern Hebrew prose#, #both fiction and# #non-fiction#. Students learn to use the dictionary#, #and approach unfamiliar# #texts and vocabulary#. Many syntactic structures are introduced#, #including# #simple clauses#,

#coordinate and compound sentences#. #Throughout the year#, #students read#, #write#, #and speak extensively and are required to analyze the# #grammatical structures of assigned materials#.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): HEBR 20501 or equivalent

Note(s): The course is devised for students who have previously taken either modern or biblical Hebrew courses.

Equivalent Course(s): JWSC 25400

HEBR 20503. Intermediate Modern Hebrew III. 100 Units.

The course aims to consolidate and broadens all four skills in order to help with the transition from easy Hebrew to regular Hebrew.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): HEBR 20502 or equivalent

Note(s): The course is devised for students who have previously taken either modern or biblical Hebrew courses.

Equivalent Course(s): JWSC 25500

HEBR 29700. Rdg/Rsch: Hebrew. 100 Units.

Kazakh Courses

KAZK 10501. Intro to Turkic Languages I. 100 Units.

The first quarter of a two-section course in which Elementary Kazakh and Elementary Uzbek will be offered as one class, with the option for students to study one or the other, or both simultaneously.

Instructor(s): Kagan Arik Terms Offered: Autumn

Equivalent Course(s): UZBK 10501, TURK 10501

KAZK 29700. Independent Study: Kazakh. 100 Units.

Independent Study: Kazakh

Instructor(s): Kagan Arik Terms Offered: Autumn Spring Winter

KAZK 29701. Independent Study: Intermediate Kazakh. 100 Units.

Independent Study: Intermediate Kazakh

Instructor(s): Kagan Arik Terms Offered: Autumn Spring Winter

Near Eastern Art and Archeology Courses

NEAA 20006. Archaeology of the Ancient Near East VI: Egypt. 100 Units.

This sequence provides a thorough survey in lecture format of the art and archaeology of ancient Egypt from the late Predynastic era through the Roman period.

Instructor(s): STAFF Terms Offered: Autumn

Note(s): This sequence does not meet the general education requirements in civilization studies.

Equivalent Course(s): NEAA 30006

NEAA 20030. The Rise of the State in the Ancient Near East. 100 Units.

This course introduces the background and development of the first urbanized civilizations in the Near East in the period from 9000 to 2200 BC. In the first half of this course, we examine the archaeological evidence for the first domestication of plants and animals and the earliest village communities in the "fertile crescent" (i.e., the Levant, Anatolia, and Mesopotamia). The second half of this course focuses on the economic and social transformations that took place during the development from simple, village-based communities to the emergence of the urbanized civilizations of the Sumerians and their neighbors in the fourth and third millennia BC.

Instructor(s): G. Stein Terms Offered: Winter

Equivalent Course(s): ANTH 36715, NEAA 30030, ANTH 26715

NEAA 20035. Introduction to Zooarchaeology. 100 Units.

This course provides undergraduate and graduate students with an introduction to the use of animal bones in archaeological research. Students will gain hands-on experience analyzing faunal remains from an archaeological site in the Near East. The class will address theoretical and methodological issues involved in the use of animal bones as a source of information about prehistoric societies. The course consists of lectures, laboratory sessions, and original research projects using collections of animal bone from archaeological excavations in southeast Turkey. Topics covered include: 1) identifying, ageing and sexing animal bones; 2) zooarchaeological sampling, measurement, quantification, and problems of taphonomy; 3) analysis of animal bone data; 4) reconstructing prehistoric hunting and pastoral economies, especially: animal domestication, hunting strategies, herding systems, seasonality, and pastoral production in complex societies.

Instructor(s): G. Stein Terms Offered: Spring

Equivalent Course(s): ANTH 38810, NEAA 30035, ANTH 28410

NEAA 20091. Field Archaeology. 100 Units.

This course entails four weeks of full-time, hands-on training in field archaeology in an excavation directed by a University of Chicago faculty member. At the Tell Keisan site in Israel, students will learn techniques of excavation and digital recording of the finds; attend evening lectures; and participate in weekend field trips. Academic requirements include the completion of assigned readings and a final written examination. For more information about this archaeological field opportunity in Summer 2020, see <http://keisan.uchicago.edu>. Students who are enrolled in this course will pay a Summer Session tuition fee in addition to the cost of participation in the dig. UChicago College students are eligible to apply for College Research Scholar grants to fund their participation.

NEAA 20100. Archaeological Methods and Interpretations. 100 Units.

The first part of this course surveys the history of archaeology as a discipline and the methods used by archaeologists to obtain evidence about past human activity via excavations, surface surveys, and remote-sensing technologies; and also surveys the methods used to date, classify, and analyze various kinds of evidence after it has been obtained. The second half of the course surveys the main paradigms in social theory and examines the theoretical concepts and assumptions archaeologists have used to make sense of what they find.

Instructor(s): David Schloen Terms Offered: Winter

Equivalent Course(s): NEAA 30100

NEAA 20501. Introduction to Islamic Archaeology. 100 Units.

This course is intended as a survey of the regions of the Islamic world from Arabia to North Africa, from Central Asia to the Gulf. The aim will be a comparative stratigraphy for the archaeological periods of the last millennium. A primary focus will be the consideration of the historical archaeology of the Islamic lands, the interaction of history and archaeology, and the study of patterns of cultural interaction over this region, which may also amplify understanding of ancient archaeological periods in the Near East.

Instructor(s): D. Whitcomb Terms Offered: Winter

Equivalent Course(s): MDVL 20530, NEAA 30501

NEAA 20522. Archaeology of Islamic Syria-Palestine. 100 Units.

This course is an exploration of the cultural patterns in the Levant from the late Byzantine period down to modern times, a span of some 1500 years. While the subject matter is archaeological sites of this period in Syria, Lebanon, Jordan, and Israel, the focus is on the role of medieval archaeology in amplifying the history of economic and social systems. It is this connective quality of Islamic archaeology that contributes to an understanding of the earlier history and archaeology of this region.

Instructor(s): D. Whitcomb Terms Offered: Spring

Prerequisite(s): Introductory course in archaeology

Equivalent Course(s): NEAA 30522, MDVL 20522

Near Eastern History and Civilizations Courses**NEHC 10101. Introduction to the Middle East. 100 Units.**

Prior knowledge of the Middle East not required. This course aims to facilitate a general understanding of some key factors that have shaped life in this region, with primary emphasis on modern conditions and their background, and to provide exposure to some of the region's rich cultural diversity. This course can serve as a basis for the further study of the history, politics, and civilizations of the Middle East.

Instructor(s): Hakan Karateke Terms Offered: Spring

Equivalent Course(s): HIST 15801

NEHC 12003. Jewish Civilization III - Language, Creation, and Translation in Jewish Thought and Literature. 100 Units.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts-biblical, Talmudic, philosophical, mystical, historical, documentary, and literary-students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The Spring course in 2021 will start with two stories from Genesis-the creation story and the story of the Tower of Babel in chapter 11-and consider the intertwined dynamics of language, creation, and translation in Jewish thought and literature. In addition to commentaries on both of these key texts, we will read philosophical and literary texts that illuminate the workings of language as a creative force and the dynamics of multilingualism and translation in the creation of Jewish culture. Through this lens, we will consider topics such as gender and sexuality, Jewish national identity, Zionism, the revival of the Hebrew language, Jewish responses to the Holocaust, and contemporary American Jewish culture.

Instructor(s): Na'ama Rokem Terms Offered: Spring

Note(s): Students who wish to take this course for Civilization Studies credit, must also take Jewish Civilization I and II. The course may also be taken as an independent elective.

Equivalent Course(s): CMLT 12003, RLST 22012, JWSC 12003

NEHC 20004-20005-20006. Ancient Near Eastern Thought and Literature I-II-III.

This sequence surveys the thought and literature of the Near East. Each course in the sequence focuses on a particular culture or civilization. Texts in English. This sequence meets the general education requirement in civilization studies. Taking these courses in sequence is not required.

NEHC 20004. Ancient Near Eastern Thought and Literature I: Mesopotamian Literature. 100 Units.

This course gives an overview of the richness of Mesopotamian Literature (modern Iraq) written in the 3rd-1st millennium BC. We will read myths and epics written on clay tablets in the Sumerian and Akkadian language in English translation and discuss content and style, but also the religious, cultural and historic implications. Particular focus will be on the development of stories over time, the historical context of the literature and mythological figures. The texts treated cover not only the famous Epic of Gilgamesh, but also various legends of Sumerian and Akkadian kings, stories about Creation and World Order, and destruction. The topics covered range from the quest for immortality, epic heroes and monsters, sexuality and love.

Instructor(s): Susanne Paulus Terms Offered: Autumn

Note(s): Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies.

NEHC 20005. Ancient Near Eastern Thought & Literature II: Anatolian Lit. 100 Units.

The goal of this class is to get an overview of Hittite literature, as "defined" by the Hittites themselves, in the wider historical-cultural context of the Ancient Near East. Some of the most important questions we can ask ourselves in reading ancient texts are: why were they written down, why were they kept, for whom were they intended, and what do the answers to these questions (apart from the primary content of the texts themselves) tell us about - in our case - Hittite society?

Instructor(s): Theo van den Hout Terms Offered: Spring

Note(s): Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies.

NEHC 20006. Ancient Near Eastern Thought & Literature III. 100 Units.

This course employs English translations of ancient Egyptian literary texts to explore the genres, conventions and techniques of ancient Egyptian literature. Discussions of texts examine how the ancient Egyptians conceptualized and constructed their equivalent of literature, as well as the fuzzy boundaries and subtle interplay between autobiography, history, myth and fiction.

Instructor(s): Brian Muhs Terms Offered: Winter

NEHC 20011-20012-20013. Ancient Empires I-II-III.

This sequence introduces three great empires of the ancient world. Each course in the sequence focuses on one empire, with attention to the similarities and differences among the empires being considered. By exploring the rich legacy of documents and monuments that these empires produced, students are introduced to ways of understanding imperialism and its cultural and societal effects—both on the imperial elites and on those they conquered. Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies.

NEHC 20011. Ancient Empires I. 100 Units.

This course introduces students to the Hittite Empire of ancient Anatolia. In existence from roughly 1750-1200 BCE, and spanning across modern Turkey and beyond, the Hittite Empire is one of the oldest and largest empires of the ancient world. We will be examining their history and their political and cultural accomplishments through analysis of their written records - composed in Hittite, the world's first recorded Indo-European language - and their archaeological remains. In the process, we will also be examining the concept of "empire" itself: What is an empire, and how do anthropologists, archaeologists, and historians study this unique kind of political formation?

Instructor(s): James Osborne Terms Offered: Winter

Note(s): Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies.

Equivalent Course(s): CLCV 25700, HIST 15602

NEHC 20012. Ancient Empires II. 100 Units.

The Ottomans ruled in Anatolia, the Middle East, South East Europe and North Africa for over six hundred years. The objective of this course is to understand the society and culture of this bygone Empire whose legacy continues, in one way or another, in some twenty-five contemporary successor states from the Balkans to the Arabian Peninsula. The course is designed as an introduction to the Ottoman World with a focus on the cultural history of the Ottoman society. It explores identities and mentalities, customs and rituals, status of minorities, mystical orders and religious establishments, literacy and the use of the public sphere.

Instructor(s): Hakan Karateke Terms Offered: Autumn

Equivalent Course(s): HIST 15603, CLCV 25800, MDVL 20012

NEHC 20013. Ancient Empires III. 100 Units.

For most of the duration of the New Kingdom (1550-1069 BC), the ancient Egyptians were able to establish a vast empire and becoming one of the key powers within the Near East. This course will investigate in detail the development of Egyptian foreign policies and military expansion which affected parts of the Near East and Nubia. We will examine and discuss topics such as ideology, imperial identity, political struggle and motivation for conquest and control of wider regions surrounding the Egyptian state as well as the relationship with other powers and their perspective on Egyptian rulers as for example described in the Amarna letters.

Instructor(s): Brian Muhs Terms Offered: Spring

Equivalent Course(s): CLCV 25900, HIST 15604

NEHC 20019. Mesopotamian Law. 100 Units.

Ancient Mesopotamia--the home of the Sumerians, Babylonians, and Assyrians who wrote in cuneiform script on durable clay tablets--was the locus of many of history's firsts. No development, however, may be as important as the formations of legal systems and legal principles revealed in contracts, trial records, and law collections (codes), among which The Laws of Hammurabi (r. 1792-1750 BC) stands as most important for understanding the subsequent legal practice and thought of Mesopotamia's cultural heirs in the Middle East and Europe until today. This course will explore the rich source materials of the Laws and relevant judicial and administration documents (all in English translations) to investigate topics of legal, social, and economic practice, including family formation and dissolution, crime and punishment (sympathetic or talionic eye for an eye, pecuniary, corporal), and procedure (contracts, trials, ordeals).

Instructor(s): M. Roth Terms Offered: Winter

Equivalent Course(s): SIGN 26022, LLSO 20019, NEHC 30019

NEHC 20201-20202-20203. Islamicate Civilization I-II-III.

This sequence surveys the intellectual, cultural, religious, and political development of the Islamic world (Middle East and North Africa), from its origins in pre-Islamic Arabia to the late 20th century. The sequence is required for MA students in CMES and counts toward completion of the NELC major and minor. It is recommended that the course be taken in sequence.

NEHC 20201. Islamicate Civilization I: 600-950. 100 Units.

This course covers the rise and spread of Islam, the Islamic empire under the Umayyad and early Abbasid caliphs, and the emergence of regional Islamic states from Afghanistan and eastern Iran to North Africa and Spain. The main focus will be on political, economic and social history.

Instructor(s): Ahmed El Shamsy Terms Offered: Autumn

Note(s): The Islamicate Civilization sequence does not fulfill the General Ed requirements

Equivalent Course(s): MDVL 20201, HIST 15611, NEHC 30201, ISLM 30201, RLST 20201, HIST 35621

NEHC 20202. Islamicate Civilization II: 950-1750. 100 Units.

This course, a continuation of Islamicate Civilization I, surveys intellectual, cultural, religious and political developments in the Islamic world from Andalusia to the South Asian sub-continent during the periods from ca. 950 to 1750. We trace the arrival and incorporation of the Steppe Peoples (Turks and Mongols) into the central Islamic lands; the splintering of the Abbasid Caliphate and the impact on political theory; the flowering of literature of Arabic, Turkic and Persian expression; the evolution of religious and legal scholarship and devotional life; transformations in the intellectual and philosophical traditions; the emergence of Shi'i states (Buyids and Fatimids); the Crusades and Mongol conquests; the Mamluks and Timurids, and the "gunpowder empires" of the Ottomans, Safavids, and Moghuls; the dynamics of gender and class relations; etc. This class partially fulfills the requirement for MA students in CMES, as well as for NELC majors and PhD students.

Instructor(s): Franklin Lewis Terms Offered: Winter

Prerequisite(s): Islamicate Civilization I (NEHC 20201) or Islamic Thought & Literature-1 (NEHC 20601), or the equivalent

Note(s): The Islamicate Civilization sequence does not fulfill the General Ed requirements

Equivalent Course(s): HIST 15612, ISLM 30202, MDVL 20202, RLST 20202, NEHC 30202, HIST 35622

NEHC 20203. Islamicate Civilization III: 1750-Present. 100 Units.

This course covers the period from ca. 1750 to the present, focusing on Western military, economic, and ideological encroachment; the impact of such ideas as nationalism and liberalism; efforts at reform in the Islamic states; the emergence of the "modern" Middle East after World War I; the struggle for liberation from Western colonial and imperial control; the Middle Eastern states in the cold war era; and local and regional conflicts.

Instructor(s): Holly Shissler Terms Offered: Spring

Prerequisite(s): Islamicate Civilization II (NEHC 20202) or Islamic Thought & Literature-2 (NEHC 20602), or the equivalent

Note(s): The Islamicate Civilization sequence does not fulfill the General Ed requirements

Equivalent Course(s): ISLM 30203, HIST 35623, HIST 15613, RLST 20203, NEHC 30203

NEHC 20235. Imaging Armenia: Diaspora and the Constitution of Subjectivity. 100 Units.

What does it mean to be "Armenian"? Despite centuries of dispersion and displacement, there has remained, in the Armenian diaspora, a sense of Armenian-ness-a sense, in other words, of being Armenian. This course will serve as an interrogation of and meditation on what that sense of being has looked like across time and space, as seen through the lens of pivotal musical and other artistic works from the post-genocide diaspora. Through in-depth analyses of these works and the discourses surrounding them, this course will trace the emergence, articulation, and negotiation of Armenian diasporic subjectivities and the ways in which those subjectivities have emerged in relation to and in conversation with power structures both internal and external to the Armenian communities under discussion. Diaspora, then, will be approached not as a fixed unit of analysis, but as something that emerges and is sustained through complex relationships and negotiations with sociopolitical forces both within and outside the diasporic community. Through this course, we will see that artistic expression in the Armenian diaspora functions as a site of agency: a site in which the question of what it is to be Armenian is explored in ways that shape, challenge, and upend notions and understandings of diasporic identity.

Instructor(s): Sylvia Alajaji Terms Offered: Spring

Equivalent Course(s): NEHC 30235

NEHC 20504. Introduction to the Hebrew Bible. 100 Units.

The course will survey the contents of the Hebrew Bible, and introduce critical questions regarding its figures and ideas, its literary qualities and anomalies, the history of its composition and transmission, its relation to other artifacts from the biblical period, its place in the history and society of ancient Israel and Judea, and its relation to the larger culture of the ancient Near East.

Instructor(s): Simeon Chavel Terms Offered: Autumn

Note(s): This course counts as a Gateway course for RLST majors/minors.

Equivalent Course(s): NEHC 30504, RLST 11004, HIJD 31004, BIBL 31000, JWSC 20120

NEHC 20550. Scandal as Historical Document, 17th-21st Centuries. 100 Units.

How can we use scandals as windows into the cultural history of the modern and early modern worlds? What does a scandal tell us about the public that consumes and disseminates it? In this course, we tackle these questions through an investigation of some of the major scandals of the early modern and modern periods in both Europe and the Middle East. From courtroom dramas in Paris and London to fierce debates in coffee houses and newspapers in Cairo, Beirut, and Istanbul, this course

offers a comparative view of how scandals were disseminated, received, and narrativized across time and space. In doing so, we will also examine the central role of the "public" both as a concept and as an actor in early modern and modern scandals. The course will also introduce students to a wide variety of primary sources as well as a rich literature on the subject. All readings are in English. No prior background on the subject is required.

Equivalent Course(s): HIST 22608

NEHC 20568. Balkan Folklore. 100 Units.

Vampires, fire-breathing dragons, vengeful mountain nymphs. 7/8 and other uneven dance beats, heart-rending laments, and a living epic tradition. This course is an overview of Balkan folklore from historical, political, and anthropological perspectives. We seek to understand folk tradition as a dynamic process and consider the function of different folklore genres in the imagining and maintenance of community and the socialization of the individual. We also experience this living tradition firsthand through visits of a Chicago-based folk dance ensemble, "Balkan Dance."

Instructor(s): A. Ilieva Terms Offered: Winter

Equivalent Course(s): REES 39009, ANTH 25908, REES 29009, CMLT 23301, NEHC 30568, ANTH 35908, CMLT 33301

NEHC 20570. Mughal India: Tradition & Transition. 100 Units.

The focus of this course is on the period of Mughal rule during the late sixteenth, seventeenth, and eighteenth centuries, especially on selected issues that have been at the center of historiographical debate in the past decades.

Instructor(s): M. Alam Terms Offered: Autumn

Prerequisite(s): Advanced standing or consent of instructor. Prior knowledge of appropriate history and secondary literature required.

Equivalent Course(s): SALC 37701, SALC 27701, HIST 36602, HIST 26602, NEHC 30570

NEHC 20573. The Burden of History: The Nation and Its Lost Paradise. 100 Units.

What makes it possible for the imagined communities called nations to command the emotional attachments that they do?

This course considers some possible answers to Benedict Anderson's question on the basis of material from the Balkans.

We will examine the transformation of the scenario of paradise, loss, and redemption into a template for a national identity narrative through which South East European nations retell their Ottoman past. With the help of Žižek's theory of the subject as constituted by trauma and Kant's notion of the sublime, we will contemplate the national fixation on the trauma of loss and the dynamic between victimhood and sublimity.

Instructor(s): A. Ilieva Terms Offered: Autumn

Equivalent Course(s): NEHC 30573, HIST 24005, CMLT 23401, REES 39013, REES 29013, CMLT 33401, HIST 34005

NEHC 20601-20602-20603. Islamic Thought and Literature I-II-III.

This sequence explores the thought and literature of the Islamic world from the coming of Islam in the seventh century C.E. through the development and spread of its civilization in the medieval period and into the modern world. Including historical framework to establish chronology and geography, the course focuses on key aspects of Islamic intellectual history: scripture, law, theology, philosophy, literature, mysticism, political thought, historical writing, and archaeology. In addition to lectures and secondary background readings, students read and discuss samples of key primary texts, with a view to exploring Islamic civilization in the direct voices of the people who participated in creating it. All readings are in English translation. No prior background in the subject is required. This course sequence meets the general education requirement in civilization studies. Taking these courses in sequence is recommended but not required.

NEHC 20601. Islamic Thought and Literature I. 100 Units.

This sequence explores the thought and literature of the Islamic world from the coming of Islam in the seventh century C.E. through the development and spread of its civilization in the medieval period and into the modern world. Including historical framework to establish chronology and geography, the course focuses on key aspects of Islamic intellectual history: scripture, law, theology, philosophy, literature, mysticism, political thought, historical writing, and archaeology. In addition to lectures and secondary background readings, students read and discuss samples of key primary texts, with a view to exploring Islamic civilization in the direct voices of the people who participated in creating it. All readings are in English translation. No prior background in the subject is required. This course sequence meets the general education requirement in civilization studies.

Instructor(s): Ahmed El Shamsy Terms Offered: Autumn

Equivalent Course(s): SOSC 22000, MDVL 20601, RLST 20401, HIST 25610

NEHC 20602. Islamic Thought and Literature II. 100 Units.

This course covers the period from ca. 950 to 1700, surveying works of literature, theology, philosophy, sufism, politics, history, etc., written in Arabic, Persian and Turkish, as well as the art, architecture and music of the Islamicate traditions. Through primary texts, secondary sources and lectures, we will trace the cultural, social, religious, political and institutional evolution through the period of the Fatimids, the Crusades, the Mongol invasions, and the "gunpowder empires" (Ottomans, Safavids, Mughals).

Instructor(s): Franklin Lewis Terms Offered: Winter

Note(s): Taking these courses in sequence is recommended but not required. This sequence meets the general education requirement in civilization studies.

Equivalent Course(s): RLST 20402, HIST 25615, SOSC 22100, MDVL 20602

NEHC 20603. Islamic Thought and Literature III. 100 Units.

This course covers the period from ca. 1700 to the present. It explores Muslim intellectuals' engagement with tradition and modernity in the realms of religion, politics, literature, and law. We discuss debates concerning the role of religion in a modern society, perceptions of Europe and European influence, the challenges of maintaining religious and cultural authenticity, and Muslim views of nation-states and nationalism in the Middle East. We also give consideration to the

modern developments of transnational jihadism and the Arab Spring. This course sequence meets the general education requirement in civilization studies.

Instructor(s): Orit Bashkin Terms Offered: Spring

Equivalent Course(s): HIST 25616, RLST 20403, SOSC 22200

NEHC 20605. Colloquium: Sources for the Study of Islamic History. 100 Units.

This course is designed to acquaint the student with the basic problems and concepts as well as the sources and methodology for the study of premodern Islamic history. Sources will be read in English translation and the tools acquired will be applied to specific research projects to be submitted as term papers.

Instructor(s): J. Woods Terms Offered: Winter

Equivalent Course(s): MDVL 20605, HIST 26005, HIST 36005, ISLM 30605, NEHC 30605

NEHC 20658. Narrating Conflict in Modern Arabic Literature. 100 Units.

This course is an exploration of conflict in the Arab world through literature, film and new media. In this course, we will discuss the influence of independence movements, wars, and revolts on Arabic literature: how do writers write about, or film, conflict? How does conflict affect language itself? How do these texts engage with issues of trauma and bearing witness? To answer these questions, we will look at a number of key moments of conflict in the Arab world, including the Arab-Israeli conflicts, the Algerian war of independence, the 2011 Egyptian revolution, the Lebanese and Iraq wars, and the ongoing war in Syria. Rather than follow a historical chronology of these events, we will read these texts thematically, beginning with texts that seek to present themselves as direct, sometimes eye-witness, accounts and then moving on to narratives that complicate the relationship between conflict and its narration.

Instructor(s): G. Hayek Terms Offered: Spring

Equivalent Course(s): ARAB 30658, ARAB 20658, NEHC 30658

NEHC 20692. Armenian History through Art and Culture. 100 Units.

Who are the Armenians and where do they come from? What is the cultural contribution of Armenians to their neighbors and overall world heritage? This crash-course will try to answer these and many other similar questions while surveying Armenian history and elements of culture (mythology, religion, manuscript illumination, art, architecture, etc.). It also will discuss transformations of Armenian identity and symbols of 'Armenianness' through time, based on such elements of national identity as language, religion, art, or shared history. Due to the greatest artistic quality and the transcultural nature of its monuments and artifacts, Armenia has much to offer in the field of Art History, especially when we think about global transculturation and appropriation among cultures as a result of peoples' movements and contacts. The course is recommended for students with interest in Armenian Studies or related fields, in Area or Civilizations Studies, Art and Cultural Studies, etc.

Instructor(s): Hripsime Haroutunian Terms Offered: Winter

Equivalent Course(s): NEHC 30692, HIST 25711, ARTH 20692

NEHC 20737. Imperialism before the Age of Empires? 100 Units.

This course offers a critical analysis of the use of concepts such as empire and imperialism in the historiography of ancient Mesopotamia to address political formations that developed (and vanished) from the Early to Late Bronze Ages (mid-3rd to late-2nd millennium BCE). Drawing from theoretical studies on imperialism and the imperial constructions that developed in the Iron Age and beyond (starting with the Neo-Assyrian and Neo-Babylonian empires), this seminar will explore the nature of power, control, and resource management in these early formations, and how they qualify (or not) as imperial policies. Students will address a substantial part of Mesopotamian history (from the Sargonic down to the Middle Assyrian and Babylonian periods) and study in depth some key historiographical issues for the history of Early Antiquity. Primary documents will be read in translation and the course has no ancient language requirements. However, readings of secondary literature in common academic languages (especially French and German) are to be expected. This course fulfills the requirements of a survey course in Mesopotamian civilization as defined by the Ancient PhD programs in NELC and MA program in the CMES.

Instructor(s): Hervé Reculeau Terms Offered: Winter

Equivalent Course(s): HIST 30312, HIST 20312, NEHC 30737

NEHC 20745. A Social History of the Poet in the Arab and Islamic World. 100 Units.

What constitutes a poet? What role does a poet play in society? Can we think of poets as agents of change? If so, in what capacity? This course asks the student to consider the role of the poet in the shaping of Islamic history. The course traces the changing role of the poet and of poetry in Islamic history with a focus on Arabic poetry (in translation) in the early modern and modern Middle East and North Africa. From early modern mystical poets, to modern Arab nationalist poets, to the street poets of the Arab Spring, the course investigates the role and function of the poet as an agent of change and of poetry as a catalyst for the formation of collective identity. To do this the course also explores the variety of mediums through which poetry was transmitted and remembered. We will thus consider the role of orality, aurality, and memory in the creation, preservation, and transmission of poetry in the early modern and modern Arabic-speaking world.

Equivalent Course(s): CMLT 22609, HIST 22609

NEHC 20765. Introduction to the Musical Folklore of Central Asia. 100 Units.

This course explores the musical traditions of the peoples of Central Asia, both in terms of historical development and cultural significance. Topics include the music of the epic tradition, the use of music for healing, instrumental genres, and Central Asian folk and classical traditions. Basic field methods for ethnomusicology are also covered. Extensive use is made of recordings of musical performances and of live performances in the area.

Instructor(s): Kagan Arik Terms Offered: Spring

NEHC 20852. Race and Ethnicity in the Modern Middle East. 100 Units.

This seminar examines the ways that race and ethnicity are identified and discussed in Middle Eastern societies from the late-eighteenth century to the contemporary period. This class will analyze debates surrounding Middle Eastern racial and ethnic constructions in order to consider the extent to which these are the products of European colonialism-as some claim-or other legacies including Ottoman slave trade networks. This course addresses the ways these categories have shaped nationalist discourses, anticolonial struggles, US involvement in the Middle East, and contemporary questions of citizenship. Students will examine the role of diaspora encounters in Europe and the Americas in crafting these categories and ask whether new flows of migrants from sub-Saharan Africa, South Asia, and the Philippines to the Middle East are reconfiguring old constructions or creating new ones. Sources will include literature, music, and film and methodologies are cultural, social, and political history. The class comprises case studies from Morocco, the Nile Valley, Turkey, Israel, and the Gulf States.

Instructor(s): K. Hickerson Terms Offered: Winter

Note(s): A background in Middle Eastern history and/or studies is suggested but not required.

Equivalent Course(s): HIST 25709, CRES 25709

NEHC 20911. Prophets in Jewish and Islamic Traditions. 100 Units.

In this course, we will study the tales of the prophets as found in the Bible, the Qur'an, and Jewish and Islamic interpretive traditions. By examining and enjoying the narratives of individual prophets, we will develop an understanding of prophecy as a broad religious phenomenon. The course offers opportunities for comparative enquiry into two sacred scriptures-the Bible and the Qur'an-and the rich interpretive literature that Jewish and Islamic communities created in order to understand them. All readings will be in English translation. Assignments include three short essays, an oral presentation, and a final exam.

Instructor(s): J. Andruss Terms Offered: Winter

Equivalent Course(s): JWSC 20910, RLST 20910

NEHC 21000. Before the Zodiac: Astronomy and Mathematics as Ancient Culture. 100 Units.

Taking as its central theme the cultural situatedness of the earliest systems of mathematics and astronomy-from their origins in ancient Mesopotamia (Iraq, c. 3400 BCE) until the Common Era (CE)-this course explores topics in mathematical language and script, metrology, geometry and topology, music theory, definitions of time, models of stars and planets, medical astrology, and pan-astronomical hermeneutics in literature and an ancient board game. Pushing against boundaries separating the humanities and social and physical sciences, students discover how histories of science and mathematics could be decisively shaped not merely by sensory experience or axiomatic definition, but also by ideas and imagery derived from the cultures, societies, and aesthetics of their day.

Equivalent Course(s): HIPS 21001, SIGN 26045, NEHC 31000

NEHC 21010. The Age of Innovation - Famous Firsts 5,000 Years Ago. 100 Units.

The first man on moon", "the first Thanksgiving," or "the first kiss"--our society is still fascinated and remembers the exact moment something happened for the first time. The history of the Ancient Near East, especially the ancient civilization of Mesopotamia (modern Iraq), is quite rich of such "firsts in history." From the moment, writing is discovered there is an abundance of textual record, covering the first documents about politics, law, and economics. The first private documents allow us a glimpse into what living and dying were like more than 5,000 years ago. This course will explore what the cultural conditions of those innovations were, how innovations transform societies, and why it matters to study ancient civilizations. By discovering primary sources (in English translation), the fascination of reading those texts for the "first" time will be experienced. Visits at the Oriental Institute Museum will link textual record and object-based inquiry.

NEHC 21215. Abraham's Sacrifice of Isaac in Multiple Perspectives. 100 Units.

The story of Abraham's (near) sacrifice of his son, Isaac, found in Genesis 22:1-19, is one of the most influential and enduring stories in Western literature and art. It is part of the living tradition of Judaism, Christianity, and Islam and its meaning and implications have been repeatedly explored in the communities defined by these religions, and has, in turn, helped to shape the self-perception of those communities. This course will consider the multiple perspectives from which this story has been viewed and the multiple interpretations which this story has generated, starting with its earliest incorporation into the Hebrew Bible, moving to its role in Judaism, Christianity, and Islam, and concluding with its influence on modern works. No knowledge of Hebrew is required.

Instructor(s): Stuart Creason Terms Offered: Spring

NEHC 22010. Jewish Civilization I: Ancient Beginnings to Medieval Period. 100 Units.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts-biblical, Talmudic, philosophical, mystical, historical, documentary, and literary-students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The autumn course will deal with antiquity through the Middle Ages. Its readings will include material from

the Bible and writings from the second temple, Hellenistic, rabbinic, and medieval periods. All sections of this course will share a common core of readings; individual instructors will supplement with other materials. It is recommended, though not required, that students take the three Jewish Civilization courses in sequence. Students who register for the Autumn Quarter course will automatically be pre-registered for the winter segment. In the Spring Quarter students have the option of taking a third unit of Jewish Civilization, a course whose topics will vary (JWSC 1200X).

NEHC 22011. Jewish Civilization II: Early Modern Period to 21st Century. 100 Units.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts-biblical, Talmudic, philosophical, mystical, historical, documentary, and literary-students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The Winter course will begin with the early modern period and continue to the present. It will include discussions of mysticism, the works of Spinoza and Mendelssohn, the nineteenth-century reform, the Holocaust and its reflection in writers such as Primo Levi and Paul Celan, and literary pieces from postwar American Jewish and Israeli authors. All sections of this course will share a common core of readings; individual instructors will supplement with other materials. It is recommended, though not required, that students take the three Jewish Civilization courses in sequence. Students who register for the Autumn Quarter course will automatically be pre-registered for the winter segment. In the Spring Quarter students have the option of taking a third unit of Jewish Civilization, a course whose topics will vary (JWSC 1200X).

Equivalent Course(s): JWSC 12001, RLST 22011

NEHC 23010. Introduction to the History and Civilizations of Central Eurasia I: Pre-1500s. 100 Units.

This course will explore narrative and thematic histories of Central Asia up to the fifteenth century, starting from the development of pastoral nomadism and ending during the rule of the Timurids. We will discuss the everyday practices of the peoples in the area, the formation and influence of political, economic, and religious forces, and the region's wider interactions with other parts of the premodern world. While acknowledging the disparate peoples and cultures of the region, the course nevertheless assumes that Central Asia can be studied as a cohesive unit of historical inquiry. Throughout the course, we will also address the problems of historiography and methodology in the study of premodern Central Asian history and will explore possible solutions to these issues.

Instructor(s): H.S. Sum Cheuk Shing Terms Offered: Winter

NEHC 24110. The Soviet Empire. 100 Units.

What kind of empire was the Soviet Union? Focusing on the central idea of Eurasia, we will explore how discourses of gender, sexuality and ethnicity operated under the multinational empire. How did communism shape the state's regulation of the bodies of its citizens? How did genres from the realist novel to experimental film challenge a cohesive patriarchal, Russophone vision of Soviet Eurasia? We will examine how writers and filmmakers in the Caucasus and Central Asia answered Soviet Orientalist imaginaries, working through an interdisciplinary archive drawing literature and film from the Soviet colonial 'periphery' in the Caucasus and Central Asia as well as writings about the hybrid conception of Eurasia across linguistics, anthropology, and geography.

NEHC 26151. The History of Iraq in the 20th Century. 100 Units.

The class explores the history of Iraq during the years 1917-2015. We will discuss the rise of the Iraqi nation state, Iraqi and Pan-Arab nationalism, and Iraqi authoritarianism. The class will focus on the unique histories of particular group in Iraqi society; religious groups (Shiis, Sunnis, Jews), ethnic groups (especially Kurds), classes (the urban poor, the educated middle classes, the landed and tribal elites), Iraqi women, and Iraqi tribesmen. Other classes will explore the ideologies that became prominent in the Iraqi public sphere, from communism to Islamic radicalism. We will likewise discuss how colonialism and imperialism shaped major trends in Iraqi history. The reading materials for the class are based on a combination of primary and secondary sources: we will read together Iraqi novels, memoirs and poems (in translation), as well as British and American diplomatic documents about Iraq.

Instructor(s): Orit Bashkin Terms Offered: Autumn

Equivalent Course(s): SIGN 26028

NEHC 26500. The Radiant Pearl: Introduction to Syriac Literature and its Historical Contexts. 100 Units.

After Greek and Latin, Syriac literature represents the third largest corpus of writings from the formative centuries of Christianity. This course offers students a comprehensive overview of the dominant genres and history of Syriac-speaking Christians from the early centuries through the modern day. Moving beyond traditional historiography that focuses exclusively on early Christianity within the Roman Empire, this class examines Christian traditions that took root in the Persian and later Islamic Empires as well. Through studying the history and literature of Syriac-speaking Christians, the global reach of early Christianity and its diversity comes to the fore. Syriac-speaking Christians preached the Gospel message from the Arabian Peninsula to early modern China and India. Syriac writers also raised female biblical figures and holy women to prominent roles within their works. Students will broaden their understanding of the development of Christian thought as they gain greater familiarity with understudied voices and visions for Christian living found within Syriac literature. Special attention will be paid to biblical translation, asceticism, poetry, differences between ecclesial communities as well as the changing political fortunes of Syriac-speaking populations. No previous knowledge or study expected.

Instructor(s): Erin Galgay Walsh Terms Offered: Autumn

NEHC 26614. Making the Monsoon: The Ancient Indian Ocean. 100 Units.

The course will explore the human adaptation to a climatic phenomenon and its transformative impacts on the littoral societies of the Indian Ocean, circa 1000 BCE-1000 CE. Monsoon means season, a time and space in which favorable winds made possible the efficient, rapid crossing of thousands of miles of ocean. Its discovery-at different times in different places-resulted in communication and commerce across vast distances at speeds more commonly associated with the industrial than the preindustrial era, as merchants, sailors, religious specialists, and scholars made monsoon crossings. The course will consider the participation of Mediterranean, Middle Eastern, South Asian, and East African actors in the making of monsoon worlds and their relations to the Indian Ocean societies they encountered; the course is based on literary and archaeological sources, with attention to recent comparative historiography on oceanic, climatic, and global histories.

Instructor(s): R. Payne Terms Offered: Spring

NEHC 29023. Returning the Gaze: The West and the Rest. 100 Units.

Aware of being observed. And judged. Inferior... Abject... Angry... Proud... This course provides insight into identity dynamics between the "West," as the center of economic power and self-proclaimed normative humanity, and the "Rest," as the poor, backward, volatile periphery. We investigate the relationship between South East European self-representations and the imagined Western gaze. Inherent in the act of looking at oneself through the eyes of another is the privileging of that

other's standard. We will contemplate the responses to this existential position of identifying symbolically with a normative site outside of oneself-self-consciousness, defiance, arrogance, self-exoticization and consider how these responses have been incorporated in the texture of the national, gender, and social identities in the region. Orhan Pamuk, Ivo Andrić, Nikos Kazantzakis, Aleko Konstantinov, Emir Kusturica, Milcho Manchevski.

Instructor(s): Angelina Ilieva Terms Offered: Winter

Equivalent Course(s): HIST 23609, NEHC 39023, REES 39023, HIST 33609, REES 29023, CMLT 39023, CMLT 29023

NEHC 29714. North Africa in Literature and Film. 100 Units.

This course explores twentieth- and twenty-first century literary and cinematic works from the countries of North Africa. We will focus in particular on the region of Northwestern Africa known as the Maghreb-encompassing Algeria, Morocco, and Tunisia. Situated at the crossroads of Africa, the Middle East, and Europe, the Maghreb has a layered colonial past culminating in France's brutal occupation of the region through the 1960s. Inflected by this colonial history, Maghrebi studies tends to privilege Francophone works while overlooking the region's rich Arabic and indigenous traditions. Understanding the Maghreb as both a geopolitical as well as an imagined space, our course materials reflect the region's diverse cultural histories and practices. We will consider the Maghreb's ethnic, linguistic, and religious pluralism in dialogue with broader questions of cultural imperialism, orientalism, decolonization, and globalization. Fictional and cinematic works will be paired with relevant historical and theoretical readings. In light of the recent 'Arab Spring' catapulted by the Tunisian uprising in January 2011, we will also touch on contemporary social and political happenings in the region.

NEHC 29899. Research Colloquium. 100 Units.

Required of fourth-year students who are majoring in NELC. This is a workshop course designed to survey the fields represented by NELC and to assist students in researching and completing their Research Project. Students must get a Reading and Research form from their College Adviser and complete the form in order to be registered. Signatures are needed from the adviser and Director of Undergraduate Studies. Please indicate on the form that you wish to register for NEHC 29899 Section 01.

Terms Offered: Autumn

NEHC 29995. Research Project. 100 Units.

In consultation with a faculty research adviser and with consent of the Director of Undergraduate Studies, students devote the equivalent of a one-quarter course to the preparation of their Research Project. Students are required to submit the College Reading and Research Course Form. Please indicate that you wish to register for NEHC 29995 Section 01 with the Director of Undergraduate Studies.

Terms Offered: Winter

Prerequisite(s): 4th year NELC majors only. Approval of Director of Undergraduate Studies.

Near Eastern Languages Courses

NELG 20301. Introduction to Comparative Semitics. 100 Units.

This course examines the lexical, phonological, and morphological traits shared by the members of the Semitic language family. We also explore the historical relationships among these languages and the possibility of reconstructing features of the parent speech community.

Instructor(s): R. Hasselbach-Andee Terms Offered: Autumn

Prerequisite(s): Knowledge of two Semitic languages or one Semitic language and Historical Linguistics.

Equivalent Course(s): NELG 30301

NELG 20901. Advanced Seminar: Comparative Semitic Linguistics. 100 Units.

This course is an advanced seminar in comparative Semitics that critically discusses important secondary literature and linguistic methodologies concerning topics in the field, including topics in phonology, morphology, syntax, etc.

Instructor(s): R. Hasselbach-Andee Terms Offered: Winter

Prerequisite(s): Introduction to Comparative Semitics. Undergraduates require consent of instructor.

Equivalent Course(s): NELG 40301

Persian Courses

PERS 10101-10102-10103. Elementary Persian I-II-III.

This sequence concentrates on modern written Persian as well as modern colloquial usage. Toward the end of this sequence, students are able to read, write, and speak Persian at an elementary level. Introducing the Iranian culture is also a goal.

PERS 10101. Elementary Persian I. 100 Units.

This sequence concentrates on modern written Persian as well as modern colloquial usage. Towards the end of the sequence the students will be able to read, write and speak Persian at an elementary level. Introducing the Iranian culture is also a goal. The class meets three hours a week with the instructor and two hours with a native informant who conducts grammatical drills and Persian conversation.

Instructor(s): Staff Terms Offered: Autumn

PERS 10102. Elementary Persian II. 100 Units.

This sequence deepens and expands the students' knowledge of modern Persian at all levels of reading, writing and speaking. Grammar will be taught at a higher level and a wider vocabulary will enable the students to read stories, articles and poetry and be introduced to examples of classical literature towards the end of the sequence. Introducing

the Iranian culture will be continued. Class meets three hours a week with the instructor and (with enough students) two hours with a native informant who conducts grammatical drills and Persian conversation.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): PERS 10101

PERS 10103. Elementary Persian III. 100 Units.

This sequence concentrates on modern written Persian as well as modern colloquial usage. Towards the end of the sequence the students will be able to read, write and speak Persian at an elementary level. Introducing the Iranian culture is also a goal. The class meets three hours a week with the instructor and two hours with a native informant who conducts grammatical drills and Persian conversation

PERS 20101-20102-20103. Intermediate Persian I-II-III.

This sequence deepens and expands students' knowledge of modern Persian at all levels of reading, writing, and speaking. Grammar is taught at a higher level, and a wider vocabulary enables students to read stories, articles, and poetry. Examples of classical literature and the Iranian culture are introduced.

PERS 20101. Intermediate Persian I. 100 Units.

This sequence deepens and expands the students' knowledge of modern Persian at all levels of reading, writing and speaking. Grammar will be taught at a higher level and a wider vocabulary will enable the students to read stories, articles and poetry and be introduced to examples of classical literature towards the end of the sequence. Introducing the Iranian culture will be continued. Class meets three hours a week with the instructor and (with enough students) two hours with a native informant who conducts grammatical drills and Persian conversation.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): PERS 10103 or consent of instructor

PERS 20102. Intermediate Persian II. 100 Units.

This sequence deepens and expands the students' knowledge of modern Persian at all levels of reading, writing and speaking. Grammar will be taught at a higher level and a wider vocabulary will enable the students to read stories, articles and poetry and be introduced to examples of classical literature towards the end of the sequence. Introducing the Iranian culture will be continued. Class meets three hours a week with the instructor and (with enough students) two hours with a native informant who conducts grammatical drills and Persian conversation.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): PERS 20101 or consent of the instructor

PERS 20103. Intermediate Persian III. 100 Units.

This sequence deepens and expands the students' knowledge of modern Persian at all levels of reading, writing and speaking. Grammar will be taught at a higher level and a wider vocabulary will enable the students to read stories, articles and poetry and be introduced to examples of classical literature towards the end of the sequence. Introducing the Iranian culture will be continued. Class meets three hours a week with the instructor and (with enough students) two hours with a native informant who conducts grammatical drills and Persian conversation.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): PERS 20202 or consent of the instructor

Sumerian Courses

SUMR 20310. Sumerian Literary Texts 1. 100 Units.

This advanced Sumerian course covers a selection of Sumerian literary texts from the Old Babylonian period. The prerequisite for this class is the one-year introductory sequence, Sumerian 10101, 10102, and 10103.

Instructor(s): C. Woods Terms Offered: Spring

Prerequisite(s): 1 Year of Sumerian

SUMR 20401. A School in Nippur. 100 Units.

Using the original tablets excavated by the Oriental Institute in Nippur, we will read different texts found in House F, an Old Babylonian School. The class will include introductions to typical genres like lexical texts, model contracts, and literary school texts.

Instructor(s): Susanne Paulus Terms Offered: Winter

Prerequisite(s): 1 year of Sumerian

Equivalent Course(s): SUMR 30401

Turkish Courses

TURK 10101-10102-10103. Elementary Turkish I-II-III.

This sequence features proficiency-based instruction emphasizing grammar in modern Turkish. This sequence consists of reading and listening comprehension, as well as grammar exercises and basic writing in Turkish. Modern stories and contemporary articles are read at the end of the courses.

TURK 10101. Elementary Turkish I. 100 Units.

This sequence features proficiency-based instruction emphasizing grammar in modern Turkish. This sequence consists of reading and listening comprehension, as well as grammar exercises and basic writing in Turkish. Modern stories and contemporary articles are read at the end of the courses.

Instructor(s): K. Arik Terms Offered: Autumn

Note(s): The class meets for five hours a week

TURK 10102. Elementary Turkish II. 100 Units.

Elementary Turkish (First Year)

Instructor(s): K. Arik Terms Offered: Winter

Prerequisite(s): TURK 10101

Note(s): This class meets for five hours a week

TURK 10103. Elementary Turkish III. 100 Units.

Elementary Turkish (First Year)

Instructor(s): K. Arik Terms Offered: Spring

Prerequisite(s): TURK 10102

Note(s): This class meets for five hours a week

TURK 10501. Intro to Turkic Languages I. 100 Units.

The first quarter of a two-section course in which Elementary Kazakh and Elementary Uzbek will be offered as one class, with the option for students to study one or the other, or both simultaneously.

Instructor(s): Kagan Arik Terms Offered: Autumn

Equivalent Course(s): UZBK 10501, KAZK 10501

TURK 20101-20102-20103. Intermediate Turkish I-II-III.

This sequence features proficiency-based instruction emphasizing speaking and writing skills as well as reading and listening comprehension at the intermediate to advanced levels in modern Turkish. Modern short stories, novel excerpts, academic and journalistic articles form the basis for an introduction to modern Turkish literature. Cultural units consisting of films and web-based materials are also used extensively in this course, which is designed to bring the intermediate speaker to an advanced level of proficiency.

TURK 20101. Intermediate Turkish I. 100 Units.

This sequence features proficiency-based instruction emphasizing speaking and writing skills as well as reading and listening comprehension at the intermediate to advanced levels in modern Turkish. Modern short stories, novel excerpts, academic and journalistic articles form the basis for an introduction to modern Turkish literature. Cultural units consisting of films and web-based materials are also used extensively in this course, which is designed to bring the intermediate speaker to an advanced level of proficiency. Prerequisite(s): TURK 10103, or equivalent with intermediate level proficiency test.

Instructor(s): Helga Anetshofer Terms Offered: Autumn

Prerequisite(s): TURK 10103, or equivalent with intermediate level proficiency test.

TURK 20102. Intermediate Turkish II. 100 Units.

This sequence features proficiency-based instruction emphasizing speaking and writing skills as well as reading and listening comprehension at the intermediate to advanced levels in modern Turkish. Modern short stories, novel excerpts, academic and journalistic articles form the basis for an introduction to modern Turkish literature. Cultural units consisting of films and web-based materials are also used extensively in this course, which is designed to bring the intermediate speaker to an advanced level of proficiency.

Instructor(s): Helga Anetshofer Terms Offered: Winter

Prerequisite(s): TURK 20101

TURK 20103. Intermediate Turkish III. 100 Units.

This sequence features proficiency-based instruction emphasizing speaking and writing skills as well as reading and listening comprehension at the intermediate to advanced levels in modern Turkish. Modern short stories, novel excerpts, academic and journalistic articles form the basis for an introduction to modern Turkish literature. Cultural units consisting of films and web-based materials are also used extensively in this course, which is designed to bring the intermediate speaker to an advanced level of proficiency.

Instructor(s): Helga Anetshofer Terms Offered: Spring

Prerequisite(s): TURK 20102

TURK 20123. Summer Intensive Intermediate Turkish. 300 Units.

Summer Intensive Intermediate Turkish enables students to develop strong intermediate speaking, listening, reading and writing skills and further solidify their foundation and proficiency in Turkish. Students study Turkish as it is used in authentic media, literature, and film, and gain familiarity with Turkish culture and civilization. The course will also address the needs of those preparing to study Ottoman. The first half of the course emphasizes completing skills acquired in Beginning Turkish and improving competency, while the second half further deepens students' proficiency, using an introductory sample of authentic textual and audio-visual materials, and excerpts from Turkish literature and texts, ranging from late Ottoman and early Republican period to the present time. Students will have 25 contact hours per week in this course, including synchronous and asynchronous online class time with the instructor, and time spent similarly with the native language assistant. Several hours will be allocated each week to cultural activities such as viewing films, clips, and presentations, and virtual conversation tables. Intensive Intermediate Turkish is the equivalent of the 20100-20200-20300 sequence offered during the regular academic year at the University of Chicago.

Instructor(s): Staff Terms Offered: Summer

Prerequisite(s): Successful completion of TURK 10300 or equivalent placement.

TURK 20350. Readings in Ottoman Court Records. 100 Units.

This course introduces the students to the scholarship on and the original texts of Ottoman court records. Thousands of registers with millions of court cases covering the period from the sixteenth century to modern times have survived to date. These documents are celebrated by modern historians as exceptional snapshots into the daily lives of common people. Monday sessions are reserved for the discussion of secondary literature; we will read from the original court records on Fridays.

Instructor(s): Hakan Karateke Terms Offered: Winter

Prerequisite(s): Some exposure to Ottoman texts

Equivalent Course(s): TURK 30350

TURK 29701. Independent Study: Old Turkic. 100 Units.

Independent study in Old Turkic.

Terms Offered: Autumn Spring Winter

Uzbek Courses**UZBK 10501. Intro to Turkic Languages I. 100 Units.**

The first quarter of a two-section course in which Elementary Kazakh and Elementary Uzbek will be offered as one class, with the option for students to study one or the other, or both simultaneously.

Instructor(s): Kagan Arik Terms Offered: Autumn

Equivalent Course(s): KAZK 10501, TURK 10501

UZBK 29700. Independent Study: Uzbek. 100 Units.

Independent Study: Uzbek

Instructor(s): Kagan Arik Terms Offered: Autumn Spring Winter

Neuroscience

Department Website: <http://neuroscience.uchicago.edu/undergraduate> (<http://neuroscience.uchicago.edu/undergraduate/>)

Program of Study

Neuroscience is concerned with the function of nervous systems. The sheer scope of neuroscience necessitates numerous scientific approaches to achieve understanding of sensation, perception, cognition, and behavior. Consequently, students in the major are provided with access to a wealth of scientific variety, including biology, psychology, physics, chemistry, computer science, engineering, mathematics, statistics, and medicine. Neuroscience faculty at the University of Chicago have expertise in all of these areas and are distributed across the Biological Sciences, Social Sciences, and Physical Sciences Divisions.

The bachelor of arts (BA), bachelor of science (BS), and bachelor of science with honors degrees in neuroscience provide a broad foundation in understanding neural function from the perspective of molecules, cells, circuits, systems, organisms, and species. The BA degree provides thorough study in the field of neuroscience while allowing flexibility in elective choice. The BS and BS honors degrees offer a more intensive program of study that includes individual research. Students who wish to incorporate neuroscientific literacy into their degree but have primary interest in other fields can choose to obtain a minor in neuroscience.

Summary of Requirements for the Major in Neuroscience

The major curriculum includes nine required neuroscience courses, which provide a comprehensive overview of the field. Students must also take neuroscience electives, which may include up to two neuroscience-related electives. Neuroscience electives increase a student's knowledge of neural systems, while neuroscience-related electives are included to provide students with tools or context to enhance understanding of neural systems. Elective courses can be selected either to achieve breadth, i.e., broad exposure to many topics, or for depth in a particular area of neuroscience. Students who wish to major in neuroscience are strongly encouraged to declare the major in their second year.

Program Requirements: BA - Nine required neuroscience courses beyond the general education requirement (which should begin in the first year), plus a minimum of seven electives are required for a BA.

Program Requirements: BS - Nine required neuroscience courses beyond the general education requirement (which should begin in the first year), plus a minimum of 10 electives. Enrollment in faculty-supervised research for elective credit culminating in a poster presentation and thesis submission are also required for a BS.

Program Requirements for BS with Honors - The honors program expands on the program requirements for the BS by requiring a minimum GPA plus a summer of full-time research and three quarters of faculty-supervised research for elective credit culminating in a public talk and thesis submission. Interested majors must apply for admittance into the honors program in their third year.

Grading

All courses used to satisfy prerequisites and requirements must be taken for quality grades. Students must pass each course in the Fundamental Neuroscience Sequence (NSCI 20100-20140) with a C or higher. Students are also required to pass general education courses with an average GPA of 2.0 or higher to continue in the program.

General Education Requirements for the Major

To satisfy the general education requirements students must take 200 units of Biology, 200 units of Math and 200 units of Chemistry from the selected list of General Education courses for the Neuroscience major (see General Education Table).

Bachelor of Arts Degree in Neuroscience

The basic degree in neuroscience is the BA. To qualify for a BA, students must minimally satisfy the general education requirements and complete the neuroscience required courses (900 units), 500 units of neuroscience elective courses, and 200 units of neuroscience or neuroscience-related elective courses as listed in the table below.

MAJOR: BACHELOR OF ARTS REQUIRED COURSES

NSCI 20101	Foundations of Neuroscience	100
NSCI 20111	Cellular Neurophysiology	100
NSCI 20130	Systems Neuroscience	100
NSCI 20140	Sensation and Perception	100
PHYS 12100-12200	General Physics I-II (or higher) *	200
NSCI 20100	Neuroscience Laboratory	100
STAT 22000	Statistical Methods and Applications *	100
CHEM 11300	Comprehensive General Chemistry III *	100
or CHEM 12300	Honors General Chemistry III	
At least five Neuroscience electives **		500

No more than two Neuroscience-related electives [^]	200
Total Units	1600

- * Credit may be granted by examination.
- [^] May also include additional neuroscience electives
- ** While students may register for multiple quarters of NSCI 29700 Reading and Research in Neuroscience, only one may be counted toward major requirements.

Independent Research

By their third year, students majoring in neuroscience are strongly encouraged to participate in research with a faculty member. This can take many forms, including internships, fellowships, and research for elective credit. See also BS and Honors in Neuroscience. For more information on research opportunities, visit (<https://neuroscience.uchicago.edu/research-opportunities/>) the undergraduate major website. (<https://neuroscience.uchicago.edu/research-opportunities/>)

Bachelor of Science Degree in Neuroscience

Students can earn a bachelor of science in neuroscience (<https://neuroscience.uchicago.edu/bachelor-science/>) by completing the neuroscience required courses (900 units), 200 units of neuroscience or related elective courses, and 800 units of neuroscience elective courses, which must include one to three quarters of faculty-supervised NSCI 29100 Neuroscience Thesis Research. At the completion of their thesis research, students will present a poster and write a thesis. BS Students will be required to attend a minimum of two informational meetings during their fourth year before the submission of the thesis and poster. Note that Neuroscience Thesis Research (NSCI 29100) must be completed before the final quarter of the student's graduating year to allow sufficient time to prepare the written document and presentation. The additional neuroscience electives and thesis work require approval by the office of the director of undergraduate studies and the thesis adviser.

MAJOR: BACHELOR OF SCIENCE REQUIRED COURSES

NSCI 20101	Foundations of Neuroscience	100
NSCI 20111	Cellular Neurophysiology	100
NSCI 20130	Systems Neuroscience	100
NSCI 20140	Sensation and Perception	100
PHYS 12100-12200	General Physics I-II (or higher) [*]	200
NSCI 20100	Neuroscience Laboratory	100
STAT 22000	Statistical Methods and Applications [*]	100
CHEM 11300	Comprehensive General Chemistry III [*]	100
or CHEM 12300	Honors General Chemistry III	
At least eight Neuroscience electives ^{**}		800
No more than two Neuroscience-related electives [^]		200
Total Units		1900

- * Credit may be granted by examination.
- ** Must include one to three courses of NSCI 29100, NSCI 29101, NSCI 29102 Neuroscience Thesis Research or NSCI 29200, NSCI 29201, NSCI 29202 Neuroscience Honors Thesis Research
- [^] May also include additional neuroscience electives

Honors in Neuroscience

The BS with honors is an extension of the BS and is targeted toward students with a particularly strong interest in research. To obtain honors in neuroscience, students must have a minimum GPA of 3.5 in the major and a cumulative GPA of 3.25 to apply for the honors program. This level of achievement must be maintained throughout the academic year corresponding to the thesis submission. Applications for the honors program will be reviewed by a faculty examining committee. A faculty sponsor (<https://neuroscience.uchicago.edu/faculty/>) and approved topic must be identified before applying.

The honors program begins with 10 weeks of full-time research during the Summer Quarter between the student's third and fourth years. This continues with research as a graded elective research course (NSCI 29200, NSCI 29201, and NSCI 29202 Neuroscience Honors Thesis Research) during Autumn, Winter, and Spring Quarters of the fourth year, which culminates in a public talk and a written thesis. A stipend is provided during the summer research component of the honors program. As part of the research course work, honors students participate in regular group meetings in which they share their research with each other and supervising faculty, and receive guidance on formulating testable hypotheses, experimental design, report writing, and oral presentations. They also receive training in the responsible conduct of research. Experimental research may not be credited toward honors in more than one major.

Minor in Neuroscience

The minor in neuroscience is intended to provide neuroscientific literacy for students whose primary interest lies in other fields. The minor requires that students meet the general education requirements in the biological and physical sciences plus MATH 13100-13200 Elementary Functions and Calculus I-II. Students are strongly encouraged to take STAT 22000 Statistical Methods and Applications (or higher) and NSCI 20140 Sensation and Perception for two of the four electives, if these courses have not already been taken to fulfill major requirements. No course in the minor can count toward the student's major(s) or other minors, nor can it count toward general education requirements.

REQUIRED COURSES FOR THE MINOR IN NEUROSCIENCE

NSCI 20101	Foundations of Neuroscience	100
NSCI 20111	Cellular Neurophysiology	100
NSCI 20130	Systems Neuroscience	100
Four Neuroscience electives*		400
Total Units		700

* Neuroscience-related electives do not count.

Minor in Computational Neuroscience

This minor is intended to provide literacy in computational neuroscience and is for students who are majoring in biological sciences and are interested in mathematical approaches, or for students who are majoring in the physical sciences and are interested in neuroscience. Students electing this minor must have completed, or placed out of, the equivalent of a year of collegiate-level calculus and must have completed the general education requirement for the neuroscience major. No course in the minor can count toward the student's major(s) or other minors, nor can it count toward general education requirements.

Summary of Requirements for the Minor in Computational Neuroscience

BIOS 26210-26211	Mathematical Methods for Biological Sciences I-II	200
NSCI 20101	Foundations of Neuroscience	100
NSCI 23700	Methods in Computational Neuroscience	100
NSCI 24000	Modeling and Signal Analysis for Neuroscientists	100
Total Units		500

Double Majors

Students interested in double majoring in neuroscience and (1) biological sciences or (2) psychology must meet with the NSCI advisors to discuss restrictions on double counting courses. Please email neuromajor@uchicago.edu to receive information on restrictions for double counting courses.

Sample Program

Neuroscience is a unique and broad field that allows students to plan their undergraduate career in a variety of ways. Below is a [sample](#) plan for when to take NSCI required courses:

Year 1: Biological Sciences, Chemistry and Mathematics General Education Courses

Year 2: NSCI 20101, NSCI 20111, NSCI 20130, PHYS 12100-12200 General Physics I-II

Year 3: NSCI 20100 and/or NSCI 20140, Electives, Research Opportunities, STAT 22000

Year 4: NSCI 20100 and/or NSCI 20140, Electives, Research Opportunities, STAT 22000

Electives

NEUROSCIENCE ELECTIVES (no fewer than five)

NSCI 20500	Neuroanatomy	100
NSCI 20510	Evolution and the Nervous System	100
NSCI 21000	Social Neuroscience	100
NSCI 21015	Biological Psychology	100
NSCI 21100	Photons to Consciousness: Cellular and Integrative Brain Functions	100
NSCI 21300	Animal Models in the Study of Cognition	100
NSCI 21400	Biological Clocks and Behavior	100
NSCI 21600	Attention and Working Memory in the Mind and Brain	100
NSCI 21800	Perspectives in Drug Abuse	100
NSCI 21900	Neuropharmacology	100
NSCI 22010	Neuroscience of Consciousness	100
NSCI 22015	Cognitive Psychology	100

NSCI 22110	Molecular and Translational Neuroscience	100
NSCI 22300	Molecular Principles of Nervous System Development	100
NSCI 22355	Observing Proteins in Action: How to Design and Build Your Own Instruments	100
NSCI 22400	Neuroscience of Seeing	100
NSCI 22450	Conquest of Pain	100
NSCI 22500	Neuroscience of Communication	100
NSCI 22535	The Psychology and Neurobiology of Stress	100
NSCI 23400	Synaptic Physiology	100
NSCI 23500	Survey of Systems Neuroscience	100
NSCI 23600	Computational Approaches to Cognitive Neuroscience	100
NSCI 23700	Methods in Computational Neuroscience	100
NSCI 23810	Neurons and Glia: A cellular and molecular perspective	100
NSCI 24000	Modeling and Signal Analysis for Neuroscientists	100
NSCI 29100	Neuroscience Thesis Research	100
NSCI 29101	Neuroscience Thesis Research	100
NSCI 29102	Neuroscience Thesis Research	100
NSCI 29200	Neuroscience Honors Thesis Research	100
NSCI 29201	Neuroscience Honors Thesis Research	100
NSCI 29202	Neuroscience Honors Thesis Research	100
NSCI 29700	Reading and Research in Neuroscience	100
CMSC 25025	Machine Learning and Large-Scale Data Analysis *	100
CMSC 25400	Machine Learning *	100

* Non-NSCI courses listed here require prior approval from the department. Inquiries and petitions may be submitted to neuromajor@uchicago.edu

CHEM 12100 & CHEM 12200	Honors General Chemistry I and Honors General Chemistry II	
Total Units		600

[†] The neuroscience major general education requirement in the biological sciences can be fulfilled by courses in the Biological Sciences Fundamentals Sequences (BIOS 20186 to 20190) without the Biological Sciences prerequisites (BIOS 20153-20151/20152) unless a student pursues a double major in Biological Sciences. However, all students in the sequence will be expected to possess the mathematical modeling competencies and basic coding in R covered in BIOS 20151/BIOS 20152 and BIOS 20153.

^{*} Credit may be granted by examination.

[#] BIOS 20171 must be taken concurrently with BIOS 20172.

^{**} Students with a score of 4 or 5 on the Advanced Placement Biology exam may use their AP credit to meet the general education requirement in the biological sciences if the first three quarters of the Advanced Biology sequence are completed.

Neuroscience Courses

NSCI 20100. Neuroscience Laboratory. 100 Units.

This course has three components in series, representing (1) molecular neuroscience, (2) cellular electrophysiology, and (3) computation and psychophysics. The course meets one afternoon each week for four hours of laboratory time, including a didactic introduction. Students will be graded on their laboratory reports.

Instructor(s): J. Maunsell; E. Heckscher; M. McNulty Terms Offered: Winter

Prerequisite(s): NSCI 20111. Must be a Neuroscience Major

NSCI 20101. Foundations of Neuroscience. 100 Units.

This course is an introduction to the broad field of neuroscience. This is a lecture-based course that aims to introduce undergraduate students to concepts and principles that explain how the nervous system is built and how it functions.

Examples of thematic areas covered in lectures include: (a) cellular anatomy of the nervous system, (b) development and evolution of the nervous system, (c) sensory systems, (d) motor systems, (e) cognition and behavior.

Instructor(s): D. Freedman, P. Kratsios Terms Offered: Autumn

Equivalent Course(s): BIOS 24101, PSYC 24450

NSCI 20111. Cellular Neurophysiology. 100 Units.

This course describes the cellular and subcellular properties of neurons, including passive and active electrophysiological properties, and their synaptic interactions. Readings are assigned from a general neuroscience textbook.

Instructor(s): M. Sheffield, W. Wei Terms Offered: Winter

Prerequisite(s): At least one quarter of Biological Sciences instruction, AND MATH 13100, or MATH 15100, or MATH 16100. Or consent of instructor

Equivalent Course(s): BIOS 24111

NSCI 20130. Systems Neuroscience. 100 Units.

This course covers vertebrate and invertebrate systems neuroscience with a focus on the anatomy, physiology, and development of sensory and motor control systems. The neural bases of form and motion perception, locomotion, memory, and other forms of neural plasticity are examined in detail. We also discuss clinical aspects of neurological disorders.

Instructor(s): J. MacLean Terms Offered: Spring

Prerequisite(s): NSCI 20101, NSCI 20111 or consent of instructors

Equivalent Course(s): BIOS 24130, PSYC 24010

NSCI 20140. Sensation and Perception. 100 Units.

What we see and hear depends on energy that enters the eyes and ears, but what we actually experience-perception-follows from human neural responses. This course focuses on visual and auditory phenomena, including basic percepts (for example, acuity, brightness, color, loudness, pitch) and also more complex percepts such as movement and object recognition. Biological underpinnings of perception are an integral part of the course.

Instructor(s): K. Ledoux Terms Offered: Winter

Equivalent Course(s): PSYC 20700

NSCI 20500. Neuroanatomy. 100 Units.

This course is part of the Study Abroad Neuroscience program in Paris, France. In this course, we will use an understanding of development in order to understand the neuroanatomy of the adult vertebrate nervous system. This understanding will be solidified by dissections of mammalian, fish and bird brains as well as a trip to see myriad brains at the Muséum national d'histoire naturelle. In the second half of the course, neuroanatomical adaptations specific to particular animals will be examined in the context of critical environmental and ecological factors. Examples include postural control in sloths, vision in marine animals and raptors, and the control of muscles of facial expression across mammalian species.

Instructor(s): P. Mason Terms Offered: TBD. Paris Study Abroad Neuroscience Program

Prerequisite(s): Enrollment into the Paris Study Abroad Program

NSCI 20510. Evolution and the Nervous System. 100 Units.

Evolutionary neuroscience has traditionally focused on the neural bases of animal behavior (neuroethology) and employed the methods of comparative anatomy, cellular neurophysiology and behavioral neuropsychology. This course will approach neuroethology from a modern evolutionary perspective, one that integrates findings from genomics, molecular developmental biology and paleontology with insights from neuroethology. Our exploration will include the controversies over the evolutionary origin of neurons and centralized brains, the independent solutions across taxa to processing ecologically important sensory information, and recent insights into the evolution of the neocortex.

Instructor(s): C. Ragsdale Terms Offered: Spring

NSCI 21000. Social Neuroscience. 100 Units.

Social species, by definition, create emergent organizations beyond the individual - structures ranging from dyads and families to groups and cultures. Social neuroscience is the interdisciplinary field devoted to the study of neural, hormonal, cellular, and genetic mechanisms, and to the study of the associations and influences between social and biological levels of organization. The course provides a valuable interdisciplinary framework for students in psychology, neuroscience, behavioral economics, and comparative human development. Many aspects of social cognition will be examined, including but not limited to attachment, attraction, altruism, contagion, cooperation, competition, dominance, empathy, isolation, morality, and social decision-making.

Instructor(s): J. Decety Terms Offered: Autumn

Equivalent Course(s): PSYC 22350, ECON 21830, HLTH 22350, BIOS 24137, CHDV 22350

NSCI 21015. Biological Psychology. 100 Units.

What are the relations between mind and brain? How do brains regulate mental, behavioral, and hormonal processes; and how do these influence brain organization and activity? This course introduces the anatomy, physiology, and chemistry of the brain; their changes in response to the experiential and sociocultural environment; and their relation to perception, attention, behavioral action, motivation, and emotion.

Instructor(s): S. London, L. Kay Terms Offered: Winter

Prerequisite(s): Some background in biology and psychology.

Note(s): This course does not meet requirements for the Biological Sciences Major.

Equivalent Course(s): PSYC 20300, CHDV 20300, BIOS 29300

NSCI 21100. Photons to Consciousness: Cellular and Integrative Brain Functions. 100 Units.

This course uses the visual system as a model to explore how the brain works. We begin by considering the physical properties of light. We then proceed to consider the mechanism of sensory transduction, cellular mechanisms of neuron to neuron communication, the operation of small neural networks, strategies of signal detection in neuron networks, and the hierarchical organization of cortical function. We conclude with visually guided behavior and consciousness.

Instructor(s): E. Schwartz Terms Offered: Winter

Prerequisite(s): NSCI 20111

Equivalent Course(s): BIOS 24136

NSCI 21300. Animal Models in the Study of Cognition. 100 Units.

This course will be a combination of lecture and seminar. In the first half of the course we will read and discuss seminal literature in the study of cognitive questions using animal models (primarily rodents). In the second half of the course we will learn about study design and design two different types of studies in smaller groups. Evaluation will be through short weekly papers, class discussion and a final paper.

Instructor(s): L. Kay Terms Offered: Spring

Prerequisite(s): Completion of PSYC 20300 Biological Psychology or equivalent background in neuroscience and/or biological psychology.

Equivalent Course(s): PSYC 28910

NSCI 21400. Biological Clocks and Behavior. 100 Units.

This course will address physiological and molecular biological aspects of circadian and seasonal rhythms in biology and behavior. The course will primarily emphasize biological and molecular mechanisms of CNS function, and will be taught at a molecular level of analysis from the beginning of the quarter. Those students without a strong biology background are unlikely to resonate with the course material.

Instructor(s): B. Prendergast Terms Offered: Spring

Prerequisite(s): A quality grade in PSYC 20300 Introduction to Biological Psychology. Additional biology courses are desirable. Completion of Core biology will not suffice as a prerequisite.

Equivalent Course(s): BIOS 24248, PSYC 21750, HLTH 21750

NSCI 21600. Attention and Working Memory in the Mind and Brain. 100 Units.

This course will provide a broad overview of current work in psychology and neuroscience related to attention and working memory. We will discuss evidence for sharp capacity limits in an individual's ability to actively monitor and maintain information in an "online" mental state. Readings will be primarily based on original source articles from peer-reviewed journals, with a focus on behavioral and neural approaches for measuring and understanding these basic cognitive processes.

Instructor(s): E. Awh, E. Vogel Terms Offered: Winter

Prerequisite(s): PQ: NSCI 20110 (Fundamental Neuroscience) is required for Neuroscience majors only.

Equivalent Course(s): PSYC 23820

NSCI 21800. Perspectives in Drug Abuse. 100 Units.

It is a broad overview course about drug abuse, that is appropriate for graduate students as well as undergraduates. It includes lectures on epidemiology, genetics, neurobiology, experimental methods, policy and treatment, as well as lectures on several specific drug classes. Lectures are by Dr. de Wit and by other invited faculty members, and students are required to present and discuss recent published papers during classes.

Equivalent Course(s): NURB 32900, BIOS 24135

NSCI 21900. Neuropharmacology. 100 Units.

This is a one quarter course that will explore neuronal pharmacology. Both the autonomic and central nervous system will be examined. The course has a clinical orientation. The course starts with an overview of the nervous system. In this section, we will explore the cellular aspects of neurons and their basic membrane and electrophysiological properties as well cellular and molecular aspects of synaptic transmission. The majority of the course will explore different neurotransmitter systems and drugs that interact with these systems.

Instructor(s): A. Fox Terms Offered: Spring

Prerequisite(s): NSCI 20101, NSCI 20111

Equivalent Course(s): BIOS 24140

NSCI 22010. Neuroscience of Consciousness. 100 Units.

Consciousness has been considered one of great mysteries in human existence. In this course, we will begin by trying to define the term and consider the so-called "hard" and "easy" problems of consciousness. A brief history of ancient civilizations' views on mental experience will be discussed. We will then go over basic neuroscientific concepts and methods that are being used to study the neural correlates of consciousness. We will explore different states of consciousness and disruptions of consciousness in human patients. We will touch on the related problems of intentionality and free will. Finally, we will discuss prevailing scientific theories of consciousness.

Instructor(s): Hatsopoulos, Nicholas Terms Offered: Autumn

Prerequisite(s): NSCI 20101

NSCI 22015. Cognitive Psychology. 100 Units.

Viewing the brain globally as an information processing or computational system has revolutionized the study and understanding of intelligence. This course introduces the theory, methods, and empirical results that underlie this approach to psychology. Topics include categorization, attention, memory, knowledge, language, and thought.

Instructor(s): M. Rosenberg Terms Offered: Spring

Equivalent Course(s): PSYC 20400, EDSO 20400

NSCI 22110. Molecular and Translational Neuroscience. 100 Units.

This lecture/seminar course explores the application of modern cellular and molecular techniques to clarify basic mechanisms that underlie neural development, synaptic transmission, protein trafficking, and circuit function and the dysfunction of these fundamental processes that results in neurodevelopmental disorders and age-associated neurological diseases.

Instructor(s): S. Sisodia Terms Offered: Spring

Prerequisite(s): Neuroscience Fundamental Series (NSCI 20110-20130)

Equivalent Course(s): BIOS 24143

NSCI 22300. Molecular Principles of Nervous System Development. 100 Units.

This elective course provides an overview of the fundamental questions in developmental neurobiology. It is based on primary research papers and highlights key discoveries in vertebrate and invertebrate animals that advanced our understanding of nervous system development. Topics covered, among others, will include neural stem cells, neuronal specification and terminal differentiation, and circuit assembly. Dogmas and current debates in developmental neurobiology

will be discussed, aiming to promote critical thinking about the field. This advanced-level course is open to upper level undergraduate and graduate students and combines lectures, student presentations, and discussion sections. Neuroscience major undergrads need to have completed the Fundamentals of Neuroscience sequence.

Instructor(s): E. Grove, P. Kratsios Terms Offered: Spring

Prerequisite(s): For undergrads: NSCI 20110, 20120, 20130 and a basic understanding of Genetics, or 'BIOS 20187' (Fundamentals of Genetics) is recommended, but not required.

Equivalent Course(s): DVBI 32300, NURB 32300, CPNS 32300

NSCI 22355. Observing Proteins in Action: How to Design and Build Your Own Instruments. 100 Units.

New insights into cell function are now possible using technologies that resolve single molecules. However, as devices become more complicated, we are often faced with three questions: What is it that our instruments actually measure; how can we change the instrument to see a new behavior; and, how do we analyze the data to get the greatest insight? We will learn how to answer these questions by designing, building, and using our own electrical and optical instruments, making measurements, and then analyzing the results. Membrane proteins play an essential role in the behavior of all cells. We will study membrane protein channels in synthetic membranes, host cells, and giant axons from squid collected in the waters surrounding the MBL. The movement of electrical charge produced by conformational changes will be correlated with both the current passing thru single channels and structural information obtained from light and electron microscopy. The course will proceed from simple measurements to student-designed projects.

Instructor(s): E. Schwartz, F. Bezanilla, E. Perozo Terms Offered: Autumn, L. September 2018.

Note(s): This course will be given at Marine Biological Laboratory, Woods Hole, Massachusetts

Equivalent Course(s): BIOS 27721

NSCI 22400. Neuroscience of Seeing. 100 Units.

This course focuses on the neural basis of vision, in the context of the following two questions: 1. How does the brain transform visual stimuli into neuronal responses? 2. How does the brain use visual information to guide behavior? The course covers signal transformation throughout the visual pathway, from retina to thalamus to cortex, and includes biophysical, anatomical, and computational studies of the visual system, psychophysics, and quantitative models of visual processing. This course is designed as an advanced neuroscience course for undergraduate and graduate students. The students are expected to have a general background in neurophysiology and neuroanatomy.

Instructor(s): W. Wei, J. Maunsell, M. Sherman, S. Shevell Terms Offered: Autumn

Prerequisite(s): NSCI 20111 or BIOS 24110 or consent of instructor

Equivalent Course(s): CPNS 34133, PSYC 34133, PSYC 24133, BIOS 24133, NURB 34133

NSCI 22450. Conquest of Pain. 100 Units.

This course examines the biology of pain and the mechanisms by which anesthetics alter the perception of pain. The approach is to examine the anatomy of pain pathways both centrally and peripherally, and to define electrophysiological, biophysical, and biochemical explanations underlying the action of general and local anesthetics. We discuss the role of opiates and enkephalins. Central theories of anesthesia, including the relevance of sleep proteins, are also examined.

Instructor(s): K. Ruskin Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, CHEM 2200-22100-22200 or BIOS 20200 and prior course in neurobiology or physiology is recommended.

Equivalent Course(s): BIOS 24217

NSCI 22535. The Psychology and Neurobiology of Stress. 100 Units.

This course explores the topic of stress and its influence on behavior and neurobiology. Specifically, the course will discuss how factors such as age, gender, and social context interact to influence how we respond to stressors both physiologically and behaviorally. The course will also explore how stress influences mental and physical health.

Instructor(s): G. Norman Terms Offered: Autumn

Note(s): This course does not meet the requirements for the Biological Sciences Major.

Equivalent Course(s): PSYC 25750, BIOS 29271

NSCI 23400. Synaptic Physiology. 100 Units.

This course covers the basic principles of synaptic transmission and plasticity using a combination of lecture and discussion of primary literature. Lecture topics cover membrane electrical phenomena that lead to release of neurotransmitter presynaptically, as well as the physiological consequences of postsynaptic receptor activation. Paper discussions, which make up ~ 2/3 of the course, are centered on two major topics: 1) The molecular machinery controlling synaptic vesicle exocytosis and recycling, and 2) Synaptic plasticity covering LTP, LTD, Metaplasticity, Spike-timing dependent plasticity and Homeostatic plasticity. There is significant emphasis on the connections between the various forms of synaptic modification and behavior.

Instructor(s): D. McGehee Terms Offered: Winter

Prerequisite(s): Upper undergrads by consent of instructor

Equivalent Course(s): NURB 32400

NSCI 23500. Survey of Systems Neuroscience. 100 Units.

This lab-centered course teaches students the fundamental principles of vertebrate nervous system organization. Students learn the major structures and the basic circuitry of the brain, spinal cord and peripheral nervous system. Somatic, visual, auditory, vestibular and olfactory sensory systems are presented in particular depth. A highlight of this course is that students become practiced at recognizing the nuclear organization and cellular architecture of many regions of brain in rodents, cats and primates.

Instructor(s): S. Bensmaia Terms Offered: Autumn

Prerequisite(s): NSCI 20130. For Biological Sciences majors: Three quarters of a Biological Sciences fundamentals sequence

Equivalent Course(s): ORGB 32500, CPNS 30116, NURB 31600, BIOS 24208

NSCI 23600. Computational Approaches to Cognitive Neuroscience. 100 Units.

This course is concerned with the relationship of the nervous system to higher order behaviors (e.g., perception, object recognition, action, attention, learning, memory, and decision making). Psychophysical, functional imaging, and electrophysiological methods are introduced. Mathematical and statistical methods (e.g. neural networks and algorithms for studying neural encoding in individual neurons and decoding in populations of neurons) are discussed. Weekly lab sections allow students to program cognitive neuroscientific experiments and simulations.

Instructor(s): N. Hatsopoulos Terms Offered: Winter

Prerequisite(s): For Neuroscience Majors: NSCI 20110, NSCI 20130, BIOS 26210, and knowledge using Matlab, or consent of instructor.

Equivalent Course(s): CPNS 33200, PSYC 34410, BIOS 24232, ORGB 34650

NSCI 23700. Methods in Computational Neuroscience. 100 Units.

Topics include (but are not limited to): relating neural data to behavior, Signal Detection theory, models of vision and artificial neural networks, Information Theory, Generalized Linear Models, dimensionality reduction, classification, and clustering.

Instructor(s): S. Bensmaia, D. Freedman, M. Kaufman Terms Offered: Winter, L.

Prerequisite(s): For Neuroscience Majors: NSCI 20130, BIOS 26210 and BIOS 26211 which must be taken concurrently, or consent of instructor.

Equivalent Course(s): PSYC 24231, CPNS 34231, BIOS 24231

NSCI 23810. Neurons and Glia: A cellular and molecular perspective. 100 Units.

This course will be an interactive, in-depth analysis of the cell biology of neurons and glia. We will learn and discuss the latest techniques used, for example, to study the structure and function of neuronal proteins. In this way we will illuminate the central concepts that define our understanding of the cell and molecular biology of neurons and glia. The course will consist of lectures and critical reading of contemporary literature.

Instructor(s): R. Carrillo; W. Green Terms Offered: Autumn

Prerequisite(s): Neuroscience Majors: NSCI 20101-20130 (Fundamental Neuroscience Sequence)

NSCI 24000. Modeling and Signal Analysis for Neuroscientists. 100 Units.

The course provides an introduction into signal analysis and modeling for neuroscientists. We cover linear and nonlinear techniques and model both single neurons and neuronal networks. The goal is to provide students with the mathematical background to understand the literature in this field, the principles of analysis and simulation software, and allow them to construct their own tools. Several of the 90-minute lectures include demonstrations and/or exercises in Matlab.

Instructor(s): W. van Drongelen Terms Offered: Spring, L.

Prerequisite(s): Undergraduates: Biology Major - BIOS 26210 and 26211, or consent of instructor. Neuroscience Major - NSCI 20130, BIOS 26210 and 26211, or consent of instructor.

Equivalent Course(s): BIOS 24408, CPNS 32111

NSCI 29100. Neuroscience Thesis Research. 100 Units.

Scholar or Research Thesis.

Instructor(s): Staff Terms Offered: Autumn, Spring, Summer, Winter

Prerequisite(s): By consent of instructor and approval of major director.

NSCI 29101. Neuroscience Thesis Research. 100 Units.

Scholar or Research Thesis.

Instructor(s): Staff Terms Offered: Autumn, Spring, Summer, Winter

Prerequisite(s): NSCI 29100, and consent of instructor, and approval of major director.

NSCI 29102. Neuroscience Thesis Research. 100 Units.

Scholar or Research Thesis.

Instructor(s): Staff Terms Offered: Autumn Spring Summer Winter

Prerequisite(s): NSCI 29101, and consent of instructor, and approval of major director.

NSCI 29200. Neuroscience Honors Thesis Research. 100 Units.

Scholar or Research Thesis.

Instructor(s): Staff Terms Offered: Autumn, Spring, Summer, Winter

Prerequisite(s): By consent of instructor and approval of major director. Open to Neuroscience majors who are candidates for honors in Neuroscience.

NSCI 29201. Neuroscience Honors Thesis Research. 100 Units.

NSCI 29200, and consent of instructor, and approval of major director. Open to Neuroscience majors who are candidates for honors in Neuroscience.

Instructor(s): Staff Terms Offered: Autumn Spring Summer Winter

Prerequisite(s): NSCI 29200, and consent of instructor, and approval of major director. Open to Neuroscience majors who are candidates for honors in Neuroscience.

NSCI 29202. Neuroscience Honors Thesis Research. 100 Units.

Research Thesis and Seminar.

Instructor(s): Staff Terms Offered: Autumn Spring Summer Winter

Prerequisite(s): NSCI 29201, and consent of instructor, and approval of major director. Open to Neuroscience majors who are candidates for honors in Neuroscience.

NSCI 29700. Reading and Research in Neuroscience. 100 Units.

BA Students can do reading and research in an area of neuroscience under the guidance of a faculty member. A written report is required at the end of the quarter.

Instructor(s): Staff Terms Offered: Autumn Spring Summer Winter

Prerequisite(s): By consent of instructor and approval of NSCI Undergraduate Director.

Note(s): Must be a Bachelor of Arts student. Students are required to submit the College Reading & Research form.

New Collegiate Division

The New Collegiate Division offers a variety of interdisciplinary courses in addition to those particularly related to specific programs of study. One of the purposes of the division is to provide a forum for new ideas in teaching; certainly only one such forum among many in the College and the University, but for some teachers, and for some subjects cutting across familiar academic lines, the most convenient one. These courses are as a rule open to all students. Indeed, they usually aspire to attract students with different interests and backgrounds.

New Collegiate Division Courses

NCDV 29700. Reading Course. 100 Units.

This course is designed for New Collegiate Division students whose program requirements are best met by study under a faculty member's individual supervision. The subject, course of study, and requirements are arranged with the instructor.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): Consent of faculty supervisor and program chairman. Students are required to submit the College Reading and Research Course Form.

Note(s): Must be taken for a quality grade.

NCDV 29800. Reading Course. 100 Units.

Students in divisions other than the New Collegiate Division may arrange a tutorial with a member of the New Collegiate Division faculty. Registration for this course and information about the tutorial arrangement must be reported to the office of the New Collegiate Division master.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): Consent of faculty supervisor and New Collegiate Division master. Students are required to submit the College Reading and Research Course Form.

Note(s): Available for either quality grades or for P/F grading.

NCDV 29900. Independent Study. 100 Units.

Open only to New Collegiate Division students with consent of faculty supervisor and program chairman.

Terms Offered: Autumn, Spring, Winter

Prerequisite(s): Students are required to submit the College Reading and Research Course Form.

Note(s): Must be taken for P/F grading.

Norwegian Studies

Minor Program in Norwegian Studies

Students in any field may complete a minor in Norwegian Studies. A Norwegian Studies minor will consist of the beginning language cycle (NORW 10100-10200-10300 (<http://collegecatalog.uchicago.edu/search/?P=NORW%2010100-10200-10300>) First-Year Norwegian I-II-III) as the language component of the minor. Three additional courses are required to complete the minor. Students choose these courses in consultation with the program administrator.

NORW 10100-10200-10300	First-Year Norwegian I-II-III	300
Three Elective Courses *		300
Total Units		600

* Students may choose from NORW 10400 Intermediate Norwegian I: Introduction to Literature, NORW 10500 Intermediate Norwegian II, or any 20000-level Norwegian language and/or literature courses.

Students who elect the minor program in Norwegian Studies must meet with the program administrator *before the end of Spring Quarter of their third year* to declare their intention to complete the minor and must submit the Consent to Complete a Minor Program (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf) form obtained from their College adviser. The department's approval for the minor program should be submitted to the student's College adviser by the deadline above on the form.

Courses in the minor may not be double counted with the student's major(s) or with other minors and may not be counted toward general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers. Minor program requirements are subject to revision.

Norwegian Courses

NORW 10100-10200-10300. First-Year Norwegian I-II-III.

The aim of this sequence is to provide students with minimal proficiency in the four language skills of speaking, reading, writing and listening—with a special emphasis on speaking. To achieve these goals, we undertake an overview of all major grammar topics and work to acquire a substantial vocabulary.

NORW 10100. First-Year Norwegian I. 100 Units.

The aim of this sequence is to provide students with minimal proficiency in the four language skills of speaking, reading, writing and listening—with a special emphasis on speaking. To achieve these goals, we undertake an overview of all major grammar topics and work to acquire a substantial vocabulary.

Instructor(s): Kimberly Kenny Terms Offered: Autumn

NORW 10200. First-Year Norwegian II. 100 Units.

Part two of the three-quarter beginning sequence, NORW10100, NORW10200 and NORW10300, continues the process of providing students with minimal proficiency in the four language skills of speaking, reading, writing, and listening - with a special emphasis on speaking. To achieve these goals, we undertake an overview of all major grammar topics and work to acquire a substantial vocabulary over the three-quarter sequence.

Instructor(s): Kimberly Kenny Terms Offered: Winter

NORW 10300. First-Year Norwegian III. 100 Units.

Part three of the three-quarter beginning sequence, NORW 10100, NORW 10200 and NORW 10300, concludes the process of providing students with minimal proficiency in the four language skills of speaking, reading, writing, and listening—with a special emphasis on speaking. To achieve these goals, we undertake an overview of all major grammar topics and work to acquire a substantial vocabulary over the three-quarter sequence.

Instructor(s): Kimberly Kenny Terms Offered: Spring

NORW 10400. Intermediate Norwegian I: Introduction to Literature. 100 Units.

This course combines intensive review of all basic grammar with the acquisition of more advanced grammar concepts. While our main priority remains oral proficiency, we work to develop our reading and writing skills. We challenge our reading ability with more sophisticated examples of Norwegian prose and strengthen our writing through essay writing. The centerpiece of the course is the contemporary Norwegian novel *Naiv*. Super.

Instructor(s): Kimberly Kenny Terms Offered: Spring

Prerequisite(s): NORW 10300 or consent of instructor

NORW 10500. Intermediate Norwegian II. 100 Units.

This course combines intensive review of all basic grammar with the acquisition of more advanced grammar concepts. Students undertake readings pertaining to culture and contemporary Norwegian life, including the contemporary novel, *L*, by Erlend Loe and excerpts from Thor Heyerdahl's *Kon Tiki*. Classes conducted in Norwegian.

Instructor(s): Kimberly Kenny Terms Offered: Spring

NORW 29700. Reading and Research Course in Norwegian. 100 Units.

Students must consult with the instructor by the eighth week of the preceding quarter to determine the subject of the course and the work to be done. Students are required to submit the College Reading and Research Course Form.

Instructor(s): Kimberly Kenny Terms Offered: Autumn, Winter, Spring

Prerequisite(s): Consent of instructor and director of undergraduate studies.

Note(s): Students must consult with the instructor by the eighth week of the preceding quarter to determine the subject of the course and the work to be done. Students are required to submit the College Reading and Research Course Form.

Philosophy

Department Website: <http://philosophy.uchicago.edu>
Philosophy Undergraduate Wiki

<https://wiki.uchicago.edu/display/phildr/Philosophy+Wiki+Home+Page> (<https://wiki.uchicago.edu/display/phildr/Philosophy+Wiki+Home+Page/>)

Email Lists

All majors and minors in philosophy should immediately subscribe to two Department of Philosophy email lists: philugs@lists.uchicago.edu and philosophy@lists.uchicago.edu. These lists are the department's primary means of disseminating information on the undergraduate program, deadlines, prizes, fellowships, and events. Information on how to subscribe can be found here: <https://coral.uchicago.edu:8443/display/phildr/Philosophy+Email+Lists> (<https://coral.uchicago.edu:8443/display/phildr/Philosophy+Email+Lists/>).

Program of Study

Philosophy covers a wide range of historical periods and fields. The BA program in philosophy is intended to acquaint students with some of the classic texts of the discipline and with the different areas of inquiry, as well as to train students in rigorous methods of argument. In addition to the standard major, the department offers two tracks. The intensive track option is for qualified students interested in small group discussions of major philosophical problems and texts. The option in philosophy and allied fields is designed for students who wish to pursue an interdisciplinary program involving philosophy and some other field. All three options are described in the next section.

The course offerings described include both 20000-level courses (normally restricted to College students) and 30000-level courses (open to graduate students and advanced College students). There is room for a good deal of flexibility in individual planning of programs. Most of the requirements allow some choice among options. Course prerequisites may be relaxed with the consent of the instructor, and College students may take 40000- and 50000-level courses (normally restricted to graduate students) under special circumstances. Students should work out their program under the guidance of the director of undergraduate studies.

Students in other fields of study may also complete a minor in Philosophy. Information follows the description of the major.

Program Requirements

All majors will be required to meet with the assistant to the director of undergraduate studies during Winter Quarter of their third year to review their program of study and discuss the possibility of writing the senior essay.

The Standard Major

The following basic requirements for the standard major in philosophy are intended to constitute a core philosophy curriculum and to provide some structure within an extremely varied collection of course offerings that changes from year to year.

The Department of Philosophy offers a three-quarter sequence in the history of philosophy (PHIL 25000 History of Philosophy I: Ancient Philosophy, PHIL 26000 History of Philosophy II: Medieval and Early Modern Philosophy, and PHIL 27000 History of Philosophy III: Kant and the 19th Century), which begins in the first quarter with ancient Greek philosophy and ends in the third quarter with nineteenth-century philosophy. Students are required to take two courses from this sequence (any two are acceptable) and are encouraged to take all three. Students are also encouraged to take these courses early in their program because they make an appropriate introduction to more advanced courses.

Students may bypass PHIL 20100 Elementary Logic for a more advanced course if they can demonstrate to the instructor that they are qualified to begin at a higher level.

Standard majors are welcome to apply to write senior essays. For more information, please see The Senior Essay (below).

Distribution

At least two courses in one of the following two fields and at least one course in the other field: (A) practical philosophy and (B) theoretical philosophy.

Courses that may be counted toward these requirements are indicated in the course descriptions by boldface letters in parentheses. Other courses may not be used to meet field distribution requirements.

Summary of Requirements: Standard Major

Two of the following:		200
PHIL 25000	History of Philosophy I: Ancient Philosophy	
PHIL 26000	History of Philosophy II: Medieval and Early Modern Philosophy	
PHIL 27000	History of Philosophy III: Kant and the 19th Century	
PHIL 20100	Elementary Logic (or approved alternative course in logic)	100

One of the following:	300
One from field A and two from field B	
Two from field A and one from field B	
Four additional courses in philosophy *	400
Total Units	1000

* These courses must be drawn from departmental offerings. Students should consult with the director of undergraduate studies regarding courses taken at other colleges. Only one of these courses may be satisfied by participation in the BA essay workshop.

The Intensive Track

Admission to the intensive track requires an application, which must be submitted by the middle of the Spring Quarter in the student's second year. The application form is on the department wiki (<https://coral.uchicago.edu:8443/display/phildr/Philosophy+Undergraduate+Wiki/>). The director of undergraduate studies and the assistant to the director of undergraduate studies will have 'interview' meetings following the application deadline. (The departmental website lists the office hours of the director of undergraduate studies and the assistant to the director of undergraduate studies.)

The intensive track is designed to acquaint students with the problems and methods of philosophy in more depth than is possible for students in the standard major. It differs from the standard program mainly by offering the opportunity to meet in the following very small discussion groups: the intensive track seminar in the Autumn Quarter of the third or fourth year (PHIL 29601 Intensive Track Seminar), PHIL 29200 Junior Tutorial, and PHIL 29300 Senior Tutorial.

Note on the pacing and scheduling of the intensive track: Intensive track majors take PHIL 29601 Intensive Track Seminar in Autumn Quarter of their third year. Students fulfill the tutorial requirement by selecting one junior tutorial (PHIL 29200) in any quarter of their third year and one senior tutorial (PHIL 29300) in any quarter of their fourth year. Finally, intensive track students must write a senior essay. The essay process includes participation in the Senior Seminar over two quarters of their fourth year; students must register for PHIL 29901 Senior Seminar I in Autumn quarter and PHIL 29902 Senior Seminar II in Winter quarter.

Summary of Requirements: Intensive Track

Two of the following:		200
PHIL 25000	History of Philosophy I: Ancient Philosophy	
PHIL 26000	History of Philosophy II: Medieval and Early Modern Philosophy	
PHIL 27000	History of Philosophy III: Kant and the 19th Century	
PHIL 20100	Elementary Logic (or approved alternative course in logic)	100
One of the following:		300
One from field A and two from field B		
Two from field A and one from field B		
PHIL 29200	Junior Tutorial	100
PHIL 29300	Senior Tutorial	100
PHIL 29601	Intensive Track Seminar	100
PHIL 29901 & PHIL 29902	Senior Seminar I and Senior Seminar II	200
Two additional courses in philosophy *		200
Total Units		1300

* These courses must be drawn from departmental offerings. Students should consult with the director of undergraduate studies regarding courses taken at other colleges.

Philosophy and Allied Fields

This variant of the major is a specialist option for students with a clear and detailed picture of a coherent interdisciplinary course of study, not available under the standard forms of major and minor. Examples of recent programs devised by students electing this track are philosophy and mathematics, philosophy and biology, and philosophy and economics. Students in this program must meet the first three of the basic requirements for the standard major (a total of six courses) and take six additional courses that together constitute a coherent program; at least one of these six additional courses must be in the Department of Philosophy. *Students must receive approval for the specific courses they choose to be used as the allied fields courses. Admission to philosophy and allied fields requires an application to the director of undergraduate studies, which should be made by the middle of Spring Quarter of their second year.* To apply, students must submit a sample program of courses as well as a statement explaining the nature of the interdisciplinary area of study and the purpose of the proposed allied fields program. Applicants must also have the agreement of a member of the Department of Philosophy to serve as their sponsor in the program. Interested students should consult with the assistant to the director of undergraduate studies before applying; for office hours and the application form, visit the departmental wiki (<https://coral.uchicago.edu:8443/display/phildr/Philosophy+Undergraduate+Wiki/>) or website.

Summary of Requirements: Philosophy and Allied Fields

Two of the following:		200
PHIL 25000	History of Philosophy I: Ancient Philosophy	
PHIL 26000	History of Philosophy II: Medieval and Early Modern Philosophy	
PHIL 27000	History of Philosophy III: Kant and the 19th Century	
PHIL 20100	Elementary Logic (or approved alternative course in logic)	100
One of the following:		300
One from field A and two from field B		
Two from field A and one from field B		
Six additional courses, at least one of which must be in the Department of Philosophy *		600
Total Units		1200

* Only one of these courses may be satisfied by participation in the BA essay workshop.

The Senior Essay

Students who have been admitted to the intensive track are required to write a senior essay (also called the “BA essay”). Standard majors and philosophy and allied fields majors may also apply to write an essay. The proposal should be formulated in consultation with a faculty adviser who has expertise in the topic area. Potential advisers can be approached directly, but the assistant to the director of undergraduate studies can help pair students with suitable advisers as needed. BA essay applications are due middle of Spring Quarter. Applications are available from the shelves outside the Philosophy Department office (Stuart 202) as well as on the wiki (<https://coral.uchicago.edu:8443/display/phildr/Philosophy+Undergraduate+Wiki/>).

Students writing a BA essay in philosophy are normally expected to have maintained a GPA of 3.25 in their philosophy courses. A 3.25 is also the minimum GPA for departmental honors in philosophy. Students should submit, along with their application to write a BA essay, a record of their grades in the College. If a student who wishes to write a BA essay in philosophy has a GPA in philosophy courses below 3.25, the student should also submit a petition in writing to the Director of Undergraduate Studies.

In their fourth year, students writing BA essays must participate in the senior seminar. The seminar runs in the Autumn and Winter quarters and attendance is required throughout. Students should register for PHIL 29901 Senior Seminar I in Autumn Quarter and for PHIL 29902 Senior Seminar II in Winter Quarter. These two courses are among the requirements for the intensive track. For essay writers who are in the standard track or the allied fields track, both courses must be taken; however, only PHIL 29902 will be counted toward the track's total-units requirement.

Grading

All courses for all tracks must be taken for a quality grade. The one exception is for students in the Intensive Track: PHIL 29901 is graded on a Pass/Fail basis. Accordingly, students in other tracks taking PHIL 29901-29902 will only be able to count PHIL 29902 in the major.

Honors

The main requirement for honors is a senior essay of distinction. A GPA in the major of 3.25 or higher typically also is required.

Transfer Students

Requirements for students transferring to the University of Chicago are the same as for other students. Up to (but typically no more than) three courses from another institution may be counted toward major requirements. All such courses must be approved by the director of undergraduate studies.

Advising

Students should contact the director of undergraduate studies with questions concerning program plans, honors, and so forth.

Minor Program in Philosophy

The minor program in philosophy provides a basic introduction to some central figures and themes in both the history of philosophy and in current philosophical controversies. The minor requires six courses: students must take: either two courses from the history of philosophy sequence and one course from field A or field B, along with three additional courses in philosophy; or one course from the history of philosophy sequence and one course from each of fields A and B, along with three additional courses in philosophy.

No courses in the minor can be double counted with the student's major(s) or with other minors; nor can they be counted toward general education requirements. They must be taken for quality grades.

Students who elect the minor program should meet with the director of undergraduate studies before the end of Spring Quarter of their third year to declare their intention to complete the program. The approval of the director of undergraduate

studies for the minor should be submitted to the student's College adviser, on a form obtained from the College adviser, no later than the end of the student's third year.

Samples follow of two groups of courses that would comprise a minor:

SAMPLE 1

Two of the following:	200
PHIL 25000 History of Philosophy I: Ancient Philosophy	
PHIL 26000 History of Philosophy II: Medieval and Early Modern Philosophy	
PHIL 27000 History of Philosophy III: Kant and the 19th Century	
One from either field A or field B	100
Three additional courses in philosophy	300
Total Units	600

SAMPLE 2

One of the following:	100
PHIL 25000 History of Philosophy I: Ancient Philosophy	
PHIL 26000 History of Philosophy II: Medieval and Early Modern Philosophy	
PHIL 27000 History of Philosophy III: Kant and the 19th Century	
One from field A	100
One from field B	100
Three additional courses in philosophy	300
Total Units	600

Philosophy Courses

PHIL 20004. Thomas Aquinas's Commentary on Aristotle's Physics. 100 Units.

In the Physics, Aristotle lays out the basic concepts and principles governing his thought about physical reality. His approach is both philosophically sophisticated and quite different from that of modern science. We will work through substantial selections, especially from Books I-IV and Book VIII, with the help of Aquinas's expositions, which make them more digestible without diluting them. Topics to be treated include the principles of change, matter and form, the concept of nature, causality, teleology, motion, the infinite, place, time, the duration of the physical world, and the primary mover. (B)

Instructor(s): S. Brock Terms Offered: Autumn

Prerequisite(s): Students with majors other than Philosophy and Fundamentals need the permission of the instructor.

Equivalent Course(s): FNDL 20004

PHIL 20100. Elementary Logic. 100 Units.

An introduction to the concepts and principles of symbolic logic. We learn the syntax and semantics of truth-functional and first-order quantificational logic, and apply the resultant conceptual framework to the analysis of valid and invalid arguments, the structure of formal languages, and logical relations among sentences of ordinary discourse. Occasionally we will venture into topics in philosophy of language and philosophical logic, but our primary focus is on acquiring a facility with symbolic logic as such.

Instructor(s): Autumn 2020: G. Schultheis; Winter 2021: M. Kremer Terms Offered: Autumn Winter

Equivalent Course(s): LING 20102, PHIL 30000, HIPS 20700, CHSS 33500

PHIL 21000. Introduction To Ethics. 100 Units.

In this course, we will read, write, and think about philosophical work meant to provide a systematic and foundational account of ethics. We will focus on close reading of two books, Immanuel Kant's *Groundwork of the Metaphysics of Morals* and John Stuart Mill's *Utilitarianism*, along with a handful of more recent essays. Throughout, our aim will be to engage in serious thought about good and bad in our lives. (A)

Instructor(s): C. Vogler Terms Offered: Winter

Equivalent Course(s): HIPS 21000, FNDL 23107

PHIL 21002. Human Rights: Philosophical Foundations. 100 Units.

Human rights are claims of justice that hold merely in virtue of our shared humanity. In this course we will explore philosophical theories of this elementary and crucial form of justice. Among topics to be considered are the role that dignity and humanity play in grounding such rights, their relation to political and economic institutions, and the distinction between duties of justice and claims of charity or humanitarian aid. Finally we will consider the application of such theories to concrete, problematic and pressing problems, such as global poverty, torture and genocide. (A) (I)

Instructor(s): B. Laurence Terms Offered: Autumn

Equivalent Course(s): HMRT 21002, HIST 39319, HIST 29319, PHIL 31002, INRE 31602, MAPH 42002, HMRT 31002, LLSO 21002

PHIL 21102. Opera as Idea and As Performance. 100 Units.

Is opera an archaic and exotic pageant for fanciers of overweight canaries, or a relevant art form of great subtlety and complexity that has the power to be revelatory? In this course of eight sessions, jointly taught by Professor Martha Nussbaum and Anthony Freud, General Director of Lyric Opera of Chicago, we explore the multi-disciplinary nature

of this elusive and much-maligned art form, with its four hundred-year-old European roots, discussing both historic and philosophical contexts and the practicalities of interpretation and production in a very un-European, twenty-first century city. Anchoring each session around a different opera, we will be joined by a variety of guest experts, one each week, including a director, a conductor, a designer and two singers, to enable us to explore different perspectives. The list of operas to be discussed include Monteverdi's *The Coronation of Poppea*, Mozart's *Don Giovanni*, Rossini's *La Cenerentola*, Verdi's *Don Carlos*, Puccini's *Madama Butterfly*, Wagner's *Die Meistersinger*, Strauss's *Elektra*, and Britten's *Billy Budd*. (A) (I)

Instructor(s): A. Freud; M. Nussbaum Terms Offered: Spring

Prerequisite(s): Remark: students do not need to be able to read music, but some antecedent familiarity with opera in performance or through recordings would be extremely helpful. Ph.D. students in the Philosophy Department and the Music Department and all law students (both J. D. and LL.M.) may enroll without permission. All other students will be selected by lottery up to the number feasible given CA arrangements.

Note(s): Ph.D. students and law students will write one long paper at the end (20-25 pages), based on a prospectus submitted earlier. Other students will write one shorter paper (5-7 pages) and one longer paper (12-15 pages), the former due in week 4 and the latter during reading period.

Equivalent Course(s): PHIL 31102, MUSI 24416, MUSI 30716

PHIL 21499. Philosophy and Philanthropy. 100 Units.

Perhaps it is better to give than to receive, but exactly how much giving ought one to engage in and to whom or what? Recent ethical and philosophical developments such as the effective altruism movement suggest that relatively affluent individuals are ethically bound to donate a very large percentage of their resources to worthy causes—for example, saving as many lives as they possibly can, wherever in the world those lives may be. And charitable giving or philanthropy is not only a matter of individual giving, but also of giving by foundations, corporations, non-profits, non-governmental and various governmental agencies, and other organizational entities that play a very significant role in the modern world. How, for example, does an institution like the University of Chicago engage in and justify its philanthropic activities? Can one generalize about the various rationales for philanthropy, whether individual or institutional? Why do individuals or organizations engage in philanthropy, and do they do so well or badly, for good reasons, bad reasons, or no coherent reasons? This course will afford a broad, critical philosophical and historical overview of philanthropy, examining its various contexts and justifications, and contrasting charitable giving with other ethical demands, particularly the demands of justice. How do charity and justice relate to each other? Would charity even be needed in a fully just world? (A)

Instructor(s): B. Schultz Terms Offered: Winter

Note(s): This course will feature a number of guest speakers and be developed in active conversation with the work of the UChicago Civic Knowledge Project and Office of Civic Engagement. Students will also be presented with some practical opportunities to engage reflectively in deciding whether, why and how to donate a certain limited amount of (course provided) funding.

Equivalent Course(s): HMRT 21499, PLSC 21499, MAPH 31499

PHIL 21609. Topics in Medical Ethics. 100 Units.

Decisions about medical treatment, medical research and medical policy often have profound moral implications. Taught by a philosopher, three physicians, and a medical lawyer, this course will examine such issues as paternalism, autonomy, assisted suicide, abortion, organ markets, research ethics, and distributive justice in health care. (A)

Instructor(s): D. Brudney; Staff Terms Offered: Autumn

Prerequisite(s): Third- or fourth-year standing. This course does not meet requirements for the Biological Sciences major.

Note(s): Philosophy majors: this course fulfills the practical philosophy (A) requirement.

Equivalent Course(s): HLTH 21609, BIOS 29314, HIPS 21609, BPRO 22612

PHIL 22000. Introduction to Philosophy of Science. 100 Units.

We will begin by trying to explicate the manner in which science is a rational response to observational facts. This will involve a discussion of inductivism, Popper's deductivism, Lakatos and Kuhn. After this, we will briefly survey some other important topics in the philosophy of science, including underdetermination, theories of evidence, Bayesianism, the problem of induction, explanation, and laws of nature. (B) (II)

Instructor(s): T. Pashby Terms Offered: Autumn

Equivalent Course(s): PHIL 32000, HIST 25109, HIST 35109, HIPS 22000, CHSS 33300

PHIL 22209. Philosophies of Environmentalism and Sustainability. 100 Units.

Many of the toughest ethical and political challenges confronting the world today are related to environmental issues: for example, climate change, loss of biodiversity, the unsustainable use of natural resources, pollution and toxic waste, and other threats to the well-being of both present and future generations. Using both classic and contemporary works, this course will highlight some of the fundamental and unavoidable philosophical questions presented by such environmental issues. Does the environmental crisis demand radically new forms of ethical and political philosophizing and practice? Must an environmental ethic reject anthropocentrism? If so, what are the most plausible non-anthropocentric alternatives? What counts as the proper ethical treatment of non-human animals, living organisms, or ecosystems? What do the terms 'nature' and 'wilderness' even mean, and should 'natural' environments as such have ethical and/or legal standing? What fundamental ethical and political perspectives inform such approaches as the 'Land Ethic,' ecofeminism, and deep ecology? Is there a plausible account of environmental justice applicable to both present and future generations? Are we now in the Anthropocene, and if so, is 'adaptation' the best strategy at this historical juncture? How can the wild, the rural, and the urban all contribute to a better future for Planet Earth? (A)

Instructor(s): B. Schultz Terms Offered: Autumn

Note(s): Field trips, guest speakers, and special projects will help us philosophize about the fate of the earth by connecting the local and the global. Please be patient with the flexible course organization! Some rescheduling may be necessary in order to accommodate guest speakers and the weather!

Equivalent Course(s): HMRT 22201, PLSC 22202, ENST 22209

PHIL 23004. Aristotle's Practical Philosophy. 100 Units.

This course will survey Aristotle's ethics and politics with a view to understanding their relation to one another.

Instructor(s): A. Ford Terms Offered: Spring

Equivalent Course(s): FNDL 23004

PHIL 23402. Augustine's Confessions and Boethius's Consolation of Philosophy. 100 Units.

We will work through these two writings, focusing chiefly on the philosophical thought present in them. (A)

Instructor(s): S. Brock Terms Offered: Spring

Prerequisite(s): Students with majors other than Philosophy and Fundamentals need the permission of the instructor.

Equivalent Course(s): FNDL 23404

PHIL 24800. Foucault and The History of Sexuality. 100 Units.

This course centers on a close reading of the first volume of Michel Foucault's 'The History of Sexuality', with some attention to his writings on the history of ancient conceptualizations of sex. How should a history of sexuality take into account scientific theories, social relations of power, and different experiences of the self? We discuss the contrasting descriptions and conceptions of sexual behavior before and after the emergence of a science of sexuality. Other writers influenced by and critical of Foucault are also discussed.

Instructor(s): A. Davidson Terms Offered: Autumn

Prerequisite(s): One prior philosophy course is strongly recommended.

Equivalent Course(s): FNDL 22001, GNSE 23100, RLST 24800, KNOW 27002, HIPS 24300, CMLT 25001

PHIL 25000. History of Philosophy I: Ancient Philosophy. 100 Units.

An examination of ancient Greek philosophical texts that are foundational for Western philosophy, especially the work of Plato and Aristotle. Topics will include: the nature and possibility of knowledge and its role in human life; the nature of the soul; virtue; happiness and the human good.

Instructor(s): G. Richardson Lear Terms Offered: Autumn Spring

Prerequisite(s): Completion of the general education requirement in humanities.

Equivalent Course(s): CLCV 22700

PHIL 26000. History of Philosophy II: Medieval and Early Modern Philosophy. 100 Units.

A survey of the thought of some of the most important figures of the period from the fall of Rome to the Scottish Enlightenment. The course will begin with an examination of the medieval hylomorphism of Aquinas and Ockham and then consider its rejection and transformation in the early modern period. Three distinct early modern approaches to philosophy will be discussed in relation to their medieval antecedents: the method of doubt, the principle of sufficient reason, and empiricism. Figures covered may include Ockham, Aquinas, Descartes, Avicenna, Princess Elizabeth, Émilie du Châtelet, Spinoza, Leibniz, Abelard, Berkeley, Hume, and al-Ghazali.

Instructor(s): D. Moerner Terms Offered: Winter

Prerequisite(s): Completion of the general education requirement in humanities required; PHIL 25000 recommended.

Equivalent Course(s): HIPS 26000, MDVL 26000

PHIL 27000. History of Philosophy III: Kant and the 19th Century. 100 Units.

The philosophical ideas and methods of Immanuel Kant's 'critical' philosophy set off a revolution that reverberated through 19th-century philosophy. We will trace the effects of this revolution and the responses to it, focusing on the changing conception of what philosophical ethics might hope to achieve. We will begin with a consideration of Kant's famous Groundwork of the Metaphysics of Morals, in which the project of grounding all ethical obligations in the very idea of rational freedom is announced. We will then consider Hegel's radicalization of this project in his Philosophy of Right, which seeks to derive from the idea of rational freedom, not just formal constraints on right action, but a substantive conception of the proper organization of our social and political lives. We will conclude by examining some important critics of the Kantian/Hegelian project in ethical theory: Karl Marx, John Stuart Mill, Frederick Douglass, and Friedrich Nietzsche.

Instructor(s): M. Boyle Terms Offered: Spring

Prerequisite(s): Completion of the general education requirement in humanities.

PHIL 29200. Junior Tutorial. 100 Units.

Junior/Senior Tutorial. For topic and other information, please visit <https://philosophy.uchicago.edu/courses>.

Instructor(s): Autumn 2020: Michael Kolodziej - Hegel's Science of Logic Sarale Ben Asher - Define 'definition': Socratic definition and its subject-matter Mathis Koschel - Kant on Causation Winter 2021: Ermioni Prokopaki - Plato's Theaetetus Stephen Cunniff - Hegel's Phenomenology of Spirit Pirachula Chulanon - Philosophy of Animal Minds from Descartes to Kant Spring 2021: Amy Levine - A Life of One's Own: Autonomy, Meaning and Selfhood Warren Wilson - Autonomy and Liberation Terms Offered: Autumn Spring Winter

Prerequisite(s): Open only to intensive-track and philosophy majors.

Note(s): Junior and Senior sections meet together. No more than two Tutorials may be used to meet program requirements.

PHIL 29300. Senior Tutorial. 100 Units.

Junior/Senior Tutorial. For topic and other information, please visit <https://philosophy.uchicago.edu/courses>.

Instructor(s): Autumn 2020: Michael Kolodziej - Hegel's Science of Logic Sarale Ben Asher - Define 'definition': Socratic definition and its subject-matter Mathis Koschel - Kant on Causation Winter 2021: Ermioni Prokopaki - Plato's Theaetetus

Stephen Cunniff - Hegel's Phenomenology of Spirit Pirachula Chulanon - Philosophy of Animal Minds from Descartes to Kant Spring 2021: Amy Levine - A Life of One's Own: Autonomy, Meaning and Selfhood Warren Wilson - Autonomy and Liberation Terms Offered: Autumn Spring Winter

Prerequisite(s): Open only to intensive-track and philosophy majors.

Note(s): Junior and Senior sections meet together. No more than two Tutorials may be used to meet program requirements.

PHIL 29400. Intermediate Logic. 100 Units.

This course provides a first introduction to mathematical logic for students of philosophy. In this course we will prove the soundness and completeness of deductive systems for both propositional and first-order predicate logic. (B) (II)

Instructor(s): A. Vasudevan Terms Offered: Winter

Prerequisite(s): Elementary Logic (PHIL 20100) or its equivalent.

Equivalent Course(s): HIPS 20500, PHIL 39600, CHSS 33600

PHIL 29601. Intensive Track Seminar. 100 Units.

Title: Internalism and Externalism about Meaning This seminar will explore an advanced topic in philosophy. It is required as part of the intensive track of the Philosophy Major.

Instructor(s): B. Callard Terms Offered: Autumn

Prerequisite(s): Open only to third-year students who have been admitted to the intensive track program.

PHIL 29700. Reading and Research. 100 Units.

Reading and Research.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of Instructor & Director of Undergraduate Studies. Students are required to submit the college reading and research course form.

PHIL 29901. Senior Seminar I. 100 Units.

Students writing senior essays register once for PHIL 29901, in the Autumn Quarter, and once for PHIL 29902, in the Winter Quarter. The Senior Seminar meets for two quarters, and students writing essays are required to attend throughout.

Instructor(s): A. Callard; T. Zimmer; E. Dupree; A. Pitel Terms Offered: Autumn

Prerequisite(s): Consent of Director of Undergraduate Studies.

Note(s): Required and only open to fourth-year students who have been accepted into the BA essay program.

PHIL 29902. Senior Seminar II. 100 Units.

Students writing senior essays register once for PHIL 29901, in the Autumn Quarter, and once for PHIL 29902, in the Winter Quarter. The Senior Seminar meets for two quarters, and students writing essays are required to attend throughout.

Instructor(s): A. Callard; T. Zimmer; E. Dupree; A. Pitel Terms Offered: Winter

Prerequisite(s): Consent of Director of Undergraduate Studies.

Note(s): Required and only open to fourth-year students who have been accepted into the BA essay program.

PHIL 29908. Free Will. 100 Units.

The 'problem of free will' is to reconcile our perception of ourselves as free agents with ideas about the structure of reality, and our place within it, that appear to belie that perception. The problem is old, of perennial interest, and, it would seem, wholly intransigent. We shall try to get as close as we can to understanding the root of the problem's seeming intransigence. Our readings will be both historical and recent. Authors include Aristotle, Cicero, Aquinas, Hobbes, Hume, Kant, Schopenhauer, Wittgenstein, Anscombe, Strawson, and Frankfurt. Topics include logical necessity, time's arrow, causation, natural law, motivation, compulsion, and moral responsibility. (A) (I)

Instructor(s): J. Bridges Terms Offered: Autumn

Equivalent Course(s): PHIL 39908

Physics

Department Website: <http://physics.uchicago.edu>

Program of Study

Physics is concerned with the study of matter, energy, forces, and their interaction in the world and universe around us. The undergraduate curriculum in the Department of Physics leading to the BA in physics includes a strong emphasis on experiment and covers the broad fundamentals necessary for graduate study in theoretical or experimental physics, as well as some fields of engineering and many interdisciplinary specialties requiring a strong technical background (e.g., biophysics, medical physics, atmospheric and environmental sciences).

Students who are majoring in other fields of study may also complete a minor in physics. Information follows the description of the major.

Program Requirements

Courses

The curriculum leading to the BA degree in physics is designed for maximum flexibility consistent with a thorough coverage of the essential principles of physics. Degree requirements include introductory and advanced physics and mathematics courses, as well as physics electives that allow students to pursue specific interests.

Students who plan to major in physics are encouraged to start course work in their first year. However, the program can be completed in three years, so one could start physics in the second year without delaying graduation. Two of the physics and two of the mathematics courses can be designated as general education courses, with eighteen courses remaining to fulfill the major.

In general, students should take the most advanced courses for which they have the appropriate prerequisites. Entering students will be given a placement for either PHYS 13100 Mechanics or PHYS 14100 Honors Mechanics based on their mathematics and physics background. Either course is appropriate for students planning to major (or minor) in physics.

Mathematics

The mathematics requirement is a Mathematical Methods sequence, MATH 18300-18400-18500-18600 Mathematical Methods in the Physical Sciences I-II-III-IV. Alternatively, students may use an Analysis sequence (MATH 20300-20400-20500 Analysis in Rn I-II-III or higher) and MATH 16300 Honors Calculus III, though they will subsequently need to acquire certain math tools, as needed, on their own.

Summary of Requirements

GENERAL EDUCATION

One of the following sequences:	200
PHYS 13100-13200	Mechanics; Electricity and Magnetism
PHYS 14100 & PHYS 14200	Honors Mechanics and Honors Electricity and Magnetism *
One of the following sequences:	200
MATH 15100-15200	Calculus I-II *
MATH 16100-16200	Honors Calculus I-II
Total Units	400

MAJOR

One of the following:	100
PHYS 13300	Waves, Optics, and Heat
PHYS 14300	Honors Waves, Optics, and Heat *
One of the following sequences:	400
MATH 18300-18400-18500-18600	Mathematical Methods in the Physical Sciences I-II-III-IV
MATH 20300 & MATH 20400 & MATH 20500 & MATH 16300	Analysis in Rn I and Analysis in Rn II and Analysis in Rn III and Honors Calculus III +
MATH 20700 & MATH 20800 & MATH 20900 & MATH 16300	Honors Analysis in Rn I and Honors Analysis in Rn II and Honors Analysis in Rn III and Honors Calculus III +
PHYS 18500	Intermediate Mechanics
PHYS 23410	Quantum Mechanics I
	100
	100

PHYS 24310	Advanced Quantum Mechanics	100
PHYS 21101-21102-21103	Experimental Physics I-II-III	300
PHYS 22500-22700	Intermediate Electricity and Magnetism I-II	200
PHYS 27900	Statistical and Thermal Physics	100
Three electives (to be selected from list of approved courses)		300
Total Units		1700

* Credit may be granted by examination.

+ Or MATH 16310 or MATH 15910

Electives

In addition to specified course work, the physics major requires three electives. These electives may be selected from the following courses:

All 20000-level physics courses (except PHYS 29100-29200-29300, and PHYS 29700)

Any of the following courses:		
ASTR 21100	Computational Techniques in Astrophysics	
ASTR 23900	Physics of Galaxies [†]	
ASTR 24100	The Physics of Stars [†]	
ASTR 24300	Cosmological Physics [†]	
ASTR 25400	Radiation Processes in Astrophysics [†]	
ASTR 25800	Astrophysics of Exoplanets	
BIOS 29326	Introduction to Medical Physics and Medical Imaging	
CHEM 26300	Chemical Kinetics and Dynamics	
CHEM 26800	Quantum Molecular and Materials Modeling	
CMSC 23710	Scientific Visualization	
CMSC 25025	Machine Learning and Large-Scale Data Analysis	
CMSC 28510	Introduction to Scientific Computing	
CMSC 28515	Introduction to Numerical Partial Differential Equations	
GEOS 21200	Physics of the Earth	
GEOS 24220	Climate Foundations	
GEOS 24230	Geophysical Fluid Dynamics: Foundations	
GEOS 24240	Geophysical Fluid Dynamics: Rotation and Stratification	
GEOS 24250	Geophysical Fluid Dynamics: Understanding the Motions of the Atmosphere and Oceans	
GEOS 24550	Ocean Circulation	
MATH 23500	Markov Chains, Martingales, and Brownian Motion	
MATH 26200	Point-Set Topology	
MATH 27000	Basic Complex Variables	
MATH 27200	Basic Functional Analysis	
MATH 27300	Basic Theory of Ordinary Differential Equations	
MATH 27400	Introduction to Differentiable Manifolds and Integration on Manifolds	
MATH 27500	Basic Theory of Partial Differential Equations	
MATH 27600	Dynamical Systems	
MENG 21100	Principles of Engineering Analysis I	
MENG 26101	Transport Phenomena I: Forces and Flows	
MENG 26102	Transport Phenomena II	
MENG 26300	Engineering Electrodynamics	
MENG 26400	Quantum Computation	
STAT 23400	Statistical Models and Methods	
or STAT 24400	Statistical Theory and Methods I	
or STAT 24410	Statistical Theory and Methods Ia	
STAT 24500	Statistical Theory and Methods II	
or STAT 24510	Statistical Theory and Methods IIa	

Or other courses approved by the program chair for physics

† Cannot be counted toward electives if used to satisfy requirements for the specialization in astrophysics.

Sample Programs

An example of what the major might look like is shown below.

In the first year, a physics sequence is taken concurrently with Mathematical Methods:

First Year					
Autumn Quarter	Units	Winter Quarter	Units	Spring Quarter	Units
PHYS 13100 or 14100		100 PHYS 13200 or 14200		100 PHYS 13300 or 14300	100
MATH 18300		100 MATH 18400		100 MATH 18500	100
		200		200	200

Total Units: 600

The Mathematical Methods sequence could also start in Winter Quarter, if additional exposure to calculus is needed.

The remaining required courses are typically distributed over the next three years, like so:

Second Year					
Autumn Quarter	Units	Winter Quarter	Units	Spring Quarter	Units
PHYS 18500		100 PHYS 23410		100 PHYS 23150	100
MATH 18600		100			
		200		100	100
Third Year					
Autumn Quarter	Units	Winter Quarter	Units	Spring Quarter	Units
PHYS 24310		100 PHYS 22500		100 PHYS 22700	100
PHYS 21101		100 PHYS 21102		100 PHYS 21103	100
		200		200	200
Fourth Year					
Autumn Quarter	Units				
PHYS 27900		100			
		100			

Total Units: 1100

In addition, three electives (selected from a list of approved courses) must be taken. In deciding when to take electives, students should be mindful of any course prerequisites.

The required laboratory sequence PHYS 21101-21102-21103 is a year-long study of experimental physics. It is recommended, but not required, that Experimental Physics be taken in the third year.

Progress through the physics program can be accelerated by 'doubling up' on some of the required courses. For example, PHYS 24310 Advanced Quantum Mechanics and PHYS 27900 (<http://collegecatalog.uchicago.edu/search/?P=PHYS%2019700>) may be taken concurrently in the third year, and PHYS 22500 (<http://collegecatalog.uchicago.edu/search/?P=PHYS%2022500>)/PHYS 22700 (<http://collegecatalog.uchicago.edu/search/?P=PHYS%2022700>) may be concurrent with PHYS 23410 Quantum Mechanics I/PHYS 23510 in the second year. This provides more options in the third and fourth years for electives, as well as research or graduate course work. Note that it is possible to complete all program requirements in three years.

Finally, the sample programs shown here are only meant to be illustrative. Students are encouraged to speak with the departmental counselors in planning individual programs, especially regarding selection of mathematics courses and program electives.

Introductory Course

The introductory course for students in the physical sciences is divided into two variants—PHYS 13100-PHYS 13200-PHYS 13300 and PHYS 14100-PHYS 14200-PHYS 14300—so students may learn with others who have comparable physics and mathematics backgrounds. The essential physics content of these two sequences is the same, but the 140s sequence covers material at a higher mathematical level. Both PHYS 130s and PHYS 140s prepare students for further courses in the physics major or minor.

The Mathematical Methods sequence MATH 18300-18400-18500-18600 would be taken concurrently, with MATH 18300 starting in Autumn or Winter Quarter of first year. Alternatively, the Mathematical Methods sequence may be replaced with MATH 20300-20400-20500 or MATH 20700-20800-20900, and MATH 16300. Depending on math background, some portion of the first-year calculus sequence MATH 15100-MATH 15200-MATH 15300 or MATH 16100-MATH 16200-MATH 16300 may be needed prior to taking the Mathematical Methods or Analysis sequences.

First-year students are placed into either PHYS 13100 or PHYS 14100 based on Advanced Placement test scores. Subsequent adjustments in physics placement can be made by consulting the undergraduate program chair (KPTC 205) during Orientation week. Transfer students who have satisfactorily completed calculus-based introductory physics courses at another university may be granted appropriate transfer credit upon petition to, and approval by, the program chair.

Another introductory sequence, PHYS 12100-PHYS 12200-PHYS 12300, is intended for students pursuing studies in biology or medicine. The prerequisite is two quarters of calculus and completion of general chemistry. While topics are similar to the 130s and 140s sequences, PHYS 120s cannot serve as a prerequisite for further courses in physics, and thus cannot be used for the physics major or minor.

In all three sequences, a grade of at least C- is required to take the next course in the sequence. For a passing grade below C- , the student will need to obtain permission from the instructor of the next course before enrolling.

A student who completes PHYS 14100 or PHYS 14200 with a grade below C is normally required to move to PHYS 13200 or PHYS 13300 the following quarter. Petitions for a waiver of this requirement must be presented to the undergraduate program chair before the second day of the succeeding course. A student who receives an A or A- in PHYS 13100 may petition the undergraduate program chair to move to PHYS 14200.

Advanced Placement

Students who took both Physics C Advanced Placement examinations prior to matriculation in the College may receive credit for PHYS 12100 and/or PHYS 12200. Consult the section on Advanced Placement Credit in this catalog for more information.

Accreditation

Accreditation examinations are administered for the content of PHYS 12100-PHYS 12200-PHYS 12300 and PHYS 14100-PHYS 14200-PHYS 14300. The first examination may be taken by incoming students only at the time of matriculation in the College. Students who pass the first examination (for PHYS 12100 or PHYS 14100) will receive credit for the lecture part of the course only and will then be invited to try the next examination of the sequence. All students who receive advanced standing on the basis of a physics accreditation examination are interviewed by the undergraduate program chair to determine the extent of their lab experience. Additional laboratory work may be required.

Grading

All regular (non-research) physics courses must be taken for quality grades. All courses used to satisfy prerequisites must be taken for quality grades. The Department of Physics requires students to pass PHYS 13100-13200-13300 or PHYS 14100-14200-14300, and PHYS 18500-23410-23510 with an average of 2.0 or higher to continue in the program.

Opportunities for Participation in Research

The physics program offers unique opportunities for College students to become actively involved in the research being conducted by faculty of the department. Interested students are welcome to consult with the departmental counselors. The focus of much of the undergraduate research is structured around the Bachelor's Thesis (PHYS 29100-PHYS 29200-PHYS 29300). Alternatively, third- or fourth-year students majoring in physics may register for research for academic credit (PHYS 29700). In addition to these formal arrangements, students at any level may become involved in research by working in a faculty member's lab or research group on an extracurricular basis.

Honors

The two requirements for a BA with Honors are as follows:

- 1) a minimum GPA of 3.3 in the courses listed under Major in the preceding Summary of Requirements section.
- 2) completion of PHYS 29100-PHYS 29200-PHYS 29300 with a grade of B or higher, based on a bachelor's thesis describing an approved research project completed during the year.

Minor Program in Physics

The minor in physics is designed to present a coherent program of study to students with a strong interest in physics but insufficient time to pursue the major. The courses required for the minor are:

One of the following:		100
PHYS 13300	Waves, Optics, and Heat	
PHYS 14300	Honors Waves, Optics, and Heat	
One of the following:		400
MATH 18300-18400-18500-18600	Mathematical Methods in the Physical Sciences I-II-III-IV	
MATH 20300 & MATH 20400 & MATH 20500 & MATH 16300	Analysis in Rn I and Analysis in Rn II and Analysis in Rn III and Honors Calculus III ⁺	
MATH 20700 & MATH 20800 & MATH 20900 & MATH 16300	Honors Analysis in Rn I and Honors Analysis in Rn II and Honors Analysis in Rn III and Honors Calculus III ⁺	
PHYS 18500	Intermediate Mechanics	100
PHYS 23410	Quantum Mechanics I	100

Two electives, at least one of which is:	200
PHYS 22500	Intermediate Electricity and Magnetism I
PHYS 27900	Statistical and Thermal Physics
The second elective may be any course that is required by the major or can be used as an elective for the major.	
Total Units	900

+ Or MATH 16310 or MATH 15910

The mathematics requirement for the minor is identical to the requirement for the major; please consult the description of the major for more information. Note that the PHYS 13300/PHYS 14300 requirement will be waived for those who must take this course to satisfy the requirements of a major or another minor. Consequently, the number of courses needed for the minor will vary between eight and nine.

Students who elect the minor program in physics must meet with the physics undergraduate program chair before the end of Spring Quarter of their third year to declare their intention to complete the minor. The approval of the program chair for the minor program should be submitted to a student's College adviser by the deadline above on a form obtained from the College adviser. Courses for the minor are chosen in consultation with the program chair.

Courses in the minor (1) may not be double counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for quality grades, and students must have a GPA of 2.0 or higher in the minor. More than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Physics Courses

PHYS 12100-12200-12300. General Physics I-II-III.

This is a one-year sequence in the fundamentals of physics for students in the biological sciences and pre-medical studies. Univariable calculus will be used as needed. Where appropriate, attention will be drawn to interdisciplinary applications. The first two courses meet the general education requirement in physical sciences. (L)

PHYS 12100. General Physics I. 100 Units.

This is a one-year sequence in the fundamentals of physics for students in the biological sciences and pre-medical studies. Univariable calculus will be used as needed. Where appropriate, attention will be drawn to interdisciplinary applications. The first two courses meet the general education requirement in physical sciences. (L) This course covers Newtonian mechanics and fluid dynamics. (L) Prerequisite(s): MATH 13300 or MATH 15300 or MATH 16300 or BIOS 20151 or BIOS 20152 or BIOS 20172 or BIOS 20236; CHEM 11300 or 12300.

Terms Offered: Autumn

Prerequisite(s): MATH 13200 or 15200 or 16200; CHEM 11300 or 12300.

PHYS 12200. General Physics II. 100 Units.

This course covers electric and magnetic fields. (L).

Terms Offered: Winter

Prerequisite(s): PHYS 12100

PHYS 12300. General Physics III. 100 Units.

This course covers waves, optics, and modern physics. (L)

Terms Offered: Spring

Prerequisite(s): PHYS 12200

PHYS 13100-13200-13300. Mechanics; Electricity and Magnetism; Waves, Optics, and Heat.

This is a one-year introductory sequence in physics for students in the physical sciences. Univariable calculus will be used extensively. The first two courses meet the general education requirement in physical sciences. (L)

PHYS 13100. Mechanics. 100 Units.

This is a three-course calculus-based sequence in the fundamentals of physics and represents a full-year's work. Content is not repeated from course to course. Topics include classical mechanics, electricity & magnetism, wave motion, optics, and an introduction to heat and thermodynamics. All labs must be completed to receive credit for the course. Final exams are held on the last Wednesday of each course. PHYS 13100 and 13200 count toward the general education requirement in the natural and mathematical sciences.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): MATH 13100 or 15100 or 16100. (May be concurrent with MATH 15100 or 16100.)

PHYS 13200. Electricity and Magnetism. 100 Units.

This is a three-course calculus-based sequence in the fundamentals of physics and represents a full-year's work. Content is not repeated from course to course. Topics include classical mechanics, electricity & magnetism, wave motion, optics, and an introduction to heat and thermodynamics. All labs must be completed to receive credit for the course. Final exams are held on the last Wednesday of each course. PHYS 13100 and 13200 count toward the general education requirement in the natural and mathematical sciences.

Terms Offered: Winter

Prerequisite(s): Minimum grade of C- in PHYS 13100 or 14100, or consent of instructor. MATH 13200 or 15200 or 16200 (may be concurrent with MATH 15200 or 16200).

PHYS 13300. Waves, Optics, and Heat. 100 Units.

Topics include mechanical waves, sound, light, polarization, reflection and refraction, interference, diffraction, geometrical optics, heat, kinetic theory, and thermodynamics. (L)

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): Minimum grade of C- in PHYS 13200 or 14200, or consent of instructor. MATH 13300 or 15300 or 16300 (may be concurrent with MATH 15300 or 16300).

PHYS 14100-14200-14300. Honors Mechanics; Honors Electricity and Magnetism; Honors Waves, Optics, and Heat.

This is a one-year introductory sequence in physics for students in the physical sciences. A strong background in univariable calculus is assumed. Multivariable and vector calculus will be introduced and used extensively. The first two courses meet the general education requirement in physical sciences. (L)

PHYS 14100. Honors Mechanics. 100 Units.

Topics include particle motion, Newton's Laws, work and energy, systems of particles, rigid-body motion, gravitation, oscillations, and special relativity. (L)

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): Placement required.

PHYS 14200. Honors Electricity and Magnetism. 100 Units.

Topics include electric fields, Gauss' law, electric potential, capacitors, DC circuits, magnetic fields, Ampere's law, induction, Faraday's law, AC circuits, Maxwell's equations, and electromagnetic waves. (L)

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): PHYS 14100

PHYS 14300. Honors Waves, Optics, and Heat. 100 Units.

Topics include mechanical waves, sound, light, polarization, reflection and refraction, interference, diffraction, geometrical optics, heat, kinetic theory, and thermodynamics. (L)

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): PHYS 14200

PHYS 18500. Intermediate Mechanics. 100 Units.

Topics include a review of Newtonian mechanics, the calculus of variations, Lagrangian and Hamiltonian mechanics, generalized coordinates, canonical momenta, phase space, constrained systems, central-force motion, non-inertial reference frames, and rigid-body motion.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): PHYS 13100 or 14100; PHYS 22000 or MATH 18400 or consent

PHYS 21101-21102-21103. Experimental Physics I-II-III.

This is a year-long laboratory sequence, offering experiments in atomic, molecular, solid-state, nuclear, and particle physics. Additional material, as needed, is presented in supplemental lectures. Content varies from quarter to quarter. (L)

Note(s): Open only to students who are majoring in Physics.

PHYS 21101. Experimental Physics I. 100 Units.

This is a year-long laboratory sequence, offering experiments in atomic, molecular, solid-state, nuclear, and particle physics. Additional material, as needed, is presented in supplemental lectures. Content varies from quarter to quarter.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): PHYS 23510

PHYS 21102. Experimental Physics II. 100 Units.

A continuation of the year-long laboratory sequence.

Terms Offered: Winter

Prerequisite(s): PHYS 21101

PHYS 21103. Experimental Physics III. 100 Units.

A continuation of the year-long laboratory sequence.

Terms Offered: Spring

Prerequisite(s): PHYS 21102

PHYS 21400. Creative Machines and Innovative Instruments. 100 Units.

This course is intended for interested students with no previous experience in design. Topics include mechanical design, machining, materials properties, computer-aided design, rapid prototyping, circuit design and electrical measurement. The course will be project-based, and the final project will be the design and construction of a functioning machine.

Instructor(s): Stephan Meyer and Scott Wakely Terms Offered: Winter

Prerequisite(s): PHYS 12200 or PHYS 13200 or PHYS 14200; or CMSC 12100 or CMSC 12200 or CMSC 12300; or consent of instructor.

PHYS 22100. Mathematical Methods in Physics. 100 Units.

Topics include linear algebra and vector spaces, ordinary and partial differential equations, calculus of variations, special functions, series solutions of differential equations, and integral transforms.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): PHYS 14300 or (PHYS 13300 and PHYS 22000)

PHYS 22500-22700. Intermediate Electricity and Magnetism I-II.

This is a two-quarter sequence on static and time-varying electric and magnetic fields.

PHYS 22500. Intermediate Electricity and Magnetism I. 100 Units.

Topics include electrostatics and magnetostatics, boundary-value problems, and electric and magnetic fields in matter.

Terms Offered: Winter

Prerequisite(s): PHYS 13200 or 14200; PHYS 22100 or MATH 18500 or MATH 20700 or MATH 20250 (may be concurrent with MATH 20250)

PHYS 22700. Intermediate Electricity and Magnetism II. 100 Units.

Topics include electromagnetic induction, electromagnetic waves, and radiation.

Terms Offered: Spring

Prerequisite(s): PHYS 22500

PHYS 22600. Electronics. 100 Units.

This hands-on experimental course is intended to develop confidence, understanding, and design ability in modern electronics. It is not a course in the physics of semiconductors. In two lab sessions a week, we explore the properties of diodes, transistors, amplifiers, operational amplifiers, oscillators, field effect transistors, logic gates, digital circuits, analog-to-digital and digital-to-analog converters, phase-locked loops, and more. Lectures supplement the lab. (L)

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): PHYS 12200 or 13200 or 14200

PHYS 23410. Quantum Mechanics I. 100 Units.

A study of wave-particle duality leading to the basic postulates of quantum mechanics is presented. Topics include the uncertainty principle, applications of the Schrödinger equation in one and three dimensions, the quantum harmonic oscillator, rotational invariance and angular momentum, the hydrogen atom, and spin.

Terms Offered: Winter

Prerequisite(s): PHYS 13300 or 14300; PHYS 22100 or MATH 18600 or MATH 20250 (may be concurrent with MATH 18600 or 20250).

PHYS 23500. Quantum Mechanics II. 100 Units.

A review of quantum mechanics is presented, with emphasis on Hilbert space, observables, and eigenstates. Topics include spin and angular momentum, time-independent perturbation theory, fine and hyperfine structure of hydrogen, the Zeeman and Stark effects, many-electron atoms, molecules, the Pauli exclusion principle, and radiative transitions.

Terms Offered: Autumn

Prerequisite(s): PHYS 23400

PHYS 23600. Solid State Physics. 100 Units.

Topics include a review of quantum statistics, crystal structure and crystal binding, lattice vibrations and phonons, liquid helium, the free-electron model of metals, the nearly-free-electron model, semi-conductors, and optical properties of solids.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): PHYS 23500 or 23510; PHYS 27900

PHYS 23700. Nuclei and Elementary Particles. 100 Units.

This course covers topics such as nuclear structure, processes of transformation, observables of the nucleus, passage of nuclear radiation through matter, accelerators and detectors, photons, leptons, mesons, and baryons, hadronic interactions, and the weak interaction.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): PHYS 23500 or 23510

PHYS 24310. Advanced Quantum Mechanics. 100 Units.

This course will include topics not normally covered in PHYS 23410-23510. Topics may include the following: symmetry in quantum mechanics; quantum mechanics and electromagnetism; adiabatic approximation and Berry phase; path integral formulation; scattering.

Terms Offered: Autumn

Prerequisite(s): PHYS 23510

PHYS 25000. Computational Physics. 100 Units.

This course introduces the use of computers in the physical sciences. After an introduction to programming basics, we cover numerical solutions to fundamental types of problems, including cellular automata, artificial neural networks, computer simulations of complex systems, and finite element analysis. Additional topics may include an introduction to graphical programming, with applications to data acquisition and device control. (L)

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): PHYS 13300 or 14300 required; knowledge of computer programming not required

PHYS 25200. Nonlinear Dynamics and Chaos. 100 Units.

This course introduces students to dynamical systems and bifurcation theory. Starting from first-order ordinary differential equations, topics will include limit cycles and nonlinear oscillators, as well as a survey of period doubling and chaos in Hamiltonian and dissipative systems. The treatment will emphasize geometrical intuition and approximate analytical solutions.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): PHYS 18500

PHYS 26400. Spacetime and Black Holes. 100 Units.

This course is an introduction to general relativity, focusing on metrics and geodesics, and treating gravity as the curvature of four-dimensional spacetime. It will begin by fully exploring special relativity, and will then introduce the basic tools of physics in curved spacetime. It will also study black holes, including aspects of the event horizon and singularity, and the properties of orbits in black hole spacetimes.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): PHYS 18500 or consent of instructor

PHYS 27900. Statistical and Thermal Physics. 100 Units.

This course develops a statistical description of physical systems. Topics include elements of probability theory, equilibrium and fluctuations, thermodynamics, canonical ensembles, the equipartition theorem, quantum statistics of ideal gases, and kinetic theory.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): PHYS 23400 or 23510

PHYS 29100-29200-29300. Bachelor's Thesis I-II-III.

This year-long sequence of courses is designed to involve the student in current research. Over the course of the year, the student works on a research project in physics or a closely related field, leading to the writing of a bachelor's thesis. A student who submits a satisfactory thesis, earns a grade of B or higher based on the project, and achieves a GPA of 3.0 or higher in courses required for the major is eligible to receive a BA with honors. The project may be one suggested by the instructor or one proposed by the student and approved by the instructor. In either case, all phases of the project (including the literature search, design and construction of the experiments, and analysis) must be done by the student. The instructor and faculty adviser, as well as members of the adviser's research group, are available for consultation. Note: Students are required to submit the College Reading and Research Course Form in Autumn Quarter. Students receive a grade in each quarter of registration: P/F grading in Autumn and Winter Quarters, and a quality grade in Spring Quarter.

PHYS 29100. Bachelor's Thesis I. 100 Units.

Students are required to submit the College Reading and Research Course Form. P/F grading.

Terms Offered: Autumn

Prerequisite(s): Open to students who are majoring in Physics with fourth-year standing and consent of instructor.

PHYS 29200. Bachelor's Thesis II. 100 Units.

P/F grading.

Terms Offered: Winter

Prerequisite(s): PHYS 29100

PHYS 29300. Bachelor's Thesis III. 100 Units.

Quality grading.

Terms Offered: Spring

Prerequisite(s): PHYS 29200

PHYS 29700. Participation in Research. 100 Units.

By mutual agreement, students work in a faculty member's research group. Participation in research may take the form of independent work (with some guidance) on a small project, or of assistance in research to an advanced graduate student or research associate. A written report must be submitted at the end of the quarter. Students may register for PHYS 29700 for as many quarters as they wish; students need not remain with the same faculty member each quarter. (L)

Terms Offered: Autumn Spring Summer Winter

Prerequisite(s): Consent of instructor and departmental counselor. Open to students who are majoring in Physics with third- or fourth-year standing.

Note(s): Students are required to submit the College Reading and Research Course Form. May be taken for P/F grading with consent of instructor.

Political Science

Department Website: <http://political-science.uchicago.edu>

Program of Study

Political science is the study of governments, public policies, political processes, political behavior, and ideas about government and politics. Political scientists use both humanistic and scientific perspectives and a variety of methodological approaches to examine the political dynamics of all countries and regions of the world, both ancient and modern. Political science contributes to a liberal education by introducing students to concepts, methods, and knowledge that help them understand and judge politics within and among nations. A BA degree in political science can lead to a career in business, government, journalism, education, or nonprofit organizations; or it can lead to a PhD program in the social sciences or to professional school in law, business, public policy, or international relations. Our graduates have gone into all those areas in recent years.

Program Requirements

Course Requirements

The Political Science major requires twelve political science courses and a substantial paper. All students must take three out of the four courses that introduce the fields of political science. All students must also take the required research methods course. Students may meet the writing requirement by completing a BA Thesis or by writing a Long Paper. The BA Thesis and Long Paper options are explained below.

Introductory Course Requirement

To gain a broad understanding of political science, the department's faculty thinks students should take a wide range of courses. To ensure that breadth, students are required to take at least three of the following four courses:

- PLSC 28701 Introduction to Political Theory
- PLSC 28801 Introduction to American Politics
- PLSC 28901 Introduction to Comparative Politics
- PLSC 29000 Introduction to International Relations

Each course will be offered every year, introducing students to the four principal areas of study in political science. The introductory courses must be taken for quality grades.

Research Methods Requirement

To prepare students to evaluate the materials in their classes and to write research papers, students are also required to take the department's research methods course, which will be offered every quarter:

- PLSC 22913 The Practice of Social Science Research

The department also strongly recommends, but does not require, a course in statistics.

Political Science Course Requirement

In addition to the above requirements, students are required to take six to eight Political Science courses of their choosing in order to develop their interests in and knowledge of the field. Those following the Long Paper path, described below, must complete eight courses while those on the BA Thesis path must complete at least six. It may be appropriate for advanced students to pursue an independent study credit (see below). Courses outside Political Science may be considered for the major only by petition. (Please submit the General Petition form (<http://college.uchicago.edu/advising/tools-forms/>), found at college.uchicago.edu/advising/tools-forms (<https://college.uchicago.edu/advising/tools-forms/>), along with a copy of the course syllabus to Pick 406.)

Writing Requirement: Two Options

Students who are majoring in political science must write at least one substantial paper. There are two ways to meet this requirement, by writing a BA Thesis or by submitting a Long Paper.

Option 1: Long Paper

The Long Paper is typically a course paper. It may be written for either a professor in Political Science or a professor in another department whose course is accepted for Political Science credit. Students who write a Long Paper are not required to write a BA Thesis. Students submitting a Long Paper must bring an approval form to the departmental office signed by an instructor who verifies that the paper meets two requirements: (a) the paper is twenty pages or longer, double-spaced (that is, approximately 5,000 words or longer); and (b) the paper received a grade of B or better (that is, a grade of B- or below does not meet the requirement).

The Long Paper might be:

- A class paper for any course used to meet the major's requirements.
- An extended version of a shorter paper written for a course. If a course requires a shorter paper, students may ask the instructor for permission to write a twenty-page paper instead.

- Written for a course that did not require any papers. Students may ask the instructor for permission to write a twenty-page paper, either in place of another assignment, as an extra assignment, or as an ungraded assignment.
- Written for a Political Science instructor after a course is completed. The student could either produce an entirely new paper or, with the instructor's permission, take a shorter assignment and turn it into a longer paper.

If the paper is not a graded assignment for class, it still meets the department's requirement if the instructor attests that it merits a grade of B or better. Unless the paper is written for a graded class assignment, students must ask the instructor's permission to submit any such paper.

Students are responsible for obtaining an approval form ([political-science.uchicago.edu/sites/political-science.uchicago.edu/files/uploads/Long Paper Form.pdf](http://political-science.uchicago.edu/sites/political-science.uchicago.edu/files/uploads/Long%20Paper%20Form.pdf) (<http://political-science.uchicago.edu/sites/political-science.uchicago.edu/files/uploads/Long%20Paper%20Form.pdf>)) to verify the successful completion of the Long Paper from the department office and giving it to the relevant instructor. Please ask the instructor to sign the approval form and return it to the departmental office. The deadline for submitting the approval form (<http://political-science.uchicago.edu/sites/political-science.uchicago.edu/files/uploads/Long%20Paper%20Form.pdf>) and the paper is 4 p.m. on Friday of the second week of the quarter in which the student expects to graduate. Students should complete their paper before their final quarter; the approval form should be submitted to the departmental office as soon as the writing requirement is completed.

Option 2: BA Thesis

Writing a BA Thesis will meet the writing requirement in Political Science and may also qualify a student for consideration for honors; see sections below for more information. In either case, the paper is typically from thirty-five to fifty pages in length (the length of most scholarly articles in professional journals). It must receive a grade of B or higher. Students choose a suitable faculty member to supervise the research and writing. The deadline for submitting two copies of a BA Thesis to the departmental office is 4 p.m. on Friday of the fourth week of the quarter in which the student expects to graduate.

BA Colloquium. Students who choose to write a BA Thesis are required to enroll in PLSC 29800 BA Colloquium in the Spring Quarter of the third year and continue to attend the BA Colloquium in the Autumn Quarter of their fourth year. The colloquium is designed to help students carry out their BA Thesis research and to offer feedback on their progress. *Although the course meets over two quarters, it counts as a single course and has a single grade.* The final grade for the colloquium is based on the student's contribution to the colloquium during both quarters. Students who write a BA Thesis must also enroll in PLSC 29900 BA Thesis Supervision for one quarter, normally Winter Quarter of fourth year (although enrollment may be in any quarter).

A few students each year study abroad in the Spring Quarter of third year or in the Autumn Quarter of the fourth year and also intend to complete the Political Science major by writing a BA Thesis. Students who study abroad in the Spring Quarter are not required to enroll in the BA Colloquium in the Spring Quarter, but are expected to enroll and participate in the BA Colloquium in the Autumn Quarter. Students who study abroad in the Autumn Quarter must enroll in the BA Colloquium in the previous Spring Quarter, but are not required to participate in the Autumn Quarter.

All students who intend to write a BA thesis must submit a proposal for the thesis by the end of Spring Quarter, regardless of residency. Students who are away from campus in the Spring Quarter should line up an adviser and discuss ideas about a thesis topic while they are abroad or even during the Winter Quarter before departure. The department has arranged the BA Thesis process so that students arrive back on campus for fourth year ready to execute the research for the thesis in the Autumn Quarter, rather than compressing research and writing both into the Winter Quarter. Students who will be abroad in Spring Quarter and unable to participate in the Spring BA Colloquium should contact the department's Undergraduate Studies office during the Winter Quarter to receive instructions about the preparations they should expect to make while they are away.

BA Thesis Supervision. During their fourth year, students who choose to write a BA Thesis must register with their BA Thesis faculty adviser for one quarter of PLSC 29900 BA Thesis Supervision. Students may also elect to take a second quarter of PLSC 29900 BA Thesis Supervision, which will count toward the twelve required courses. To enroll, students are required to submit the College Reading and Research Course Form, which is available from the College Advising Reception Desk. The final grade for the course will be based on the grade given the BA Thesis by the faculty adviser. Although most BA Theses are supervised by Political Science professors, the adviser need not be a member of the Department of Political Science.

Summary of Requirements for Students Meeting the Writing Requirement with a Long Paper

Three of the following Political Science courses:		300
PLSC 28701	Introduction to Political Theory	
PLSC 28801	Introduction to American Politics	
PLSC 28901	Introduction to Comparative Politics	
PLSC 29000	Introduction to International Relations	
PLSC 22913	The Practice of Social Science Research	100
Eight additional Political Science courses *		800

Fulfillment of the writing requirement	000
Total Units	1200

* At least five must be courses in Political Science.

Summary of Requirements for Students Meeting the Writing Requirement with a BA Thesis

Three of the following Political Science courses:	300
PLSC 28701	Introduction to Political Theory
PLSC 28801	Introduction to American Politics
PLSC 28901	Introduction to Comparative Politics
PLSC 29000	Introduction to International Relations
PLSC 22913	The Practice of Social Science Research
Six additional Political Science courses *	600
PLSC 29800	BA Colloquium
PLSC 29900	BA Thesis Supervision
Total Units	1200

* At least three must be courses in Political Science.

Pass/Fail Courses

Courses that meet requirements for the major are normally taken for quality grades. The three required introductory courses must be taken for quality grades. However, students may take up to two courses in the major on a *P/F* basis.

Independent Study

Students with extensive course work in Political Science who wish to pursue more specialized topics that are not covered by regular courses have the option of registering for PLSC 29700 Independent Study, to be taken individually and supervised by a member of the Political Science faculty. Students must obtain the prior consent of the program director and the instructor, as well as submit the College Reading and Research Course Form that is available from the College Advising Reception Desk. The substance of the independent study may not be related to the BA Thesis or BA research, which is covered by PLSC 29900 BA Thesis Supervision. Only one PLSC 29700 Independent Study course may count toward requirements for the major.

Honors in the Major

Students who do exceptionally well in their course work and who write an outstanding BA Thesis are recommended for honors in the major. A student is eligible for honors if the GPA in the major is 3.6 or higher and the overall GPA is 3.0 or higher at the beginning of the quarter in which the student intends to graduate. Students who wish to be considered for honors are required to register for PLSC 29800 BA Colloquium and PLSC 29900 BA Thesis Supervision and to submit a BA Thesis. To graduate with department honors, then, a student must have both honors-level grades and a BA Thesis that receives honors.

Double Majors

Students who plan to double major may complete the Political Science requirements by either the BA Thesis option or the Long Paper option. Students who write the BA Thesis must attend the Political Science BA Colloquium *even if the other major also requires attendance at its colloquium*. A request to use a single BA Thesis for two majors requires the approval of both program directors on a form available at college.uchicago.edu/advising/forms-and-petitions (<https://college.uchicago.edu/advising/tools-forms/>).

Courses Taken at Other Universities by Students Who Transfer to the University of Chicago

Student who transfer into the University of Chicago and wish to transfer courses into the major should see the Director of Undergraduate Studies soon after matriculation. The introductory course requirement and the research methods requirement cannot be satisfied by courses taken elsewhere, but courses may be counted toward the major by petition (see college.uchicago.edu/advising/forms-and-petitions (<https://college.uchicago.edu/advising/tools-forms/>)).

Becoming a Political Science Major

Most students declare a major at the end of the second year or beginning of the third. The department encourages students to try out the major even before declaring. To receive announcements about the program in the major and other information about the Department of Political Science, students should sign up for the undergraduate email list either in the departmental office or at <https://lists.uchicago.edu/web/info/ugpolsall> (<https://lists.uchicago.edu/web/info/ugpolsall/>).

Political Science Courses for 2020–21

PLSC 20676. Labor and Liberty in the Scottish Enlightenment. 100 Units.

When we ask children what they want to be when they grow up, we presume their participation in a division of labor. Few concepts in the history of economic thought are as central as the division of labor, or as immediately visible in our social structure. But how did this division evolve? And does specialization encourage social well-being? Theorists of the Scottish Enlightenment treated 'the separation of arts and professions' and 'the distinction of ranks' as an historical development -

one with profound consequences, not just for the accumulation of wealth but, more centrally, for its effect on gender roles, family relations, national security, and the organization of justice. Scottish authors such as Adam Smith, Adam Ferguson, and John Millar debated whether the division of labor was in fact a sign of natural 'progress. We will study how these early sociologists and political theorists treated the future of work - and its effects on education, civic participation, and national cohesion. We will ask whether the rise of specialization has led to social atomization or encouraged new forms of social interdependence. Finally, we will look at how Scottish theories of social division and domination influenced subsequent thinkers, particularly Karl Marx, Emile Durkheim, and Friedrich Hayek.

Instructor(s): Danielle Charette Terms Offered: Course to be taught winter quarter 2021

Equivalent Course(s): SETH 20676

PLSC 21410. Advanced Theories of Gender and Sexuality. 100 Units.

Beginning with the breakup of the New Left and the proliferation of 'new social movements' such as feminism, Black Power, and gay liberation, this seminar explores the key debates around which gender and sexuality were articulated as politically significant categories. How did feminist and queer politics come to be scripted increasingly in terms of identity and its negation? To what extent has a juridical and state-centered conception of politics come to displace quotidian practices of freedom and world-building? What are the limits to rights-oriented political movements? What are the political implications of the recent ontological turn to affect in feminist and queer theory?

Instructor(s): Linda Zerilli Terms Offered: Winter

Note(s): Undergraduates by consent only.

Equivalent Course(s): GNSE 21400, MAPH 36500, ENGL 30201, GNSE 31400, PLSC 31410, ENGL 21401

PLSC 21499. Philosophy and Philanthropy. 100 Units.

Perhaps it is better to give than to receive, but exactly how much giving ought one to engage in and to whom or what? Recent ethical and philosophical developments such as the effective altruism movement suggest that relatively affluent individuals are ethically bound to donate a very large percentage of their resources to worthy causes—for example, saving as many lives as they possibly can, wherever in the world those lives may be. And charitable giving or philanthropy is not only a matter of individual giving, but also of giving by foundations, corporations, non-profits, non-governmental and various governmental agencies, and other organizational entities that play a very significant role in the modern world. How, for example, does an institution like the University of Chicago engage in and justify its philanthropic activities? Can one generalize about the various rationales for philanthropy, whether individual or institutional? Why do individuals or organizations engage in philanthropy, and do they do so well or badly, for good reasons, bad reasons, or no coherent reasons? This course will afford a broad, critical philosophical and historical overview of philanthropy, examining its various contexts and justifications, and contrasting charitable giving with other ethical demands, particularly the demands of justice. How do charity and justice relate to each other? Would charity even be needed in a fully just world? (A)

Instructor(s): B. Schultz Terms Offered: Winter

Note(s): This course will feature a number of guest speakers and be developed in active conversation with the work of the UChicago Civic Knowledge Project and Office of Civic Engagement. Students will also be presented with some practical opportunities to engage reflectively in deciding whether, why and how to donate a certain limited amount of (course provided) funding.

Equivalent Course(s): HMRT 21499, PHIL 21499, MAPH 31499

PLSC 21506. Feminist Politics in the US: Lessons from the Second Wave. 100 Units.

Feminist scholars and activists tend to look back on the second wave in the United States as a failure. Indeed, the movement could not pass the Equal Rights Amendment (ERA) or regulations of pornography, and abortion became legal only because of a Supreme Court decision. Historical accounts often narrate the women's liberation movement as dominated by white, wealthy, straight women, who suppressed the voices of women of color and lesbians. This course returns to the era of the 'second wave' as a vibrant moment for feminism—perhaps more so than contemporary politics—and to the women's liberation movement as an important site of feminist organizing and theorizing. After engaging with four notable activist efforts at political and legal transformation, we move on to read Betty Friedan's famous consciousness-raising text, as well as lesbian manifestos and womanist works that critiqued the mainstream women's liberation movement. We end by considering the ways in which the backlash against the second wave continues to haunt contemporary feminist politics. Questions raised by the course include: What political goals motivated the women's liberation movement, and how did they strive to achieve those goals? What lessons can feminist activists and theorists today take away from the movement? Why do we narrate the second wave, and the women's liberation movement, as a failure? How could re-thinking our treatment of the second wave transform our conception of feminist politics today?

Terms Offered: Winter

Equivalent Course(s): GNSE 21506

PLSC 21538. Racial Universalisms. 100 Units.

This class will discuss the relationship between race and universalism. At first glance, one might think that both terms are opposed, with race as a particular and the universal that which transcends it. The universalism of equal rights, this view would suggest, stands against the divisions drawn along racial lines. But closer inspection reveals that the interplay between race and the discourse of universalism is more complex. In fact, their juxtaposition - as in the seemingly oxymoronic 'racial universalisms' in the plural - arguably leads to the heart of what both concepts are about, both in their theoretical contours and historical trajectories. Particular attention will be given to contemporary debates on race and 'epistemologies of ignorance,' which have provided theoretical tools to understand the systematic and racialized blinding effects that universalist discourse might entail.

Instructor(s): Niklas Plautzer Terms Offered: Winter

Equivalent Course(s): CRES 27538

PLSC 21539. The Politics of Black Queer Feminist Praxis. 100 Units.

This course critically interrogates contemporary 'status quo' power dynamics through a lens of Black Queer Feminism. This course understands Black Queer Feminism as a political praxis that operationalizes intersectionality by seeking to deconstruct normative and hegemonic systems of power. While many of the attendees of the Women's March of 2017 were white, over 53% of white women had just voted for Donald Trump in the 2016 presidential election. This comes at a stark comparison with the 94% of Black women that voted for Hillary Clinton. As one journalist cleverly wrote, this highlights a '53 percent problem in American Feminism'. This seminar-style course, through critical engagement with Black Queer Feminist praxis (thought and action), attempts to reconcile this 53 percent problem. We will begin with a history of Black feminist thought and transition to its contemporary iterations, including trans politics and queer theory. Along with a diasporic and transnational analysis, we will investigate: how do contemporary iterations of radical Black feminism engage with and resist against the state? How does Black Queer Feminism shape politics and society? The syllabus will incorporate readings from various disciplines including political science, sociology, and Black studies and will focus on how the simultaneity of hegemony shapes access to and relationships with power.

Instructor(s): Laterricka Smith Terms Offered: Spring

Equivalent Course(s): CRES 27539, GNSE 27539

PLSC 21540. Slave Abolition and Its Afterlives. 100 Units.

In recent years scholars and activists have (re)turned to the abolitionist movement of the 19th century in order to gain critical traction on the interlocking operations of racism, capitalism, and patriarchy. The return of abolitionism reveals an aspiration to learn from the failures of the past in order to generate new strategies to overcome the structures of domination that pervade our social and political lives. This quarter we will read a series of texts produced before and after the formal end of slavery in the United States with particular attention paid to the revisions, retrospections, and reformulations made to conceptions of freedom. How did abolitionists understand the meaning of freedom before Emancipation? What political transformations did they endorse? Did formal emancipation actualize or reframe the abolitionist imaginary? We will also track two unfulfilled promises in the thought of black scholars and activists: the attempt to secure economic independence for freed slaves and critiques of patriarchal rule within the family. By tracking these political projects, we will raise questions about the re-emergence of abolitionist promises. How does the present trend to appropriate abolition occlude key political disagreements among early and mid-nineteenth century activists? Which strand of abolitionism are we inheriting in the twenty-first century? Why? These questions will anchor our course and help us think about the uses of history for our own political present.

Instructor(s): Larry Svabek Terms Offered: Winter

Equivalent Course(s): HIST 29008, CRES 27540

PLSC 22202. Philosophies of Environmentalism and Sustainability. 100 Units.

Many of the toughest ethical and political challenges confronting the world today are related to environmental issues: for example, climate change, loss of biodiversity, the unsustainable use of natural resources, pollution and toxic waste, and other threats to the well-being of both present and future generations. Using both classic and contemporary works, this course will highlight some of the fundamental and unavoidable philosophical questions presented by such environmental issues. Does the environmental crisis demand radically new forms of ethical and political philosophizing and practice? Must an environmental ethic reject anthropocentrism? If so, what are the most plausible non-anthropocentric alternatives? What counts as the proper ethical treatment of non-human animals, living organisms, or ecosystems? What do the terms 'nature' and 'wilderness' even mean, and should 'natural' environments as such have ethical and/or legal standing? What fundamental ethical and political perspectives inform such approaches as the 'Land Ethic,' ecofeminism, and deep ecology? Is there a plausible account of environmental justice applicable to both present and future generations? Are we now in the Anthropocene, and if so, is 'adaptation' the best strategy at this historical juncture? How can the wild, the rural, and the urban all contribute to a better future for Planet Earth? (A)

Instructor(s): B. Schultz Terms Offered: Autumn

Note(s): Field trips, guest speakers, and special projects will help us philosophize about the fate of the earth by connecting the local and the global. Please be patient with the flexible course organization! Some rescheduling may be necessary in order to accommodate guest speakers and the weather!

Equivalent Course(s): HMRT 22201, PHIL 22209, ENST 22209

PLSC 22205. Utopia's Eclipse? The Horizon of Political Hope in the Wake of Empire and Revolution. 100 Units.

The twentieth century was a time of extraordinary political hope associated with socialist and anti-colonial struggles that promised to usher in new forms of human freedom. However, by the 1980s, this hope had given way to catastrophe as the horizons of revolutionary aspiration characterizing these struggles collapsed. How do we reckon with this collapse, and what does it mean to make a life for oneself in the wake of these failed emancipatory projects? This course explores this question by examining the place of utopian thinking, broadly understood, in the projects of anticolonial and socialist struggle in the twentieth century and by reading this strain of thought in light of the doubts that certain thinkers have raised about the possibility of attaining utopia's promise. Taking as a starting point the idea that utopian thinking—at least in its modern, universalistic form—has always existed in a complex relationship to the figure of the 'savage Other' and the project of Western imperialism, the first half of the course invites students to test this claim against the aspirations advanced by certain anti-colonial and left revolutionaries. In the second half of the course, we turn to recent reflections on the postcolonial predicament and to arguments for renewed utopian thinking to consider what we might learn from the revolutionary failures of the twentieth century and what critical resources this history has yielded to us.

Instructor(s): D. Grant Terms Offered: Winter

Equivalent Course(s): LLSO 22205

PLSC 22400. Public Opinion. 100 Units.

What is the relationship between the mass citizenry and government in the U.S.? Does the public meet the conditions for a functioning democratic polity? This course considers the origins of mass opinion about politics and public policy, including the role of core values and beliefs, information, expectations about political actors, the mass media, economic self-interest, and racial attitudes. This course also examines problems of political representation, from the level of political elites communicating with constituents, and from the possibility of aggregate representation.

Instructor(s): J. Brehm Terms Offered: Spring

Equivalent Course(s): LLSO 26802, CRES 22400

PLSC 22505. Knowledge and Politics. 100 Units.

What is the relationship between knowledge and power, and between science and democracy? What kinds of knowledge are needed in politics, and who needs to know what? In this course we read a number of philosophers, theorists, and social scientists interested in the relationship between knowledge and politics. Topics covered may include: the epistemic properties of political institutions and markets; the role of expertise in politics; values in science and public policy; and theories of epistemic democracy and epistemic injustice. (A)

Instructor(s): M. Landauer Terms Offered: Spring

PLSC 22700. Happiness. 100 Units.

From Plato to the present, notions of happiness have been at the core of heated debates in ethics and politics. What is happiness? Is it subjective or objective? Is it a matter of pleasure or enjoyment? Of getting what one most wants? Of flourishing through the development of one's human capabilities? Of being satisfied with how one's life is going overall? Is happiness the ultimate good for human beings, the essence of the good life and tied up with virtue, or is morality somehow prior to it? Can it be achieved by all, or only by a fortunate few? Can it be measured, and perhaps made the basis of a science? Should it be the aim of education? What causes happiness? Does the wrong notion of happiness lend itself to a politics of manipulation and surveillance? What critical perspectives pose the deepest challenges to the idea that happiness matters? These are some of the questions that this course addresses, with the help of both classic and contemporary texts from philosophy, literature, and the social sciences. The approach will involve a lot of more or less Socratic questioning, which may or may not contribute your personal happiness. (A)

Instructor(s): B. Schultz Terms Offered: Spring

Equivalent Course(s): HUMA 24900, PHIL 21400, GNSE 25200

PLSC 22710. Electoral Politics In America. 100 Units.

This course explores the interactions of voters, candidates, the parties, and the media in American national elections, chiefly in the campaign for the presidency, both in nominating primaries and in the November general election. The course will examine how voters learn about candidates, how they perceive candidates, how they come to turn out to vote, and how they decide among the candidates. It will examine the strategies and techniques of electoral campaigns, including the choices of campaign themes and the impact of campaign advertising. It will consider the role of campaign contributors and volunteers, the party campaign organizations, campaign and media polls, and the press. Finally, it will assess the impact of campaigns and elections on governing and policymaking.

Instructor(s): M. Hansen Terms Offered: Autumn

Equivalent Course(s): LLSO 22710, AMER 22710

PLSC 22755. The Idea of Africa. 100 Units.

The Idea of Africa, a new interdisciplinary course, offers undergraduates students an opportunity to engage critically with key philosophical and political debates about contemporary Africa on the continent and globally. The course takes its title from V.Y. Mudimbe's 1994 book which builds on his earlier work *The Invention of Africa*. It asks three questions: (1) How and to what purposes has Africa been conceived as metaphor and concept. (2) How might we locate Africa as a geographic site and conceptual space to think through contemporary debates about citizenship, migration and new structures of political economy? (3) What futures and modes of futurity are articulated from the space and metaphor of Africa? This lecture course co-thought in an interdisciplinary mode will include public guest lectures, field trips, and engagement with visual arts, and film related to the themes of the course. The course will be divided into the following four sections: 1) Inventing Africa; 2) Political Trajectories; 3) Afro-Mobilities; 4) Afro-Futures.

Instructor(s): Natacha Nsabimana & Adom Getachew Terms Offered: Spring, Spring 2021

Equivalent Course(s): CRES 22755, ANTH 22755

PLSC 22805. Empire, Law, and Global Justice. 100 Units.

In this research seminar we will read recent scholarship examining the law and politics of empire from the early modern period through the early twentieth century. Empires present particular problems of constitutional law, in particular the relationship between center and periphery. They are sites of conflict over membership, commerce, and the rights of colonized peoples. They are arenas in which conceptions of sovereignty, authority, and regulation are created and fought over. We will read works by historians, political scientists, and legal scholars that situate these issues in the context of particular empires, in both the Atlantic and Pacific worlds, as well as in relation to a more broadly imperial global order.

Instructor(s): J. Pitts Terms Offered: Winter

Equivalent Course(s): PLSC 42805

PLSC 22913. The Practice of Social Science Research. 100 Units.

This is a first course in empirical research as it is practiced across a broad range of the social sciences, including political science. It is meant to enable critical evaluation of statements of fact and cause in discussions of the polity, economy, and society. One aim is to improve students' ability to produce original research, perhaps in course papers or a senior thesis. A second objective is to improve students' ability to evaluate claims made by others in scholarship, commentary, or public

discourse. The specific research tools that the course develops are statistical, but the approach is more general. It will be useful as a guide to critical thinking whether the research to be evaluated, or to be done, is quantitative or not. Above all, the course seeks to demonstrate the use of empirical research in the service of an argument.

Instructor(s): P. Conley Terms Offered: Autumn, Spring, Winter

PLSC 23100. Democracy and the Information Technology Revolution. 100 Units.

The revolution in information technologies has serious implications for democratic societies. We concentrate, though not exclusively, on the United States. We look at which populations have the most access to technology-based information sources (the digital divide), and how individual and group identities are being forged online. We ask how is the responsiveness of government being affected, and how representative is the online community. Severe conflict over the tension between national security and individual privacy rights in the U.S., United Kingdom, and Ireland will be explored as well. We analyze both modern works (such as those by Turkle and Gilder) and the work of modern democratic theorists (such as Habermas).

Instructor(s): M. Dawson Terms Offered: Spring

Equivalent Course(s): LLSO 27101

PLSC 23501. International Political Economy. 100 Units.

What explains a government's decision to block a trade deal, prevent foreign investors from gaining control of a local factory, or ban the export of rare earth minerals? This course develops theory and evidence that these decisions reflect domestic and international politics. We will discuss the political dimension of the integration of the global economy and the way that globalization separates workers, business, and consumers. Drawing on methods and theory from international political economy, we will critically examine the prospects for international cooperation on trade and immigration, as well as the future of international governance.

Instructor(s): R. Gulotty Terms Offered: Spring

PLSC 24210. Politicizing the Passions: Emotions and Collective Action. 100 Units.

The first objective of this course is to develop a critical understanding of the different disciplinary and methodological approaches to emotion and its place in political life. To that end, we will begin by analyzing how rationality and emotion are conceptualized and theorized in different disciplines. Throughout the course we will consider the conceptions and methodologies of competing models of the place of emotion in politics, examining both macro and micro approaches, and considering questions such as: how do we measure emotions? Are emotions primarily physiological or cognitive? Are emotions at base universal or socially and culturally constructed? What are the processes by which private, individual emotions become public, collective, and politically relevant? The first half of the course is organized thematically by political effect. The second half of the course is designed to discern patterns and identify concrete ways that specific emotions—such as fear, shame, anger, and hope—shape politics.

Instructor(s): Mekawy, Yasmeen Terms Offered: Spring

Equivalent Course(s): GLST 24210

PLSC 24741. Politics and Popular Culture in the Middle East. 100 Units.

This course will examine the relationship between popular culture and politics in the MENA. Pop culture, such as cinema, television, street art, music, and social media, has been a means of both resisting and shoring up authority, of affirming and subverting societal norms and taboos, and of motivating and expressing political action. We will critically examine examples of pop culture from societies throughout the region, analyzing their connection to power structures and changes in ideology and nationalism, gender/class/religious identity and practice, militarism and insurgency, and state power. This course will draw on research approaches in anthropology, sociology, media studies, and political science to theorize the role of popular culture in reflecting, challenging, and expanding political horizons in the region.

Instructor(s): Mekawy, Yasmeen Terms Offered: Autumn

Equivalent Course(s): GLST 24741

PLSC 25311. Models of Ancient Politics I: Athens, Sparta, Rome. 100 Units.

This course begins a two-quarter sequence on Athens, Sparta, and Rome as models of politics and their subsequent reception and appropriation in the history of Western political thought. This quarter, we will focus on understanding the institutions, political culture, and political theory of ancient Greece and Rome through an engagement with ancient texts and modern scholarship. Readings will include Thucydides, Plato, Aristotle, Xenophon, Plutarch, Polybius, Livy, and Sallust.

Instructor(s): M. Landauer Terms Offered: Winter

Equivalent Course(s): PLSC 35311

PLSC 25312. Models of Ancient Politics II: Modern Receptions. 100 Units.

This is the second course in a two-quarter sequence on the importance of Athens, Sparta, and Rome for Western political theory. This quarter we will focus on the reception and appropriation of ancient political models in modern European political thought. Authors to be read include Machiavelli, Montesquieu, Adams, Hume, Rousseau, Mill, and Grote, as well as modern scholars.

Instructor(s): M. Landauer Terms Offered: Spring

Equivalent Course(s): PLSC 35312

PLSC 25350. The Arab Uprisings: Social Movements and Revolution in the MENA. 100 Units.

This course examines the reasons for and variations in contemporary uprisings in the Middle East. At once theoretical and empirical, the class focuses on events in Tunisia, Egypt, Yemen, Bahrain, Syria, Libya in the first wave, followed by Sudan, Algeria, Lebanon, and Iraq in the second wave, considering them in relation to prevailing social scientific theories of change and management. We will cover the following topics: the causes and meanings of 'revolution'; the rise of new social movements in a neoliberal era; authoritarianism and the various roles of the military; the importance of digital

publics; popular culture and artistic practices in the context of ongoing tumult; cultural, generational, and gender dynamics; the causes of civil war; and the influence of regional and international super-powers. Throughout the class we will make connections between the Arab uprisings and theories of social movements and revolutions, evaluating different lenses of analysis, such as the state, class, and culture and ideology. In addition to academic texts, the course will also draw on a wide range of other materials such as memoirs, short films, documentaries, songs, and social media.

Instructor(s): Mekawy, Yasmeen Terms Offered: Autumn

Equivalent Course(s): GLST 25350

PLSC 25610. Authority, Obligation, and Dissent. 100 Units.

What is the basis of political authority? What, if anything, makes it legitimate? Under what conditions are we obliged to follow the laws and orders of government authorities? Under what conditions can we legitimately disobey such laws or orders, or even engage in violent rebellion? How have some of the most influential political thinkers answered such questions historically and which of their theories are most helpful for illuminating these issues for us today? Readings include classic writings by Plato, Hobbes, Locke, Burke, Paine, Kant, Thoreau, Gandhi, Fanon, and Martin Luther King, Jr.

Instructor(s): S. Muthu Terms Offered: Winter

Equivalent Course(s): LLSO 25610

PLSC 25705. Radical Enlightenment. 100 Units.

An examination of some of the roots of radical critical theory in the writings of a variety of European eighteenth-century thinkers on topics such as despotism, prejudice, oligarchic interests, slavery, empire, sex/gender equality, private/public goods, state power, and revolution/reform.

Instructor(s): S. Muthu Terms Offered: Spring

PLSC 26205. American Political Economy and Race. 100 Units.

This course will explore how individual or group identity and social location is understood in economics. Specifically, we will use a political economy framework, which emerges from the premise that economic life has material, cultural, and political dimensions and that an individual's (or group's) identity or social location--e.g., race, gender, and class--may constrain or empower agents in their participation in economic and political life. The readings will draw from diverse disciplines including political science, economics, and sociology and will focus primarily on the intersection of race and class.

Instructor(s): P. Posey Terms Offered: Winter

Equivalent Course(s): CRES 26205

PLSC 26244. Research Approaches to Global New Media. 100 Units.

The development of new media technology has prompted questions about and challenges to conceptions of power, knowledge, and subjectivity. In this course we will examine how different groups around the world use digital media in the construction of new identities, subcultures, virtual public spheres, and new forms of political participation. This course will equip students with methodological tools for studying new media, including discourse analysis, digital ethnography, and other interpretive methods. The goal of this course is not only to acquaint students with the theoretical and epistemological underpinnings of such methods, but to put them into practice through class exercises and a final multi-media research project.

Instructor(s): Mekawy, Yasmeen Terms Offered: Spring

Equivalent Course(s): ENST 26244, GLST 26244

PLSC 26502. Race and Criminal Justice Systems in the US. 100 Units.

This course will familiarize students with major themes in research on criminal justice and race in the United States. These include how racial hierarchies influence legislation, the role criminal justice plays in racial construction, the functioning of bureaucracies in racialized societies, the political consequences of criminal justice policy, and the historical development of the contemporary criminal justice system.

Instructor(s): A. McCall Terms Offered: Autumn

Equivalent Course(s): CRES 26502

PLSC 26603. Democracy and the Immigrant in Classical Greek Thought. 100 Units.

Readers have long marveled at classical Greek thought's ability to capture the enduring dilemmas of democratic life. But on the increasingly urgent issue of immigration, political scientists persistently bypass the Athenian democratic polis and its critics even though Athenians lived in a democracy that invited, but kept disenfranchised, a large number of free, integrated immigrants called 'metics' (metoikoi). With this curiosity in mind, we seek to understand how ancient philosophers, dramatists, and orators saw the democracy's dependence on immigrants to support its economy, fight its wars, educate its citizenry, and express a precarious way of living in the polis. On what grounds were metics excluded from citizenship? What do critics think citizenship comes to mean under such conditions? Can they shed new light on contemporary assumptions about the relationship between democracy and immigration? Readings of primary texts in translation will be paired with contemporary political theory, gender theory, and classical studies.

Instructor(s): D. Kasimis Terms Offered: Spring

Equivalent Course(s): CRES 26603

PLSC 26615. Democracy's Life and Death. 100 Units.

How are democracies founded and maintained? What are their advantages and disadvantages with respect to stability, security, liberty, equality, and justice? Why do democracies decline and die? This course addresses these questions by examining democracies, republics, and popular governments in both the ancient and modern worlds. We will read and discuss primary texts from and social scientific analyses of Athenian democracy, the Roman Republic, the United States, and modern representative governments throughout the globe.

Instructor(s): J. McCormick, D. Kasimis Terms Offered: Autumn
Equivalent Course(s): LLSO 26615

PLSC 26920. Freedom, Justice and Legitimacy. 100 Units.

In this course we will explore two main questions, which are central to both contemporary political theory and political discourse: (1) how different concepts and conceptions of freedom ground different theories of social justice and political legitimacy and (2) how to understand the relationship between justice and legitimacy. To what extent are justice and legitimacy separate ideas? Does legitimacy require justice? Are just states necessarily legitimate? We will critically analyze and normatively assess how different contemporary theories have answered, whether explicitly or implicitly, such questions. The course will focus on five major contemporary theories: liberal-egalitarianism as represented by the work of John Rawls; libertarianism, as represented by the work of Robert Nozick, neo-Lockean theories as represented by the work of John Simmons, neo-republicanism as represented by the work of Philip Pettit, and neo-Kantian theories as represented by the work of Arthur Ripstein.

Instructor(s): C. Cordelli, J. Wilson Terms Offered: Autumn
Equivalent Course(s): PLSC 36920, LLSO 26920

PLSC 27002. Norms, Ideas, and Identity in International Politics. 100 Units.

This advanced seminar examines the role of norms, ideas, and identities in world politics. The main goal is to help students understand academic and policy debates over the role of non-material factors in theories of international politics. Our emphasis will be on the tradition of constructivist scholarship in International Relations, its trajectory, and its critics. This course is intended for advanced undergraduates (political science majors and non-majors welcome) with prior coursework in International Relations.

Instructor(s): R. Terman Terms Offered: Spring

PLSC 27301. Weimar Political Theology: Schmitt and Strauss. 100 Units.

This course is devoted to the idea of 'political theology' that developed during the interwar period in twentieth-century Central Europe, specifically Germany's Weimar Republic. The course's agenda is set by Carl Schmitt, who claimed that both serious intellectual endeavors and political authority require extra-rational and transcendent foundations. Along with Schmitt's works from the period, such as *Political Theology* and *The Concept of the Political*, we read and discuss the related writings of perhaps his greatest interlocutor, Leo Strauss.

Instructor(s): J. McCormick Terms Offered: Spring
Prerequisite(s): Consent of instructor.
Equivalent Course(s): PLSC 37301, FNDL 27301

PLSC 27500. Organizational Decision Making. 100 Units.

This course examines the process of decision making in modern, complex organizations (e.g., universities, schools, hospitals, business firms, public bureaucracies). We also consider the impact of information, power, resources, organizational structure, and the environment, as well as alternative models of choice.

Instructor(s): J. Padgett Terms Offered: Winter

PLSC 27541. Race, Capitalism and the Atlantic World. 100 Units.

This course serves as an introduction to the long history of racial capitalism. While understandings of racial capitalism vary across disciplines and historical periods, this interdisciplinary course will focus on the construction of the Black Atlantic world as a way of understanding how race, capitalism and gender are constitutive elements of modernity. Taking the Black Atlantic as both a discursive formation and historical world-event, the course will explore the articulations of power made possible by the modern geography of the Atlantic world. The course will necessarily draw from sources both historically minded and theoretically rich, encouraging students to consider how the development of modern regimes of racialization and capitalism inform contemporary understandings of race, gender and power.

Instructor(s): Cameron Cook Terms Offered: Autumn
Equivalent Course(s): CRES 27541

PLSC 27703. Exemplary Leaders: Livy, Plutarch, and Machiavelli. 100 Units.

Cicero famously called history the 'schoolmistress of life.' This course explores how ancient and early modern authors—in particular, Livy, Plutarch, and Machiavelli—used the lives and actions of great individuals from the Greek and Roman past to establish models of political behavior for their own day and for posterity. Such figures include Solon, Lycurgus, Alexander, Romulus, Brutus, Camillus, Fabius Maximus, Scipio Africanus, Julius Caesar, and Augustus. We will consider how their actions are submitted to praise or blame, presented as examples for imitation or avoidance, and examine how the comparisons and contrasts established among the different historical individuals allow new models and norms to emerge. No one figure can provide a definitive model. Illustrious individuals help define values even when we mere mortals cannot aspire to reach their level of virtue or depravity. Course open to undergraduates and graduate students. Readings will be in English. Students wishing to read Latin, Greek, or Italian will receive support from the professors.

Instructor(s): J. McCormick, M. Lowrie Terms Offered: Winter
Equivalent Course(s): CLAS 37716, PLSC 47703, FNDL 27716, CLCV 27716

PLSC 27815. Politics and Public Policy in China. 100 Units.

This course offers a historical and thematic survey of Chinese politics and of salient issues in China's public policy. We review the patterns and dynamics of political development or lack thereof in the Mao and reform eras, including the Great Leap Forward, the Cultural Revolution, and the politics of reforms. Later sections of the course look at China's political institutions, leadership, as well as various issues of governance and public policy, including state-society relations, the relationship between Beijing and the provinces, corruption, population and environment. Emphasis is on how institutions have provided the incentives for change as well as how institutions have been transformed.

Instructor(s): D. Yang Terms Offered: Winter
Equivalent Course(s): LLSO 27815

PLSC 28301. Nuclear Weapons and International Politics. 100 Units.

The aim of this course is to examine: 1) the impact of nuclear weapons on the conduct of international politics; 2) how states think about employing nuclear weapons in a war; 3) the different theories of nuclear deterrence; and 4) the causes and consequences of nuclear proliferation.

Instructor(s): J. Mearsheimer Terms Offered: Spring

PLSC 28400. American Grand Strategy. 100 Units.

This course examines the evolution of American grand strategy since 1900, when the United States first emerged on the world stage as a great power. The focus is on assessing how its leaders have thought over time about which areas of the world are worth fighting and dying for, when it is necessary to fight in those strategically important areas, and what kinds of military forces are needed for deterrence and war-fighting in those regions.

Instructor(s): J. Mearsheimer Terms Offered: Winter
Equivalent Course(s): PLSC 49500

PLSC 28405. Democratic Erosion. 100 Units.

Until recently, democracies died dramatic deaths. Tanks rolled out, politicians were arrested, a free press was suddenly closed. In recent years, the coup d'état is being replaced by slower and less easily identified challenges to democratic governance. The attacks often arise from within, as elected leaders chip away at democratic institutions and norms. What are the causes of the erosion of democracy? What are the early warning signs, and can it be reversed? This course, which is being taught in tandem among 35 universities across the U.S. and several abroad, delves deeply into these themes. It offers students opportunities to write policy briefings and to blog about challenges to democracy in the world today.

Instructor(s): S. Stokes Terms Offered: Autumn

PLSC 28602. American National Security Strategy. 100 Units.

This course surveys contemporary National Security Strategy around the world, focusing on the most urgent and important issues of the U.S. national security agenda. The purpose of the course is to help students better understand how the U.S. formulates national security strategy, key debates over how the U.S. should handle contemporary challenges, and provide important conceptual frameworks that will enable students to grapple with the security challenges of the decade ahead. The course covers recent changes in American grand strategy, nuclear policy, and the use of conventional forces in contemporary conflicts.

Instructor(s): R. Pape Terms Offered: Spring
Equivalent Course(s): PLSC 38602

PLSC 28620. The Intelligible Self. 100 Units.

The Delphic maxim 'know thyself' is one of the cornerstones of Western philosophy. But how, exactly, do we figure ourselves out? This course examines three approaches to self-knowledge: Buddhism, Psychoanalytic Theory, and Social Neuroscience. We will learn both the theories behind each approach and how they can foster deeper perspectives on our own condition. We will explore the nature of love, guilt, anxiety, and other emotions, the origins of morality, and the many biases in our cognition. Readings include Sigmund Freud, Patricia Churchland, Daniel Kahneman, Pema Chodron, and Walpola Sri Rahula.

Instructor(s): E. Oliver Terms Offered: Autumn

PLSC 28701. Introduction to Political Theory. 100 Units.

This course will address several major, pressing questions of political morality, and introduce students to theoretical approaches to those questions. The class aims to develop students' abilities to address political problems in rigorous and thoughtful ways. Topics will include property rights and distributive justice; the meaning of freedom and equality; arguments for and against democracy and the proper design of democratic institutions; war and the use of force; racial and gender justice; and global economic justice and human rights. The focus will be on contemporary approaches to these problems rather than on classical works of political thought. Familiarity with some such works will be helpful but is not required.

Instructor(s): J. Wilson Terms Offered: Autumn

PLSC 28765. The Politics of Authoritarian Regimes. 100 Units.

This course provides an overview of topics related to politics in authoritarian regimes. We begin by introducing the concept of authoritarianism: how it differs from democracy and how authoritarian regimes differ from each other. We then investigate the tools authoritarian rulers employ to maintain power, including institutions, policies, and tactics, and we examine the effects and side effects of these tools. Finally, we study transitions of power and of institutions, both on the way out of authoritarianism (democratization) and on the way in (democratic backsliding). Students who take this course will acquire a broad understanding of authoritarian politics and how it is covered in the literature.

Instructor(s): Scott Gehlbach; Zhaotian Luo Terms Offered: Winter
Prerequisite(s):

Note(s): Prior recommended coursework: one semester in Statistics (Stats 220 or equivalent) and current or prior training in game theory (PBPL 222, Social Science Inquiry core, or equivalent).

Equivalent Course(s): PBPL 28765

PLSC 28801. Introduction to American Politics. 100 Units.

This survey course canvasses the basic behavioral, institutional, and historical factors that comprise the study of American politics. We will evaluate various modes of survey opinion formation and political participation both inside and outside of

elections. In addition to studying the primary branches of U.S. government, we will consider the role of interest groups, the media, and political action committees in American politics. We also will evaluate the persistent roles of race, class, and money in historical and contemporary political life.

Instructor(s): R. Bloch Rubin Terms Offered: Autumn

PLSC 28901. Introduction to Comparative Politics. 100 Units.

Why are some nations rich and others are poor? Why is inequality skyrocketing across the developed world? Why are some countries democratic and others are dictatorships, and what determines switching between regimes? Does democracy matter for health, wealth, and happiness? Why are some countries beset by civil violence and revolution whereas others are politically stable? Why do political parties organize themselves politically around ethnicity, language, religion, or ideology? This course explores these and other similar questions that lie at the core of comparative politics. Drawing on political science, economics, sociology, and anthropology, while utilizing a wealth of data and case studies of major countries, we will examine how power is exercised to shape and control political, cultural, and economic institutions and, in turn, how these institutions generate policies that affect what we learn, what we earn, how long we live, and even who we are.

Instructor(s): M. Albertus, M. Nalepa Terms Offered: Spring

PLSC 29000. Introduction to International Relations. 100 Units.

Humans face many challenges today. These range from wars and nuclear proliferation, to economic crises and the collapse of global order. International Relations-the study of global anarchy and the commitment problems it creates between sovereign governments-offers analytical tools for understanding the causes and consequences of these challenges. This course introduces students to the scientific study of world politics, focusing on the areas of security, economic cooperation, and international law.

Instructor(s): P. Poast Terms Offered: Autumn

PLSC 29102. Game Theory I. 100 Units.

This course introduces students to games of complete information through solving problem sets. We will cover the concepts of dominant strategies, rationalizable strategies, Nash equilibrium, subgame perfection, backward induction, and imperfect information. The course will be centered around several applications of game theory to politics: electoral competition, agenda control, lobbying, voting in legislatures and coalition games.

Instructor(s): M. Nalepa Terms Offered: Autumn

Prerequisite(s): PLSC 40801 Social Choice Theory and PLSC 43401 Mathematical Foundations of Political Methodology or consent of instructor

Equivalent Course(s): PLSC 30901

PLSC 29103. Game Theory II. 100 Units.

This course introduces students to games of incomplete information and several advanced topics through solving problem sets. We will cover the concepts of Bayes Nash equilibrium, perfect Bayesian equilibrium, and the basics of mechanism design and information design. In terms of applications, the course will extend the topics examined in the prerequisite, PLSC 30901. Game Theory I to allow for incomplete information, with a focus on the competing challenges of moral hazard and adverse selection in those settings.

Instructor(s): Z. Luo Terms Offered: Winter

Prerequisite(s): PLSC 30901 or equivalent and consent of instructor. Undergraduates by consent only.

Equivalent Course(s): PLSC 31000

PLSC 29700. Independent Study. 100 Units.

This is a general reading and research course for independent study not related to the BA thesis or BA research.

Terms Offered: Autumn Spring Summer Winter

Prerequisite(s): Consent of faculty supervisor and program chair.

Note(s): Students are required to submit the College Reading and Research Course Form.

PLSC 29800. BA Colloquium. 100 Units.

The colloquium is designed to help students carry out their BA thesis research and offer feedback on their progress.

Terms Offered: Autumn Spring

Note(s): Required of students who are majoring in political science and plan to write a BA thesis. Students participate in both Spring and Autumn Quarters but register only in the Spring Quarter of the third year. PLSC 29800 counts as a single course and a single grade is reported in Autumn Quarter.

PLSC 29900. BA Thesis Supervision. 100 Units.

This is a reading and research course for independent study related to BA research and BA thesis preparation.

Terms Offered: Autumn Spring Summer Winter

Note(s): Required of fourth-year students who are majoring in political science and plan to write a BA thesis. Students are required to submit the College Reading and Research Course Form.

Psychology

Department Website: <http://psychology.uchicago.edu>

Program of Study

Psychology is the study of the mental states and processes that give rise to behavior. It seeks to understand the basic mechanisms and functions of perception, cognition, emotion, and attitudes in guiding behavior. Although it focuses on the level of the individual, individual behavior depends on the social relationships and structures in which people are embedded and the biological systems of which we are comprised. Thus, psychological study encompasses a broad set of topics that overlap with a number of disciplines across the social and biological sciences. The requirements of the major are designed to acquaint students with the research methods psychologists use and to provide a foundation of core knowledge covering the major areas of psychology. This broad foundation allows students to pursue a more advanced understanding of subfields related to their own particular interests and goals for the major. The program may serve as preparation for graduate work in psychology or related fields (e.g., neuroscience, education), as well as for students interested in careers in social work, public policy, business, or medicine. Students are encouraged to become actively engaged in research in the department and should consult with the director of undergraduate research about their interests as early as possible.

Program Requirements

Although no special application is required for admission to the major, majors are required to:

1. Inform the Department of Psychology by completing an enrollment form available from the department student affairs administrator in Beecher 109 and inform their College adviser.
2. Subscribe to the Psychology Majors Listhost at lists.uchicago.edu/web/info/psychology-majors/ (<https://lists.uchicago.edu/web/info/psychology-majors/>). The listhost is the primary means of communication between the program and its majors or students interested in being majors. We use it to notify students of events relevant to psychology majors, such as research opportunities, job postings, fellowship announcements, and any changes in the course schedule, or curriculum updates.

NOTE: The following revised requirements are in effect for students who matriculated September 2014 and after. Students who matriculated prior to September 2014 should consult the College Catalog archives for the requirements that pertain to them.

NOTE: When planning your course schedule, please consult Class Search at registrar.uchicago.edu/classes/ and the Courses section (<http://psychology.uchicago.edu/content/courses-2017-18/>) of the Psychology Department Undergraduate Program website for any changes in the course offerings.

Statistics/Methodology Sequence

By the end of their third year, psychology majors are required to complete PSYC 20200 Psychological Research Methods and one of the following courses: PSYC 20250 Introduction to Statistical Concepts and Methods, STAT 22000 Statistical Methods and Applications, or PSYC 20100 Psychological Statistics (if taken Autumn Quarter 2018 or earlier). It is strongly recommended that these courses be taken as early as possible as they provide foundational concepts that facilitate understanding of subject area courses. These two courses cover the conceptual and methodological issues (PSYC 20200) and the statistical methods (PSYC 20250, STAT 22000, or PSYC 20100) used in psychological science and are typically taught in Autumn and Winter Quarters. We advise students to take PSYC 20200 Psychological Research Methods prior to taking statistics, but either order is acceptable.

Beginning with the Class of 2019, students with AP examination credit for STAT 22000 Statistical Methods and Applications may not count that credit toward the major and should instead replace that requirement with a higher-level statistics course or an additional psychology elective. Students interested in graduate programs in psychology or other empirical sciences are strongly encouraged to take a higher level statistics course.

Breadth Requirement

Students are required to take four of the following five courses, each of which will be offered every year:

PSYC 20300	Biological Psychology	100
PSYC 20400	Cognitive Psychology	100
PSYC 20500	Developmental Psychology	100
PSYC 20600	Social Psychology	100
PSYC 20700	Sensation and Perception	100

Additional Courses

At least six additional courses (for a total of twelve in the major) must be chosen from among the courses offered by the Department of Psychology. Courses without a PSYC number must be approved by the Curriculum Committee; petitions must be submitted to the undergraduate program chair. Only one independent study course can count toward the twelve courses required of students who are majoring in psychology (PSYC 29200 Undergrad Rdgs: Psychology or PSYC 29700 Undergraduate Research in Psychology). In addition to the six electives, students pursuing honors in psychology must also take the PSYC 29800 Honors Seminar: Psychology. Independent study courses can be taken for P/F grading, but all other

courses must be taken for a quality grade. NOTE: Before registering for an elective, students should confirm that they have met any prerequisites for the course.

Research

Students are required to take PSYC 20200 Psychological Research Methods. Students are encouraged to gain additional experience by working on a research project under the guidance of a faculty member.

Calculus

Students are required to take two quarters of calculus as part of the College general education requirements.

NOTE: For psychology students, a maximum of three courses can be transferred into the major from outside the University of Chicago.

Summary of Requirements

GENERAL EDUCATION

MATH 13100-13200	Elementary Functions and Calculus I-II (or higher) [†]	200
Total Units		200

MAJOR

PSYC 20200	Psychological Research Methods (by end of third year)	100
One of the following (by end of third year): *		100
PSYC 20250	Introduction to Statistical Concepts and Methods	
STAT 22000	Statistical Methods and Applications	
PSYC 20100	Psychological Statistics	
Four of the following:		400
PSYC 20300	Biological Psychology	
PSYC 20400	Cognitive Psychology	
PSYC 20500	Developmental Psychology	
PSYC 20600	Social Psychology	
PSYC 20700	Sensation and Perception	
Six electives ⁺		600
Total Units		1200

[†] Credit may be granted by examination.

* Examination credit for PSYC 20250 Introduction to Statistical Concepts and Methods, PSYC 20100 Psychological Statistics, or STAT 22000 Statistical Methods and Applications will not count toward the requirements for the major. Students with credit for PSYC 20250, PSYC 20100, or STAT 22000 should replace that requirement with a higher level Statistics course or an additional psychology elective.

+ Courses without a PSYC number must be approved by the Curriculum Committee; petitions must be submitted to the undergraduate program chair.

Grading

All courses in the major must be taken for quality grades except for the independent study course, which is available for either a quality grade or for P/F grading.

Honors

To qualify for honors, students must meet the following requirements:

- Students must have a GPA of at least 3.0 overall, and a GPA of at least 3.5 in the major by the beginning of the quarter in which they intend to graduate.
- Students should arrange to write an honors paper with a faculty advisor from the Department of Psychology. Papers must represent a more substantial research project than the average term paper. After the paper has been approved by the faculty sponsor, the paper must then be read and approved by a second faculty member.
- Students are required to take PSYC 29800 Honors Seminar: Psychology in Winter Quarter of their third or fourth year. This is in addition to the twelve required courses for the major. It is expected that students will be actively working on the thesis project during the quarter they are taking the honors research seminar.
- Students are required to present their findings in Spring Quarter of their fourth year at an honors day celebration. For details, visit psychology.uchicago.edu (<http://psychology.uchicago.edu>).

Specialized Courses of Study

Faculty members (or the undergraduate program chair) are available to help individual students design a specialized course of study within psychology. For example, particular course sequences within and outside of psychology may be designed for students who wish to pursue specializations in particular areas. These areas include, but are not limited

to, cognitive neuroscience, language and communication, computational psychology, behavioral neuroscience and endocrinology, sensation and perception, and cultural psychology.

Double Majors

Students pursuing honors in more than one major should note that:

1. The student's thesis adviser for psychology cannot be the same person as his or her thesis adviser for the second major.
2. The student must meet all the requirements listed in the preceding Honors section, including taking the Honors Seminar and presenting at an honors day celebration.

Earl R. Franklin Research Fellowship

The Earl R. Franklin Research Fellowship is awarded to select third-year students who are majoring in psychology. It provides financial support during the summer before his or her fourth year to carry out psychological research that will be continued as a senior honors project. Applications, which are submitted at the beginning of Spring Quarter, include a research proposal, personal statement, transcript, and letter of recommendation.

Psychology Courses

PSYC 20200. Psychological Research Methods. 100 Units.

This course introduces concepts and methods used in behavioral research. Topics include the nature of behavioral research, testing of research ideas, quantitative and qualitative techniques of data collection, artifacts in behavioral research, analyzing and interpreting research data, and ethical considerations in research.

Instructor(s): K. Ledoux Terms Offered: Autumn

PSYC 20209. Adolescent Development. 100 Units.

Adolescence represents a period of unusually rapid growth and development. At the same time, under the best of social circumstances and contextual conditions, the teenage years represent a challenging period. The period also affords unparalleled opportunities with appropriate levels of support. Thus, the approach taken acknowledges the challenges and untoward outcomes, while also speculates about the predictors of resiliency and the sources of positive youth development.

Instructor(s): M. Spencer Terms Offered: Spring

Prerequisite(s): Students will have previously taken one other course in CHDV

Note(s): CHDV Distribution: B

Equivalent Course(s): EDSO 20209, CHDV 20209

PSYC 20250. Introduction to Statistical Concepts and Methods. 100 Units.

Statistical techniques offer psychologists a way to build scientific theories from observations we make in the laboratory or in the world at large. As such, the ability to apply and interpret statistics in psychological research represents a foundational and necessary skill. This course will survey statistical techniques commonly used in psychological research. Attention will be given to both descriptive and inferential statistical methodology.

Instructor(s): TBD Terms Offered: Winter

Prerequisite(s): It is recommended that students complete MATH 13100 and MATH 13200 (or higher) before taking this course.

Equivalent Course(s): EDSO 20250, ENST 20250

PSYC 20260. Introduction to Behavioral Research Methods: From Design to Statistical Analysis. 100 Units.

The course will take a novel approach to these topics that integrates an understanding of research designs and methods with the descriptive and inferential statistical techniques used to interpret and learn from data. The primary goal of the course is for students to learn how to establish an empirical relationship between theory and data, and identify the inferences this relationship licenses. More specifically, students will gain experience in how to (1) form testable hypotheses, (2) devise and implement appropriate research methods and designs, (3) describe and analyze resulting data, and (4) interpret and report results. Through this process, students will learn to recognize and understand a variety of research designs, data collection methods, and statistical models that psychologists and other social scientists use to address research questions about the psychological states and processes that drive individual behavior. While topics will include naturalistic observation of behavior and large-scale surveys, the primary focus of the course will be on experimental methods and designs and the statistical methods and models appropriate to them. In addition to designing studies and collecting data, students will also learn how to use statistical software for data management and analysis, and how to report the results of their studies in accordance with APA guidelines. This course will expose students in a very direct way to the process by which psychological science is done.

Terms Offered: Summer

Equivalent Course(s): SOSC 20260

PSYC 20300. Biological Psychology. 100 Units.

What are the relations between mind and brain? How do brains regulate mental, behavioral, and hormonal processes; and how do these influence brain organization and activity? This course introduces the anatomy, physiology, and chemistry of the brain; their changes in response to the experiential and sociocultural environment; and their relation to perception, attention, behavioral action, motivation, and emotion.

Instructor(s): S. London, L. Kay Terms Offered: Winter

Prerequisite(s): Some background in biology and psychology.

Note(s): This course does not meet requirements for the Biological Sciences Major.

Equivalent Course(s): NSCI 21015, CHDV 20300, BIOS 29300

PSYC 20400. Cognitive Psychology. 100 Units.

Viewing the brain globally as an information processing or computational system has revolutionized the study and understanding of intelligence. This course introduces the theory, methods, and empirical results that underlie this approach to psychology. Topics include categorization, attention, memory, knowledge, language, and thought.

Instructor(s): M. Rosenberg Terms Offered: Spring

Equivalent Course(s): NSCI 22015, EDSO 20400

PSYC 20500. Developmental Psychology. 100 Units.

This is an introductory course in developmental psychology, with a focus on cognitive and social development in infancy through early childhood. Example topics include children's early thinking about number, morality, and social relationships, as well as how early environments inform children's social and cognitive development. Where appropriate, we make links to both philosophical inquiries into the nature of the human mind, and to practical inquiries concerning education and public policy.

Instructor(s): K. O'Doherty Terms Offered: Spring

Note(s): CHDV Distribution, B

Equivalent Course(s): CHDV 25900, EDSO 20500

PSYC 20600. Social Psychology. 100 Units.

This course examines social psychological theory and research that is based on both classic and contemporary contributions. Topics include conformity and deviance, the attitude-change process, social role and personality, social cognition, and political psychology.

Instructor(s): K. Meidenbauer Terms Offered: Autumn

Equivalent Course(s): CHDV 26000

PSYC 20700. Sensation and Perception. 100 Units.

What we see and hear depends on energy that enters the eyes and ears, but what we actually experience-perception-follows from human neural responses. This course focuses on visual and auditory phenomena, including basic percepts (for example, acuity, brightness, color, loudness, pitch) and also more complex percepts such as movement and object recognition. Biological underpinnings of perception are an integral part of the course.

Instructor(s): K. Ledoux Terms Offered: Winter

Equivalent Course(s): NSCI 20140

PSYC 20850. Introduction to Human Development. 100 Units.

This course introduces the study of lives in context. The nature of human development from infancy through old age is explored through theory and empirical findings from various disciplines. Readings and discussions emphasize the interrelations of biological, psychological, and sociocultural forces at different points of the life cycle.

Instructor(s): S. Numanbayraktaroglu Terms Offered: Autumn

Prerequisite(s): CHDV majors or intended majors.

Note(s): Required Course for Comparative Human Development Majors

Equivalent Course(s): HLTH 20000, CHDV 20000

PSYC 21100. Human Development Research Design. 100 Units.

The purpose of this course is to expose CHD majors in college to a broad range of methods in social sciences with a focus on human development research. The faculty in Comparative Human Development is engaged in interdisciplinary research encompassing anthropology, biology, psychology, sociology, and applied statistics. The types of data and methods used by faculty span the gamut of possible methodologies for addressing novel and important research questions. In this course, students will study how appropriate research methods are chosen and employed in influential research and will gain hands-on experience with data collection and data analysis. In general, the class will meet as a whole on Mondays and will have lab/discussion sections on Wednesdays. The lab/discussion sections are designed to review the key concepts, practice through applying some of the methods, and prepare students for the assignments. Students in each section will be assigned to small groups. Some of the assignments are group-based while others are individual-based.

Instructor(s): E. Abdelhadi Terms Offered: Winter

Note(s): Required Course for Comparative Human Development Majors

Equivalent Course(s): HLTH 20100, EDSO 20100, CHDV 20100

PSYC 21116. The Development of Social Cognition. 100 Units.

Our species is notably social, with both positive and negative consequences: we thrive in groups, yet we often discriminate against those who are not like us. This course focuses on social cognitive development in childhood, with the goal of understanding the foundations of human nature in a social context. Topics include theories of mind, social learning, motivation and achievement, moral development, social categorization and the origins and development of our tendency to divide the world into "us" versus "them."

Instructor(s): K. Kinzler Terms Offered: Winter

PSYC 21260. Psychology Research Incubator. 100 Units.

Answering questions about how minds work, how choices are made, or about the forces that shape behavior depends on understanding how to carry out research. This course guides you through the process of developing an original research project of your own design. Whether your questions come from research you are already working on in a lab or reflect independent interests of your own, this course will lead you through the process of designing an empirical study to address an issue that interests you. From the first stages of turning an idea into a study, you will work either individually or with

a group to develop your research questions scientifically to address issues that can add new knowledge to psychological science. In this course you will learn to: (1) generate testable hypotheses that are informed by prior research, (2) design and implement methods for testing these hypotheses, and (3) write an IRB protocol in order to collect data. The course culminates with drafting a research grant proposal so you will be well positioned to take advantage of the increased funding opportunities available for undergraduate research.

Instructor(s): A. Henly Terms Offered: Winter

Prerequisite(s): PQ: PSYC 20200 Psychological Research Methods

Note(s): Open to second and third year students only.

PSYC 21690. Media and Psychology: Causes and consequences of media use across the lifespan. 100 Units.

This course will examine the influence of media on individuals and groups from both a developmental and socio-cultural perspective. Topics will include young children's academic and social-emotional skill learning from television, video and tablets; adolescents' social media identities and experiences including cyber-bullying; media influences on adults' health behaviors, aggression, prejudice, and more. Students will engage in both qualitative and quantitative research on media and psychology as part of this course.

Instructor(s): K. O'Doherty Terms Offered: Winter

PSYC 21750. Biological Clocks and Behavior. 100 Units.

This course will address physiological and molecular biological aspects of circadian and seasonal rhythms in biology and behavior. The course will primarily emphasize biological and molecular mechanisms of CNS function, and will be taught at a molecular level of analysis from the beginning of the quarter. Those students without a strong biology background are unlikely to resonate with the course material.

Instructor(s): B. Prendergast Terms Offered: Spring

Prerequisite(s): A quality grade in PSYC 20300 Introduction to Biological Psychology. Additional biology courses are desirable. Completion of Core biology will not suffice as a prerequisite.

Equivalent Course(s): BIOS 24248, NSCI 21400, HLTH 21750

PSYC 22350. Social Neuroscience. 100 Units.

Social species, by definition, create emergent organizations beyond the individual - structures ranging from dyads and families to groups and cultures. Social neuroscience is the interdisciplinary field devoted to the study of neural, hormonal, cellular, and genetic mechanisms, and to the study of the associations and influences between social and biological levels of organization. The course provides a valuable interdisciplinary framework for students in psychology, neuroscience, behavioral economics, and comparative human development. Many aspects of social cognition will be examined, including but not limited to attachment, attraction, altruism, contagion, cooperation, competition, dominance, empathy, isolation, morality, and social decision-making.

Instructor(s): J. Decety Terms Offered: Autumn

Equivalent Course(s): ECON 21830, NSCI 21000, HLTH 22350, BIOS 24137, CHDV 22350

PSYC 22580. Child Development in the Classroom. 100 Units.

This discussion-based, advanced seminar is designed to investigate how preschool and elementary students think, act, and learn, as well as examine developmentally appropriate practices and culturally responsive teaching in the classroom. This course emphasizes the application of theory and research from the field of psychology to the realm of teaching and learning in contemporary classrooms. Course concepts will be grounded in empirical research and activities geared towards understanding the nuances and complexities of topics such as cognitive development (memory, attention, language), early assessment systems, standardized testing, "mindset", "grit", exercise/nutrition, emotion regulation, and more.

Instructor(s): Kate O'Doherty Terms Offered: Autumn

Equivalent Course(s): HLTH 22580, CHDV 22580, EDSO 22580

PSYC 23000. Cultural Psychology. 100 Units.

There is a substantial portion of the psychological nature of human beings that is neither homogeneous nor fixed across time and space. At the heart of the discipline of cultural psychology is the tenet of psychological pluralism, which states that the study of "normal" psychology is the study of multiple psychologies and not just the study of a single or uniform fundamental psychology for all peoples of the world. Research findings in cultural psychology thus raise provocative questions about the integrity and value of alternative forms of subjectivity across cultural groups. In this course we analyze the concept of "culture" and examine ethnic and cross-cultural variations in mental functioning with special attention to the cultural psychology of emotions, self, moral judgment, categorization, and reasoning.

Instructor(s): R. Shweder Terms Offered: Autumn

Prerequisite(s): Undergraduates must be in third or fourth year.

Note(s): CHDV Distribution: B, C

Equivalent Course(s): GNSE 31000, PSYC 33000, GNSE 21001, AMER 33000, ANTH 35110, EDSO 21100, CHDV 21000, CRES 21100, ANTH 24320, CHDV 31000

PSYC 23165. Multidisciplinary Perspectives on Morality. 100 Units.

The past decade saw an explosion of empirical research in the study of morality. Among the most exciting and novel findings and theories, evolutionary biologists and comparative psychologists have shown that moral cognition has evolved to facilitate cooperation and smooth social interactions, and that certain components of morality are present in non-human animals. Developmental psychologists came up with ingenious paradigms, demonstrating that the elements that underpin morality are in place much earlier than we thought, and clearly in place before children turn two. Social neuroscientists have begun to map brain circuits implicated in moral decision-making and identify the contribution of neuropeptides to moral sensitivity. Changes in the balance of brain chemistry, or in connectivity between regions can cause changes in moral

behavior. The lesson from all this new knowledge is clear: human moral behavior cannot be separated from human biology, its development, and past evolutionary history. As our understanding of the human brain improves, society at large, and justice and the law in particular, are and will be increasingly challenged. Discoveries in neuroscience will soon impact our legal system in ways that hopefully lead to a more cost-effective, humane and flexible system than we have today. The intent of this class is to provide an overview of the current research on the morality, and examine this topic from a range of relevant interdisciplinary perspectives.

Instructor(s): J. Decety Terms Offered: Winter

Equivalent Course(s): PSYC 33165

PSYC 23370. Bright and Dark Sides of Empathy. 100 Units.

This course invites students to critically explore the science of empathy by examining its scope and its limits. It delves into cutting-edge research from evolutionary theory, neurobiology, developmental and social psychology, social neuroscience, clinical neuroscience, and behavioral economics to illuminate the mechanisms behind feeling for and with others. Questions explored in this course include: What are the evolutionary roots of empathy? What are the neural and neuro-endocrinological mechanisms that facilitate empathy? How does empathy develop in young children? Is empathy a limited-capacity resource? How is empathy modulated by unconscious processing and implicit attitudes (e.g., group dynamics, social status)? Is empathy necessarily a good thing for social decision-making? Why empathy can make us act unfairly? Why do some individuals (i.e., psychopaths) lack empathy and concern for the well-being of others? How does empathy improve the overall effectiveness of medical care? This course introduces undergraduate students to current research and theories of empathy. The study of empathy serves as the basis for integrating a variety of perspectives including evolutionary biology, behavioral economics, affective neuroscience, developmental psychology, social psychology, behavioral neurology and psychiatry.

Instructor(s): J. Decety Terms Offered: Autumn

Equivalent Course(s): CHDV 23370

PSYC 23660. The Disordered Mind. 100 Units.

What are disorders of the mind? What are some of the theoretical and practical issues surrounding the identification, classification, and treatment of such disorders? What do mental disorders have to teach us about the typically-functioning mind? This seminar course will address these and other questions within biological, psychological, and sociocultural perspectives to attempt to understand the current and historical paradigms that have influenced our perception of what it means for the mind to be "disordered." Included will be discussion of behavioral, emotional, cognitive, and developmental disorders.

Instructor(s): K. Ledoux Terms Offered: Spring

PSYC 23820. Attention and Working Memory in the Mind and Brain. 100 Units.

This course will provide a broad overview of current work in psychology and neuroscience related to attention and working memory. We will discuss evidence for sharp capacity limits in an individual's ability to actively monitor and maintain information in an "online" mental state. Readings will be primarily based on original source articles from peer-reviewed journals, with a focus on behavioral and neural approaches for measuring and understanding these basic cognitive processes.

Instructor(s): E. Awh, E. Vogel Terms Offered: Winter

Prerequisite(s): PQ: NSCI 20110 (Fundamental Neuroscience) is required for Neuroscience majors only.

Equivalent Course(s): NSCI 21600

PSYC 23860. Beyond Good and Evil: The Psychology of Morality. 100 Units.

Morality is a mysterious and possibly uniquely human capacity that influences how we make decisions in a number of domains. In this course we will explore how and why human beings have the moral intuitions that they do and also where these intuitions come from—what about our moral intuitions are built in and how are these intuitions shaped by experience? To achieve these goals, we will discuss literature from developmental, social, and evolutionary psychology, as well as some literature from behavioral economics and experimental philosophy. We will briefly review the history of moral psychology, but spend the bulk of our time discussing contemporary debates and findings from research on moral psychology.

Instructor(s): A. Shaw Terms Offered: Winter

PSYC 24010. Systems Neuroscience. 100 Units.

This course covers vertebrate and invertebrate systems neuroscience with a focus on the anatomy, physiology, and development of sensory and motor control systems. The neural bases of form and motion perception, locomotion, memory, and other forms of neural plasticity are examined in detail. We also discuss clinical aspects of neurological disorders.

Instructor(s): J. MacLean Terms Offered: Spring

Prerequisite(s): NSCI 20101, NSCI 20111 or consent of instructors

Equivalent Course(s): NSCI 20130, BIOS 24130

PSYC 24060. Understanding Practical Wisdom. 100 Units.

Thinking about the nature of wisdom goes back to the Greek philosophers and the classical religious sages, but the concept of wisdom has changed in many ways over the history of thought. While wisdom has received less scholarly attention in modern times, it has recently re-emerged in popular discourse with a growing recognition of its potential importance for addressing complex issues in many domains. But what is wisdom? It's often used with a meaning more akin to "smart" or "clever." Is it just vast knowledge? This course will examine the nature of wisdom—how it has been defined in philosophy and psychological science, how its meaning has changed, and what its essential components might be. We will discuss how current philosophical and psychological theories conceptualize wisdom and consider whether, and how, wisdom can be studied scientifically; that is, can wisdom be measured and experimentally manipulated to illuminate its underlying mechanisms and understand its functions? Finally, we will explore how concepts of wisdom can be applied in business,

education, medicine, the law, and in the course of our everyday lives. Readings will be drawn from a wide array of disciplines including philosophy, classics, history, psychology, behavioral economics, medicine, and public policy. The course will include lectures by philosophers and psychologists. This course is offered in association with the Chicago Moral Philosophy Project and the Good Life program (the Hyde Park Institute).

Instructor(s): H. Nusbaum, A. Henly Terms Offered: Spring

Prerequisite(s): PQ: Third- or fourth-year standing

Equivalent Course(s): CHDV 24050, PSYC 34060, RLST 24055, BPRO 24050

PSYC 24133. Neuroscience of Seeing. 100 Units.

This course focuses on the neural basis of vision, in the context of the following two questions: 1. How does the brain transform visual stimuli into neuronal responses? 2. How does the brain use visual information to guide behavior? The course covers signal transformation throughout the visual pathway, from retina to thalamus to cortex, and includes biophysical, anatomical, and computational studies of the visual system, psychophysics, and quantitative models of visual processing. This course is designed as an advanced neuroscience course for undergraduate and graduate students. The students are expected to have a general background in neurophysiology and neuroanatomy.

Instructor(s): W. Wei, J. Maunsell, M. Sherman, S. Shevell Terms Offered: Autumn

Prerequisite(s): NSCI 20111 or BIOS 24110 or consent of instructor

Equivalent Course(s): CPNS 34133, NSCI 22400, PSYC 34133, BIOS 24133, NURB 34133

PSYC 24231. Methods in Computational Neuroscience. 100 Units.

Topics include (but are not limited to): relating neural data to behavior, Signal Detection theory, models of vision and artificial neural networks, Information Theory, Generalized Linear Models, dimensionality reduction, classification, and clustering.

Instructor(s): S. Bensmaia, D. Freedman, M. Kaufman Terms Offered: Winter, L.

Prerequisite(s): For Neuroscience Majors: NSCI 20130, BIOS 26210 and BIOS 26211 which must be taken concurrently, or consent of instructor.

Equivalent Course(s): NSCI 23700, CPNS 34231, BIOS 24231

PSYC 24450. Foundations of Neuroscience. 100 Units.

This course is an introduction to the broad field of neuroscience. This is a lecture-based course that aims to introduce undergraduate students to concepts and principles that explain how the nervous system is built and how it functions.

Examples of thematic areas covered in lectures include: (a) cellular anatomy of the nervous system, (b) development and evolution of the nervous system, (c) sensory systems, (d) motor systems, (e) cognition and behavior.

Instructor(s): D. Freedman, P. Kratsios Terms Offered: Autumn

Equivalent Course(s): BIOS 24101, NSCI 20101

PSYC 25101. The Psychology of Decision Making. 100 Units.

We constantly make decisions, determine our preferences, and choose among alternatives. The importance of our decisions range from ordering a meal at a restaurant to choosing what college to attend. How do we make such decisions? What are the rules that guide us and the biases that shape our decisions? What determines our preferences? What impacts our willingness to take risks? In this course we consider how the way we go about gathering information affects our judgment, and how the way we frame problems affects our perceptions and shapes the solutions to problems. We learn what governs choice and the systematic way it deviates from normative rules. We consider how we think about the future and how we learn from the past. The course focuses on the psychology behind making decisions with implications for a wide range of areas such as public policy, law, and medicine.

Instructor(s): B. Keysar Terms Offered: Autumn

Prerequisite(s): Third and fourth-year students only. Priority will be given to third-year students.

PSYC 25120. Child Development and Public Policy. 100 Units.

The goal of this course is to introduce students to the literature on early child development and explore how an understanding of core developmental concepts can inform social policies. This goal will be addressed through an integrated, multidisciplinary approach. The course will emphasize research on the science of early child development from the prenatal period through school entry. The central debate about the role of early experience in development will provide a unifying strand for the course. Students will be introduced to research in neuroscience, psychology, economics, sociology, and public policy as it bears on questions about "what develops?", critical periods in development, the nature vs. nurture debate, and the ways in which environmental contexts (e.g., parents, families, peers, schools, institutions, communities) affect early development and developmental trajectories. The first part of the course will introduce students to the major disciplinary streams in the developmental sciences and the enduring and new debates and perspectives within the field. The second part will examine the multiple contexts of early development to understand which aspects of young children's environments affect their development and how those impacts arise. Throughout the course, we will explore how the principles of early childhood development can guide the design of policies and practices that enhance the healthy development of young children, particularly for those living in adverse circumstances, and thereby build a strong foundation for promoting equality of opportunity, reducing social class disparities in life outcomes, building human capital, fostering economic prosperity, and generating positive social change. In doing so, we will critically examine the evidence on whether the contexts of children's development are amenable to public policy intervention and the costs and benefits of different policy approaches.

Instructor(s): A. Kalil Terms Offered: Winter

Prerequisite(s): Attendance on the first day of class is required or registration will be dropped.

Equivalent Course(s): EDSO 25120, CHDV 25120, PBPL 25120

PSYC 25700. The Psychology of Negotiation. 100 Units.

Negotiation is ubiquitous in interpersonal interactions, from making plans for a trip with friends or family, to determining working conditions with an employer, to managing international conflicts. In this course we examine the structure of different negotiations and the psychology that governs the processes and outcomes of a negotiation. For instance, we consider the role of perceptions, expectations, intuitions, and biases. We evaluate the role of information processing, modes of communication, and power in influencing a negotiated outcome. We see how the psychology of trust, reciprocity, fairness, cooperation, and competition can affect our ability to benefit from an exchange or contribute to the escalation of conflict. To better understand the dynamics of the negotiation process, we learn both through engaging in a variety of negotiation role-plays and relating these experiences to research findings.

Instructor(s): B. Keysar Terms Offered: Winter

Prerequisite(s): Third- or fourth-year students only. Priority will be given to fourth-year students.

Note(s): It is recommended that students take PSYC 25101 The Psychology of Decision Making before this course, as it provides the conceptual foundations.

PSYC 25750. The Psychology and Neurobiology of Stress. 100 Units.

This course explores the topic of stress and its influence on behavior and neurobiology. Specifically, the course will discuss how factors such as age, gender, and social context interact to influence how we respond to stressors both physiologically and behaviorally. The course will also explore how stress influences mental and physical health.

Instructor(s): G. Norman Terms Offered: Autumn

Note(s): This course does not meet the requirements for the Biological Sciences Major.

Equivalent Course(s): NSCI 22535, BIOS 29271

PSYC 25790. Psychology of Race, Ethnicity, and Social Class: Perspectives and Impact. 100 Units.

This course will explore contemporary theories, findings, and social issues concerning the study of race, ethnicity, and social class as they relate to human behavior from the perspective of the individual in various social contexts. Drawing from disciplines such as cognitive, developmental, and social psychology, this course will also incorporate perspectives from social epidemiology, health disparities research, and critical race theory. Therefore, this course will be guided by a critical analysis lens that recognizes the intersection of gender, race/ethnicity, and social class, using the United States as a "case study" to evaluate the complexities of social inequality. Learning will take place through a series of lectures, in-class activities, and weekly readings, and will emphasize interdisciplinary research, multilevel analysis, and critical evaluation of empirical research articles.

Instructor(s): C. Cardenas-Iniguez Terms Offered: Winter

Prerequisite(s): PSYC 20200. Third or fourth-year standing.

Equivalent Course(s): CRES 25790

PSYC 26010. Big Data in the Psychological Sciences. 100 Units.

Innovative research in Psychology has been pushing the bounds of traditional experiments through the usage of "Big Data", where experiments are conducted at humungous scales-at the levels of thousands to millions of participants, images, or neurons. With these developments in the field, fluency in these new technologies, methods, and computational skills are becoming increasingly important. In this course, students will develop an understanding of these new directions, and will learn practical plug-and-play tools that will allow them to easily incorporate Big Data in their lives and research. We will also discuss the looming ethical issues and societal implications that come with Big Data. The class will culminate in a final project in which students will be able to collect and analyze their own Big Data.

Instructor(s): W. Bainbridge Terms Offered: Winter

Prerequisite(s): Familiarity with basic statistics and Excel. PSYC 20100 (Statistics) and PSYC 20200 (Research Methods) recommended but not required.

PSYC 26020. Habits of a Free Mind: Psychology for Democracy. 100 Units.

Are we capable of engaging across lines of difference without feeling traumatized and without dehumanizing? How can we navigate "cancel culture" in which a misinterpreted word, heterodox views, or guilt-by-association can result in ostracization on college campuses, mobbing on social media, and retractions and redactions of published works? Texts will include *The Coddling of the American Mind*, *Man's Search for Meaning* by Viktor Frankl, *On Tyranny* by Timothy Snyder, and a variety of short readings in philosophy, poetry, social science, theatre, and historical and contemporary essays. You will begin by identifying why being a free thinker matters to you. Then, through in-class exercises, experiential assignments, and an emphasis on playfulness, you will spend the quarter developing and practicing mental and interpersonal habits designed to increase your capacity to tolerate discomfort, expand your facility with civil dialogue and productive disagreement, and strengthen your ability to make a difference in an area that matters to you. At its core, this course is about what it means to be human. You must be willing to engage in authentic critical self-examination, abide by an unfamiliar set of class rules and norms, experience psychological discomfort, and be playful.

Instructor(s): Pamela Paresky Terms Offered: Spring

Equivalent Course(s): HIPS 26020, SOSC 26020, KNOW 26020

PSYC 26780. Emotion and Motivation. 100 Units.

What are emotions and how do they motivate us? In this course we will explore the universally experienced concept of emotion and how it is fundamentally inseparable from that of motivation. From their shared neurobiological mechanisms and evolutionary theories to their psychological impact on behavior, this course will trace the commonalities between emotion and motivation. Topics will include autonomic correlates of emotions, the motivational utility of positive and negative emotions, and relationships to development, cognition, social behavior, and mental health. Interdisciplinary research will be emphasized, particularly in the critical evaluation of current theories and empirical research.

Instructor(s): F. Rockwood Terms Offered: Spring

Prerequisite(s): Prior coursework in psychology and/or neuroscience recommended but not required.

PSYC 26880. Comparative Chronobiology and Timed Behavior. 100 Units.

From bacteria to blue whales, organisms keep time. The importance of time is unquestionable. Imagine if a willow flowered in the dead of winter or a mouse emerged at noon; the outcomes are not pleasant. Such occurrences, though, are the exception not the norm. So perhaps it is important to ask why don't plants flower in the dead of winter or nocturnal rodents emerge during the day? How do they track the days and seasons, and modify their reproductive, social and self-regulatory behaviors accordingly? Decades of research have come to one basic answer: engrained in their genomes lay a network of genes that collectively generates hyperprecise timekeeping mechanisms which impact diverse aspects of cellular- and organismal-level processes. These timing mechanisms are called 'biological clocks'. This course will address how biological clocks are constructed out of the genes, RNAs, and proteins expressed over the course of the lifespan. The material will consist of scientific articles (empirical studies and review papers) surveying the mechanisms of clocks in organisms ranging from bacteria to humans. After understanding how clocks measure circadian time intervals, we will turn to clocks that impact behavior and physiology over non-circadian intervals (years, tidal cycles, menstrual/and estrus cycles) and to still more mysterious timing mechanisms that generate ultradian (>24h) oscillations.

Instructor(s): JP. Riggle Terms Offered: Winter

Prerequisite(s): This course assumes that students are comfortable with reading structured reports from generalist and specialist scientific journals; possess a basic understanding of genetics; have familiarity with neuroscience via an introductory course on biopsychology or the equivalent. The completion of Biological Clocks and Behavior (PSYC 21750) accomplishes all prerequisites, but it is not required. Experience in 200 level biology or neuroscience courses is preferred.

PSYC 27010. Psycholinguistics. 100 Units.

This is a survey course in the psychology of language. We will focus on issues related to language comprehension, language production, and language acquisition. The course will also train students on how to read primary literature and conduct original research studies.

Instructor(s): Eszter Ronai (Autumn), Jason Riggle (Spring) Terms Offered: Autumn Spring

Equivalent Course(s): LING 27010

PSYC 28610. Neuroendocrine Mechanisms of Human Behavior. 100 Units.

This course aims to explore the role hormones play in the study of human behavior and development across various stages in the life course. We will explore how biological mechanisms take part in explaining many different aspects of human behavior, and how these explanations fit into discourse from the fields of evolutionary biology, psychology, and behavioral economics.

Instructor(s): N. Nickels Terms Offered: Spring

Prerequisite(s): N/A

Note(s): CHDV Distribution: A

Equivalent Course(s): CHDV 28600

PSYC 28791. Behavioral Science and Public Policy. 100 Units.

Many policies are aimed at influencing people's behavior. The most well-intentioned policies can fail, however, if they are not designed to be compatible with the way people actually think and make decisions. This course will draw from the fields of cognitive, social, and environmental psychology to (1) examine the ways in which human behavior deviates from the standard rational actor model typically assumed by economics, and (2) provide strategies for improving the design, implementation, and evaluation of public-facing policies. The basic premise of this course is that a foundational understanding of human behavior can lead not only to more effective policies, but enhanced decision-making and well-being.

Instructor(s): K. Wolske Terms Offered: Spring

Equivalent Course(s): PBPL 28791

PSYC 28810. From Fossils to Fermi's Paradox: Origin and Evolution of Intelligent Life. 100 Units.

The course approaches Fermi's question, "Are we alone in the universe?," in the light of recent evidence primarily from three fields: the history and evolution of life on Earth (paleontology), the meaning and evolution of complex signaling and intelligence (cognitive science), and the distribution, composition and conditions on planets and exoplanets (astronomy). We also review the history and parameters governing extrasolar detection and signaling. The aim of the course is to assess the interplay between convergence and contingency in evolution, the selective advantage of intelligence, and the existence and nature of life elsewhere in the universe - in order to better understand the meaning of human existence.

Instructor(s): P. Sereno; L. Rogers; S. London Terms Offered: Winter

Prerequisite(s): Third or fourth-year standing

Equivalent Course(s): ASTR 18700, BIOS 29142, BPRO 28800

PSYC 28850. The Biological Nature of Psychological Problems. 100 Units.

This course is based on the strong assumption that psychology is a biological science, albeit with elements of the social sciences. The course uses a combination of lectures and classroom discussion of primary and secondary source readings assigned for each class meeting. It presents a strong biological science perspective on individual differences in emotions, motivations, and cognitions that cause distress or interfere with adaptive life functioning, but does so in a non-stigmatizing manner. The course begins with a description and discussion of the nature of psychological problems. The course will survey what is known about the genetic, environmental, and epigenetic bases of such problems and the methods used to study genetic influences and gene-environment interactions. Next, students will review what is currently known about the neural and other biological mechanisms involved in maladaptive individual difference in emotion, motivation, and cognitive processes, with discussion of the methods of studying such mechanisms in humans and nonhumans. The pros and cons of

the medical model of 'mental illness' will be discussed as the major contrast with the natural science view advocated by the instructor.

Instructor(s): B. Lahey Terms Offered: Spring

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-MAJOR PRE-MED STUDENTS, except by petition.

Equivalent Course(s): BIOS 16120

PSYC 28910. Animal Models in the Study of Cognition. 100 Units.

This course will be a combination of lecture and seminar. In the first half of the course we will read and discuss seminal literature in the study of cognitive questions using animal models (primarily rodents). In the second half of the course we will learn about study design and design two different types of studies in smaller groups. Evaluation will be through short weekly papers, class discussion and a final paper.

Instructor(s): L. Kay Terms Offered: Spring

Prerequisite(s): Completion of PSYC 20300 Biological Psychology or equivalent background in neuroscience and/or biological psychology.

Equivalent Course(s): NSCI 21300

PSYC 29200. Undergrad Rdgs: Psychology. 100 Units.

Students are required to submit the College Reading and Research Course Form. Available for either quality grades or for P/F grading. Only one independent study course may count toward the twelve courses required of students majoring in psychology.

Terms Offered: Autumn, Spring, Winter

PSYC 29700. Undergraduate Research in Psychology. 100 Units.

Students are required to submit the College Reading and Research Course Form. Available for either quality grades or for P/F grading. Only one independent study course may count toward the twelve courses required of students majoring in psychology.

Terms Offered: Autumn Spring Winter

PSYC 29800. Honors Seminar: Psychology. 100 Units.

This course is a reading and discussion of general papers on writing and research, and individual students present their own projects to the group. A literature review, data from ongoing or completed empirical projects, or portions of the thesis paper itself can be presented. Students are expected to give thoughtful feedback to others on their presentations and written work.

Instructor(s): B. Prendergast Terms Offered: Winter

Note(s): Open to third- or fourth-year students who are majoring in psychology and have begun their thesis project.

Available for either quality grades or for P/F grading.

PSYC 29941. XCAP: The Experimental Capstone - The Affect System. 100 Units.

The Affect system in Medicine and the Political Science is a multidisciplinary course that aims to explore the concept of "affect" from different angles and unique perspectives. Drawing broadly from Medicine, philosophy and the political science, this course seeks to understand the affect system in different cultures and environments. The term "affect" typically refers to feelings beyond those of the traditional senses, with an emphasis on the experience of emotions and variations in hedonic tone. The structure and processes underlying mental contents are not readily apparent, however, and most cognitive processes occur non-consciously with only selected outcomes reaching awareness. Over millions of years of evolution, efficient and manifold mechanisms have evolved for differentiating hostile from hospitable stimuli and for organizing adaptive responses to these stimuli. These are critically important functions for the evolution of mammals, and the integrated set of mechanisms that serve these functions can be thought of as an "affect system." It is this affect system - its architecture and operating characteristics, as viewed from neural, psychological, social, and political perspectives, that is the focus of the course.

Instructor(s): Stephanie Cacioppo and Eric Oliver Terms Offered: Winter

Note(s): This course is one of three offered in The Experimental Capstone (XCAP) in the 2019-20 academic year.

Enrollment in this course is restricted to 3rd and 4th year undergraduates in the College. For more information about XCAP, visit <https://sifk.uchicago.edu/courses/xcap/>

Equivalent Course(s): KNOW 29941

Public Policy Studies

Department Website: <http://pbpl.uchicago.edu>

Program of Study

Public Policy Studies is a multidisciplinary major grounded in the social sciences, with substantial inputs from economics, sociology, political science, and law, among other disciplines. The major recognizes that public issues are not neatly contained within traditional disciplinary boundaries and that analysts possessing a broad range of social scientific understanding, quantitative expertise, and communication skills are well placed to contribute to improved public policies. Public Policy involves direct contact with policy problems, ensuring that academic speculations are well-informed and connected to real-world conditions.

The Public Policy Studies major strives to put analysis before advocacy, stressing that compelling policy analysis is a central component of effective advocacy. We aim to be open and helpful to students of all political persuasions and challenge students to rethink clichéd responses to policy problems. The program of study for the BA degree in Public Policy Studies is designed to introduce students to policy analysis and implementation, equip them to use quantitative and economic methods, train them in policy research, enhance their spoken and written policy communication skills, and provide them with a thorough grounding in one or more specific policy areas.

Program Requirements

Two quarters of calculus, one quarter of statistics, five “core” Public Policy courses, one “Methods” and one “Windows” course, three related courses constituting an area of specialization, a BA paper preparation course, and a successful BA paper (senior thesis): these are the necessary components for completing the Public Policy Studies major. The calculus and statistics requirements, and frequently some courses constituting an area of specialization, too, are generally fulfilled through courses offered in programs outside of Public Policy Studies. Students have considerable flexibility in terms of when in their undergraduate career they take the required courses. One useful precept, however, is that it is helpful (though not required) to have taken the Methods and Windows courses, as well as most of the core courses, before embarking on the BA paper.

Calculus and Statistics: Public Policy Studies students take two quarters of calculus (typically MATH 13100-13200 Elementary Functions and Calculus I-II or MATH 15100-15200 Calculus I-II), and one quarter of statistics (either STAT 22000 Statistical Methods and Applications or STAT 23400 Statistical Models and Methods).

Five Public Policy Core Courses: Students are required to take PBPL 20000 Economics for Public Policy; an acceptable substitute for PBPL 20000, however, is ECON 20000 The Elements of Economic Analysis I. Completion of PBPL 20000 (or ECON 20000) is a prerequisite for the required course PBPL 22200 Public Policy Analysis. With the exception of PBPL 20000 Economics for Public Policy (which must be taken prior to PBPL 22200), the core courses can be taken in any order, and the core requirements can be fulfilled over multiple academic years.

The five core courses are listed in the table below. Except for PBPL 22300 Policy Implementation, the core courses typically are offered only one quarter each academic year: for instance, PBPL 22100 Politics and Policy is offered in the Autumn Quarter, and PBPL 22200 Public Policy Analysis is offered in the Winter Quarter. This standard timing, however, is subject to change, so students should check with their academic adviser before committing to a plan that necessitates, for instance, taking a specific core course in the quarter just before graduation.

PBPL 20000	Economics for Public Policy	100
PBPL 22100	Politics and Policy	100
PBPL 22200	Public Policy Analysis	100
PBPL 22300	Policy Implementation	100
PBPL 26400	Quantitative Methods in Public Policy	100

Methods and Windows

Students must take one “Methods” course and one “Windows” course to fulfill the practicum requirement of the major. The practicum requirement is designed to help students to learn research methods (e.g., demography, interviewing, GIS mapping, survey design) and then apply their methodological skills in a “real world” context, opening a “window” from the ivory tower into the outside world. Some Windows courses, in particular, involve collective work on a substantive policy problem with a community organization or government entity.

A sample of approved Methods and Windows courses are listed in the tables below; for a more complete list, please see our website at harris.uchicago.edu/academics/undergraduate-program (<https://harris.uchicago.edu/academics/undergraduate-program/>). Students can also petition to fulfill their Methods or their Windows requirement with an appropriate course that is not listed.

Some approved Methods courses:

PBPL 26302	Public Policy Practicum: Interview Project on Gun Violence	100
PBPL 26303	Public Policy Practicum: Interview Project on Urban Education	100
PBPL 26433	Practicum in Environmental Management	100

SOCI 20140	Qualitative Field Methods	100
GEOG 20273	Urban Spatial Archaeology I	100
GEOG 28202	Geographic Information Science I	100
PPHA 34600	Program Evaluation	100
CHDV 20100	Human Development Research Design	100
MACS 20500	Computing for the Social Sciences	100
PBPL 28829	Artificial Intelligence for Public Policy	100

Some approved Windows courses:

PBPL 24751	The Business of Non-Profits and The Evolving Social Sector	100
PBPL 26302	Public Policy Practicum: Interview Project on Gun Violence	100
PBPL 26303	Public Policy Practicum: Interview Project on Urban Education	100
PBPL 26255	Environmental Justice Field Research Project I (also PBPL 26355)	100
PBPL 26433	Practicum in Environmental Management	100
ENST 27155	Urban Design with Nature	100
ENST 27221	Sustainable Urbanism	100
CHDV 20305	Inequality in Urban Spaces	100
SOCI 20140	Qualitative Field Methods	100

Area of Specialization

Students are required to complete three related, policy-relevant courses that together constitute their area of specialization. The specialization courses can be related either with respect to academic discipline (for example, three statistics courses could form a statistics specialization) or with respect to policy sub-field, such as urban policy or environmental policy. Area of specialization courses can be drawn from any academic department; they do not have to be listed as Public Policy Studies courses. Please see the Public Policy Studies website for examples of some specialization courses: harris.uchicago.edu/academics/undergraduate-program/areas-specialization/ (<https://harris.uchicago.edu/academics/undergraduate-program/areas-specialization/>). Proposed Areas of Specialization can be pre-approved, before some or all of the constituent courses have been taken.

The BA Prep Course and the BA Paper

All Public Policy Studies majors must produce a substantial piece of policy-relevant research, their BA paper (or senior thesis), which is intended to serve as a capstone experience for students within the major. The BA paper-creating process covers almost an entire academic year, from the Autumn Quarter through the early Spring Quarter. As part of the process, students are required to take PBPL 29800 BA Seminar: Public Policy in the Autumn quarter of their final (typically fourth) year. A public presentation of the BA paper at the annual BA Paper Symposium is also required for Public Policy Studies majors.

Email List

Students majoring in Public Policy Studies should subscribe to our e-mail list publicpolicy-ugrad@lists.uchicago.edu, which disseminates announcements concerning courses, internships, fellowships, and other information connected with the major. You can subscribe at publicpolicy-ugrad-request@uchicago.edu.

Summary of Requirements

GENERAL EDUCATION

MATH 13100-13200	Elementary Functions and Calculus I-II (or higher)	200
------------------	--	-----

MAJOR

STAT 22000 or STAT 23400	Statistical Methods and Applications Statistical Models and Methods	100
PBPL 20000	Economics for Public Policy	100
PBPL 22100	Politics and Policy	100
PBPL 22200	Public Policy Analysis	100
PBPL 22300	Policy Implementation	100
PBPL 26400	Quantitative Methods in Public Policy	100
Approved Methods Course		100
Approved Windows Course		100
Three Courses in an Area of Specialization		300
PBPL 29800	BA Seminar: Public Policy	100

BA Paper and Public Presentation

Total Units 1200

Grading

All courses counting toward the public policy major must be taken for quality grades.

Honors

Fourth-year students are eligible for honors if their overall GPA is 3.4 or higher. Qualifying students are recommended for honors if their BA papers are judged to be of superior quality. For additional information about honors, please visit the Public Policy Studies website (pbpl.uchicago.edu (<http://pbpl.uchicago.edu>)).

Study Abroad

The University of Chicago's Spring quarter Barcelona Public Policy program provides University of Chicago students with an opportunity to study comparative public policy in the exciting cultural and political capital of Catalonia in northeastern Spain. The program is designed to expose students to policymaking in a non-U.S. setting through a combination of courses and excursions that will allow students to learn how the political and policymaking system operates in other nations. The three-course Public Policy sequence will meet the requirement for three courses in an area of specialization within the Public Policy major (though students need not be Public Policy majors to participate in the program). In addition to the Public Policy sequence, participants take a fourth course in Spanish language. Students with sufficient knowledge of Catalan may substitute a Catalan language course in place of the Spanish language course. For more information, or to apply, visit the Study Abroad website (<http://study-abroad.uchicago.edu/programs/barcelona-public-policy/>).

Public Policy Studies (PBPL) Courses

PBPL 20000. Economics for Public Policy. 100 Units.

This course develops the microeconomic theories of consumer and producer choices, as well as demonstrates the application of these theoretical tools to policy problems. Supply, demand, and competitive markets are examined, along with the conditions under which government policy can increase efficiency.

Instructor(s): R. Kellogg Terms Offered: Autumn

Prerequisite(s): Completion of two quarters of calculus required; prior knowledge of economics not required. For ECON majors and students who have taken ECON 20000: consent of instructor required.

Note(s): PBPL 20000 or ECON 20000 is required of all students who are majoring in public policy. PBPL 20000 satisfies the ECON 20000 prerequisite for PBPL 22200. Students who have taken ECON 20000 require the instructor's consent to enroll in PBPL 20000.

PBPL 20150. Sustainable Urban Development. 100 Units.

The course covers concepts and methods of sustainable urbanism, livable cities, resiliency, and smart growth principles from a social, environmental and economic perspective.

Instructor(s): Evan Carver Terms Offered: Spring Winter

Note(s): ENST 21201 and 20150 are required of students who are majoring in Environmental and Urban Studies and may be taken in any order.

Equivalent Course(s): ENST 20150, ARCH 20150, GLST 20150

PBPL 20170. Pandemics, Urban Space, and Public Life. 100 Units.

Much of the cultural vibrance, economic strength, and social innovation that characterizes cities can be credited to their density. Put simply, cities bring people together, and togetherness allows for complex and fruitful exchange. But togetherness also brings risks, notably from infectious disease. A pandemic feeds on propinquity. "Social distance," while a short-term public health imperative, is antithetical to the very idea of the urban. In this seminar, we will explore these competing tensions in light of current and past disease outbreaks in urban settings. Drawing on a range of texts from history, design theory, sociology, and anthropology, as well as cultural artifacts like film, graphic memoir, and photography, we will engage questions like: How are the risks of contagion balanced with the benefits of density? How are such risks distributed throughout society? What creative responses have architects, urban designers, and planners brought to this challenge?

Most importantly, how can we respond constructively to the challenge of pandemic to create cities where the benefits of togetherness are maximized, perhaps even improved on compared with the pre-outbreak condition? Students will have the opportunity to propose design or policy interventions to help their own communities cope with the present coronavirus/COVID-19 crisis as it is unfolding and to return to post-pandemic life more vibrant than ever.

Instructor(s): Evan Carver Terms Offered: Autumn Spring

Equivalent Course(s): ARCH 20170, ENST 20170, GEOG 20170, HLTH 20170

PBPL 20305. Inequality in Urban Spaces. 100 Units.

The problems confronting urban schools are bound to the social, economic, and political conditions of the urban environments in which schools reside. Thus, this course will explore social, economic, and political issues, with an emphasis on issues of race and class as they have affected the distribution of equal educational opportunities in urban schools. We will focus on the ways in which family, school, and neighborhood characteristics intersect to shape the divergent outcomes of low- and middle-income children residing with any given neighborhood. Students will tackle an important issue affecting the residents and schools in one Chicago neighborhood. This course is part of the College Course Cluster: Urban Design.

Instructor(s): M. Keels Terms Offered: Autumn

Note(s): CHDV Distribution: B; 2*

Equivalent Course(s): CRES 20305, EDSO 20305, EDSO 40315, CHDV 20305

PBPL 20702. Introduction to Environmental Ethics. 100 Units.

This course will examine answers to four questions that have been foundational to environmental ethics: Are religious traditions responsible for environmental crises? To what degree can religions address environmental crises? Does the natural world have intrinsic value in addition to instrumental value to humans, and does the type of value the world has imply anything about human responsibility? What point of view (anthropocentrism, biocentrism, theocentrism) should ground an environmental ethic? Since all four of the above questions are highly contested questions, we will examine a constellation of responses to each question. During the quarter we will read texts from a wide variety of religious and philosophical perspectives, though I note that the questions we are studying arose out of the western response to environmental crises and so often use that language. Some emphasis will be given to particularly influential texts, thinkers, and points of view in the scholarship of environmental ethics. As the questions above indicate, the course prioritizes theoretical issues in environmental ethics that can relate to many different applied subjects (e.g. energy, water, animals, climate change) rather than emphasizing these applied issues themselves. Taking this focus will give you the background necessary to work on such issues.

Instructor(s): Sarah Fredericks Terms Offered: Autumn

Equivalent Course(s): KNOW 20702, LLSO 24106, RETH 30702, ENST 24106, RLST 24106, KNOW 30702

PBPL 21220. Cities Through Space and Time. 100 Units.

This course introduces you to cities. What are cities? Where do they come from? How do they work? In Calvino's words, what are the "invisible reasons that make cities live"? And, crucially, how can cities be better than they are today? In investigating these questions, we will explore the spatial, economic, cultural, political, and social aspects of cities, including topics like industrialization, transportation technologies, social movements, gentrification, and environmental design. We will examine case studies drawn from both the Global North and South that will help us see how the ideas we explore are being worked out in actual practice in cities, and we will also explore the qualitative, quantitative, and spatial tools used for studying cities. Class sessions will involve a mix of (interactive) lectures, discussion, and exercises. Outside class, the primary work will be reading selected texts and writing responses. There will also be a midterm and a final exam.

Instructor(s): Evan Carver Terms Offered: Autumn

Note(s): Not offered during the 2020-21 academic year.

Equivalent Course(s): GEOG 21221, ENST 21220

PBPL 21310. Water: Economics, Policy and Society. 100 Units.

Water is inextricably linked to human society. While modern advances in technology and new economic and policy mechanisms have emerged to address water stressors from overconsumption, development pressures, land use changes and urbanization, challenges continue to evolve across the globe. These problems, while rooted in scarcity, continue to become more complex due to myriad human and natural forces. In addition to water quality impairments, droughts and water shortages persist, putting pressure on agricultural production and urban water use, while the increased frequency and severity of rainfall and tropical storms, already being experienced globally, are only projected to grow in intensity and duration under climate change. Students will explore water from the perspective of the social sciences and public policy, with attention on behavioral dimensions of water use and water conservation. Qualitative and quantitative approaches to examining how humans use and affect water will be considered, and a case study using visualizations of campus water data will be conducted by students in the course.

Instructor(s): Sabina Shaikh Terms Offered: Spring

Note(s): No prerequisites but the following courses are recommended prior to enrollment in ENST 21310: one economics course and ENST/MENG 20300: The Science, History, Policy, and Future of Water (Winter 2020) ENST/MENG 20300: The Science, History, Policy, and Future of Water (Winter 2020)

Equivalent Course(s): ECON 16510, LLSO 21310, GLST 21310, ENST 21310

PBPL 21425. Health in a Changing America: Social Context and Human Rights. 100 Units.

In this interdisciplinary course, students will consider the social context of health and the social and political commitments necessary to protect health as a human right. We will analyze recent trends in population health, such as the obesity epidemic, the opioid crisis, and the large gaps in life expectancy between neighborhoods in urban centers. Using case studies, students will envision a human rights-based response to these and other health challenges. We will examine the ways that framing health as personal versus public responsibility is consequential for social policy.

Instructor(s): Alicia Riley, Graduate Lecturer in Human Rights Terms Offered: Spring

Equivalent Course(s): HMRT 21403

PBPL 21700. Applied Research in Environment, Development and Health. 100 Units.

This course engages students in collaborative research on topics that connect the environment, health, agriculture and development. After identifying a shared theme, students will design and commence a plan of research with the goal of producing content including reading lists, research and policy briefs, data visualizations, maps, blog posts and web content, as well as creative media such as podcasts. Students will also apply their findings to programming surrounding the Frizzell Speaker and Learning Series for 2020-21 by identifying possible keynote speakers and curating other events. Students are strongly encouraged but not required to enroll in both the autumn and winter courses to gain the full benefit of a sustained research experience.

Instructor(s): Shaikh, Sabina Terms Offered: Autumn

Equivalent Course(s): GEOG 21710, GLST 21700, ENST 21700

PBPL 21800. Economics and Environmental Policy. 100 Units.

This course combines basic microeconomic theory and tools with contemporary environmental and resources issues and controversies to examine and analyze public policy decisions. Theoretical points include externalities, public goods, common-property resources, valuing resources, benefit/cost analysis, and risk assessment. Topics include pollution, global

climate change, energy use and conservation, recycling and waste management, endangered species and biodiversity, nonrenewable resources, congestion, economic growth and the environment, and equity impacts of public policies.

Instructor(s): S. Shaikh Terms Offered: Autumn

Prerequisite(s): ECON 19800 or higher, or PBPL 20000

Note(s): Not offered in Autumn of the 2020-21 academic year.

Equivalent Course(s): ENST 21800, ECON 16520, LLSO 26201

PBPL 22100. Politics and Policy. 100 Units.

This course has two fundamental aims. The first is to introduce students to a set of analytical tools and concepts for understanding how political institutions generate public policy. The second is to apply these tools in examining the major institutions of democracy in the United States. Note(s): Public Policy 22100-22200-22300 may be taken in any order.

Instructor(s): C. Berry Terms Offered: Autumn

Note(s): Public Policy 22100-22200-22300 may be taken in any order.

PBPL 22200. Public Policy Analysis. 100 Units.

This course reviews and augments the basic tools of microeconomics developed in ECON 20000 and applies these tools to policy problems. We examine situations in which private markets are likely to produce unsatisfactory results, suggesting a potential rationale for government intervention. Our goal is to allow students to comprehend, develop, and respond to economics arguments when formulating or evaluating public policy.

Instructor(s): J. Leitzel Terms Offered: Winter

Prerequisite(s): PBPL 20000 or ECON 20000

Note(s): PBPL 22100-22200-22300 may be taken in any order. PBPL 22200 is not intended for students majoring in public policy who are planning to specialize in economics or to take advanced economics courses; those students should meet with the program director or administrator to arrange an alternative.

PBPL 22300. Policy Implementation. 100 Units.

Good public policy has the potential to advance justice in society. However, once a policy or program is put in place, policymakers often face challenges in getting it carried out in the ways it was intended. This course explores some of the structural and cultural challenges that government and organizations face as they attempt to put policies into effect. Focusing on the United States, we will draw on organizational theory as well as case studies from education, policing, healthcare, and the corporate world in order to investigate the broader context of policy implementation.

Instructor(s): S. Brophy Terms Offered: Spring Winter

Prerequisite(s): Second-year standing is recommended; attendance on the first day of class is required or registration is dropped.

Note(s): PBPL 22100-22200-22300 may be taken in any order.

PBPL 23001. Organizational Theory in Public Policy. 100 Units.

In this course, we will draw on the tools of organizational theory in order to better understand organizational dynamics in nonprofits, social service, and government organizations. We will pair organizational theory texts with contemporary case studies and interviews with class guests in order to develop conclusions about how change is created in organizations, how conflict impacts their success, and how they are impacted by the external environment.

Instructor(s): Brophy, Sorcha Terms Offered: Winter

PBPL 23007. Clinical and Health Services Research: Methods and Applications. 100 Units.

This course will introduce the interdisciplinary field of clinically-oriented health services research with a focus on policy-related implications. Through exposure to theoretical foundations, methodologies, and applications, students without significant investigative experience will learn about the design and conduct of research studies. We will cover the integration of research within the stages of translational medicine, and how science conducted across the translational medicine spectrum informs policy through purveyors of clinical services (e.g. physicians, hospitals), government, insurers, and professional societies. We will use the examples of postmenopausal hormone replacement therapy and autologous bone marrow transplantation to illustrate pitfalls in the progression from basic science research to clinical trials leading to diffusion in clinical medicine that can complicate the creation of logical, evidence-based practice guidelines, reimbursement, and clinical practice.

Instructor(s): Greg Ruhnke Terms Offered: Spring

Equivalent Course(s): CCTS 21007, BIOS 29329, HLTH 21007, CCTS 43007

PBPL 23100. Environmental Law. 100 Units.

This course will examine the bases and assumptions that have driven the development of environmental law, as well as the intersection of this body of law and foundational legal principles (including standing, liability, and the Commerce Clause). Each form of lawmaking (statutes, regulations, and court decisions) will be examined, with emphasis on reading and understanding primary sources such as court cases and the laws themselves. The course also analyzes the judicial selection process in order to understand the importance of how the individuals who decide cases that determine the shape of environmental law and regulations are chosen.

Instructor(s): R. Lodato Terms Offered: Winter

Prerequisite(s): Third- or fourth-year standing, or consent of instructor

Equivalent Course(s): ENST 23100, LLSO 23100

PBPL 23200. The Economics of Crime. 100 Units.

This course uses theoretical and empirical economic tools to analyze a wide range of issues related to criminal behavior. Topics include the police, prisons, gang behavior, guns, drugs, capital punishment, labor markets and the macroeconomy, and income inequality. We emphasize the analysis of the optimal role for public policy.

Instructor(s): S. Levitt

Prerequisite(s): ECON 20100 required; STAT 23400, ECON 21010, or ECON 21020 strongly recommended

Equivalent Course(s): ECON 28700

PBPL 23420. Introduction to Intergenerational Mobility. 100 Units.

The gap between top income percentiles and bottom income percentiles has increased in many countries, including the US, over the last decades. Income distribution is placed back at the center of economics and has become a prominent part of media and policy discussions. Empirical findings suggest that there exists a positive correlation between inequality and immobility. To provide deeper insight in mechanisms underlying the latter phenomenon the course covers theories of persistent inequality and intergenerational mobility. Students in this course will learn about the fundamental theories of distributive justice, theory of measures of mobility and persistence, empirical evidence on intergenerational mobility, theories of intergenerational mobility. Assignments include regular class participation and several home assignments (in particular, students will be asked to choose 1 paper to master and to write an essay on it; there will be also offered sets of problems and practical questions).

Instructor(s): Aleksandra Lukina Terms Offered: Spring

Prerequisite(s): PBPL 20000 and 22200

PBPL 23550. Urban Ecology and the Nature of Cities. 100 Units.

Urban ecology is an interdisciplinary field derived from the academic discipline of ecology. How well does classical ecological theory, typically formed from reductionist views of nature without humans, describe and predict patterns in human-dominated landscapes? Students will learn fundamental concepts in ecological theory, examine how these concepts apply to urban systems, and explore the paradigms of ecology in, of, and for cities. Readings and discussions will focus on classical research papers from the ecological literature, history of modern ecology, and contemporary approaches to studying biotic systems in cities.

Instructor(s): Alison Anastasio Terms Offered: Winter

Equivalent Course(s): ENST 23550

PBPL 23600. Political Sociology. 100 Units.

This course provides analytical perspectives on citizen preference theory, public choice, group theory, bureaucrats and state-centered theory, coalition theory, elite theories, and political culture. These competing analytical perspectives are assessed in considering middle-range theories and empirical studies on central themes of political sociology. Local, national, and cross-national analyses are explored. The course covers readings for the Sociology Ph.D. Prelim exam in political sociology.

Instructor(s): T. Clark Terms Offered: Spring

Prerequisite(s): Completion of the general education requirement in the social sciences

Equivalent Course(s): ENST 23500, SOCI 30106, SOCI 20106

PBPL 23606. Political Culture, Social Capital, and The Arts. 100 Units.

Many analysts like Robert Putnam hold that bowling alone signals a decline in social capital, with major consequences for trust and legitimacy of the political system. But new work finds that certain arts and cultural activities are rising, especially among the young, in many countries. This course reviews core related concepts--political culture, social capital, legitimacy--and how they change with these new developments. We lay out new concepts and related methods, such as a grammar of scenes, measured for 40,000+ U.S. zip codes. Scenes, nightlife, design, the internet, and entertainment emerge as critical drivers of the post-industrial/knowledge society. Older primordial conflicts over class, race, and gender are transformed with these new issues, which spark new social movements and political tensions. The course has two halves: first to read and discuss major works and complete a mid-term exam, second to continue as a seminar where the main requirement is writing a paper.

Equivalent Course(s): SOCI 20184, SOCI 30184

PBPL 23700. Geographical Issues in Housing and Community Development. 100 Units.

This course is part of the College Course Cluster, Urban Design.

Instructor(s): M. Conzen Terms Offered: Spring. This course offered in even years.

Prerequisite(s): Open to Chicago Studies Program students.

Equivalent Course(s): GEOG 23700, GEOG 33700

PBPL 24102. Environmental Politics. 100 Units.

Politics determines not only which particular faction holds power, but the parameters upon which contests for power are conducted. At present, the desirability of economic growth is the universal consensus principle that actors across the political spectrum and national borders agree upon despite their disagreement on the shape that this should take and the beneficiaries of it. This principle overrides any other consideration, including environmental protection and restoration, regardless of the political beliefs of the leader or party in question. This course undertakes a term-long discussion of how the assumptions and practices of politics, policy, and activism would be changed if the protection of the environment was the central organizing principle of the international system, with particular attention to theories that challenge conventional ways of organizing society, economics, and politics.

Instructor(s): R. Lodato Terms Offered: Spring

Equivalent Course(s): ENST 24102, LLSO 24102

PBPL 24105. Urban Design: The Chicago Experience. 100 Units.

This course examines the theory and practice of urban design at the scale of block, street, and building--the pedestrian realm. Topics include walkability, the design of streets, architectural style and its effect on pedestrian experience, safety and security in relation to accessibility and social connection, concepts of urban fabric, repair and placemaking, the regulation

of urban form, and the social implications of civic spaces. Students will analyze normative principles and the debates that surround them through readings and discussion, as well as firsthand interaction with the urbanism of Chicago.
Equivalent Course(s): SOSC 26001, GEOG 24100, GEOG 34100, SOSC 36001

PBPL 24605. Introduction to Urban Sciences. 100 Units.

This course is a grand tour of conceptual frameworks, general phenomena, emerging data and policy applications that define a growing scientific integrated understanding of cities and urbanization. It starts with a general outlook of current worldwide explosive urbanization and associated changes in social, economic and environmental indicators. It then introduces a number of historical models, from sociology, economics and geography that have been proposed to understand how cities operate. We will discuss how these and other facets of cities can be integrated as dynamical complex systems and derive their general characteristics as social networks embedded in structured physical spaces. Resulting general properties of cities will be illustrated in different geographic and historical contexts, including an understanding of urban resource flows, emergent institutions and the division of labor and knowledge as drivers of innovation and economic growth. The second part of the course will deal with issues of inequality, heterogeneity and (sustainable) growth in cities. We will explore how these features of cities present different realities and opportunities to different individuals and how these appear as spatially concentrated (dis)advantage that shape people's life courses. We will show how issues of inequality also have consequences at more macroscopic levels and derive the general features of population and economic growth for systems of cities and nations.

Instructor(s): Luis Bettencourt Terms Offered: Autumn

Prerequisite(s): STAT 22000

Equivalent Course(s): GEOG 24600, SOCI 20285, GEOG 34600, ENST 24600

PBPL 24701. U.S. Environmental Policy. 100 Units.

Making environmental policy is a diverse and complex process. Environmental advocacy engages different governmental agencies, congressional committees, and courts, depending on the issue. This course examines how such differentiation has affected policy making over the last several decades.

Instructor(s): R. Lodato Terms Offered: Autumn

Equivalent Course(s): ENST 24701, LLSO 24901

PBPL 24702. Political Anthropology. 100 Units.

This course introduces students to the anthropological study of politics and the political. Classes are seminar-style discussions with a mix of group discussions, mini-lectures, writing workshops, and in-class small group activities. In addition to reading major theoretical and empirical contributions to the field, students will also learn how to conduct meeting- and event-based ethnography and to compose ethnographic writing. Major assignments include conducting fieldwork, handing in periodic field notes journals, and a final paper assignment that weaves together field data with course readings. Authors include, but are not limited to the following: Abrams, Anderson, Aretxaga, Comaroff and Comaroff, Evans-Pritchard, Foucault, Mbembé, McGovern, Mitchell, Mosse, Nelson, Povinelli, Rabinow, Ramirez, Scott, Sharma and Gupta, Silverstein, Taussig, Trouillot, and Weber.

Instructor(s): Erin McFee Terms Offered: Winter. Course offered Winter 2020

Equivalent Course(s): ANTH 34701, ANTH 24701, GLST 24701

PBPL 24751. The Business of Non-Profits and The Evolving Social Sector. 100 Units.

Led by an experienced practitioner, this course aims to provide both an intellectual and experiential understanding of the contemporary nonprofit sector. In addition to a seminar component examining the rapidly evolving social sector, students engage in a hands-on consulting project for an area nonprofit involving analysis, reporting, and presentation. This course satisfies the Public Policy practicum WINDOWS requirement.

Instructor(s): C. Velasquez Terms Offered: Autumn Spring Winter

Prerequisite(s): Instructor consent required. During 6th and 7th week, students must submit an application to

CampusCATALYST, a nonprofit that assists in the coordination of consulting projects. Please see the quarterly time schedules for the CampusCATALYST application link.

PBPL 24752. Impact investing: Using Impact Capital to Address Social Problems. 100 Units.

While modern-day impact investing (investing with the goal of generating both financial and positive social/environmental returns) has been around for fifty years, only in the last decade has this movement really caught on achieving mainstream levels of attention and awareness. Investors of all types are seeking to align their values with their investments and every day we see more examples of companies being held accountable (either by themselves or by their stakeholders) for the social and/or environmental externalities of their operations. Through a combination of readings, case studies, class discussion and projects, the course provides an introduction to and overview of the impact investing landscape, the range of investment opportunities across asset classes, and the opportunities and challenges for investors seeking meaningful impact investment vehicles. Students will learn the entire impact investment process from deal sourcing, financial and programmatic due diligence, to investment structuring to monitoring financial and social returns. Led by an experienced practitioner and supplemented by guest speakers, this course will provide both an intellectual and experiential understanding of double-bottom-line investing.

Instructor(s): Christa Velasquez Terms Offered: Spring

Prerequisite(s): PBPL 24751 The Business of Non-Profits and The Evolving Social Sector

Note(s): Registration only with instructor consent

PBPL 24756. Exploring the Resilient City. 100 Units.

In recent years, sub-national units of government have enacted meaningful policy plans in the wake of the ongoing failure of the international community to address global climate change. Cities in particular have shaped their plans to address

the now-inevitable effects of climate change by adopting policies that emphasize resilience and environmental protection, without sacrificing economic growth, and with attention to the ongoing challenges of poverty and inequality. This course will take a comparative look at the policies adopted by cities on an international basis, while defining what it means to be a resilient city and how much the built environment can be adjusted to limit the environmental impact of densely populated metropolises. It will also consider what impact citizen activism and input had upon the shape of each plan and the direction that its policies took. Students will also be asked to consider what might be missing from each plan and how each plan could be improved to foster greater resiliency.

Instructor(s): R. Lodato Terms Offered: Course was not offered 2019-2020

Equivalent Course(s): ENST 24756

PBPL 24776. International Environmental Policy. 100 Units.

Environmental issues have become a prominent part of the work of international organizations and their member nations. The international community has recognized the efficacy of multi-national agreements as a method for comprehensive solutions to problems that were once dealt with on a nation-by-nation basis. This course will address such topics as the Montreal Protocol, climate change agreements, and the Law of the Sea treaty, as well as the efforts being undertaken by some leading nations to address present-time environmental challenges.

Instructor(s): R. Lodato Terms Offered: Spring

Equivalent Course(s): ENST 24776

PBPL 24800. Urban Policy Analysis. 100 Units.

This course addresses the explanations available for varying patterns of policies that cities provide in terms of expenditures and service delivery. Topics include theoretical approaches and policy options, migration as a policy option, group theory, citizen preference theory, incrementalism, economic base influences, and an integrated model. Also examined are the New York fiscal crisis and taxpayer revolts, measuring citizen preferences, service delivery, and productivity.

Instructor(s): T. Clark Terms Offered: Autumn

Equivalent Course(s): SOCI 30120, SOCI 20120, GEOG 20120, GEOG 30120

PBPL 24901. Trade, Development and Poverty in Mexico. 100 Units.

With a focus on the past two decades, this interdisciplinary course explores the impact of economic integration, urbanization, and migration on Mexico and, to a lesser extent, on the United States—in particular, working class communities of the Midwestern Rust Belt. The course will examine work and life in the borderland production centers; agriculture, poverty, and indigenous populations in rural Mexico; evolving trade and transnational ties (especially in people, food products and labor, and drugs) between the U.S. and Mexico; and trade, trade adjustment, and immigration policy.

Instructor(s): C. Broughton Terms Offered: Winter

Note(s): This course is offered in alternate years.

Equivalent Course(s): SOCI 20251, LACS 24901

PBPL 25003. Immigration, Law and Society. 100 Units.

Law is everywhere within the social world. It shapes our everyday lives in countless ways by permitting, prohibiting, protecting and prosecuting native-born citizens and immigrants alike. This course reviews the major theoretical perspectives and sociological research on the relationship between law and society, with an empirical focus on immigrants in the United States, primarily from Mexico and Central America. To begin, we explore the permeation of law in everyday life, legal consciousness, and gap between "law on the books" and "law on the ground." The topic of immigration is introduced with readings on the socio-legal construction of immigration status, theories of international migration, and U.S. immigration law at the national and subnational levels. We continue to study the social impact of law on immigrants through the topics of liminal legality; children, families, and romantic partnerships; policing, profiling, and raids; detention and deportation; and immigrants' rights. This course adopts a "law in action" approach centered on the social, political, and cultural contexts of law as it relates to immigration and social change. It is designed to expose you to how social scientists study and think about law, and to give you the analytical skills to examine law, immigration, and social change relationally.

Terms Offered: TBD

Equivalent Course(s): HMRT 25003, SSAD 25003, SOCI 28079, CRES 25003, LACS 25003

PBPL 25004. Punishment and Social Theory. 100 Units.

How is the power to punish derived? How has the role of punishment been conceived? What do the practices of punishment produce? What do they tell us about ourselves? Are there alternatives? Taking up these questions, the course outlines major theories of punishment advanced by political philosophers, penologists and scholars who study the role of punishment in society, tracing the trajectory of our modern impulse to punish "wrong doers." We will interrogate the shifting terrain of crime control policy and attend to the ways that prison reformers, scholars, and activists have sought to bring about change. We examine the political economy, culture, and consequences of punishment through readings on the carceral state and conclude by raising new questions about punishment and its alternatives in the age of mass incarceration.

Terms Offered: TBD

Equivalent Course(s): SSAD 25004, HMRT 25004

PBPL 25005. Inequality at Work: The Changing Nature of Jobs and Prospects for Improvement. 100 Units.

This course will consider sources of inequality in the labor market and in workplaces. Empirical evidence and theory on labor markets and job conditions will be analyzed to provide insights into the changing nature of work and workplace inequality for the majority of Americans -- who do not hold a four-year college degree. Although the course will consider ways to ready workers for good jobs in the economy, the emphasis will be on improving jobs themselves, through voluntary employer behavior, collective action, and public policy. The assignment for the course involves observing and/or interviewing workers in an occupation chosen by the student.

Instructor(s): Susan Lambert Terms Offered: TBD

Equivalent Course(s): SSAD 25005, LLSO 25005

PBPL 25006. How Things Get Done in Cities and Why. 100 Units.

Innovation. Prosperity. Democracy. Diversity. Cities long have been lauded as unique incubators of these social features. In contrast to the national level, the smaller scale and dense diversity of cities is thought to encourage the development of civic solutions that work for the many. But cities are inhabited by distinct groups of people with divergent interests and varied beliefs about how to address countless urban issues, such as creating jobs, delivering education, ensuring safe neighborhoods, promoting environmental sustainability, and taking care of the vulnerable. Many groups and organizations have an interest in the outcomes of these processes. Some take action to try to shape them to their own advantage, while others have few chances to make themselves heard. This course examines the social and political dynamics that undergird possible avenues for creating social change in cities, including interest representation, decision-making, and inclusion/exclusion. We will draw insights from multiple disciplines and explore a variety of substantive areas, such as housing, public safety, economic development, education, and the provision of social welfare. This course is part of the College Course Cluster program: Urban Design.

Terms Offered: TBD

Equivalent Course(s): ENST 25006, SOCI 20294, LLSO 21100, SSAD 21100

PBPL 25120. Child Development and Public Policy. 100 Units.

The goal of this course is to introduce students to the literature on early child development and explore how an understanding of core developmental concepts can inform social policies. This goal will be addressed through an integrated, multidisciplinary approach. The course will emphasize research on the science of early child development from the prenatal period through school entry. The central debate about the role of early experience in development will provide a unifying strand for the course. Students will be introduced to research in neuroscience, psychology, economics, sociology, and public policy as it bears on questions about "what develops?", critical periods in development, the nature vs. nurture debate, and the ways in which environmental contexts (e.g., parents, families, peers, schools, institutions, communities) affect early development and developmental trajectories. The first part of the course will introduce students to the major disciplinary streams in the developmental sciences and the enduring and new debates and perspectives within the field. The second part will examine the multiple contexts of early development to understand which aspects of young children's environments affect their development and how those impacts arise. Throughout the course, we will explore how the principles of early childhood development can guide the design of policies and practices that enhance the healthy development of young children, particularly for those living in adverse circumstances, and thereby build a strong foundation for promoting equality of opportunity, reducing social class disparities in life outcomes, building human capital, fostering economic prosperity, and generating positive social change. In doing so, we will critically examine the evidence on whether the contexts of children's development are amenable to public policy intervention and the costs and benefits of different policy approaches.

Instructor(s): A. Kalil Terms Offered: Winter

Prerequisite(s): Attendance on the first day of class is required or registration will be dropped.

Equivalent Course(s): PSYC 25120, EDSO 25120, CHDV 25120

PBPL 25220. Constructing a Society of Human Rights: A Psychological Framework. 100 Units.

This course is designed to discuss the ways that cultural and social psychology contribute to understandings about human rights conceptually, and how human rights issues emerge from social dynamics. Over the course of the quarter, students will learn about theories on intergroup conflict and prejudice, how an individual's beliefs emerge from social contexts and shape their relationships with others, how obedience to authority is created and abused, and how social positioning and narratives influence conceptions of self and other. We will also discuss the relevance and impact of psychological study and data on human rights issues.

Equivalent Course(s): CHDV 25220, HMRT 25220, INRE 30600

PBPL 25370. Social Justice and Social Policy. 100 Units.

What is a fair policy? Policy makers often appeal to justice, fairness or rights to justify policy. Yet it is often unclear what exactly these concepts mean. This course will examine contemporary theories of justice and teach students how these theories can be applied to public policy issues. We will start with three general theories of justice: utilitarianism, liberal equality and libertarianism. We will then discuss more specific issues pertaining to marginalized groups such as immigrants or the disabled. Finally, we will examine empirical evidence about peoples' fairness beliefs in the US and abroad. This course will allow students to form a more coherent notion of what they think is fair, while understanding that rational people can legitimately disagree with each other about what is fair.

Instructor(s): I. Marinescu Terms Offered: TBD

PBPL 25550. Economic Development and Policy. 100 Units.

The history, current pattern, and causes of the distribution of the wealth of nations remains one of the most fascinating and fundamental of all questions in economics and policy. This course will attempt to give an overview of economic growth and development, focusing on real-world data, by looking at the empirical and theoretical research that has been used to understand them and subsequently form the basis of development policies. The course is divided into three major sections: measuring and modeling growth and development, human capital, and markets. Throughout the quarter, we'll explore sets of "development facts" - the way that the world currently appears to us as policy-makers - by looking at contemporary data. For each topic, we will discuss contemporary methodology and debates in development policy.

Instructor(s): Jina, A Terms Offered: Spring Winter

Equivalent Course(s): PPHA 35550

PBPL 25663. Urban Studies: Placemaking. 100 Units.

This course considers the values that drive neighborhood transformation, how policy is shaped and implemented, and the role that arts and culture can play in mindful city-building. Classroom hours will be spent with Theaster Gates, professor, Department of Visual Art, in addition to other UChicago faculty, discussing key principles in guiding city redevelopment in mindful and equitable ways. Students will gain field experience working with Place Lab, Gates's multidisciplinary team that documents and demonstrates urban ethical redevelopment strategies initiated through arts and culture. Working across a variety of projects, students will be exposed to programming, data collection, development, community building, strategy, and documentation. Weekly site visits will give students the opportunity to see analogous projects and meet practitioners throughout Chicago.

Equivalent Course(s): ARTV 20663

PBPL 25695. Workplace and Family Policy. 100 Units.

The topics covered in the course will include: the demographic transition, human capital accumulation, gender wage and employment gaps, discrimination in the workplace, family leave and childcare policies, tax policies including subsidies like the Earned Income Tax Credit (EITC), and related welfare policies. We will draw on the theory of static and dynamic labor supply, theories of labor demand, and labor market equilibrium to guide its investigation, and use empirical tools to answer research questions. For each topic covered in this course, I will introduce an elementary treatment of the canonical theoretical model and give examples of its empirical application. In studying empirical applications, we will often draw on analysis from international experience.

Instructor(s): Y. Asai Terms Offered: Spring

Equivalent Course(s): GNSE 25695

PBPL 25704. Environmental Justice in Chicago. 100 Units.

This course will examine the development of environmental justice theory and practice through social scientific and ethical literature about the subject. We will focus on environmental justice issues in Chicago including, but not limited to waste disposal, toxic air and water, the Chicago heat wave, and climate change. Particular attention will be paid to environmental racism and the often understudied role of religion in environmental justice theory and practice.

Instructor(s): Sarah Fredericks Terms Offered: Autumn

Equivalent Course(s): RETH 35704, ENST 25704, KNOW 25704, RLST 25704

PBPL 25831. Comparative Politics and Policy. 100 Units.

We will study the political economy of our host city and nation. The first module of the course introduces students to the political behavior and institutions of the location, set within the broader context of the European Union. Subsequent modules explore the politics of policymaking process in three specific areas: physical, social, and fiscal policy. The course complements PBPL 221, Politics and Policy, which is focused on the United States.

Instructor(s): A. Fourinaies Terms Offered: Spring

PBPL 25832. Early Human Capital Development. 100 Units.

We will study the social and policy contexts aimed at promoting the development, health, and well-being of young children, with an emphasis on our host nation and the European Union. Topics to be covered include family policies such as fertility and related family planning policies; marriage and family formation; policies targeting working parents (i.e. parental leave); income support policies for lone or low-income parents; as well as child care and early education programs targeted directly to children.

Instructor(s): A. Kalil Terms Offered: Spring

Prerequisite(s): Acceptance into the Barcelona Public Policy Program

PBPL 25833. Comparative Social Policy Analysis. 100 Units.

This course will teach students the tools for understanding inequality and redistribution in comparative perspective. The course does not require deep knowledge of econometrics. Topics to be covered include defining and measuring social welfare, tools of the social policy maker including redistribution, incentives, universal vs. targeted policies, conditionality in social policies and potentially important trade-offs (like economic growth and equality).

Instructor(s): S. Mayer

Prerequisite(s): Acceptance into the Barcelona Public Policy Program

PBPL 25834. Independence Movements. 100 Units.

This course will examine independence movements around the world. We will primarily focus on the politics of secession while also discussing its ethics, legality, economics, violence, and aftermath. Many different movements will be discussed including Scotland, Quebec, Northern Ireland, and South Sudan, although particular attention will be paid to Catalonia.

Instructor(s): Anthony Fowler Terms Offered: Spring, Barcelona Pub Pol Program

Prerequisite(s): Admission to Barcelona Pub Pol Program

PBPL 25840. Odyssey Engaged Nonprofit Practicum. 100 Units.

The Odyssey Engaged nonprofit practicum is a unique partnership between the Office of Civic Engagement, the Public Policy department of the College, Career Advancement, the campusCATALYST (cC) RSO and local nonprofit organizations. The Odyssey Engaged program integrates career development, public service, and innovation with academic work. This course presents a broad overview of the nonprofit sector and offers an opportunity to study the theory that underlies the hands-on work students are doing at local nonprofit organizations. Each student is required to complete a capstone project, which allows them to apply the knowledge that they will be receiving from the academic component of the program to their work at their host organization.

Instructor(s): C. Velasquez Terms Offered: Summer

Prerequisite(s): Acceptance into the Odyssey Engaged Program

PBPL 25860. Crime, Justice, and Inequality in the American City. 100 Units.

This course explores perspectives on street gangs and criminal activity; policing and the criminal justice system; and obstacles to securing housing, employment, and services for reentry after incarceration. Students will examine advances in the social science of adolescence and innovations in government policy and community-based programs aimed at encouraging public safety and youth development, improving policing and prisons, and promoting criminal desistance and decarceration. In addition, we will delve into the lived experience of adolescence and beyond in the context of racially-segregated, high-poverty neighborhoods, with a focus on Chicago. Our approaches will include discussion and lecture; ethnographic, autobiographical, and policy-oriented readings; panels and guest speakers; and documentary films and other media.

Instructor(s): Broughton, C. Terms Offered: Autumn

Equivalent Course(s): SOCI 20255

PBPL 26003. Chicago by Design. 100 Units.

This course examines the theory and practice of urban design at the scale of block, street, and building-the pedestrian realm. Topics include walkability; the design of streets; architectural style and its effect on pedestrian experience; safety and security in relation to accessibility and social connection; concepts of urban fabric, repair, and placemaking; the regulation of urban form; and the social implications of civic spaces. Students will analyze normative principles and the debates that surround them through readings and discussion as well as firsthand interaction with the urbanism of Chicago. This course is part of the College Course Cluster, Urban Design.

Instructor(s): E. Talen Terms Offered: Spring

Equivalent Course(s): GEOG 24300, ENST 26003, SOSC 26003

PBPL 26005. Cities by Design. 100 Units.

This course examines the theory and practice of city design-how, throughout history, people have sought to mold and shape cities in pre-determined ways. The form of the city is the result of myriad factors, but in this course we will hone in on the purposeful act of designing cities according to normative thinking-ideas about how cities ought to be. Using examples from all time periods and places around the globe, we will examine how cities are purposefully designed and what impact those designs have had. Where and when has city design been successful, and where has it resulted in more harm than good?

Instructor(s): Emily Talen Terms Offered: Autumn

Equivalent Course(s): ENST 26005, GEOG 26005, ARCH 26005

PBPL 26255. Environmental Justice Field Research Project I. 100 Units.

This two-quarter sequence will expose students to real-world policy-making questions and field-based research methodologies to design an environmentally based research project, collect data, conduct analyses, and present findings. In the first quarter, we will follow a robust methodological training program in collaboration with University partners to advance the foundations laid elsewhere in the public policy studies program. In the second quarter, this expertise in a full range of research methodologies will be put into practice to tackle public policy problems in the city and neighborhoods that surround the University. PBPL 26255 and PBPL 26355 satisfy the Public Policy practicum Windows and Methods requirements.

Instructor(s): Lodato, R. Terms Offered: Autumn

Prerequisite(s): Students taking this course to meet the Public Policy practicum requirement must take both courses.

Equivalent Course(s): ENST 26255

PBPL 26302. Public Policy Practicum: Interview Project on Gun Violence. 100 Units.

This one-quarter practicum in qualitative methods aims to develop interview research skills, including instrument design, questioning, transcription, thematic analysis, and write-up, in the context of a mini-BA thesis trial run. The topic of this version of the practicum is gun violence in Chicago. Students will engage in weekly in-class interviews with informants with wide-ranging vantage points on gun violence as a social and policy problem including community members, scholars, and policy-makers. Meant to prepare Public Policy Studies students for the BA thesis process, each student, using the weekly in-class interviews conducted by students, and supplemented by interviews and observations of their own, will formulate a question related to gun violence and construct the component parts of their own research paper, which they will submit at the end of the quarter.

Instructor(s): Broughton, Chad Terms Offered: Spring

Prerequisite(s): Open only to Public Policy Studies majors.

Note(s): Can fulfill either the "Methods" or "Windows" major requirement. Recommended for third-year students.

PBPL 26303. Public Policy Practicum: Interview Project on Urban Education. 100 Units.

This one-quarter practicum in qualitative methods aims to develop interview research skills, including instrument design, questioning, transcription, thematic analysis, and write-up, in the context of a mini-BA thesis trial run. The topic of this version of the practicum is urban education. Students will engage in weekly in-class interviews with informants with wide-ranging vantage points on education as a social and policy issue including community members, scholars, and policy-makers. Meant to prepare Public Policy Studies students for the BA thesis process, each student, using the weekly in-class interviews conducted by students and supplemented by interviews and observations of their own, will formulate a question related to urban education and construct the component parts of their own research paper, which they will submit at the end of the quarter.

Instructor(s): Broughton, Chad Terms Offered: Spring

Note(s): Open only to Public Policy Studies majors. Can fulfill either the "Methods" or "Windows" major requirement.

Recommended for third-year students.

PBPL 26304. Public Policy Practicum: Interview Project on Policing. 100 Units.

This one-quarter practicum in qualitative methods aims to develop interview research skills-including instrument design, questioning, transcription, thematic analysis, and write-up-in the context of a mini-BA thesis trial run. The topic of this version of the practicum is policing in America. Students will engage in several in-class interviews with informants with wide-ranging vantage points on police-citizen relations as a social and policy issue including scholars, activists, police officers, and policy-makers. Meant to prepare Public Policy students for the BA thesis process, each student, using in-class interviews conducted by students-and supplemented by interviews, observations, and other data exercises of their own-will formulate a question related to policing and construct the component parts of their own "Mini-Thesis," which they will submit at the end of the quarter. In addition, this course will have an ExoTerra component in which students will develop-based on what they've learned in class-a system of policing and punishment de novo as part of an educational role-playing game. Students can volunteer to participate in this component all quarter. Open only to Public Policy Studies majors. Can fulfill either the "Methods" or "Windows" major requirement. Strongly recommended for third-year students.

Instructor(s): Chad Broughton Terms Offered: Autumn

Note(s): Open only to Public Policy Studies Majors. Can fulfill either the 'Methods' or 'Windows' major requirement. Strongly recommended for third-year students.

PBPL 26355. Environmental Justice Field Research Project II. 100 Units.

This two-quarter sequence will expose students to real-world policy-making questions and field-based research methodologies to design an environmentally based research project, collect data, conduct analysis, and present findings. In the first quarter, we will follow a robust methodological training program in collaboration with University partners to advance the foundations laid elsewhere in the public policy studies program. In the second quarter, this expertise in a full range of research methodologies will be put into practice to tackle public policy problems in the city and neighborhoods that surround the University. PBPL 26255 and PBPL 26355 satisfy the Public Policy practicum Windows and Methods requirements.

Instructor(s): Lodato, R. Terms Offered: Winter

Prerequisite(s): Students taking this course to meet the Public Policy practicum requirement must take both courses.

Equivalent Course(s): ENST 26355

PBPL 26400. Quantitative Methods in Public Policy. 100 Units.

Policy designers and policy analysts should understand the quantitative methods whereby social and economic reality can be described and policy outcomes evaluated; this course will introduce the basic methodologies used in quantitative social description. The underlying discipline is statistics, and this course will focus on statistical thinking and applications with real data sets. Students will be introduced to sampling, hypothesis testing, and regression, as well as other components of the basic toolkit of quantitative policy analysis.

Instructor(s): A. Fowler Terms Offered: Winter

PBPL 26416. Latin American Extractivisms. 100 Units.

This course will survey the historical antecedents and contemporary politics of Latin American extractivisms. While resource extraction in Latin America is far from new, the scale and transnational scope of current "neextractivisms" have unearthed unprecedented rates of profit as well as social conflict. Today's oil wells, open-pit mines, and vast fields of industrial agriculture have generated previously unthinkable transformations to local ecologies and social life, while repeating histories of indigenous land dispossession in the present. Yet parallel to neo-extractive regimes, emergent Latin American social movements have unleashed impassioned and often unexpected forms of local and transnational resistance. Readings in the course will contrast cross-regional trends of extractive economic development and governance with fine-grained accounts of how individuals, families, and communities experience and respond to land dispossession, local and transregional conflict, and the ecological and health impacts of Latin American extractivisms.

Equivalent Course(s): ANTH 23093, LACS 26416

PBPL 26530. Environment, Agriculture, and Food: Economic and Policy Analysis. 100 Units.

The connections between environment, agriculture, and food are inherent in our social, cultural, and economic networks. Land use, natural resource management, energy balances, and environmental impacts are all important components in the evolution of agricultural systems. Therefore it is important to develop ways in which to understand these connections in order to design effective agricultural programs and policies. This course is designed to provide students with guidance on the models and tools needed to conduct an economic research study on the intersecting topics of environment, agriculture, and food. Students learn how to develop original research ideas using a quantitative and applied economic policy analysis for professional and scholarly audiences. Students collect, synthesize, and analyze data using economic and statistical tools. Students provide outcomes and recommendations based on scholarly, objective, and policy relevant research rather than on advocacy or opinions, and produce a final professional-quality report for a workshop presentation and publication. This small seminar course is open by instructor consent to undergraduate and graduate students who meet the prerequisites. For consideration, please submit a one-page proposal of research to pge@uchicago.edu.

Instructor(s): S. Shaikh Terms Offered: Winter

Prerequisite(s): ECON 20000 or ECON 20100 or PBPL 20000 or PBPL 22200 (or equivalent), STAT 22000 or STAT 23400 or PBPL 26400 (or equivalent); for ECON Enrollment: ECON 20000 and ECON 20100, STAT 23400

Equivalent Course(s): PPHA 32510, ENST 26530, ECON 26530

PBPL 26531. Environment, Agriculture, and Food: Advanced Economic and Policy Analysis. 100 Units.

This course is an extension of ENST 26530 but also stands alone as a complete course itself. Students don't need to take ENST 26530 to enroll in this course. This small seminar course is open by instructor consent to undergraduate and graduate students who meet the prerequisites. For consideration, please submit a one-page proposal of research to pge@uchicago.edu.

Instructor(s): S. Shaikh Terms Offered: Spring

Prerequisite(s): ECON 20000 or ECON 20100 or PBPL 20000 or PBPL 22200 (or equivalent), STAT 22000 or STAT 23400 or PBPL 26400 (or equivalent); for ECON Enrollment: ECON 20000 and ECON 20100, STAT 23400
 Equivalent Course(s): PPHA 32520, ENST 26531, ECON 26540

PBPL 26690. The Politics of Health Care. 100 Units.

In this course we will tackle some of the complexity of health care head on, considering how cultural, legal and structural factors shape the delivery of care. Our goal will be to address foundational questions about how we as a society imagine health care, the professionals who work within the field, and the patients. We will draw on evidence from the United States to ask: How have shifts in the institutional context in which medical professionals work altered their task? How do we imagine patients and their choices? How do external and internal pressures shape what issues are prioritized and who receives care? In addition to traditional coursework, PBPL 26690 will take part in the ExoTerra Imagination Lab

Instructor(s): S. Brophy Terms Offered: Autumn

Equivalent Course(s): HLTH 26690

PBPL 26705. Economics of Education. 100 Units.

This course explores economic models of the demand for and supply of different forms of schooling. The course examines the markets for primary, secondary, and post-secondary schooling. The course examines numerous public policy questions, such as the role of government in funding or subsidizing education, the design of public accountability systems, the design of systems that deliver publicly funded (and possibly provided) education, and the relationship between education markets and housing markets.

Instructor(s): D. Neal Terms Offered: TBD

Prerequisite(s): ECON 21020 or ECON 21030

Equivalent Course(s): ECON 26700, EDSO 26700

PBPL 26830. Medical Ethics. 100 Units.

In this course we will tackle some of the complex ethical challenges faced in health care. We will discuss the broad philosophical frameworks used in health care settings to make decisions around hot-button issues like: abortion, organ donation, and withdrawing care at the end of life. We will also investigate how legal and cultural factors complicate decision-making around these topics. Class time will be divided between debates over real case studies, class guests, field trips to hospitals and ethics committees, and a mock policy forum, in which students will represent the perspectives of different interest groups in order to develop medical ethics policy.

Instructor(s): Brophy, S. Terms Offered: Summer

PBPL 26843. Public Policy and the Labor Market. 100 Units.

The field of labor economics explores how labor markets function. The course will cover 6 major themes in labor economics and their applications to public policy: (1) labor force participation (employment, unemployment, non-employment), (2) the wage structure (the earnings distribution, measuring inequality, superstar earnings, inter-generational mobility), (3) labor mobility (migration, immigration, job match, job turnover), (4) collective bargaining (unions), (5) incentive pay (piece rates, time rates, tournaments, efficiency wages), and (6) impacts of trade on employment and wages.

Instructor(s): Sloane, C. Terms Offered: Autumn

Prerequisite(s): PBPL 20000 or ECON 20000

PBPL 26886. Women and Labor Markets. 100 Units.

Workers differ on many dimensions. In this course, we will focus on one: gender. Students will develop a microeconomist's toolbox to consider six major themes related to women's labor: (1) Human capital- Understanding why and how people invest in themselves and how these investments have differed by gender over time. (2) Aggregate labor market- Understanding where wages come from. (3) Occupational choice- Thinking about why people sort into occupations and how occupational sorting by gender has varied over time. (4) Discrimination- Considering the effects of prejudice and discrimination on wages and productivity. (5) Family as an economic unit- Family formation/dissolution, time use, and fertility decisions. (6) Public policy- Considering the effects of public programs, regulations, taxes, and transfers on female labor force participation, family size, and family stability.

Instructor(s): Sloane, C. Terms Offered: Spring

Prerequisite(s): PBPL 20000 or ECON 20000

PBPL 27000. International Economics. 100 Units.

This course covers international economics with an emphasis on international trade. The basic theories of international trade are introduced and used to analyze welfare and distributional effects of international trade, government policies, and technology diffusion. In addition, this course also discusses the main empirical patterns of international trade and international investment.

Instructor(s): F. Tintelnot Terms Offered: Winter

Prerequisite(s): ECON 20100

Equivalent Course(s): ECON 27000

PBPL 27040. Public Finance and Public Policy. 100 Units.

This course analyzes the rationales for government intervention in the economy, the form that intervention takes, and the effects of government policy. We will review the economic tools of analysis used in public finance, including cost-benefit analysis, and apply them to government policies, largely at the federal level. The course will focus on policies to remedy externalities, the provision of public goods, social insurance, and the effects of taxes. Within social insurance, we will cover social security and health reform. We will also explore the role taxation plays in government policy. Tax topics include the effect of taxes on consumers and firms, savings and corporate decisions, and fundamental tax reform.

Instructor(s): A. Jones Terms Offered: Winter

Prerequisite(s): PBPL 20000 or ECON 20000

PBPL 27070. Philanthropy: Private Acts and Public Goods. 100 Units.

Under what conditions do philanthropy and other forms of private action come to be significant elements of the provision of public goods? What are the consequences of organizing society in this way? In this course, we will address the social role of philanthropy, its historical development as a significant economic and political institution, and the place of philanthropy in contemporary public policy and civic projects.

Instructor(s): E. Clemens Terms Offered: Winter

Prerequisite(s): Completion of at least 2 quarters of SOSC

Equivalent Course(s): SOCI 20222

PBPL 27101. Sustainable Urbanism in Context. 100 Units.

Sustainable urbanism presents a great range of challenges at conceptual, practical, and spatial levels. But solutions to these challenges are only meaningful insofar as they can be implemented at local scales and in a context-appropriate manner.

This hands-on seminar-studio takes students into the heart of the Calumet, a region with complex environmental, industrial, and urban histories. Students will learn to assess the conditions of the built environment, to identify needs, and, working in concert with local stakeholders, to propose design solutions to help reinvigorate a sense of place and restore a fragmented landscape.

Instructor(s): Evan Carver Terms Offered: Spring

Prerequisite(s): Acceptance is based on enrollment in the Chicago Studies Quarter: Calumet in Spring 2020.

Equivalent Course(s): GEOG 27101, ENST 27101

PBPL 27103. Planning for Land and Life. 100 Units.

The collaborative plan to create a Calumet National Heritage Area that touches aspects of environmental conservation, economic development, cultural heritage, recreation, arts, and education will ground this course's exploration of landscape history and landscape planning in the Calumet region. Students will investigate this planning process and its relationship to other local and regional plans. A strong focus of the course is on the opportunities and challenges this complex and richly textured industrial region faces in its transition to a more sustainable future.

Instructor(s): Mark Bouman Terms Offered: Spring

Equivalent Course(s): ARCH 27103, GEOG 27103, ENST 27103

PBPL 27115. Crime and Policing. 100 Units.

This class covers recent empirical work in crime and policing, including the effects of arrests, bail, criminal records, and incarceration on long-term outcomes, as well as interactions between family formation and the criminal justice system.

We also study the effects of officer diversity and police reforms, body cameras, and stop and frisk. We will examine both individual (e.g., officer, judge) racial discrimination as well as systemic racism in the justice system.

Instructor(s): Norris, Sam Terms Offered: Spring

PBPL 27125. Voices of Alterity and the Languages of Immigration. 100 Units.

This course investigates the individual experience of immigration: how do immigrants recreate themselves in this alien world in which they seem to lose part of themselves? How do they find their voice and make a place for themselves in their adoptive homes? If in the new world the immigrant becomes a new person, what meanings are still carried in traditional values and culture? How do they remember their origins and record new experiences?

Instructor(s): Angelina Ilieva Terms Offered: Spring. Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Note(s): Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Equivalent Course(s): ENGL 27125, REES 29025, ENST 27125, HIST 27710, CMLT 27125

PBPL 27150. China's Economic Development & Transition. 100 Units.

TBD

Equivalent Course(s): ECON 25710

PBPL 27156. Urban Design with Nature. 100 Units.

This course will use the Chicago region as the setting to evaluate the social, environmental, and economic effects of alternative forms of human settlement. Students will examine the history, theory and practice of designing cities in sustainable ways - i.e., human settlements that are socially just, economically viable, and environmentally sound. Students will explore the literature on sustainable urban design from a variety of perspectives, and then focus on how sustainability theories play out in the Chicago region. How can Chicago's neighborhoods be designed to promote environmental, social, and economic sustainability goals? This course is part of the College Course Cluster program: Urban Design.

Instructor(s): Sabina Shaikh and Emily Talen Terms Offered: Autumn

Prerequisite(s): Third or fourth-year standing

Note(s): Students who have taken ENST 27150: Urban Design with Nature: Assessing Social and Natural Realms in the Calumet Region in the Spring of 2018 may not enroll in this course.

Equivalent Course(s): BPRO 27155, GEOG 27155, ENST 27155

PBPL 27210. Where We Come From: Methods & Materials in the Study of Immigration. 100 Units.

This course provides an interactive survey of methodologies that engage the experiences of immigrants in Chicago.

Exploring practices ranging from history to fiction, activism to memorialization, this course will introduce students to a variety of the ways that immigrants and scholars have approached the Second City.

Instructor(s): William Nickell Terms Offered: Spring. Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Note(s): Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Equivalent Course(s): ENST 27210, REES 24417, HIST 27712

PBPL 27307. Schools and Space: A Chicago History. 100 Units.
