The College Catalog 2020-2021

Educational Objectives and Enrollment

The College residential and curricular experience is predicated on the community that students build by attending classes together and by learning from faculty and each other in academic and social settings. We believe that successful education at the college level depends to a large extent on regular attendance at classes and laboratories, and therefore it is the expectation of the College that students will attend all classes for which they have registered. Nevertheless, it is up to the individual department, faculty member, or instructor to set the attendance policy for their individual courses.

All students enroll in the general education curriculum, designed with the expectation that in the first two years of study a student will complete general education requirements and introductory courses in a major. The final two years of enrollment are devoted to advanced work in the major and elective courses that build on the foundation laid in the first two years.

In order to engage in this structured plan, students must register full time (with three or four courses) in each quarter of the standard academic year (autumn, winter, spring). Full-time registration allows for completion of the general education requirements and introductory courses to the major, and enables students to participate fully in the intellectual life of the College. As young scholars, students test their understanding and perspective across all disciplines in conversation with peers. The community that develops in College housing and in cocurricular student life builds on students' common experiences in learning and in exploring beyond the classroom. Further, the elements of the general education curriculum provide cross-disciplinary perspectives on enduring questions and create the habits of mind that prepare students for advanced studies.

Non-discrimination Statement

In keeping with its long-standing traditions and policies, the University of Chicago considers students, employees, applicants for admission or employment, and those seeking access to University programs on the basis of individual merit. The University does not discriminate on the basis of race, color, religion, sex, sexual orientation, gender identity, national or ethnic origin, age, status as an individual with a disability, protected veteran status, genetic information, or other protected classes under the law (including Title IX of the Education Amendments of 1972). For additional information regarding the University of Chicago's Policy on Harassment, Discrimination, and Sexual Misconduct, please see: harassmentpolicy.uchicago.edu/page/policy (<http://harassmentpolicy.uchicago.edu/page/policy/>).

The University official responsible for coordinating compliance with this Notice of Nondiscrimination is Bridget Collier, Associate Provost for Equal Opportunity Programs. Ms. Collier also serves as the University's Title IX Coordinator, Affirmative Action Officer, and Section 504/ADA Coordinator. You may contact Ms. Collier by emailing bcollier@uchicago.edu, by calling 773.702.5671, or by writing to Bridget Collier, Office of the Provost, The University of Chicago, 5525 S. Ellis Ave., Suite B, Chicago, IL 60637.

General Information

The University of Chicago is accredited by the Higher Learning Commission of the North Central Association.

The content of this catalog is accurate as of April 1, 2020. It is subject to change.

Introduction

Educational Objectives and Enrollment

The College residential and curricular experience is predicated on the community that students build by attending classes together and by learning from faculty and each other in academic and social settings. We believe that successful education at the college level depends to a large extent on regular attendance at classes and laboratories, and therefore it is the expectation of the College that students will attend all classes for which they have registered. Nevertheless, it is up to the individual department, faculty member, or instructor to set the attendance policy for their individual courses.

All students enroll in the general education curriculum, designed with the expectation that in the first two years of study a student will complete general education requirements and introductory courses in a major. The final two years of enrollment are devoted to advanced work in the major and elective courses that build on the foundation laid in the first two years.

In order to engage in this structured plan, students must register full time (with three or four courses) in each quarter of the standard academic year (autumn, winter, spring). Full-time registration allows for completion of the general education requirements and introductory courses to the major, and enables students to participate fully in the intellectual life of the College. As young scholars, students test their understanding and perspective across all disciplines in conversation with peers. The community that develops in College housing and in cocurricular student life builds on students' common experiences in learning and in exploring beyond the classroom. Further, the elements of the general education curriculum provide cross-disciplinary perspectives on enduring questions and create the habits of mind that prepare students for advanced studies.

Non-discrimination Statement

In keeping with its long-standing traditions and policies, the University of Chicago considers students, employees, applicants for admission or employment, and those seeking access to University programs on the basis of individual merit. The University does not discriminate on the basis of race, color, religion, sex, sexual orientation, gender identity, national or ethnic origin, age, status as an individual with a disability, protected veteran status, genetic information, or other protected classes under the law (including Title IX of the Education Amendments of 1972). For additional information regarding the University of Chicago's Policy on Harassment, Discrimination, and Sexual Misconduct, please see: harassmentpolicy.uchicago.edu/page/policy (<http://harassmentpolicy.uchicago.edu/page/policy/>).

The University official responsible for coordinating compliance with this Notice of Nondiscrimination is Bridget Collier, Associate Provost for Equal Opportunity Programs. Ms. Collier also serves as the University's Title IX Coordinator, Affirmative Action Officer, and Section 504/ADA Coordinator. You may contact Ms. Collier by emailing bcollier@uchicago.edu, by calling 773.702.5671, or by writing to Bridget Collier, Office of the Provost, The University of Chicago, 5525 S. Ellis Ave., Suite B, Chicago, IL 60637.

General Information

The University of Chicago is accredited by the Higher Learning Commission of the North Central Association.

The content of this catalog is accurate as of April 1, 2020. It is subject to change.

The Curriculum

The University of Chicago College curriculum has three components: general education requirements (1500 units), a major (900–1900 units), and electives (800–1800 units). A minimum of 4200 units of credit (forty-two 100-unit courses) is required for the undergraduate degree. Of all credits earned, at least 3800 must be earned via course enrollment, as opposed to credit earned via examination.

Students choose courses across the curriculum in consultation with College advisers and faculty counselors. Courses valued at less than 100 units may not be used to satisfy degree requirements.

General Education

General education requirements are designed to teach the skills of critical inquiry, argumentation, and analytical thinking in both quantitative and qualitative settings. These requirements are largely completed with integrated, often interdisciplinary, sequences comprised of two or three courses. (Note: The courses designed to satisfy these requirements cannot be replaced by other courses, except in the sciences, as indicated. Substitutes for general education courses are rarely approved (1) to accommodate a second major or a minor, or (2) to avoid curricular and scheduling conflicts that result from postponing general education requirements until a student's third or fourth year.)

Meant to be a foundation for later study at the College, the general education requirements are a quintessential element of the University of Chicago experience and should be completed by the end of the second year.

These requirements are completed with 1500 units of credit (fifteen 100-unit courses) spread over seven areas of study. These seven general education requirements fall into three broad categories. Students must also satisfy a language competence requirement, which is outlined below.

1. Humanities, Civilization Studies, and the Arts (total: 600 units/6 quarter courses)

Students take a total of six quarter courses in this category, distributed in the following way: at least two quarters in the humanities, at least two quarters in civilization studies, and at least one quarter in the arts. The remaining (sixth) course may be taken in any one of these categories. Each of these requirements has its own detailed page under the heading 'The Curriculum' in this catalog.

An essential component of general education is learning how to appreciate and analyze texts intellectually, historically, and aesthetically. Through this general education requirement, students learn how to interpret literary, philosophical, and historical texts in depth; how to identify significant intellectual problems posed by those texts; and how to discuss and write about them perceptively and persuasively. They also learn how to study a visual or performing art form and how to study texts and art forms within a specific cultural and chronological frame.

2. Natural Sciences (Biological Sciences and Physical Sciences) and Mathematical Sciences (total: 600 units/6 quarter courses)

Students take a total of six quarter courses in this category, distributed in the following way: at least two quarters of physical sciences, at least two quarters of biological sciences, and at least one in mathematical sciences. The remaining (sixth) course may be taken in any one of these categories, unless calculus is being used to satisfy the requirement in mathematical sciences. In that case, the student must take two calculus courses for the general education requirement. In general, be aware that a student's major and/or preparation for the health professions may dictate which of the available options the student should select.

Courses and sequences in the natural sciences are designed to explore significant features of the natural universe and to examine the exciting process of scientific inquiry. These courses consider the powers and limitations of diverse forms of scientific observation, scientific reasoning, and natural laws. Courses in the mathematical sciences develop the powers of formal reasoning through use of precise artificial languages found in mathematics, computer science, statistics, or formal logic.

Each of these requirements has its own detailed page under the heading 'The Curriculum' in this catalog.

3. Social Sciences (total: 300 units/3 quarter courses)

Each of these year-long (three-quarter) social sciences sequences introduces fundamental questions and theories from the social sciences and shows how they enhance our understanding of important issues facing the world. Some sequences focus on classic texts, others on substantive fields of inquiry or research methodologies, but all explore how the social sciences formulate questions and inquire into the nature of social life through acts of imagination as well as through systematic analysis. The social sciences general education curriculum requires active engagement in small seminars, close reading, and analytic writing; some sequences may also include lectures.

Courses must be taken in sequence. Once students begin a sequence, they are expected to remain in the same sequence. NOTE: Students registered in any of the social sciences sequences must attend the first and second class sessions or their registration will be dropped. This requirement has its own detailed page under the heading 'The Curriculum' in this catalog.

Major Programs

More than a set of course credits, a sound major is an effort to understand the methods and experience of a discipline or interdisciplinary field. Majors complement the breadth of the University of Chicago general education requirements with

an opportunity to come to grips with the depth of knowledge and the complexities of developing knowledge in a particular area of inquiry. Majors range from nine to nineteen courses, though the majority of them require between ten and fourteen courses. Each major is described in detail in the Programs of Study section of the catalog.

More than half of the requirements for a major must be met by registering for courses bearing University of Chicago course numbers. Courses used to meet general education requirements cannot also be counted toward a major.

Students officially declare a major through the student portal (my.uchicago.edu (<https://my.uchicago.edu/>)), but they should meet with their College adviser and with the director of undergraduate studies in the department as part of that process.

The following major programs are available in the:

Biological Sciences Collegiate Division (BSCD)

- Biological Sciences
- Neuroscience

Humanities Collegiate Division (HCD)

- Art History
- Cinema and Media Studies
- Classical Studies
- Comparative Literature
- Creative Writing
- East Asian Languages and Civilizations
- English Language and Literature
- Gender and Sexuality Studies
- Germanic Studies
- Inquiry and Research in the Humanities
- Jewish Studies
- Linguistics
- Medieval Studies
- Music
- Near Eastern Languages and Civilizations
- Philosophy
- Romance Languages and Literatures
- Russian and East European Studies
- South Asian Languages and Civilizations
- Theater and Performance Studies
- Visual Arts

New Collegiate Division (NCD)

- Fundamentals: Issues and Texts
- Law, Letters, and Society
- Religious Studies

Physical Sciences Collegiate Division (PSCD)

- Astrophysics
- Biological Chemistry
- Chemistry
- Computational and Applied Mathematics
- Computer Science
- Environmental Science
- Geophysical Sciences
- Mathematics
- Molecular Engineering
- Physics
- Statistics

Social Sciences Collegiate Division (SSCD)

- Anthropology
- Comparative Human Development
- Critical Race and Ethnic Studies
- Economics
- Environmental and Urban Studies
- Geographical Sciences
- Global Studies
- History
- History, Philosophy, and Social Studies of Science and Medicine
- Latin American and Caribbean Studies
- Political Science
- Psychology

Public Policy Studies
Sociology

Electives

The number of courses required for a major primarily determines the number of general electives required for an individual student. A student needs at least forty-two 100-unit courses to graduate: fifteen toward general education and twenty-seven more split between the major and electives. Programs that specify thirteen courses require fourteen electives; twelve-course majors require fifteen electives, and so on.

Additionally, the amount of credit by examination (e.g., AP, IB, placement credit, etc.) may also impact the number of electives required. For students matriculating in Autumn 2017 or later, of the 4200 units required to graduate, at least 3800 units must be completed via course enrollment, i.e., not credit by examination. For example, a student who satisfies more than 400 units of general education or major requirements through examination may increase the number of electives required.

Elective courses may be taken in any subject matter or discipline, including the same discipline as the student's major. They provide students the opportunity to shape their studies toward their distinctive curiosities and interests. At their broadest, they provide an opportunity to explore freely across the richness of opportunities for learning at the University of Chicago.

Courses taken in exploration of alternative majors and in study abroad programs, as well as course requirements completed by examination, are often included in electives. Some students also choose to use groups of electives to create minors or second majors. These options, though suitable ways to formalize students' interests outside their major, should not be undertaken in the mistaken belief that they necessarily enhance a student's transcript. Courses taken as electives should not displace courses in, and should not displace attention to, the student's general education program and major.

Credit for language courses, whether it is earned by course registration or petition, is usually counted toward electives, unless a major requires or permits language courses for credit as part of the major. Courses used to satisfy the language competence requirement ordinarily contribute to the elective totals.

Minor Programs

Some majors offer minors to students in other fields of study, and a few programs offer minors only. A minor requires five to seven courses, all of which count toward the student's general elective totals. Courses in a minor cannot be (1) double counted with the student's major(s) or with other minors, or (2) counted toward general education requirements. Courses in a minor must be taken for quality grades, and more than half of the requirements for a minor must be met by registering for courses bearing University of Chicago course numbers. For specific requirements, see the descriptions of the programs listed below that appear elsewhere in this catalog.

Students can indicate their interest in a minor via the student portal (my.uchicago.edu (<https://my.uchicago.edu>)), but can only officially declare a minor by meeting with the director of undergraduate studies in the department and with their College adviser. Students submit to their College adviser the director's approval for the minor on a form obtained from the adviser. The deadline for declaring a minor is Spring Quarter of a student's third year.

A full list of minors offered by the College can be found [here](#).

While not a minor, the Dougan Scholars Certificate Program (<http://www.chicagobooth.edu/programs/full-time/admissions/early-career-candidates/dougan-scholars-program/>) is a selective program for undergraduate students offered by the Booth School of Business. The Chicago Studies Program (<http://chicagostudies.uchicago.edu/>) also offers a certificate for students who complete a series of courses and cocurricular activities related to the city of Chicago.

Language Competence

Students in the College are required to possess understanding of more than one culture and to demonstrate competence in a language other than English. The language competence requirement must be met by demonstrating linguistic proficiency equivalent to one year of college-level study. For information about which languages are currently being taught and which may be used to meet the language competence requirement, visit humanities.uchicago.edu/about/languages-uchicago/ (<http://humanities.uchicago.edu/about/languages-uchicago/>).

Students who matriculate in or after September 2009 may meet the language competence requirement in one of the following ways:

- passing a College-administered competency examination. The language competency exams are given each Winter Quarter; students can sign up through their advisers. To qualify for the competency exam, students must have placed into the second year of that language or completed an approved beginning-level sequence at another institution with a C or above (see Transfer Credit rules);
- completing (with a quality grade) the third course of a first-year language sequence or a higher-level course offered at the University of Chicago;
- receiving a score of 5 on an AP examination in Chinese, French, German, Italian, Japanese, Latin, or Spanish, or a score of 5 or above on an IB Standard Level (SL) or Higher Level (HL) exam in a foreign language;

- placing into 10300 or higher in a foreign language offered at the University of Chicago, then participating in one of the College's study abroad programs (visit study-abroad.uchicago.edu (<http://study-abroad.uchicago.edu>) for more information) where that language is spoken and completing (with a quality grade) a language course at the intermediate or advanced level;
- participating in a College-approved one-quarter intensive foreign language study abroad program and completing all required courses with a quality grade (visit study-abroad.uchicago.edu (<http://study-abroad.uchicago.edu>) for more information);
- passing one of the College's Practical or Advanced Language Proficiency assessments in a foreign language. File the Language Petition (<https://college.uchicago.edu/advising/forms-and-petitions/>), using the second option, to complete the requirement; or
- taking approved intermediate-level (or above) courses at another institution and passing with a B or above. (See Transfer Credit rules.)

Students who are foreign nationals may meet the language competence requirement if their formal schooling experience in a country other than the United States enables them to demonstrate the criteria of cultural understanding and language competence described above. They must submit a petition (<https://college.uchicago.edu/advising/forms-and-petitions/>) to Catherine Baumann (Cobb 214, 773.702.8008, ccbauman@uchicago.edu). Supporting documentation must also be provided; the requirement is not automatically waived.

NOTE: Students are strongly urged to complete the language competence requirement in their first two years in the College. Students who wish to establish language proficiency via summer course work should see the Summer Language Institute (<https://summerlanguages.uchicago.edu/>)'s offerings.

After meeting the language competence requirement, students may work toward Practical and Advanced Foreign Language Proficiency Certificates. More information can be found here (<https://languageassessment.uchicago.edu/flpc/>). (<http://college.uchicago.edu/academics-advising/academic-opportunities/advanced-language-proficiency/>)

Petitions

Any student who wishes to appeal for special consideration under a College regulation or an interpretation thereof may file a petition (<https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/GeneralPetition.pdf>) with the Dean of Students in the College. Students are encouraged to speak to their adviser for more information.

Physical Education

Physical education is not required for an undergraduate degree. However, students are encouraged to pursue physical fitness as part of their College experience. For further information on fitness opportunities, visit athletics.uchicago.edu (<http://athletics.uchicago.edu/>).

Archived Catalogs

Students fulfill requirements that are in place when they enter the College. For more information on the requirements for students who entered the College between 1995 and 2018, refer to the appropriate archived editions of the College Course Catalog (collegecatalog.uchicago.edu/archives).

Earning a Degree

Requirements for the Degree

The College awards the BA or the BS degree to qualified students who are recommended by the faculty. In order to qualify for the degree, students must complete the following:

1. The general education requirements
2. The requirements of a major program
3. The language competency requirement
4. Course credit for a minimum of 42 quarter courses (4200 units): This number may be reached in part by examination where appropriate. For students matriculating in Autumn 2017 or later, of the 4200 units, 3800 units of credit must be earned by course enrollment. Course enrollments may include direct enrollment study abroad programs affiliated with the College and approved transfer credit.
5. An overall GPA of 1.75 and a GPA of 2.0 in the major
6. A residency requirement: A student must be in residence at the University of Chicago campus for at least six quarters (excluding summers) and must successfully complete a minimum of 1800 units of credit while in residence. Additionally, more than half of the requirements for any major or minor must be completed in residence. NOTE: Certain non-summer College-sponsored study abroad programs (chiefly the civilization studies programs) may be used to meet this residency and course requirement.
7. Completion of a degree application prior to the quarter in which the degree is to be received
8. Payment of all outstanding bills and return of all equipment and library books

Liberal Education at Chicago

For a century the College of the University of Chicago has been an innovative leader in liberal education in the United States. Since the 1930s the curriculum of the College has varied in its details, but its intellectual foundations have been constant.

Undergraduate education at Chicago begins with a common core curriculum, conducted from the standpoint of multiple disciplines but beholden to none, which provides opportunities for critical inquiry and the discovery of knowledge. Chicago's long-standing commitment to a rigorous core of general education for first- and second-year students emphasizes the unique value of studying original texts and of formulating original problems based on the study of those texts. The objective of our faculty-taught general education courses—which constitute the major component of the first two years in the College—is not to transfer information, but to raise fundamental questions and to encourage those habits of mind and those critical, analytical, and writing skills that are most urgent to a well-informed member of civil society.

Just as general education provides a foundation for addressing key intellectual questions, the major program of study insists upon depth of knowledge and sophistication in a defined field. Majors afford students invaluable opportunities to develop and defend complex arguments by means of extended scholarly research.

The curriculum, however, extends beyond the general education requirements and the major. The faculty has always believed that maturity and independence of mind are enhanced by exploration in intellectual universes outside or transcending required programs of study. Electives—that is, courses drawn from other majors, independent research projects, programs of overseas study, and advanced training in a second language—provide a breadth and a balance that is critical to a true liberal education. Hence the Chicago curriculum allows up to one-third of a student's academic work to consist of electives that will build upon the work of our general education courses, but do so on more advanced and more focused levels.

Many national figures in higher education have been identified with Chicago's undergraduate curriculum—including William Rainey Harper, Robert Maynard Hutchins, and Edward Levi—but learning at Chicago has never been the province of one person or one vision. Rather, the curriculum devoted to 'the knowledge most worth having,' and the critical cast of mind that it develops, has been the product of generations of collegial debate and constant re-examination, processes which are themselves a part of the intellectual adventure to which the curriculum is devoted.

Arts

The general education requirement in the arts provides an introduction to methods for analyzing, comprehending, and appreciating works of dramatic, musical, or visual art by examining their formal vocabularies and how these vocabularies are used to create meaning. This is accomplished either by the intensive study of selected masterpieces or by producing original works.

The courses that satisfy this requirement, listed below, come from a variety of departments and are designed not as specialized introductions to one single field or creative practice, but instead are expressly designed to broadly investigate the arts through study and practice. For that reason, only these courses can be used to satisfy the general education requirement in the arts. *Substitutes, including upper-level electives, will not be approved.*

General Education Course Options

ARTH 10100	Introduction to Art	100
ARTH 14000 through ARTH 16999	Art Surveys	100
ARTH 17000 through ARTH 18999	Art in Context	100
ARTV 10100	Visual Language: On Images	100
ARTV 10200	Visual Language: On Objects	100
ARTV 10300	Visual Language: On Time and Space	100
CMST 14400	Film and the Moving Image	100
CMST 14500 through CMST 14599	Topics in Cinema and Media Studies	100
CRWR 12100 through CRWR 12199	Introduction to Genres or Reading as a Writer	100
CRWR 18200	Poetry and the Human III	100
MAAD 26210	Media Art and Design Practice	100
MUSI 10100	Introduction to Western Art Music	100
MUSI 10200	Introduction to World Music	100
MUSI 10300	Introduction to Music: Materials and Design	100
MUSI 10400	Introduction to Music: Analysis and Criticism	100
TAPS 10100	Drama: Embodiment and Transformation	100
TAPS 10200	Acting Fundamentals	100
TAPS 10300 through TAPS 10699	Text and Performance	100
TAPS 10700	Introduction to Stage Design	100
TAPS 10800	Contemporary Dance Practices	100

See the departmental pages under Programs of Study for information on specific course offerings planned for the 2020–21 academic year.

Notes:

- MAAD 26210 Media Art and Design Practice and CRWR 18200 Poetry and the Human III are affiliated with HUMA 16000-16100-16200 Media Aesthetics: Image, Text, Sound I-II-III and HUMA 18000-18100-18200 Poetry and the Human I-II-III, respectively. They are offered in Spring Quarter, simultaneous with the third course in the humanities sequence. First-year students satisfying the general education requirement in the humanities with one of those sequences will have priority in enrollment for the associated arts course.
- The departments that offer courses for the general education requirement in the arts may require or encourage students in their major to complete this requirement in a specific way. Be sure to check the department's page under Programs of Study.
- Students who completed TAPS 28400 History and Theory of Drama I or TAPS 28401 History and Theory of Drama II prior to Autumn 2016 may count those courses toward this general education requirement. However, they are no longer approved for the requirement in the arts.

Biological Sciences

The General Education Requirement in the Biological Sciences

All students are required to complete at least two quarters of Biological Sciences course work to satisfy the general education requirement in the biological sciences. The goal is to provide students of all majors and academic interests with a broad foundational understanding of the concepts of biology and an opportunity to focus on a specific area of interest within the discipline. The requirement should be completed by the end of the second year.

Most students choose one of the following options to meet the general education requirement in the biological sciences. For other options, see Specific General Education Requirement for Certain Majors.

1. A two-quarter general education sequence for non-Biological Sciences majors; options include BIOS 10130 Core Biology followed by any Topics course (course numbers BIOS 11125-BIOS 16120 and BIOS 27721-27723) OR one of three two-quarter Core Biology sequences (course numbers BIOS 10450-BIOS 10451, BIOS 10500-BIOS 10501, or BIOS 10602-BIOS 10603).

2. The first two courses of the Pre-Med Sequence (BIOS 20170 Microbial and Human Cell Biology through BIOS 20175 Biochemistry and Metabolism) for students interested in completing the requirements for medical school but not majoring in Biological Sciences. NOTE: BIOS 20171 requires concurrent enrollment with BIOS 20172.

3. The first two courses in a Fundamentals Sequence for Biological Sciences majors: BIOS 20153 Fundamentals of Ecology and Evolutionary Biology and BIOS 20151 Introduction to Quantitative Modeling in Biology (Basic) or BIOS 20152 Introduction to Quantitative Modeling in Biology (Advanced).

4. Completion of three quarters of the Advanced Biology Fundamentals Sequence. Students with a score of 4 or 5 on the AP Biology test who complete the first three quarters of an Advanced Biology Fundamentals Sequence will be awarded a total of two quarters of credit to be counted toward the general education requirement in the biological sciences and three quarters of credit toward the Biological Sciences major. For more information about the Advanced Biology Fundamentals Sequence, see the Biological Sciences Program of Study page in this catalog.

Advanced Placement Credit

For students who do not plan to major in the Biological Sciences or prepare for the health professions, a score of 4 or 5 on the AP Biology test confers credit for BIOS 10130 Core Biology. These students complete the general education requirement with either one or two Topics courses in the biological sciences, depending on how the requirements in the mathematical and physical sciences are met; students should contact their College adviser for details.

Students with a score of 4 or 5 on the AP Biology test who complete the first three quarters of an Advanced Biology Fundamentals Sequence will be awarded a total of two quarters of credit to be counted toward the general education requirement in the biological sciences.

General Education Sequences for Non-Biological Sciences Majors

Core Biology

BIOS 10130. Core Biology. 100 Units.

What is life? How does it work and evolve? This course uses student-centered interactive learning in the lab, assigned readings from both the popular press and primary scientific literature, and directed writing exercises to explore the nature and functions of living organisms, their interactions with each other, and their environment.

Instructor(s): Staff Terms Offered: Autumn, Spring, Winter

Multiple sections of BIOS 10130 Core Biology are taught throughout the year. Sections are taught from a different perspective based upon the specialty of the instructor. The different descriptions are listed below. Students should register for the section that best suits their interests based upon the descriptions below:

A. Neurobiology. This course explores the principles governing the organization, operation, and evolution of living systems by examining these concepts through the lens of neuroscience. Through laboratory investigations, readings from the popular and scientific press, and directed writing exercises, the methods of scientific inquiry and logic of scientific reasoning will be introduced. In this exploration, the following questions will be addressed: How are all living organisms organized and how does that organization contribute to their function? What are the mechanisms by which organisms sense and respond to changes in their environment and engage in functional interactions within that environment? What are the biological and evolutionary mechanisms that underlie natural organismal behaviors including, but not limited to, motivated and circadian-driven behaviors? Both invertebrate and vertebrate model systems will be examined to explore the processes at work in all living systems as well as the mechanisms underlying the formation and maintenance of life's diversity. *M. McNulty. Autumn, Spring, L.*

B. Microbes and Immunity. This section covers the most basic concepts in biology, such as life, macromolecules, cells, energy, metabolism, evolution, and genomics, as well as human anatomy and physiology, drawing examples from microbiology and immunology to tie these basic concepts together. The impact of our interactions with microorganisms in our evolution is highlighted in many ways. Hands-on laboratories, readings, and discussion sessions complement lectures. *B. Fineschi. Autumn, Winter, Spring, L.*

C. Basic Biology. What is life? How does it work and evolve? This course uses student-centered interactive learning in the lab, assigned readings from both the popular press and primary scientific literature, and directed writing exercises to explore the nature and functions of living organisms, their evolution, and their interactions with each other. *A. Hunter. Autumn, Spring. L.*

D. Biotechnology. In the first half of this course, basic biology concepts related to biotechnology are covered. These include lectures on life, cells, macromolecules, metabolism, and genetics, complemented by hands-on laboratories. The second half of the course involves student-led topical research and presentations on various aspects of biotechnology, such as plant biotechnology, animal biotechnology, microbial biotechnology, response to bioterrorism, and examining the consequences of developments in these areas. *N. Bhasin. Winter. L.*

E. Ecology. Have you wondered how the environment has influenced your anatomy, physiology, and psychology through your lifetime? Each one of us continuously interacts, directly or indirectly, with the rest of the Earth's biodiversity at different levels, from molecules, cells, organisms, populations, ecosystems, and the whole biosphere. Are we really independent individuals, or do we need a better concept that broadens our understanding of the world we live in? In this course you will examine fundamental biological principles to understand how organisms live and thrive in a complex and intricate network that we call nature. You will develop your own criteria based on evidence obtained through hypothesis testing and identification of legitimate sources of information. *O. Pineda. Autumn, Winter. L.*

F. Ecology and Evolution. This course focuses on the interaction of organisms with their environment and evolutionary processes that lead to diversity and adaptation. We will examine biological processes at the cellular and organismal levels across a wide range of organisms, considering their ecological similarities and differences in an evolutionary framework. Population and ecosystem levels will be examined to promote understanding of the importance of diversity in ecosystem health and the impacts of an ever increasing human population. *E. Larsen. Winter. L.*

G. Cell and Developmental Biology. This course covers basic concepts in life science including molecular biology, cells, genetics, development, evolution, and ecology, with examples being derived from cell and developmental biology. We will use laboratory activities, readings from the scientific literature, and writing exercises to learn about scientific methodology and how that is applied in the biological sciences. *A. Brock. Autumn, Winter. L.*

H. Cancer Biology. This course covers most basic concepts of biology such characteristics of life, structure, function and division of the cell, macromolecules, metabolism, genetics and principles of evolution. It will also explore how DNA is replicated and transcribed and how proteins are made. As genes control many biological processes, gene regulation will be discussed. An integral part of this course will be the discussion of how anomalies of most of the introduced concepts may lead to cancer. Selected lectures will be delivered in a flipped format, and team-based and other active learning pedagogies will be adopted in this course. Lab activities will be integrated in the course materials. Reading of assigned scientific topics, writing exercises, team-innovative projects and presentations will be used for assessment. *A. Amin. L.*

Topics Courses for Non-Majors

The courses that follow have a prerequisite of BIOS 10130 Core Biology, or a score of 4 or 5 on the AP Biology test. Attendance is required at the first class to confirm enrollment. Students who choose to complete only one general education course in the mathematical sciences may take a second topics course as part of the general education requirements.

BIOS 11125. Life Through a Genomic Lens. 100 Units.

The implications of the double helical structure of DNA triggered a revolution in cell biology. More recently, the technology to sequence vast stretches of DNA has offered new vistas in fields ranging from human origins to the study of biodiversity. This course considers a set of these issues, including the impact of a DNA perspective on the legal system, on medicine, and on conservation biology.

Instructor(s): A. Turkewitz, M. Nobrega Terms Offered: Winter

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

Equivalent Course(s): ENST 12402

BIOS 11140. Biotechnology for the 21st Century. 100 Units.

This course is designed to provide a stimulating introduction to the world of biotechnology. Starting with an overview of the basic concepts of molecular biology and genetics that serve as a foundation for biotechnology, the course will segue into the various applied fields of biotechnology. Topics will include microbial biotechnology, agricultural biotechnology, biofuels, cloning, bioremediation, medical biotechnology, DNA fingerprinting and forensics. The goal of this course is to provide the Biology non-majors with an appreciation of important biotechnology breakthroughs and the associated bioethics issues.

Instructor(s): N. Bhasin Terms Offered: Winter

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 12114. Nutritional Science. 100 Units.

This course examines the underlying biological mechanisms of nutrient utilization in humans and the scientific basis for setting human nutritional requirements. The relationships between food choices and human health are also explored. Students consider how to assess the validity of scientific research that provides the basis for advice about how to eat healthfully. Class assignments are designed to help students apply their knowledge by critiquing their nutritional lifestyle, nutritional health claims, and/or current nutrition policy issues.

Instructor(s): P. Strieleman Terms Offered: Autumn, Spring, Summer

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

Note(s): Credit may not be earned for both BIOS 12114 and BIOS 10501

BIOS 12115. Responses of Cardiopulmonary System to Stress. 100 Units.

This course is designed to provide students an overview of basic concepts involved in the functioning of cardiopulmonary vascular systems. Special emphasis will be given to different regulatory mechanisms working at the cell, tissue and organ levels to control the systems functioning during stress conditions. We also discuss recent topics related to molecular basis of adaptation and drugs designed to treat mal-adaptive changes taking place in the heart and lungs (vessels) subjected to various-types of pathological stresses. Instructors, who are both actively engaged in research to understand molecular basis of cardiopulmonary vascular diseases, take this course beyond the knowledge of standard textbook content.

Instructor(s): M. Gupta, Y. Fang Terms Offered: Spring

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 12116. The Human Body in Health and Disease. 100 Units.

This course is designed to provide an overview of physiological organ systems under different states of health and disease. A comprehensive tour through the human body will take students through the anatomy and functioning of several systems including, but not limited to, the cardiovascular, respiratory, nervous, renal, gastrointestinal, and immune systems. We will examine each of these systems under normal conditions and from the perspective of disease. A variety of pathological conditions including diabetes, heart and kidney diseases, neurodegenerative conditions, and autoimmune diseases, will be covered with an emphasis on how many diseases involve multiple organ systems.

Instructor(s): M. McNulty Terms Offered: Autumn

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 12117. The 3.5 Billion Year History of the Human Body. 100 Units.

This course looks at the structure, function, and deep history of the human body. Each major organ and system of the body is explored from perspectives of anatomy, paleontology, and developmental genetics to reveal the deep history of the body and our connections to the rest of life on the planet.

Instructor(s): N. Shubin Terms Offered: Autumn

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

Note(s): Due to significant overlap of course content, students may register for only one of PHSC 11000, BIOS 12117, or GEOS 13900/BIOS 13123

BIOS 12121. Physiology in Extreme Environments. 100 Units.

Humans live nearly everywhere, including arid deserts, the tops of mountains, and frigid arctic tundra. We have also expanded our reach to include the bottom of the ocean and the International Space Station. Our bodies' ability to make physiologic adaptations allows us to survive in each of these environments. Physiology in Extreme Environments will enhance your understanding of how your body reacts to stressors such as high altitude, diving, spaceflight, isolation, and more. Discussion topics will include a review of the cardiovascular and respiratory systems, exercise physiology, and cerebral blood flow. We will also discuss the physiology of sleep and fatigue. This knowledge will then be used to explain how life support environments work and how we survive in dangerous environments.

Instructor(s): K. Ruskin, A. Garcia, A. Clebone Terms Offered: Spring

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 12122. Gourmet Biology: Exploring Relationships between Human Nutrition, Food & Biodiversity. 100 Units.

Human omnivorous nature has allowed us to fulfill our caloric requirements eating a large diversity of organisms. The neurological perception of food - taste, smell, texture, and appearance - highly influences our nutrition. It also contributes to our instinct for experimenting constantly with new combinations of ingredients and ways of cooking. Everywhere humans have travelled and settled, we have established close relationships with the local biodiversity to identify food sources. We have domesticated and transported several of those species throughout the world, dramatically changing ecosystems at a global scale. In this course, students will learn basic principles of human nutrition and neurophysiology to explore how our biology has influenced the selection of species we use as food sources and how, through that selection, we continuously impact ecosystems around the world.

Instructor(s): O. Pineda-Catalan Terms Offered: Spring

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 13111. Natural History of North American Deserts. 100 Units.

This lecture course focuses on the ecological communities of the Southwest, primarily on the four subdivisions of the North American Desert, the Chihuahuan, Sonoran, Mohave, and Great Basin Deserts. Lecture topics include climate change and the impact on the flora and fauna of the region; adaptations to arid landscapes; evolutionary, ecological, and conservation issues in the arid Southwest, especially relating to isolated mountain ranges; human impacts on the biota, land, and water; and how geological and climatic forces shape deserts.

Instructor(s): E. Larsen Terms Offered: Spring

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 13112. Natural History of North American Deserts; Field School. 100 Units.

This lecture/lab course is the same course as BIOS 13111, but includes a lab section preparatory to a two-week field trip at end of Spring Quarter, specific dates to be announced. Our goal in the lab is to prepare proposals for research projects to conduct in the field portion of this course. Field conditions are rugged. Travel is by twelve-passenger van. Lodging during most of this course is tent camping on developed campsites.

Instructor(s): E. Larsen Terms Offered: Spring

Prerequisite(s): Consent of instructor. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 13123. Biological Evolution. 100 Units.

This course is an introduction to evolutionary processes and patterns in present-day organisms and in the fossil record and how they are shaped by biological and physical forces. Topics emphasize evolutionary principles. They include DNA and the genetic code, the genetics of populations, the origins of species, and evolution above the species level. We also discuss major events in the history of life, such as the origin of complex cells, invasion of land, and mass extinction. This course is part of the College Course Cluster program: Climate Change, Culture and Society. (L)

Instructor(s): D. Jablonski Terms Offered: Winter

Prerequisite(s): BIOS 10130; No Biological Sciences majors except by petition to the BSCD Senior Advisers.

Note(s): Due to significant overlap of course content, students may register for only one of PHSC 11000, BIOS 12117, or GEOS 13900/BIOS 13123. Students using this course for credit in the GEOS or ENSC major register for GEOS 27300; additional work, including a term paper, will be required.

Equivalent Course(s): GEOS 13900

BIOS 13128. Plant-Animal Interactions. 100 Units.

In this course we investigate the ecological interactions between plants and animals, and their evolution. Through readings and discussion we explore herbivory and mutualisms (pollination, seed dispersal). How do plants defend themselves against herbivores? How have plants and their seed dispersers, pollinators, and predators co-evolved?

Instructor(s): A. Hunter Terms Offered: Autumn Winter

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 13133. Resolving the Environmental Crisis. 100 Units.

Humans have evolved unique capabilities for transforming their environment rather than accommodating to it. But we pass the costs of improving our circumstances onto the environment and therefore onto our own future generations. This pattern has accelerated enormously during the past 200 years of industrialization. It is now profoundly important for us to come to terms with the impact of the human enterprise on all aspects of our environment as well as our health, welfare, security and pleasure in life. The environmental crisis is the defining issue for the 21st Century, yet traditional values are often poor guides for making our activities sustainable. How can we improve our economic, social and civil institutions so as to resolve our environmental crisis? How should societies now joining the industrial world proceed with their own development? This course will consider these and related issues and approaches to their resolution.

Instructor(s): T. Steck Terms Offered: Autumn

Prerequisite(s): BIOS10130. NO BIOLOGICAL SCIENCES MAJORS AND NO NON-BIOLOGY PRE-MEDS, except by petition.

BIOS 13140. The Public and Private Lives of Insects. 100 Units.

This course examines the ecology and evolution of insects, from their early evolution over 350 million years ago to their adaptations that allow them to exploit nearly every habitat on earth and become the most diverse animal group on the planet. We explore the basic biology of insects that have allowed them to become the largest group of animals on the planet, making up approximately 1.5 million of the 2 million described species.

Instructor(s): E. Larsen Terms Offered: Autumn Spring, Spring quarter, only in even years

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 13141. The Mathematics of Evolution. 100 Units.

In this course, students will learn fundamental concepts and models of population dynamics, selection and evolution.

The course will emphasize the importance of population thinking, information, chance, competition and selection in finite populations in determining dynamical outcomes. We will emphasize how genetic information can be modeled and transmitted under variation and selection across generations, providing a modern framework to understand mathematical theories of evolution by natural selection. This then leads to the central theme of the course, creating a general view of evolution as learning in populations, which establishes connections between ecology and evolution and computer science, economics and complex systems.

Instructor(s): L. Bettencourt, M. Steinruecken Terms Offered: Winter, offer Winter 2022

Prerequisite(s): Prerequisite(s): BIOS 10130, STAT 22000, and MATH 13300 or higher. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 13142. Origin and Evolution of Intelligent Life. 100 Units.

The course approaches Fermi's question, 'Are we alone in the universe?,' in the light of recent evidence primarily from three fields: the history and evolution of life on Earth (paleontology), the meaning and evolution of complex signaling and intelligence (cognitive science), and the distribution, composition and conditions on planets and exoplanets (astronomy). We also review the history and parameters governing extrasolar detection and signaling. The aim of the course is to assess the

interplay between convergence and contingency in evolution, the selective advantage of intelligence, and the existence and nature of life elsewhere in the universe- in order to better understand the meaning of human existence.

Instructor(s): P. Sereno, L. Rogers, S. London Terms Offered: Winter. Offered Winter 2021

Prerequisite(s): PQ: BIOS 10130. Third or fourth year standing. NO BIOLOGICAL SCIENCES MAJORS AND NO NON-BIOLOGY PRE-MEDS, except by petition.

BIOS 13253. Apes and Human Evolution. 100 Units.

This course is a critical examination of the ways in which data on the behavior, morphology, and genetics of apes have been used to elucidate human evolution. We emphasize bipedalism, hunting, meat eating, tool behavior, food sharing, cognitive ability, language, self-awareness, and sociability. Visits to local zoos and museums, film screenings, and demonstrations with casts of fossils and skeletons required.

Instructor(s): R. Tuttle Terms Offered: Spring. Spring 2021

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

Equivalent Course(s): ANTH 38600, EVOL 38600, ANTH 21428, HIPS 21428

BIOS 14112. Workings of the Human Brain: From Brain to Behavior. 100 Units.

This course examines how the brain generates behavior. Topics include the organization of the nervous system; the mechanisms by which the brain translates external stimuli into electrical and chemical signals to initiate or modify behavior; and the neurological bases of learning, memory, sleep, cognition, drug addiction, and neurological disorders.

Instructor(s): M. McNulty Terms Offered: Spring Summer

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS, NEUROSCIENCE, OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 14114. Drugs Galore: What They Are and What They Do to You. 100 Units.

The course will cover several drugs used and abused (such as alcohol, ritalin, adderall, cannabinoids), their targets and pharmacological actions.

Instructor(s): R. Zaragoza Terms Offered: Autumn Spring

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 14116. Introduction to Social Neuroscience. 100 Units.

This course on social neuroscience addresses a timely topic in the fields of medicine, psychology, and the neurosciences. Specifically, a key challenge in the study of the brain and its effects on health and behavior resides not only in determining how one's mental processes map onto their own patterns of brain activity but also how this activity is modulated by shared representations with other individuals through various neural, hormonal, cellular, and genetic mechanisms. These are questions that fall within the field of social neuroscience - the study of the neural, hormonal, cellular, and genetic mechanisms underlying the super-organismal structures. When social neuroscience was first proposed a quarter century ago, attention was given to why the notion of 'social neuroscience' was not an oxymoron and to articulate a set of principles (multilevel analysis) that justified attention to super-organismal structures (e.g., a pair bond, marriage, salutary relationship) in the analysis of the function of the nervous system and brain. This was prior to the recognition of the importance of epigenetics and the sophisticated means of probing the neural aspects of shared representations, embodied cognition, that exist today. Indeed, genes were still thought to be strong if not invariant determinants of human illness, phenotypes and behavior. So where does social neuroscience now fit within medicine and the science of brain, mind, and behavior? That is the focus of the course.

Instructor(s): S. CACIOPPO Terms Offered: Winter

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 15115. Cancer Biology: How Good Cells Go Bad. 100 Units.

This lecture/discussion course examines the multi-step process by which normal cells become malignant cancer cells. Topics include how defects in the regulation of proliferation, differentiation, and apoptosis can occur in cancer cells, as well as how cancer cells can acquire the ability to attract blood vessels (angiogenesis) and to invade other organ systems (metastasis). We emphasize the study of signal transduction pathways and how they are altered in cancer cells. The concept of genes that cause cancer (oncogenes) and genes that deter cancer (tumor suppressor genes) is discussed. New disease treatments that target specific molecular defects within cancer cells are reviewed.

Instructor(s): M. Villereal Terms Offered: Spring, Winter

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 15124. The Principles of Microbiology/Global Infectious Diseases. 100 Units.

Infectious diseases - of both viral and bacterial origins - remain a major global health burden. This course introduces students to the excitingly diverse world of microbes and discusses the roles they play in causing infectious diseases in humans. Various types of microbes are described, with the focus on viruses and bacteria that have caused, or continue to cause, significant morbidity and mortality in humans worldwide. A central part of this subject outlines some of the strategies used by infectious agents to cause disease, their transmission, and principal mechanisms employed by the human immune system to prevent disease. Other measures of controlling infectious diseases, including vaccines and antimicrobial therapies, are also discussed. This course provides students with an understanding of the basic concepts in Microbiology/Infectious Diseases.

Instructor(s): M. Gack Terms Offered: Winter

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-MAJOR PRE-MED STUDENTS, except by petition.

BIOS 16120. The Biological Nature of Psychological Problems. 100 Units.

This course is based on the strong assumption that psychology is a biological science, albeit with elements of the social sciences. The course uses a combination of lectures and classroom discussion of primary and secondary source readings assigned for each class meeting. It presents a strong biological science perspective on individual differences in emotions, motivations, and cognitions that cause distress or interfere with adaptive life functioning, but does so in a non-stigmatizing manner. The course begins with a description and discussion of the nature of psychological problems. The course will survey what is known about the genetic, environmental, and epigenetic bases of such problems and the methods used to study genetic influences and gene-environment interactions. Next, students will review what is currently known about the neural and other biological mechanisms involved in maladaptive individual difference in emotion, motivation, and cognitive processes, with discussion of the methods of studying such mechanisms in humans and nonhumans. The pros and cons of the medical model of 'mental illness' will be discussed as the major contrast with the natural science view advocated by the instructor.

Instructor(s): B. Lahey Terms Offered: Spring

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-MAJOR PRE-MED STUDENTS, except by petition.

Equivalent Course(s): PSYC 28850

Sequences

These sequences are an alternative to taking BIOS 10130 Core Biology plus a Topics course to fulfill the general education requirement in the biological sciences. Students MUST take BOTH courses in a sequence.

Pharmacology Sequence

BIOS 10450. Pharmacological Perspectives in Cell and Molecular Biology. 100 Units.

This course introduces concepts related to the use, pharmacodynamic properties, manner in which drugs act at the molecular and/or cellular level, and their effects at the organismal level.

Instructor(s): R. Zaragoza Terms Offered: Autumn

Prerequisite(s): NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition. This course MUST be followed by the second course in the sequence.

BIOS 10451. Pharmacological Perspectives II. 100 Units.

Must be taken in sequence with BIOS 10450. The goal of this course is to learn the pharmacological principles by which drugs act, at the molecular and cellular level, to affect an organ/organ systems of the human body. The pharmacodynamics, pharmacokinetic, pharmacotherapeutics and toxicology of a number of drugs are discussed. Drugs currently in the media, how these drugs affect different systems ranging from cardiovascular to the central nervous system, and the fundamental basis for the use of drugs are covered.

Instructor(s): R. Zaragoza Terms Offered: Winter

Prerequisite(s): BIOS 10450. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

Metabolism Sequence

BIOS 10500. Metabolism and Exercise. 100 Units.

Must be taken in sequence with BIOS 10501. This course examines the flow of energy through the human body—from what we eat to what we can do. Basic physiology, metabolism, and exercise concepts are covered from cells to systems. Students should be prepared to alter their diet and/or physical activity. This course is intended to be followed by BIOS 10501 (Metabolism and Nutrition). Prerequisite(s): This course MUST be followed by the second course in the sequence. NO BIOLOGICAL SCIENCES MAJORS, except by petition.

Instructor(s): J. Kennedy Terms Offered: Autumn

Prerequisite(s): This course MUST be followed by the second course in the sequence. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 10501. Metabolism and Nutrition. 100 Units.

Must be taken in sequence with BIOS 10500. Taking a scientific approach to nutrition, this course covers nutritional requirements and why they are required for human health by exploring their function at the cellular and molecular level. Basic physiology concepts related to nutritional health are covered, including digestive physiology and some aspects of endocrinology. As a continuation of the exercise concepts covered in BIOS 10501, the relationship between exercise and nutrition is considered. Students complete a dietary analysis of their food intake to critique their individual nutritional health.

Instructor(s): P. Strielemann Terms Offered: Winter

Prerequisite(s): BIOS 10500. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

Note(s): Credit may not be earned for both BIOS 10501 and BIOS 12114.

Computer Modeling Sequence

BIOS 10602. Multiscale Modeling of Biological Systems I. 100 Units.

Modern biology generates massive amounts of data; this course is devoted to biological information and the models and computational techniques used to make sense of it. The first course in the sequence begins with the organization of life at the molecular level, and builds a physical understanding to the structure of macromolecules such as DNA, RNA and proteins. Students learn about biological databases, algorithms for sequence alignment and phylogenetic tree building. Students

will also be introduced to basics of high performance computation and its application to the field of bioinformatics. They will learn how to use our in-house supercomputer to process and analyze next generation gene sequencing data in order to identify disease-relevant variants. Students implement computational algorithms using R and Unix.

Instructor(s): E. Haddadian Terms Offered: Autumn. L.

Prerequisite(s): MATH 13300/15300/16300 or equivalent placement. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition. This course MUST be followed by the second course in the sequence.

BIOS 10603. Multiscale Modeling of Biological Systems II. 100 Units.

Must be taken in sequence with BIOS 10602. Major Advances in understanding how life works at the molecular level have revolutionized biology. The second course in the sequence is dedicated to the study of how large molecules, such as proteins, DNA, carbohydrates, and phospholipids, perform their functions. The course will begin with a solid grounding in molecular chemistry and the forces that govern interactions between atoms and molecules. This is followed by an overview of structure and function of macromolecules, in particular of proteins and enzymes. The students will learn how to visualize macromolecules and measure their basic properties and to model their physical movements by means of molecular dynamic simulations running at university's super computer facility. The course will then proceed to describe how interactions of these molecules produce functioning organelles and cells, and how molecular mishaps can lead to disease.

Instructor(s): E. Haddadian Terms Offered: Winter. L.

Prerequisite(s): BIOS 10602 or consent of instructor. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

Pre-Med Sequence for Non-Majors BIOS 20170 through BIOS 20175

This integrated sequence explores the molecular, cellular, organismal, and biochemical properties of living systems. It is designed to prepare students who do not intend to major in biology for graduate study in the health professions. This five-course sequence begins with BIOS 20170 Microbial and Human Cell Biology in the Winter Quarter and both BIOS 20171 Human Genetics and Developmental Biology and BIOS 20172 Mathematical Modeling for Pre-Med Students I in the Spring Quarter. These two courses will complete a student's general education requirement in the biological sciences. The second year of the sequence continues with BIOS 20173 Perspectives of Human Physiology in the Autumn Quarter and concludes with BIOS 20175 Biochemistry and Metabolism in the Winter Quarter. BIOS 20172 must be taken concurrently with BIOS 20171 in the Spring Quarter of the first year. The Fundamentals sequence for biology majors is also open to non-majors completing their pre-med biology requirements and provides comparable topical coverage. *This sequence is open only to first- and second-year non-biology majors and cannot be applied toward a major in Biological Sciences.*

BIOS 20170. Microbial and Human Cell Biology. 100 Units.

This course is the entry point into an integrated biology sequence designed to prepare non-biology majors for application to medical school. We explore topics in human cell biology within the context of evolutionary biology, chemistry, microbiology, and medicine. We pay special attention to the influence of prokaryotes on the history of life and to the ecological interactions between humans and their microbiota, which have major implications for human health and disease. Students read and discuss papers from the scientific literature, attend discussions led by physicians, researchers, and other medical professionals, and gain experience with microbiological basic microscopy techniques in lab.

Instructor(s): C. Andrews, R. Zaragoza, E. Kovar Terms Offered: Winter. L.

Prerequisite(s): First or second-year standing, or consent of instructors.

BIOS 20171. Human Genetics and Developmental Biology. 100 Units.

This course covers the fundamentals of genetics, with an emphasis on human traits and diseases. Topics include Mendelian genetics, simple and complex traits, genetic diseases, the human genome, and testing for human traits and diseases. After establishing a foundation in genetics, we will discuss mechanisms underlying differentiation and development in humans. We will focus on events that lead to gastrulation and the establishment of the body plan (how humans develop from an unpatterned egg into a recognizable human form). Other topics may include limb development and stem cell biology.

Instructor(s): O. Pineda-Catalan, R. Zaragoza Terms Offered: Spring. L.

Prerequisite(s): BIOS 20170

Fundamentals Sequences for Biological Sciences Majors

All first-year students who wish to major in Biological Sciences must take BIOS 20153 Fundamentals of Ecology and Evolutionary Biology in the Winter Quarter and either BIOS 20151 Introduction to Quantitative Modeling in Biology (Basic) (Spring) or BIOS 20152 Introduction to Quantitative Modeling in Biology (Advanced) (Winter) as prerequisites for the Fundamentals courses, which form the foundation of the Biological Sciences major. BIOS 20153 and BIOS 20151 or BIOS 20152 will satisfy the general education requirement in the biological sciences. Majors will go on to complete one of the Fundamentals Sequences.

BIOS 20151. Introduction to Quantitative Modeling in Biology (Basic) 100 Units.

The goal for this course is to give future biologists the quantitative tools to fully participate in modern biological research. These include descriptive statistics, linear regression, stochastic independence and hypothesis testing, Markov models and stationary probability distributions, solutions of linear differential equations, equilibria and stability analysis of nonlinear differential equations. The ideas are applied to different areas of biology, e.g. molecular evolution, allometry, epidemiology, and biochemistry, and implemented by students in computer assignments using the R computational platform.

Instructor(s): D. Kondrashov Terms Offered: Spring. L.

Prerequisite(s): Two quarters of calculus of any sequence (MATH 13200 or 15200 or 16200). First-year Biology Major standing only.

BIOS 20152. Introduction to Quantitative Modeling in Biology (Advanced) 100 Units.

This is a more advanced version of 20151, intended for students with greater mathematical maturity. In addition to the topics covered in the regular version, students will learn about nonlinear least-squares fitting, eigenvalues and eigenvectors, bifurcations and bistability in differential equations. Additional applications will include phylogenetic distance and systems biology.

Instructor(s): D. Kondrashov Terms Offered: Winter. L.

Prerequisite(s): MATH placement of 15200 or higher OR either MATH 15200 or MATH 16200 and second-year standing or higher.

BIOS 20153. Fundamentals of Ecology and Evolutionary Biology. 100 Units.

This course surveys the basic principles of ecology and evolutionary biology to lay the foundation for further study in all fields of biology. Broad ecological concepts, such as population growth, disease dynamics, and species interactions, will be explored through a combination of published data, simulations, and mathematical models. The emphasis is on 'ecological thinking' rather than specific notions. Essential topics in the modern study of evolutionary biology will be covered with a focus on both theory and empirical examples. Examples of topics include history of evolutionary thought, evidence for evolution, mechanisms of microevolution, phylogenetics, molecular evolution, and speciation.

Instructor(s): T. Price, M. Kronforst, C. Andrews, A. Hunter. Terms Offered: Winter. L.

Specific General Education Requirement for Certain Majors

Students should note that several majors have specified requirements for how the biological sciences portion of the general education requirements must be satisfied. These include Biological Chemistry, Neuroscience, Environmental Science, Geophysical Sciences, and Molecular Engineering.

Civilization Studies

Civilization studies provide an in-depth examination of the development and accomplishments of one of the world's great civilizations through direct encounters with significant and exemplary documents and monuments. These sequences complement the literary and philosophical study of texts central to the humanities sequences, as well as the study of synchronous social theories that shape basic questions in the social science sequences. Their approach stresses the grounding of events and ideas in historical context and the interplay of events, institutions, ideas, and cultural expressions in social change. The courses emphasize texts rather than surveys as a way of getting at the ideas, cultural patterns, and social pressures that frame the understanding of events and institutions within a civilization. And they seek to explore a civilization as an integrated entity, capable of developing and evolving meanings that inform the lives of its citizens.

Unless otherwise specified, courses should be taken in sequence. Note the prerequisites, if any, included in the course description of each sequence. Some civilization sequences are two-quarter sequences; others are three-quarter sequences. Students may meet a two-quarter civilization requirement with two courses from a three-quarter sequence.

Because civilization studies sequences offer an integrated, coherent approach to the study of a civilization, students cannot change sequences. Students can neither combine courses from a civilization sequence with a freestanding course nor combine various freestanding courses to create a civilization studies sequence. Students who wish to use such combinations are seldom granted approval to their petitions, including petitions from students with curricular and scheduling conflicts who have postponed meeting the civilization studies requirement until their third or fourth year in the College.

Civilization Studies Courses on Campus

CRES 24001-24002-24003. Colonizations I-II-III.

This sequence meets the general education requirement in civilization studies. This three-quarter sequence approaches the concept of civilization from an emphasis on cross-cultural/societal connection and exchange. We explore the dynamics of conquest, slavery, colonialism, and their reciprocal relationships with concepts such as resistance, freedom, and independence, with an eye toward understanding their interlocking role in the making of the modern world.

CRES 24001. Colonizations I. 100 Units.

This sequence meets the general education requirement in civilization studies. This three-quarter sequence approaches the concept of civilization from an emphasis on cross-cultural/societal connection and exchange. We explore the dynamics of conquest, slavery, colonialism, and their reciprocal relationships with concepts such as resistance, freedom, and independence, with an eye toward understanding their interlocking role in the making of the modern world. Themes of slavery, colonization, and the making of the Atlantic world are covered in the first quarter. Note(s): This sequence meets the general education requirement in civilization studies. This course is offered every year. These courses can be taken in any sequence.

Terms Offered: Autumn

Note(s): This sequence meets the general education requirement in civilization studies. This course is offered every year. These courses can be taken in any sequence.

Equivalent Course(s): SOSC 24001, ANTH 24001, HIST 18301

CRES 24002. Colonizations II. 100 Units.

Modern European and Japanese colonialism in Asia and the Pacific is the theme of the second quarter.

Terms Offered: Winter

Note(s): This sequence meets the general education requirement in civilization studies. These courses can be taken in any sequence.

Equivalent Course(s): ANTH 24002, SOSC 24002, HIST 18302

CRES 24003. Colonizations III. 100 Units.

The third quarter considers the processes and consequences of decolonization both in the newly independent nations and the former colonial powers.

Terms Offered: Spring

Note(s): This sequence meets the general education requirement in civilization studies. These courses can be taken in any sequence.

Equivalent Course(s): ANTH 24003, SALC 20702, SOSC 24003, HIST 18303

EALC 10800-10900-11000. Introduction to the Civilizations of East Asia I-II-III.

This sequence meets the general education requirement in civilization studies. This is a sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present.

EALC 10800. Introduction to the Civilizations of East Asia I. 100 Units.

This sequence meets the general education requirement in civilization studies. This is a sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present.

Instructor(s): G. Alitto Terms Offered: Autumn Summer

Prerequisite(s): Open to undergraduates only; all students attend the MW lecture and register for one F discussion section.

Note(s): Taking these courses in sequence is not required.

Equivalent Course(s): HIST 15100, CRES 10800, SOSC 23500

EALC 10900. Introduction to the Civilizations of East Asia II. 100 Units.

This sequence meets the general education requirement in civilization studies. This is a three-quarter sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present

Instructor(s): J. Ketelaar Terms Offered: Winter

Prerequisite(s): Open to undergraduates only; all students attend the MW lecture and register for one F discussion section.

Note(s): Taking these courses in sequence is not required.

Equivalent Course(s): SOSC 23600, HIST 15200, CRES 10900

EALC 11000. Introduction to the Civilizations of East Asia III. 100 Units.

This sequence meets the general education requirement in civilization studies. This is a sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present.

Instructor(s): J. Jeon Terms Offered: Spring

Prerequisite(s): Open to undergraduates only; all students attend the MW lecture and register for one F discussion section.

Note(s): Taking these courses in sequence is not required.

Equivalent Course(s): CRES 11000, HIST 15300, SOSC 23700

GNSE 15002-15003. Gender and Sexuality in World Civilizations I-II.

This two-quarter sequence aims to expand students' exposure to an array of texts—theoretical, historical, religious, literary, visual—that address the fundamental place of gender and sexuality in the social, political, and cultural creations of different civilizations. This sequence meets the general education requirement in civilization studies.

GNSE 15002. Gender and Sexuality in World Civilizations I. 100 Units.

The first quarter offers a theoretical framing unit that introduces concepts in feminist, gender, and queer theory, as well as two thematic clusters, 'Kinship' and 'Creativity and Cultural Knowledge.' The 'Kinship' cluster includes readings on such topics as marriage, sex and anti-sex, love and anti-love, and reproduction. The 'Creativity and Cultural Knowledge' cluster addresses the themes of authorship and authority, fighting and constructing the canon, and the debates over the influence of 'difference' on cultural forms.

Instructor(s): Staff Terms Offered: Autumn

Note(s): This sequence meets the general education requirement in civilization studies.

GNSE 15003. Gender and Sexuality in World Civilizations II. 100 Units.

Three thematic clusters make up the second quarter. 'Politics' focuses on texts related to activism/movement politics and women's rights as human rights and the question of universalism. 'Religion' contextualizes gender and sexuality through examinations of a variety of religious laws and teachings, religious practices, and religious communities. 'Economics' looks at slavery, domestic service, prostitution as labor, consumption, and the gendering of labor in contemporary capitalism.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): GNSE 15002

Note(s): This sequence meets the general education requirement in civilization studies.

HIPS 18300, HIPS 18400–18403, and HIPS 18500–18503 Science, Culture, and Society in Western Civilization

These courses focus on the origins and development of science in the West. They aim to trace the evolution of the biological, psychological, natural, and mathematical sciences as they emerge from the culture and social matrix of their periods and, in turn, affect culture and social. In order to satisfy the general education requirement in civilization studies, students must take a course in two or three of the following chronological periods: ancient (numbered HIPS 18300), early modern (HIPS 18400–18403), and modern (HIPS 18500–18503). Taking these courses in sequence is recommended but not required. Only one course per category may count toward the requirement unless special approval is granted.

HIST 10101-10102-10103. Introduction to African Civilization I-II-III.

African Civilization introduces students to African history in a three-quarter sequence. Taking these courses in sequence is recommended but not required; this sequence meets the general education requirement in civilization studies.

HIST 10101. Introduction to African Civilization I. 100 Units.

Part one considers literary, oral, and archeological sources to investigate African societies and states from the early Iron Age through the emergence of the Atlantic World. We will study the empires of Ghana and Mali, the Swahili Coast, Great Zimbabwe, and medieval Ethiopia. We will also explore the expansion of Islam, the origins and effects of European contact, and the trans-Atlantic slave trade.

Instructor(s): E. Osborn Terms Offered: Autumn

Equivalent Course(s): ANTH 20701, MDVL 10101, CRES 20701

HIST 10102. Introduction to African Civilization II. 100 Units.

Part two examines the transformations of African societies in the long nineteenth century. At the beginning of the era, European economic and political presence was mainly coastal, but by the end, nearly the entire continent was colonized. This course examines how and why this occurred, highlighting the struggles of African societies to manage

internal reforms and external political, military, and economic pressures. Topics include the Egyptian conquest of Sudan, Omani colonialism on the Swahili coast, Islamic reform movements across the Sahara, and connections between the end of the transatlantic slave trade and the formal colonization of the African continent. Students will examine memoirs of African soldiers, religious texts, colonial handbooks, and visual and material sources, including ethnographic artifacts, photographs, and textiles. Assignments: team projects, document and material analyses, response papers, essays, and written exams. The course will equip students with a working knowledge of the struggles that created many of the political and social boundaries of modern Africa.

Instructor(s): K. Hickerson Terms Offered: Winter
Equivalent Course(s): CRES 20802, ANTH 20702

HIST 10103. Introduction to African Civilization III. 100 Units.

Part three uses anthropological perspectives to investigate colonial and postcolonial encounters in sub-Saharan Africa, with a particular focus on Southern Africa. The course is centered on the twentieth and twenty-first centuries. It begins with an examination of colonialism, the institutionalization of racism, and dispossession, before examining anti-colonialism and the postcolonial period. The class draws on scholarship on and by African writers: from poets to novelists, ethnographers, playwrights, historians, politicians, political theorists, and social critics. Over the course of the quarter, students will learn about forms of person-hood, subjectivity, gender, sexuality, kinship practices, governance, migration, and the politics of difference.

Instructor(s): K. Takabvirwa Terms Offered: Spring
Equivalent Course(s): ANTH 20703, CRES 20303

HIST 13001-13002-13003. History of European Civilization I-II-III.

Has Europe ever been civilized? This sequence, which satisfies the general education requirement in civilization studies, invites students to discuss the simultaneously creative and destructive forces inherent in centuries of European history. While resisting shallow critiques and caricatures of Europe's role in the world, students examine in depth major themes in the history of European ideas about civilization, including the interplay of faith, reason, and secularism; the individual, family, and mass society; and monarchy, revolution, and democracy. Students not only grapple with big questions and transformative ideas but also consider unique perspectives and ordinary people by reading a variety of different kinds of historical evidence. The sequence provides students with foundational skills and knowledge for the University of Chicago general education core curriculum more broadly, which owes much of its intellectual project to European ideas of knowledge and education. In keeping with the traditions of the core curriculum, students contextualize and interrogate sources in small, rigorous, and textually immersive classes. Learn to think historically! There are three parts to this sequence. Parts I and II cover the period from approximately the fall of Rome to the present and should be taken in sequence in the Autumn-Winter or Winter-Spring Quarters. The optional Part III treats specialized topics in greater depth in the Spring Quarter.

HIST 13001. History of European Civilization I. 100 Units.

The first part of the sequence examines the period from approximately 500 to 1700 in European history. It challenges students to question two-dimensional, rigid narratives about the fall of Rome, the Dark Ages, the Renaissance and Reformation, and the early Enlightenment by reading historical sources with empathy and attention to their authors' own perspectives. For example, we explore the entanglement of the political, economic, and religious by reading a chronicle written by a monk; we examine gender relations and daily life by reading men's and women's personal letters; and we investigate the earliest contacts between Europeans and the peoples of the Americas by reading eyewitness accounts of their interactions. In the process of recovering the lived experiences of medieval and early modern Europeans, the course engages with the sophisticated societies and cultures of premodern Europe, which many subsequent generations post-1700 would come to label backwards and uncivilized.

Instructor(s): Staff Terms Offered: Autumn Winter

Prerequisite(s): Students must take a minimum of two quarters of European Civilization to fulfill the general education requirement; register for the same section each quarter.

HIST 13002. History of European Civilization II. 100 Units.

The second part of the sequence examines the period from approximately 1700 to the present in European history. Major topics include the Enlightenment, the French Revolution, industrialization, the world wars, and the European Union. This course challenges students to do more than simply define conceptual terms like imperialism, nationalism, liberalism, capitalism, and communism. We situate these and other grand narratives in new ideas of progress, new technologies and forms of knowledge production, and the material transformations of everyday life. Changes in media (newspapers, radio, films, etc.) and the rise of mass production and consumption in these centuries were both the cause and effect of many of the events we will be discussing. Sources include nineteenth-century novels, eyewitness accounts to revolution and the Holocaust, and speeches and manifestos of the political and cultural avant-garde. Throughout the course, we will continuously examine the paradoxes that have shaped modern Europe: its resilience and fragility, its great experiments in liberty and tragic acts of violence.

Instructor(s): Staff Terms Offered: Spring Winter

Prerequisite(s): HIST 13001

HIST 13003. History of European Civilization III. 100 Units.

Students who plan to complete a three-quarter sequence register for HIST 13003 in Spring Quarter after completing HIST 13001-13002. In the third part of the History of European Civilization sequence, students will have the opportunity to explore in greater depth a particular aspect of European history. Topics in recent years have included 'The Enlightenment: Foundations and Interpretations,' 'Women, Piety, and Heresy in Premodern Europe,' 'Crusades:

History and Imagination,' 'Crossing the Channel: England and France,' and 'Church and State in European History.' Students should refer to <https://history.uchicago.edu/content/courses> for course titles and topic descriptions.

Instructor(s): A. Locking Terms Offered: Spring

Prerequisite(s): For the 3-qr sequence register for HIST 13003 after completing HIST 13001-13002. Only HIST 13001-13002 complete the 2-qr sequence.

Note(s): Students may not combine HIST 13003 with one other quarter of European Civilization to fulfill the general education requirement. Spring 2021 topics: (section 1) Women, Piety, and Heresy in Premodern Europe; (section 2) Crossing the Channel: England and France

HIST 13100-13200-13300. History of Western Civilization I-II-III.

Available as a three-quarter sequence (Autumn-Winter-Spring) or as a two-quarter sequence (Autumn-Winter or Winter-Spring). This sequence meets the general education requirement in civilization studies. The purpose of this sequence is threefold: (1) to introduce students to the principles of historical thought, (2) to acquaint them with some of the more important epochs in the development of Western civilization since the sixth century B.C.E, and (3) to assist them in discovering connections between the various epochs. The purpose of the course is not to present a general survey of Western history. Instruction consists of intensive investigation of a selection of original documents bearing on a number of separate topics, usually two or three a quarter, occasionally supplemented by the work of a modern historian. The treatment of the selected topics varies from section to section. This sequence is currently offered twice a year. The amount of material covered is the same whether the student enrolls in the Autumn-Winter-Spring sequence or the Summer sequence.

HIST 13100. History of Western Civilization I. 100 Units.

This sequence fulfills the general education requirement in civilization studies. The purpose of this three-course sequence is (1) to introduce students to the principles of historical thought and to provide them with the critical tools for analyzing texts produced in the distant or near past, (2) to acquaint them with some of the more important epochs in the development of European civilization since the sixth century B.C.E, and (3) to assist them in discovering the developmental connections between these various epochs. 13100: The first course focuses on the history of Classical civilization, beginning with the world of Homer and ending with the world of St. Augustine. The sequence does not present a general survey of European history, but rather undertakes an intensive investigation of original documents bearing on a number of discrete topics in European civilization (e.g., the Roman Republic, or the origins of the First World War). These original documents are contained in the nine-volume series published by The University of Chicago Press, The University of Chicago Readings in Western Civilization. The course also draws on supplementary materials from the work of modern historians. This sequence fulfills the general education requirement in civilization studies. Students should log on to <https://canvas.uchicago.edu/> and check the page for this course for the first day's reading assignment; you will be expected to be prepared.

Instructor(s): K. Weintraub, Autumn; J. Boyer, Summer Terms Offered: Autumn Summer

Prerequisite(s): These courses must be taken in sequence.

HIST 13200. History of Western Civilization II. 100 Units.

This sequence fulfills the general education requirement in civilization studies. The purpose of this three-course sequence is (1) to introduce students to the principles of historical thought and to provide them with the critical tools for analyzing texts produced in the distant or near past, (2) to acquaint them with some of the more important epochs in the development of European civilization since the sixth century B.C.E, and (3) to assist them in discovering the developmental connections between these various epochs. 13200: The second course explores major themes in the Middle Ages, the Renaissance, and the Reformation. The sequence does not present a general survey of European history, but rather undertakes an intensive investigation of original documents bearing on a number of discrete topics in European civilization (e.g., the Roman Republic, or the origins of the First World War). These original documents are contained in the nine-volume series published by The University of Chicago Press, The University of Chicago Readings in Western Civilization. The course also draws on supplementary materials from the work of modern historians. This sequence fulfills the general education requirement in civilization studies. Students should log on to <https://canvas.uchicago.edu/> and check the page for this course for the first day's reading assignment; you will be expected to be prepared.

Instructor(s): K. Weintraub, Winter, Summer Terms Offered: Summer Winter

Prerequisite(s): These courses must be taken in sequence.

HIST 13300. History of Western Civilization III. 100 Units.

This sequence fulfills the general education requirement in civilization studies. The purpose of this three-course sequence is (1) to introduce students to the principles of historical thought and to provide them with the critical tools for analyzing texts produced in the distant or near past, (2) to acquaint them with some of the more important epochs in the development of European civilization since the sixth century B.C.E, and (3) to assist them in discovering the developmental connections between these various epochs. 13300: The third course undertakes a detailed study of the French Revolution and charts the rise of liberal, anti-liberal, and post-liberal states and societies in nineteenth- and twentieth-century European history. The sequence concludes with an appraisal of the condition of European politics, culture, and society at the end of the twentieth century. The sequence does not present a general survey of European history, but rather undertakes an intensive investigation of original documents bearing on a number of discrete topics in European civilization (e.g., the Roman Republic, or the origins of the First World War). These original documents are contained in the nine-volume series published by The University of Chicago Press, The University of Chicago Readings in Western Civilization. The course also draws on supplementary materials from the work of modern historians.

This sequence fulfills the general education requirement in civilization studies. Students should log on to <https://>

canvas.uchicago.edu/ and check the page for this course for the first day's reading assignment; you will be expected to be prepared.

Instructor(s): K. Weintraub, Spring; D. Koehler, Summer Terms Offered: Spring Summer

Prerequisite(s): These courses must be taken in sequence.

HIST 13500-13600-13700. America in World Civilization I-II-III.

The America in World Civilization sequence is nothing like your high school history class, for here we examine America as a contested idea and a contested place by reading and writing about a wide array of primary sources. In the process, students gain a new sense of historical awareness and of the making of America. The course is designed both for history majors and non-majors who want to deepen their understanding of the nation's history, encounter some enlightening and provocative voices from the past, and develop the qualitative methodology of historical thinking. It is recommended that students take this course in chronological sequence: HIST 13500-13600 (I and II) or HIST 13600-13700 (II and III). This sequence meets the general education requirement in civilization studies.

HIST 13500. America In World Civilization I. 100 Units.

America in World Civilization I examines foundational texts and moments in American culture, society, and politics, from early European incursions into the New World through the early republic of the United States, roughly 1500-1800. We will examine encounters between Native Americans and representatives of imperial powers (Spain, France, and England) as well as the rise of African slavery in North America before 1700. We will consider the development of Anglo-American society and government in the eighteenth century, focusing especially on the causes and consequences of the American Revolution.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): It is recommended that students take this course in chronological sequence: HIST 13500-13600 (I and II) or HIST 13600-13700 (II and III).

HIST 13600. America in World Civilization II. 100 Units.

The nineteenth-century segment of America in World Civilizations asks: What happens when democracy confronts inequality? We focus on themes that include indigenous-US relations; religious revivalism and reform; slavery, the Civil War, and emancipation; the intersection between women's rights and antislavery; the development of industrial capitalism; urbanism and social inequality.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): It is recommended that students take this course in chronological sequence: HIST 13500-13600 (I and II) or HIST 13600-13700 (II and III).

HIST 13700. America in World Civilization III. 100 Units.

The third quarter America in World Civilization focuses on multiple definitions of Americanism in a period characterized by empire, transnational formations, and America's role in the world. We explore the construction of social order in a multicultural society; culture in the shadow of war; the politics of race, ethnicity, and gender; the rise and fall of new social movements on the left and the right; the emergence of the carceral state and militarization of civil space; and the role of climate change and the apocalyptic in shaping imagined futures.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): It is recommended that students take this course in chronological sequence: HIST 13500-13600 (I and II) or HIST 13600-13700 (II and III).

HIST 13900-14000-14100. Introduction to Russian Civilization I-II-III.

This three-quarter sequence, which meets the general education requirement in civilization studies, provides an interdisciplinary introduction to Russian civilization.

HIST 13900. Introduction to Russian Civilization I. 100 Units.

The first quarter covers the ninth century to the 1870s; the second quarter continues on through the post-Soviet period. Working closely with a variety of primary sources—from oral legends to film and music, from political treatises to literary masterpieces—we will track the evolution of Russian civilization over the centuries and through radically different political regimes. Topics to be discussed include the influence of Byzantine, Mongol-Tataric, and Western culture in Russian civilization; forces of change and continuity in political, intellectual and cultural life; the relationship between center and periphery; systems of social and political legitimization; and symbols and practices of collective identity.

Instructor(s): E. Gilburd, W. Nickell Terms Offered: Autumn

Note(s): Taking these courses in sequence is recommended but not required.

Equivalent Course(s): SOSC 24000, REES 26011

HIST 14000. Introduction to Russian Civilization II. 100 Units.

The second quarter continues on through the post-Soviet period. Working closely with a variety of primary sources—from oral legends to film and music, from political treatises to literary masterpieces—we will track the evolution of Russian civilization over the centuries and through radically different political regimes. Topics to be discussed include the influence of Byzantine, Mongol-Tataric, and Western culture in Russian civilization; forces of change and continuity in political, intellectual and cultural life; the relationship between center and periphery; systems of social and political legitimization; and symbols and practices of collective identity.

Instructor(s): E. Gilburd, R. Bird Terms Offered: Winter

Note(s): Taking these courses in sequence is recommended but not required.

Equivalent Course(s): SOSC 24100, REES 26012

HIST 14100. Introduction to Russian Civilization III. 100 Units.

The third quarter of Russian Civilization is a new (2020) addition to the curriculum. When taken following Introduction to Russian Civilization I and II, Introduction to Russian Civilization III meets the general education requirement in Humanities, Civilization Studies, and the Arts. The course is thematic and will vary from year to year. In spring 2021 this course will explore the nature of state socialism, or 'communism'-the political and economic system that governed much of the world's population during the twentieth century-and the transition from that system to alternative modes of governance. Course material will emphasize the experience of the (former) Soviet Union and Eastern Europe, where communism as a system has disappeared most completely, but many of the lessons of transition apply also to China, Vietnam, North Korea, and Cuba. A nontrivial portion of the course covers the nature of communism, as both the tasks and obstacles of transition are determined in part by the character of the previous system. However, the bulk of the material addresses postcommunist policies, institutions, and outcomes.

Instructor(s): S. Gehlbach Terms Offered: Spring

Note(s): Students who wish to take this course for Civilization Studies Core credit must also take Russ Civ I and II.

Equivalent Course(s): SOSC 24200, REES 26015

HIST 16700-16800-16900. Ancient Mediterranean World I-II-III.

Available as a three-quarter sequence (Autumn-Winter-Spring) or as a two-quarter sequence (Autumn-Winter or Winter-Spring). This sequence meets the general education requirement in civilization studies. It surveys the social, economic, and political history of Greece to the death of Alexander the Great (323 BC), the Roman Republic (509 to 27 BC), and late antiquity (27 BC to the fifth century AD).

HIST 16700. Ancient Mediterranean World I: Greece. 100 Units.

This course surveys the social, economic, and political history of Greece from prehistory to the Hellenistic period. The main topics considered include the development of the institutions of the Greek city-state, the Persian Wars and the rivalry of Athens and Sparta, the social and economic consequences of the Peloponnesian War, and the eclipse and defeat of the city-states by the Macedonians.

Instructor(s): C. Kearns Terms Offered: Autumn

Equivalent Course(s): CLCV 20700

HIST 16800. Ancient Mediterranean World II: Rome. 100 Units.

Part II surveys the social, economic, and political history of Rome, from its prehistoric beginnings in the twelfth century BCE to the end of the Severan dynasty in 235 CE. Throughout, the focus will be upon the dynamism and adaptability of Roman society, as it moved from a monarchy to a republic to an empire. The course will also cover the questions of social organization (free and unfree people, foreigners), gender relations, religion, and specific forms of the way of life of the Romans. It will be based both on lectures and on discussions of textual or archaeological documents in smaller discussion groups.

Instructor(s): A. Bresson Terms Offered: Winter

Equivalent Course(s): CLCV 20800

HIST 16900. Ancient Mediterranean World III. 100 Units.

Part III examines late antiquity, a period of paradox. The later Roman emperors established the most intensive, pervasive state structures of the ancient Mediterranean, yet yielded their northern and western territories to Goths, Huns, Vandals, and, ultimately, their Middle Eastern core to the Arab Muslims. Imperial Christianity united the populations of the Roman Mediterranean in the service of one God, but simultaneously divided them into competing sectarian factions. A novel culture of Christian asceticism coexisted with the consolidation of an aristocratic ruling class notable for its insatiable appetite for gold. The course will address these apparent contradictions while charting the profound transformations of the cultures, societies, economies, and political orders of the Mediterranean from the conversion of Constantine to the rise of Islam.

Instructor(s): R. Payne Terms Offered: Spring

Equivalent Course(s): CLCV 20900, MDVL 16900

HMRT 10100-10200. Human Rights in World Civilizations I-II.

This sequence meets the general education requirement in civilization studies. These courses must be taken in sequence.

HMRT 10100. Human Rights in World Civilizations I. 100 Units.

The first quarter begins with a set of conceptual problems and optics designed to introduce students to the critical study of human rights, opening up questions of the universal, human dignity, and the political along with the practices of witness and testimony. It is followed by two thematic clusters. 'Anti-Slavery, Humanitarianism, and Rights' focuses on the late eighteenth and early nineteenth centuries to historicize notions of dignity, sympathy, and witness. 'Declarations as a Human Rights Genre' examines revolutionary eighteenth-century rights declarations in France, the United States, and Haiti against the aspirations of the 1948 UN Universal Declaration of Human Rights.

Instructor(s): J. Ransmeier, B. Laurence, Staff Terms Offered: Autumn

Note(s): This sequence meets the general education requirement in civilization studies. These courses must be taken in sequence.

Equivalent Course(s): SOSC 24900

HMRT 10200. Human Rights in World Civilizations II. 100 Units.

Four thematic clusters structure the second quarter. 'Migration, Minorities, and Refugees' examines minority rights, the evolution of legal norms around refugees, and human trafficking. 'Late Twentieth Century Human Rights Talk' explores the contestations between rights claims in the political-civil and socio-economic spheres, calls for sexual rights, and cultural representations of human rights abuses. 'Global Justice' considers forms of international criminal

law, transitional justice, and distributive justice. 'Indigenous Rights as Human Rights' takes up the relatively new domain of the rights of indigenous peoples and how they relate to contemporary human rights practice.

Instructor(s): B. Laurence, E. Osborn, Staff Terms Offered: Winter

Prerequisite(s): HMRT 10100

Note(s): This sequence meets the general education requirement in civilization studies. These courses must be taken in sequence; students must have taken HMRT 10100 to enroll in this course.

Equivalent Course(s): SOSC 24901

JWSC 12000-12001-12003. Jewish Civilization I-II-III.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts—biblical, Talmudic, philosophical, mystical, historical, documentary, and literary—students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The Autumn course will deal with antiquity to the medieval period; the Winter course will begin with the early modern period and continue to the present. The Spring course will vary as to special topic; for the Spring course to count towards the general education requirement in civilization studies, the student must also take the Autumn and Winter courses. Note: Jewish Studies revised its civilization studies courses in academic year 2018–19. Students who began the requirement prior to Autumn Quarter 2018 under the previous course options, may complete it with those courses that remain available, or (with prior approval from the JWSC director of undergraduate studies) they may combine them with the new course options, provided that they fulfill the requirement to take one JWSC course in the ancient or medieval period and one in the modern period. Only students who have taken JWSC courses prior to academic year 2018–19 are eligible to complete the program under the prior system.

JWSC 12000. Jewish Civilization I: Ancient Beginnings to Medieval Period. 100 Units.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts—biblical, Talmudic, philosophical, mystical, historical, documentary, and literary—students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The autumn course will deal with antiquity through the Middle Ages. Its readings will include material from the Bible and writings from the second temple, Hellenistic, rabbinic, and medieval periods. All sections of this course will share a common core of readings; individual instructors will supplement with other materials. It is recommended, though not required, that students take the three Jewish Civilization courses in sequence. Students who register for the Autumn Quarter course will automatically be pre-registered for the winter segment. In the Spring Quarter students have the option of taking a third unit of Jewish Civilization, a course whose topics will vary (JWSC 1200X).

Instructor(s): James Robinson Other TBA Terms Offered: Autumn

Equivalent Course(s): NEHC 22010, RLST 22010, MDVL 12000

JWSC 12001. Jewish Civilization II: Early Modern Period to 21st Century. 100 Units.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts—biblical, Talmudic, philosophical, mystical, historical, documentary, and literary—students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The Winter course will begin with the early modern period and continue to the present. It will include discussions of mysticism, the works of Spinoza and Mendelssohn, the nineteenth-century reform, the Holocaust and its reflection in writers such as Primo Levi and Paul Celan, and literary pieces from postwar American Jewish and Israeli authors. All sections of this course will share a common core of readings; individual instructors will supplement with other materials. It is recommended, though not required, that students take the three Jewish Civilization courses in sequence. Students who register for the Autumn Quarter course will automatically be pre-registered for the winter segment. In the Spring Quarter students have the option of taking a third unit of Jewish Civilization, a course whose topics will vary (JWSC 1200X).

Instructor(s): S. Hammerschlag J. Kirzane Terms Offered: Winter

Equivalent Course(s): NEHC 22011, RLST 22011

JWSC 12003. Jewish Civilization III - Language, Creation, and Translation in Jewish Thought and Literature. 100 Units.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts—biblical, Talmudic, philosophical, mystical, historical, documentary, and literary—students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The Spring course in 2021 will start with two stories from Genesis—the creation story and the story of the Tower of Babel in chapter 11—and consider the intertwined dynamics of language, creation, and translation in Jewish thought and literature. In addition to commentaries on both of these key texts, we will read philosophical and literary texts that illuminate the workings of language as a creative force and the dynamics of multilingualism and translation in the creation of Jewish culture. Through this lens, we will consider topics such as gender and sexuality, Jewish national identity, Zionism, the revival of the Hebrew language, Jewish responses to the Holocaust, and contemporary American Jewish culture.

Instructor(s): Na'ama Rokem Terms Offered: Spring

Note(s): Students who wish to take this course for Civilization Studies credit, must also take Jewish Civilization I and II. The course may also be taken as an independent elective.

Equivalent Course(s): CMLT 12003, NEHC 12003, RLST 22012

LACS 16100-16200-16300. Introduction to Latin American Civilization I-II-III.

Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies. This sequence is offered every year. This course introduces the history and cultures of Latin America (e.g., Mexico, Central and South America, and the Caribbean Islands).

LACS 16100. Introduction to Latin American Civilization I. 100 Units.

Autumn Quarter examines the origins of civilizations in Latin America with a focus on the political, social, and cultural features of the major pre-Columbian civilizations of the Maya, Inca, and Aztec. The quarter concludes with an analysis of the Spanish and Portuguese conquest, and the construction of colonial societies in Latin America. The courses in this sequence may be taken in any order.

Instructor(s): Emilio Kouri Terms Offered: Autumn

Equivalent Course(s): CRES 16101, HIST 36101, SOSC 26100, ANTH 23101, HIST 16101, LACS 34600

LACS 16200. Introduction to Latin American Civilization II. 100 Units.

Winter Quarter addresses the evolution of colonial societies, the wars of independence, and the emergence of Latin American nation-states in the changing international context of the nineteenth century.

Instructor(s): D. Borges Terms Offered: Winter

Equivalent Course(s): PPHA 39770, HIST 16102, CRES 16102, HIST 36102, ANTH 23102, LACS 34700, SOSC 26200

LACS 16300. Introduction to Latin American Civilization III. 100 Units.

Spring Quarter focuses on the twentieth century, with special emphasis on the challenges of economic, political, and social development in the region.

Instructor(s): B. Fischer Terms Offered: Spring

Equivalent Course(s): HIST 36103, PPHA 39780, CRES 16103, LACS 34800, SOSC 26300, ANTH 23103, HIST 16103

MUSI 12100-12200. Music in Western Civilization I-II.

This two-quarter sequence explores musical works of broad cultural significance in Western civilization. We study pieces not only from the standpoint of musical style but also through the lenses of politics, intellectual history, economics, gender, cultural studies, and so on. Readings are taken both from our music textbook and from the writings of a number of figures such as St. Benedict of Nursia and Martin Luther. In addition to lectures, students discuss important issues in the readings and participate in music listening exercises in smaller sections.

MUSI 12100. Music In Western Civilization I: To 1750. 100 Units.

This course, part of the Social Sciences Civ core, looks at musics in different moments of Euro-American history and the social contexts in which they originated, with some comparative views on other world traditions. It aims to give students a better understanding of the social contexts of European music over this period; aids for the basic sound structures of pieces from these different moments; and convincing writing in response to prompts based on source readings or music pieces. Our first quarter (MUS 12100 etc.) spans roughly the period between Charlemagne's coronation as Holy Roman Emperor (800 CE) and the dissolution of the Empire (1806) with the triumph of Napoleon across Western Europe.

Instructor(s): R. Kendrick Terms Offered: Autumn

Note(s): Prior music course or ability to read music not required. Students must confirm enrollment by attending one of the first two sessions of class. This two-quarter sequence meets the general education requirement in civilization studies; it does not meet the general education requirement in the arts.

Equivalent Course(s): SOSC 21100, HIST 12700

MUSI 12200. Music In Western Civ II. 100 Units.

This course, part of the Social Sciences Civ core, looks at musics in different moments of Euro-American history and the social contexts in which they originated, with some comparative views on other world traditions. It aims to give students a better understanding of the social contexts of European music over this period; aids for the basic sound structures of pieces from these different moments; and convincing writing in response to prompts based on source readings or music pieces. Our second quarter (MUS 12200 etc.) runs from the beginning of European Romanticism around 1800 to the turn of the 21st century.

Terms Offered: Winter

Note(s): Prior music course or ability to read music not required. Students must confirm enrollment by attending one of the first two sessions of class. This two-quarter sequence meets the general education requirement in civilization studies; it does not meet the general education requirement in the arts.

Equivalent Course(s): HIST 12800, SOSC 21200

NEHC 20001-20002-20003. Ancient Near Eastern History and Society I-II-III.

This sequence meets the general education requirement for civilization studies.

NEHC 20001. Ancient Near Eastern History and Society I: Egypt. 100 Units.

This course surveys the political, social, and economic history of ancient Egypt from pre-dynastic times (ca. 3400 B.C.) until the advent of Islam in the seventh century of our era.

Instructor(s): Brian Muhs, Robert Ritner Terms Offered: Autumn

Equivalent Course(s): NEHC 30001

NEHC 20002. Ancient Near Eastern History and Society II. 100 Units.

This course offers an overview of the history of Mesopotamia from its origins down to the Achaemenid and Hellenistic periods, when Mesopotamia became part of larger empires. Weeks 1 to 5, preceding mid-term exam, cover the periods ranging from the late Chalcolithic down to the end of the Middle Bronze age (late fifth to mid-second millennia BCE). Weeks 6 to 10 study the developments of the Late Bronze and Iron Ages, from the period of the archives of El-Amarna in the fourteenth century BCE down to the time of Alexander the Great in the late fourth century BCE.

Instructor(s): Hervé Reculeau Terms Offered: Winter

Prerequisite(s): Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies.

Equivalent Course(s): NEHC 30002

NEHC 20003. Ancient Near Eastern History and Society III. 100 Units.

This course introduces students to the history of ancient Anatolia and its neighbors from the first historical texts around 2000 BCE, with a short detour through prehistory and the appearance of Proto-Indo-European culture, to the arrival of Alexander the Great. Some of the famous ancient Near Eastern civilizations that we encounter include the Assyrians, Hittites, Phrygians, Lydians, Persians, and Israelites. We will focus on the information provided by inscriptions - especially political and socioeconomic history - as well as the relevant archaeological and art historical records. No prior knowledge of Anatolian or Near Eastern history is required.

Instructor(s): Petra Goedegebuure Terms Offered: Spring

Equivalent Course(s): NEHC 30003

NEHC 20004-20005-20006. Ancient Near Eastern Thought and Literature I-II-III.

This sequence surveys the thought and literature of the Near East. Each course in the sequence focuses on a particular culture or civilization. Texts in English. This sequence meets the general education requirement in civilization studies. Taking these courses in sequence is not required.

NEHC 20004. Ancient Near Eastern Thought and Literature I: Mesopotamian Literature. 100 Units.

This course gives an overview of the richness of Mesopotamian Literature (modern Iraq) written in the 3rd-1st millennium BC. We will read myths and epics written on clay tablets in the Sumerian and Akkadian language in English translation and discuss content and style, but also the religious, cultural and historic implications. Particular focus will be on the development of stories over time, the historical context of the literature and mythological figures. The texts treated cover not only the famous Epic of Gilgamesh, but also various legends of Sumerian and Akkadian kings, stories about Creation and World Order, and destruction. The topics covered range from the quest for immortality, epic heroes and monsters, sexuality and love.

Instructor(s): Susanne Paulus Terms Offered: Autumn

Note(s): Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies.

NEHC 20005. Ancient Near Eastern Thought & Literature II: Anatolian Lit. 100 Units.

The goal of this class is to get an overview of Hittite literature, as 'defined' by the Hittites themselves, in the wider historical-cultural context of the Ancient Near East. Some of the most important questions we can ask ourselves in reading ancient texts are: why were they written down, why were they kept, for whom were they intended, and what do the answers to these questions (apart from the primary content of the texts themselves) tell us about - in our case - Hittite society?

Instructor(s): Theo van den Hout Terms Offered: Spring

Note(s): Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies.

NEHC 20006. Ancient Near Eastern Thought & Literature III. 100 Units.

This course employs English translations of ancient Egyptian literary texts to explore the genres, conventions and techniques of ancient Egyptian literature. Discussions of texts examine how the ancient Egyptians conceptualized and constructed their equivalent of literature, as well as the fuzzy boundaries and subtle interplay between autobiography, history, myth and fiction.

Instructor(s): Brian Muhs Terms Offered: Winter

NEHC 20011-20012-20013. Ancient Empires I-II-III.

This sequence introduces three great empires of the ancient world. Each course in the sequence focuses on one empire, with attention to the similarities and differences among the empires being considered. By exploring the rich legacy of documents and monuments that these empires produced, students are introduced to ways of understanding imperialism and its cultural and societal effects—both on the imperial elites and on those they conquered. Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies.

NEHC 20011. Ancient Empires I. 100 Units.

This course introduces students to the Hittite Empire of ancient Anatolia. In existence from roughly 1750-1200 BCE, and spanning across modern Turkey and beyond, the Hittite Empire is one of the oldest and largest empires of the ancient world. We will be examining their history and their political and cultural accomplishments through analysis of their written records - composed in Hittite, the world's first recorded Indo-European language - and their archaeological remains. In the process, we will also be examining the concept of 'empire' itself: What is an empire, and how do anthropologists, archaeologists, and historians study this unique kind of political formation?

Instructor(s): James Osborne Terms Offered: Winter

Note(s): Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies.

Equivalent Course(s): CLCV 25700, HIST 15602

NEHC 20012. Ancient Empires II. 100 Units.

The Ottomans ruled in Anatolia, the Middle East, South East Europe and North Africa for over six hundred years.

The objective of this course is to understand the society and culture of this bygone Empire whose legacy continues, in one way or another, in some twenty-five contemporary successor states from the Balkans to the Arabian Peninsula.

The course is designed as an introduction to the Ottoman World with a focus on the cultural history of the Ottoman society. It explores identities and mentalities, customs and rituals, status of minorities, mystical orders and religious establishments, literacy and the use of the public sphere.

Instructor(s): Hakan Karateke Terms Offered: Autumn

Equivalent Course(s): HIST 15603, CLCV 25800, MDVL 20012

NEHC 20013. Ancient Empires III. 100 Units.

For most of the duration of the New Kingdom (1550-1069 BC), the ancient Egyptians were able to establish a vast empire and becoming one of the key powers within the Near East. This course will investigate in detail the development of Egyptian foreign policies and military expansion which affected parts of the Near East and Nubia. We will examine and discuss topics such as ideology, imperial identity, political struggle and motivation for conquest and control of wider regions surrounding the Egyptian state as well as the relationship with other powers and their perspective on Egyptian rulers as for example described in the Amarna letters.

Instructor(s): Brian Muhs Terms Offered: Spring

Equivalent Course(s): CLCV 25900, HIST 15604

NEHC 20416-20417-20418. Semitic Languages, Cultures, and Civilizations I-II-III.

This sequence meets the general education requirement in civilization studies.

NEHC 20416. Semitic Languages, Cultures, and Civilizations I. 100 Units.

This course looks at the attestations of Semitic, the development of the language family and its individual languages, the connection of language spread and political expansions with the development of empires and nation states (which can lead to the development of different language strata), the interplay of linguistic innovation and archaism in connection with innovative centers and peripheries, and the connection and development of language and writing.

Terms Offered: TBD

Equivalent Course(s): NEHC 30416, HIST 15702

NEHC 20417. Semitic Languages, Cultures, and Civilizations II. 100 Units.

This course explores various peoples of the ancient Near East from the third through the first millennium BC. The shared characteristic of those peoples is their use of Semitic languages. The focus is on major cultural traditions that later become of interest for the modern Middle East and for the Western world. This course provides a background to understand contemporary problems in a historical context. This includes a close examination and discussion of representative ancient sources, as well as readings in modern scholarship to help us think of interpretative frameworks and questions. Ancient sources include literary, historical, and legal documents. Texts in English.

Terms Offered: TBD

Note(s): Not open to first-year students

Equivalent Course(s): NEHC 30417, HIST 15703

NEHC 20418. Semitic Languages, Cultures, and Civilizations III. 100 Units.

The course studies how various groups in the Middle East imagined the ancient Semitic heritage of the region. We examine how Semitic languages (in particular, Arabic and Hebrew) came to be regarded as the national markers of the peoples of the Middle East. We likewise explore the ways in which archeologists, historians, novelists, and artists emphasized the connectivity between past and present, and the channels through which their new ideas were transmitted. The class thus highlights phenomena like nationalism, reform, and literary and print capitalism (in both Hebrew and Arabic) as experienced in the Middle East.

Terms Offered: TBD

Note(s): Not open to first-year students

Equivalent Course(s): JWSC 21100, HIST 15704, NEHC 30418

NEHC 20501-20502-20503. Islamic History and Society I-II-III.

This sequence meets the general education requirement in civilization studies. This sequence surveys the main trends in the political history of the Islamic world, with some attention to economic, social, and intellectual history. Taking these courses in sequence is recommended but not required.

NEHC 20501. Islamic History and Society I: The Rise of Islam and the Caliphate. 100 Units.

This course covers the period from ca. 600 to 1100, including the rise and spread of Islam, the Islamic empire under the Umayyad and Abbasid caliphs, and the emergence of regional Islamic states from Afghanistan and eastern Iran to North Africa and Spain.

Instructor(s): Ahmed El Shamsy Terms Offered: Autumn

Equivalent Course(s): HIST 35704, ISLM 30500, MDVL 20501, NEHC 30501, CMES 30501, HIST 25704, RLST 20501

NEHC 20502. Islamic History and Society II: The Middle Period. 100 Units.

This course covers the period from ca. 1100 to 1750, including the arrival of the Steppe Peoples (Turks and Mongols), the Mongol successor states, and the Mamluks of Egypt and Syria. We also study the foundation of the great Islamic regional empires of the Ottomans, Safavids, and Moghuls.

Instructor(s): J. Woods Terms Offered: Winter

Prerequisite(s): Not open to first-year students

Equivalent Course(s): HIST 35804, CMES 30502, NEHC 30502, MDVL 20502, HIST 25804, ISLM 30600

NEHC 20503. Islamic History and Society III: The Modern Middle East. 100 Units.

This course covers the period from ca. 1750 to the present, focusing on Western military, economic, and ideological encroachment; the impact of such ideas as nationalism and liberalism; efforts at reform in the Islamic states; the emergence of the 'modern' Middle East after World War I; the struggle for liberation from Western colonial and imperial control; the Middle Eastern states in the cold war era; and local and regional conflicts.

Instructor(s): Holly Shissler Terms Offered: Spring

Prerequisite(s): Not open to first-year students

Note(s): This course does not apply to the medieval studies major or minor.

Equivalent Course(s): HIST 35904, HIST 25904, NEHC 30503

NEHC 20601-20602-20603. Islamic Thought and Literature I-II-III.

This sequence explores the thought and literature of the Islamic world from the coming of Islam in the seventh century C.E. through the development and spread of its civilization in the medieval period and into the modern world. Including historical framework to establish chronology and geography, the course focuses on key aspects of Islamic intellectual history: scripture, law, theology, philosophy, literature, mysticism, political thought, historical writing, and archaeology. In addition to lectures and secondary background readings, students read and discuss samples of key primary texts, with a view to exploring Islamic civilization in the direct voices of the people who participated in creating it. All readings are in English translation. No prior background in the subject is required. This course sequence meets the general education requirement in civilization studies. Taking these courses in sequence is recommended but not required.

NEHC 20601. Islamic Thought and Literature I. 100 Units.

This sequence explores the thought and literature of the Islamic world from the coming of Islam in the seventh century C.E. through the development and spread of its civilization in the medieval period and into the modern world. Including historical framework to establish chronology and geography, the course focuses on key aspects of Islamic intellectual history: scripture, law, theology, philosophy, literature, mysticism, political thought, historical writing, and archaeology. In addition to lectures and secondary background readings, students read and discuss samples of key primary texts, with a view to exploring Islamic civilization in the direct voices of the people who participated in creating it. All readings are in English translation. No prior background in the subject is required. This course sequence meets the general education requirement in civilization studies.

Instructor(s): Ahmed El Shamsy Terms Offered: Autumn

Equivalent Course(s): SOSC 22000, MDVL 20601, RLST 20401, HIST 25610

NEHC 20602. Islamic Thought and Literature II. 100 Units.

This course covers the period from ca. 950 to 1700, surveying works of literature, theology, philosophy, sufism, politics, history, etc., written in Arabic, Persian and Turkish, as well as the art, architecture and music of the Islamicate traditions. Through primary texts, secondary sources and lectures, we will trace the cultural, social, religious, political and institutional evolution through the period of the Fatimids, the Crusades, the Mongol invasions, and the 'gunpowder empires' (Ottomans, Safavids, Mughals).

Instructor(s): Franklin Lewis Terms Offered: Winter

Note(s): Taking these courses in sequence is recommended but not required. This sequence meets the general education requirement in civilization studies.

Equivalent Course(s): RLST 20402, HIST 25615, SOSC 22100, MDVL 20602

NEHC 20603. Islamic Thought and Literature III. 100 Units.

This course covers the period from ca. 1700 to the present. It explores Muslim intellectuals' engagement with tradition and modernity in the realms of religion, politics, literature, and law. We discuss debates concerning the role of religion in a modern society, perceptions of Europe and European influence, the challenges of maintain religious and cultural authenticity, and Muslim views of nation-states and nationalism in the Middle East. We also give consideration to the modern developments of transnational jihadism and the Arab Spring. This course sequence meets the general education requirement in civilization studies.

Instructor(s): Orit Bashkin Terms Offered: Spring

Equivalent Course(s): HIST 25616, RLST 20403, SOSC 22200

SALC 20100-20200. Introduction to the Civilizations of South Asia I-II.

This sequence introduces core themes in the formation of culture and society in South Asia from the early modern period until the present. This sequence meets the general education requirement in civilization studies. These courses must be taken in sequence.

SALC 20100. Introduction to the Civilizations of South Asia I. 100 Units.

The first quarter focuses on Islam in South Asia, Hindu-Muslim interaction, Mughal political and literary traditions, and South Asia's early encounters with Europe.

Instructor(s): M. Alam Terms Offered: Winter

Equivalent Course(s): ANTH 24101, MDVL 20100, SALC 30100, HIST 10800, SOSC 23000

SALC 20200. Introduction to the Civilizations of South Asia II. 100 Units.

The second quarter analyzes the colonial period (i.e., reform movements, the rise of nationalism, communalism, caste, and other identity movements) up to the independence and partition of India.

Instructor(s): Dipesh Chakrabarty Terms Offered: Spring

Prerequisite(s): SALC 20100, ANTH 24101, HIST 10800, SASC 20000, SOSC 23000

Equivalent Course(s): ANTH 24102, SOSC 23100, HIST 10900

Civilization Studies Abroad Programs

Students may also complete their civilization studies requirement by participating in one of the College's Study Abroad programs. For more information about these programs, consult the Study Abroad section of this catalog or visit study-abroad.uchicago.edu (<http://study-abroad.uchicago.edu>).

Humanities

General Education Sequences

All first-year students take a Humanities sequence that engages them in the pleasure and challenge of humanistic works through the close reading of literary, historical, and philosophical texts. These are not survey courses; rather, they work to establish methods for appreciating and analyzing the meaning and power of exemplary texts. The class discussions and the writing assignments are based on textual analysis. In combination with these courses, students are required to take a zero-unit seminar (HUMA 19100 Humanities Writing Seminars) that introduces the analysis and practice of expert academic writing.

All HUMA 10000-level sequences that meet general education requirements, listed below, are available as either a two-quarter sequence (Autumn, Winter) or as a three-quarter sequence (Autumn, Winter, Spring). Once students begin a sequence, they are expected to remain in the same sequence. Students are expected to complete this foundational requirement in their first year. NOTE: Students registered in any of the sequences below must attend the first and second class sessions or their registration will be dropped.

The sequences that fulfill the general education requirements in Humanities are listed here. Descriptions of individual courses are below.

HUMA 11000-11100-11200	Readings in World Literature I-II-III	300
HUMA 11500-11600-11700	Philosophical Perspectives I-II-III	300
HUMA 12050-12150-12250	Greece and Rome: Texts, Traditions, Transformations I-II-III	300
HUMA 12300-12400-12500	Human Being and Citizen I-II-III	300
HUMA 13500-13600-13700	Introduction to the Humanities I-II-III	300
HUMA 14000-14100-14200	Reading Cultures: Collection, Travel, Exchange I-II-III	300
HUMA 16000-16100-16200	Media Aesthetics: Image, Text, Sound I-II-III	300
HUMA 17000-17100-17200	Language and the Human I-II-III	300
HUMA 18000-18100-18200	Poetry and the Human I-II-III	300

For students preparing for medical school: A three-quarter sequence in Humanities is recommended. Those able to complete only a two-quarter sequence in their first year should plan to take a writing-intensive English Language and Literature course when their schedule allows. This English course, however, cannot be applied to the general education requirement in the humanities.

Course Descriptions for General Education Sequences

HUMA 11000-11100-11200. Readings in World Literature I-II-III.

This Humanities general education sequence examines the relationship between the individual and society in a rich, diverse, and exciting selection of literary texts from across the globe and from the earliest literary text to today. We address the challenges faced by readers confronting foreign literatures, reading across time and cultures, and reading texts in translation.

HUMA 11000. Readings in World Literature I. 100 Units.

The theme for the Autumn Quarter of Readings in World Literature is 'The Epic'. Beginning with the oldest extant literary text known to mankind, The Epic of Gilgamesh, and moving on to India's national epic The Mahabharata as well as The Odyssey, we study epic texts that are central to the literary and cultural traditions of various regions and peoples of the world. As an introduction to the study of the Humanities, this course will help you develop your skills in textual analysis, independent critical thinking, and expository writing. As a course on literature, it will pay particular attention to issues such as narrative structure, verse form, performativity and poetic devices, but also to the question of how literature might matter for our lives here and now. As a course that aims to address world literatures, this class will focus on ways in which texts from different cultural backgrounds articulate the cultural values, existential anxieties, and power structures of the societies that produced them.

Instructor(s): Staff Terms Offered: Autumn

Note(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

HUMA 11100. Readings in World Literature II. 100 Units.

The theme for the Winter Quarter of Readings in World Literature is 'Autobiography/ Writing the Self.' This course examines the nature of autobiographical writing from a wide range of cultural and historical contexts, including texts such as Augustine's Confessions, Sei Shonagon's The Pillow Book, Vladimir Nabokov's Speak Memory, Wole Soyinka's Aké and Alison Bechdel's graphic memoir Fun Home. While last quarter focused on the genre of the epic-texts that imagine and even create a people's sense of a shared past and a shared culture-this quarter will focus on how individuals imagine their own, particular lives. We will explore, among other issues, how the self is constructed through reading and writing, the relationship between memory and identity, the claims of authenticity or truth, the oscillation between interior and exterior life, and the peculiarities of individual voice.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): HUMA 11000

Note(s): These courses must be taken in sequence.

HUMA 11200. Readings in World Literature III. 100 Units.

Students wishing to take the third quarter of the Readings in World Literature sequence will be able to choose from a selection of different topics that varies slightly from year to year, such as 'Gender and Literature,' 'Crime Fiction and Murder Mysteries,' 'Reading the Middle Ages: Europe and Asia,' 'Colonial Fictions: Novel of Exoticisms, Adventure, and East and West', 'Masterpieces of Poetry,' 'The Nobel Prize in Literature,' or 'Fictions of the Modern City'.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): HUMA 11100

Note(s): These courses must be taken in sequence.

HUMA 11500-11600-11700. Philosophical Perspectives I-II-III.

This sequence considers philosophy in two lights: as an ongoing series of arguments addressed to certain fundamental questions about the place of human beings in the world and as a historically situated discipline interacting with and responding to developments in other areas of thought and culture. Readings tend to divide between works of philosophy and contemporaneous works of literature, but they may also include texts of scientific, religious, or legal practice.

HUMA 11500. Philosophical Perspectives I. 100 Units.

In Autumn Quarter, we examine fundamental ethical issues--about virtue, the good life, and the role of the individual in society--in the works of ancient Greek writers as well as 20th-century writers in conversation with them. Texts are drawn from Plato, Aristotle, the Greek tragedians, Martin Luther King and others.

Instructor(s): Staff Terms Offered: Autumn

Note(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

HUMA 11600. Philosophical Perspectives II. 100 Units.

Winter Quarter explores metaphysical and epistemological questions as they confronted participants and spectators of the 'scientific revolution'. Problems of skepticism, self-understanding and the social status of knowledge are at the fore. Authors tend to include Descartes, Newton, Voltaire, and Mary Shelley, among others.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): HUMA 11500

Note(s): These courses must be taken in sequence.

HUMA 11700. Philosophical Perspectives III. 100 Units.

In Spring Quarter we explore the constitution of agency and personal morality from the vantage point of Enlightenment and post-Enlightenment philosophy and novels. Authors include Hume, Kant, Nietzsche and Jane Austen.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): HUMA 11600

Note(s): These courses must be taken in sequence.

HUMA 12050-12150-12250. Greece and Rome: Texts, Traditions, Transformations I-II-III.

The Greece and Rome sequence is about traditions—not as stable, pre-given structures, but as bodies of texts that influence and transform each other across historical time periods. Students gain a grounding in some major texts of the Classical Greek and Latin traditions (read in English translation) as well as their reception at pivotal moments in modernity. These texts have sustained a community of reading, commentary, and debate ever since their inception, and they continue to resonate through our institutions and values today. In our encounter with them, we will develop the tools to read in inquiring and original ways, as well as to defend our readings with respect to the texts. Each quarter is devoted to one or two genres, and each includes Greek, Roman, and modern texts that build on each other. Autumn opens with epic works by Homer, Vergil, and Milton. Winter sees us delve into the paired genres of tragedy and history, examining how each represents society through distinct modes of narrative and speech: past authors have included Aeschylus, Herodotus, Livy, Seneca, Tacitus, Shakespeare, and Racine. Spring alternates between comedy (Aristophanes, Plautus, Shakespeare) as a vehicle for negotiating social norms and the subject of love in philosophical and literary perspectives (Plato's Symposium, Lucretius, the ancient novel, Shelley's *Frankenstein*).

HUMA 12050. Greece and Rome: Texts, Traditions, Transformations I. 100 Units.

Autumn Quarter examines the epic tradition with a focus on warfare, foundation, and the social order. Readings cover Homer's *Iliad*, Vergil's *Aeneid*, and Milton's *Paradise Lost*, with selections from the lyric poetry of Sappho, Auden, and Wheatley.

Instructor(s): Staff Terms Offered: Autumn

Note(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

HUMA 12150. Greece and Rome: Texts, Traditions, Transformations II. 100 Units.

The Winter Quarter focuses on how tragedy and history confront familial, social, and external conflict in different genres. Readings cover Aeschylus' *Oresteia*, selections from the histories of Herodotus, Livy, and Tacitus, tragedies by Seneca, and several of Shakespeare's history plays.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): HUMA 12050

Note(s): These courses must be taken in sequence.

HUMA 12250. Greece and Rome: Texts, Traditions, Transformations III. 100 Units.

Spring Quarter alternates between comedy as a vehicle for negotiating social norms and the subject of love in philosophical and literary perspectives. In comedy years, social integration is treated with a lighter touch than in

Autumn and Winter Quarters, through the texts of Aristophanes, Plautus, and Shakespeare. In the alternate years, love is explored through the philosophical texts of Plato's Symposium and Lucretius' *The Way Things Are*, as well as works of Shakespeare and Shelley's *Frankenstein*.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): HUMA 12150

Note(s): These courses must be taken in sequence.

HUMA 12300-12400-12500. Human Being and Citizen I-II-III.

Human Being and Citizen explores the needs and aspirations that draw human beings together in formal and informal communities and the problems that we encounter as social animals in the pursuit of human flourishing. We investigate matters of justice, the law, and leadership, and consider these together with modes of human interaction from contractual relations to friendship and kinship ties in both their legislative and affective dimensions (especially love, anger, shame, grief, and faith). We think about the role of divinity (from Greek mythology to modern Christianity) in shaping the ways our texts conceive of these topics, and we consider ideas about the formation of the self. Our readings are predominantly drawn from the western tradition—Homer, Plato, Aristotle, Augustine, Dante, Shakespeare, Kant, among others—and these canonical texts do not go unquestioned. Rather, by entering into conversation with one another, they provide the intellectual resources for an inquiry that leads ultimately into an exploration of contemporary questions of rights, representation, and belonging.

HUMA 12300. Human Being and Citizen I. 100 Units.

The autumn quarter explores the ways that Ancient Greek and the Abrahamic text of Genesis conceive of, express ideals about, and articulate tensions in conceptions and practices of justice, human and divine law, and emotion. We examine the ways these conceptions figure in literary, philosophical and religious texts concerned with rupture and continuity in the social order. We consider the ways human beings come together in groups (families, cities, armies, but also beliefs and aspirations) and strive to understand what binds these groups as structures of meaning-making and social practice. Texts include Homer's *Iliad*, the book of Genesis, Plato's *Apology* and *Laches*, and Sophocles' *Antigone*.

Instructor(s): Staff Terms Offered: Autumn

Note(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

HUMA 12400. Human Being and Citizen II. 100 Units.

In the winter quarter, we examine conceptions of the human good in connection with practices of the self as they pertain to virtue, the social order, spiritual beliefs and practices, and community. We ask what constitutes human flourishing and explore relations and tensions between individual self-formation and the social and political good. Texts include Aristotle's *Nicomachean Ethics*, Augustine's *Confessions*, and Dante's *Inferno*.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): HUMA 12300

Note(s): These courses must be taken in sequence.

HUMA 12500. Human Being and Citizen III. 100 Units.

The spring quarter addresses matters of community, law, freedom, morality, and ideology in a (broadly speaking) modern idiom of citizenship and its attendant idea of the human being as a rights-bearing subject. We ask what (whether culture, religion, reason itself) might ground our moral judgments, and what the limits and freedoms are of thinking the human being as a subject accorded rights through instruments of philosophical or political law. Resourced by our autumn and winter texts, we consider the impact of thinking matters of race, ethnicity, and gender through a modern lens and how these considerations both challenge and draw on the past. Texts include Shakespeare's *The Tempest*, Kant's *Groundwork of the Metaphysics of Morals*, and Baldwin's *No Name in the Street*.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): HUMA 12400

Note(s): These courses must be taken in sequence.

HUMA 13500-13600-13700. Introduction to the Humanities I-II-III.

This sequence emphasizes writing, both as an object of study and as a practice. As we study the texts of the course, we pay special attention to questions about how they function as instances of writing: How does the writing of a text shape the way that we understand it? How does writing shape our sense of what we are doing in the humanities? Such questions about writing will lead to similar questions about language in general: How is our understanding shaped by the language we use? In the Autumn Quarter, we'll ask these questions within classical and familiar norms for using language to argue, to analyze, to be accurate, to be logical, and so on. In Winter and Spring Quarters, we'll move to challenges, and radical criticisms, of these familiar ideas. As to practice: The writing workload of the course is significant. Students will write at least one writing assignment each week, and we discuss these assignments in small writing workshops. This is not a course in remedial writing; rather it is a course for students who are particularly interested in writing or who want to become particularly proficient writers. Readings for the course are selected not thematically or chronologically, but to serve the focus on writing.

HUMA 13500. Introduction to the Humanities I. 100 Units.

In the Autumn Quarter, we read two of Plato's *Dialogues*, the Declaration of Independence, selections from Thucydides' *History of the Peloponnesian War*, and a Shakespeare play.

Instructor(s): Staff Terms Offered: Autumn. Sequence not offered every year.

Note(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

HUMA 13600. Introduction to the Humanities II. 100 Units.

In the Winter Quarter, we read Descartes' *Meditations*, Conrad's *Heart of Darkness*, further selections from Thucydides' *History*, Woolf's *The Waves*, and Nietzsche's *Beyond Good and Evil*.

Instructor(s): Staff Terms Offered: Winter. Sequence not offered every year.

Prerequisite(s): HUMA 13500

Note(s): These courses must be taken in sequence.

HUMA 13700. Introduction to the Humanities III. 100 Units.

In the Spring Quarter, we read Plato's *Phaedrus* with Derrida's 'Pharmakon,' Harriet Jacobs's *Incidents in the Life of a Slave Girl*, still more selections from Thucydides' *History*, an experimental feminist essay, and a graphic novel, perhaps Alison Bechdel's *Fun Home* or Chris Ware's *Building Stories*.

Instructor(s): Staff Terms Offered: Spring. Sequence not offered every year.

Prerequisite(s): HUMA 13600

Note(s): These courses must be taken in sequence.

HUMA 14000-14100-14200. Reading Cultures: Collection, Travel, Exchange I-II-III.

This sequence introduces students to the critical analysis of culture, principally through the interpretation of literary works drawn from a wide variety of traditions and periods, ranging from Homeric epic to folktale to the contemporary novel. Our overarching goal is to study the specific kinds of questions that literature and narrative make possible to ask about a cultural or historical moment—in other words, to think about how literary texts can variously express, differ from, or even critique the cultural situations out of which they emerge. To this end, students in this sequence will cultivate skills in textual interpretation and narrative analysis, while also learning how to formulate broad critical questions concerning the relationship of literary works to the worlds they inhabit as well as regarding the meaning and definition of culture more generally. Each quarter of the sequence considers a theme or concept that is central to the analysis of culture: collection and accumulation, in the Autumn; mobility, movement, and travel in Winter; and exchange in Spring. Works considered in the Autumn include Zora Neale Hurston's *Mules and Men*, Ovid's *Metamorphoses*, and T. S. Eliot's *The Waste Land*; in the Winter, Homer's *Odyssey*, Harriet Jacobs's *Incidents in the Life of a Slave Girl*, and Tomás Rivera's *And the Earth Did Not Devour Him*; and Richard Wright's *Native Son*, Honoré de Balzac's *Le Père Goriot*, and Xiao Hong's *The Field of Life and Death in the Spring*.

HUMA 14000. Reading Cultures: Collection, Travel, Exchange I. 100 Units.

The Autumn Quarter of Reading Cultures is devoted to the analysis of 'collection' as a form of cultural activity.

Reading texts such as Ovid's *Metamorphoses*, *The Arabian Nights*, and Zora Neale Hurston's *Mules and Men* that offer collections of stories in lieu of a single tale, we consider the extent to which culture comes into being through the accumulation, assemblage and transmission of narratives. In other words, students in this quarter learn how to think about narrative and storytelling in terms of the production, organization and control of culture. Who gets to collect and to tell the stories of a culture, we ask, and what difference does their identity make to cultural representation?

Instructor(s): Staff Terms Offered: Autumn

Note(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

HUMA 14100. Reading Cultures: Collection, Travel, Exchange II. 100 Units.

The Winter Quarter of Reading Cultures considers the centrality of movement, migration and travel to the study of culture. Turning to texts such as Harriet Jacobs's *Incidents in the Life of a Slave Girl*, Jamaica Kincaid's *A Small Place* and Tomás Rivera's *And the Earth Did Not Devour Him*, we ask how cultures have retained their coherence, historically, under conditions of migration, diaspora and violent or enforced movement. We also consider the ways that cultures themselves travel and change, and analyze the ways that language and narrative function as mediums of cultural movement and transmission.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): HUMA 14000

Note(s): These courses must be taken in sequence.

HUMA 14200. Reading Cultures: Collection, Travel, Exchange III. 100 Units.

The Spring Quarter of Reading Cultures focuses on exchange as a fundamental cultural activity. Here, we consider literary texts such as Xiao Hong's *The Field of Life and Death*, Richard Wright's *Native Son* and Honoré de Balzac's *Le Père Goriot*, as well as theoretical texts by Karl Marx and Marcel Mauss that raise questions about the cultural function of exchange. Thus in this quarter, students study the ways in which literary works from different cultural traditions have offered unique critiques of and pointed responses to the prevailing economic systems of their times.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): HUMA 14100

Note(s): These courses must be taken in sequence.

HUMA 16000-16100-16200. Media Aesthetics: Image, Text, Sound I-II-III.

This sequence examines a question central to humanistic thought across cultures and historical periods: How do different kinds of media allow us to perceive and represent our world? We study how painting, photography, writing, film, song, and other media have allowed for new forms of knowledge, expression, and experience—but have also been seen as ethically dangerous or politically disruptive. The sequence traces philosophical and aesthetic debates about media from antiquity to the present in various cultural contexts; we examine discussions of image, text, and sound in Plato, Shakespeare, Nietzsche, W. E. B. Du Bois, Alfred Hitchcock, Toni Morrison, and recent critical theory. Throughout, we develop attention to the "aesthetics" of media by closely studying how specific aspects of complex works of art and literature lead audiences to think

and feel in particular ways. In Spring Quarter, students may take a third quarter of humanities or shift into a related general education course in the arts (MAAD 16210).

HUMA 16000. Media Aesthetics: Image, Text, Sound I. 100 Units.

Autumn Quarter focuses on images, imitation, and seeing. Images may seem to simply reflect the real, but they just as often distort or distance viewers from it. We explore the strangeness of images through Diego Velasquez's *Las Meninas*, Plato's *Republic*, Hitchcock's *Vertigo*, and Toni Morrison's *The Bluest Eye*.

Instructor(s): Staff Terms Offered: Autumn

Note(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

HUMA 16100. Media Aesthetics: Image, Text, Sound II. 100 Units.

Winter Quarter focuses on writing, reading, and signs. Language is an extraordinarily flexible medium for representing events and experiences—but it also raises distinctive challenges of interpretation, decoding, and translation. We examine some of these challenges through Plato's *Phaedrus*, Shakespeare's *The Tempest*, Akira Kurosawa's *Rashomon*, and Alison Bechdel's *Fun Home*.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): HUMA 16000

Note(s): These courses must be taken in sequence.

HUMA 16200. Media Aesthetics: Image, Text, Sound III. 100 Units.

Spring Quarter focuses on sound, music, and listening. How do sounds or noises become meaningful? Why are music and voice so effective at expressing desire, suffering, or even overwhelming the intellect? We explore these and other questions through William Blake's *Songs of Innocence and Experience*, W.E.B. Du Bois's *The Souls of Black Folk*, Nietzsche's *The Birth of Tragedy*, contemporary albums, and sound art.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): HUMA 16100

Note(s): These courses must be taken in sequence. For the option of taking the third quarter of Media Aesthetics as the general education requirement in the arts, see MAAD 16210.

HUMA 17000-17100-17200. Language and the Human I-II-III.

Language is at the center of what it means to be human and is instrumental in most humanistic pursuits. With it, we understand others, describe, plan, narrate, learn, persuade, argue, reason, and think. This sequence aims to provoke us to critically examine common assumptions that determine our understanding of language—and more specifically, the ways we, as speakers or writers, use it to communicate meaning.

HUMA 17000. Language and the Human I. 100 Units.

The Autumn Quarter of this sequence explores fundamental questions about the nature of language, concentrating on the conventional character of language as a system, and language in the individual. We discuss: the properties of human languages (spoken and signed) as systems of communication distinct from other forms (including animal and artificial systems), whether some languages are more primitive than others, how language is acquired, used, changes, and evolves, what it means to be bilingual. Typical texts used include Plato's *Cratylus*, parts of *Finnegans Wake*, Locke, Truffaut's *L'enfant sauvage*, Turing.

Instructor(s): Staff Terms Offered: Autumn

Note(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

HUMA 17100. Language and the Human II. 100 Units.

The Winter Quarter is generally devoted to examining how language mediates between the individual and society, its origin, spread, evolution, and development, and its role in power, identity, culture, nationalism, thought, and persuasion, as well as its use in naming, politeness, irony, and metaphor. Further examined are the nature of translation, writing systems, language and artificial intelligence, invented languages, and to what extent language shapes or influences perception of the world and cognition. Readings typically from Whorf, Orwell, Grice, and others.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): HUMA 17000

Note(s): These courses must be taken in sequence.

HUMA 17200. Language and the Human III. 100 Units.

The topics addressed in the Spring Quarter vary from year to year: We may look at language and poetry, the nature of metaphor, rhetorical force of language. These questions are examined through classic and contemporary primary and secondary literature, with readings which may be drawn from literary, linguistic, philological, and philosophical traditions (in varying years, from parts of the Bible, *Beowulf*, Chaucer, Descartes, and Rousseau to Borges, Chomsky, and others).

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): HUMA 17100

Note(s): These courses must be taken in sequence.

HUMA 18000-18100-18200. Poetry and the Human I-II-III.

What is poetry and why do we do it? This three-quarter sequence examines the practice of poetry as a form of communication, linguistic innovation, and embodied presence. How is poetry as language and action different from other forms of activity? What is the role of poetry in society, in regard to memory, performance, storytelling, and history; ritual

and creation; knowledge and formation of selfhood; institution and revolution? This sequence addresses these questions in the poetry of different eras and peoples, including Homer, Sappho, Catullus, Beowulf, John Donne, Emily Dickinson, the Popol Vuh, Gwendolyn Brooks, Audre Lorde, Paul Celan, N. Scott Momaday, Layli Long Soldier, Claudia Rankine, and many others. It provides students with skills in the close reading of texts and performance and a grasp of the literary, philosophical, and theoretical questions that underpin the humanities. In the Spring Quarter, students may take a third quarter of Humanities or shift into a related general education course in the arts (CRWR 18200).

HUMA 18000. Poetry and the Human I. 100 Units.

In Autumn (form/formation/transformation), we closely analyze poetry to understand its distinctive qualities, looking at questions of form and rhythm, translation and adaptation, and experimentation with genre. We also explore argumentation, criticism, and the role of poetry in mapping creation through practices of language, image, and sound.

Instructor(s): Staff Terms Offered: Autumn

Note(s): These courses must be taken in sequence

HUMA 18100. Poetry and the Human II. 100 Units.

In Winter (crisis/performance/politics), we turn to questions of social rupture, breakdown, and reformation as we consider the ways that poetry revolts, reflects, and rebuilds in political crises. We will also look at poetry in performance, and performance as poetry, to consider how poetry is practiced in non-textual media such as spoken word, film, and dance.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): HUMA 18000

Note(s): These courses must be taken in sequence

HUMA 18200. Poetry and the Human III. 100 Units.

In the Spring Quarter Humanities course (object/event/narrative), we consider the poem first as an object that expresses the processes of writing and the materiality of the body, then as a staged and sonic event, and finally as a way of shaping a life or of conceiving an afterlife.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): HUMA 18100

Note(s): These courses must be taken in sequence. For the option of taking the third quarter of Poetry and the Human to meet the general education requirement in the arts, see CRWR 18200.

Writing Seminars

HUMA 19100. Humanities Writing Seminars. 000 Units.

These seminars introduce students to the analysis and practice of expert academic writing. Experts must meet many familiar standards for successful writing: clear style, logical organization, and persuasive argument. But because they work with specialized knowledge, experts also face particular writing difficulties: they must be clear about complexities and specific about abstractions; they must use uncomplicated organization for very complicated ideas; they must create straightforward logic for intricate arguments; they must be concise but not incomplete, direct but not simplistic; they must clarify the obscure but not repeat the obvious; and they must anticipate the demands of aggressively skeptical readers. The seminars do not repeat or extend the substantive discussion of the Humanities class; they use the discussions and assignments from those classes as a tool for the advanced study of writing. We study various methods not only for the construction of sophisticated and well-structured arguments but also for understanding the complications and limits of those arguments. These seminars also address issues of readership and communication within expert communities. As students present papers in the seminars, we can use the reactions of the audience to introduce the techniques experts can use to transform a text from one that serves the writer to one that serves the readers.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Note(s): These seminars are available only in combination with either a two- or a three-quarter general education sequence in the Humanities.

Collegiate Courses

The 20000-level Collegiate courses in Humanities seek to extend humanistic inquiry beyond the scope of the general education requirements. A few of them also serve as parts of special degree programs. All of these courses are open as electives to students from any Collegiate Division.

Course Descriptions for Collegiate Courses

HUMA 02980. Practicum. 25 Units.

This course is for students who secure a summer internship. For details, visit careeradvancement.uchicago.edu/jobs-internships-research/internships-for-credit. Students write a short paper (two to three pages) and give an oral presentation reflecting on their internship experience.

Instructor(s): D. Spatz Terms Offered: Summer

Note(s): Must be taken for P/F grading; students who fail to complete the course requirements will receive an F on their transcript (no W will be granted). Students receive 025 units of credit at completion of course. Course meets once in Spring Quarter and once in Autumn Quarter. Course fee \$150; students in need of financial aid should contact Jay Ellison at 702.8609.

Equivalent Course(s): SOSC 02980

HUMA 20710-20711-20712-20713. At the Piano I-II-III-IV.

Keyboard Studies for Non-Music Majors

HUMA 20710. At the Piano I: Keyboard Studies for Non-Music Majors. 100 Units.

Keyboard Studies for Non-Music Majors

Instructor(s): C. Bohlman Terms Offered: Autumn Spring Winter

HUMA 20711. At the Piano II: Keyboard Studies for Non-Music Majors. 100 Units.

Keyboard Studies for Non-Music Majors

Instructor(s): C. Bohlman Terms Offered: Autumn

Prerequisite(s): HUMA 20710 or consent of instructor

HUMA 20712. At the Piano III: Keyboard Studies for Non-Music Majors. 100 Units.

Keyboard Studies for non-Music majors

Instructor(s): C. Bohlman Terms Offered: Winter

Prerequisite(s): HUMA 20711 or consent of instructor.

HUMA 20713. At the Piano IV: Keyboard Studies for Non-Music Majors. 100 Units.

Keyboard Studies for non-Music majors

Instructor(s): C. Bohlman Terms Offered: Spring

Prerequisite(s): HUMA 20712 or consent of instructor.

HUMA 24800. Dostoevsky. 100 Units.

Dostoevsky was an inveterate risk-taker, not only at the baccarat tables of the Grand Casino in Baden-Baden, but in his personal life, his political activities, and his artistic endeavors. This course is intended to investigate his two greatest wagers: on the presence of the divine in the world and on the power of artistic form to convey and articulate this presence. Dostoevsky's wager on form is evident even in his early, relatively conventional texts, like *The Double*. It intensifies after his decade-long sojourn in Siberia, exploding in works like *The Notes from Underground*, which one-and-a-half centuries later remains an aesthetic and philosophical provocation of immense power. The majority of the course will focus on Dostoevsky's later novels. In *Crime and Punishment* Dostoevsky adapts suspense strategies to create a metaphysical thriller, while in *The Demons* he pairs a study of nihilism with the deformation of the novel as a genre. Through close readings of these works we will trace how Dostoevsky's formal experimentation created new ways of exploring realms of existence that traditionally belonged to philosophy and theology. The results were never comfortable or comforting; we will focus on interpreting Dostoevsky's metaphysical provocations.

Instructor(s): R. Bird Terms Offered: Spring

Equivalent Course(s): FNLD 24612, RLST 28204, RLIT 39501, REES 20013, REES 30013

HUMA 25207. Mindfulness: Experience and Media. 100 Units.

How do we experience media (of all kinds) with (or without) awareness? Methods of mindfulness offer principles and practices of awareness focusing on mind, body, and embodied mind. Mindfulness (a flexible, moment-to-moment, non-judging awareness) is an individual experience and at the same time, practices of mindfulness can be a mode of public health intervention. Mindfulness involves social epistemologies of how we know (or don't know) collectively, as we interact with immediate sensory experience as well as with mediated communication technologies generating various sorts of virtual realities (from books to VR). In addition to readings and discussions, this course teaches embodied practices of attention and awareness through the curriculum of Mindfulness-Based Stress Reduction.

Instructor(s): M. Browning Terms Offered: Winter

Equivalent Course(s): HIPS 25207, HLTH 25207, TAPS 20507

HUMA 29700. Reading Course. 100 Units.

An instructor within Humanities agrees to supervise the course and then determines the kind and amount of work to be done. Students must receive a quality grade. Students may not petition to receive credit for more than two HUMA 29700 courses. Students may register for this course using the College Reading and Research Form, available in the College Advising offices. This form must be signed by the instructor and the Director of Undergraduate Studies and then submitted to the Office of the Registrar.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of instructor and senior adviser.

Mathematical Sciences

The courses that satisfy the general education requirement in the mathematical sciences present broadly applicable techniques for formulating, analyzing, and solving problems, and for evaluating proposed solutions. Options to complete this requirement include some Computer Science, Statistics, and Mathematics offerings, including calculus.

Students may select from the following lists of courses.

Non-Calculus Courses

All non-calculus options may be taken individually or, when available, as a sequence. These courses may also be combined to fulfill 200 units of general education requirements (i.e., MATH 11200 and STAT 20000). Students who satisfy the requirement with something other than calculus will take 100 or 200 units of approved non-calculus course work. If only 100 units are used for the mathematical sciences requirement, an additional 100 units will be taken in either the physical or biological sciences categories (for a total of 300 units).

CMSC 11000	Multimedia Programming as an Interdisciplinary Art I	100
CMSC 11800	Introduction to Data Science I	100
CMSC 11900	Introduction to Data Science II	100
CMSC 12100-12200	Computer Science with Applications I-II	200
CMSC 15100-15200	Introduction to Computer Science I-II	200
CMSC 16100-16200	Honors Introduction to Computer Science I-II	200
MATH 11200-11300	Studies in Mathematics I-II	200
One of the following courses: #		100
STAT 20000	Elementary Statistics	
STAT 20010	Elementary Statistics Through Case Study	
STAT 22000	Statistical Methods and Applications	

^ Credit may be granted by examination.

Statistics AP credit may not be used in combination with a calculus course, with STAT 20000 (<http://collegecatalog.uchicago.edu/search/?P=STAT%2020000>) Elementary Statistics, or with STAT 22000 (<http://collegecatalog.uchicago.edu/search/?P=STAT%2022000>) Statistical Methods and Applications. Students may not receive credit for more than one of STAT 20000, STAT 20010, and STAT 22000.

Calculus Sequences

Students must meet the mathematical sciences requirement with the first two quarters of a calculus sequence if they are preparing for the health professions or if they anticipate majors in the Physical or Biological Sciences, Economics, Psychology, or Public Policy Studies. Other restrictions may apply. Students should consult their College adviser or departmental counselor about course choices. Those who take calculus must earn credit for the first two quarters of a calculus sequence (200 units).

Information regarding calculus placement can be found on the Examination Credit page.

MATH 13100-13200	Elementary Functions and Calculus I-II	200
MATH 15100-15200	Calculus I-II ^	200
MATH 16110 & MATH 16210	Honors Calculus I (IBL) and Honors Calculus II (IBL)	200
MATH 16100-16200	Honors Calculus I-II	200

^ Credit may be granted by examination.

Physical Sciences

General education courses in the Physical Sciences benefit from a rich tradition of scientific discovery at the University of Chicago. The late University of Chicago professor and Nobel laureate Subrahmanyan Chandrasekhar, who predicted the existence of black holes based on theoretical considerations, described well the importance of science in our lives when he said, 'Science is a perception of the world around us. Science is a place where what you find in nature pleases you.'

Under the designation PHSC, the Physical Sciences Collegiate Division offers several sequences of courses from the Astronomy and Astrophysics, Chemistry, Geophysical Sciences, and Physics departments, tailored to provide an interesting and useful education for non-scientists in their goal of satisfying their general education requirement in the physical sciences. The goal of general education in the physical sciences is to engender in the student the ability to understand and assess our understanding of the physical world. One can argue that the fundamental tenet of liberal education at the University of Chicago is to cultivate an appreciation for critical inquiry and the basis for judgement. The physical sciences contribute to this mission in teaching the principles of experimentation, observation, and the principles of scientific inquiry. Chemistry and physics are advanced through laboratory experiments that study the structure of nature and build models which we extrapolate from those observations. Astronomy and geophysical sciences develop methods to make inferences about the world around us based on observations which cannot always be recreated in a laboratory.

While the Departments of Mathematics, Statistics, and Computer Science do not offer PHSC courses, these subjects are strongly connected to the physical sciences. Mathematics is the language of science and the only known way to make quantitative assessments about the experiments. Statistics teaches us how to interpret experimental results and how to assess a level of confidence in the conclusions derived from them, while computer science enables us to analyze large and complex data and simulate physical processes whose properties cannot be determined mathematically. The techniques developed and applied to scientific inquiry provide valuable tools to the basis of inquiry in any field, and indeed in our lives in general.

Students are required to take at least two courses in the physical sciences to satisfy the general education requirement. This requirement may be met by taking an introductory sequence in Chemistry, Geosciences, or Physics, or by taking any acceptable pairing of Physical Sciences (PHSC) courses, which generally have a broader focus than the disciplinary sequences. It is strongly recommended that the general education sequence in the physical sciences be completed in the first two years.

General Education Sequences for Science Majors

The following introductory sequences may be used to satisfy the general education requirement in the physical sciences for all students, although these tend to be taken by sciences majors or by students who have a particular need for science (namely, premeds). The sequences are:

CHEM 10100-CHEM 10200

CHEM 11100-CHEM 11200*

CHEM 12100-CHEM 12200

GEOS 13100-GEOS 13200

PHYS 12100-PHYS 12200*#

PHYS 13100-PHYS 13200

PHYS 14100-PHYS 14200*

*For information, see the Placement Tests and Advanced Placement Credit sections elsewhere in this catalog.

#PHYS 12100 has the prerequisite of CHEM 11300 or CHEM 12300.

Physical Sciences Courses for Non-Science Majors

There are several sequences in the physical sciences, each of which introduces a different discipline and different aspects of scientific knowledge. Physical Sciences (PHSC) courses fall mainly into four general categories that we might conveniently label as '**Physics**,' '**Astronomy and Astrophysics**,' '**Geosciences**,' and '**Chemistry**.' As a general rule, courses from two different categories may not be combined to satisfy the two-quarter general education requirement in the physical sciences. It is strongly recommended that the general education sequence in the physical sciences be completed in the first two years. Some PHSC courses restrict registration for students beyond the second year.

Students who seek to deviate from the combinations identified here must submit a petition to the master of the Physical Sciences Collegiate Division, Harper Memorial Library 235 (HM 235).

The PHSC courses in the **Physics** category are PHSC 11100-11200 Modern Physics I-II, PHSC 11300 Everyday Physics, and PHSC 11400-11500 Life in the Universe I-II; PHSC 11600 Physics for Future Presidents: Fundamental Concepts and Applications, and PHSC 11700 Physics for Future Presidents: Energy and Sustainability; PHSC 11800 Physics and Contemporary Architecture. The approved sequences among these courses are listed below. Other sequences are not permitted.

PHSC 11100-PHSC 11200

PHSC 11100-PHSC 11300

PHSC 11600-PHSC 11700

PHSC 11800-PHSC 11600

PHSC 11800-PHSC 11700

PHSC 11800-PHSC 12600

PHSC 11800-PHSC 13400

Students wishing to take a three-quarter Physical Sciences sequence may take PHSC 11100-11200-11300, although at present only one of PHSC 11200 and PHSC 11300 is offered in any given year. Students wishing to take a three quarter Physical Sciences sequence may also combine PHSC 11600-11700 with any other Physical Sciences core courses except PHSC 11100.

The PHSC courses in the **Geosciences** category are PHSC 10100 Origin and Evolution of the Solar System and the Earth, PHSC 10800 Earth as a Planet: Exploring Our Place in the Universe, PHSC 11000 Environmental History of the Earth, PHSC 13400 Global Warming: Understanding the Forecast and PHSC 13140 Global Warming: Understanding the Forecast (flipped version), and PHSC 13600 Natural Hazards. The only approved sequences among these courses are listed below. The courses in these sequences can be taken in any order. Below is a summary of approved courses:

PHSC 10100-PHSC 11000

PHSC 10100-PHSC 13400/PHSC 13410

PHSC 10800-PHSC 11000

PHSC 10800-PHSC 13400/PHSC 13410

PHSC 10800-PHSC 13600

PHSC 11000-PHSC 13400/PHSC 13410

PHSC 11000-PHSC 13600

PHSC 12300-PHSC 13400/PHSC 13410

PHSC 13400/PHSC 13410-PHSC 13600

Under no circumstances may a student receive credit for both PHSC 10100 and PHSC 10800.

There is one sequence of PHSC courses with a focus on **Chemistry**, PHSC 12100 Chemistry in Everyday Media, PHSC 12300 Chemistry for an Alternative Energy Economy, PHSC 12400 The Chemistry of Big Problems, and PHSC 12500 Molecular Mechanisms of Human Disease.

PHSC 12300-PHSC 12400

PHSC 12300-PHSC 12500

PHSC 12400-PHSC 12500

PHSC 12300-PHSC 13400

PHSC 12100-PHSC 11600

PHSC 12100-PHSC 11700

PHSC 12100-PHSC 12300

PHSC 12100-PHSC 12400

PHSC 12100-PHSC 12500

PHSC 12100-PHSC 12600

PHSC 12100-PHSC 13400

PHSC 12100-PHSC 13600

Students who have credit for CHEM 10100, 11100, or 12100 by either taking the course or by AP credit (for CHEM 11100) and do not wish to take CHEM 10200, 11200, or 12200 may complete the general education requirement with any of the following four courses offered by the Department of Chemistry:

PHSC 12100

PHSC 12300

PHSC 12400

PHSC 12500

Two sequences are available that pair **Geosciences** and **Astronomy and Astrophysics** courses. The approved sequences are PHSC 10800 Earth as a Planet: Exploring Our Place in the Universe + PHSC 12720 Exoplanets, and PHSC 10100 The Origin and Evolution of the Solar System and the Earth + PHSC 12720 Exoplanets.

PHSC 10100-PHSC 12720

PHSC 10800-PHSC 12720

Students who wish to take a three-quarter sequence may enroll accordingly: PHSC 12700 Stars (Autumn Quarter) + PHSC 10100 The Origin and Evolution of the Solar System and the Earth (Winter Quarter) + PHSC 12720 Exoplanets (Spring Quarter).

PHSC 12700-PHSC 10100-PHSC 12720

The on-campus PHSC courses in the **Astronomy and Astrophysics** category are PHSC 12600 Matter, Energy, Space, and Time, PHSC 12610 Black Holes, PHSC 12620 The Big Bang, PHSC 12700 Stars, PHSC 12710 Galaxies, and PHSC 12720 Exoplanets. PHSC 12600-12610-12620 is a logical progression that applies physical principles based on terrestrial experiments to the cosmos at large. Similarly, PHSC 12700-12710-12720 is a logical progression that concerns observed properties of important classes of astronomical objects. Thus, a two-quarter sequence can be built most naturally from 12600 + 12610 or 12600 + 12620, and similarly from 12700 + 12710, 12700 + 12720 or 12710 + 12720. It is also possible to make two-quarter sequences from 12600 + 12710 (galaxies are an example of structure that evolved from early conditions), from 12700 + 12610 (black holes are an end state of stellar evolution), and from PHSC 12600 + 12700.

PHSC 12600 must be taken as the prerequisite before PHSC 12610 or PHSC 12620. Either PHSC 12700 or PHSC 12710 can be taken as the prerequisite before PHSC 12720. Three-quarter sequences may be created by adding any third of the six courses, subject to prerequisite restrictions. The approved sequences among these courses are:

PHSC 12600-PHSC 12610

PHSC 12600-PHSC 12620

PHSC 12600-PHSC 12700

PHSC 12600-PHSC 12710

PHSC 12700-PHSC 12710

PHSC 12700-PHSC 12720

PHSC 12700-PHSC 12610

PHSC 12710-PHSC 12720

Every Spring Quarter a three-course Astronomy program (<http://study-abroad.uchicago.edu/programs/paris-astronomy/>) is offered in Paris, composed from the PHSC courses numbered in the 12600s and 12700s that are offered on campus. The Astronomy program in Paris satisfies the general education requirement in the physical sciences.

PHSC course electives that fit into the Astronomy and Astrophysics category are numbered in the 18000s. These courses may only be used as a third physical sciences general education course and may be combined with any acceptable two-quarter sequence, including those outside of the Astronomy and Astrophysics category.

Note on General Education in the Sciences:

Along with one of these two-quarter sequences, students must register for at least two quarters of an approved biological sciences sequence and at least one quarter of an approved mathematical science. A sixth quarter must be taken in any one of the three areas: physical sciences, biological sciences, or mathematical sciences. (If the mathematical sciences requirement is met by taking calculus, two quarters must be taken.)

General Education Courses

PHSC 10100. Origin and Evolution of the Solar System and the Earth. 100 Units.

This course examines the physical and chemical origins of planetary systems, the role of meteorite studies in this context, and a comparison of the Earth with neighboring planets. It then turns to chemical and physical processes that lead to internal differentiation of the Earth. Further topics include the thermal balance at the Earth's surface (glaciation and the greenhouse effect), and the role of liquid water in controlling crustal geology and evolution. (L)

Instructor(s): A. Davis Terms Offered: Winter

Note(s): Under no circumstances may a student receive credit for both PHSC 10100 and PHSC 10800.

PHSC 10800. Earth as a Planet: Exploring Our Place in the Universe. 100 Units.

This course explores the diversity of bodies in our Solar System, and the physical and chemical processes that have shaped them over their histories. We will also discuss how these studies have carried us away from an Earth-centered view of the

universe to one where Earth is just one of billions of planets that exist in our galaxy. Topics to be covered include: early observations of the Solar System and the laws of planetary motion, the formation and evolution of the Moon, the structure and geophysical evolution of the planets, and the search for habitable environments outside of Earth. (L)

Instructor(s): F. Ciesla Terms Offered: Autumn

Note(s): Under no circumstances may a student receive credit for both PHSC 10100 and PHSC 10800.

PHSC 11000. Environmental History of the Earth. 100 Units.

This course considers how physical and biological processes determine environmental conditions at the surface of the Earth, and how environments have changed over the 4.5 billion-year history of Earth. Topics include the methods of historical inference in geology; major transitions in the history of life, including the origin of life, the evolution of oxygen-producing photosynthesis, the origin of animals, and the series of massive extinctions that have repeatedly re-set ecosystems both on land and in the sea; and ecosystem evolution, including the environmental effects of human evolution. Labs involve hands-on study of rock and fossil specimens, and analysis and interpretation of datasets drawn from the scientific literature and/or faculty research programs.

Instructor(s): M. Webster; S. Kidwell Terms Offered: Spring

Note(s): Due to significant overlap of course content, students may register for only one of PHSC 11000, BIOS 12117, or GEOS 13900/BIOS 13123

PHSC 11100. Modern Physics I: Modern Physics in the Everyday World. 100 Units.

This course will introduce key concepts in classical and quantum physics and will relate them to things we encounter every day, such as lasers, microwaves, and magnetic levitation. It will also discuss some of the recent developments in chaos, nanotechnology, and quantum computing, and how they will change the world we live in. (L)

Note(s): Must be taken with either PHSC 11200 or PHSC 11300

PHSC 11200. Modern Physics II: Paradoxes in Modern Physics. 100 Units.

Physics advancements are often the result of conflict between, on the one hand, existing ideas and speculations, and on the other, observations and measurements. In this course, we explore historical and modern paradoxes in physics including quantum phenomena, elementary particle physics, and others. We match common sense and sensibility with scientific abstraction to broaden our understanding of the physical world.

Prerequisite(s): PHSC 11100

Note(s): Must be taken with PHSC 11100

PHSC 11300. Everyday Physics. 100 Units.

This course will be a walking tour through various topics in physics. It is not organized in the traditional way-mechanics, heat, electromagnetism, quantum mechanics, and relativity-but rather will look at real-world phenomena and try to figure out what is going on. Relying somewhat on knowledge gained in PHSC 11100, we will ask questions about the world around us. No formulas will be used. Questions might include, 'Which draws more water from Lake Michigan, evaporation or the city of Chicago?' and 'How does my cellphone work and what can I do to improve its reception?' The course will also address more substantial topics such as measuring the density of air, figuring out whether airplanes should be able to fly, estimating the density of the Sun, and determining the size of molecules. (L)

Terms Offered: TBD

Prerequisite(s): PHSC 11100 or consent of instructor

PHSC 11600. Physics for Future Presidents: Fundamental Concepts and Applications. 100 Units.

This algebra-based course presents an introduction to many of the foundational concepts of physics with applications to modern society. These concepts include energy and power, heat, sound, gravity, electromagnetism and light, nuclear physics and radioactivity, and Newton's laws.

Instructor(s): Scott Wakely Terms Offered: Autumn

Prerequisite(s): none

Note(s): PHSC 11600-11700 is an approved two-quarter sequence which will satisfy the general education requirement in the physical sciences. Neither course can be combined with any other course to complete the two-quarter Physical Sciences core requirement.

PHSC 11700. Physics for Future Presidents: Energy and Sustainability. 100 Units.

This course treats both the past and future of how the principles that govern the conversion of energy to useful work have impacted and will impact civilization. The principles of kinetic, potential, thermal, mechanical, and nuclear energies will be considered in the contexts of societal issues such as energy sustainability, modern technologies, war, information, food, and health.

Instructor(s): Peter Littlewood Terms Offered: Winter

Prerequisite(s): none

Note(s): PHSC 11600-11700 is an approved two-quarter sequence which will satisfy the general education requirement in the physical sciences. Neither course can be combined with any other course to complete the two-quarter Physical Sciences core requirement.

PHSC 11800. Physics and Contemporary Architecture. 100 Units.

Architectural structures form the built environment around us and in many ways create the backbone of our civilization. They push the limits of form and function on the largest human scales, often leading to iconic masterpieces that symbolize the aesthetics as well as the technical achievements of a period. Many architectural advances have been made possible by breakthroughs in the science of materials, which then led to innovation in construction and fabrication techniques. This course will introduce the physics principles that have enabled some of the most innovative architecture of our time. This course will take key ideas and tools from physics and demonstrate their power and relevance in a broader context familiar

from everyday experience. The course will challenge students to recognize physics concepts in the built structures that make up the urban environment we live in. Chicago is a most appropriate place for this study; it was the birthplace of the first skyscraper, and ever since it has played an internationally celebrated role in pushing the limits of the architectural state of the art. A long succession of renowned Chicago architects and structural engineers has turned this city into a premier laboratory for architectural innovation. Against this backdrop, the course will show how science, and physics in particular, delivers the conceptual foundations that drive current directions in architecture and open up new opportunities.

Instructor(s): Heinrich M. Jaeger; Sidney Nagel Terms Offered: Spring

Prerequisite(s): Some exposure to high-school physics is recommended

Note(s): The course will consist of two lectures per week plus a weekly hands-on workshop (lab) component. The Monday lectures will introduce the physics principles to be explored that week. The Thursday lectures will be delivered by distinguished guest speakers, including renowned architects and engineers. These lectures will be public lectures. They will relate to the physics principle introduced that Monday and explore its ramification within the broader context of contemporary architectural practice. The Thursday afternoon workshop component will involve team-based, hands-on construction projects to develop a better understanding and intuition of the physics principles introduced in the lectures and to obtain a sense of their real-life implications. The workshops will also provide an opportunity to interact with the guest lecturers. Attendance at Thursday lectures is required. This course meets the general education requirement in the physical sciences and may be paired with PHSC 11600, 11700, 12600, or 13400 in order to complete the requirement. This course can be taken for credit towards either the general education requirement in the physical sciences or the Architectural Studies minor, but not both. Students intending to receive physical sciences general education credit should register for PHSC 11800; students intending to receive credit towards the Architectural Studies Minor should register for ARCH 11800.

Equivalent Course(s): ARCH 11800

PHSC 12100. Chemistry in Everyday Media. 100 Units.

What are the harmful 'chemicals' found in consumer products that make 'chemical-free' alternatives better for you? How can you be certain of the results of the latest medical or scientific study reported on the news? Learning where to look for the answers to questions such as these and communicating what answers you find is the goal of this course! Students taking this course will become better-informed citizens by learning to identify chemistry concepts in current news articles and evaluate claims made in them against a background of scientific knowledge. Where existing background knowledge is insufficient, students will learn to read resources such as scientific journal articles and semi-technical review articles to provide the necessary context to evaluate information presented to them in the media they consume everyday. Translation of these concepts in relation to media claims pushes chemistry into application to everyday systems and phenomena. Lecture topics in the course will be selected to provide a baseline of chemical literacy upon which the students will build with their own reading and research. 'Hands-on' laboratory demonstrations will give the students the opportunity to deepen their understanding of lecture topics through application and collaborative work. This course will culminate in a writing piece and presentation critiquing a news article on a chemistry-related topic for accuracy, providing a corrected interpretation of the relevant scientific results

Instructor(s): Nolan Miller Shepherd Terms Offered: This course was offered in 2019-20 and will not be offered again.

Prerequisite(s): none

Note(s): This course meets the general education requirement in the physical sciences and may be paired with PHSC 11600, PHSC 11700, PHSC 12300, PHSC 12400, PHSC 12500, PHSC 12600 PHSC 13400 and PHSC 13600 in order to complete the physical science core requirement.

PHSC 12300. Chemistry for an Alternative Energy Economy. 100 Units.

This course will cover the chemistry of alternative energy technologies and the potential for science to provide climate change solutions. Topics will include both non-renewable energy sources (fossil fuels and nuclear) and renewable energy sources, including electricity production (photovoltaics, solar thermal, wind, hydro and geothermal, fuel production (solar and biofuels), and energy storage (batteries and fuel cells). We will also touch on climate change mitigation approaches (carbon capture and geoengineering). Discussion of these topics will be enriched by an understanding of the basic chemical principles behind energy production and conversion. Students will gain an appreciation of the pivotal role chemistry can play in an alternative energy economy and a foundation to better understand energy issues. The lab component will provide experiential support of the lecture material through hands on experiments and exploratory projects. (L)

Instructor(s): TBD Terms Offered: Spring. Not Offered in 2020-21; This course last offered in 2018-19 and will not be offered again.

Prerequisite(s): No formal prerequisite but some previous background in Chemistry is recommended.

Note(s): Note(s): In order to satisfy the general education requirements in the physical sciences PHSC 12300 may be combined with PHSC 12400 The Chemistry of Big Problems, PHSC 12500 Molecular Mechanisms of Human Disease, PHSC 13400 Global Warming. If a student does not wish to continue with CHEM 10100 Introductory General Chemistry, CHEM 11100 Comprehensive General Chemistry, or CHEM 12100 Honors General Chemistry, they may take PHSC 12300 as the second course.

PHSC 12400. The Chemistry of Big Problems. 100 Units.

This course will discuss the chemistry of big problems that impact human life and society, such as the future accessibility of personal genetic sequence information, genetically modified organisms, or plastics and polymers and alternative sources of energy. We will use each of these topics as a window to grasp the underlying chemistry, reaction mechanisms, analytical methods, and quantitative chemical principles applied to major scientific issues that impact the world around us. Relevant examples will be considered in a discussion-oriented format to bring out chemical and analytical principles associated with big problems. The course will have a classroom lecture component as well as a laboratory component. The laboratory component will involve case studies and problem solving by application of analytical principles and independent work or teams of students. (L)

Instructor(s): Y. Krishnan Terms Offered: Autumn

Prerequisite(s): Some previous background in Chemistry is recommended.

Note(s): Note(s): In order to satisfy the general education requirements in the physical sciences PHSC 12400 may be combined with PHSC 12300 Chemistry for an Alternative Energy Source or PHSC 12500 Molecular Mechanisms of Human Disease. If a student does not wish to continue with CHEM 10100 Introductory General Chemistry, CHEM 11100 Comprehensive General Chemistry, or CHEM 12100 Honors General Chemistry sequence, they may take PHSC 12400 as the second course.,

PHSC 12500. Molecular Mechanisms of Human Disease. 100 Units.

This course will examine the molecular basis for a few specific instances of human disease. We will use each of these molecular case studies as a vehicle to demonstrate quantitative chemical principles such as thermodynamics, chemical equilibrium, chemical kinetics, diffusive dynamics, and DNA damage and repair. The goal of the course will be to use well-understood biological and medical examples to illustrate chemical principles and to give students a toolbox and techniques to understand molecular systems more broadly. The course will have a classroom lecture component as well as a laboratory component. The laboratory component will involve specific case studies and mechanistic proposals that represent exploratory independent work by teams of students. (L)

Instructor(s): G. Engel Terms Offered: Spring

Prerequisite(s): Some previous background in Chemistry recommended

Note(s): Note(s): In order to satisfy the general education requirements in the physical sciences PHSC 12500 may be combined with PHSC 123 Chemistry for an Alternative Energy Source or PHSC 12400 The Chemistry of Big Problems. If a student does not wish to continue with CHEM 10100 Introductory General Chemistry, CHEM 11100 Comprehensive General Chemistry, or CHEM 12100 Honors General Chemistry sequence, they may take PHSC 12500 as the second course.

PHSC 12600. Matter, Energy, Space, and Time. 100 Units.

A comprehensive survey of how the physical world works, and how matter, energy, space, and time evolved from the beginning to the present. A brief survey of the historical development of mathematics, physics, and astronomy leads to a conceptual survey of the modern theory of the physical universe: space and time in relativity; the quantum theory of matter and energy; and the evolution of cosmic structure and composition. The major theme of this course is the understanding of all nature, from the prosaic to the exotic, using powerful quantitative theory grounded in precise experiments. Although quantitative analysis will be an important part of the course, students will not be expected to employ mathematics beyond algebra. (L)

Instructor(s): Erik Shirokoff Terms Offered: Autumn

Equivalent Course(s): ASTR 12600

PHSC 12610. Black Holes. 100 Units.

Black Holes are the most exotic, extreme and paradoxical systems in the universe. They are the densest concentrations of energy, yet they convert all matter that falls in to pure space-time curvature; they radiate more power than anything else, even though most of their radiation is not even made of light; they are mathematically the most perfectly understood of any physical structure, but their enigmatic behavior is still the subject of a violent disagreement among experts that highlights our ignorance of how quantum physics relates to gravity. This course will survey the physics of space and time, the nature of black holes, their effects on surrounding matter and light, the astrophysical contexts in which they are observed, frontier areas of research as quantum gravity and gravitational waves, and the importance of space-time physics to everyday needs such as navigation and energy. The modern theory of space and time, as well as black holes, will be placed in historical context, with special attention to the work of Albert Einstein. Experimental exercises will include direct measurement of the speed of light and gravitational mass, and experience with interferometry. Quantitative analysis will be an important part of the course, but mathematics beyond algebra will not be required. (L)

Instructor(s): Fausto Cattaneo (Summer Quarter); Nick Gnedin (Spring Quarter) Terms Offered: Spring Summer. Summer Quarter instructor is Fausto Cattaneo.

Prerequisite(s): PHSC 12600 or PHSC 12700

Equivalent Course(s): ASTR 12610

PHSC 12620. The Big Bang. 100 Units.

The Big Bang model describes the Universe on the largest scales and its evolution from the earliest observationally accessible times through the formation of the complex world we live in today. This powerful framework allows us to interpret a wide range of observations and to make detailed and precise predictions for new experiments. The key motivating observations include the expansion of the Universe and how it has changed with time; the existence of radiation indicating a hot and dense early phase; the abundance of the light elements; and how matter is organized over a wide range of physical scales. The model naturally incorporates dark matter and dark energy, two surprising and poorly understood components that govern the growth of structure over time. The course will explore the history of scientific cosmology and the evidence for the Big Bang model, its consequences for the earliest moments after the Big Bang, and its predictions for the eventual fate of the Universe. Labs will include a hands-on measurement of the relic cosmic microwave background radiation from the early universe and the use of astronomical data to verify key discoveries in the history of Big Bang cosmology. Quantitative analysis will be an important part of the course, but prior experience with mathematics beyond algebra will not be required. (L)

Instructor(s): Rocky Kolb Terms Offered: Winter

Prerequisite(s): PHSC 12600

Equivalent Course(s): ASTR 12620

PHSC 12700. Stars. 100 Units.

Elements such as carbon and oxygen are created in fusion reactions at high temperatures and pressures in the deep interiors of stars, conditions that naturally arise in stars like the Sun. This course will outline the physical principles at work and the history of the development of the key ideas: how nuclear physics and the theory of stellar interiors account for how stars shine, why they live for such long times, and how the heavy elements in their cores are dispersed to form a new generation of stars. Gravity assembles stars out of more diffuse material, a process that includes the formation of planetary systems. The course shows how, taken together, these physical processes naturally lead to the ingredients necessary for the emergence of life, namely elements like carbon, nitrogen, and oxygen, and planets in stable orbits around long-lived stars. The course features quantitative analysis of data; any tools needed beyond pre-calculus algebra will be taught as part of the course. (L)
 Instructor(s): Fausto Cattaneo (Summer Quarter); Damiano Caprioli (Autumn Quarter) Terms Offered: Autumn Summer.
 Summer Quarter instructor is Fausto Cattaneo.
 Equivalent Course(s): ASTR 12700

PHSC 12710. Galaxies. 100 Units.

Galaxies have been called island universes, places where stars are concentrated, where they are born, and where they die. The study of galaxies reaches back to the Renaissance; Galileo Galilei first pointed a telescope skyward in 1610 and confirmed a then 2000 year-old Greek conjecture about the nature of our own galaxy -- the Milky Way. This course will use extensive modern observational data from a wide range of telescopes to trace the modern picture for the formation and evolution of galaxies and the stars in them. Galaxies will then be used as markers of yet larger scale structures, in order to explore the influence of gravity over cosmic time. The object of study in this course is galaxies, and the narrative arc traced through that extensive data and understanding will highlight our profound discovery that most of the mass in galaxies (and the Universe as a whole) is in fact an exotic form of matter -- dark matter -- that we cannot directly see. Quantitative analysis will be an important part of the course in both laboratory work and lectures, but mathematics beyond algebra and some geometric understanding will not be required. This course will feature several observationally-oriented labs that will allow students to directly experience how some of the modern understanding of galaxies has arisen. (L)
 Instructor(s): Jeffrey McMahon Terms Offered: Winter
 Prerequisite(s): PHSC 12600 or PHSC 12700. PHSC 12710 can be taken as the first course in a sequence combined with PHSC 12720.
 Equivalent Course(s): ASTR 12710

PHSC 12720. Exoplanets. 100 Units.

The past two decades have witnessed the discovery of planets in orbit around other stars and the characterization of extra-Solar (exo-) planetary systems. We are now able to place our Solar System into the context of other worlds and a surprising conclusion that most planetary systems look nothing like our own. A challenging next step is to find planets as small as the Earth in orbit around stars like the Sun. The architecture of planetary systems reflects the formation of the parent star and its protoplanetary disk, and how these have changed with time. This course will review the techniques for discovery of planets around other stars, what we have learned so far about exoplanetary systems, and the driving questions for the future, including the quest for habitable environments elsewhere. Although quantitative analysis will be an important part of the course, students will not be expected to employ mathematics beyond algebra. (L)
 Instructor(s): Leslie Rogers Terms Offered: Spring
 Prerequisite(s): PHSC 10800, PHSC 10100, PHSC 12700 or PHSC 12710.
 Equivalent Course(s): ASTR 12720

PHSC 13400. Global Warming: Understanding the Forecast. 100 Units.

This course presents the science behind the forecast of global warming to enable the student to evaluate the likelihood and potential severity of anthropogenic climate change in the coming centuries. It includes an overview of the physics of the greenhouse effect, including comparisons with Venus and Mars; an overview of the carbon cycle in its role as a global thermostat; predictions and reliability of climate model forecasts of the greenhouse world. This course is part of the College Course Cluster program, Climate Change, Culture, and Society. (L)
 Instructor(s): D. MacAyeal Terms Offered: Not offered in 2020-21.
 Prerequisite(s): Some knowledge of chemistry or physics helpful.
 Equivalent Course(s): ENST 12300, GEOS 13400, ENSC 13400

PHSC 13600. Natural Hazards. 100 Units.

This course presents the current understanding of high-impact weather and geologic events and an introduction to risk assessment and mitigation. Topics include an overview of geography, statistics, and societal impacts of the world's natural hazards; physics and forecasts of hurricanes, extratropical cyclones, tornadoes, earthquakes, tsunamis, volcanic eruptions, droughts, floods, wildfires, and landslides; climate change and weather events; quantifying risks; and successful examples of community- and national-level disaster prevention programs. (L)
 Instructor(s): N. Nakamura Terms Offered: Winter

Elective Courses

Any of the following can be used only as a third course in physical sciences to meet the general education requirement (of six courses total in the biological, physical, and mathematical sciences).

PHSC 18000. The Search for Extraterrestrial Life. 100 Units.

The origin of life is one of the biggest questions of modern science. While substantial progress has been made in understanding how life arose on our planet, such research represents just a single case study in how life originates and evolves. This course covers the search for life beyond Earth from the planets and moons of the Solar System to planets orbiting other stars and intelligent life that may have left its mark on macroscopic scales. The discovery of life beyond

Earth would be transformative for our understanding of humanity's place in the universe. A range of ongoing and planned experiments have the potential to detect or put strong constraints on the existence of life during the next few decades. This class will mix traditional lectures with flipped classroom problem-solving sessions.

Instructor(s): Jacob Bean Terms Offered: Autumn

Note(s): Not recommended for students who have taken ASTR/PHSC 12720 Exoplanets.

Equivalent Course(s): ASTR 18000

PHSC 18100. The Milky Way. 100 Units.

Within a largely empty universe, we live in a vast stellar 'island' that we call the Milky Way. As we survey the stellar and interstellar components of the Milky Way-the distribution and motions of stars and interstellar gas, and how these dynamic, ever-changing components interact with each other during their life cycles inside the Milky Way-we will follow the path of ancient astronomers, wonder at their mistakes and prejudices, and form our own understanding.

Instructor(s): Nick Gnedin Terms Offered: Spring. Not offered in 2020-2021.

Prerequisite(s): Any two-course 10000-level general education sequence in chemistry, geophysical sciences, physical sciences, or physics.

Equivalent Course(s): ASTR 18100

PHSC 18200. The Origin and Evolution of the Universe. 100 Units.

This course provides a comprehensive introduction to modern cosmology for students wishing to delve deeper into the subject than PHSC 12620 (which is not a prerequisite) but at a similar mathematical level. It will discuss how the fundamental laws of physics allow us to understand the origin, evolution, and large-scale structure of the universe. After a brief review of the history of cosmology, the course will cover the expansion of the universe, Newtonian cosmology, Einstein's Special and General Relativity, black holes, dark matter, dark energy, the Cosmic Microwave Background radiation, Big Bang nucleosynthesis, the early universe, primordial inflation, the origin and evolution of large-scale structure in the universe, and cosmic surveys that are probing inflation and cosmic acceleration.

Instructor(s): Josh Frieman Terms Offered: Not offered in 2020-2021.

Prerequisite(s): Any two-course 10000-level general education sequence in chemistry, geophysical sciences, physical sciences, or physics.

Equivalent Course(s): ASTR 18200

PHSC 18300. Searching Between the Stars. 100 Units.

With the advent of modern observational techniques (e.g., radio, satellite astronomy), it has become possible to study free atoms, molecules, and dust in the vast space between the stars. The observation of interstellar matter provides information on the physical and chemical conditions of space and on the formation and evolution of stars.

Instructor(s): Al Harper Terms Offered: Spring

Prerequisite(s): Any two-course 10000-level general education sequence in chemistry, geophysical sciences, physical sciences, or physics.

Equivalent Course(s): ASTR 18300

PHSC 18800. Philosophical Problems in Cosmology. 100 Units.

In this course, we will undertake a comparison of the philosophical underpinnings of the Aristotelian and Copernican cosmologies, including a comparison of mechanistic and teleological approaches to the natural world. The epistemological foundations of the scientific method, in particular as applied to cosmology (from Galileo to the modern context) will be examined, as will positivist vs. realistic outlooks on cosmology. (For example, what does science say-or not say-about the inside of a black hole, or the space beyond the Hubble horizon?) We will ponder questions such as: Do the epistemological foundations of science require us to be able to repeat relevant experiments? If so, does this disqualify cosmology as a science? If not, why? Might our universe be part of a computer simulation? What information could possibly convince us that this is true or false?

Instructor(s): Dan Hooper Terms Offered: Autumn

Prerequisite(s): Any two-course 10000-level general education sequence in chemistry, geophysical sciences, physical sciences, or physics.

Equivalent Course(s): ASTR 18800, HIPS 18800

Social Sciences

The distinguished American sociologist, David Riesman, who played a major role in the creation of the general education program in the social sciences at Chicago, once observed that it was only with a 'marvelous hubris' that students were encouraged to range over such 'large territory' in the social sciences. Indeed, since the 1940s, yearlong sequences designed to introduce students to different types of social scientific data and different forms of social sciences inquiry have become a permanent feature of the Chicago curriculum. Although considerable variety manifests itself in the way the social sciences courses in general education are organized, most of the sequences are informed, as Robert Redfield once suggested, by an attempt 'to communicate the historical development of contemporary society' and by an effort 'to convey some understanding of the scientific spirit as applied to social problems and the capacity to address oneself in that spirit to such a problem.' By training students in the analysis of social phenomena through the development and use of interdisciplinary and comparative concepts, the courses also try to determine the characteristics common among many societies, thus enabling the individual to use both reason and special knowledge to confront rapid social change in the global world of the late twentieth century.

All three courses in a SOSC sequence must be taken in order. Once students begin a sequence, they are expected to remain in the same sequence. NOTE: Students registered in any of the sequences below must attend the first and second class sessions or their registration will be dropped.

Please note: The Power, Identity, and Resistance sequence changed order and numbering in 2017–18. Students who need only one of these courses should consult with their College adviser to confirm they are taking the correct one.

Please note: The Self, Culture, and Society sequence changed order and numbering in 2018–19. Students who need only one of these courses should consult with their College adviser to confirm they are taking the correct one.

Social Sciences Collegiate Division General Education Sequences

SOSC 11400-11500-11600	Power, Identity, Resistance I-II-III	300
SOSC 12400-12500-12600	Self, Culture, and Society I-II-III	300
SOSC 13100-13200-13300	Social Science Inquiry I-II-III	300
SOSC 13110-13210-13310	Social Science Inquiry: Formal Theory	300
SOSC 13120-13220-13320	Social Science Inquiry: Spatial Analysis	300
SOSC 14100-14200-14300	Mind I-II-III	300
SOSC 15100-15200-15300	Classics of Social and Political Thought I-II-III	300
SOSC 16100-16200-16300	Global Society I-II-III	300

SOSC 11400-11500-11600. Power, Identity, Resistance I-II-III.

'Power, Identity, and Resistance' examines multiple and interrelated aspects of power, from the roles of economic markets and political states to the social structures that determine individual, class, and gender inequalities.

SOSC 11400. Power, Identity, Resistance I. 100 Units.

The first quarter of this sequence focuses on key texts for liberal political and state conceptions. We explore the distinctly modern liberal claim that society or groups of associated individuals make states for their own protection and the governance of their affairs. We interrogate authors on questions concerning individuality, liberty, equality, the limitation of state power, the importance of political stability, the value of democratic participation in governance, the role that organized society plays in political life, and the degree to which social and political relations vary historically--among other issues. We address both defenders and critics of the liberal conception of liberty and the state. Texts vary by year. Typical authors assigned include some combination of Machiavelli, Hobbes, Locke, Montesquieu, Rousseau, Burke, Constant, Smith, Wollstonecraft, Paine, Hegel, Tocqueville, Mill, Marx, Du Bois, Durkheim, Weber, Dewey, Schmitt, Arendt, Polanyi, Hayek, Foucault.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 11500. Power, Identity, Resistance II. 100 Units.

Winter Quarter focuses on the work of central figures in modern political economy and social theory. The course highlights the organization of economic process and the ways in which it relates to social and political relations and institutions. The central questions are these: How historically distinctive is the modern form of capitalist economy? Do human beings 'naturally' act in certain ways in the economy and society? To what degree can we rely on individual self-control? Is inequality an inevitable outcome of capitalist economic development? What is the role of power in economic life? How should we think about the relationship between political power and economic practice? Readings vary by year. Typical texts include some combination of Aristotle, Mandeville, Rousseau, Smith, Marx, Mill, Durkheim, Weber, Polanyi, Hayek, Keynes, Foucault, Marshall, Roepke, Friedman, Stiglitz, Krugman.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): SOSC 11400. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 11600. Power, Identity, Resistance III. 100 Units.

Spring Quarter analyzes the way in which selected themes from the first two quarters work themselves out in the history of the nineteenth, twentieth, and twenty-first centuries. Broadly, we consider the scope of liberal claims about rights, liberty, and resistance, and we explore themes like identity, equality, democracy, and human beings' relationship to nature. In the past, the course has also included explorations of colonialism, racial and gender equality, and different forms of violence. Themes and readings vary by year. Texts used previously include: Smith, Kant, Hegel, Herder, Fichte, Marx, Emerson, Thoreau, Whitman, Nietzsche, Freud, Lenin, Luxemburg, Trotsky, Sorel, Dewey, Hayek, Polanyi, Keynes, Fanon, Césaire, DuBois, Arendt, Martin Luther King Jr., Malcolm X, Foucault, de Beauvoir, and Butler.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): SOSC 11500. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 12400-12500-12600. Self, Culture, and Society I-II-III.

"Self, Culture, and Society" introduces students to a broad range of social scientific theories and methodologies that deepen their understanding of basic problems of cultural, social, and historical existence. The sequence starts with the conceptual foundations of political economy and theories of capitalism and meaning in modern society. Students then consider the cultural and social constitution of the self, foregrounding the exploration of sexuality, gender, and race. Finally, students critically examine dominant discourses of science, individuality, and alterity, keeping an eye towards the application of social theory to contemporary concerns.

SOSC 12400. Self, Culture, and Society I. 100 Units.

The social theories of Ibn Khaldun, Smith, Marx, and Weber, supplemented by historical and ethnographic works, serve as points of departure for considering the characterizing features of the modern world. Particular emphasis is given to socioeconomic structure, theories of historical change, possibilities for individual freedom, the meaning of work, and globalization.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 12500. Self, Culture, and Society II. 100 Units.

In Winter Quarter, students tackle questions about the construction of self and society. The works of Durkheim, Freud, de Beauvoir, Fanon, and others inform investigation of symbolic representation, the strength of social forces, the unconscious, culture, ethics and violence, sexuality, gender, and race.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): SOSC 12400. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 12600. Self, Culture, and Society III. 100 Units.

In Spring Quarter, students consider contemporary issues and social science approaches to them. Beginning with post-modern, post-colonial, and other critiques of sciences of self, culture, and society (as articulated by Kuhn, Foucault, and Said), the course investigates how new theories arise and new problems are addressed, how new perspectives (more global, more inclusive) test and challenge, and how social scientists change, renew, and improve their insights. The quarter focuses on topics of contemporary concern, including the human impact on the environment, feminism outside the West, and the rise of global cities.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): SOSC 12500. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 13100-13200-13300. Social Science Inquiry I-II-III.

'Social Science Inquiry' explores classic and contemporary points of view about ways of gathering, analyzing, and interpreting information about public policy issues. The course aims to provide the student with an introduction to the philosophy of social science inquiry, a sense of how that inquiry is conducted, and an understanding of how policy implications can be drawn responsibly from evidence provided by empirical social science. The sequence's objective is to convey both the promise and the pitfalls of social science and a sense of its uses and abuses. The sequence also offers two specialized tracks: formal theory ('Social Science Inquiry: Formal Theory' SOSC 13110-13210-13310) and spatial analysis ('Social Science Inquiry: Spatial Analysis' 13120-13220-13320).

SOSC 13100. Social Science Inquiry I. 100 Units.

The Autumn Quarter starts by introducing students to the various ways that social scientists think about the world. Examples include theoretical models from Milton Friedman, Thomas Schelling, and John Nash; path-breaking experiments from Stanley Milgram and Daniel Kahneman; and quantitative research on topics ranging from voting to gun violence to baby names. Through these works, students will learn how researchers theorize about social phenomena.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 13200. Social Science Inquiry II. 100 Units.

In the Winter Quarter, students will be introduced to social science research tools. They will learn how to collect data, conduct experiments, and make causal inferences from statistics. Using the General Social Survey, the National Election Studies, and other surveys, students will gain hands-on experience working with large data sets.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): SOSC 13100. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 13300. Social Science Inquiry III. 100 Units.

In the Spring Quarter, students will conduct their own substantial research project. Students will learn how to translate their ideas into research questions, their theories into testable hypotheses, and their findings into meaningful conclusions. By year's end, students will develop a critical perspective on many perennial social science questions and, ultimately, acquire 'quantitative literacy,' essential skills in an increasingly data-driven world.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): SOSC 13200. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 13110-13210-13310. Social Science Inquiry: Formal Theory.

Social Science Inquiry: Formal Theory builds on the rich traditions of rational choice scholarship set in place by James Coleman and Gary Becker. Mastering game theoretic and public choice models is an invaluable tool for understanding how interest groups influence politics, how voting takes place in Congress, how matches are made in the dating world, or how neighborhood arrangements are coordinated. More broadly, applications of formal theory to social science include explaining how peace negotiations occur between governments and rebels in the aftermath of civil war, how trade unionists bargain over wages with employers, and even the decisions of autocrats to step down from power and allow for free elections. SSI-Formal Theory will introduce students to the systematic study of social, political, and economic interactions, where the optimal course of one person's action depends on the options and preferences of other people involved in the interaction. Students will learn how to model strategic situations in the language of mathematics and how to make equilibrium predictions.

SOSC 13110. Social Science Inquiry: Formal Theory I. 100 Units.

Social Science Inquiry: Formal Theory I introduces students to deductive reasoning and teaches them primitives of rational choice---players, strategies and preferences.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 13210. Social Science Inquiry: Formal Theory II. 100 Units.

Social Science Inquiry: Formal Theory II covers two basic equilibrium concepts: Nash, and Subgame Perfect Nash.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): SOSC 13110. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 13310. Social Science Inquiry: Formal Theory III. 100 Units.

Social Science Inquiry: Formal Theory III covers games of incomplete information, including Bayesian Nash and Perfect Bayesian Nash equilibrium.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): SOSC 13210. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 13120-13220-13320. Social Science Inquiry: Spatial Analysis.

Social Science Inquiry: Spatial Analysis deals with the fundamental role of space, place, location, distance, and interaction---crucial to tackling many research questions in the social sciences. This sequence of three courses explores the fundamentals of spatial analysis, a collection of quantitative methods in which space is explicitly accounted for. The three courses explore different concepts of space; how it is measured, represented, and accounted for in social science methodology; and how spatial problems are solved (spatial reasoning).

SOSC 13120. Social Science Inquiry: Spatial Analysis I. 100 Units.

This course explores the concept of spatial thinking and how it has been incorporated in research in the social sciences. Fundamental notions related to space, such as location, distance, spatial interaction, among others are explored in classic readings in quantitative geography, as well as in several recent examples of research papers in urban studies, sociology, political science, criminology, public health, and economics.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 13220. Social Science Inquiry: Spatial Analysis II. 100 Units.

This second course in the sequence covers basic principles of spatial analysis, geographic information science and spatial statistics. A range of methods for spatial data exploration and analysis are covered. A heavy emphasis is on carrying out the analysis by means of the open source statistical software R and its many spatial packages.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): SOSC 13120. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 13320. Social Science Inquiry: Spatial Analysis III. 100 Units.

In this third course of the spatial analysis sequence, the concepts and methods covered so far are applied to an actual research problem that deals with an issue where the role of space is important. The focus is on formulating a research question, collecting and analyzing data and communicating the results.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): SOSC 13220. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 14100-14200-14300. Mind I-II-III.

'Mind' explores subjective experience and behavior through the lens of underlying mental processes, biological mechanisms, and social context. Drawing from research in the social sciences and beyond, the course broadly considers how empirical approaches can shape our understanding of long-standing questions about human experience. Each quarter of Mind is taught by a different group of faculty, and the material in each quarter is arranged into a broad theme that makes connections across quarters. These themes vary from year to year.

SOSC 14100. Mind I. 100 Units.

The first quarter of Mind builds an intellectual framework for understanding the mental and behavioral phenomena of animals, connecting philosophical and historical foundations to the modern scientific literature. What is the difference between the subjective and the objective? How do the mind and body relate to each other? How do nature and nurture impact behavior? These are some of the broad questions that are addressed.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 14200. Mind II. 100 Units.

The second quarter of Mind explores the concept of 'mechanism,' or different kinds of causal models and theories that are used to explain mental phenomena from different levels of scientific analysis (e.g., biological, cognitive). Focusing on empirical literature, this quarter's emphasis on mechanism builds upon the intellectual foundations established in Autumn Quarter.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): SOSC 14100. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 14300. Mind III. 100 Units.

The third quarter of Mind explores the effects of different kinds of context on mental phenomena and mechanisms, including developmental, social, and cultural contexts. Focusing on empirical literature, this quarter highlights the impact of basic research on some of the big problems that face humans and society.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): SOSC 14200. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 15100-15200-15300. Classics of Social and Political Thought I-II-III.

'Classics of Social and Political Thought' reads classic texts from Plato and Aristotle to Nietzsche and DuBois in order to investigate criteria for understanding and judging political, social, and economic institutions. What is justice? What makes a good society? This sequence examines such problems as the conflicts between individual interest and common good; between morality, religion, and politics; and between liberty and equality. We examine alternative conceptions of society, law, authority, consent, and dissent that underlie continuing controversies in contemporary political life.

SOSC 15100. Classics of Social and Political Thought I. 100 Units.

'Classics of Social and Political Thought' reads classic texts from Plato and Aristotle to Nietzsche and DuBois in order to investigate criteria for understanding and judging political, social, and economic institutions. What is justice? What makes a good society? This sequence examines such problems as the conflicts between individual interest and common good; between morality, religion, and politics; and between liberty and equality. We examine alternative conceptions of society, law, authority, consent, and dissent that underlie continuing controversies in contemporary political life. In recent years, thinkers read in the Autumn Quarter have included Plato, Aristotle, Aquinas, and Machiavelli.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 15200. Classics of Social and Political Thought II. 100 Units.

'Classics of Social and Political Thought' reads classic texts from Plato and Aristotle to Nietzsche and DuBois in order to investigate criteria for understanding and judging political, social, and economic institutions. What is justice? What makes a good society? This sequence examines such problems as the conflicts between individual interest and common good; between morality, religion, and politics; and between liberty and equality. We examine alternative conceptions of society, law, authority, consent, and dissent that underlie continuing controversies in contemporary political life. In recent years, thinkers read in the Winter Quarter have included Hobbes, Locke, and Rousseau.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): SOSC 15100. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 15300. Classics of Social and Political Thought III. 100 Units.

'Classics of Social and Political Thought' reads classic texts from Plato and Aristotle to Nietzsche and DuBois in order to investigate criteria for understanding and judging political, social, and economic institutions. What is justice? What makes a good society? This sequence examines such problems as the conflicts between individual interest and common good; between morality, religion, and politics; and between liberty and equality. We examine alternative conceptions of society, law, authority, consent, and dissent that underlie continuing controversies in contemporary political life. In recent years, thinkers read in the Spring Quarter have included J.S. Mill, Tocqueville, Marx, Nietzsche, W.E.B. Du Bois, and Simone de Beauvoir.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): SOSC 15200. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 16100-16200-16300. Global Society I-II-III.

Global Society is organized around three essential areas for making sense of a globalized world: social thought, population, and social change. The sequence is designed to cultivate an understanding of social science research that extends beyond experiences and processes that are particular to Western civilizations. The curriculum will expose students to a long-standing, globally expansive canon within the social sciences and teach students to distinguish cultural particulars from universal concerns.

SOSC 16100. Global Society I. 100 Units.

The first quarter of Global Society addresses social thought from a global perspective by first considering some classic works from the Western tradition and then reading major statements about society from the classical traditions of others cultures including: Latin America, Islam, East Asia, and Africa. In Global Society, students read these statements simultaneously as theoretical treatises, as empirical approaches, and as normative prescriptions for the social world. This three-pronged approach enables us to disentangle differences in empirical perception from differences in values and to assess how, in combination, these color our own inevitably particular judgments of world events. The course opens a set of themes that will run through the entire sequence: individual-and-society, tradition-and-change, sources of social values, difference and particularity. The pedagogical emphasis is on close reading, discussion, and analytic writing. Possible readings include: Thomas More, J. J. Rousseau, D. F. Sarmiento, Ali Shariati, Raden Ayu Kartini, and Léopold Sédar Senghor

Instructor(s): A. Abbott Terms Offered: Autumn

Prerequisite(s): These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 16200. Global Society II. 100 Units.

The second quarter of Global Society is built around the theme of population and is designed as a hybrid course that brings together a) an intellectual history of population thought and census-taking and b) a practical introduction to basic demographic tools and contemporary debates about population. Students will engage Malthus, his detractors, and new incarnations of Malthusian thought in detail. Questions considered will include: What is a population? What is at stake when we count? How many people can this earth support? What are the implications of population shifts for individual life chances? For social values and patterns of difference? Students will learn how to construct basic period lifetables, how to compare populations and sub-populations using basic standardization techniques, and how to analyze generations and cohorts in context. At the same time, since population issues like reproduction, migration, and mortality are simultaneously philosophical, political, and empirical matters, students will connect these practical and empirical analyses to political and value debates about the causes and consequences of population change. Possible texts include: Graunt, Petty, Malthus, Nehru, Wu Ta-k'un, and contemporary instantiations.

Instructor(s): J. Trinitapoli Terms Offered: Winter

Prerequisite(s): SOSC 16100. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

SOSC 16300. Global Society III. 100 Units.

This third part of the sequence marries themes that emerge from Global Social Thought and Population, with an emphasis on social change and development during twentieth and twenty-first centuries. From the perspective of Global Society, 'change' and 'development' encompass everything from micro-level changes in gender relations to macro-level shifts in the global economy. With new theoretical and empirical tools from parts 1 & 2 of the sequence, students will engage the empirical, the theoretical, and the normative aspects of defining and evaluating long-run and short-run social change. Using global and comparative lenses, we examine forms of state repression, civil resistance, religious transformations, technological and economic changes, and the effects of these large social patterns on individual persons. Students will write about the relationship of individuals to broad forces of social change, connecting themes from the first and second quarters. The sequence concludes with a set of writing workshops designed to guide students through the steps of producing a capstone sequence paper. Using the skills and tools they've acquired throughout the sequence, students will analyze the relationship of a particular cohort (anchored in a time, place) to social change, with a focus on the empirical, normative, and theoretical stakes, their causes and consequences. Possible texts include: Geertz, DuBois, Srinivas, and contemporary instantiations.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): SOSC 16200. These courses must be taken in sequence. Students registered in this sequence must attend the first and second class sessions or their registration will be dropped.

Collegiate Courses

SOSC 02980. Practicum. 25 Units.

This course is for students who secure a summer internship. For details, visit careeradvancement.uchicago.edu/jobs-internships-research/internships-for-credit. Students write a short paper (two to three pages) and give an oral presentation reflecting on their internship experience.

Instructor(s): D. Spatz Terms Offered: Summer

Note(s): Must be taken for P/F grading; students who fail to complete the course requirements will receive an F on their transcript (no W will be granted). Students receive 025 units of credit at completion of course. Course meets once in Spring Quarter and once in Autumn Quarter. Course fee \$150; students in need of financial aid should contact Jay Ellison at 702.8609.

Equivalent Course(s): HUMA 02980

SOSC 20224. Virtual Ethnographic Field Research Methods. 100 Units.

'Virtual worlds are places of imagination that encompass practices of play, performance, creativity and ritual.' - Tom Boellstorff, from *Ethnography and Virtual Worlds: A Handbook of Method* This course is designed to provide students in the social sciences with a review of ethnographic research methods, exposure to major debates on ethnographic research, opportunities to try their hand at practicing fieldwork virtually, and feedback on a proposed study that employs ethnographic methods. By way of analyzing and problematizing enduring oppositions associated with ethnographic fieldwork - field/home, insider/outsider, researcher/research subject, expert/novice, 'being there'/removal - this seminar is a practicum in theoretically grounded and critically reflexive qualitative methods of research. By introducing students to participant observation and interviews in virtual worlds, ethics, data analysis and writing up, the course offers an opportunity to make sense of the current pandemic we're all experiencing in real time. An emphasis will be placed on multimedia, digital, and virtual ethnography.'

Terms Offered: Summer

Equivalent Course(s): ENST 20224, SOSC 30224, SOCI 20515, ANTH 31432, ANTH 21432, GLST 26220

SOSC 21100-21200. Music in Western Civilization I-II.

This two-quarter sequence explores musical works of broad cultural significance in Western civilization. We study pieces not only from the standpoint of musical style but also through the lenses of politics, intellectual history, economics, gender, cultural studies, and so on. Readings are taken both from our music textbook and from the writings of a number of figures such as St. Benedict of Nursia and Martin Luther. In addition to lectures, students discuss important issues in the readings and participate in music listening exercises in smaller sections.

SOSC 21100. Music In Western Civilization I: To 1750. 100 Units.

This course, part of the Social Sciences Civ core, looks at musics in different moments of Euro-American history and the social contexts in which they originated, with some comparative views on other world traditions. It aims to give students a better understanding of the social contexts of European music over this period; aids for the basic sound structures of pieces from these different moments; and convincing writing in response to prompts based on source readings or music pieces. Our first quarter (MUS 12100 etc.) spans roughly the period between Charlemagne's coronation as Holy Roman Emperor (800 CE) and the dissolution of the Empire (1806) with the triumph of Napoleon across Western Europe.

Instructor(s): R. Kendrick Terms Offered: Autumn

Note(s): Prior music course or ability to read music not required. Students must confirm enrollment by attending one of the first two sessions of class. This two-quarter sequence meets the general education requirement in civilization studies; it does not meet the general education requirement in the arts.

Equivalent Course(s): MUSI 12100, HIST 12700

SOSC 21200. Music In Western Civ II. 100 Units.

This course, part of the Social Sciences Civ core, looks at musics in different moments of Euro-American history and the social contexts in which they originated, with some comparative views on other world traditions. It aims to give students a better understanding of the social contexts of European music over this period; aids for the basic sound structures of pieces from these different moments; and convincing writing in response to prompts based on source readings or music pieces. Our second quarter (MUS 12200 etc.) runs from the beginning of European Romanticism around 1800 to the turn of the 21st century.

Terms Offered: Winter

Note(s): Prior music course or ability to read music not required. Students must confirm enrollment by attending one of the first two sessions of class. This two-quarter sequence meets the general education requirement in civilization studies; it does not meet the general education requirement in the arts.

Equivalent Course(s): MUSI 12200, HIST 12800

SOSC 22000-22100-22200. Islamic Thought and Literature I-II-III.

This sequence meets the general education requirement in civilization studies. Taking these courses in sequence is recommended but not required.

SOSC 22000. Islamic Thought and Literature I. 100 Units.

This sequence explores the thought and literature of the Islamic world from the coming of Islam in the seventh century C.E. through the development and spread of its civilization in the medieval period and into the modern world.

Including historical framework to establish chronology and geography, the course focuses on key aspects of Islamic intellectual history: scripture, law, theology, philosophy, literature, mysticism, political thought, historical writing, and archaeology. In addition to lectures and secondary background readings, students read and discuss samples of key primary texts, with a view to exploring Islamic civilization in the direct voices of the people who participated in creating it. All readings are in English translation. No prior background in the subject is required. This course sequence meets the general education requirement in civilization studies.

Instructor(s): Ahmed El Shamsy Terms Offered: Autumn

Equivalent Course(s): MDVL 20601, NEHC 20601, RLST 20401, HIST 25610

SOSC 22100. Islamic Thought and Literature II. 100 Units.

This course covers the period from ca. 950 to 1700, surveying works of literature, theology, philosophy, sufism, politics, history, etc., written in Arabic, Persian and Turkish, as well as the art, architecture and music of the Islamicate traditions. Through primary texts, secondary sources and lectures, we will trace the cultural, social, religious, political and institutional evolution through the period of the Fatimids, the Crusades, the Mongol invasions, and the 'gunpowder empires' (Ottomans, Safavids, Mughals).

Instructor(s): Franklin Lewis Terms Offered: Winter

Note(s): Taking these courses in sequence is recommended but not required. This sequence meets the general education requirement in civilization studies.

Equivalent Course(s): RLST 20402, HIST 25615, NEHC 20602, MDVL 20602

SOSC 22200. Islamic Thought and Literature III. 100 Units.

This course covers the period from ca. 1700 to the present. It explores Muslim intellectuals' engagement with tradition and modernity in the realms of religion, politics, literature, and law. We discuss debates concerning the role of religion in a modern society, perceptions of Europe and European influence, the challenges of maintain religious and cultural authenticity, and Muslim views of nation-states and nationalism in the Middle East. We also give consideration to the modern developments of transnational jihadism and the Arab Spring. This course sequence meets the general education requirement in civilization studies.

Instructor(s): Orit Bashkin Terms Offered: Spring

Equivalent Course(s): HIST 25616, NEHC 20603, RLST 20403

SOSC 23000-23100. Introduction to the Civilizations of South Asia I-II.

This sequence introduces core themes in the formation of culture and society in South Asia from the early modern period until the present. This sequence meets the general education requirement in civilization studies. These courses must be taken in sequence.

SOSC 23000. Introduction to the Civilizations of South Asia I. 100 Units.

The first quarter focuses on Islam in South Asia, Hindu-Muslim interaction, Mughal political and literary traditions, and South Asia's early encounters with Europe.

Instructor(s): M. Alam Terms Offered: Winter

Equivalent Course(s): ANTH 24101, MDVL 20100, SALC 30100, HIST 10800, SALC 20100

SOSC 23100. Introduction to the Civilizations of South Asia II. 100 Units.

The second quarter analyzes the colonial period (i.e., reform movements, the rise of nationalism, communalism, caste, and other identity movements) up to the independence and partition of India.

Instructor(s): Dipesh Chakrabarty Terms Offered: Spring

Prerequisite(s): SALC 20100, ANTH 24101, HIST 10800, SASC 20000, SOSC 23000

Equivalent Course(s): ANTH 24102, HIST 10900, SALC 20200

SOSC 23500-23600-23700. Introduction to the Civilizations of East Asia I-II-III.

This sequence meets the general education requirement in civilization studies. This is a sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present.

SOSC 23500. Introduction to the Civilizations of East Asia I. 100 Units.

This sequence meets the general education requirement in civilization studies. This is a sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present.

Instructor(s): G. Alitto Terms Offered: Autumn Summer

Prerequisite(s): Open to undergraduates only; all students attend the MW lecture and register for one F discussion section.

Note(s): Taking these courses in sequence is not required.

Equivalent Course(s): HIST 15100, EALC 10800, CRES 10800

SOSC 23600. Introduction to the Civilizations of East Asia II. 100 Units.

This sequence meets the general education requirement in civilization studies. This is a three-quarter sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present

Instructor(s): J. Ketelaar Terms Offered: Winter

Prerequisite(s): Open to undergraduates only; all students attend the MW lecture and register for one F discussion section.

Note(s): Taking these courses in sequence is not required.

Equivalent Course(s): HIST 15200, CRES 10900, EALC 10900

SOSC 23700. Introduction to the Civilizations of East Asia III. 100 Units.

This sequence meets the general education requirement in civilization studies. This is a sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present.

Instructor(s): J. Jeon Terms Offered: Spring

Prerequisite(s): Open to undergraduates only; all students attend the MW lecture and register for one F discussion section.

Note(s): Taking these courses in sequence is not required.

Equivalent Course(s): EALC 11000, CRES 11000, HIST 15300

SOSC 24000-24100-24200. Introduction to Russian Civilization I-II-III.

This three-quarter sequence, which meets the general education requirement in civilization studies, provides an interdisciplinary introduction to Russian civilization. The first quarter covers the ninth century to the 1870s; the second quarter continues on through the post-Soviet period. Working closely with a variety of primary sources—from oral legends to film and music, from political treatises to literary masterpieces—we will track the evolution of Russian civilization over the centuries and through radically different political regimes. Topics to be discussed include the influence of Byzantine, Mongol-Tataric, and Western culture in Russian civilization; forces of change and continuity in political, intellectual and cultural life; the relationship between center and periphery; systems of social and political legitimization; and symbols and practices of collective identity.

SOSC 24000. Introduction to Russian Civilization I. 100 Units.

The first quarter covers the ninth century to the 1870s; the second quarter continues on through the post-Soviet period. Working closely with a variety of primary sources—from oral legends to film and music, from political treatises to literary masterpieces—we will track the evolution of Russian civilization over the centuries and through radically different political regimes. Topics to be discussed include the influence of Byzantine, Mongol-Tataric, and Western culture in Russian civilization; forces of change and continuity in political, intellectual and cultural life; the relationship between center and periphery; systems of social and political legitimization; and symbols and practices of collective identity.

Instructor(s): E. Gilburd, W. Nickell Terms Offered: Autumn

Note(s): Taking these courses in sequence is recommended but not required.

Equivalent Course(s): HIST 13900, REES 26011

SOSC 24100. Introduction to Russian Civilization II. 100 Units.

The second quarter continues on through the post-Soviet period. Working closely with a variety of primary sources—from oral legends to film and music, from political treatises to literary masterpieces—we will track the evolution of Russian civilization over the centuries and through radically different political regimes. Topics to be discussed include the influence of Byzantine, Mongol-Tataric, and Western culture in Russian civilization; forces of change and continuity in political, intellectual and cultural life; the relationship between center and periphery; systems of social and political legitimization; and symbols and practices of collective identity.

Instructor(s): E. Gilburd, R. Bird Terms Offered: Winter

Note(s): Taking these courses in sequence is recommended but not required.

Equivalent Course(s): HIST 14000, REES 26012

SOSC 24200. Introduction to Russian Civilization III. 100 Units.

The third quarter of Russian Civilization is a new (2020) addition to the curriculum. When taken following Introduction to Russian Civilization I and II, Introduction to Russian Civilization III meets the general education requirement in Humanities, Civilization Studies, and the Arts. The course is thematic and will vary from year to year. In spring 2021 this course will explore the nature of state socialism, or 'communism'—the political and economic system that governed much of the world's population during the twentieth century—and the transition from that system to alternative modes of governance. Course material will emphasize the experience of the (former) Soviet Union and Eastern Europe, where communism as a system has disappeared most completely, but many of the lessons of transition apply also to China, Vietnam, North Korea, and Cuba. A nontrivial portion of the course covers the nature of communism, as both the tasks and obstacles of transition are determined in part by the character of the previous system. However, the bulk of the material addresses postcommunist policies, institutions, and outcomes.

Instructor(s): S. Gehlbach Terms Offered: Spring

Note(s): Students who wish to take this course for Civilization Studies Core credit must also take Russ Civ I and II.

Equivalent Course(s): HIST 14100, REES 26015

SOSC 24001-24002-24003. Colonizations I-II-III.

This sequence meets the general education requirement in civilization studies. This three-quarter sequence approaches the concept of civilization from an emphasis on cross-cultural/societal connection and exchange. We explore the dynamics of conquest, slavery, colonialism, and their reciprocal relationships with concepts such as resistance, freedom, and independence, with an eye toward understanding their interlocking role in the making of the modern world.

SOSC 24001. Colonizations I. 100 Units.

This sequence meets the general education requirement in civilization studies. This three-quarter sequence approaches the concept of civilization from an emphasis on cross-cultural/societal connection and exchange. We explore the dynamics of conquest, slavery, colonialism, and their reciprocal relationships with concepts such as resistance, freedom, and independence, with an eye toward understanding their interlocking role in the making of the modern world. Themes

of slavery, colonization, and the making of the Atlantic world are covered in the first quarter. Note(s): This sequence meets the general education requirement in civilization studies. This course is offered every year. These courses can be taken in any sequence.

Terms Offered: Autumn

Note(s): This sequence meets the general education requirement in civilization studies. This course is offered every year. These courses can be taken in any sequence.

Equivalent Course(s): CRES 24001, ANTH 24001, HIST 18301

SOSC 24002. Colonizations II. 100 Units.

Modern European and Japanese colonialism in Asia and the Pacific is the theme of the second quarter.

Terms Offered: Winter

Note(s): This sequence meets the general education requirement in civilization studies. These courses can be taken in any sequence.

Equivalent Course(s): ANTH 24002, CRES 24002, HIST 18302

SOSC 24003. Colonizations III. 100 Units.

The third quarter considers the processes and consequences of decolonization both in the newly independent nations and the former colonial powers.

Terms Offered: Spring

Note(s): This sequence meets the general education requirement in civilization studies. These courses can be taken in any sequence.

Equivalent Course(s): ANTH 24003, SALC 20702, HIST 18303, CRES 24003

SOSC 25090. Anthropology of Olympic Sport. 100 Units.

If cultural differences are as powerful as Anthropology has conventionally stressed, how is it possible that over 200 national and innumerable sub-national and transnational cultural formations have found common cause in the modern Olympic Games? This course explores, theoretically and historically, the emergence of the Olympic Games as the liturgy of the world system of nation states and the current dialectic between the Olympic Movement and the Olympic Sports Industry. Extensive reading and an independent research paper will be required.

Instructor(s): John MacAloon Terms Offered: This course was offered Winter 2020

Equivalent Course(s): ANTH 30420, MAPS 47501, ANTH 20420

SOSC 25100. Urban Structure and Process. 100 Units.

This course reviews competing theories of urban development, especially their ability to explain the changing nature of cities under the impact of advanced industrialism. Analysis includes a consideration of emerging metropolitan regions, the microstructure of local neighborhoods, and the limitations of the past American experience as a way of developing urban policy both in this country and elsewhere.

Instructor(s): M. Garrido Terms Offered: Spring

Equivalent Course(s): GEOG 22700, GEOG 32700, ARCH 20104, SOCI 20104, CRES 20104, SOCI 30104, ENST 20104

SOSC 26000. Chicago Neighborhoods. 100 Units.

This course is an applied learning experience in which students explore the many dimensions of Chicago neighborhoods, with a particular focus on the built environment and how it impacts - and is impacted by - the social and economic life of the city. Students will observe, interpret and represent neighborhoods through a series of exercises designed to deepen knowledge about the significance and meaning of neighborhood form. Readings and fieldwork will engage students in neighborhood analysis and observation techniques that explore contemporary issues about public life, diversity, and social equity. This course is part of the College Course Cluster, Urban Design.

Instructor(s): E. Talen Terms Offered: Spring

Equivalent Course(s): GEOG 24000, PBPL 24005, ENST 26000

SOSC 26004. History of City Planning. 100 Units.

This lecture-based course provides a broad survey of the history of city planning. It focuses on the normative: the endeavor to control and design the physical fabric of cities. What are the different ways cities have been envisioned and planned and to what effect? What are the competing theories of good city design that underlie city plans, and how do these plans interrelate to the social, political, cultural, and economic forces shaping cities? The course explores city planning's successes and failures, its tangible effect on urban pattern and form, and the extent to which city planning ideals have changed over time. Though the emphasis is on city planning's history, current debates about city planning within the context of the history of the profession will also be engaged. Emphasis will be on U.S. and European city planning experience, although global practices will also be surveyed.

Instructor(s): E. Talen Terms Offered: Spring

Equivalent Course(s): ENST 26004, SOSC 36004, GEOG 26200, PBPL 26004

SOSC 26006. Foundations of Statistical Theory. 100 Units.

This course is taught at the advanced undergraduate/master level and aims to provide basic mathematical foundations for probability and statistical theory. Students will understand the fundamental concepts on joint, marginal, and conditional probability, Bayes rule, probability distributions, principles of statistical inference, sampling distributions, and estimation strategies. This course will emphasize on the connection between the statistical theory and the routine statistical practice, and can serve as a foundation for more theoretical statistics courses or more advanced quantitative methods courses in social and behavioral sciences.

Instructor(s): Yanyan Sheng Terms Offered: Autumn

Prerequisite(s): Basic knowledge of calculus, and specifically differentiation and integration, is necessary to understand the material on continuous distributions, multivariate distributions and functions of random variables
 Equivalent Course(s): SOSC 36006

SOSC 26007. Overview of Quantitative Methods in the Social and Behavioral Sciences. 100 Units.

The course is designed to present the logic and offer an overview of a wide range of methods developed for rigorous quantitative inquiry in social and behavioral sciences. Students will be familiarized with various research designs, measurement, and analytic strategies, will understand the inherent connections between different statistical methods, and will become aware of the strengths and limitations of each. In addition, this course provides a gateway to the numerous offerings of quantitative methods courses. It is suitable for undergraduate and graduate students at any stage of their respective programs.

Instructor(s): Yanyan Sheng Terms Offered: Winter

Equivalent Course(s): SOSC 36007

SOSC 26009. Introductory Statistical Methods. 100 Units.

This course introduces and applies fundamental statistical concepts, principles, and procedures to the analysis of data in social and behavioral sciences. Students will learn computation, interpretation, and application of commonly used descriptive, correlational, and inferential statistical procedures as they relate to social and behavioral research. The course will integrate the use of Stata as a tool for these techniques. This course is equivalent to SOSC 20004/30004 (Statistical Methods of Research I), CHDV 20101/30101 (Applied Statistics in Human Development Research), PSYCH 20100 (Psychological Statistics), and other introductory level applied statistics courses.

Instructor(s): Yanyan Sheng Terms Offered: Autumn

Equivalent Course(s): SOSC 36009

SOSC 26100-26200-26300. Introduction to Latin American Civilization I-II-III.

Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies. This sequence is offered every year. This course introduces the history and cultures of Latin America (e.g., Mexico, Central and South America, and the Caribbean Islands).

SOSC 26100. Introduction to Latin American Civilization I. 100 Units.

Autumn Quarter examines the origins of civilizations in Latin America with a focus on the political, social, and cultural features of the major pre-Columbian civilizations of the Maya, Inca, and Aztec. The quarter concludes with an analysis of the Spanish and Portuguese conquest, and the construction of colonial societies in Latin America. The courses in this sequence may be taken in any order.

Instructor(s): Emilio Kouri Terms Offered: Autumn

Equivalent Course(s): CRES 16101, LACS 16100, HIST 36101, ANTH 23101, HIST 16101, LACS 34600

SOSC 26200. Introduction to Latin American Civilization II. 100 Units.

Winter Quarter addresses the evolution of colonial societies, the wars of independence, and the emergence of Latin American nation-states in the changing international context of the nineteenth century.

Instructor(s): D. Borges Terms Offered: Winter

Equivalent Course(s): PPHA 39770, HIST 16102, CRES 16102, HIST 36102, ANTH 23102, LACS 34700, LACS 16200

SOSC 26300. Introduction to Latin American Civilization III. 100 Units.

Spring Quarter focuses on the twentieth century, with special emphasis on the challenges of economic, political, and social development in the region.

Instructor(s): B. Fischer Terms Offered: Spring

Equivalent Course(s): HIST 36103, PPHA 39780, CRES 16103, LACS 34800, ANTH 23103, LACS 16300, HIST 16103

SOSC 29700. Rdgs: Social Sciences. 100 Units.

Instructor(s): Staff Terms Offered: Autumn, Spring, Winter

Prerequisite(s): Consent of instructor and senior adviser

Note(s): Students are required to submit the College Reading and Research Course Form.

SOSC 29900. BA Paper in Russian Civilization. 100 Units.

This is a reading and research course for independent study related to BA research and BA paper preparation.

Instructor(s): Staff Terms Offered: Autumn, Spring, Summer, Winter

Prerequisite(s): Consent of instructor and undergraduate program chair

Note(s): Students are required to submit the College Reading and Research Course Form.

SOSC 34500-34600. Anthropology of Museums I-II.

Anthropology of Museums

SOSC 34500. Anthropology of Museums I. 100 Units.

Using anthropological theories and methodology as a conceptual framework, this seminar will explore the organizational and ideological aspects of museum culture(s). The course includes visits to museums with guest museum professionals as guides into the culture of museums.

Equivalent Course(s): ANTH 24510, MAPH 34400, MAPS 34500, CHDV 34501, ANTH 34501

SOSC 34600. Anthropology of Museums II. 100 Units.

Using anthropological theories and methodology as a conceptual framework, this seminar will explore the organizational and ideological aspects of museum culture(s). The course includes visits to museums with guest museum professionals as guides into the culture of museums.

Instructor(s): M. Fred Terms Offered: Autumn Winter

Prerequisite(s): Advanced standing and consent of instructor

Note(s): CHDV Distribution: C

Equivalent Course(s): CHDV 38102, ANTH 34502, ANTH 24511, MAPS 34600

Collegiate Courses in Civilization Studies Abroad

For more information about collegiate courses offered through Study Abroad, consult the Study Abroad section of this catalog or visit study-abroad.uchicago.edu (<http://study-abroad.uchicago.edu>).

Programs of Study

The programs of study, known as majors or minors, include a narrative description and a summary of course requirements. Students should read the complete narrative descriptions because the summary eliminates essential information. An explanation of the components of each course entry follows.

Course Numbering

Unless an exception is noted, course numbering typically follows standard guidelines. Courses numbered 10000 are general education and introductory courses. Courses numbered 20000 are intermediate, advanced, or upper-level courses that are open only to undergraduates. Courses numbered 30000 and above are graduate courses that are available only to undergraduate students who obtain the consent of the instructor. Undergraduates registered for 30000-level courses will be held to graduate-level requirements. *With the exception of BUSN courses, when a course is cross listed between the College (10000- to 20000-level courses) and graduate divisions or professional schools (courses numbered 30000 and above), College students may only register for the undergraduate number.* Higher-numbered courses within each of these categories do not indicate increasing levels of difficulty.

In some departments, students with advanced standing and consent of instructor may register for higher-level courses. Except for language instruction courses, these courses are not listed in this catalog; students should contact individual departments for further information.

A number shown, for example, as 211xx, indicates that it is a course within the series 21100 through 21199; any information that describes 211xx applies to the entire range of courses available within the series.

Course Description

A narrative description follows the course number and title. Unless otherwise designated, courses are taught on campus.

'L' at the end of the course description indicates that the course has a laboratory requirement. Courses with laboratories do not yield extra credit.

Units

A student receives 100 units of course credit for most undergraduate courses. The appropriate unit value is listed next to the course title in the catalog and in the course details at Class Search (<http://registrar.uchicago.edu/classes/>).

Term Offered

Courses may be offered in Summer, Autumn, Winter, or Spring Quarter, or in multiple quarters. If a course is not offered in the current academic year but will be offered at a future time, that information appears in this field.

Instructor

For faculty contact information, visit the University of Chicago online directory at directory.uchicago.edu (<http://directory.uchicago.edu>). Many departmental websites include additional information about the research and scholarly interests of faculty members.

Equivalent Courses

Because of the interdisciplinary nature of the College, many courses are cross listed in multiple programs of study. For example, CMST 10100 Introduction to Film Analysis is cross listed among Art History, Cinema and Media Studies, English Language and Literature, and Visual Arts.

Prerequisites

A course may have one or more prerequisites for registration. Before registering for MATH 21100 Basic Numerical Analysis, for example, a student must first have completed MATH 20000 Mathematical Methods for Physical Sciences I, MATH 20250 Abstract Linear Algebra, MATH 20400 Analysis in Rn II, or MATH 20410 Analysis in Rn II (accelerated). Another example: Some courses require students to be in their third or fourth year in the College.

Notes

The Notes field contains additional information that may be of use to students, for instance, that the course meets a general education requirement or that the course is required for students in a certain major. Certain courses, especially those that meet general education requirements, have mandatory attendance for the first class meeting; otherwise the student's registration will be dropped. Students are advised to pay close attention to these notes.

For More Information

For further specifics on quarterly course offerings, consult the Class Search at my.uchicago.edu (<http://my.uchicago.edu>). Some historic course offerings can be found at timeschedules.uchicago.edu (<http://timeschedules.uchicago.edu>).

timeschedules.uchicago.edu/). For further information about areas of study, consult the College (<http://college.uchicago.edu>) website and the program websites linked on the individual program of study pages in this catalog.

Anthropology

Department Website: <http://anthropology.uchicago.edu>

Program of Study

Anthropology encompasses a variety of historical and comparative approaches to human cultural and biological diversity, ranging from the study of human evolution to the study of cultures as systems of meaningful symbols. Faculty in the Department of Anthropology specialize in sociocultural, linguistic, archaeological, and biological anthropological approaches. They take up questions of anatomy, ecology, and genomics, as well as psychological, economic, philosophical, and historical issues, often in comparative perspective. Anthropology can lead (through graduate study) to careers in research and teaching in university and museum settings. More often it provides a background for further work in other disciplines of the social sciences, humanities, and biological sciences, as well as for professional careers in government, non-governmental work, business, law, medicine, social services, and other fields.

For more information, see the Department of Anthropology website (<http://anthropology.uchicago.edu>).

Program Requirements

The BA program in anthropology consists of twelve courses, of which at least ten are typically chosen from those listed or cross-listed as Department of Anthropology courses. The requirements for the major are:

1. ANTH 21107 Anthropological Theory
2. One **Methods** course (ANTH 21420 Ethnographic Methods, ANTH 28400 Bioarchaeology and the Human Skeleton, ANTH 29500 Archaeology Laboratory Practicum, or an approved alternative in archaeological, linguistic, or biological anthropology)
3. One **Discovering Anthropology** course. Designated courses will be added to a list each term. Descriptions will be available on the Department of Anthropology (<http://anthropology.uchicago.edu>) website.
4. Seven electives in Anthropology
5. Two electives from Anthropology or from a related discipline, with approval from the director of undergraduate studies. To seek approval of non-departmental courses, submit a completed Course Petition Form (available in Haskell 119) and syllabus for the course(s) to the director of undergraduate studies. Ideally this petition should be submitted before the end of the second week of the quarter in which the student is enrolled in the course, but petitions may also be submitted for courses that have already been completed.

Students are encouraged to construct individual programs; and, in so doing, they should consult periodically with the preceptor and the director of undergraduate studies. We strongly urge students who are majoring in anthropology to complete several introductory courses before enrolling in upper-level courses. Anthropology provides a broad view of the human career and condition. Students may select courses widely across all four subfields (sociocultural, linguistic, archaeological, and biological anthropology) within the major, or may focus their work within or across any of the subfields.

Students should confer with the director of undergraduate studies before declaring a major in anthropology and must obtain the endorsement of the director of undergraduate studies on the Student Program Form before graduating with a major in anthropology. Students should submit a copy of the approved form to their College adviser.

Students interested in the Anthropology major should endeavor to complete the three required courses (Theory, Methods, and Discovering Anthropology) by the end of their third year. When possible, completion of those courses by the end of second year is recommended as they provide foundational concepts that facilitate understanding of higher level course work.

Note: These requirements are in effect starting with the graduating Class of 2018. Students who matriculated prior to Autumn 2014 may adopt the modified requirements if appropriate and should consult with the department to design their program of study.

Introductory Courses and General Education

Courses designated as Discovering Anthropology provide introductions to some of the substantive, methodological, and theoretical issues of sociocultural, archaeological, linguistic, and biological anthropology. These courses do not presume any previous study of anthropology and may be taken in any order. However, students are urged to complete the general education requirement in the social sciences before taking more advanced courses in sociocultural anthropology. SOSC 11400-11500-11600 Power, Identity, Resistance I-II-III or SOSC 12100-12200-12300 Self, Culture, and Society I-II-III are particularly recommended.

Several sequences that satisfy the general education requirement in civilization studies typically feature anthropological approaches and content. These courses are cross-listed with Anthropology and may be used toward the major if they are not used toward the general education requirement: ANTH 20701-20702-20703 Introduction to African Civilization I-II-III, ANTH 23101-23102-23103 Introduction to Latin American Civilization I-II-III, ANTH 24001-24002-24003 Colonizations I-II-III, and ANTH 24101-24102 Introduction to the Civilizations of South Asia I-II. With prior approval, other civilization courses (if taken in addition to the courses used toward the general education requirement) can be used toward the Anthropology major, in accordance with the individual student's needs or interests and up to the two-course limit for non-departmental courses.

The director of undergraduate studies may refer students who wish to emphasize archaeological, biological, linguistic, or sociocultural anthropology to faculty in these fields for assistance in the development of their individual programs.

Readings and Research Courses

When desirable for a student's individual anthropology program and with the approval of the director of undergraduate studies, preferably in advance, a student may also obtain course credit for supervised individual reading or research (ANTH 29700 Readings in Anthropology).

Students electing to write a bachelor's essay for honors are urged to enroll in ANTH 29910 Bachelor's Essay Seminar in Winter Quarter of fourth year. They also have the option of taking ANTH 29900 Preparation of Bachelor's Essay, in which the student does supervised reading or research in preparation for the BA essay, in Autumn Quarter of fourth year. However, students can only use a total of two independent readings or research courses toward the major, chosen from among ANTH 29700, ANTH 29900, ANTH 29910, and BA essay seminars in other departments when required for a joint second major. Additional readings and research courses would count as general elective credits.

Field Courses

Students attending field schools or taking courses offered by other universities can solicit approval to obtain course credit (up to the two-course limit for nondepartmental courses) when appropriate for their individual program of study. Credit from other institutions would first need to be approved by the College (<https://college.uchicago.edu/advising/transfer-credit/>) and then by the director of undergraduate studies, if intended to count toward the major.

Summary of Requirements

Note: These requirements are in effect starting with the graduating Class of 2018. Students who matriculated prior to Autumn 2014 may adopt the modified requirements if appropriate and should consult with the department to design their program of study.

ANTH 21107	Anthropological Theory	100
One Methods course *		100
ANTH 21420	Ethnographic Methods	
ANTH 28400	Bioarchaeology and the Human Skeleton	
ANTH 29500	Archaeology Laboratory Practicum	
One Discovering Anthropology course §		100
Seven electives in Anthropology ±		700
Two electives in Anthropology or approved related disciplines ±		200
Total Units		1200

- * Students may also seek approval for a relevant methods course in archaeological, linguistic, or biological anthropology.
- § A list of designated Discovering Anthropology courses will be maintained on the Anthropology Department website (<https://anthropology.uchicago.edu>).
- ± A maximum of two reading and research courses (chosen from ANTH 29700 Readings in Anthropology, ANTH 29900 Preparation of Bachelor's Essay, ANTH 29910 Bachelor's Essay Seminar, and BA courses from other departments) can be used toward the Anthropology major.

Grading

Courses counted toward the major must be taken for quality grades (no P/F grading).

Honors BA Process

Students who wish to be considered for honors must apply to the director of undergraduate studies before the end of their third year. Eligible candidates must have a GPA of 3.6 or higher in courses in the major and typically a GPA of 3.25 overall. To receive honors, students must develop an extended piece of research via a bachelor's essay under the approved supervision of a faculty member. BA projects involving alternative media (like film, photography, photo-essay, or art installation) might be acceptable if accompanied by a written text.

To execute a successful BA essay, students should begin considering their research question early on. Students should begin looking for a faculty supervisor in their third year and aim to have a topic identified by the beginning of the fourth year so that they have sufficient time to complete the necessary research and to write the paper. Students writing BA honors papers are strongly urged to enroll in ANTH 29910 Bachelor's Essay Seminar in Winter Quarter of their fourth year. If possible, students should also consider starting their research under the independent supervision of their faculty supervisor in Autumn Quarter by registering for ANTH 29900 Preparation of Bachelor's Essay. Students who take these courses, ANTH 29700 Readings in Anthropology, and/or BA seminars for a second major may only use a maximum of two these courses toward the Anthropology major.

For award of honors, the BA essay must receive a grade of A or A- from the faculty supervisor and from the second reader. Students being recommended for honors must submit two copies of the completed paper to the program administrator no later than fifth week of the quarter of graduation. The faculty supervisor must be chosen from the Anthropology

faculty. Affiliated faculty may serve with approval of the director of undergraduate study. The second reader may be any credentialed scholar/scientist approved by the director of undergraduate study.

This program may accept a BA paper or project used to satisfy the same requirement in another major if certain conditions are met. Approval from both program chairs is required. Students should consult with the chairs by the earliest BA proposal deadline (or by the end of their third year, if neither program publishes a deadline). A consent form, to be signed by both chairs, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Anthropology Courses

ANTH 10100. Introduction to Anthropology. 100 Units.

The social science that has pursued ethnographic study of human societies for more than a century, anthropology still leads the most creative social science efforts to understand humanity in its full complexity. New kinds of inquiry into history, power, race, class, gender, language, economy and culture, and into transnational and even global phenomena, lead anthropologists to reconsider the fundamentals of political economy, culture and history, structure and events, and knowledge and power. This course will introduce anthropology's characteristic modes of inquiry, with special attention to thick data in relation to big data, and systems of meaning in relation to structures of power. To introduce anthropology we will read classic descriptive texts, touchstone feminist, postcolonial and science-and-technology-studies critiques, and accessible and innovative contemporary work. We will view classic and contemporary ethnographic films, and inquire into uses of new media. This course will orient students to the general history of ethnographic social science, and will prepare interested students for every other anthropology course offered at the collegiate level here.

Instructor(s): Staff Terms Offered: TBD

Prerequisite(s): Designed as a first course in Anthropology

ANTH 20003. Discovering Anthropology: Reading Race. 100 Units.

Before and since Anthropology became a discrete scientific field of study, questions about the biological reality, potential utility and misuse of the concept of race in *Homo sapiens* have been debated. We will read and discuss a sample of writings by 18th, 19th, and 20th century and contemporary authors who attempted to define human races and those who have promoted or debunked the utility of the concept of race with special attention to its role in retarding social progress, and the extermination and exploitation of some populations and individuals.

Instructor(s): R. Tuttle Terms Offered: Autumn. Autumn 2020

Equivalent Course(s): ANTH 38305, CRES 12300, HIPS 20003

ANTH 20006. Embodiment and the Senses. 100 Units.

This course approaches bodies as points of insight into governance, the varied experiences of being governed, and efforts to evade and reconfigure institutional expressions of authority. First, we will examine bodies as targets of governance, objects to be reformed, regulated, contained, disciplined, educated, incarcerated, treated, trained, and 'cared' for. Next, we will consider how bodies accrue power as sites of resistance, refusal, and critique. Certain bodies in certain places elicit discomfort, unsettling familiar divisions such as of private and public space, of developed and backward, of religious and secular, of reason and madness, of citizenship and (often racialized) non-citizenship. Finally, we will ask how bodies and sensory practices figure in ethical projects of crafting exemplary kinds of subjectivity or collectivity. In this way, the course will introduce students to anthropological approaches to embodiment as well as related questions of bio-politics, gender and race, political subjectivity, care and self-making, post/colonialism, sensory politics and the aesthetic. Along the way, students will gain a new appreciation of the political potency of bodies and bodily practices near and far-from Lenin's preserved body to Trump's 'small' hands, reproductive labor to sex work, dirty protest to women's marches, indigenous eco-rituals to queer intimacies.

Instructor(s): Mareike Winchell Terms Offered: Winter. Winter 2021

Prerequisite(s): This course qualifies as a Discovering Anthropology selection for Anthropology majors.

ANTH 20014. Animal Magnetism: Histories of Human-Animal Relationships. 100 Units.

Animals are all around us—in homes and laboratories, farms and forests, zoos and supermarkets. Yet the remarkable ways in which human and animal lives are intertwined often go unnoticed. What makes an animal a predator in one setting, prey in another? A companion to befriend or a trophy to fight over? In this course, we will examine the meanings that humans have ascribed to their nonhuman counterparts from a long-term perspective. Human-animal relationships inform much of what we consider to be society, including humans' interactions with other humans. Those perceptions and practices vary widely across time and space, from shared experiences and mutual exchanges across species boundaries to processes of subordination and domestication that have reshaped human and animal bodies and behaviors to contemporary concerns over the nature of animal intelligence, emotions, and rights. Drawing on interdisciplinary readings in archaeology, anthropology, biology, history, psychology, and environmental studies, we will examine the changing ways that humans have conceptualized, commodified, and experienced our nonhuman counterparts from the past to the present.

Instructor(s): Sarah Newman Terms Offered: Winter. Winter 2021

Prerequisite(s): This course qualifies as a Discovering Anthropology selection for Anthropology majors.

ANTH 20405. Anthropology of Disability. 100 Units.

This seminar undertakes to explore 'disability' from an anthropological perspective that recognizes it as a socially constructed concept with implications for our understanding of fundamental issues about culture, society, and individual differences. We explore a wide range of theoretical, legal, ethical, and policy issues as they relate to the experiences of persons with disabilities, their families, and advocates. The final project is a presentation on the fieldwork.

Instructor(s): M. Fred Terms Offered: Autumn

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): HMRT 35210, CHDV 30405, SOSC 36900, MAPS 36900, HMRT 25210, CHDV 20505, ANTH 30405

ANTH 20420. Anthropology of Olympic Sport. 100 Units.

If cultural differences are as powerful as Anthropology has conventionally stressed, how is it possible that over 200 national and innumerable sub-national and transnational cultural formations have found common cause in the modern Olympic Games? This course explores, theoretically and historically, the emergence of the Olympic Games as the liturgy of the world system of nation states and the current dialectic between the Olympic Movement and the Olympic Sports Industry. Extensive reading and an independent research paper will be required.

Instructor(s): John MacAloon Terms Offered: This course was offered Winter 2020

Equivalent Course(s): SOSC 25090, ANTH 30420, MAPS 47501

ANTH 20701-20702-20703. Introduction to African Civilization I-II-III.

Completion of the general education requirement in social sciences recommended. Taking these courses in sequence is recommended but not required. This sequence meets the general education requirement in civilization studies. African Civilization introduces students to African history and cultures in a three-quarter sequence.

ANTH 20701. Introduction to African Civilization I. 100 Units.

Part one considers literary, oral, and archeological sources to investigate African societies and states from the early Iron Age through the emergence of the Atlantic World. We will study the empires of Ghana and Mali, the Swahili Coast, Great Zimbabwe, and medieval Ethiopia. We will also explore the expansion of Islam, the origins and effects of European contact, and the trans-Atlantic slave trade.

Instructor(s): E. Osborn Terms Offered: Autumn

Equivalent Course(s): MDVL 10101, HIST 10101, CRES 20701

ANTH 20702. Introduction to African Civilization II. 100 Units.

Part two examines the transformations of African societies in the long nineteenth century. At the beginning of the era, European economic and political presence was mainly coastal, but by the end, nearly the entire continent was colonized. This course examines how and why this occurred, highlighting the struggles of African societies to manage internal reforms and external political, military, and economic pressures. Topics include the Egyptian conquest of Sudan, Omani colonialism on the Swahili coast, Islamic reform movements across the Sahara, and connections between the end of the transatlantic slave trade and the formal colonization of the African continent. Students will examine memoirs of African soldiers, religious texts, colonial handbooks, and visual and material sources, including ethnographic artifacts, photographs, and textiles. Assignments: team projects, document and material analyses, response papers, essays, and written exams. The course will equip students with a working knowledge of the struggles that created many of the political and social boundaries of modern Africa.

Instructor(s): K. Hickerson Terms Offered: Winter

Equivalent Course(s): CRES 20802, HIST 10102

ANTH 20703. Introduction to African Civilization III. 100 Units.

Part three uses anthropological perspectives to investigate colonial and postcolonial encounters in sub-Saharan Africa, with a particular focus on Southern Africa. The course is centered on the twentieth and twenty-first centuries. It begins with an examination of colonialism, the institutionalization of racism, and dispossession, before examining anti-colonialism and the postcolonial period. The class draws on scholarship on and by African writers: from poets to novelists, ethnographers, playwrights, historians, politicians, political theorists, and social critics. Over the course of the quarter, students will learn about forms of person-hood, subjectivity, gender, sexuality, kinship practices, governance, migration, and the politics of difference.

Instructor(s): K. Takabvirwa Terms Offered: Spring

Equivalent Course(s): HIST 10103, CRES 20303

ANTH 21107. Anthropological Theory. 100 Units.

Since its inception as an academically institutionalized discipline, anthropology has always addressed the relation between a self-consciously modernizing West and its various and changing others. Yet it has not always done so with sufficient critical attention to its own concepts and categories—a fact that has led, since at least the 1980s, to considerable debate about the nature of the anthropological enterprise and its epistemological foundations. This course provides a brief critical introduction to the history of anthropological thought over the course of the discipline's long twentieth century, from the 1880s to the present. Although we focus on the North American and British traditions, we review important strains of French and, to a lesser extent, German social theory in chronicling the emergence and transformation of modern anthropology as an empirically based, but theoretically informed, practice of knowledge production about human sociality and culture.

Instructor(s): William Mazzarella Terms Offered: Winter. Winter 2021

Prerequisite(s): Preference for Anthropology majors

Note(s): This year only, the cross list ANTH 30000 is being disabled

ANTH 21201. Chicago Blues. 100 Units.

This course is an anthropological and historical exploration of one of the most original and influential American musical genres in its social and cultural context. We examine transformations in the cultural meaning of the blues and its place within broader American cultural currents, the social and economic situation of blues musicians, and the political economy of blues within the wider music industry.

Instructor(s): M. Dietler Terms Offered: Spring. Spring 2021

Note(s): The course qualifies as a Discovering Anthropology selection for Anthropology majors.

ANTH 21303. Making the Natural World: Foundations of Human Ecology. 100 Units.

Humans have 'made' the natural world both conceptually, through the creation of various ideas about nature, ecosystem, organism, and ecology, and materially, through millennia of direct action in and on the landscape. In this course we will consider the conceptual underpinnings of contemporary Western notions of nature, environment, and balance, through the examination of specific historical trajectories of anthropogenic landscape modification and human society. Taking examples from current events we will evaluate the extent and character of human entanglement with the environment. ENST 21201 and 21301 are required of students who are majoring in Environmental and Urban Studies and may be taken in any order.

Instructor(s): Alison Anastasio Terms Offered: Winter

Equivalent Course(s): ENST 21301

ANTH 21306. Explorations in Oral Narrative. 100 Units.

A study of storytelling in non-literate and folk societies, antecedent to the complexities of modern narrativity, itself anchored in and energized by literacy. The main objects of our study will be the vast body of folktales and collateral folklore collected by anthropologists and folklorists in traditional societies. Despite the impact of literacy on modern minds this course argues for the persistence of ancient themes, plots, characters and motifs.. A further argument is made for the foundational role of storytelling in the creation of culture and construction of society ...an argument, in short, that humans are, by nature, story-telling creatures whose sapience lies primarily in the capacity to create, be entertained by, and even live by, fictions The central place of storytelling is shown in the humanistic and social sciences: anthropology, economics, history, philosophy, politics, psychoanalysis. Student story-telling and even performance, of brief stories is encouraged and reflected upon in light of the main arguments of the course.

Instructor(s): James Fernandez Terms Offered: Spring

Note(s): This course qualifies as a 'Discovering Anthropology' selection for Anthropology majors.

Equivalent Course(s): ANTH 45301

ANTH 21347. To Preserve or Destroy: Anthropologies of Heritage. 100 Units.

Why do some monuments matter more than others? Why do we destroy some sites and preserve others? How do these objects and sites attain value? As witnessed in Charlottesville, heritage is at the heart of intense debates in politics and culture today. Questions of theft and colonial violence haunt museums, galleries, and other cultural institutions. Looting and repatriation-linked to archaeology's complex history and of equal concern to contemporary anthropology-force us to contend with the very meaning of heritage, including why it matters, what it does, and to whom it rightfully belongs. Bringing archaeology and anthropology together, this course attends to these complex questions, exploring how monuments, heritage sites, and material culture are enmeshed in power and condense contested histories. Drawing together ethnographies of heritage, theories of history and art, and accounts of dispossession and destruction, we will examine heritage as a conceptual formation, a set of social, political, and economic practices, and as a locus of both enchantment and endangerment. In doing so, students will gain a better sense of why the category of heritage seems to matter so much in the 21st century, paradoxically weaponized by both nationalist narratives and decolonial movements, and what futures heritage builds.

Instructor(s): Hilary Leatham Terms Offered: Winter. This course was offered Winter 2020

Equivalent Course(s): HIPS 21347, ARCH 21347, GLST 23317

ANTH 21353. Anthropology of Revolution: Orientalism, Islam, and the Middle East in Global Perspective. 100 Units.

The rise of political Islam in the Middle East as a revolutionary force has provoked concern among commentators fearing that without separation between 'church and state,' the region is doomed to religious conflict. But what's Islamic about political Islam, or religious about religious conflict? What does it mean to frame secularism as a solution to this 'problem'? How do Orientalist narratives complicate our understanding of political movements? In this class, we deploy anthropological methods to interrogate how religion and secularism are defined by exploring Islam as a lived religion and political practice in the contemporary Middle East. Reading ethnographic texts from Iran, Lebanon, and Egypt, we explore how political activists have framed challenges and their responses. Are 'political Islam' and 'secularism' useful analytics for examining Middle Eastern revolutions and uprisings? What makes a government 'secular'? And what roles have Western powers played in shaping contemporary conflicts and how they are framed? Course discussion is driven by both texts and popular films. Drawing on an interdisciplinary body of works from anthropology, history, and sociology, in addition to primary sources, we ask what answers ethnographic methods can provide. We critically engage with films from the region as well as popular Western media representations and news articles.

Instructor(s): Alexander Shams Terms Offered: Autumn. Autumn 2020

Equivalent Course(s): RLST 27651

ANTH 21354. Architectural Worlds: The Materiality and Sociality of Space. 100 Units.

The interplay between humans and built environments has been a central object of anthropological inquiry since the emergence of the discipline in the 19th century. This course explores the multiple ways in which anthropology and architecture intersect, providing an overview of how social scientists have engaged with and theorized built environments. It sketches some of the concerns that animate anthropological interrogations of built spaces, including spatial organization, the relationship between the public and the private spheres, the materiality of architecture, and the politics of architectural forms. Some of the issues that we will address include: What is the relationship between culture, society, and architecture? What are the concepts that have been mobilized to approach the study of built environments? How is architecture created, imagined, and experienced? We will draw on a range of theoretical approaches, read case studies, classic ethnographies, and a wide range of scholarship from the fields of philosophy, geography, cultural studies, and environmental psychology, in order to understand how architecture as a social and material artifact shapes human experiences, actions, relations, imaginaries, and subjectivities.

Instructor(s): Estefania Vidal Montero Terms Offered: Spring. Spring 2021

Equivalent Course(s): ARCH 21354

ANTH 21355. Remembering: An Anthropological Approach. 100 Units.

How do people remember? How much does remembering depend on our present context, the people, events and things that are there to remind us of prior experiences? How does memory contribute to the impression of existing under a continuous identity over time? And what are the connections between memory and history, memory and culture? This course is an anthropological reflection on human remembering, considered as an ensemble of practices, rather than an increasing mental stock. Through our readings, we will strive to establish the definitions, limits, and limitations that have been given to the concepts of memory, mnemonic practices, and acts of remembering. We will pay attention to the erasures and ruptures remembering involves, the synesthetic, narrative and/or mnemonic practices by which we retain information and the way different accounts of past experiences might conflict within individuals and within the groups they live among. This course will highlight how assumptions we make about what memory is have ethical, political and methodological implications, and encourage collective discussions to address these effects. Through a combination of reading discussions and practicums, the course will ensure that students are both knowledgeable about prevalent conceptions of memory in the Social Sciences and the Humanities and able to produce data and analyses with a primary focus on memory, remembering, and mnemonic practices.

Instructor(s): Eleonore Rimbault Terms Offered: Spring, Spring 2021

ANTH 21356. The State as Imagination, Fetish, Spectacle. 100 Units.

From Trump's theory of the 'deep state' and the rise of populism around the world to the global 'war on terror' and mass-mediated counterinsurgency, the state as shot through with emotion, fantasy, and the spectacular has become central in political life these days. This course will explore the state through its affective, ideological, and imaginary dimensions, asking what they may teach us about the kind(s) of entity that the state is. We will analyze how the state materializes in unexpected forms and places; how it comes to be perceived as a larger-than-life formation, embodying fantasies of power; how it presents itself through an interplay of spectacle and secrecy, seeking to shape itself and through its 'others' (outlaws, terrorists, enemies) in particular ways. We will ask what kinds of political configurations are at play in these processes and what forms state power acquires: How is this power felt? How does it (seek to) shape us as political subjects? What unintended consequences may it produce? While drawing from work in a range of disciplines, we will privilege ethnographic perspectives for their capacity to illuminate the intricacies of the contemporary state.

Instructor(s): Agnes Mondragon Celis Ochoa Terms Offered: Autumn, Autumn 2020

Note(s): Will be taught on line

ANTH 21420. Ethnographic Methods. 100 Units.

This course is a practical and theoretical introduction to ethnographic research. It will provide students with (i) a background in the key epistemological, ethical and representational issues raised by fieldwork, and (ii) a collaborative forum for practicing and critically interrogating ethnographic methods, including participant observation, fieldnote writing, interviewing, and archival research. With the help of instructor and peer feedback, students will design and execute a short fieldwork-based research project over the course of the quarter. Readings and discussions will guide students through the process of developing research questions, choosing and gaining access to a field site, generating data, and re-presenting that field site in writing. We will pay particular attention to questions of knowledge, location, evidence, ethics, power, translation, and experience, and to the nature of the theoretical and social claims that can be pursued through ethnographic research. Class sessions will be divided between discussions of critical readings in anthropology related to methodological epistemology and practice, and workshop-style sessions where we collectively discuss student projects, reflect on the experience of fieldwork, and share advice and constructive criticism.

Instructor(s): TBD Terms Offered: Spring, Course offered in Spring 2020

Prerequisite(s): Preference given to third-year anthropology majors, others by consent only

ANTH 21428. Apes and Human Evolution. 100 Units.

This course is a critical examination of the ways in which data on the behavior, morphology, and genetics of apes have been used to elucidate human evolution. We emphasize bipedalism, hunting, meat eating, tool behavior, food sharing, cognitive ability, language, self-awareness, and sociability. Visits to local zoos and museums, film screenings, and demonstrations with casts of fossils and skeletons required.

Instructor(s): R. Tuttle Terms Offered: Spring, Spring 2021

Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

Equivalent Course(s): ANTH 38600, EVOL 38600, BIOS 13253, HIPS 21428

ANTH 21432. Virtual Ethnographic Field Research Methods. 100 Units.

'Virtual worlds are places of imagination that encompass practices of play, performance, creativity and ritual.' - Tom Boellstorff, from *Ethnography and Virtual Worlds: A Handbook of Method* This course is designed to provide students in the social sciences with a review of ethnographic research methods, exposure to major debates on ethnographic research, opportunities to try their hand at practicing fieldwork virtually, and feedback on a proposed study that employs ethnographic methods. By way of analyzing and problematizing enduring oppositions associated with ethnographic fieldwork - field/home, insider/outsider, researcher/research subject, expert/novice, 'being there'/removal - this seminar is a practicum in theoretically grounded and critically reflexive qualitative methods of research. By introducing students to participant observation and interviews in virtual worlds, ethics, data analysis and writing up, the course offers an opportunity to make sense of the current pandemic we're all experiencing in real time. An emphasis will be placed on multimedia, digital, and virtual ethnography.'

Terms Offered: Summer

Equivalent Course(s): ENST 20224, SOSC 30224, SOCI 20515, ANTH 31432, SOSC 20224, GLST 26220

ANTH 21525. Love, Conjuality, and Capital: Intimacy in the Modern World. 100 Units.

A look at societies in other parts of the world demonstrates that modernity in the realm of love, intimacy, and family often had a different trajectory from the European one. This course surveys ideas and practices surrounding love, marriage, and capital in the modern world. Using a range of theoretical, historical, and anthropological readings, as well as films, the course explores such topics as the emergence of companionate marriage in Europe and the connections between arranged marriage, dowry, love, and money. Case studies are drawn primarily from Europe, India, and Africa.

Instructor(s): J. Cole, R. Majumdar Terms Offered: Winter

Prerequisite(s): Any 10000-level music course or consent of instructor

Note(s): This course typically is offered in alternate years.

Equivalent Course(s): CRES 23101, GNSE 23102, HIST 26903, CHDV 22212, CHDV 33212, ANTH 32220, SALC 43101, SALC 33101, HIST 36903, CRES 33101, GNSE 31700

ANTH 22124. Feminist Perspectives on Science. 100 Units.

Feminist perspectives on science come from anthropology, sociology, history, and philosophy. What they have in common is a determination to uproot the deepest and least visible forms of oppression in our society: those pertaining to facts and methods we unquestioningly take to be true, known, and valid. We will first acquaint ourselves with the value-free ideal of science as an objective, rational process of discovery, and the ways this ideal has been wielded as an instrument of domination. We will spend the rest of the quarter challenging this dogma by (1) historically demonstrating science's symbiotic alliances with political ideologies of gender and race, (2) ethnographically examining structural and interactive practicalities of knowledge-construction and -circulation that reproduce social oppression, and (3) epistemologically deconstructing the very notions of objectivity and rationality that are used to insulate science from feminist critique. Works include but are not limited to authors Londa Schiebinger, Evelyn Hammonds, Emily Martin, Sharon Trawick, Susan Leigh Star, Joan Fijimura, Helen Longino, Heather Douglas, Donna Haraway, Elizabeth Anderson, Sandra Harding, and Susan Haack.

Instructor(s): P. Mostajir Terms Offered: Autumn, Autumn 2020

Equivalent Course(s): HIPS 25202, GNSE 25222, SOCI 20517

ANTH 22131. The Science, History, Policy, and Future of Water. 100 Units.

Water is shockingly bizarre in its properties and of unsurpassed importance throughout human history, yet so mundane as to often be invisible in our daily lives. In this course, we will traverse diverse perspectives on water. The journey begins with an exploration of the mysteries of water's properties on the molecular level, zooming out through its central role at biological and geological scales. Next, we travel through the history of human civilization, highlighting the fundamental part water has played throughout, including the complexities of water policy, privatization, and pricing in today's world. Attention then turns to technology and innovation, emphasizing the daunting challenges dictated by increasing water stress and a changing climate as well as the enticing opportunities to achieve a secure global water future.

Instructor(s): Seth Darling Terms Offered: Winter. Not offered in 2020-2021

Prerequisite(s): None

Equivalent Course(s): MENG 20300, ENST 20300, HIPS 20301, GLST 26807, HIST 25426

ANTH 22132. Science/Fiction/Theory. 100 Units.

Science fiction has enjoyed an extraordinary and still growing resurgence in popularity over the last two decades - through literature, film, video games, and even universities, where it is the subject of ever more courses being taught. Why has science fiction become so popular? Does it express the anxieties of a way of life that can't be sustained, is in decline, and might soon end, in the face of intractable war, lurching financial crises, recurrent pandemics and unchecked climate change? Does it speak to the senses of radical hope and irreparable despair about the future that seem to characterize our time? If so, then science fiction today is grappling with traditionally theological themes: fate and finitude, immortality and the nature of divinity, the place of the human within a cosmic scale, and the possibilities for redemption and messianic rupture. This course will explore these themes by pairing sci-fi literature and film with readings in philosophy and social theory. Throughout, we will ask how science fiction's propensity toward the theological allows it to grapple with the unique forms of hope and despair in our time, and in times past.

Instructor(s): Alireza Doostdar and Hussein Ali Agrama Terms Offered: Spring

Equivalent Course(s): RLST 22132

ANTH 22161. Ships, Trains, and Planes: A Global History of Vessels and Voyagers, 18th Century to the Present. 100 Units.

From "La Amistad" to the airplanes of September 11, vessels make history. And yet, we often take for granted the fact that they also contain history. Investigating the sociocultural pasts of vessels and the politics of mobility, this course poses two overarching questions. How have ships, trains, and airplanes shaped the behavior and outlooks of modern humans, and how has the experience of being in transit evolved over the past three centuries? Beginning with sailing ships of the eighteenth century and winding its way to the airplane via steamships and railways, the course explores how vehicles and transit have inspired and coerced humans into unique forms of subjectivity. Through case studies and primary sources from across world history, vessels in transit will be analyzed as engines of modernity and sites of emancipation, but also as tools of terror and laboratories of power.

Instructor(s): C. Fawell Terms Offered: Spring

Equivalent Course(s): GLST 24425, HIST 29425

ANTH 22165. Politics of Technoscience in Africa. 100 Units.

Euro-American discourse has often portrayed Africa as either a place without science and technology or as the home of deep and ancient wisdom. European imperialists used the alleged absence of science and technology as a justification for colonialism while pharmaceutical companies sought out African knowledge about healing plants. In addition to their

practical applications, science and technology carry significant symbolic weight in discussions about Africa. In this class, we examine the politics of scientific and technical knowledge in Africa with a focus on colonialism and its aftermath. How have different people produced and used knowledge about the environment, medicine, and technology? What kinds of knowledge count as indigenous and who gets credit for innovation? How have independent African governments dealt with the imperial legacies of science? From the interpretation of archaeological ruins to the design of new medical technologies, this class will examine science and technology as political practice in Africa.

Equivalent Course(s): KNOW 21410, CRES 21410, HIPS 21410

ANTH 22202. Anthropology of Caste in Asia. 100 Units.

This seminar course explores anthropological approaches to caste. We will survey colonial ethnological accounts to structuralist, transactionalist, historical anthropological, and contemporary ethnographic accounts of forms of caste difference, identity, and violence in South and East Asia, with an eye to comparison to other forms of invidious social difference in other times and cultures.

Instructor(s): Constantine Nakassis Terms Offered: Winter. Winter 2021

Prerequisite(s): This course qualifies as a Discovering Anthropology selection for Anthropology Majors.

Equivalent Course(s): ANTH 32202, SALC 22202, SALC 32202

ANTH 22415. Technology and the Human. 100 Units.

Technology is ubiquitous in contemporary life. Yet technological developments continue to infatuate and inspire in us feelings of excitement, hope and fear. How are we to understand the uncanny relationship between the human and technology? What does this relationship disclose about human agency and creativity? If human life is unimaginable without tools, artifacts, memory supports, and machines, how might we gain the critical distance necessary to properly assess the human-technical relation? In this course we will open up an inquiry into the question of technology by considering the ways in which technical objects, processes, and systems interrupt, challenge, and constitute human subjectivity. Readings will include texts by Martin Heidegger, Friedrich Kittler, Bernard Stiegler, Gilbert Simondon, Katherine Hayles and others.

Instructor(s): Sara-Jo Swiatek Terms Offered: Autumn

Equivalent Course(s): RLST 27802

ANTH 22540. Games: Theory, Practice, and Experience. 100 Units.

Why do humans play? How do games achieve their hold on our passions and attention? And why have thinkers and scientists found 'the game' to be such a powerful concept for understanding economic competition, language use, cultural values, and war? This course offers students a chance to explore these questions through an introduction to a comparative anthropological method of analysis. Students will read and discuss accounts of gaming in diverse human societies, from the mock combats of Siberian shamans to the consuming passions of chess masters, machine gamblers, e-athletes, and role-players. Along the way, students will discover the conventions and technologies through which games create new worlds of meaning and achieve the experiential merger of self with activity that makes them such an engaging pursuit. Students will also make use of resources at the Weston Game Lab to compose reflexive accounts of gaming experience, with the option to complete a final research project on a favorite game. This course will appeal to anthropology majors interested in foundational concepts of ritual performance, everyday practice, strategic competition, and social experience, as well as non-majors interested in education, finance, design, theater, marketing, cognition, and, of course, gaming.

Instructor(s): Zachary Sheldon Terms Offered: Winter. Winter 2021

ANTH 22620. Comparative Colonialisms and Indigenous Sovereignty. 100 Units.

Scholarship on contemporary Indigeneity—the sets of conditions, experiences, urgencies, and histories that are used to understand and theorize Indigenous life—has relied on various analytics to amplify these social processes. Sovereignty, as a legal and political discourse, has provided a useful mode to simultaneously analyze assertions of Indigenous self-determination and ongoing processes of colonial domination. Whereas an analytic of sovereignty describes the legal frameworks that confine and offer possibility of autonomy, settler colonialism identifies the ongoing structural conditions that limit Indigenous empowerment. This interdisciplinary course critically engages the analytics of sovereignty, settler colonialism, as well as decolonization for understanding Indigenous political formations in North America and beyond. In the first section of the course we will interrogate the historical emergence of these legal and political apparatuses before moving into the second section where we apply these insights to the analysis of timely concerns such as: resource extraction and economic development, blood quantum and identity politics, recognition and citizenship, territory and the question of property, and lastly, environmental protection and social justice movements.

Instructor(s): Teresa Montoya Terms Offered: TBD

ANTH 22625. Indigenous Movements in Latin America. 100 Units.

TBD

Instructor(s): Mareike Winchell Terms Offered: TBD (Not 2020-2021)

Prerequisite(s): The course qualifies as a Discovering Anthropology selection for Anthropology Majors.

ANTH 22710. Signs and the State. 100 Units.

Relations of communication, as well as coercion, are central though less visible in Weber's famous definition of the state as monopoly of legitimate violence. This course reconsiders the history of the state in connection to the history of signs. Thematic topics (and specific things and sites discussed) include changing semiotic technologies; means; forces and relations of communication (writing, archives, monasteries, books, 'the' internet); and specific states (in early historic India and China, early colonial/revolutionary Europe, especially France, Britain, and Atlantic colonies, and selected postcolonial 'new nations').

Instructor(s): J. Kelly Terms Offered: TBD

Note(s): This course qualifies as a Discovering Anthropology selection for Anthropology majors.

Equivalent Course(s): ANTH 41810

ANTH 22750. Unsettling Sovereignty: Political Practices and Personal Aspirations. 100 Units.

This introductory graduate course will explore competing sovereignties as tentative, emergent, and contested forms of authority and control. Focusing on the tensions between nation-states, informal/illegal networks, and the actions and aspirations of individual subjects, we will interrogate sovereignty as both a deferred personal aspiration and a political practice. What are the roles of performances, narrative histories, and acts of exclusion and violence in the making of sovereignties? How are competing de facto and de jure sovereignties negotiated at the levels of individual subject, community, and nation-state? The centrality of both physical violence and the consent and complacency born of the naturalized hegemony of political institutions and economic rationality will arise in our close readings of ethnographic texts on political mobilization and precarious authorities.

Equivalent Course(s): MAPS 34513, ANTH 34725

ANTH 22755. The Idea of Africa. 100 Units.

The Idea of Africa, a new interdisciplinary course, offers undergraduates students an opportunity to engage critically with key philosophical and political debates about contemporary Africa on the continent and globally. The course takes its title from V.Y. Mudimbe's 1994 book which builds on his earlier work *The Invention of Africa*. It asks three questions: (1) How and to what purposes has Africa been conceived as metaphor and concept? (2) How might we locate Africa as a geographic site and conceptual space to think through contemporary debates about citizenship, migration and new structures of political economy? (3) What futures and modes of futurity are articulated from the space and metaphor of Africa? This lecture course co-thought in an interdisciplinary mode will include public guest lectures, field trips, and engagement with visual arts, and film related to the themes of the course. The course will be divided into the following four sections: 1) Inventing Africa; 2) Political Trajectories; 3) Afro-Mobilities; 4) Afro-Futures.

Instructor(s): Natacha Nsabimana & Adom Getachew Terms Offered: Spring, Spring 2021

Equivalent Course(s): CRES 22755, PLSC 22755

ANTH 22765. Ethnographic Approaches to Power and Resistance. 100 Units.

This introductory graduate course will examine understandings of power articulated by influential political theorists and ethnographers. We will explore key theoretical concepts, including discipline, governmentality, sovereignty, hegemony, agency, and resistance, as well as their application within textured, intersubjective, and affectively oriented ethnographic texts. Seeing power grounded in tentative and unstable practices, we will focus on the tensions between nation-states, informal networks, and the actions and aspirations of individual subjects. How are attempts to consolidate power articulated in performances, narrative histories, and acts of exclusion and violence? How are competing de facto and de jure powers negotiated in various spaces ranging from the institutional to the intimate? The centrality of both physical violence and the complacency born of the naturalized hegemony of political institutions and economic rationality will arise in our examinations of political mobilization and possibility. This course will give students opportunities to develop conceptual understandings of various modes of power that offer insights into the forces of colonialism, global interconnectivity, and violence that shape the 21st century world.

Instructor(s): Victoria Gross Terms Offered: Spring

Equivalent Course(s): MAPS 31504, ANTH 34730

ANTH 22770. Anthropology of Power, Status, and Performance. 100 Units.

This introductory graduate course examines the nature of power and status through the theoretical lens of performativity. We will engage with notions of performativity, articulated by influential theorists of linguistics, gender, and religion, that demonstrate the abilities of performances to effect change in the world. Thinking with performativity, we will interrogate practices of negotiating power and status in a broad range of social, political, and geographical contexts. How is the power made and unmade through particular acts? How is status, a particular type of power differentiation, created collectively and individually through acts of saying and doing? Such questions will animate our explorations of power and status in recent ethnographies focused on Asia, the Americas, and Europe.

Instructor(s): Victoria Gross Terms Offered: Winter

Equivalent Course(s): ANTH 34735, GNSE 22770, MAPS 33508

ANTH 22845. Xenophobia and the Politics of Belonging. 100 Units.

What work does xenophobia do in the making and marking of nation-states? What does it mean to belong, in a world structured by migration? In this course, we will examine the practices and politics of exclusion, of othering and of unbelonging. Drawing on cases from North America and Sub-Saharan Africa, we will study xenophobia at different points along its spectrum of intensity - from mass atrocities to the seemingly banal ways in which othering and exclusion are baked into everyday life. We will study each case in depth in its own right, as well as how it sits within broader experiences of exclusion and violence around the world and across time. In the course, we will explore theoretical debates surrounding nativism, autochthony, and different forms of nationalism, and the ways they relate to xenophobia. Scholars of migration and belonging have long shown that collective identities are constructed in large part in relation to an external other. Does (one person's) belonging necessitate (another's) unbelonging? In this course we ask: how does the 'stranger' come to be seen as threatening or destabilizing? How does one come to be seen as a 'stranger'?

Instructor(s): Kathryn Takabvirwa Terms Offered: Autumn, Autumn 2020

Equivalent Course(s): CRES 22845

ANTH 22850. Mobility in Society: Concepts and Cultures. 100 Units.

This course seeks to explore the analytic of mobility in society. Through the exploration of various cultures and epochs, we will explore the ways in which itinerant peoples engage with the world, and how they are perceived in academic and colloquial perspectives. How do mobile people create a homeplace, and how is the concept different or similar to sedentary

peoples' sense of home and belonging? In what ways does mobility inform social, political, or economic particularities? How do mobile populations relate to the state as an entity that seeks to count and account for populations? To explore these topics and more, readings and documentaries will concentrate on nomadic pastoralism, ranchers, gypsies, and even modern families in motorhomes. We will rely on archaeological, historical, and contemporary eras to engage empirical case studies that will provide the foundation for a complementary theoretical discussion of the peripatetic lifestyle.

Instructor(s): K. Bryce Lowry Terms Offered: Winter, Winter 2021

ANTH 22855. Childhood, Migration, and Nation. 100 Units.

While the figure of mobile children is central to academic and public debates about migration worldwide, this course asks students to step back and reconsider a question that is frequently taken for granted: 'What is a child?' The intersections between childhood and other categories of personhood, such as migrant laborers and refugees, complicate our assumptions about what it means to be a 'child' and the ways children fit into the ideologies of nation-states. Ambiguous representations of migrant children also problematize human rights and humanitarian discourses that often depict them as vulnerable, passive, and inseparable from their family units. The analytical focus on young mobile subjects who are in the process of 'growing up' call our attention to questions of temporalities and different modes of imagination which come to mediate the ongoing socialization of the child by state, family, and schools. In this course, we will critically discuss both theoretical concerns, ethnographic projects, films, and contemporary news media in the US, Asia, and elsewhere which take '(im)migrant children' as an object of inquiry. We will examine 1) the intersection between childhood and other personhood categories along the citizen-migrant continuum, and 2) institutional interventions and everyday practices of the child which are mediated by different ideologies about being children and being (non)citizens of a particular state.

Instructor(s): Moodjalin Sudcharoen Terms Offered: Spring, Spring 2021

Equivalent Course(s): CHDV 22855, HMRT 22855, GLST 22855

ANTH 22930. Charisma. 100 Units.

TBD

Instructor(s): William Mazzarella Terms Offered: TBD

ANTH 23003. Greater Latin America. 100 Units.

What is 'Latin America,' who are 'Latin Americans' and what is the relationship among and between places and people of the region we call Latin America, on the one hand, and the greater Latinx diaspora in the US on the other? This course explores the history of Latin America as an idea, and the cultural, social, political and economic connections among peoples on both sides of the southern and eastern borders of the United States. Students will engage multiple disciplinary perspectives in course readings and assignments and will explore Chicago as a crucial node in the geography of Greater Latin America. Some topics we will consider are: the origin of the concept of 'Latin' America, Inter-Americanism and Pan-Americanism, transnational social movements and intellectual exchanges, migration, and racial and ethnic politics.

Instructor(s): Diana Schwartz Francisco Terms Offered: Autumn

Equivalent Course(s): LACS 26386, CRES 26386, HIST 26321

ANTH 23024. Extractivism in Latin America. 100 Units.

From the elusive search for El Dorado to the growing transition to renewable energy, extractivism has defined and continues to produce effects on the everyday lives, economic possibilities, and political horizons of Latin Americans in different historic and geographic settings. This course critically explores the social and material worlds built around resource extraction in Latin America. By focusing on key episodes of 20th and 21st century energy development, the course will examine how extractivism has enabled and foreclosed certain configurations of political power, especially in relation to the state, (anti-)imperialism, the left, and indigenous social movements. We will also explore the rise of anti-extractivist struggles and critiques, with a particular emphasis on indigenous peoples' mobilization of human rights discourse. Course readings will be interdisciplinary (from anthropology and economics to history and film), drawing on cases from Venezuela, Paraguay, Brazil, Mexico, and Bolivia.

Instructor(s): Steven Schwartz Terms Offered: Spring

Equivalent Course(s): LACS 26624

ANTH 23028. Body Modifications, Sociocultural Meanings, and Beauty in Ancient Mesoamerica. 100 Units.

The course will introduce past and current anthropological discussions of embodiment and beauty and then explore culturally born body concepts from the perspective of native Mesoamerican thought and ritual practice. A methodological unit will embrace reconstructions of ancient body modifications at the intersection between (bio) archaeology, ethnohistory, semiotics, and imagery. We will also review and discuss basic visual, behavioral, and social aspects of native Mesoamerican body works, focusing on head shaping, dental modification, and skin ornaments. A number of case studies target such forms of physical embodiment among the Olmecs, Maya, and the Aztecs. Finally, we will cover the evolving roles of body modifications past the European contact in Mexico, providing food-for-thought in discussing Novohispanic domination strategies, native resilience, and transformation.

Instructor(s): Vera Tiesler Terms Offered: Spring

Equivalent Course(s): LACS 27726, LACS 37726

ANTH 23077. Indigenous Politics in Latin America. 100 Units.

This course examines the history of Indigenous policies and politics in Latin America from the first encounters with European empires through the 21st Century. Course readings and discussions will consider several key historical moments across the region: European encounters/colonization; the rise of liberalism and capitalist expansion in the 19th century; 20th-century integration policies; and pan-Indigenous and transnational social movements in recent decades. Students will engage with primary and secondary texts that offer interpretations and perspectives both within and across imperial and national boundaries.

Instructor(s): Diana Schwartz
 Equivalent Course(s): LACS 26380, HIST 26318

ANTH 23083. A Latin American Anthropology of Violence and Conflict in Latin America. 100 Units.

This course explores the dynamics of conflict and organized violence in Latin America through a combination of Latin American fiction and documentary films and ethnographic and other relevant research. The following are some of the interrelated topics that we will cover, which draw primarily from scholars not only of Latin America, but also in Latin America: non-state armed groups, transnational criminal networks, international cooperation and humanitarian intervention, human rights abuses and activism, gendered experiences of violence and its aftermath, and the state. We will begin our work in contemporary conversations about these topics throughout the region and weave in readings from the globally dispersed foundational thinkers who have informed these conversations. Students will develop a case study of their choosing over the quarter and receive in-class instruction on forming and managing effective writing groups to facilitate their projects. Significant flexibility is also possible for those who want to incorporate their coursework into the development of a larger research project.

Instructor(s): Erin McFee
 Terms Offered: Autumn, Autumn 2020

Prerequisite(s): PQ. Course materials and discussions will be in both Spanish and English; Spanish fluency required.)

Equivalent Course(s): LACS 23083, GLST 23083, LACS 32335, HMRT 23083, ANTH 32335

ANTH 23093. Latin American Extractivisms. 100 Units.

This course will survey the historical antecedents and contemporary politics of Latin American extractivisms. While resource extraction in Latin America is far from new, the scale and transnational scope of current 'neextractivisms' have unearthed unprecedented rates of profit as well as social conflict. Today's oil wells, open-pit mines, and vast fields of industrial agriculture have generated previously unthinkable transformations to local ecologies and social life, while repeating histories of indigenous land dispossession in the present. Yet parallel to neo-extractive regimes, emergent Latin American social movements have unleashed impassioned and often unexpected forms of local and transnational resistance. Readings in the course will contrast cross-regional trends of extractive economic development and governance with fine-grained accounts of how individuals, families, and communities experience and respond to land dispossession, local and transregional conflict, and the ecological and health impacts of Latin American extractivisms.

Equivalent Course(s): LACS 26416, PBPL 26416

ANTH 23094. Development and Environment in Latin America. 100 Units.

This course will consider the relationship between development and the environment in Latin America and the Caribbean. We will consider the social, political, and economic effects of natural resource extraction, the quest to improve places and peoples, and attendant ecological transformations, from the onset of European colonialism in the fifteenth century, to state- and private-led improvement policies in the twentieth. Some questions we will consider are: How have policies affected the sustainability of land use in the last five centuries? In what ways has the modern impetus for development, beginning in the nineteenth century and reaching its current intensity in the mid-twentieth, shifted ideas and practices of sustainability in both environmental and social terms? And, more broadly, to what extent does the notion of development help us explain the historical relationship between humans and the environment?

Instructor(s): Diana Schwartz
 Terms Offered: Winter

Equivalent Course(s): LACS 26382, HIST 36317, HIST 26317, LACS 36382, GEOG 26382, ENST 26382, HIPS 26382

ANTH 23097. Poverty and Urban Development: the Right to Housing in Latin America. 100 Units.

Bringing a wide variety of disciplinary texts into conversation, this course leads towards a holistic understanding of the historically rooted and globally entangled housing condition of Latin America's urban poor. It encourages students to read along the grain of developmental discourse at different stages of twentieth-century development, thus advancing students' capacity to critically situate and condition global and national policies. The course analytically foregrounds problems of governance, resource distribution, and sociopolitical complexity, providing students with a representative range of case studies from across the subcontinent and interrogating what it means for social and economic goods to be labeled human rights. Throughout the course, students will examine diverse housing arrangements and policies in the context of national, regional, and global development histories. Ultimately, this course advances comprehension of the particularities of contemporary Latin American societies, and that which they share with the Global South and the world at large.

Instructor(s): Gonzalez, Ines Escobar
 Terms Offered: Spring

Equivalent Course(s): GLST 25320, ENST 25320

ANTH 23101-23102-23103. Introduction to Latin American Civilization I-II-III.

Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies. This sequence is offered every year. This course introduces the history and cultures of Latin America (e.g., Mexico, Central and South America, and the Caribbean Islands).

ANTH 23101. Introduction to Latin American Civilization I. 100 Units.

Autumn Quarter examines the origins of civilizations in Latin America with a focus on the political, social, and cultural features of the major pre-Columbian civilizations of the Maya, Inca, and Aztec. The quarter concludes with an analysis of the Spanish and Portuguese conquest, and the construction of colonial societies in Latin America. The courses in this sequence may be taken in any order.

Instructor(s): Emilio Kouri
 Terms Offered: Autumn

Equivalent Course(s): CRES 16101, LACS 16100, HIST 36101, SOSC 26100, HIST 16101, LACS 34600

ANTH 23102. Introduction to Latin American Civilization II. 100 Units.

Winter Quarter addresses the evolution of colonial societies, the wars of independence, and the emergence of Latin American nation-states in the changing international context of the nineteenth century.

Instructor(s): D. Borges Terms Offered: Winter

Equivalent Course(s): PPHA 39770, HIST 16102, CRES 16102, HIST 36102, LACS 34700, LACS 16200, SOSC 26200

ANTH 23103. Introduction to Latin American Civilization III. 100 Units.

Spring Quarter focuses on the twentieth century, with special emphasis on the challenges of economic, political, and social development in the region.

Instructor(s): B. Fischer Terms Offered: Spring

Equivalent Course(s): HIST 36103, PPHA 39780, CRES 16103, LACS 34800, SOSC 26300, LACS 16300, HIST 16103

ANTH 23335. Racial France. 100 Units.

Over the last two decades, questions of race, racial identity, and racial discrimination have come increasingly to the fore in France, despite (or because of) the country's prevailing rhetoric of colorblind indivisibility. These issues are becoming ever more pressing on a background of intensifying racisms and right-wing populisms in Europe. The purpose of this course is to offer analytical perspectives about these critical tensions and their ripples across the landscape of contemporary French politics. Using readings from a wide variety of fields (among others, anthropology, sociology, literature, philosophy, history, political science, and news media), we will unpack the discourses and lived experiences of race that have shaped the politics of national identity and difference in France since the late 18th century. We will see that the question of 'racial France' has been intimately bound up with the country's history of colonialism and decolonization, with its Republican ideology, with matters of law and government, with questions of citizenship, religion and sexuality, with recent debates on multiculturalism, and with white malaise and resentment stirred by the growth of right-wing extremisms. In the course of our examinations, we will also reflect on the specificity of race and racialization in France, and its differences from racecraft in the United States.

Instructor(s): Francois Richard

Note(s): This version of the course is for the Paris Program, Spring 2021. This course qualifies as a Discovering Anthropology selection for Anthropology Majors.

Equivalent Course(s): CRES 23335, ANTH 33335, FREN 23335, FREN 33335

ANTH 23405. War: What's It Good For? 100 Units.

War is a destructive force, but also an incredibly productive one in the transformation and reconfiguration of social relations. This course will explore war's presences and absences in social and political thought as well as ethnographies that examine the mutually reconstitutive relationships between war and society.

Instructor(s): Darryl Li Terms Offered: TBD. Not offered 2020-21; may be offered 2021-22

ANTH 23607. The Immigrant as American Prototype. 100 Units.

This undergraduate seminar explores how the figure of 'the immigrant' has come to mediate various origin myths and anticipatory imaginations of 'Americanness' in contemporary political struggles. A central proposition of the course is that 'the immigrant' should be seen NOT as an 'original' founding subject of the United States and its 'American Dream' but rather, as a modern prototype-forged only since the late 19th century-for stress-testing different models of American presence and power in the world. Importantly, this is a world increasingly ordered, as well as destabilized, by the expanding logics of industrial and corporate capital-a historical development with reverberating effects into our contemporary debates over the relation of 'the immigrant' to American 'values' and global 'competitiveness.' Drawing on various historical, anthropological and audiovisual resources, this seminar aims to situate the emergence of 'the immigrant' as American prototype in relation to (1) earlier cultural-historical archetypes of mass migration, such as 'the settler' and 'the emigrant' and (2) current debates over nativist and cosmopolitan models of American security-cum-prosperity that take 'the immigrant' as the limit case for evaluating 'the human,' 'the normal,' and 'the good life' across nationalist and globalizing space-times. Besides conventional reading and writing assignments, this seminar will offer students the opportunity to experiment with multimedia methods for ethnographic research through a final web-based project in which students will draw from current news and popular media sources to assemble and critically present on their own version of 'the Immigrant' as American prototype.

Instructor(s): Julie Chu Terms Offered: TBD. Not offered 2020-21; may be offered 2021-22

Prerequisite(s): This course qualifies as a Discovering Anthropology selection for Anthropology majors.

Equivalent Course(s): CRES 23607

ANTH 23608. Introduction to Asian American Studies. 100 Units.

On May 6, 1882, the United States passed the Chinese Exclusion Act, the first major federal legislation of its kind to explicitly exclude an entire ethnic group. More than a century later, as the U.S. grappled with a deadly outbreak of COVID-19, President Donald Trump insisted upon referring to the virus as 'Chinese,' reigniting historical and racialized anxieties of 'Yellow Peril' and 'Asian invasion,' even as Asians across the country reported incidents of anti-Asian discrimination and violence. This course seeks to bridge these two moments by providing a critical examination of contemporary Asian American experience through the social, political, and historical contexts that come to bear upon it. Focusing on East and Southeast Asian communities, it will interrogate theories of race, class, and identity, alongside issues of immigration/migration, transnationalism, labor, citizenship, generational dissonance, and activism. Engaging a variety of historical events, social movements, racialized imaginaries, critical writings, and cultural representations, we will consider how Asian American history is vitally shaped by not only repression and assimilation, but also radicalism and innovation.

Instructor(s): Victoria Nguyen Terms Offered: Winter

Equivalent Course(s): GLST 20004, CRES 20004

ANTH 23609. Contentious Natures: Race, Nature, and Power. 100 Units.

Drawing on anthropology, critical race theory, feminist studies, postcolonial studies, and STS, this course examines how race and nature work in tandem as domains of power. Tracking how race and nature are vitally intertwined, we interrogate the racial politics of climate, wilderness, local ecologies, biology, and space and place. Ultimately, the course considers how contested and essentialized notions of nature are crucial to environmental politics, as well as the formation of citizenship, territory, projects of development, and modern regimes of governance.

Instructor(s): Victoria Nguyen Terms Offered: Winter

Equivalent Course(s): CRES 12100, GLST 22100

ANTH 23611. Racial Consciousness and the Asian American Perspective. 100 Units.

What does it mean to be Asian American today? At once marginalized and woefully unspecific, Asian American identity seems to occupy a purgatorial status in the American racial imagination. How have Asian Americans been understood within, and how do they understand themselves within, White institutions, anti-Black hierarchies, and capitalist orders? And what are the cumulative psychic effects of their quotidian, uneventful, and often unspoken racializations? This seminar examines how Asian American writers, artists, and thinkers reckon with in/visibility, ambiguity, and the 'minor intensities' of Asian American life through stories, poetry, films, and visual art. We will engage in close reading and analysis of these materials, with an eye toward their specific social, historical, and political contexts as we read them alongside a range of critical theory on the politics of identity and subjectivity.

Instructor(s): Victoria Nguyen Terms Offered: Spring

Equivalent Course(s): CRES 27542

ANTH 23612. Lethal Landscapes, Toxic Worlds: Geographies of Race, Risk, and Contingency. 100 Units.

This advanced seminar critically examines environmental racism and injustice with an eye toward the social, historical, and political forces that create, sustain, and ultimately challenge environmental inequalities. We explore recent work at the intersection of anthropology, political ecology, and science studies that investigate unequal exposures and the politics of containment. Connecting local and international case studies with larger social and settler colonial logics, the seminar will investigate relations of power, segregation, contingency, and kinship in uneven terrains of vulnerability and risk.

Instructor(s): Victoria Nguyen Terms Offered: Spring

Prerequisite(s): CRES 12100, or CRES 12200, or consent of instructor

Equivalent Course(s): CRES 22000

ANTH 23700. Capitalism, Colonialism, and Nationalism in the Pacific. 100 Units.

This course compares colonial capitalist projects and their dialogic transformations up to present political dilemmas, with special attention to Fiji, New Zealand, and Hawai'i, and a focus on the labor diaspora, the fates of indigenous polities, and tensions in contemporary citizenship. We will compare Wakefield's 'scientific colonization' in New Zealand, Gordon's social experiments and indentured labor in Fiji, and the plantations, American annexation, tourism, and the military in Hawai'i. We will compare the colonial experiences of the Maori, Hawaiians, and indigenous Fijians, and also those of the immigrant laborers and their descendants, especially white New Zealanders, the South Asians in Fiji, and the Japanese in Hawai'i. General propositions about nationalism, capitalism 'late' and otherwise, global cultural flows, and postcolonial subject positions will be juxtaposed with contemporary Pacific conflicts.

Instructor(s): John Kelly Terms Offered: TBD. May be offered in 2020-21

Note(s): This course qualifies as a Discovering Anthropology selection for Anthropology majors.

Equivalent Course(s): ANTH 33700, CRES 33700, CRES 23710

ANTH 23806. The Politics of Plant Life: Edens, Plots, and Ruins. 100 Units.

How do plant ecologies materialize conflicted and incommensurate political formations? How are political ideals, collectivities, or anxieties reflected in the matter and meaning of plant life across its many social guises (as food, magic, medicine, drugs, industrial commodities, mortal enemies, alien invaders, and more)? How might radical attention to the complexities of our lives with plants help us to formulate ethical and political possibilities in the wake of conflicted histories and in midst of uncertain planetary futures? This course explores possibilities for understanding political imaginaries through the lens of plant life. We will attend to the history of social and natural scientific understandings of plant life as these shaped foundational concepts in social and political theory (including concepts of culture, race, gender and sexuality, economy, and history). We will examine how the scientific, military, and commercial transformation of plant natures was central to political projects from 18th century imperialism to 21st century counter-insurgency, from World War to the 'War on Drugs,' from colonization to climate crisis. This seminar brings together historical sources, classical theoretical texts, and contemporary ethnographic projects with experimental and multi-media materials to explore the history of plant life's entanglement with imagined political histories and futures--apocalyptic, utopian and revolutionary.'

Instructor(s): Amy McLachlan Terms Offered: Spring

Equivalent Course(s): ENST 24902, GLST 24901, ANTH 33809

ANTH 23807. Toxic: Body Burdens and Environmental Exposures. 100 Units.

Toxicity is a pervasive and often elusive presence in our lives today. In this seminar class, we begin to address this condition by asking: what exactly is toxic? Who bears the burden of this classification? And, how then, are these understandings of toxicity defined and deployed in broader historical, political, and scientific contexts? From these preliminary questions, we explore the pathways through which toxic exposure, contamination, and fallout accumulates in disproportionate and uneven ways, especially for minoritized populations and upon Indigenous territories. Drawing upon a variety of social science literature and community-based research we trace these challenges through overlapping structures of race, class, gender, citizenship, and coloniality. This transnational and interdisciplinary orientation will acquaint students with case studies of exposure across different scales and geographies, from Chernobyl to Chicago. Through mixed approaches of

ethnography and media curation, students will also have the opportunity to research and document their own cases studies of body burdens and environmental exposure.

Instructor(s): Teresa Montoya Terms Offered: Autumn. Autumn 2020

Equivalent Course(s): HLTH 23807, ENST 23807, CRES 23807

ANTH 23809. Visualization and Biology: Science, Culture, and Representation. 100 Units.

How do scientific images get made? This deceptively simple question lies at the heart of this course. Over three weeks at the MBL, we will examine the techniques, technologies, philosophies and histories of scientific image making, with a particular focus on marine biology. Rather than simply reading theories of visualization and representation, students will immerse themselves in the making of images themselves. Students will perform hands-on work with historical and contemporary theories and techniques of microscopy, taxonomy, anatomy, and specimen collecting. They will also examine the theoretical, philosophical, and ethical underpinnings of those practices. Through a combination of ethnographic (participant observation) and historical (archival) work, students will develop rich accounts of scientific visualization - from matters of objectivity and instrumentation, to problems of vision and the limits of (human) senses, to questions of aesthetics, abstraction, and representation. During the course, students will have the opportunity to work with Marine Biological Laboratory faculty, have access to laboratory and archives, and will develop new data and novel accounts of the social, cultural, and technical creation of scientific images.

Instructor(s): Michael Paul Rossi Terms Offered: Autumn

Prerequisite(s): Prerequisite: Consent Only.

Note(s): Prerequisite: Consent Only. Course meets for three weeks, 9/9 thru 9/27 (5-6 days/week, 8 hours per day), at Marine Biological Laboratories, in Woods Hole Massachusetts. Course will be part of Autumn quarter course load. For more information see <http://college.uchicago.edu/academics/mbi-september-courses>

Equivalent Course(s): HIST 14904, HIPS 15100

ANTH 23811. Facing Climate Change in the Global South. 100 Units.

Reckoning with climate change often leads to an appeal to a common humanity that is on the brink of annihilation. The call is to act together to stall the harmful effects we as a species have had on the planet. This course will critically interrogate the social, political, racial inequalities that such a rhetoric evades. Reading ethnographies from different parts of the world, we will examine the causes and consequences of the Global South disproportionately bearing both the impact of environmental degradation and the burden of remedial measures to avert the climate crisis. Taking up four environmental issues, we will ask: what causes environmental inequality, how is it manifested, and what are the consequences - both for people experiencing these inequalities and for effectivity of climate change action? The course will cover: (a) The problem of toxicity and waste in underprivileged communities from New York to New Delhi. (b) The impact of the global quest to save tropical wilderness on local communities that are pitted against prioritized megafauna such as the tigers of the Sundarbans and the elephants of the Zambezi. (c) The inequalities in climate disaster relief, from New Orleans after Hurricane Katrina to the Maldives facing sea-level rise (d) The toll on marginal farming communities of the global push towards sustainable, organic food production.

Instructor(s): Suchismita Das Terms Offered: Winter. Winter 2021

Equivalent Course(s): CRES 23811, ENST 23811

ANTH 23825. Social Theory of the City. 100 Units.

This seminar explores various historical, sociological and anthropological theories of cities. The course analyzes major theoretical frameworks concerned with urban forms, institutions and experience as well as particular instances of city development from pre-modern to contemporary periods. The seminar will consist of initial orienting lectures, discussion of selected texts concerned with social theories of the city, and presentation of research projects by class participants.

Instructor(s): Alan L. Kolata Terms Offered: Winter. Winter 2021 in Paris

Prerequisite(s): Admission to the Winter 2021 Paris Program

Note(s): Undergraduates only

Equivalent Course(s): ARCH 23825

ANTH 23906. Magic, Science, and Religion. 100 Units.

The relationship between the categories of magic, science, and religion has been a problem for modern social science since its inception in the nineteenth century. In the first half of this course, we will critically examine some of the classical and contemporary approaches to these concepts. In the second half, we will explore a number of detailed historical and ethnographic studies about modern phenomena that call some of the fundamental assumptions behind these categories into question.

Instructor(s): A. Doostdar Terms Offered: Spring

Equivalent Course(s): KNOW 28900, AASR 30501, RLST 28900

ANTH 23908. Religion and its 'Other': Secular and Post-Secular Formations. 100 Units.

How do we locate religion? What is a secular space? Are we somehow beyond secularism? This course provides an introduction to the relationship between religion and the secular as it has been conceived in the modern West. It is intended to provide students with a basic historical and theoretical framework for thinking about how these categories relate, how they have evolved, and the work they do in our contemporary society. Readings will include works by Hermann Cohen, Louis Dupré, Charles Taylor, Michel Foucault, Bruno Latour, Judith Butler, Talal Asad, and Saba Mahmood.

Instructor(s): Lisa Hedrick Terms Offered: Winter

Equivalent Course(s): RLST 29015

ANTH 23910. Holocaust Object. 100 Units.

In this course, we explore various ontological and representational modes of the Holocaust material object world as it was represented during World War II. Then, we interrogate the post-Holocaust artifacts and material remnants, as they are displayed, curated, controlled, and narrated in the memorial sites and museums of former ghettos and extermination and concentration camps. These sites which-once the locations of genocide-are now places of remembrance, the (post)human, and material remnants also serve educational purposes. Therefore, we study the ways in which this material world, ranging from infrastructure to detritus, has been subjected to two, often conflicting, tasks of representation and preservation, which we view through a prism of authenticity. In order to study representation, we critically engage a textual and visual reading of museum narrations and fiction writings; to tackle the demands of preservation, we apply a neo-materialist approach. Of special interest are survivors' testimonies as appended to the artifacts they donated. The course will also equip you with salient critical tools for future creative research in Holocaust studies.

Instructor(s): Bozena Shallcross Terms Offered: Autumn

Equivalent Course(s): HIST 23413, ANTH 35035, REES 27019, JWSC 29500, REES 37019, HIST 33413

ANTH 23911. Anthropology of Religion. 100 Units.

How do anthropologists study religion? This course is an introduction to classic concepts that have defined the social scientific study of religion such as ritual, taboo, transcendence, embodiment, and enchantment. To grasp how fieldwork is paired with theory, we will engage ethnographic writings on Orthodox Christianity in northern Ethiopia, Afro-Caribbean Santería in Chicago, and Islamic jinn veneration in Delhi India. We will further examine various themes in the socio-cultural inquiry of contemporary religion including asceticism, sexuality, sectarianism, and political theology.

Instructor(s): A. Heo Terms Offered: Winter

Equivalent Course(s): RLST 27650, AASR 34411

ANTH 23914. Whom am I to Judge? Relativism and Religious Difference. 100 Units.

How do we evaluate people who are different from us? What grounds our evaluation of human behaviors or beliefs? At the end of the 20th century, comparative analyses of religious beliefs and ethics were heavily criticized for their ethnocentric tendencies; researchers were blamed for importing their own values on the 'other'. More recently, however, the pendulum seems to have swung in the other direction. Comparative religious ethicists often adopt a brand of liberal moral relativism. 'To each their own' is their preferred mantra. This dramatic swing within the field of comparative religious ethics opens up questions for future study: Under what conditions can we praise or blame those who are different than us? What virtues of scholarship are necessary for quality comparative work? In this course we will learn about the field of comparative religious ethics and the perils and possibilities that accompany its intellectual projects. In addition to several theoretical texts, we will read two ethnographies (Fernando 2014 and Pandian 2009) that weave in and out of comparative religious ethics. These texts focus on themes of nationalism, post-colonialism, immigration, the production and regulation of religious subjects, and the limits of our judgments on the other.

Instructor(s): Caroline Anglim Terms Offered: Winter

Equivalent Course(s): RLST 24160

ANTH 24001-24002-24003. Colonizations I-II-III.

This sequence meets the general education requirement in civilization studies. This three-quarter sequence approaches the concept of civilization from an emphasis on cross-cultural/societal connection and exchange. We explore the dynamics of conquest, slavery, colonialism, and their reciprocal relationships with concepts such as resistance, freedom, and independence, with an eye toward understanding their interlocking role in the making of the modern world.

ANTH 24001. Colonizations I. 100 Units.

This sequence meets the general education requirement in civilization studies. This three-quarter sequence approaches the concept of civilization from an emphasis on cross-cultural/societal connection and exchange. We explore the dynamics of conquest, slavery, colonialism, and their reciprocal relationships with concepts such as resistance, freedom, and independence, with an eye toward understanding their interlocking role in the making of the modern world. Themes of slavery, colonization, and the making of the Atlantic world are covered in the first quarter. Note(s): This sequence meets the general education requirement in civilization studies. This course is offered every year. These courses can be taken in any sequence.

Terms Offered: Autumn

Equivalent Course(s): SOSC 24001, CRES 24001, HIST 18301

ANTH 24002. Colonizations II. 100 Units.

Modern European and Japanese colonialism in Asia and the Pacific is the theme of the second quarter.

Terms Offered: Winter

Note(s): This sequence meets the general education requirement in civilization studies. These courses can be taken in any sequence.

Equivalent Course(s): CRES 24002, SOSC 24002, HIST 18302

ANTH 24003. Colonizations III. 100 Units.

The third quarter considers the processes and consequences of decolonization both in the newly independent nations and the former colonial powers.

Terms Offered: Spring

Note(s): This sequence meets the general education requirement in civilization studies. These courses can be taken in any sequence.

Equivalent Course(s): SALC 20702, SOSC 24003, HIST 18303, CRES 24003

ANTH 24101-24102. Introduction to the Civilizations of South Asia I-II.

This sequence introduces core themes in the formation of culture and society in South Asia from the early modern period until the present. This sequence meets the general education requirement in civilization studies. These courses must be taken in sequence.

ANTH 24101. Introduction to the Civilizations of South Asia I. 100 Units.

The first quarter focuses on Islam in South Asia, Hindu-Muslim interaction, Mughal political and literary traditions, and South Asia's early encounters with Europe.

Instructor(s): M. Alam Terms Offered: Winter

Equivalent Course(s): MDVL 20100, SALC 30100, HIST 10800, SOSC 23000, SALC 20100

ANTH 24102. Introduction to the Civilizations of South Asia II. 100 Units.

The second quarter analyzes the colonial period (i.e., reform movements, the rise of nationalism, communalism, caste, and other identity movements) up to the independence and partition of India.

Instructor(s): Dipesh Chakrabarty Terms Offered: Spring

Prerequisite(s): SALC 20100, ANTH 24101, HIST 10800, SOSC 20000, SOSC 23000

Equivalent Course(s): SOSC 23100, HIST 10900, SALC 20200

ANTH 24110. Jews, Arabs, and Others: Nations from the Nile to the Jordan. 100 Units.

This course considers nationbuilding as an ongoing and recurring process in the Middle East, realigning identities and communities according to the political concerns of the time. In particular, we will examine how Arabs and Others have figured in the political imagination of both Egypt and Israel-Palestine. When can Egyptians, Palestinians, and Israelis consider themselves 'Arab'—and when not? What are the stakes of naming Arab-ness or claiming it for oneself? To answer these questions, this course will include readings on Arab nationalism and minorities in Egypt, the question of Jewish versus Israeli nationalism, Arab (or Mizrahi) Jews in Israel, and the relationship of Palestinian nationalism to the borders that have been drawn within the historic land of Palestine.

Instructor(s): Callie Maidhof Terms Offered: Autumn

Equivalent Course(s): GLST 25209

ANTH 24302. Disability in Local and Global Contexts. 100 Units.

This is a course about intersections. Disability cuts across age, gender, class, caste, occupation, and religion— or does it? By some measures, people with disabilities are the largest minority group in the world today. In this course, we critically examine both the experiences of people with disabilities in a global context as well as the politics and processes of writing about such experiences. Indeed, questions of representation are perhaps at the core of this course. What role have the United Nations Declaration on the Rights of Persons with Disabilities and international organizations such as the United Nations, the World Health Organization, and other non-governmental social and human service agencies played in the creation of specific understandings of disability experience? We will ask whether disability is a universal category and we will consider how experiences of health, illness, disability, and debility vary. We will engage in 'concept work' by analyzing the relationships between disability and impairment and we will critically evaluate the different conceptual and analytical models employed to think about disability. In doing so, we will engage with broader questions about international development, human rights, the boundaries of the nation, the family and other kinship affiliations, and identity and community formation. How is disability both a productive analytic and a lens for thinking about pressing questions and concerns in today's world?

Instructor(s): M. Friedner Terms Offered: Winter

Equivalent Course(s): HLTH 24302, CHDV 25250, MAPS 46460

ANTH 24308. History of Perception. 100 Units.

Knowing time. Feeling space. Smelling. Seeing. Touching. Tasting. Hearing. Are these universal aspects of human consciousness, or particular experiences contingent upon time, place, and culture? How do we come to know about our own perceptions and those of others? This course examines these and related questions through detailed readings of primary sources, engagement in secondary scholarship in the history and anthropology of sensation, and through close work with participants' own sensations and perceptions of the world around them.

Equivalent Course(s): CHSS 35309, HIPS 25309, ANTH 34308, KNOW 31404, HIST 35309, KNOW 21404, HIST 25309

ANTH 24314. Meaning and the Body. 100 Units.

This course examines recent (20th- and 21st-century) retrievals of the body to understand 'meaning.' We will analyze varying construals of nature, materiality, matter, emotion, and thought. Readings will therefore be multidisciplinary, including selections from philosophy, sociolinguistics, anthropology, and religious studies. More specifically, we will examine the relationship between meaning and embodiment by way of the following: modern philosophies of the subject; analytic philosophies of language; deconstruction and the historicization of the body; feminist theories of discourse; new materialist conceptions of matter; new animist conceptions of the subject.

Instructor(s): Lisa Landoe Hedrick Terms Offered: Winter

Equivalent Course(s): RLST 26116

ANTH 24316. Thinking Psychoanalytically: From the Sciences to the Arts. 100 Units.

Since Freud's seminal investigation into the nature of the mind, psychoanalytic thinking has offered a unique approach to the unconscious, relational, and meaningful dimensions of human experience. Despite assaults on the field from numerous quarters, psychoanalytic thinking remains central to the work of practitioners across an array of disciplines. After an introduction to key psychoanalytic concepts including the unconscious, repression, and transference, we will investigate

some of the ways in which these ideas are mobilized within clinical practice, neuroscience, anthropology, education, philosophy, literary studies, and the visual arts through a series of lectures presented by specialists from these fields. Along the way, we will gain an appreciation for some of the ways in which psychoanalytic perspectives continue to inspire a variety of current scientific and humanistic projects.

Instructor(s): A. Beal; Staff Terms Offered: Spring

Prerequisite(s): Third or fourth-year standing

Equivalent Course(s): BPRO 28400

ANTH 24320. Cultural Psychology. 100 Units.

There is a substantial portion of the psychological nature of human beings that is neither homogeneous nor fixed across time and space. At the heart of the discipline of cultural psychology is the tenet of psychological pluralism, which states that the study of 'normal' psychology is the study of multiple psychologies and not just the study of a single or uniform fundamental psychology for all peoples of the world. Research findings in cultural psychology thus raise provocative questions about the integrity and value of alternative forms of subjectivity across cultural groups. In this course we analyze the concept of 'culture' and examine ethnic and cross-cultural variations in mental functioning with special attention to the cultural psychology of emotions, self, moral judgment, categorization, and reasoning.

Instructor(s): R. Shweder Terms Offered: Autumn

Prerequisite(s): Undergraduates must be in third or fourth year.

Note(s): CHDV Distribution: B, C

Equivalent Course(s): GNSE 31000, PSYC 33000, GNSE 21001, AMER 33000, ANTH 35110, EDSO 21100, PSYC 23000, CHDV 21000, CRES 21100, CHDV 31000

ANTH 24330. Medical Anthropology. 100 Units.

This course introduces students to the central concepts and methods of medical anthropology. Drawing on a number of classic and contemporary texts, we will consider both the specificity of local medical cultures and the processes which increasingly link these systems of knowledge and practice. We will study the social and political economic shaping of illness and suffering and will examine medical and healing systems-including biomedicine-as social institutions and as sources of epistemological authority. Topics covered will include the problem of belief; local theories of disease causation and healing efficacy; the placebo effect and contextual healing; theories of embodiment; medicalization; structural violence; modernity and the distribution of risk; the meanings and effects of new medical technologies; and global health.

Instructor(s): E. Raikhel Terms Offered: Winter

Prerequisite(s): PQ: Undergraduates must have completed or currently be enrolled in a SOSC sequence. Graduate option is only open to Master's students.

Note(s): CHDV Distribution: C, D; 3, 4

Equivalent Course(s): HIPS 27301, ANTH 40330, KNOW 43204, CHDV 23204, CHDV 43204, HLTH 23204

ANTH 24334. Introduction to Health and Society II. 100 Units.

What can the social sciences teach us about the ongoing coronavirus pandemic or the opioid epidemic of the past decade? How can we understand the sources of inequalities in access to care and in health outcomes across populations, both in the United States and globally? What is the significance of varying experiences of illness, categories of disorder, ideals of well-being, and forms of intervention across cultural settings and historical periods? This course introduces students to the social, political, and economic processes that shape individual and population health, as well as to a range of concepts and methods which social scientists use to study these processes. This summer's class will focus on the case studies of the 2020 coronavirus pandemic and the opioid epidemic, along with other cases. Please note that this course is not a continuation of HLTH 17000, but a summer session version of the same class. This course can be used to satisfy the HLTH 17000 requirement for the Health and Society minor. Students who are not currently in the minor are also welcome to take the course as an opportunity to learn about the social sciences of health and medicine.'

Instructor(s): Eugene Raikhel Terms Offered: Summer

Note(s): Please note that this course is not a continuation of HLTH 17000, but a summer session version of the same class.

This course can be used to satisfy the HLTH 17000 requirement for the Health and Society minor. Students who are not currently in the minor are also welcome to take the course as an opportunity to learn about the social sciences of health and medicine.

Equivalent Course(s): CHDV 24010, HLTH 17001, SOCI 20509

ANTH 24341. Topics in Medical Anthropology. 100 Units.

This seminar will review theoretical positions and debates in the burgeoning fields of medical anthropology and science and technology studies (STS). We will begin this seminar exploring how 'disease' and 'health' in the early 19-century became inseparable from political, economic, and technological imperatives. By highlighting the epistemological foundations of modern biology and medicine, the remainder of this seminar will then focus on major perspectives in, and responses to, critical studies of health and medicine, subjectivity and the body, entanglements of ecology and health, humanitarianism, and psychoanalytic anthropology.

Instructor(s): P. Sean Brotherton Terms Offered: Winter. Winter 2021

Prerequisite(s): Strongly recommended: previous lower-division courses in the social studies of health and medicine through ANTH, HIPS, HLTH, or CHDV

Note(s): This is an advanced reading seminar. Among undergraduates, 3rd and 4th year students are given priority. Consent only: Use the online consent form via the registrar to enroll.

Equivalent Course(s): CHDV 40301, HIPS 24341, ANTH 40310, CRES 24341, CHDV 24341, CHSS 40310, HLTH 24341

ANTH 24350. Historical Epistemology & Contemporary Biomedicine. 100 Units.

No description available

ANTH 24510-24511. Anthropology of Museums I-II.

This sequence examines museums from a variety of perspectives. We consider the World's Columbian Exposition of 1893, the Native American Graves Protection and Repatriation Act, the image and imagination of African American culture as presented in local museums, and museums as memorials, as exemplified by Holocaust exhibitions. Several visits to area museums required.

ANTH 24510. Anthropology of Museums I. 100 Units.

Using anthropological theories and methodology as a conceptual framework, this seminar will explore the organizational and ideological aspects of museum culture(s). The course includes visits to museums with guest museum professionals as guides into the culture of museums.

Equivalent Course(s): SOSC 34500, MAPH 34400, MAPS 34500, CHDV 34501, ANTH 34501

ANTH 24511. Anthropology of Museums II. 100 Units.

Using anthropological theories and methodology as a conceptual framework, this seminar will explore the organizational and ideological aspects of museum culture(s). The course includes visits to museums with guest museum professionals as guides into the culture of museums.

Equivalent Course(s): CHDV 38102, ANTH 34502, MAPS 34600, SOSC 34600

ANTH 24701. Political Anthropology. 100 Units.

This course introduces students to the anthropological study of politics and the political. Classes are seminar-style discussions with a mix of group discussions, mini-lectures, writing workshops, and in-class small group activities. In addition to reading major theoretical and empirical contributions to the field, students will also learn how to conduct meeting- and event-based ethnography and to compose ethnographic writing. Major assignments include conducting fieldwork, handing in periodic field notes journals, and a final paper assignment that weaves together field data with course readings. Authors include, but are not limited to the following: Abrams, Anderson, Aretxaga, Comaroff and Comaroff, Evans-Pritchard, Foucault, Mbembé, McGovern, Mitchell, Mosse, Nelson, Povinelli, Rabinow, Ramirez, Scott, Sharma and Gupta, Silverstein, Taussig, Trouillot, and Weber.

Instructor(s): Erin McFee Terms Offered: Winter. Course offered Winter 2020

Equivalent Course(s): ANTH 34701, GLST 24701, PBPL 24702

ANTH 24720. Trust after Betrayal: Society-Building in the Aftermath of Atrocity. 100 Units.

In this course, students will learn about the moral philosophy and anthropology of trust, mistrust, and betrayal. The course will be structured through four cases: the Colombian Peace Process, Germany's Stasi, the Cultural Revolution in China, and the United States 2008 Financial Crisis. The class will tend towards the discussion seminar format with some short lectures to help students bridge the theoretical and empirical materials. Students will analyze of laws, public discourses, literature, and ethnographic materials to write a final term paper on one of the four cases. As part of the course pedagogy, students will also learn how to form and manage productive writing groups and to write literature reviews that draw from multiple disciplines. The midterm will consist of a their literature review for their final term paper. Authors will include, but are not limited to the following: Baier, Benedict, Carey, Corsín Jimenez, Darwall, Faulkner, Fukuyama, Gambetta, Govier, Hawley, Holton, Jamal, Jones, Kleinman, Lewicki, Luhmann, McAllister, Möllering, Simpson, Tilly, and Widner.

Instructor(s): Erin McFee Terms Offered: Autumn. This course was offered Autumn 2019

Equivalent Course(s): HMRT 34720, HMRT 24720, ANTH 34720

ANTH 24725. Humans After Violence. 100 Units.

What happens to individuals and societies after experiences with violence? This course takes a critical look at scholarship and practitioner efforts to understand and influence those who make and unmake violence and who are implicated in its aftermath. The four units - violence, trauma, subjectivity, and reconciliation - explore and problematize each of these domains of inquiry. Throughout the course, we will draw from both foundational and emerging texts in anthropology and related disciplines as we critically examine the 're' in contexts of violence: re-integration of ex-combatants, re-entry of the formerly incarcerated individuals, re-turn of displaced populations, and re-conciliation among war affected peoples. What are the reach and limits of these discourses in contexts of violence and physical and socioeconomic insecurity? How is social life in these settings differentially experienced according to gender and stages of the life course? The course will also include an examination of methodological approaches to studying violence-affected individuals and communities as well as issues of decolonizing research, non-extractive approaches, reflection on relations of power and inequality, and trauma-informed approaches to research and engagement. Students will develop a case study of their choosing over the quarter and receive dedicated classroom instruction on writing interdisciplinary literature reviews.

Instructor(s): Erin McFee Terms Offered: Winter. Winter 2021

Prerequisite(s): Open to 3rd or 4th year undergraduates and masters students

Equivalent Course(s): GLST 24725, HMRT 34721, HMRT 24725, ANTH 34721

ANTH 24730. Religious Violence. 100 Units.

Are there 'proper' or 'improper' practices of religion? Is it at best a matter of private belief, to be kept separate from or protected by the state? Or is it something that at times requires the state's intervention? Does religion represent the last vestiges of the premodern world, or is it something that is integral to modern life? To answer these questions, we will call on anthropologists and other social scientists and theorists to understand, first, what is 'religion,' and then what is, can be,

or should be its relationship to gender, the nation, and the modern state in various historical and geographical locations, with particular attention to the Middle East and South Asia.

Instructor(s): Callie Maidhof Terms Offered: Spring

Equivalent Course(s): GLST 25630, RLST 26630

ANTH 24810. Atmospherics. 100 Units.

In a world of changing climate, how do we change the political? What affective chemistry is needed to recognize and mobilize on behalf of shifting air currents? This seminar explores the conceptual and material chemistries of atmosphere. The course will investigate key texts on climate change, embodiment, and affect, as well as recent ethnographic explorations of environmental sensibilities across air, ice, ocean, and land.

Terms Offered: Spring

Note(s): This course qualifies as a Discovering Anthropology selection for Anthropology majors.

Equivalent Course(s): HIPS 24810

ANTH 24830. Oil, Power, Modernity: The Anthropology of Energy. 100 Units.

Oil is often regarded as the quintessential commodity of modern industrial capitalism. Oil is a material substrate of power—as a source of energy, an impetus for warfare, and a source of windfall revenue for multinational corporations and petrostates. This undergraduate seminar surveys social scientific approaches to oil and adjacent energy complexes. This seminar will debate the character of oil as a material substance and an instrument of political power. To this end, students will consult the writings of anthropologists, geographers, and economists alongside creative media including film, television, and short stories.

Instructor(s): Ryan Jobson Terms Offered: Winter. Winter 2021

Note(s): Course is designed for undergraduates and master's students

Equivalent Course(s): ANTH 35515

ANTH 24835. Global Disaster Ecologies: Interspecies Exposures and Immunities. 100 Units.

This class explores ecologies that thrive, transform, or collapse under severe anthropogenic pressures. Construing 'ecology' and 'disaster' broadly, it attends to human and nonhuman interdependencies in contexts at once different and related: (post)war landscapes, sites of modern agriculture and food production, and extreme weather events attributed to global climate change. The class asks: what social and ecological relations become possible, thinkable, and tenable when scientific and experiential facts of natural destruction meet optimistic ideologies of conservation, resilience, and climate finance? Interdisciplinary class readings will place special emphasis on honeybees' collapse and worldwide insect decline.

Instructor(s): Jasarevic, Larisa Terms Offered: Autumn

Equivalent Course(s): GLST 25250, ENST 25250

ANTH 24910. Contemporary Social Theory. 100 Units.

This course is about how contemporary theorists and those interested in a theoretical sociology, anthropology or related fields think about societies, how they rearranges themselves, and how social and cultural forms and relations can be analyzed. It addresses connections that transcend national borders and connections that require us to dig deeper than the person and look at the brain. We address different theoretical traditions, including those attempting a diagnosis of our times, and mechanism theories. The overall focus is on defining and agenda setting paradigms in the second half of the 20th century and some new 21st century theorizing.

Instructor(s): K. Knorr Terms Offered: Autumn

Equivalent Course(s): SOCI 20291, ANTH 30310, SOCI 30291

ANTH 25100. Anthropology of the Body. 100 Units.

Drawing on a wide and interdisciplinary range of texts, both classic and more recent, this seminar will variously examine the theoretical debates of the body as a subject of anthropological, historical, psychological, medical, and literary inquiry. The seminar will explore specific themes, for example, the persistence of the mind/body dualism, experiences of embodiment/alienation, phenomenology of the body, Foucauldian notions of bio-politics, biopower and the ethic of the self, and the medicalized, gendered, and racialized body, among other salient themes.

Instructor(s): P. Sean Brotherton Terms Offered: Spring. Spring 2021

Note(s): CHDV Distribution: D

Equivalent Course(s): GNSE 25112, CHDV 25100, CRES 25112

ANTH 25117. About Nature: From Science to Sense. 100 Units.

Consider mushrooms,' Anna Tsing (2012) suggests to those who are curious about human nature and she points to the relational and biological diversity found at the unruly edges of the global empire—the governmentalized, politicized, commoditized culture nature of capitalism. This class follows the suit, tracking the scent of what evidently remains, thrives, withdraws, overwhelms, and inspires wonder in the guises of the natural, wild, organic, or awesome.

Instructor(s): L. Jasarevic Terms Offered: Winter

Equivalent Course(s): GLST 27702, INST 27702

ANTH 25118. Earthbound Metaphysics: Speculations on Earths and Heavens. 100 Units.

Social thought has recently reopened the subject matter of the 'world': what is it made of, how does it hold together, who and what inhabits it? Proposals and inquiries generated in response are as imaginative as they are self-consciously urgent: written on the crest of the global ecological disaster, from within the zones of disturbance or the sites of extreme intervention into the living matter and forms of life, contemplating the end of the world and possibilities of extinction, redemption, cohabitation, or 'collateral survival' (Tsing 2015). All are variously political. Foregrounding the plurality of the material worlds and lived worldviews on the one hand, and of the shared historical predicament on the other, social thinkers question universal values and conceivable relations, and search for alternate forms of grasping, engaging, and representing the

pluriverse. This course goes along with such interests in the 'worlds' and collects a number of compelling, contemporary texts that are variously oriented towards cosmopolitics, 'minimalist metaphysics,' 'new materialisms,' speculative realisms, eco-theology, and multispecies coexistence. Readings will stretch out to examine some classic ethnographic texts and past theoretical excursions into the perennial problem of how to know and tell the unfamiliar, native, worlds, which are swept by, mingling with, or standing out in the more globalizing trends of capitalist, scientific, and secular materialism.

Terms Offered: Spring

Equivalent Course(s): GLST 27703

ANTH 25148. Israel in Film and Ethnography. 100 Units.

This seminar explores the dynamics of Israeli culture and society through a combination of weekly screenings of Israeli fiction and documentary films with readings from ethnographic and other relevant research. Among the (often overlapping) topics to be covered in this examination of the institutional and ideological construction of Israeli identity/ies: the absorption of immigrants; ethnic, class, and religious tensions; the kibbutz; military experience; the Holocaust; evolving attitudes about gender and sexuality; the struggle for minorities' rights; and Arab-Jewish relations. In addition to the readings, participants will be expected to view designated films before class related to the topic.

ANTH 25150. Anthropology of Israel. 100 Units.

This seminar explores the dynamics of Israeli culture and society through a combination of weekly screenings of Israeli fiction and documentary films with readings from ethnographic and other relevant research. Among the (often overlapping) topics to be covered in this examination of the institutional and ideological construction of Israeli identity/ies: the absorption of immigrants; ethnic, class, and religious tensions; the kibbutz; military experience; the Holocaust; evolving attitudes about gender and sexuality; the struggle for minorities' rights; and Arab-Jewish relations.

Instructor(s): Morris Fred Terms Offered: Spring

Equivalent Course(s): JWSC 25149, ANTH 35150, MAPS 35150, NEHC 25147, NEHC 35147, CMES 35150

ANTH 25207. Gender, Sexuality, & Religion. 100 Units.

In many cultural contexts today, religion is often seen as a socially conservative force in public and political realms. For instance, Christian 'pro-life' movements in the US often draw on tropes of women's 'traditional' role as mothers to argue against easily accessible abortion clinics or contraceptives; recent faith-based objections to legal protections for LGBTQ individuals; and debates in the US and Western Europe about Muslim women's use of the veil as inherently disempowering women. Social scientists have often noted the logics of duality that shape our contemporary world: religious/secular, traditional/modern, conservative/liberal, private/public, etc. Within this logic, religious peoples are presumed to be traditional or 'primitive' and therefore hostile to modernity or foreclosed from being modern. Similarly, to be progressive or liberal, one is assumed to be secular and skeptical of religion. Is it always the case, though, that religion is conservative, traditional, and works to maintain the status quo of possible gender roles and sexual identities in society? The goal of this course is to investigate this question. We will look at contemporary places around the world, multiple religions, and various genders and sexualities in order to complicate the picture of how religion and gender inform one another.

Equivalent Course(s): CHDV 20802, GNSE 20802, RLST 26909

ANTH 25208. Bodies, Gifts, and Commodities. 100 Units.

This course presents a survey of anthropological theories of gifts and commodities and how they have been used to explain exchanges involving the human body. We will consider various forms of labor, including sex work and paid surrogacy, exchanges enabled by modern biotechnologies, such as organ and tissue donation, as well as other contexts where the body is objectified and fragmented, such as in the discovery and marketing of genetic materials and processes.

Instructor(s): Elham Miresghhi Terms Offered: Spring

Equivalent Course(s): GNSE 27570, AASR 37570, RLST 27570

ANTH 25209. Morality across the Life Course. 100 Units.

Morality across the Life Course. What does it mean to be a moral person? And how do moral expectations within a given society shift across the life course? Social scientists have noted that what it means to be a moral child may not always be the same as what it means to be a moral adolescent or middle-aged adult. At the same time, scholars have been interested in how moral ideals pass from one generation to another through processes such as socialization. Social reproduction must also deal with globalization and other sources of social change. By honing in on such processes of social reproduction and change, many have suggested we may better understand how moral beliefs change across generations and over time. In this course we will explore these processes of moral development, socialization, and change, drawing largely on anthropological and psychological research. While early developmental psychologists theorized moral development as stage-based and teleological (i.e., an ultimate, ideal adult moral personhood towards which developmental stages were progressive steps), anthropologists and cultural psychologists working in many different cultural contexts have complicated this understanding of morality. We will begin the quarter by looking at some of the early texts and theories about moral development in addition to early concerns about social reproduction across generations. Afterwards we will turn to a series of ethnographic monographs in order to explore in detail how particular life course stages are conceptualized in moral terms in various parts of the world and in different contexts of social change.

Equivalent Course(s): CHDV 20803

ANTH 25212. Treating Trans-: Practices of Medicine, Practices of Theory. 100 Units.

Medical disciplines from psychiatry to surgery have all attempted to identify and to treat gendered misalignment, while queer theory and feminisms have simultaneously tried to understand if and how trans- theories should be integrated into their respective intellectual projects. This course looks at the logics of the medical treatment of transgender (and trans- more broadly) in order to consider the mutual entanglement of clinical processes with theoretical ones. Over the quarter we will

read ethnographic accounts and theoretical essays, listen to oral histories, discuss the intersections of race and ability with gender, and interrogate concepts like 'material bodies' and 'objective science'. Primary course questions include: 1.

Instructor(s): Paula Martin Terms Offered: Spring

Note(s): This course counts as a Foundations Course for GNSE majors

Equivalent Course(s): HLTH 12103, CHDV 12103, HIPS 12103, GNSE 12103

ANTH 25214. (Re)Producing Race and Gender through American Material Culture. 100 Units.

This course introduces students to the role of the material world in the production and reproduction of ideologies of race, gender, and their intersections. Objects around us are imbued with meaning through their design, construction, use, and disuse. Architecture, art, photography, clothing, quilts, toys, food, and even the body have all been used to define groups of people. Combining secondary literature, theory, documentary evidence, and material culture, this course guides students as they ask questions about how ideologies of race and gender are produced, how they are both historically specific and constantly in flux, and how human interaction with the material world creates, challenges, and changes their construction. The primary course objectives are to (1) provide students with an introduction to material culture as a theory and methodology and (2) teach them how to apply it to research on ideologies of gender and race in history.

Terms Offered: Winter

Equivalent Course(s): CRES 27530, GNSE 27530, ARTH 27530, HIST 27414

ANTH 25216. Gender, Sex, and Culture. 100 Units.

This introductory graduate course examines the social construction of gendered identities in different times and places. We study culturally-specific gendered experiences, 'roles,' rights and rebellions around the world, discussing the individual and social consequences of gender and the interrelationships between gender and other categories for identity including race, class and sexuality. While focusing on the global diversity of gendered experience and expectations, we also examine gender in the US, taking a critical approach to understanding gendered inequality and gender-based and sexual violence both abroad and at home. Finally, we examine the role of gendered expectations in Western science, the relationship between gender and 'globalization,' and the contemporary movements affecting change in gendered norms, especially in the arts and media. Advanced Undergraduates admitted with Instructor consent.

Instructor(s): Mary Elena Wilhoit Terms Offered: Autumn

Prerequisite(s): Advanced Undergraduates admitted with Instructor consent.

Equivalent Course(s): MAPS 33502, ANTH 32925, GNSE 33506, GNSE 23506

ANTH 25255. Borders, (Im)mobilities and Human Rights. 100 Units.

What is the human cost of border control? To what extent do individuals possess the right to move to other states? How do different states with large populations of refugees and asylum seekers develop and enforce migration policies, and what do the differences in these policies reveal about the social histories and futures of these states? To address these questions, we will consider how borders, institutions, and categories of migrant groups mutually shape one another. We will explore the interrelationships between categories of migration-forced, economic, regular, and irregular-in order to understand the multiple and unequal forms of mobility experienced by those who inhabit these categories. By utilizing a framework of human rights, this course will investigate how contemporary issues in migration-such as border management, illicit movement, and the fuzzy distinction between forced and economic migration-raise and reopen debates concerning the management of difference. We will draw on the work of anthropologists, sociologists, and geographers, as well as journalists, legal, and medical professionals. Our readings each week will include a mix of conceptual, ethnographic, long-form journalism, and policy texts. When possible, we will also invite representatives from different Chicago-based organizations that promote and protect the rights of people in various situations of migration to come to our class to discuss their work.

Equivalent Course(s): CHDV 23403, HMRT 23403, GLST 23403

ANTH 25256. Anthropology of Borders. 100 Units.

Today, the world may seem more connected than ever. Infectious disease, data, global capital, and even 'culture' seem to travel in the blink of an eye. At the same time, we're witnessing the fortification of borders, and a resurgence of rightwing ethnonationalist populism on both sides of the Atlantic. Borders take on new significance national debates and security policy, and for those who rarely come into contact with borders, they may seem like mere metaphor for how a nation positions itself with regard to immigration, public health, and trade. But beyond the party platforms of politicians in the world's capitol, borders are very real places, constituted by the practices of state and non-state actors alike, and creating new forms of life in response to the technologies that police them. In this course, we will take an anthropological view of borders in order to understand how they are created, policed, and inhabited, following and bucking trends in the micropractices of military, police, and bordercrossers both legal and illegal.

Instructor(s): Callie Maidhof Terms Offered: Winter

Equivalent Course(s): GLST 25701

ANTH 25305. Anthropology of Food and Cuisine. 100 Units.

Contemporary human foodways are not only highly differentiated in cultural and social terms, but often have long and complicated histories. Anthropologists have long given attention to food. But, until quite recently, they did so in an unsystematic, haphazard fashion. This course explores several related themes with a view towards both the micro- and macro-politics of food by examining a range of ethnographic and historical case studies and theoretical texts. It takes the format of a seminar augmented by lectures (during the first few weeks), scheduled video screenings, and individual student presentations during the rest of the course.

Instructor(s): S. Palmie Terms Offered: Was Offered in 2019-20; will not be offered in 2020-21.

Note(s): This course qualifies as a Discovering Anthropology selection for Anthropology majors.

Equivalent Course(s): ANTH 35305

ANTH 25315. XCAP: Food for Thought. 100 Units.

If anthropology and contemporary art have one thing in common, it is the aim to de-familiarize taken-for-granted ways of being in the world by means of ethnographic comparison or aesthetic provocation so as to open up new perspectives on the complexities of human social life. Co-taught by an artist and an anthropologist, this course considers what's at stake when contemporary artists build on this longstanding practice to explore the complexities of current societal, political, and cultural contexts.

Instructor(s): Laura Letinsky & Stephan Palmié Terms Offered: Autumn

Note(s): for 3rd and 4th year students only

Equivalent Course(s): ARTV 36210, CMST 36210, ARTV 26210, ANTH 35315, ARTH 29942, CMST 26210, KNOW 29942

ANTH 25322. Food Politics in a Global World. 100 Units.

Food Politics' means so many things: Trust, risk, danger. Safety, regulation, retail, and consumption across wildly different scales: global, (trans)national, urban, regional, local, distant, foreign. Diets, fasts, binges. Canning, refrigeration, cafeterias, farmers' markets, and the cold aisles of supermarkets. Educated consumers, mass panics, and the 'distant' bodies of humanitarian aid. In this class, ethnographic and comparative approaches to food politics will be our lens into recognizing, discussing, and thinking about food as a critical site of global politics. We will examine articulations of social differences, performances and performativities of bodies (gendered, migrant, public, private, clandestine, hungry, satiated, healthy, and criminal), transnational battles over regional and local 'purity,' and sensibilities that do or do not trust sites of economic and/or political authority positioned far away. Indeed, food politics are just as much a window into the investigative and critical potentials of ethnography in a global world as they are a way to recognize the moral, popular, imaginary, and experiential processes at work and constitutive of taken-for-granted political actor-abstractions such as 'the state' 'the economy' and 'the public.'

Instructor(s): Czarnecki, Natalja Terms Offered: Winter

Equivalent Course(s): ENST 24233, GLST 24233

ANTH 25401. Consumption. 100 Units.

The modern period was associated with industrial production, class society, rationalization, disenchantment, the welfare state, and the belief in salvation by society. Current societies are characterized by a culture of consumption; consumption is central to lifestyles and identity, it is instantiated in our technological reality and the complex of advertising media, structures of wanting and shopping. Starting from the question 'why do we want things' we will discuss theories and empirical studies that focus on consumption and identity formation; on shopping and the consumption of symbolic signs; on consumption as linked to the re-enchantment of modernity; as a process of distinction and of the globalization of frames; and as related to time and information. The course is built around approaches that complement the 'productionist' focus of the social sciences. Students interested in economic sociology and anthropology can supplement this course by one on Markets and Money.

Instructor(s): K. Knorr Cetina Terms Offered: Autumn

Equivalent Course(s): SOCI 20150, ANTH 35401, SOCI 30150

ANTH 25422. Struggle and Solidarity: The Politics of Chicago Labor in the 19th and 20th Centuries. 100 Units.

In this course we will question how and why Chicago was important to the way we think about 'work.' Employment, equity, wages, and security are certainly of debate throughout the nation today, but Chicago has been at the forefront of this contentious conversation for the last two hundred years. In order to better understand the relationship between advancing capitalism, labor politics, the workers' body, exploitation, and resistance we will analyze the Haymarket Massacre, the Chicago Stockyards, and the African-American Pullman Porters. To be sure, laborers built this city with broad shoulders, but also with a commitment to struggle and solidarity that changed the social, political, and economic landscape of the United States and the world forever. What about the confluence of labor and capital sparked these events? How does union organization work on a pragmatic level as well in regards to ideological (re)formation? In what other ways can populations resist oppression? How do class, race, capital, and labor intersect in society over time and why do those relationships shift? What are the differences or similarities regarding labor issues between Chicago and other parts of the world?

Instructor(s): K. Bryce Lowry Terms Offered: Spring, Spring 2021

Equivalent Course(s): ENST 25422, HIST 28812

ANTH 25455. Work, Labor, Value. 100 Units.

Who works and who doesn't? How does labor create value? And who directs these processes and who ultimately benefits? This course explores how work and labor vary cross-culturally and transform under modern capitalism and in response to social and technological change. It brings together a wide selection of scholarship from within anthropology and related disciplines to explore how the categories of work, labor and value are constituted across different political-economic regimes and cultural frameworks and differently theorized within the social sciences. Inter alia, students explore the role of 'kinship' and the primacy of 'gender' or 'class' in small-scale, non-capitalist economies; the historical significance of distinct labor regimes (e.g. 'feudalism', 'slavery' and 'wage-labor') and the role of each in the transition to modern capitalism; the imposition of colonial labor regimes and the modern global division of labor; racialized and gendered political-economy and the role of racial and gender categories in shaping ideologies of labor and occupational hierarchies; the emergence of labor movements and the institutionalization of 'working class' politics; the role of border regimes and migration in the formation of transnational labor regimes; the opposition between 'physical' or 'manual' labor on the one hand, and 'intellectual', 'affective' or 'semiotic' labor on the other; the effects of mechanization and automation and ongoing debates about right to employment.

Instructor(s): Patrick Lewis Terms Offered: Winter. Winter 2021

ANTH 25720. Unfolding Anthropology: Practices of Research and Representation. 100 Units.

This introductory graduate course interrogates the forms of interaction, understanding, and representation that define the ongoing evolution of the discipline of anthropology. Starting with the early moments of anthropology and proceeding to contemporary texts, we will identify both the unique insights anthropology offers and its blind spots. Students will be given opportunities to explore the value of anthropology as a way of thinking with and about human experience through close studies of the discursive frameworks, aesthetic forms, and claims of ethnographies. What kinds of knowledge are conveyed in what forms? What kinds of truths are communicated through what kinds of texts? These are some of the questions we will explore as we gain exposure to wide-ranging ethnographies focused on South Asia, Brazil, Morocco, Southern Africa, and the United States. We will enrich close readings of ethnographies with hands-on explorations of the methods of anthropology. Students will undertake research projects, and compose abridged ethnographies in order to complicate their practices of intellectual engagement and critique with the contingencies of life outside the classroom.

Instructor(s): Victoria Gross Terms Offered: Autumn

Equivalent Course(s): ANTH 35720, MAPS 34512

ANTH 25905-25906. Introduction to the Musical Folklore of Central Asia.

No sequence description available.

ANTH 25905. Introduction to the Musical Folklore of Central Asia. 100 Units.

This course explores the musical traditions of the peoples of Central Asia, both in terms of historical development and cultural significance. Topics include the music of the epic tradition, the use of music for healing, instrumental genres, and Central Asian folk and classical traditions. Basic field methods for ethnomusicology are also covered. Extensive use is made of recordings of musical performances and of live performances in the area.

Instructor(s): Kagan Arik Terms Offered: Spring

Equivalent Course(s): MUSI 33503, REES 35001, REES 25001, MUSI 23503, NEHC 20765, NEHC 30765

ANTH 25906. Shamans and Oral Poets of Central Asia. 100 Units.

This course explores the rituals, oral literature, and music associated with the nomadic cultures of Central Eurasia.

Instructor(s): K. Arik Terms Offered: Spring

Equivalent Course(s): NEHC 20766, NEHC 30766

ANTH 25908. Balkan Folklore. 100 Units.

Vampires, fire-breathing dragons, vengeful mountain nymphs. 7/8 and other uneven dance beats, heart-rending laments, and a living epic tradition. This course is an overview of Balkan folklore from historical, political, and anthropological perspectives. We seek to understand folk tradition as a dynamic process and consider the function of different folklore genres in the imagining and maintenance of community and the socialization of the individual. We also experience this living tradition firsthand through visits of a Chicago-based folk dance ensemble, 'Balkan Dance.'

Instructor(s): A. Ilieva Terms Offered: Winter

Equivalent Course(s): REES 39009, REES 29009, CMLT 23301, NEHC 30568, NEHC 20568, ANTH 35908, CMLT 33301

ANTH 25909. Anthropological Approaches to Global Hip Hop(s) 100 Units.

In this course, our goal will be to further develop a series of tools with which to study hip hop in its local, regional, and transnational diversity. How do artists make affinities and draw distinctions along aesthetic, political, and other social lines? What symbolic status and importance do artists outside of urban North America accord the genre's US and African-American historical lineages? What role do states and industries play in mediating the forms that so-called global hip hops assume? Hip hop scholars have productively analyzed the genre and its associated messages and styles by way of analytics like post-industrialization, authenticity, resistance, 'flows,' and identity. We will also explore the ways in which hip hop relates to genre and semiotic ideology, subjectivity and publics/groups/nations. Toward these ends, seminar discussion will consider historical and audiovisual material from French, Senegalese, German, Russian, Mongolian, American, post-Yugoslav, and other scenes. Through a variety of screenings, listenings, and other activities, we will encounter a diverse range of hip hop's crafts in addition to rap, including beat-making, -boxing, and DJing/turntablism/controllerism. Course readings will address ethnographic, historical, journalistic, and artistic considerations of hip hop's creative practices, while situating these in more abstract, yet relevant debates within anthropology, ethnomusicology, and media studies.

Instructor(s): Owen Kohl Terms Offered: Spring

Equivalent Course(s): GLST 24801

ANTH 25920. Are You Not Entertained? The Anthropology and Politics of 'Fun' 100 Units.

Spaces throughout our uncertain present have often been referred to as 'post-industrial.' However, many cities, regions, and laborers remain dedicated to bringing novel, entertaining product including films, music, and devices to diverse markets. Among skeptics, an old functionalist question has reemerged: Do seemingly lighthearted institutions, venues, and technogadgets enable capitalism's continued transnational primacy through their capacity to distract? Are pressing social problems including gross wealth imbalance, state surveillance, and punitive policing ignored in favor of never-ending amusement? No doubt, theoreticians from various walks of life have long deemed entertainers, gizmos, and the audiovisuals that they conjure critical in winning hearts, minds, and conflicts - both foreign and domestic. By following ambivalent, aspirational genres through a range of distinct, yet kindred 21st century industries, we will critically consider entertainment's capacity to reflect, challenge, and shape political economy. Our bi-weekly lectures, readings, and discussions will draw upon social practices and performances that have awkwardly aimed to do more than merely amuse by supposedly educating, enlightening, and benefiting consumers. We will first consider (post-) colonial and Cold War historical genealogies by looking closely at battlegrounds of fun such as the Soviet circus, the Yugoslav music and film industries, and the State Department's jazz 'jambassadors.'

Instructor(s): Kohl, Owen Terms Offered: Winter
Equivalent Course(s): GLST 24655

ANTH 25975. AdvRdgs: Anthropology of the Modern Subject. 100 Units.

Anthropology of the Modern Subject will frame its consideration of modernity through two intersecting lenses: the subject and the state. During the first week, we will engage with foundational texts representing various conceptions of the modern project. During the following two sessions, we will consider the formation of the modern subject and its relation to the state, focusing on two primary concerns that have structured debate in these areas: discourse and secularism. During the final two sessions, we examine two paradigms that have fundamentally questioned and re-imagined the modern project and its ostensible subjects: Bruno Latour's posthumanist writings and Deleuze and Guattari's critique of modern conceptions of the subject and its relation to capital.

Instructor(s): John D. Kelly Terms Offered: Might be offered during 2020-21.

Prerequisite(s): Consent of Instructor

Equivalent Course(s): ANTH 55854

ANTH 26115. Rome: The Eternal City. 100 Units.

The city of Rome was central to European culture in terms both of its material reality and the models of political and sacred authority that it provided. Students in this course will receive an introduction to the archaeology and history of the city from the Iron Age to the early medieval period (ca. 850 BCE-850 CE) and an overview of the range of different intellectual and scientific approaches by which scholars have engaged with the city and its legacy. Students will encounter a broad range of sources, both textual and material, from each period that show how the city physically developed and transformed within shifting historical and cultural contexts. We will consider how various social and power dynamics contributed to the formation and use of Rome's urban space, including how neighborhoods and residential space developed beyond the city's more famous monumental areas. Our main theme will be how Rome in any period was, and still is, a product of both its present and past and how its human and material legacies were constantly shaping and reshaping the city's use and space in later periods.

Instructor(s): Margaret Andrews Terms Offered: Spring

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): HIST 16603, ARCH 16603, ENST 16603, CLCV 24119

ANTH 26120. Troy and Its Legacy. 100 Units.

This course will explore the Trojan War through the archaeology, art, and mythology of the Greeks and Romans, as well as through the popular imaginings of it in later cultures. The first half will focus on the actual events of the 'Trojan War' at the end of the second millennium BCE. We will study the site of Troy, the cities of the opposing Greeks, and the evidence for contact, cooperation, and conflict between the Greeks and Trojans. Students will be introduced to the history of archaeology and the development of archaeological fieldwork. The second half will trace how the narrative and mythology of Homer's Iliad and the Trojan War were adapted and used by later civilizations, from classical Greece to twenty-first-century America, to justify their rises to political and cultural hegemony in the Mediterranean and the West, respectively.

Instructor(s): M. Andrews Terms Offered: Spring

Equivalent Course(s): CLCV 20404, HIST 30404, CLAS 30404, HIST 20404, ARCH 20404, ANTH 36120

ANTH 26330. Making the Maya World. 100 Units.

What do we know about the ancient Maya? Pyramids, palaces, and temples are found from Mexico to Honduras, texts in hieroglyphic script record the histories of kings and queens who ruled those cities, and painted murals, carved stone stelae, and ceramic vessels provide a glimpse of complex geopolitical dynamics and social hierarchies. Decades of archaeological research have expanded that view beyond the rulers and elites to explore the daily lives of the Maya people, networks of trade and market exchange, and agricultural and ritual practices. Present-day Maya communities attest to the dynamism and vitality of languages and traditions, often entangled in the politics of archaeological heritage and tourism. This course is a wide-ranging exploration of ancient Maya civilization and of the various ways archaeologists, anthropologists, linguists, historians, and indigenous communities have examined and manipulated the Maya past. From tropes of long-hidden mysteries rescued from the jungle to New Age appropriations of pre-Columbian rituals, from the thrill of decipherment to painstaking and technical artifact studies, we will examine how models drawn from astrology, ethnography, classical archaeology and philology, political science, and popular culture have shaped current understandings of the ancient Maya world, and also how the Maya world has, at times, resisted easy appropriation and defied expectations.

Instructor(s): Sarah Newman Terms Offered: Autumn. Autumn 2020

Equivalent Course(s): ANTH 36330, LACS 26330, LACS 36330

ANTH 26715. The Rise of the State in the Ancient Near East. 100 Units.

This course introduces the background and development of the first urbanized civilizations in the Near East in the period from 9000 to 2200 BC. In the first half of this course, we examine the archaeological evidence for the first domestication of plants and animals and the earliest village communities in the 'fertile crescent' (i.e., the Levant, Anatolia, and Mesopotamia). The second half of this course focuses on the economic and social transformations that took place during the development from simple, village-based communities to the emergence of the urbanized civilizations of the Sumerians and their neighbors in the fourth and third millennia BC.

Instructor(s): G. Stein Terms Offered: Winter

Equivalent Course(s): ANTH 36715, NEAA 20030, NEAA 30030

ANTH 26760. Archaeology of Bronze Age China. 100 Units.

Bronze Age' in China conventionally refers to the time period from ca. 2000 BC to about 500 BC, during which bronze, an alloy of copper and other metals such as tin and lead, was the predominant medium used by the society, or to be more precise, the elite classes of the society. Bronze objects, in the forms of vessels, weapons, and musical instruments, were reserved for the upper ruling class of the society and were used mostly as paraphernalia during rituals and feasting. 'Bronze Age' in China also indicates the emergence and eventual maturation of states with their bureaucratic systems, the presence of urban centers, a sophisticated writing system, and advanced craft producing industries, especially metal production. This course surveys the important archaeological finds of Bronze Age China and the theoretical issues such as state formation, craft production, writing, bureaucratic systems, urbanization, warfare, and inter-regional interaction, etc. It emphasizes a multi-disciplinary approach with readings and examples from anthropology, archaeology, art history, and epigraphy. This course will also visit the Smart Museum, the Field Museum, and the Art Institute of Chicago to take advantage of the local collections of ancient Chinese arts and archaeology.

Instructor(s): Y. Li Terms Offered: Spring

Equivalent Course(s): EALC 28015, ANTH 46760, EALC 48015

ANTH 26765. Archaeology of Anyang: Bronzes, Inscriptions, and World Heritage. 100 Units.

Anyang is one of the most important archaeological sites in China. The discoveries of inscribed oracle bones, the royal cemetery, clusters of palatial structures, and industrial-scale craft production precincts have all established that the site was indeed the last capital of the Shang dynasty recorded in traditional historiography. With almost continuous excavations since the late 1920s, work at Anyang has in many ways shaped and defined Chinese archaeology and the study of Early Bronze Age China. This course intends to examine the history of research, important archaeological finds, and the role of Anyang studies in the field of Chinese archaeology. While the emphasis is on archaeological finds and the related research, this course will also attempt to define Anyang in the modern social and cultural contexts in terms of world heritage, national and local identity, and the looting and illegal trade of antiquities.

Instructor(s): Y. Li Terms Offered: Winter

Note(s): Open to undergraduates with consent of instructor

Equivalent Course(s): ANTH 36765, EALC 48010, EALC 28010

ANTH 26825. Heritage, Memory, and the Affective Turn: Performing and Consuming the Past. 100 Units.

TBA

Instructor(s): Michael Dietler Terms Offered: Winter. Winter 2021

Note(s): This course qualifies as a Discovering Anthropology selection for Anthropology Majors

ANTH 26900. Archaeological Data Sets. 100 Units.

This course focuses on the methodological basis of archaeological data analysis. Its goals are twofold: (1) to provide students with an opportunity to examine research questions through the study of archaeological data; and (2) to allow students to evaluate evidential claims in light of analytical results. We consider data collection, sampling and statistical populations, exploratory data analysis, and statistical inference. Built around computer applications, the course also introduces computer analysis, data encoding, and database structure.

Instructor(s): Alice Yao Terms Offered: Was offered in 2019-20; will be offered again in 2021-22.

Prerequisite(s): Advanced standing and consent of instructor for undergraduates

Equivalent Course(s): ANTH 46900

ANTH 27001. Intro To Linguistics-I. 100 Units.

TBD

Equivalent Course(s): LING 30100, ANTH 37001, SOSC 21700, LING 20100

ANTH 27116. Language and Migration: Individual, Social and Institutional Perspectives. 100 Units.

This class offers a broad range of perspectives on issues regarding language in the context of migration. For instance we analyze the ways in which language has been instrumentalized by Nation-States to regiment and restrain the mobility of targeted populations. We deconstruct the straightforward correlation between socio-economic integration and language competence in discourse produced by politicians and some academics alike. We also analyze how different types of mobility (e.g., slavery, colonization, and free individual migration) produce, at different times, differing sociolinguistic dynamics.

Equivalent Course(s): LING 30249, CHDV 30249, ANTH 37116

ANTH 27170. Verbal Art. 100 Units.

This course introduces linguistic patterns of speech play and verbal art (SPVA), including parallelism, jokes, language games, sound symbolism, puns, ideophones, poetry, and other expressive strategies. We examine how speakers of indigenous and minority languages around the world use these strategies in everyday speech, and discuss how native intuitions and interpretations of SPVA data provide a key to understanding epistemologies, social identities, power and inequalities, and language ideologies. Through a humanistic and scientific lens, we will theorize how SPVA pushes the boundaries of iconicity, creativity, and variation. The everyday use of SPVA becomes central to understanding the language, culture, society, and individual nexus.

Instructor(s): Natalia Bermudez Terms Offered: Spring

Equivalent Course(s): LING 27170

ANTH 27305. Pornography and Language. 100 Units.

The course explores the place and role of language in pornographic films. Why does language occur in filmed pornography at all? What kind of language occurs? What role does it play? How is it gendered? How does it frame the narrative or drive it forward? How does language subvert or undermine the visual representation of sex? What does any of this tell us about gender, sexuality and erotics in non-pornographic contexts? Course readings focus on theories of pornographic

representation, theories of language, gender and erotics, and methods of transcribing and analyzing dialogue. The course requires students to watch a wide range of pornography, including different varieties of straight, gay and trans porn, so anyone enrolling in the course must be interested in pornography as a social and cultural phenomenon and must also have experience watching porn and thinking about it.

Instructor(s): D. Kulick Terms Offered: Spring

Prerequisite(s): Upper-level undergrad course.

Equivalent Course(s): LING 29405, CHDV 20405

ANTH 27430. Linguistic Politics: Language Revitalization. 100 Units.

Linguists and the general public have long been alarmed about the number of languages that disappear from use, and so are no longer spoken in the world. Their speakers shift to other languages. As part of the response, social groups have been mobilizing for many decades to prevent such lapses/losses and shifts in use and to document, revitalize, archive and mobilize the resources of communication. This course takes up the processes by which shift happens, asking what 'language' is in these transformations; what and how linguistic forms, cultural values, and social institutions are involved and what social activism can or cannot accomplish in the 'saving' of languages.

Instructor(s): S. Gal Terms Offered: Not offered in 2020-21

Equivalent Course(s): LING 27430, ANTH 37430

ANTH 27445. Whose Hybridity?: 'Mixing' Language, Race, and Identity. 100 Units.

Throughout the modern world, members of racial, ethnic, and other groups perform their identities, in part, through the use of multiple languages or linguistic sub-varieties. It is a commonplace assumption that some of these performed identities and their linguistic modes of expression are 'hybrid' or 'mixed.' Whether viewed as a cause for celebration or alarm, such assumptions often rely on the idea of previously 'pure' things that were later made 'hybrid.' In various accounts in a range of media, 'hybridity' spells the end of desirable ways of life, even the 'natural order of things.' In other accounts, 'hybridity' is celebrated for producing novel relations between discrete categories, practices, and identifications. Yet upon closer inspection, even such supposedly 'pure' categories themselves frequently turn out to be anything but 'pure.' This course will critically explore how 'hybridity' is constructed as a matter of concern across a range of intellectual-, geopolitical-, cultural-, and media contexts. It focuses on language as a privileged marker of and resource in identity-construction, both self and other. This class uses theories and methods from anthropology, sociolinguistics, history, and sociology to explore how 'hybridity' can be and has been used to construct social boundaries, exclusions, and erasures as much as solidarities, inclusions, and recognitions. The class focuses also on the material media in which these inclusions and exclusions are produced.

Instructor(s): Joshua Babcock Terms Offered: TBD

Equivalent Course(s): CRES 27535

ANTH 27450. Language Movements. 100 Units.

In this seminar course we explore various language movements-large-scale, social projects that take as their object of focus 'language' and its protection, reform, purification, revitalization, standardization, and even invention. Surveying a range of historical and regional cases from around the world, we are particularly interested in the way in which different language movements conceptualize language itself, and how those reflexive ideologies of language both articulate particular political positions (and get hooked up into particular institutional forms) and, in their own often ironical ways, affect language structure, function, and use.

Instructor(s): Constantine V. Nakassis Terms Offered: Offered Winter 2020; not offered in 2020-21.

Equivalent Course(s): LING 27450

ANTH 27700. Romani Language and Linguistics. 100 Units.

An introduction to the language of the Roms (Gypsies). The course will be based on the Arli dialect currently in official use in the Republic of Macedonia, but due attention will be given to other dialects of Europe and the United States. The course will begin with an introduction to Romani linguistic history followed by an outline of Romani grammar based on Macedonian Arli. This will serve as the basis of comparison with other dialects. The course will include readings of authentic texts and discussion of questions of grammar, standardization, and Romani language in society.

Instructor(s): Victor Friedman Terms Offered: Spring

Equivalent Course(s): LING 27810, LING 37810, ANTH 47900

ANTH 27902. Modern Yucatec Maya II. 100 Units.

This sequence is a basic introduction to the modern Yucatec Maya language, an indigenous American language spoken by about 750,000 people in southeastern Mexico. Three consecutive quarters of instruction are intended for students aiming to achieve basic and intermediate proficiency. Students receiving FLAS support must take all three quarters. Others may elect to take only the first quarter or first two quarters. Students wishing to enter the course midyear (e.g., those with prior experience with the language) must obtain consent of instructor. Materials exist for a second year of the course; interested students should consult the instructor. Students wishing to continue their training with native speakers in Mexico may apply for FLAS funding in the summer.

Equivalent Course(s): LACS 27902, CHDV 27902, LACS 47902, CHDV 47902

ANTH 27903. Modern Yucatec Maya III. 100 Units.

No description available

Equivalent Course(s): LACS 47903, LACS 27903, CHDV 47903, ANTH 47903, CHDV 27903

ANTH 28110. Human Origins: Milestones in Human Evolution and the Fossil Record. 100 Units.

This course aims at exploring the fundamentals of human origins by tracking the major events during the course of human evolution. Starting with a laboratory based general introduction to human osteology and muscle function, the latest on

morphological and behavioral evidence for what makes *Homo sapiens* and their fossil ancestors unique among primates will be presented. Our knowledge of the last common ancestor will be explored using the late Miocene fossil record followed by a series of lectures on comparative and functional morphology, adaptation and biogeography of fossil human species. With focus on the human fossil record, the emergence of bipedalism, advent of stone tool use and making, abandonment of arboreality, advent of endurance walking and running, dawn of encephalization and associated novel life histories, language and symbolism will be explored. While taxonomic identities and phylogenetic relationships will be briefly presented, the focus will be on investigating major adaptive transitions and how that understanding helps us to unravel the ecological selective factors that ultimately led to the emergence of our species. The course will be supported by fresh data coming from active field research conducted by Prof. Alemseged and state of the art visualization methods that help explore internal structures. By tracing the path followed by our ancestors over time, this course is directly relevant to reconnoitering the human condition today and our place in nature.

Instructor(s): Z. Alemseged Terms Offered: Autumn

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, or consent of Instructor.

Equivalent Course(s): ORGB 33265, BIOS 22265

ANTH 28400. Bioarchaeology and the Human Skeleton. 100 Units.

This course is intended to provide students in archaeology with a thorough understanding of bioanthropological and osteological methods used in the interpretation of prehistoric societies by introducing bioanthropological methods and theory. In particular, lab instruction stresses hands-on experience in analyzing the human skeleton, whereas seminar classes integrate bioanthropological theory and application to specific cases throughout the world. Lab and seminar-format class meet weekly.

Instructor(s): M. C. Lozada Terms Offered: Winter. Winter 2021

Note(s): This course qualifies as a Methodology selection for Anthropology majors.

Equivalent Course(s): ANTH 38800, BIOS 23247

ANTH 28410. Introduction to Zooarchaeology. 100 Units.

This course provides undergraduate and graduate students with an introduction to the use of animal bones in archaeological research. Students will gain hands-on experience analyzing faunal remains from an archaeological site in the Near East. The class will address theoretical and methodological issues involved in the use of animal bones as a source of information about prehistoric societies. The course consists of lectures, laboratory sessions, and original research projects using collections of animal bone from archaeological excavations in southeast Turkey. Topics covered include: 1) identifying, ageing and sexing animal bones; 2) zooarchaeological sampling, measurement, quantification, and problems of taphonomy; 3) analysis of animal bone data; 4) reconstructing prehistoric hunting and pastoral economies, especially: animal domestication, hunting strategies, herding systems, seasonality, and pastoral production in complex societies.

Instructor(s): G. Stein Terms Offered: Spring

Equivalent Course(s): ANTH 38810, NEAA 30035, NEAA 20035

ANTH 28505. Political Ecologies of Colonialism: Local and Global. 100 Units.

The rapidly warming planet makes it clear that the natural and human worlds are inseparable and that local ecologies are inextricable from global political and economic processes. While resulting devastation has more recently emerged as global crisis, the assimilation of local landscapes and ecologies into global social processes has a deep history. This class considers the development and intensification of such global connections through the lens of political ecology. It contextualizes local ecological changes wrought by expansive colonial powers - poisoned mountains, mono-cropped landscapes, and disappeared forests - within the emergence of a global economy in the early modern era. The course is roughly divided into two parts.

First, it examines the political ecology of colonialism, considering links between extractive practices of land management and the imbalances of power typical of colonial contexts. Secondly, it assesses how the extraction and expansion inherent to colonial projects provided impetus to the emerging global economy from the 16th to 20th centuries, and considers how those historical processes continue to reverberate into the present. While historicizing contemporary environmental issues, students will be introduced to political ecology, environmental history, 'the Anthropocene' concept, theories of commodification and value, and world systems analysis.

Instructor(s): Raymond Hunter Terms Offered: Spring

Equivalent Course(s): ENST 24340, GLST 24340

ANTH 29500. Archaeology Laboratory Practicum. 100 Units.

This hands-on lab practicum course exposes students to various stages of artifact processing on a collection from a recently excavated site (e.g., washing, sorting, flotation, identification, data entry, analysis, report preparation, curation). The primary requirement is that students commit to a minimum of nine hours of lab work per week, with tasks assigned according to immediate project needs.

Instructor(s): Shannon Dawdy Terms Offered: Spring. Spring 2021

Prerequisite(s): Consent of instructor

Note(s): This course qualifies as a Methodology selection for Anthropology majors. Undergraduates may take it only once for credit.

Equivalent Course(s): ANTH 59500

ANTH 29601. Populism and Its Discontents. 100 Units.

Populism and its Discontents is a reading-based undergraduate discussion seminar. Populism is currently the word on everyone's lips. But what does it mean? We begin with the ambiguous status of populism in current public debates; populism is at once imagined as the lifeblood of genuine democracy and at the same time as the dark force that threatens democracy from within. Why should this be? Questions to be covered include, but are not limited to, the following: Are there progressive and regressive forms of populism? Does populism look different in today's social media-saturated world

than it did a hundred years ago? Does populism in the Global South force us to reconsider what we think we know about its Euro-American variants? Students will be asked to complete assignments drawing on the assigned readings and audiovisual materials and on contemporary media sources.

Instructor(s): William Mazzarella Terms Offered: Offered Spring 2019; will not be offered in 2020-21.

Prerequisite(s): PQ: 3rd or 4th year standing

Note(s): This is a 3CT Capstone Course

Equivalent Course(s): HMRT 29601, SOCI 28078

ANTH 29604. Topics in Critical Theory: Constitutionalism and Rights. 100 Units.

(Brief/keyword description) - Historicizing and theorizing constitutionalism, rights and the law from the South. Particular empirical focus on South Africa, will also draw on Indian, other African and Latin American material, and think Euro-American genealogies of law and rights from these global Southern locations.

Instructor(s): Kaushik Sunder Rajan Terms Offered: Autumn. Autumn 2020

Prerequisite(s): 3rd or 4th year standing

Note(s): This is a 3CT Capstone course.

Equivalent Course(s): HMRT 29604

ANTH 29700. Readings in Anthropology. 100 Units.

Independent research projects.

Instructor(s): Select section from pull down list under ANTH 29700 in the Time Schedule Terms Offered:

Autumn, Spring, Winter

Prerequisite(s): Consent of instructor and Director of Undergraduate Studies

Note(s): Students are required to submit the College Reading and Research Course Form. At the discretion of the instructor, this course is available for either a quality grade or for P/F grading.

ANTH 29900. Preparation of Bachelor's Essay. 100 Units.

Reading and Research course for Anthropology majors preparing to write a BA Essay.

Instructor(s): Select section from pull-down list under ANTH 29900 in the Time Schedule Terms Offered:

Autumn, Spring, Winter

Prerequisite(s): Consent of instructor and Director of Undergraduate Studies

Note(s): Students are required to submit the College Reading and Research Course Form. At the discretion of the instructor, this course is available for either a quality grade or for P/F grading. For honors requirements, see Honors section under Program Requirements.

ANTH 29910. Bachelor's Essay Seminar. 100 Units.

This seminar is designed to prepare fourth-year Anthropology majors to write a compelling BA thesis. To that end, the course is structured as a writing workshop that addresses three key issues: First, we will focus on formulating a viable research question that can be interrogated in a 40-50 page paper; second, we will examine core anthropological research methods, paying particular attention to the relationship between questions and evidence; finally, we will consider the writing process (including aspects such as planning, outlining, and drafting) and modes of argumentation. Along the way, participants will work toward producing a 20-page first draft. Fridays 3-5:50pm

Instructor(s): Rebecca Journey Terms Offered: Autumn. Offered Autumn 2020

Prerequisite(s): Open only to fourth year anthropology students currently writing BA Essays

Note(s): Open only to students currently writing BA honors papers.

Architectural Studies

Department Website: <https://arthistory.uchicago.edu/undergraduate/architectural-studies> (<https://arthistory.uchicago.edu/undergraduate/architectural-studies/>)

Minor in Architectural Studies

The minor in architectural studies combines course work in art history, which equips students to analyze the form and changing history of the built environment in diverse cultures, places, and times, with up to four courses on architectural or urban topics offered in any department. Thus the minor enables students to enrich art historical analysis with methods from other disciplines. A student might choose to minor in architectural studies because the student is interested in the built environment—the inescapable setting of our lives—from a liberal arts perspective or because the student is considering applying to architecture school. The minor could represent an interest distinct from the student's major or it could complement a major in the social sciences or humanities by exploring the material setting of history and social life or the context for works of literature, film, music, or drama. It could equally complement a major in the sciences, such as medical fields, ecology, geology, physics, or mathematics.

Prospective minors need to meet with the Department of Art History's Director of Undergraduate Studies sometime before the end of the third year to discuss their interests and course plans, and to obtain advice and approval. Together the student and the Director of Undergraduate Studies will fill out the Consent to Complete a Minor Program (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf) form listing the intended courses, which the Director of Undergraduate Studies signs. After submitting the form, students may still change their choice of courses, with the approval of the Director of Undergraduate Studies. The student should submit the completed, signed version to the College adviser before the end of the third year. As students complete the minor, they and the Director of Undergraduate Studies will track their progress, including any changes to their initial plan, on the Architectural Studies Minor Worksheet (<https://arthistory.uchicago.edu/undergraduate/architectural-studies/>), available for download on the Art History website.

Requirements

The minor in architectural studies requires a total of six courses at the 20000-level chosen in consultation with the Director of Undergraduate Studies, all of which must either focus on the built environment or permit the student to devote the assignments or papers to the built environment. A minimum of two courses must be in the Department of Art History. The additional four courses may be taken in Art History or in other departments or programs. Some of the programs that may offer relevant courses are Geographical Sciences, Visual Arts, History, English Language and Literature, Anthropology, and Environmental and Urban Studies.

Lists of past and current courses that have already been approved for program credit are posted on the departmental website (<https://arthistory.uchicago.edu/undergraduate/architectural-studies/>) for the architectural studies minor. To be approved for program credit, courses should meet these criteria: (1) the subject matter should include some attention to buildings and/or the arrangement of buildings and landscape elements in space; (2) the assignments must allow the student to study the built environment. If you have questions, please contact the Architectural Studies faculty advisor, including the course description and, if possible, the syllabus.

In one of the courses, students must also write one research paper of about 10 to 15 pages on a topic chosen with and guided by the instructor, by individual arrangement at the start of the quarter. A research paper can be:

- a paper written to fulfill a course assignment,
- the extension of a shorter course paper (either during the course or after its completion) to meet the page requirement, or
- a new paper on a topic chosen in consultation with the instructor.

The paper should include an analysis of existing scholarship and other relevant source materials. The paper should also draw on that scholarship and evidence to shape and support a thesis or argument of the student's own devising. Formal analyses of works of art and analytic papers on materials assembled by the instructor do not qualify. On completion of a research paper, students must submit an approval form, signed by the course instructor, to the Director of Undergraduate Studies. It is the student's responsibility to obtain this signature and to submit the form. Approval forms are available on the Art History website (<https://arthistory.uchicago.edu/undergraduate/architectural-studies/>).

Minors are strongly encouraged to take ARCH 20000 Understanding the Built Environment when available. Minors may elect to take ARTH 29600 Junior Seminar: Doing Art History, for which they would research and write an essay on a topic of their choice instead of preparing an honors paper proposal. This option is particularly suitable for minors interested in doing graduate work in architectural history.

Graduate seminars at the 40000-level may count toward requirements. Students are advised, however, that such courses impose special burdens of time and expertise, and admission to them is typically only by explicit approval of the instructor and may involve various prerequisites.

Courses in the minor may not be double counted with the student's major(s) or with other minors. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Summary of Requirements for the Minor in Architectural Studies

Two (2) courses at the 20000-level in ARTH focusing on the built environment *	200
Four (4) courses at the 20000-level in ARTH or other programs focusing on the built environment	400
One (1) 10-to-15-page research paper written for one of the six courses in the minor	
Total Units	600

* One of the courses may be ARTH 29600 Junior Seminar: Doing Art History. Students in the minor would research and write an essay on a topic of their choice instead of preparing an honors paper proposal.

The following faculty members in art history specialize in architectural history: Niall Atkinson, Wei-Cheng Lin, and Katherine Fischer Taylor. Many other faculty members in art history have an interest in the built environment and will support students writing papers on architecture; students are welcome to ask their instructors.

For more information about the minor in architectural studies, please contact the Director of Undergraduate Studies in Art History at arth-dus@lists.uchicago.edu. Information about architecture-related programs (<https://arthistory.uchicago.edu/index.php/undergraduate-architectural-studies/uchicago-and-chicago-resources/>), events (<https://arthistory.uchicago.edu/undergraduate/architectural-studies/related-events/>), and resources (<https://arthistory.uchicago.edu/undergraduate/architectural-studies/additional-resources/>) is available on the Art History website. Students are also invited to join the architecture listserv for new events and announcements; contact the department assistant to be added.

Architectural Studies Courses

ARCH 11800. Physics and Contemporary Architecture. 100 Units.

Architectural structures form the built environment around us and in many ways create the backbone of our civilization. They push the limits of form and function on the largest human scales, often leading to iconic masterpieces that symbolize the aesthetics as well as the technical achievements of a period. Many architectural advances have been made possible by breakthroughs in the science of materials, which then led to innovation in construction and fabrication techniques. This course will introduce the physics principles that have enabled some of the most innovative architecture of our time. This course will take key ideas and tools from physics and demonstrate their power and relevance in a broader context familiar from everyday experience. The course will challenge students to recognize physics concepts in the built structures that make up the urban environment we live in. Chicago is a most appropriate place for this study; it was the birthplace of the first skyscraper, and ever since it has played an internationally celebrated role in pushing the limits of the architectural state of the art. A long succession of renowned Chicago architects and structural engineers has turned this city into a premier laboratory for architectural innovation. Against this backdrop, the course will show how science, and physics in particular, delivers the conceptual foundations that drive current directions in architecture and open up new opportunities.

Instructor(s): Heinrich M. Jaeger; Sidney Nagel Terms Offered: Spring

Prerequisite(s): Some exposure to high-school physics is recommended

Note(s): The course will consist of two lectures per week plus a weekly hands-on workshop (lab) component. The Monday lectures will introduce the physics principles to be explored that week. The Thursday lectures will be delivered by distinguished guest speakers, including renowned architects and engineers. These lectures will be public lectures. They will relate to the physics principle introduced that Monday and explore its ramification within the broader context of contemporary architectural practice. The Thursday afternoon workshop component will involve team-based, hands-on construction projects to develop a better understanding and intuition of the physics principles introduced in the lectures and to obtain a sense of their real-life implications. The workshops will also provide an opportunity to interact with the guest lecturers. Attendance at Thursday lectures is required. This course meets the general education requirement in the physical sciences and may be paired with PHSC 11600, 11700, 12600, or 13400 in order to complete the requirement. This course can be taken for credit towards either the general education requirement in the physical sciences or the Architectural Studies minor, but not both. Students intending to receive physical sciences general education credit should register for PHSC 11800; students intending to receive credit towards the Architectural Studies Minor should register for ARCH 11800.

Equivalent Course(s): PHSC 11800

ARCH 16010. Mesoamerican Architecture. 100 Units.

This course will examine the range of architectural expression in Mexico, Guatemala, Honduras, and Belize from 1500 BCE to 1600 CE. Using a relatively simple vocabulary of elements (house, pyramid, plaza, ballcourt, and road), each Mesoamerican city constructed a distinctive visual identity, exquisitely attuned to the surrounding environment. Moving city by city over time, we will look closely at individual buildings as well as the spatial relationships between structures. At the end of this course, students will have honed their ability to analyze architectural space and its representations, and to write cogently about what they see.

Instructor(s): C. Brittenham Terms Offered: Autumn

Note(s): Students must attend 1st class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form & attend the first class. This course meets the Gen. Edu. Reqmt. in the dramatic, musical, & visual arts.

Equivalent Course(s): LACS 16010, ARTH 16010

ARCH 16603. Rome: The Eternal City. 100 Units.

The city of Rome was central to European culture in terms both of its material reality and the models of political and sacred authority that it provided. Students in this course will receive an introduction to the archaeology and history of the city from the Iron Age to the early medieval period (ca. 850 BCE-850 CE) and an overview of the range of different intellectual and scientific approaches by which scholars have engaged with the city and its legacy. Students will encounter a broad

range of sources, both textual and material, from each period that show how the city physically developed and transformed within shifting historical and cultural contexts. We will consider how various social and power dynamics contributed to the formation and use of Rome's urban space, including how neighborhoods and residential space developed beyond the city's more famous monumental areas. Our main theme will be how Rome in any period was, and still is, a product of both its present and past and how its human and material legacies were constantly shaping and reshaping the city's use and space in later periods.

Instructor(s): Margaret Andrews Terms Offered: Spring

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): HIST 16603, ENST 16603, CLCV 24119, ANTH 26115

ARCH 17002. Drawing and the Making of Architecture. 100 Units.

This course focuses on the practice of drawing in the making of architecture. It explores the act of tracing lines on a surface as the foundation of design, a word that evokes through its own origins the very moment of architectural invention. As the most direct expression of the architect's ideas and an operative form of 'non-verbal thinking,' the physical response of the hand to media contributes crucially to the creative process. This studio course will offer an unmediated encounter with drawing techniques: we will test different supports-from parchment to screen, and especially paper-and different tools-natural chalks, antique and modern inks, industrial pencils, as well as keyboards and tablets-in order to understand the interaction, throughout history, between materials and design practice. Parallel to this, we will discuss a wide range of readings critically, thus reconstructing the evolving theory of representation in architectural writings and the relevance of graphic expression to both theorists and practitioners. Ultimately, the course will allow students to penetrate norms and conventions of technical drawing and to understand a primary tool in the production of architecture from the point of view of its makers.

Instructor(s): Dario Donetti Terms Offered: Autumn

Note(s): Students must attend first class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form and attend the first class. This course meets the general education requirement in the arts. This course may be taken for Architectural Studies minor credit or Arts Music Drama Core credit but not both.

Equivalent Course(s): ARTH 17002

ARCH 20000. Understanding the Built Environment. 100 Units.

This thematic course aims to equip students with the basic skills and knowledge required to analyze architecture and the urban environment. It provides an introduction to the methods and procedures of the architectural historian. These include such practical tasks as understanding architectural terminology, reading and interpreting architectural drawings, engaging with buildings "on site", and studying buildings in urban context, relative to surrounding buildings, street networks and public spaces. At a broader level, the course will entail critical discussion about the relationship between architecture and society, the building as a historically specific object that also changes over time, the cultural representation of architecture, and modes of perceiving/experiencing the built environment. The format is a discussion seminar based on readings, assignments, virtual visits and meetings with guest speakers. Although it is designed to introduce the fundamentals of architectural history to undergraduates seeking a minor in architectural studies, MA and PhD students in any field are also welcome to register.

Instructor(s): K. Taylor Terms Offered: Autumn

Note(s): This course will be taught entirely in remote format.

Equivalent Course(s): ARTH 30700, ARTH 20700

ARCH 20104. Urban Structure and Process. 100 Units.

This course reviews competing theories of urban development, especially their ability to explain the changing nature of cities under the impact of advanced industrialism. Analysis includes a consideration of emerging metropolitan regions, the microstructure of local neighborhoods, and the limitations of the past American experience as a way of developing urban policy both in this country and elsewhere.

Instructor(s): M. Garrido Terms Offered: Spring

Equivalent Course(s): GEOG 22700, GEOG 32700, SOCI 20104, SOSC 25100, CRES 20104, SOCI 30104, ENST 20104

ARCH 20150. Sustainable Urban Development. 100 Units.

The course covers concepts and methods of sustainable urbanism, livable cities, resiliency, and smart growth principles from a social, environmental and economic perspective.

Instructor(s): Evan Carver Terms Offered: Spring Winter

Note(s): ENST 21201 and 20150 are required of students who are majoring in Environmental and Urban Studies and may be taken in any order.

Equivalent Course(s): ENST 20150, PBPL 20150, GLST 20150

ARCH 20160. Cities on Screen. 100 Units.

How do the movies shape our collective imagination about cities? Why do we so often turn to them for visions of disaster and dystopia, on the one hand, or a futuristic utopia on the other? How has film responded to cities in the past, and how can it help investigate our present urban condition? How can film be understood as a tool for exploring what a city is? In this seminar, we will watch and discuss feature films in which the built environment or urban issues play important roles. Students will improve their film literacy -- learning not just what a film does but how it does it -- and understand applications for film in the analysis of social, spatial, temporal, and immersive phenomena, as well as how it can help inspire and communicate design more effectively. For more information, contact Evan Carver (ehc@uchicago.edu).

Instructor(s): Evan Carver Terms Offered: Winter

Equivalent Course(s): ENST 20160

ARCH 20170. Pandemics, Urban Space, and Public Life. 100 Units.

Much of the cultural vibrance, economic strength, and social innovation that characterizes cities can be credited to their density. Put simply, cities bring people together, and togetherness allows for complex and fruitful exchange. But togetherness also brings risks, notably from infectious disease. A pandemic feeds on propinquity. "Social distance," while a short-term public health imperative, is antithetical to the very idea of the urban. In this seminar, we will explore these competing tensions in light of current and past disease outbreaks in urban settings. Drawing on a range of texts from history, design theory, sociology, and anthropology, as well as cultural artifacts like film, graphic memoir, and photography, we will engage questions like: How are the risks of contagion balanced with the benefits of density? How are such risks distributed throughout society? What creative responses have architects, urban designers, and planners brought to this challenge? Most importantly, how can we respond constructively to the challenge of pandemic to create cities where the benefits of togetherness are maximized, perhaps even improved on compared with the pre-outbreak condition? Students will have the opportunity to propose design or policy interventions to help their own communities cope with the present coronavirus/COVID-19 crisis as it is unfolding and to return to post-pandemic life more vibrant than ever.

Instructor(s): Evan Carver Terms Offered: Autumn Spring

Equivalent Course(s): ENST 20170, PBPL 20170, GEOG 20170, HLTH 20170

ARCH 20180. Writing the City. 100 Units.

How do great writers convey sense-of-place in their writing? What are the best ways to communicate scientific and social complexity in an engaging, accessible way? How can we combine academic rigor with journalistic verve and literary creativity to drive the public conversation about urgent environmental and urban issues? These are just some of the questions explored in *WRITING THE CITY*, an intensive course dedicated to honing our skills of verbal communication about issues related to the built and natural environments. Students will research, outline, draft, revise, and ultimately produce a well-crafted piece of journalistic writing for publication in the program's new annual magazine. Throughout the quarter we will engage intensely with a range of authors of place-based writing exploring various literary and journalistic techniques, narrative devices, rhetorical approaches and stylistic strategies.

Instructor(s): Evan Carver Terms Offered: Autumn

Prerequisite(s): At least one ENST, GEOG, or ARCH course; or one PBPL, ARTH, ANTH, or SOCI course with an urban focus; or instructor permission. Please contact ehc@uchicago.edu with questions.

Equivalent Course(s): ENST 20180

ARCH 20185. Visualizing the City. 100 Units.

An underlying principle of all modern inquiry is to "make the unseen seen." But all too often, the phrase is thrown about as a meaningless cliché or, even worse, is used as an excuse for obfuscation. In *VISUALIZING THE CITY*, we reclaim the mandate to "make the unseen seen" by taking the cliché literally: we will restore the potential of excellent visual communication in the context of urban and environmental studies, culminating in the production of a print and online magazine for the program. Throughout this hands-on course, students will explore theories of visibility and visual communication and then apply various visualization tools to document, analyze, and communicate aspects of the built environment. Students will learn the fundamentals of software applications (such as Illustrator, InDesign, and Photoshop), web design, image editing, drawing, graphic advertising, layout, and page design. Special attention will be given to representing 2- and 3-dimensional space (i.e., cartography and drafting). Small exercises will build toward the final publication, with students acting as the production team, thereby coordinating technical skills with organization, management, communication, ethics, and teamwork.

Instructor(s): Evan Carver Terms Offered: Winter

Equivalent Course(s): ENST 20185

ARCH 20200. Urban Dramas: Theater, Performance and the City. 100 Units.

How do urban landscapes, economies, collectives and communities influence the ecology of artistic practice? How does art - and theatre in particular - represent and reflect the eccentricities, anxieties and exultations of urban experience? In this course, we will examine the mutually constitutive relationship between theatre and the city through different perspectives, methodologies and approaches. We will consider how the city is represented in a range of dramatic works including Aristophanes' *The Birds*, Lorraine Hansberry's *A Raisin in the Sun*, Ramu Ramanathan's *Cotton 56*, Polyester 84, and Anne Deavere Smith's *Twilight*: Los Angeles 1992. We will read these plays in conjunction with critical writings that illustrate the ways in which changing urban landscapes reshape the contours of theatre practice along economic, demographic and infrastructural lines. These include the scholarship of Marvin Carlson, Loren Kruger, Michael McKinnie, and Stanton B. Garner, among others. The course requires students to engage with the course themes both intellectually and experientially, through a dedicated set of readings and assignments that probe the entanglements between theatre and city life within the specific Chicago context. Students will have the opportunity to familiarize themselves with the theatre culture of Chicago, and conduct ethnographic research on existing theatre spaces in the city.

Instructor(s): S. Sastry Terms Offered: Spring

Equivalent Course(s): TAPS 20200

ARCH 20404. Troy and Its Legacy. 100 Units.

This course will explore the Trojan War through the archaeology, art, and mythology of the Greeks and Romans, as well as through the popular imaginings of it in later cultures. The first half will focus on the actual events of the "Trojan War" at the end of the second millennium BCE. We will study the site of Troy, the cities of the opposing Greeks, and the evidence for contact, cooperation, and conflict between the Greeks and Trojans. Students will be introduced to the history of archaeology and the development of archaeological fieldwork. The second half will trace how the narrative and mythology of Homer's

Iliad and the Trojan War were adapted and used by later civilizations, from classical Greece to twenty-first-century America, to justify their rises to political and cultural hegemony in the Mediterranean and the West, respectively.

Instructor(s): M. Andrews Terms Offered: Spring

Equivalent Course(s): CLCV 20404, HIST 30404, CLAS 30404, HIST 20404, ANTH 26120, ANTH 36120

ARCH 20506. Cities, Space, Power: Introduction to urban social science. 100 Units.

This lecture course provides a broad, multidisciplinary introduction to the study of urbanization in the social sciences. The course surveys a broad range of research traditions from across the social sciences, as well as the work of urban planners, architects, and environmental scientists. Topics include: theoretical conceptualizations of the city and urbanization; methods of urban studies; the politics of urban knowledges; the historical geographies of capitalist urbanization; political strategies to shape and reshape the built and unbuilt environment; cities and planetary ecological transformation; post-1970s patterns and pathways of urban restructuring; and struggles for the right to the city.

Instructor(s): N. Brenner Terms Offered: Winter

Equivalent Course(s): SOCI 20506

ARCH 20805. Cities and Urban Space in the Ancient World. 100 Units.

Cities have been features in human landscapes for nearly six thousand years. This course will explore how cities became such a dominant feature of settlement patterns in the ancient Mediterranean and Near East, ca. 4,000 BCE-350 CE. Was there an "Urban Revolution," and how did it start? What various physical forms did cities assume, and why did cities physically differ (or not) from each other? What functions did cities have in different cultures of the past, and what cultural value did "urban" life have? How do past perspectives on cities compare with contemporary ones? Working thematically and using theoretical and comparative approaches, this course will address various aspects of ancient urban space and its occupation, with each topic backed up by in-depth analysis of concrete case studies.

Instructor(s): M. Andrews Terms Offered: Spring

Equivalent Course(s): ENST 20805, HIST 20805, HIST 30805, CLAS 36618, CLCV 26618, ANCM 36618

ARCH 21300. (Re)Branding the Balkan City: Contemp. Belgrade/Sarajevo/Zagreb. 100 Units.

The course uses an urban studies lens to explore the complex history, infrastructure and transformations of cities, mainly the capitals of today's Serbia, Bosnia and Hercegovina, and Croatia. There is a particular need to survey this region and feed the newfound interest in it, mainly because Yugoslav architecture embodied one of the great political experiments of the modern era. Drawing on anthropological theory and ethnography of the city, we consider processes of urban destruction and renewal, practices of branding spaces and identities, urban life as praxis, art and design movements, film, music, food, architectural histories and styles, metropolitan citizenship, and the broader politics of space. The course is complemented by cultural and historical media, guest speakers, and virtual tours. One of them is a tour through the 2018 show at MoMA "Toward a Concrete Utopia: Architecture in Yugoslavia 1948-1980" a project curated with the goal to find a place for Yugoslav Modernism in the architectural canon. Classes are held in English. No knowledge of South Slavic languages is required.

Instructor(s): Nada Petkovic Terms Offered: Spring

Equivalent Course(s): REES 21300, BCSN 21300, BCSN 31303, REES 31303

ARCH 21347. To Preserve or Destroy: Anthropologies of Heritage. 100 Units.

Why do some monuments matter more than others? Why do we destroy some sites and preserve others? How do these objects and sites attain value? As witnessed in Charlottesville, heritage is at the heart of intense debates in politics and culture today. Questions of theft and colonial violence haunt museums, galleries, and other cultural institutions. Looting and repatriation-linked to archaeology's complex history and of equal concern to contemporary anthropology-force us to contend with the very meaning of heritage, including why it matters, what it does, and to whom it rightfully belongs. Bringing archaeology and anthropology together, this course attends to these complex questions, exploring how monuments, heritage sites, and material culture are enmeshed in power and condense contested histories. Drawing together ethnographies of heritage, theories of history and art, and accounts of dispossession and destruction, we will examine heritage as a conceptual formation, a set of social, political, and economic practices, and as a locus of both enchantment and endangerment. In doing so, students will gain a better sense of why the category of heritage seems to matter so much in the 21st century, paradoxically weaponized by both nationalist narratives and decolonial movements, and what futures heritage builds.

Instructor(s): Hilary Leatham Terms Offered: Winter. This course was offered Winter 2020

Equivalent Course(s): HIPS 21347, ANTH 21347, GLST 23317

ARCH 21354. Architectural Worlds: The Materiality and Sociality of Space. 100 Units.

The interplay between humans and built environments has been a central object of anthropological inquiry since the emergence of the discipline in the 19th century. This course explores the multiple ways in which anthropology and architecture intersect, providing an overview of how social scientists have engaged with and theorized built environments. It sketches some of the concerns that animate anthropological interrogations of built spaces, including spatial organization, the relationship between the public and the private spheres, the materiality of architecture, and the politics of architectural forms. Some of the issues that we will address include: What is the relationship between culture, society, and architecture? What are the concepts that have been mobilized to approach the study of built environments? How is architecture created, imagined, and experienced? We will draw on a range of theoretical approaches, read case studies, classic ethnographies, and a wide range of scholarship from the fields of philosophy, geography, cultural studies, and environmental psychology, in order to understand how architecture as a social and material artifact shapes human experiences, actions, relations, imaginaries, and subjectivities.

Instructor(s): Estefania Vidal Montero Terms Offered: Spring. Spring 2021

Equivalent Course(s): ANTH 21354

ARCH 22105. Sex and Gender in The City. 100 Units.

This course is designed to introduce students to some of the key concerns at the intersection of gender studies and urban studies. In this course, we will take gender relations and sexuality as our primary concern and as a constitutive aspect of social relations that vitally shape cities and urban life. We will examine how gender is inscribed in city landscapes, how it is lived and embodied in relation to race, class, and sexuality, and how it is (re)produced through violence, inequality, and resistance. Over the course of the quarter, we will draw on an interdisciplinary scholarship that approaches the central question of how and why thinking about urban life in relation to gender and sex matters.

Instructor(s): Sneha Annavarapu Terms Offered: Spring

Note(s): This course counts as a Foundations course for GNSE majors

Equivalent Course(s): ENST 12105, SOCI 28088, GLST 22105, GNSE 12105

ARCH 22611. Paris from 'Les Misérables' to the Liberation, c. 1830-1950. 100 Units.

Starting with the grim and dysfunctional city described in Victor Hugo's "Les Misérables," the course will examine the history of Paris over the period in which it became viewed as the city par excellence of urban modernity through to the testing times of Nazi occupation and then liberation (c. 1830-1950). As well as focussing on architecture and the built environment, we will examine the political, social, and especially cultural history of the city. A particular feature of the course will be representations of the city-literary (Victor Hugo, Baudelaire, Zola, etc.) and artistic (impressionism and postimpressionism, cubism, surrealism). We will also examine the city's own view of itself through the prism of successive world fairs (expositions universelles).

Instructor(s): C. Jones Terms Offered: Spring

Prerequisite(s): Students taking FREN 22620/32620 must read texts in French.

Equivalent Course(s): ENST 22611, HIST 22611, HIST 32611, FREN 22620, FREN 32620

ARCH 23321. Writing and Reading Space(s) in the Italian Renaissance. 100 Units.

This course offers an introduction to the study of the Renaissance in Italian literature. A defining movement in the history of European culture and civilization, the Renaissance is best known for its rediscovery of classical antiquity, its achievements in the arts, literature, philosophy, exploration etc., as well as for the rise of a modern sense of self. Italy represents the gateway to the study of the Renaissance as it was the birthplace of many of its key protagonists. In this course, students will become familiar with some of the major male and female representatives of the Italian Renaissance. From Petrarch to Alberti, from Lorenzo de' Medici to Ficino, from Machiavelli to Michelangelo, from Vittoria Colonna to Moderata Fonte, we will situate their writings against the discrete geographical, political, and cultural backdrops that engendered them. Thematically, the class will focus on the issue of space and the relationship between authors and the built environment. We will compare/contrast the physical milieu in which texts were produced (city/countryside, courts etc.), as well as look at how real and imaginary spaces were represented in literary form in order to examine how location both informs and affects the production of literary works. Lastly, we will engage with manuscripts and early printed editions of these texts during our in-and-off campus visits to the Special Collections at The University of Chicago Library and the Newberry Library.

Instructor(s): E. Baldassarre Terms Offered: Winter

Note(s): Taught in Italian.

Equivalent Course(s): ARTH 23321, ITAL 23321, ENST 23321

ARCH 23825. Social Theory of the City. 100 Units.

This seminar explores various historical, sociological and anthropological theories of cities. The course analyzes major theoretical frameworks concerned with urban forms, institutions and experience as well as particular instances of city development from pre-modern to contemporary periods. The seminar will consist of initial orienting lectures, discussion of selected texts concerned with social theories of the city, and presentation of research projects by class participants.

Equivalent Course(s): ANTH 23825

ARCH 24190. Imagining Chicago's Common Buildings. 100 Units.

This course is an architectural studio based in the common residential buildings of Chicago and the city's built environment. While design projects and architectural skills will be the focus of the course, it will also incorporate readings, a small amount of writing, some social and geographical history, and several explorations around Chicago. The studio will: (1) give students interested in pursuing architecture or the study of cities experience with a studio course and some skills related to architectural thinking, (2) acquaint students intimately with Chicago's common residential buildings and built fabric, and (3) situate all this within a context of social thought about residential architecture, common buildings, housing, and the city. This course is part of the College Course Cluster program: Urban Design.

Instructor(s): L. Joyner Terms Offered: Autumn

Note(s): Consent is required to enroll in this course. Interested students should email the instructor (Luke Joyner, lukejoy@uchicago.edu) to briefly explain their interest and any previous experience with the course topics. Students must attend first class to confirm enrollment.

Equivalent Course(s): ARTV 20210, ARTH 24190, ENST 24190, GEOG 24190, AMER 24190

ARCH 24194. Projections in the Vivosphere. 100 Units.

This studio course invites students to devise new techniques for imaging the vivosphere: the fragile and reactive film of interactions that sustain human and non-human life around the surface of the earth. This critical zone is both a space of inquiry and topic of concern, crossing geophysical and disciplinary boundaries. Although more than the sum of representations, new techniques of imaging are urgently required for the shape and behavior of this frontier to fully enter our collective imagination and policy conversations. Seminar discussions and hands-on workshops will immerse students in historic and contemporary techniques of drawing as platforms for inquiry and political influence. While students will develop the ability to manipulate the projective geometries that underpin orthographic, perspectival, isometric, anamorphic and cartographic systems of projection, the vivosphere defies these prevailing modes of description. Research in this critical

zone struggles to represent its shape, picture interactions across scale, and overcome the dissonance between planetary representations and lived experience, static geometry and dynamic cycles. Students will be invited to devise and attempt novel techniques to overcome these limitations.

Instructor(s): A. Schachman Terms Offered: Autumn

Note(s): Students must attend first class to confirm enrollment.

Equivalent Course(s): ARTH 24194

ARCH 24196. Second Nature: New Models for the Chicago Park District. 100 Units.

The Chicago Park District seems to preserve "first nature" within the metropolitan field. But the motive for establishing this sovereign territory was hardly natural. Today, cultural change raises questions about the significance and operation of this immense network of civic spaces. What opportunities emerge as we rethink them? While this design studio focuses on the development of new model parks for Chicago, it can support students coming from a broad range of disciplines. Texts, seminar discussions, and field trips will complement and nourish the development of architectural proposals.

Instructor(s): A. Schachman Terms Offered: Spring

Equivalent Course(s): ENST 24196, GEOG 24196, ARTH 24196, ARTV 20206

ARCH 24197. Lakefront Kiosk. 100 Units.

Students will design kiosks on Chicago's lakefront, one of the city's most vibrant public spaces. Historically, the shoreline of Lake Michigan has played a central role in Chicago's urban identity. In the 1909 "Plan for Chicago" Daniel Burnham proposed to reclaim the entire length of the lakefront as a place of leisure for all inhabitants of the city—an idea realized during the 20th century. The Chicago Park District oversees over 40 kiosks that punctuate the shoreline, which during the summer offer food, retail, and recreational services. Although these kiosks are, by necessity, modest in size, these structures are an exciting opportunity to explore creative architectural solutions. The design studio will identify the lakefront as a new realm of architectural imagination that operates on the scenic threshold of the city and at a more intimate scale. Though small—a work of micro-architecture—a kiosk can reinforce the city's broader commitment to forward-thinking design. The studio's challenge is to demonstrate how small-scale architectural design can transform public space. The kiosk will be designed as both a seasonal commercial space, and year-round space for exhibiting information about Lake Michigan from its history as an industrial machine to its potential future as an ecological preserve. It will explore how a kiosk engages with both visitors and the surrounding environment, and how a kiosk maintains an active presence on the lakefront and attracts visitors year-round.

Instructor(s): M. Felsen Terms Offered: Winter

Equivalent Course(s): ARTH 24197

ARCH 24198. Architecture of the Public Library. 100 Units.

In this architecture studio course, you will learn and practice a range of architectural skills, using as a starting point the library as an institution, and in particular the range of libraries in and around Chicago. You will look at, sketch, and work within libraries across the campus and city, and think about the role the library plays in our time. Studio projects will focus on the library as a locus for learning, a public space, an organizational system, a set of social services, and an architectural opportunity. After a series of short design exercises, you will work in groups to design a proposal for a new library for Chicago, on a real site that you choose. The bulk of your time will be spent on these studio projects, but there will also be reading and conversation. Materials for drawing and making will be provided.

Instructor(s): L. Joyner Terms Offered: Spring

Note(s): This class will not have field trips outside of class time, but will regularly meet at different locations both on-campus and around the city. Please make sure you've built enough time into your schedule to get to and from meeting locations. Consent is required to enroll in this class. Interested students should email the instructor (Luke Joyner, lukejjoy@uchicago.edu) to briefly explain their interest and any previous experience with the course topics. Students must attend first class to confirm enrollment.

Equivalent Course(s): ARTH 24198

ARCH 24205. Skills & Processes for Architecture and Urban Design. 100 Units.

This studio course seeks to acquaint students with a range of skills and methods in design, including manual, digital and hybrid methods. Students will test out several design processes through a series of problem sets and micro-projects, and develop their own personal tools and ways as they go. An emphasis will be put on free play and experimentation, followed by rounds of revision and refinement. We will also consider how historical research, precedent, context and constraint can help meaningfully inform design process, without overly paralyzing it. This is an excellent course to take if you are interested in other studio design courses (such as courses listed ARCH 2419X and ARTV 24267), but want to build up your skills before undertaking a major, quarter-long project.

Instructor(s): L. Joyner Terms Offered: Winter

Prerequisite(s): Consent is required to enroll in this class. Interested students should email the instructor (Luke Joyner, lukejjoy@uchicago.edu) to briefly explain their interest and any previous experience with the course topics, though none is required. Priority will be given to 1st-3rd year undergraduates who have not already taken UAD studio courses, but intend to do so. Students must attend first class to confirm enrollment.

Equivalent Course(s): ARTH 24205

ARCH 24210. Complex Curves/Plastic Shapes. 100 Units.

Complex forms are ever more prevalent in architecture, in large part due to sophisticated software easing their design and fabrication. This course is a formal investigation of these curved forms and plastic shapes, and aims to develop critical understanding of formal issues underlying their use, construction and intention. The format is that of a combined workshop/seminar: in workshop mode, weekly drawing exercises will be done with increasing levels of geometric complexity. This work will be accompanied by discussion of formal issues, including positive and negative space, boundaries, interiority,

and distinction between curved surfaces and volumes. Readings and presentations will provide theoretical and historical background. The underlying basis for our investigation are a number of sculptures done in the mid-20th century by Albers, Moholy-Nagy, Gabo, Hepworth, Kobro, and Vantongerloo. Seen as a whole, their work provides methodologies for the construction of complex curved form, and a broad range of positions on materiality and fabrication. The discipline learned from both their and your work is applicable at a variety of scales from the intimate to the architectural, as well as to orthogonal constructions. The exercises build on each other so steady participation is needed. Familiarity with digital software is preferred, although analog methods of drawing and making can work. Some experience with design is recommended.

Instructor(s): G. Goldberg Terms Offered: Winter

Equivalent Course(s): ARTH 24210

ARCH 24214. Cities in Modern China: History and Historiography. 100 Units.

China's shift from a predominantly rural country to an urban majority is one of the greatest social and demographic transformations in world history. This course begins with the roots of this story in the early modern history of China's cities and traces it through a series of momentous upheavals in the nineteenth and twentieth centuries. We will learn about how global ideas and practices contributed to efforts to make Chinese cities "modern," but also how urban experiences have been integral to the meaning of modernity itself. We will discuss urban space, administration, public health, commerce and industry, transportation, foreign relations, and material culture. In addition to tackling these important topics in urban history and tracing the general development of Chinese cities over time, another primary concern of our course will be the place of urban history in English-language scholarship on Chinese history more broadly. We will track this development from Max Weber's observations on Chinese cities through the rise of "China-centered" scholarship in the 1970s to the "global turn" of the 2000s. Students will develop the skills necessary for writing an effective historiography paper, i.e., doing background research, writing annotated bibliographies, and using citation-management software. Students will put these skills to work by writing a critical historiographical review of scholarship on a topic of their choice.

Instructor(s): D. Knorr Terms Offered: Spring

Prerequisite(s): Students taking ARCH 24214 should explain the relationship between their final projects and architectural studies.

Equivalent Course(s): GLST 24214, HIST 24214, ENST 24214, EALC 24214

ARCH 24660. Urban Geography. 100 Units.

This course examines the spatial organization and current restructuring of modern cities in light of the economic, social, cultural, and political forces that shape them. It explores the systematic interactions between social process and physical system. We cover basic concepts of urbanism and urbanization, systems of cities urban growth, migration, centralization and decentralization, land-use dynamics, physical geography, urban morphology, and planning. Field trip in Chicago region required. This course is part of the College Course Cluster, Urban Design.

Instructor(s): M. Conzen Terms Offered: Winter

Note(s): This course offered in even years.

Equivalent Course(s): GEOG 33500, ENST 24660, GEOG 23500

ARCH 26005. Cities by Design. 100 Units.

This course examines the theory and practice of city design-how, throughout history, people have sought to mold and shape cities in pre-determined ways. The form of the city is the result of myriad factors, but in this course we will hone in on the purposeful act of designing cities according to normative thinking-ideas about how cities ought to be. Using examples from all time periods and places around the globe, we will examine how cities are purposefully designed and what impact those designs have had. Where and when has city design been successful, and where has it resulted in more harm than good?

Instructor(s): Emily Talen Terms Offered: Autumn

Equivalent Course(s): ENST 26005, GEOG 26005, PBPL 26005

ARCH 26322. A History of Public Spaces in Mexico, 1520-2020. 100 Units.

Streets and plazas have been sites in which much of Mexican history has been fought, forged, and even performed. This course examines the history of public spaces in Mexico since the Spanish Conquest. By gauging the degree to which these sites were truly open to the public, it addresses questions of social exclusion, resistance, and adaptability. The course traces more than the role and evolution of built sites. It also considers the individuals and groups that helped to define these places. This allows us to read street vendors, prostitutes, students, rioters, and the "prole" as central historical actors. Through case studies and primary sources, we will examine palpable examples of how European colonization, various forms of state building, and more recent neoliberal reforms have transformed ordinary Mexicans and their public spaces.

Instructor(s): C. Rocha Terms Offered: Spring

Equivalent Course(s): LACS 25322, HIST 26322, ENST 26322

ARCH 26511. Cities from Scratch: The History of Urban Latin America. 100 Units.

Latin America is one of the world's most urbanized regions, and its urban heritage long predates European conquest. And yet the region's cities are most often understood through the lens of North Atlantic visions of urbanity, many of which fit poorly with Latin America's historical trajectory, and most of which have significantly distorted both Latin American urbanism and our understandings of it. This course takes this paradox as the starting point for an interdisciplinary exploration of the history of Latin American cities in the nineteenth and twentieth centuries, focusing especially on issues of social inequality, informality, urban governance, race, violence, rights to the city, and urban cultural expression. Readings will be interdisciplinary, including anthropology, sociology, history, fiction, film, photography, and primary historical texts.

Instructor(s): B. Fischer Terms Offered: Winter

Prerequisite(s): Some knowledge of Latin America or urban studies helpful.

Equivalent Course(s): LACS 36510, LACS 26510, HIST 36511, HIST 26511, ENST 26511

ARCH 27021. The Rise and Demise of Polish Chicago: Reading Polonia's Material Culture. 100 Units.

Chicago claims to have the largest Polish and Polish-American population in the US and yet the city's distinctly Polish neighborhoods are now only history as their population has dispersed or moved to the suburbs. This course explores the diminishing presence of Poles against the lasting input of the material culture which they introduced to the urban spaces of Chicago. The course is framed by the fundamentals of thing discourse and employs the mediums of sculpture, fashion, photography, architecture and topography of the Polish community in Chicago through several field trips. The course's main goal is to map the evolution of the former Polish neighborhoods which often concluded with the erasure of their distinct ethno-space. In order to grasp the status of such changes, students take several field trips to the former Polish neighborhoods and visit their existing architectural landmarks and cultural institutions. Towards the end of the course, students conduct several interviews with Polish Chicagoans from the postwar and Solidarity immigrations. The course concludes with a capstone project for which students will make a virtual collection of artifacts designed as a curio cabinet filled with objects they found, created, and purchased during their research and field trips.

Instructor(s): Bo#ena Shallcross Terms Offered: Winter

Prerequisite(s): Students must attend several panels of their choice during the conference entitled, "What They Brought / What They Changed: Material Culture and Polish Chicago," on December 2-4, 2020.

Equivalent Course(s): REES 37021, REES 27021

ARCH 27103. Planning for Land and Life. 100 Units.

The collaborative plan to create a Calumet National Heritage Area that touches aspects of environmental conservation, economic development, cultural heritage, recreation, arts, and education will ground this course's exploration of landscape history and landscape planning in the Calumet region. Students will investigate this planning process and its relationship to other local and regional plans. A strong focus of the course is on the opportunities and challenges this complex and richly textured industrial region faces in its transition to a more sustainable future.

Instructor(s): Mark Bouman Terms Offered: Spring

Equivalent Course(s): PBPL 27103, GEOG 27103, ENST 27103

ARCH 27307. Schools and Space: A Chicago History. 100 Units.

This course fuses urban and educational history into a two-century case study of Chicago. When the Chicago Public Schools closed fifty schoolhouses in 2013, many stressed the links between public education, uneven neighborhood investment, and racial segregation. But this episode was part of a longer regional history of how metropolitan development, labor markets, and anxieties over migration affected educational policy. The course stresses the relationship between educational policy and the politics of urban development, gender, and race. Schools were sites of gendered work, for the women who operated them and for the children who navigated the moral and vocational paths laid for their futures; meanwhile, the rise of racial ghettos had an enduring impacts on educational inequity and the shape of African American political life. Over the time span covered by the course, the United States became an indisputably "schooled" society, and Chicago was a leading indicator of national trends. Key historic episodes in American education—the rise of the modern high school, the birth of progressive education, the origins of teachers' unions, the Catholic encounter with race, the fragmentation of suburban school districts, the civil-rights critique of de facto school segregation, the pronounced "failure" of urban education, and the triumph of choice-and-accountability reforms, and the teacher-led resistance that followed—are especially well-illustrated by this course's focus on Chicago.

Instructor(s): N. Kryczka Terms Offered: Winter

Note(s): This course combines lecture with discussions of primary sources and secondary literature each week, beginning with the one-room, log-stable schoolhouses of the antebellum Illinois prairie and ending with the nation's first charter-school teacher strikes in 2018. In addition to composing a research paper on a chosen school or school policy, students will take a field trip to local schoolhouses, reading the city's urban history through its educational architecture.

Equivalent Course(s): EDSO 27307, AMER 27307, PBPL 27307, GNSE 27307, HIST 27307

ARCH 27708. Black in the City. 100 Units.

Moving from literature written during the early Jim Crow era to contemporary hip hop, this course will look at the ways black artists have staged encounters with urban space. We will pay close attention to not just how black artists have represented the city but the methodologies they have experimented with in studying and surviving it. From the juxtaposition of Southern and Northern cities in pre and post-Great Migration literature, to Gwendolyn Brooks' mid-century experiments in urban seeing, Spike Lee's staged urban explosions and Kendrick Lamar's Compton soundscapes, this course complicates both the dreams and the despairs yoked to being black in the city. (Fiction, 1830-1940, Theory)

Instructor(s): Adrienne Brown Terms Offered: Spring

Equivalent Course(s): ENGL 27008, AMER 27008, CRES 27008, SIGN 26077

ARCH 28402. Geographic Information Science II. 100 Units.

This course investigates the theory and practice of infrastructure and computational approaches in spatial analysis and GIScience. Geocomputation is introduced as a multidisciplinary systems paradigm necessary for solving complex spatial problems and facilitating new understandings. Students will learn about the elements of spatial algorithms and data structures, geospatial topologies, spatial data queries, and the basics of geodatabase architecture and design.

Instructor(s): Marynia Kolak Terms Offered: Winter. Offered 2020-21

Prerequisite(s): GEOG 28202 /GEOG 38202. Students must receive a grade of C or higher in GEOG 28202/GEOG 38202 in order to register for this course.

Equivalent Course(s): GEOG 38402, GEOG 28402

ARCH 28602. Geographic Information Science III. 100 Units.

This advanced course extends and connects both foundational and functional GIScience concepts. Students will be introduced to advanced programming and scripting languages necessary for spatial analysis and GIScience applications. Additional topics include customization, enterprise GIS, web GIS, and advanced visualization and analytic techniques.

Instructor(s): M. Kolak Terms Offered: Spring. Offered 2020-21

Prerequisite(s): GEOG 38202 and GEOG 38402. Students must receive a grade of C or higher in GEOG 28402/GEOG 38402 in order to register for this course.

Equivalent Course(s): GEOG 28602, GEOG 38602

ARCH 28702. Introduction to GIS and Spatial Analysis. 100 Units.

This course provides an introduction and overview of how spatial thinking is translated into specific methods to handle geographic information and the statistical analysis of such information. This is not a course to learn a specific GIS software program, but the goal is to learn how to think about spatial aspects of research questions, as they pertain to how the data are collected, organized and transformed, and how these spatial aspects affect statistical methods. The focus is on research questions relevant in the social sciences, which inspires the selection of the particular methods that are covered. Examples include spatial data integration (spatial join), transformations between different spatial scales (overlay), the computation of "spatial" variables (distance, buffer, shortest path), geovisualization, visual analytics, and the assessment of spatial autocorrelation (the lack of independence among spatial variables). The methods will be illustrated by means of open source software such as QGIS and R.

Instructor(s): M. Kolak Terms Offered: Spring. Offered 2020-21

Equivalent Course(s): SOCI 30283, ENST 28702, SOCI 20283, GEOG 28702, GEOG 38702

ARCH 28925. Health Impacts of Transportation Policies. 100 Units.

Governments invest in transport infrastructure because it encourages economic growth and mobility of people and goods, which have direct and indirect benefits to health. Yet, an excessive reliance on motorized modes of transport harms population health, the environment, and social well-being. The impact on population health is substantial: Globally, road traffic crashes kill over 1.3 million annually. Air pollution, to which transport is an important contributor, kills another 3.2 million people. Motorized modes of transport are also an important contributor to sedentary lifestyles. Physical inactivity is estimated to cause 3.2 million deaths every year, globally. This course will introduce students to thinking about transportation as a technological system that affects human health and well-being through intended and unintended mechanisms. The course will examine the complex relationship between transportation, land use, urban form, and geography, and explore how decisions in other sectors affect transportation systems, and how these in turn affect human health. Students will learn to recognize how the system level properties of a range of transportation systems (such as limited-access highways, urban mass transit, inter-city rail) affect human health.

Terms Offered: Spring

Equivalent Course(s): BPPL 28925, ENST 28925, HLTH 28925

ARCH 29421. Politics of Commemoration. 100 Units.

Most of the time we pass in front of the statues, commemorative museums, monuments, and flags that inhabit our cities without noticing them. In recent years, however, they (along with pre-college history curricula) have become controversial across the globe. This course addresses those controversies primarily in Europe and the United States, but also in Latin America, West Africa, and South Africa. Through a series of case studies we will analyze the conditions of the creation of statues, monuments, and museums. Who conceptualized them and lobbied for their creation? Who paid for them? For whom were they originally intended? What message did they convey? What happened over time? How did their message change? Did they provoke controversy at the moment of their planning or inauguration or later and, if so, from whom? Equal attention will be paid to scholars' efforts to address the question of what these commemorative works actually do. If they really become unnoticeable, then why does the threat of their removal so often spark such intense controversy? Assignments: Active participation in class, one secondary text analysis, one analysis of a controversy, and one proposal for a monument, museum, or school curriculum.

Instructor(s): L. Auslander Terms Offered: Spring

Equivalent Course(s): HIST 29421, GLST 29526, CRES 39421, ENST 29421, HIST 39421, LLSO 29421, CRES 29421, JWSC 29421

Art History

Department Website: <http://arthistory.uchicago.edu>

Program of Study

The study of art history encompasses the visual art, architecture, and material culture of a wide range of regions and historical periods. Art history courses develop students' skills in visual analysis, interpretation of images and texts, use of historical sources, and engagement with scholarly debates. So conceived, the study of art is an element of a general, liberal arts education; the skills of analytical thinking, logical argument, and clear verbal expression necessary to the program are basic to most fields. While maintaining the University of Chicago's traditional emphasis on the life of the mind, the major in art history prepares students for advanced study at the graduate level as well as for a wide array of careers involving visual acuity, design, research, and analysis.

Within the Art History Department, courses at the 10000-level meet the general education requirement in the arts. These courses may not be taken for credit toward the major, although majors are strongly encouraged to take at least one (1) to meet their general education requirements. Upper-level courses (20000-level) may take a relatively broad or narrow approach to particular periods, places, themes, or issues, or may deal with theoretical questions. The usual prerequisite for 20000-level Art History courses is consent of instructor or any 10000-level course in Art History or Visual Arts.

General Education Courses

Any of these 10000-level courses is an appropriate choice for any undergraduate to meet the general education requirement in the arts. None presuppose prior training in art.

Introduction to Art

ARTH 10100 Introduction to Art develops basic skills in the analysis and critical enjoyment of a wide range of visual materials. Issues and problems in the making, exhibition, and understanding of images and objects are explored through classroom discussion of key works, critical reading of fundamental texts, visits to local museums, and writing.

Survey Courses

ARTH 14000 through 16999 - discuss major monuments of world art and architecture in the context of broad chronological and geographic categories and in relation to broad questions concerning the role art plays in individual, societal, and institutional settings.

- ARTH 14000 through 14999 - address Western art in Antiquity, the Middle Ages, and the Renaissance.
- ARTH 15000 through 15999 - address Western art from the early modern period to the present day.
- ARTH 16000 through 16999 - address the art of Africa, Asia, Latin America, and/or the Middle East.

Art in Context Courses

- ARTH 17000 through 18999 - introduce students to a well-defined issue, topic, or period of art in depth; at the same time, these courses explore issues of creativity, communication, and value in a series of concrete case studies.

Students who have taken at least one course in art history or visual art, or who have equivalent nonacademic experience, may elect to take an advanced lecture course, numbered from 20000 to 29999. The usual prerequisite is consent of instructor or any 10000-level course in art history or visual arts. The 20000-level art history courses investigate the arts of specific periods and places from a variety of perspectives. Some courses embrace large bodies of material defined by national culture; others follow developments in style, iconography, and patronage as they affect works in selected media.

Major in Art History

The BA in art history furnishes students with a broad knowledge of art, including architecture, even as it provides an opportunity for the complementary, intensive study of an area of special interest. The basic components of the concentration are: a Special Field, devised in consultation with departmental instructors and the Director of Undergraduate Studies (DUS); a distribution of courses outside the special field; at least two research papers in art history (emerging from ordinary course work in the department); and a third-year seminar on art-historical methods and issues. Fourth-year students who wish to pursue honors in the major conduct independent research on a topic of their own devising, producing a BA Paper with the guidance of a faculty member and a graduate preceptor.

Program Requirements

All art history majors are **expected take at least one (1) course in art history at the 10000-level** to fulfill their general education requirement in the arts. Although general education courses do not count for the major, they are useful preliminaries to advanced work. It is, therefore, strongly recommended that students take such a course as early as possible in their undergraduate careers. Note: Students who have formally declared the major in art history are guaranteed admission to 10000-level courses by notifying the instructor in advance.

The Standard Curriculum

The standard formula for requirements in the major goes by the sobriquet "4-3-2-1." All art history majors must complete the following:

- **Four (4) courses at the 20000-level to meet a distribution requirement** within the department. These courses shall be selected in consultation with the Director of Undergraduate Studies. Courses should be selected for maximal geographical, chronological, cultural, and methodological diversity, and for minimal overlap with the Special Field.
- **Three (3) courses at the 20000-level in a Special Field.** Students develop the Special Field in consultation with departmental instructors and the Director of Undergraduate Studies. Because Special Fields reflect the interests of individual students, they range widely in topic, approach, and scope. Reading courses with art history faculty may be used to pursue specific questions within a Special Field. For more on the Special Field, see Special Field below.
- **Two (2) courses at the 20000-level as free electives.** Any art history courses at the 20000-level may satisfy this requirement. Courses outside the Department of Art History that relate directly to the Special Field are eligible to meet this requirement by petition to the Director of Undergraduate Studies.
- **ARTH 29600 Junior Seminar: Doing Art History .** Students are expected to take this course in their third year.
- At least **two research papers** of 10–15 pages. See Research Papers below.

In all of the above cases, graduate seminars at the 40000-level may count toward requirements in the major. Students are advised, however, that such courses impose special burdens of time and expertise, and admission to them is typically only by explicit approval of the instructor and may involve various prerequisites.

Students wishing to pursue honors in the major have additional requirements, described below under Honors.

Special Field

The Special Field is developed by the student in consultation with instructors and the Director of Undergraduate Studies, and may take various forms. It may be defined with reference to a civilization, a chronological period, a nation-state, a cultural institution, or a suitable combination; it may be conceptual in character (e.g., art and the history of science, urban history, geography, gender and sexuality studies); it may combine historical, critical, and theoretical perspectives (e.g., politics and visual art in the twentieth century); it may be based in a particular medium or class of object (e.g., the built environment, tomb assemblages, or prints); it may combine historical and studio-practice courses (e.g., DoVA, CMST, TAPS, Music) to explore interrelations (e.g., art and dance). In many cases, courses outside the Department of Art History will be directly relevant to the Special Field; up to two such courses may be counted toward the major as free electives to complement the Special Field.

For those writing a BA Paper, the topic normally develops from the Special Field and allows for further study in the Special Field through independent research and writing.

A proposal for the Special Field, in the form of a written petition, must be received by the Director of Undergraduate Studies and approved no later than the end of a student's third year. It is strongly recommended that students complete at least two courses in their Special Field by the end of their third year. The Special Field Declaration Form is available on the Department of Art History website (<https://arthistory.uchicago.edu/undergraduate/major-requirements/>).

Junior Seminar

ARTH 29600 Junior Seminar: Doing Art History is designed to introduce the methods of art historical research. It is required of art history majors; if they wish, minors may take the course to satisfy a 20000-level course requirement. Second-year art history majors are permitted to enroll in the Junior Seminar with permission from the instructor and the Director of Undergraduate Studies.

Research Papers

All art history majors write at least **two research papers** of 10–15 pages. Students who wish to write a BA Paper should complete this requirement before the beginning of their fourth year. A research paper can be:

- a paper written to fulfill a course assignment,
- the extension of a shorter course paper (either during the course or after its completion) to meet the page requirement, or
- a new paper on a topic chosen in consultation with the instructor.

The paper should include an analysis of existing scholarship and other relevant source materials. The paper should also draw on that scholarship and evidence to shape and support a thesis or argument of the student's own devising. Formal analyses of works of art and analytic papers on materials assembled by the instructor do not qualify. On completion of a research paper, students must submit an approval form, signed by the course instructor, to the Director of Undergraduate Studies. It is the student's responsibility to obtain this signature and to submit the form. Approval forms are available on the Art History website (<https://arthistory.uchicago.edu/undergraduate/major-requirements/>).

Honors

Art history majors who wish to pursue a BA with honors must complete the following requirements in addition to the standard curriculum. These students must register for the BA Paper writing seminar (ARTH 29800 Senior Thesis Workshop) in Autumn Quarter of the fourth year. Writing the BA Paper is a process that usually takes more than two quarters. Each student must secure the consent of an art history faculty member who will serve as his or her adviser by the second week of Autumn Quarter (i.e., two quarters before the planned quarter of graduation). Working with a preceptor, students must then complete a BA Paper by the second week of Spring Quarter of the fourth year. The BA Paper is typically a 20- to 30-page research paper of original work that grows out of the Special Field. For more information, see BA Paper and Seminar.

To be eligible for honors in the major, students must complete both the BA seminar and the BA Paper, and must have earned a major GPA of at least 3.5 and cumulative GPA of 3.3 at the time of graduation. Please note that completion of the BA Paper does not, in itself, guarantee honors in the major. Honors are awarded by the College on the basis of a departmental nomination of exceptional BA Papers.

BA Paper and Seminar

ARTH 29800 Senior Thesis Workshop is a workshop course offered in Autumn Quarter designed to assist students in writing and researching their BA Papers. Students typically take the seminar in Autumn Quarter before graduating in Spring Quarter; students graduating in Autumn or Winter Quarter should take the course in the previous academic year. In the closing sessions of the seminar, students present their work-in-progress for the BA Paper. They continue their research on the paper during the following quarters, meeting at intervals with their faculty BA advisor. Students have the option of taking ARTH 29900 Preparation for the BA Paper in Autumn or Winter Quarter to afford additional time for research or writing; this course is taught by arrangement between a student and his or her instructor. This course would be in addition to the 11 courses for the major with honors.

A polished draft of the BA Paper is due by Friday of ninth week of the quarter preceding graduation; the final version of the BA Paper is due Monday of second week of the quarter of graduation. Both the draft and final version of the BA Paper must be submitted in duplicate: one copy to the faculty advisor and the second to the Director of Undergraduate Studies. Because individual projects vary, no specific requirements for the BA Paper have been set. Essays typically range in length from 20 to 30 pages, but there is no minimum or maximum. Students should consult their BA advisor regarding all details, including optimal length, of the BA Paper.

The BA Paper is a substantial research paper that presents an original argument or develops original evidence about an intellectual problem. The paper should demonstrate the student's capacity to formulate a serious research problem, develop a clear thesis, and substantiate the thesis on the basis of careful analysis of relevant evidence and measured consideration of competing views. The originality of the BA Paper may lie in the discovery of evidence, a new, critical analysis of familiar claims, or the synthesis of materials. In keeping with guidelines set by the College, the Department of Art History only recommends papers that have earned the highest grade to the master of the Humanities Collegiate Division for consideration of departmental honors.

Double Majors and the BA Paper

Whether or not a single BA Paper can satisfy requirements for a double major in art history and another program is decided by the department on a case-by-case basis. Students should consult with the Director of Undergraduate Studies. The criteria on which the decision is based include:

- the degree to which the resulting thesis is likely to speak from and to art history, even as it necessarily speaks from and to another field;
- the feasibility of the proposed advising arrangements for the proposed joint thesis; and
- the department's estimation of the student's track record for independent work that bodes well for writing a successful thesis while navigating between two majors.

Transferring Credit

No credit from Advanced Placement (AP) exams can be used in the major. Up to four courses taken outside the University of Chicago may be counted towards the art history major, contingent on approval by the College and Director of Undergraduate Studies. Students planning to take courses outside the University are urged to consult with the Director of Undergraduate Studies as they formulate their plans. Students should also consult with their College adviser to be sure that they understand the University's procedures for transfer credit. Refer to Transfer Credit for more information.

While studying abroad, students are encouraged to keep excellent records: they will be required to submit the syllabus and all written work for each course in order to be considered for credit. Please note that some courses may be approved by the College but not by the major.

Students first apply for transfer credit from the College, and credit for courses taken as part of a University of Chicago-affiliated direct enrollment program is vetted by Study Abroad. When the credit has been approved, students petition the Director of Undergraduate Studies in writing for credit for the major. The petition must include a cover letter with the title and description of the course, as well as the name and location of the institution. To the cover letter should be attached a syllabus and a written record of the work the student did for the course. The Director of Undergraduate Studies will review the work for each course individually, determine if the course is applicable for credit in the major, and, if so, where that credit should be applied.

Summary of Requirements for the Major

MAJOR: Standard Curriculum

Four (4) courses approved to meet the distribution requirement *	400
Three (3) courses approved in a special field *	300
Two (2) courses approved as electives *	200
ARTH 29600 Junior Seminar: Doing Art History	100

Two (2) 10- to 15-page research papers	
Total Units	1000
* All courses must be at the 20000-level or higher.	
MAJOR: Honors Curriculum	
Four (4) courses to meet the distribution requirement *	400
Three (3) courses in a special field *	300
Two (2) courses as electives *	200
ARTH 29600 Junior Seminar: Doing Art History	100
Two (2) 10- to 15-page research papers	
ARTH 29800 Senior Thesis Workshop	100
BA Paper +	
Total Units	1100

- * All courses must be at the 20000-level or higher.
- + Some students register for ARTH 29900 Preparation for the BA Paper in Autumn or Winter Quarter to afford additional time for research or writing. This course would be taken in addition to the 11 courses in the major with honors.

Advising

Art history majors should see the Director of Undergraduate Studies no less than once a year for consultation and guidance in planning a special field, in selecting courses, and in choosing a topic for the BA Paper if pursuing honors, as well as for help with any academic problems within the major. When choosing courses, students should refer to the worksheet available on the Art History website (<https://arthistory.uchicago.edu/undergraduate/major-requirements/>). This form helps each student and the Director of Undergraduate Studies monitor the student's progress in the program.

In order to keep an accurate record of students' progress to graduation, students will need to regularly provide a copy of the updated major worksheet to their College adviser for processing.

Recommendations for Art History Majors

Qualified undergraduate students in art history may, with the express permission of the instructor, enroll in graduate seminars in the department. (These seminars are also open to non-majors with the same proviso.) For students interested in graduate study in art history, it is advantageous to have performed well in a graduate seminar while completing the BA.

Students are urged to also pursue upper-level language courses. If a language course is relevant to a student's Special Field, the student may petition the Director of Undergraduate Studies to count it toward electives.

Those planning to continue their study of art history at the graduate level are advised to achieve language competency equal to at least two years of college study in French or German, or in the language(s) relevant for the geographic region that corresponds to their primary area of interest.

Grading

Art history majors must receive quality grades in courses taken for the major. ARTH 29900 Preparation for the BA Paper is open for Pass/Fail grading with consent of the instructor. Art history courses elected beyond program requirements may be taken for P/F grading with consent of the instructor. All courses taken to satisfy the general education requirement in the arts must receive quality grades. Nonmajors may select the P/F grading option with consent of the instructor if they are taking an art history course that is not satisfying a general education requirement. A Pass grade is given only for work of C– quality or higher.

Minor in Art History

All art history minors are **encouraged take at least one (1) course in art history at the 10000-level** to fulfill their general education requirement in the arts. Although general education courses do not count for the minor, they are useful preliminaries to advanced work. It is, therefore, strongly recommended that students take such a course as early as possible in their undergraduate careers. Note: Students considering the minor in art history and seeking admission to a 10000-level ARTH course may identify themselves to the instructor in advance.

The formula for requirements in the minor goes by the sobriquet “3-and-3”:

- All art history minors take **three (3) courses at the 20000-level to meet a distribution requirement** within the department. These courses shall be selected in consultation with the Director of Undergraduate Studies. Courses should be selected for maximal geographical, chronological, cultural, and methodological diversity, and for minimal overlap with the Special Field.
- All art history minors take **three (3) courses at the 20000-level in a Special Field**. Students develop the Special Field in consultation with departmental instructors and the Director of Undergraduate Studies. Because Special Fields reflect the interests of individual students, they range widely in topic, approach, and scope. Reading courses with art

history faculty may be used to pursue specific questions within a Special Field. For more on the Special Field, see Special Field.

In all of the above cases, graduate seminars at the 40000-level may count toward requirements in the minor. Students are advised, however, that such courses impose special burdens of time and expertise, and admission to them is typically only by explicit approval of the instructor and may involve various prerequisites.

In one of the courses, students also write one research paper of about 10–15 pages on a topic chosen with and guided by the instructor, by individual arrangement at the start of the quarter (see Research Papers). Minors may elect to take ARTH 29600 Junior Seminar: Doing Art History with the majors; if they do, they will research and write an essay on a topic of their choice instead of preparing a BA Paper proposal.

Students who elect the minor program in art history must meet with the Director of Undergraduate Studies before the end of Spring Quarter of their third year to declare their intention to complete the minor. Students choose courses in consultation with the Director of Undergraduate Studies. The Director's approval for the minor program should be submitted to a student's College adviser by the deadline above on a form available on the Art History website (<https://arthistory.uchicago.edu/undergraduate/program/minor-requirements/>).

Courses in the minor may not be double counted with the student's major(s), other minors, or general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Special Field

The Special Field is developed by the student in consultation with instructors and the Director of Undergraduate Studies and may take various forms. It may be defined with reference to a civilization, a chronological period, a nation-state, a cultural institution, or a suitable combination; it may be conceptual in character (e.g., art and the history of science, urban history, geography, gender and sexuality studies); it may combine historical, critical, and theoretical perspectives (e.g., politics and visual art in the twentieth century); it may be based in a particular medium or class of object (e.g., the built environment, tomb assemblages, or prints); it may combine historical and studio-practice courses (e.g., DoVA, CMST, TAPS, Music) to explore interrelations (e.g., art and dance).

Summary of Requirements for the Minor in Art History

Three (3) courses at the 20000-level to meet the distribution requirement	300
Three (3) courses at the 20000-level in a special field *	300
One (1) 10- to 15-page research paper	
Total Units	600

* One of the courses may be ARTH 29600 Junior Seminar: Doing Art History. Students in the minor would research and write an essay on a topic of their choice instead of preparing an honors paper proposal.

Art History Courses

ARTH 10100. Introduction to Art. 100 Units.

This course develops skills in perception, comprehension, and evaluation of various art objects and the built environment. It encourages close analysis of visual materials, exploring the range of questions and methods appropriate to works of art and buildings, in their historical, theoretical, and social dimensions. Most importantly, the course emphasizes articulate writing and salient argumentation about visual and other aesthetic phenomena. Three coherent units, on Monument/Site, Image/Medium, and Object/Museum, explore these issues across cultures and periods. Examples draw on original objects in campus collections and sites on campus.

Instructor(s): Staff Terms Offered: Winter

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

ARTH 14006. Introduction to Byzantine Art. 100 Units.

In this course we will explore works of art and architecture as primary sources on the civilization of Byzantium. Through the close investigation of artifacts of different media and techniques, students will gain insight into the artistic production of the Byzantine Empire from its beginnings in the fourth century C.E. to the Ottoman conquest in 1453. We will employ different methodological approaches and scholarly resources that are relevant for the fruitful investigation of artifacts in their respective cultural setting. In order to fully assess the pivotal importance of the visual arts in Byzantine culture, we will address a wide array of topics, including art and ritual, patronage, the interrelation of art and text, the classical heritage, art and theology, Iconoclasm, etc.

Instructor(s): K. Krause Terms Offered: Winter

Note(s): For nonmajors, this course meets the arts, music, drama general education requirements.

Equivalent Course(s): RLST 28308

ARTH 14107. Greek Art and Archaeology. 100 Units.

This course examines the art and archaeology of ancient Greece from ca. 1000 BCE - ca. 200 BCE. Participants will learn a lot of facts about the Greek world; they will see the Greeks emerge from poverty and anarchy to form a distinctive political and social system based on city-states, and they will see that system grow unstable and collapse. They will see the emergence of distinctive forms of sculpture, architecture, pottery, and urban design - many of which are still in use today.

Along with these facts, they will acquire a conceptual toolkit for looking at works of art and for thinking about the relation of art to social life.

Instructor(s): S. Estrin Terms Offered: Winter

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): CLCV 14119

ARTH 14200. Introduction to Medieval Art. 100 Units.

This course provides an introduction to art produced during the European Middle Ages. Beginning with the fusion of Christian and Imperial images under the Roman Empire and ending with the introduction of print in the fifteenth century, this course considers works of art across a variety of media (architecture, sculpture, painting, textiles, metalwork, stained glass) and in a range of historical and cultural contexts. We will address the complex social, religious, and political motivations that informed artistic production during the Middle Ages, and we will focus on the question of how images were seen and understood by medieval viewers. The course is organized chronologically and is structured around a set of broad thematic concerns such as the relationship between art and power, changing theorizations of the image, the re-use of the past, the body in art, the relationship of the secular and the sacred, and the role of art in public and private devotion. Readings will include medieval sources in translation and selected works of modern scholarship.

Instructor(s): C. Boxer Terms Offered: Autumn

Prerequisite(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): MDVL 14200

ARTH 14400. Italian Renaissance Art. 100 Units.

Why did the "Renaissance" begin to flourish first in Italy? How did the role of the artist change in this period? What was new in the Renaissance? This course begins to answer these questions by introducing students to the study of the visual culture of Renaissance Italy (roughly 1350-1600) and by examining such issues as the revival of antiquity, the significance of the study of nature, the role of competition, and the public and private display of art. We will explore a variety of media including painting, sculpture, architecture, decorative arts and works on paper, using diverse art historical methods, as well as social, political and religious history. Major artists to be studied include: Giotto, Ghiberti, Donatello, Masaccio, Botticelli, Leonardo da Vinci, Michelangelo, Raphael, Titian. The major assignments for the class will include two papers, a formal analysis and a formal comparison (the latter building upon the former), as well as a final exam. Students will gain exposure to original works through appropriate use of resources on campus as well as a couple visits to the Art Institute. The textbook for the course will be complemented by selected original readings (in translation) and exemplary art historical scholarship on the period.

Instructor(s): Lia Markey Terms Offered: Winter

Note(s): This course meets the general education requirement in the arts.

ARTH 14650. Global Renaissance: Encounters and Exchanges in the Early Modern World, c. 1450-1750. 100 Units.

This course examines the visual, political, intellectual, and material encounters and exchanges between Africa, the Americas, Asia, and Europe during the early modern period. Challenging assumptions about the European Renaissance as the foundation of modern culture, art, and science, we will consider this period with a wider geographic lens and through a multi-cultural framework in order to get the bigger picture of what was going on in the early modern world. Through a series of object studies, we will navigate the intertwined histories of imperialism, colonialism, trade, exploration, exploitation, and revolution that forged a global network and shaped the world we live in today, for better and for worse. The course will be structured around lectures, class discussions, blog posts, and two projects: 1) a descriptive/reflective essay on a specific object, monument, or topic; and 2) a research project: either an essay or a creative project such as an annotated map, a "cabinet of curiosities", or a performance. Throughout the course, students will be encouraged to go beyond the "classroom" and study monuments, sites, and museum objects. Requirements include attending lecture, participating in discussions, and creating a respectful learning environment conducive to experimental thinking and personal growth.

Instructor(s): C. Pelletier Terms Offered: Autumn

Note(s): Students must attend 1st class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form & attend the first class. This course meets the Gen. Edu. Reqmt. in the dramatic, musical, & visual arts.

ARTH 14810. Devotion-Dissent-Disenchantment: Art in the Age of Protestant Reformation. 100 Units.

In the years leading up to Martin Luther's radical transformation of the political-religious landscape, late medieval and early modern Europeans were inundated with a flood of "alternative facts" that called into question the intellectual, ethical, and religious values governing their lives. With the advent of new media technologies, images became important vehicles of commentary and disputation for Reformers, leading to the formation of a public sphere of discourse to which the image was central; yet, at the same time, the image itself and its role in daily life came increasingly under attack. This course provides an introduction to artistic production in northern Europe from the late fourteenth century through the sixteenth century through the lens of the productive, if tumultuous, relationship between art and the epistemological challenges of the Reformation. Particular attention will be paid to the shifting status of the artist, focusing on the historical and cultural circumstances that led to the elevation of artists such as Albrecht Dürer, Hans Baldung, and Pieter Bruegel the Elder, as well as their relationship to the world outside the Alps, including Italy, Spain, and the New World. This course will also examine topics such as the relationship between word and image, iconoclasm and iconophilia, public and private spheres of patronage, and strategies of visual polemics. Readings will include primary sources in translation and selected works of modern scholarship.

Instructor(s): Tamara Golan Terms Offered: Spring Winter

Note(s): Students must attend the first class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form and attend the first class. This course meets the general education requirement in the arts.

ARTH 15590. New Media Since the 19th Century. 100 Units.

How have artists working outside the traditional categories of painting and sculpture introduced new ways of looking at the world? This introductory course will survey the practice, theory, and reception of so-called "new media" art from the late 19th century to the present day. We will examine artists' use of emerging technologies including photography, the portable video camera, the electronic computer, holography, virtual and augmented reality, and Web-based art. We will also discuss time-based art forms such as performance and dance, which made the human body their primary medium. Moving roughly chronologically, we will attend to a set of central themes: temporality and perception, the blurring of artistic and scientific practices, and intersecting questions of gender, race, and class in relation to technology. Through a combination of close looking (the careful study of the visual and material qualities of a work of art) with close reading of primary literature (artists' writings, contemporary art criticism and theory) and secondary literature (scholars' takes on these topics), students will develop the vocabulary and conceptual tools necessary to describe works of art and contextualize them historically.

Instructor(s): Z. Valyi-Nagy Terms Offered: Autumn

Note(s): This class will take place entirely remotely, with the majority of sessions held asynchronously. Students must attend 1st class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form & attend the first class. This course meets the Gen. Edu. Reqmt. in the dramatic, musical, & visual arts.

ARTH 15650. Art Since 1900. 100 Units.

Focusing on the interrelationships between avant-garde culture and the emerging mass cultural formations of industrializing societies, our survey will address a wide range of historical and methodological questions: the impact of new technologies of production, the utopian projects of the Euro-American avant-gardes, the transformation of modernist conceptions of artistic autonomy, the changing roles of cultural institutions, the construction of social Others, the formation of new audiences, and the rise of "contemporary art."

Instructor(s): M. Jackson Terms Offered: Spring

Prerequisite(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

ARTH 15710. Modern Design and Modern Culture. 100 Units.

This course explores key issues of modernity (industrialization, capitalism, colonialism, consumerism, mass culture, nationalism, technology, etc.) through the study of material culture. Focusing on modern design in Europe and the United States, we will examine major developments in design thinking and practice as both reactive to and generative of broader political, economic, and social concerns. The course is organized around influential exhibitions, from World's Fairs to storefront shows, where design professionals, institutions, and publics came together to reflect on topics of urgency, identify design solutions, and imagine the implications of design on everyday life.

Instructor(s): Maggie Taft Terms Offered: Spring

Note(s): Students must attend first class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form and attend the first class. This course meets the general education requirement in the arts.

Equivalent Course(s): MAAD 25710

ARTH 15800. Contemporary Art. 100 Units.

This course will consider the practice and theory of visual art in the late twentieth and early twenty-first centuries. Among the subjects that will drive our narrative will be the rise of postmodernism, pop art, the aesthetics of the social movements of the 1960s, institutional critique, the relationship between reproductive media and Feminism, the concept of spectacle, conceptual art, the appearance of a global art industry after 1989, the connections between art school and art-making, "relational aesthetics," the fate of art in the age of the Internet, the art of the post-studio moment, and what happens to art when it engages with *everything*.

Instructor(s): M. Jackson Terms Offered: Spring

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): MAAD 10006, ARTV 20006

ARTH 16010. Mesoamerican Architecture. 100 Units.

This course will examine the range of architectural expression in Mexico, Guatemala, Honduras, and Belize from 1500 BCE to 1600 CE. Using a relatively simple vocabulary of elements (house, pyramid, plaza, ballcourt, and road), each Mesoamerican city constructed a distinctive visual identity, exquisitely attuned to the surrounding environment. Moving city by city over time, we will look closely at individual buildings as well as the spatial relationships between structures. At the end of this course, students will have honed their ability to analyze architectural space and its representations, and to write cogently about what they see.

Instructor(s): C. Brittenham Terms Offered: Autumn

Note(s): Students must attend 1st class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form & attend the first class. This course meets the Gen. Edu. Reqmt. in the dramatic, musical, & visual arts.

Equivalent Course(s): LACS 16010, ARCH 16010

ARTH 16100. Art of the East: China. 100 Units.

This course is an introduction to the arts of China focusing on the bronze vessels of the Shang and Zhou dynasties, the Chinese appropriation of the Buddha image, and the evolution of landscape and figure painting traditions. This course considers objects in contexts (from the archaeological sites from which they were unearthed to the material culture that

surrounded them) to reconstruct the functions and the meanings of objects, and to better understand Chinese culture through the objects it produced.

Instructor(s): Wu Hung Terms Offered: Spring

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): EALC 16100

ARTH 16460. Modern Latin American Art. 100 Units.

This course offers an introductory survey of the art of modern Latin America from the first wave of independence in the early nineteenth century to the present day. Through the study of key artists, movements, and works of art, we will attend to a set of central problems: the formation of collective identities in these new nations, the impact of revolution, dictatorship, and political violence on the development of art in the region, the incorporation of both foreign styles and indigenous traditions, and the shifting definitions of Latin American art. Special emphasis will be placed on developing the skills needed to analyze a wide variety of modern and contemporary art, including painting, sculpture, photography, performance art, and site-specific installations.

Instructor(s): M. Sullivan Terms Offered: Winter

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): LACS 16460

ARTH 16800. Arts of Japan. 100 Units.

This course surveys the arts of the Japanese archipelago through the study of selected major sites and artifacts. We will consider objects in their original contexts and in the course of transmission and reinterpretation across space and time. How did Japanese visual culture develop in the interaction with objects and ideas from China, Korea, and the West? Prehistoric artifacts, the Buddhist temple, imperial court culture, the narrative handscroll, the tea ceremony, folding screens, and woodblock prints are among the topics covered.

Instructor(s): C. Foxwell Terms Offered: Spring

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): EALC 16806

ARTH 16910. Modern Japanese Art and Architecture. 100 Units.

This course takes the long view of modern Japanese art and architecture with a focus on the changing relationships between object and viewer in the 19th and 20th centuries. Beginning in the late eighteenth century with the flowering of revivalist and individualist trends and the explosion of creativity in the woodblock prints of Hokusai and others, we will then turn to examine Western-style architecture and painting in the late nineteenth century; socialism, art criticism, and the emergence of the avant garde in the early twentieth century. Also covered are interwar architectural modernism, art during World War II, and postwar movements such as Gutai and Mono-ha. No familiarity with art history or Japan is required.

Instructor(s): C. Foxwell Terms Offered: Winter

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): EALC 16911

ARTH 17002. Drawing and the Making of Architecture. 100 Units.

This course focuses on the practice of drawing in the making of architecture. It explores the act of tracing lines on a surface as the foundation of design, a word that evokes through its own origins the very moment of architectural invention. As the most direct expression of the architect's ideas and an operative form of 'non-verbal thinking,' the physical response of the hand to media contributes crucially to the creative process. This studio course will offer an unmediated encounter with drawing techniques: we will test different supports—from parchment to screen, and especially paper—and different tools—natural chalks, antique and modern inks, industrial pencils, as well as keyboards and tablets—in order to understand the interaction, throughout history, between materials and design practice. Parallel to this, we will discuss a wide range of readings critically, thus reconstructing the evolving theory of representation in architectural writings and the relevance of graphic expression to both theorists and practitioners. Ultimately, the course will allow students to penetrate norms and conventions of technical drawing and to understand a primary tool in the production of architecture from the point of view of its makers.

Instructor(s): Dario Donetti Terms Offered: Autumn

Note(s): Students must attend first class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form and attend the first class. This course meets the general education requirement in the arts. This course may be taken for Architectural Studies minor credit or Arts Music Drama Core credit but not both.

Equivalent Course(s): ARCH 17002

ARTH 17121. The Art of Leonardo da Vinci. 100 Units.

The central focus of this course will be on the small, damaged and disputed body of paintings that Leonardo has left to us, the wealth of his drawings that help us make sense of that problematic heritage and provide the most direct route into his creative thinking, and the hundreds of pages of text in the form of notes in mirror-image handwriting that comment on art and so many other subjects. Our structure will be roughly chronological, including his late fifteenth-century Florentine artistic and social context; his two long periods in Milan as a court artist; his triumphant return to Florence and rivalry with the young Michelangelo; his brief and unsatisfying stay in papal Rome; and his final years in France. Among the themes that will be critically examined are: Leonardo's role in the creation of what is still grandiosely called the High Renaissance; the value and problematic aspects of thinking of him as the quintessential artist-scientist; the significance of the fact that

he has been a figure of such obsessive art-historical and broader cultural significance for over 500 years; and the ways in which recent scientific examination and digital imaging have shed surprising amounts of new light on his art. Through the concentrated study of the works of Leonardo and his artistic context, the course will take seriously the attempt to introduce students with little or no background in art history to some of the major avenues for analysis and interpretation in this field.

Instructor(s): C. Cohen Terms Offered: Autumn

Prerequisite(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): FNLD 21414

ARTH 17225. The Art of Premodern Science. 100 Units.

What did "science" look like in the premodern world? This course surveys scientific images and objects from antiquity through the fifteenth century to investigate how they could represent theories, teach their readers, facilitate practice, and aid in the production of knowledge. We will look at a wide variety of objects and images related to geometry, astrology, cosmology, medicine, anatomy, botany, and other disciplines. Largely through the lens of drawings and diagrams made by medieval artists and scholars reinterpreting and building upon older ideas, this course will explore historical scientific concepts, consider how these concepts transformed over time, and focus on the role scientific images played in the transmission and translation of theories over the course of several centuries. This course also explores the connections between science, magic, and religion in the premodern world. How did these concepts overlap, and how do modern definitions fall short in helping us understand premodern ideas about the natural world? Students will develop the conceptual tools necessary to confront these questions using visual evidence.

Instructor(s): Carly Boxer Terms Offered: Winter

Note(s): This course meets the general education requirement in the arts.

ARTH 17303. The Body in Ancient Greek Art and Culture. 100 Units.

This course provides an introduction to the role of the human body in ancient Greek art. We will examine, on the one hand, the various ways in which Greek artists represented the body, and consider how forms of bodily identity such as gender and sexuality were constructed and articulated through artistic practice. But we will also consider the ways in which works of art themselves - statues, paintings, vessels - could function like bodies or in place of bodies, expanding the notion of what it means to be a living being. Readings will range from primary texts - ancient literature in translation - to more theoretical writing on embodiment, gender, and sexuality.

Instructor(s): S. Estrin Terms Offered: Autumn

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): GNSE 17303, ARTH 37303, CLCV 17319

ARTH 17312. Art and the Cult of Saint in the Middle Ages. 100 Units.

As powerful mediators between the earthly and heavenly spheres, saints and their material remains occupied a central place in the religious practices of the medieval Christian world. This course will examine the visual and material culture of devotion to the "very special dead," and the particular role that works of art played in the narration, authentication, and negotiation of transactions between the devotee and the divine. We will cover the history of the medieval cult of saints from its origins in the depths of the Roman catacombs to its radical transformation in the pulpits of Reformation Germany, as well as the wide range of theoretical matters that surfaces in its study: mobility and exchange; gift-giving; commoditization; gender and sexuality; ritual violence; and theories of the body. Special emphasis will be placed on close reading of primary sources (in translation), through which students will learn to interrogate different strategies for constructing the sanctity of the objects at the center of these religious practices. This course will also cover a diverse array of media - including painting, sculpture, architecture, luxury goods, and textiles - and will make several trips to various collections in Chicago of devotional objects from western Europe, colonial Latin America, and Ethiopia.

Instructor(s): Tamara Golan Terms Offered: Spring

Note(s): Students must attend first class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form and attend the first class. This course meets the general education requirement in the arts.

ARTH 17501. Art and Feminism. 100 Units.

How has feminism changed the landscape of artistic practices over the course of the 20th and 21st centuries? What does a history of feminist art look like and how does it relate to a feminist history of art? In this course, students will consider the relationship between art and feminism, focusing upon artwork produced in the Americas over the last century. Through course readings, seminar discussions, and the close analysis of artworks, the course will be structured around a series of thematic investigations across the geographical space of the Americas, focusing especially upon the U.S. and Mexico. We will consider texts by feminist art historians such as Linda Nochlin and Anne Wagner alongside key texts by feminist theorists such as Judith Butler, bell hooks, and Laura Mulvey; we will explore the work of artists who have identified as feminists (e.g., Judy Chicago, Howardena Pindell) as well as those who have complicated or even resisted such identification (e.g., Georgia O'Keeffe, Agnes Martin, Yayoi Kusama). Key themes will include: representations of bodies, eroticisms, domestic space and labor, the relationship between the personal and the political, and the politicization of materials and making processes.

Instructor(s): M. Borowitz Terms Offered: Autumn

Note(s): Students must attend 1st class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form & attend the first class. This course meets the Gen Edu. Reqmt. in the dramatic, musical, and visual art.

ARTH 17520. Venetian Renaissance Art: Bellini, Giorgione, Titian. 100 Units.

This course is an introduction to the visual arts through the study of the distinctive version of the Renaissance in Venice. We concentrate on three major figures of European art Bellini, Giorgione and Titian with the aim of learning how to analyze and interpret different individual styles while also exploring the commonalities of Venetian culture and society that are reflected in their art. In the process we will devote attention to the character of Venice's water borne topography and the implications for its art, urbanism and architecture as well, unfortunately, for its precarious existence in a world of rising seas. The attempt to characterize Venice's difference, including art's emphasis on light, color and touch, will require us to be aware of its complex interaction with contemporary Tusco-Roman art and its major practitioners such as Leonardo and Michelangelo. Through the particular art- historical material studied, the course will take seriously the attempt to introduce students with little or no background in art or art history to some of the major avenues for interpretation in this field, including formal, stylistic, iconographical, psychological, social, feminist, theoretical and reception. Readings are chosen with this diversity of approach in mind.

Instructor(s): C. Cohen Terms Offered: Spring

Note(s): Students must attend 1st class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form & attend the first class. This course meets the Gen. Edu. Reqmt. in the dramatic, musical, & visual arts.

ARTH 17610. Modernism. 100 Units.

This course will explore the development of European and American modernism by concentrating on examples in local collections, especially the Smart Museum and the Art Institute of Chicago. The modernist era, from roughly 1860 to 1960, brought dramatic changes in the conception and making of art. We will analyze these by attending to the media of painting, sculpture, and printmaking.

Instructor(s): M. Ward Terms Offered: Autumn

Note(s): The class will meet frequently at the Art Institute, and students will need to be able to arrive at the museum in time for classes beginning there at 3:30 p.m. Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

ARTH 17612. The Art of Michelangelo. 100 Units.

The focus of this course will be Michelangelo's sculpture, painting and architecture while making use of his writings and his extensive body of drawings to understand his artistic personality, creative processes, theories of art, and his intellectual and spiritual biography, including his changing attitudes towards Neoplatonism, Christianity and politics. Our structure will be chronological starting with his juvenilia of the 1490s in Florence at the court of Lorenzo the Magnificent through his death in Rome in 1564 as an old man who was simultaneously the deity of art and a lonely, troubled, repentant Christian. Beyond close examination of the works themselves, among the themes that will receive attention for the ways they bear upon his art are Michelangelo's fraught relationship with patrons; his changing attitude towards religion, especially his engagement with the Catholic Reform; his sexuality and how it might bear on the representation of gender in his art and poetry; his "official" biographies during Michelangelo's lifetime and complex, ambivalent, reception over the centuries; new ideas about Michelangelo that have emerged from the restoration and scientific imaging of many of his works. At the same time, the course will be an introduction of students with little or no background in art history to some of the major avenues for interpretation in this field, including formal, stylistic, iconographical, psychological, social, feminist, theoretical and reception.

Instructor(s): C. Cohen Terms Offered: Autumn

Note(s): This course meets the general education requirement in the arts.

Equivalent Course(s): FNLD 21411, GNSE 17612

ARTH 17700. 19th Century French Art in the Art Institute. 100 Units.

In this course, we will closely examine 19th century paintings and sculptures in the Art Institute of Chicago and seek to understand how and why art changed during this period. Topics to be considered include the meaning of stylistic innovation in the 19th century, the development and dissolution of the genres as landscape and portraiture, and varying conceptions of realism and abstraction. Most class sessions will be devoted to looking at works in the galleries of the Art Institute. Because attendance is mandatory, students should consider whether their schedules will allow time for traveling to and from the museum for class meetings.

Instructor(s): M. Ward Terms Offered: Spring

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

ARTH 17704. Art Meets Philosophy. 100 Units.

The great German Romantic poet and critic Friedrich Schlegel once famously noted that "one of two things is usually lacking in the so-called Philosophy of Art: either philosophy or art." In this course, we are looking to prove Schlegel wrong by mapping out the very fruitful history of the relationship between ("western") art and ("western") philosophy instead, beginning in the poet's own early 19th-century Germany and concluding in the contemporary debates surrounding the rising influence of artificial intelligence on the making and exhibiting of art. We will be looking at artists and artworks- and not only in the classroom, but also in museums and artist's studios - in the framework of, and illuminating, contemporaneous philosophical discourse, and reading a variety of texts that help to shed light on the circumstances of certain artistic developments' conception in turn. Think Hegel and Caspar David Friedrich; Nietzsche and Ferdinand Hodler; Heidegger and Van Gogh or Paul Klee; Derrida and Daniel Buren's "institutional critique"; Agamben and Steve McQueen. (The historical emphasis will rest on post-war art and philosophy.) Our bibliography will focus primarily on the continental tradition in philosophy; writing assignments will depart from a direct experience of seeing and handling art. A final project will propose a physical synthesis of the rivaling siblings of art and philosophy.

Instructor(s): D. Roelstraete Terms Offered: Winter

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): ARTV 17704

ARTH 17728. Commemorating and Contesting Colonialism. 100 Units.

This course examines the ways in which French colonialism has been celebrated, commemorated, taught, and contested in visual art, monuments, institutions and neighborhoods, from the revolutionary era to the present. From the commemorations of Napoleon's Egyptian Expedition to the recently redesigned Islamic Art wing of the Louvre; from the Palais de la Porte Dorée that housed the 1931 Colonial Exposition to the Franco-Algerian artist Kader Attia's recently opened "convivial space" La Colonie; from the Grand Mosque of Paris to the Institut du Monde Arabe; we will explore together the many ways that artists, sculptors, architects, city planners, and activists have responded to the French imperial project. For much of the 19th and 20th centuries, successive regimes sponsored large- and small-scale efforts to make metropolitan citizens aware of French colonial efforts, ranging from monumental celebrations of military victories to the naming of streets after colonial administrators. At the same time, critics of empire, both colonial subjects and French activists, and postcolonial states have used art and architecture to contest those same efforts, exposing the limits of the French universalizing mission and the human costs of empire building. In examining the many ways different artistic forms have engaged with France's colonial projects, we will pay particular attention to how historical events and contemporary political debates have shaped their production.

Instructor(s): N. Davidson Terms Offered: Spring

Prerequisite(s): Admission to the Paris Humanities study abroad program.

Note(s): This course is part of the College's Paris Humanities study abroad program. This course meets the general education requirement in the arts.

ARTH 17899. Warhol's Art Histories. 100 Units.

This undergraduate course centers on the Andy Warhol (1928-1987) retrospective, Andy Warhol: From A to B and Back Again, held at the Art Institute of Chicago on October 20-January 26. This is the first retrospective of Warhol's work organized by a U.S. institution since 1989. The first part of the course will closely examine the historiography of writing on Warhol- including a focus on the art historical debates about what a queer reading of Warhol's work looks like and performs; the contested legacies of Warhol's race riots series; the role of advertising and design; the marginalization of Warhol's moving image works; and an investigation of the histories of pop art that may have been eclipsed by an over-emphasis on Warhol. The remaining weeks will hinge on close analysis of select objects in the exhibition, as well as the exhibition as itself an argument about why Warhol's work should be taken seriously. We might include discussions with visiting scholars, artists, conservators and curators.

Instructor(s): S. Nelson Terms Offered: Autumn

Note(s): This course meets frequently at the Art Institute of Chicago. Students should plan their schedules accordingly to account for travel. Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

ARTH 17905. The Museum Today. 100 Units.

The news is full of museums overhauling their collections, installations, and operations. The Baltimore Museum of Art pledged to buy only work by women artists in 2020. The Museum of Modern Art's 2019 redesign interrupts familiar chronologies with surprise conceptual encounters. The Minnesota Institute of Art recently launched a Center for Empathy and the Visual Arts. Through a series of case studies, this course examines how and why museums are radically rethinking their practices. What problems do they seek to redress? Who do the solutions aim to serve, and to what end? This course ultimately asks students to debate the role of the museum in the 21st century by way of course readings drawn from theory, scholarship, and the popular press; class discussions complimented by visits from guest scholars, artists, and curators; and occasional trips to Chicago museums.

Instructor(s): M. Taft Terms Offered: Spring

Note(s): Students must attend 1st class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form & attend the first class. This course meets the Gen. Edu. Reqmt. in the dramatic, musical, & visual arts.

ARTH 17908. American Graphic Art and Commercial Culture: 1850-1960. 100 Units.

This class focuses on widely distributed printed images, most of them with commercial, aesthetic, and/or political significance, along with the graphic design traditions and typography associated with them. While concentrating on American imagery, the context would be international, reflecting the condition of popular graphic arts in this country. Among other things it would treat book illustration, posters, advertising art, magazines and newspapers, cartooning, postcards, children's literature, commercial paper, and trade catalogs. Necessarily, given this wide scope, it will be episodic in character, but it will also attempt to relate this visual explosion to larger artistic movements, major events, technological changes, and political trends. It would also explore, from time to time, the roles played by collecting, exhibition, and academic commentary in legitimating the subject, as well as the power of ethnic and racial stereotyping and the multiplication of trade and printing journals. The aim, in short, is to examine the flowering of a visual print culture that had its roots in the Gutenberg Revolution of the 15th century. There will be both class discussion and lecturing. This is art in context, emphasizing breadth and the introduction of figures, institutions, and movements nurtured by an expansive production and distribution network. The course will be hosted by the Special Collections Research Center at Regenstein Library.

Instructor(s): N. Harris Terms Offered: Spring

Note(s): This course meets the general education requirement in the arts.

Equivalent Course(s): MAAD 27908, AMER 17908

ARTH 18000. Photography and Film. 100 Units.

This is a core course that serves as an introduction to the history of art by concentrating on some fundamental issues in the history of photography and film. The course is divided roughly in half between still photography and film. The central theme of the course concerns the way in which photographs and films have been understood and valued during the past 165 years. There have been profound changes in attitudes and beliefs regarding the nature of photographs throughout the history of photography (this is likewise true of film). The current range of views is very different from those held by the various audiences for photographs and films in the last century and the century before. For instance, photographs were originally conceived of as copies of things that can be seen, but the notion of copy was drawn from a long-established set of views about what makes a picture a work of art and copies were said to be incapable of being works of art. This view continues to haunt the writings of some critics and historians of photography and film. The course will concentrate on the work of photographers, theorists of photography and film, and on films by John Huston, Billy Wilder, and Roman Polanski.

Instructor(s): J. Snyder Terms Offered: Autumn

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts. This course can be taken for credit towards either the General Education Requirement in the Arts Music Drama core or the MAAD minor, but not both

Equivalent Course(s): MAAD 18000

ARTH 18305. Art in Context: New Art in Chicago Museums. 100 Units.

Through very regular, required site visits to museums, galleries, and experimental spaces in the greater Chicago area, this course will introduce students to the close consideration-in situ-of works of art created in our times, as well as to the application to these works of pertinent modes of critical and historical inquiry. Sites to be visited can include our own Smart Museum of Art, the Hyde Park Art Center, the Art Institute of Chicago, the Museum of Contemporary Art Chicago, the Museum of Contemporary Photography, Gallery 400 at the University of Illinois at Chicago, and private collections and galleries.

Instructor(s): D. English Terms Offered: Spring

Prerequisite(s): Course limit of 12 students; instructor consent required.

Note(s): This course meets the general education requirement in the arts. This course frequently meets off campus; students should plan their schedules accordingly to account for travel.

ARTH 18601. Reframing Women: Female Portraiture from the Mona Lisa to RuPaul. 100 Units.

As soon as portraiture was reinvented in the early 1400s, male patrons commissioned male artists to record the likenesses of their wives, mothers, daughters and lovers. With little sociopolitical agency of their own, the women depicted in these paintings also had little control over how they were portrayed. As such, their visual identities were constructed and framed by "the male gaze"-that is, the visual point-of-view of a cis-gendered, European, heterosexual male. Because art academies remained closed to women for centuries, male artists continued not only to create society's images of ideal female beauty but also to help define the ways in which women could participate in the public sphere. With few exceptions, portraits show women as passive muses, the foci of the adoration of their male family members, or as sex objects, dangerous bodies engendering lust and temptation. As women gained increased autonomy in western society and, with that, the ability to study art, they began, for the first time, to claim their feminine identities and to construct a version of femininity that existed outside of-or at least reacted against-the male gaze. In contemporary times, an expanded idea of what it means to be "female" and a cultural move towards intersectionality have continued to challenge our notions of femininity, showing that the concept of ideal female beauty is inextricably caught up not only in concerns about gender and sexuality but also of class and race. Organized

Instructor(s): Christine Zappella Terms Offered: Summer

Note(s): This course meets the general education requirement in the arts.

Equivalent Course(s): GNSE 18601

ARTH 18803. Woodblock Prints Of Japan. 100 Units.

Despite the availability of moveable type, woodblock printing-in which each printed sheet was produced by an intricately hand-carved block-was the main reproductive technology in Japan from roughly 1600 to 1870 for both texts and images. In these years, Japan's high literacy rates and booming urban publishing industry supported an array of fascinating illustrated books and prints-from theater ephemera and guidebooks to "art" prints, landscape series, and supernatural tales-that offer interesting points of comparison with early modern printing in the West. This course will consider Japanese woodblock prints as artistic and social objects during the 17th through 19th centuries. We will discuss style and technique, class and gender representations, the world of the pleasure quarters, illustrated plays and fiction, urban growth and travel, censorship, and the supernatural.

Instructor(s): C. Foxwell Terms Offered: Spring

Note(s): Students must attend 1st class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form & attend the first class. This course meets the Gen. Edu. Reqmt. in the dramatic, musical, & visual arts.

Equivalent Course(s): EALC 18803

ARTH 20212. A Cultural History of Modern and Contemporary Korean Art. 100 Units.

This course explores the development of modern and contemporary art in Korea from the 20th century to today. In parallel with political, economic, and social changes that defined the nation's identity, Korean art also experienced fundamental shifts and expansion. With a particular concern for the sociopolitical landscapes around artistic productions, this course introduces the main developments and cultural trends in the arts, drawing upon a wide array of media, from traditional paintings and sculptures to more recent media such as video, performance, photography, and new media art. We will

familiarize ourselves with the most crucial artists and their practices, focusing on key events that shaped the history of Korea and its art such as the Japanese colonial era, the Korean War, the national division, struggles against dictatorship, democratization, and globalization. Students will also learn how to look at, think about, and engage in critical discussion of the visual arts.

Instructor(s): Boyoung Chang Terms Offered: Autumn

Equivalent Course(s): ARTH 30212

ARTH 20304. Ancient Stones in Modern Hands. 100 Units.

Objects from classical antiquity that have survived into the modern era have enticed, inspired, and haunted those who encountered or possessed them. Collectors, in turn, have charged ancient objects with emotional, spiritual, and temporal power, enrolling them in all aspects of their lives, from questions of politics and religion to those of race and sexuality. This course explores intimate histories of private ownership of antiquities as they appear within literature, visual art, theater, aesthetics, and collecting practices. Focusing on the sensorial, material, and affective dimensions of collecting, we will survey histories of modern classicism that span from the eighteenth century to the present, from the Mediterranean to the Pacific. Historical sources will include the writings of Johann Gottfried Herder, Johann Joachim Winckelmann, Emma Hamilton, Vernon Lee, and Sigmund Freud, among others; secondary source scholarship will draw from the fields of gender studies, the history of race, art history, and the history of emotions. We will supplement our readings with occasional museum visits and film screenings. Assignments: Active participation in class, one secondary text analysis, one analysis of a controversy, and one proposal for a monument, museum, or school curriculum.

Instructor(s): S. Estrin & A. Goff Terms Offered: Winter

Prerequisite(s): Prerequisite: instructor consent required. Email both instructors describing your interest in the course, how it fits into your broader studies, and any relevant background (sestrin@uchicago.edu and agoff@uchicago.edu). This is a traveling seminar that includes a 4-day trip to visit California museum collections.

Note(s): Making History courses forgo traditional paper assignments for innovative projects that develop new skills with professional applications in the working world. A team-taught and interdisciplinary course; we welcome students from all backgrounds, with no previous experience in ancient art or modern history required.

Equivalent Course(s): CLCV 21019, HIST 29422, HIST 39422, ARTH 30304, CLAS 31019

ARTH 20603. Image and Text in Mexican Codices. 100 Units.

In most Mesoamerican languages, a single word describes the activities that we would call "writing" and "painting." This seminar will investigate the interrelationships between image and text in Central Mexico both before and immediately after the introduction of alphabetic writing in the 16th century. We will also review art historical and archaeological evidence for the social conditions of textual and artistic production in Mexico, and how these traditions were transformed under Spanish colonial rule. We will consider the materiality of text and image by working with facsimiles of Mesoamerican books in the Special Collections Research Center of the Regenstein Library. At the end of the course, students will have acquired a basic literacy in Aztec and Mixtec writing systems, and will have refined their ability to look productively and write elegantly about art.

Instructor(s): C. Brittenham Terms Offered: Spring

Equivalent Course(s): LACS 20603, LACS 30603, KNOW 27001, ARTH 30603, KNOW 37001

ARTH 20692. Armenian History through Art and Culture. 100 Units.

Who are the Armenians and where do they come from? What is the cultural contribution of Armenians to their neighbors and overall world heritage? This crash-course will try to answer these and many other similar questions while surveying Armenian history and elements of culture (mythology, religion, manuscript illumination, art, architecture, etc.). It also will discuss transformations of Armenian identity and symbols of 'Armenianness' through time, based on such elements of national identity as language, religion, art, or shared history. Due to the greatest artistic quality and the transcultural nature of its monuments and artifacts, Armenia has much to offer in the field of Art History, especially when we think about global transculturation and appropriation among cultures as a result of peoples' movements and contacts. The course is recommended for students with interest in Armenian Studies or related fields, in Area or Civilizations Studies, Art and Cultural Studies, etc.

Instructor(s): Hripsime Haroutunian Terms Offered: Winter

Equivalent Course(s): NEHC 20692, NEHC 30692, HIST 25711

ARTH 20700. Understanding the Built Environment. 100 Units.

This thematic course aims to equip students with the basic skills and knowledge required to analyze architecture and the urban environment. It provides an introduction to the methods and procedures of the architectural historian. These include such practical tasks as understanding architectural terminology, reading and interpreting architectural drawings, engaging with buildings "on site", and studying buildings in urban context, relative to surrounding buildings, street networks and public spaces. At a broader level, the course will entail critical discussion about the relationship between architecture and society, the building as a historically specific object that also changes over time, the cultural representation of architecture, and modes of perceiving/experiencing the built environment. The format is a discussion seminar based on readings, assignments, virtual visits and meetings with guest speakers. Although it is designed to introduce the fundamentals of architectural history to undergraduates seeking a minor in architectural studies, MA and PhD students in any field are also welcome to register.

Instructor(s): K. Taylor Terms Offered: Autumn

Note(s): This course will be taught entirely in remote format.

Equivalent Course(s): ARTH 30700, ARCH 20000

ARTH 21301. Beyond Guernica. Destruction and Preservation in the Spanish Civil War. 100 Units.

This course studies the Spanish Civil War (1936-1939) as a testing ground for the Second World War in regards to destruction and conservation, and as a key chapter in the process towards the creation of the notion of World Heritage. Picasso's "Guernica" epitomizes the image of the Spanish Civil War as a laboratory for destruction, as it encapsulates the vanishing of the idea of refuge in the time of total war. This exceptional devastation was contested through innovative methods to sheltering people and protecting monuments and museums, turning the country into a laboratory for conservation as well. Introducing the significance of this war through the letters of American soldiers who volunteered in Spain, we will reconstruct a series of debates about destruction and conservation from different ideological stands-liberalism, fascism, communism, anarchism-that mobilized the entire population: philosophers, peasants, artists, architects, writers, workers, and the international community.

Instructor(s): M. Caballero Terms Offered: Winter

Prerequisite(s): Reading proficiency in Spanish required.

Note(s): Class discussions in English. Students seeking Spanish credit will do all the readings/writing in Spanish.

Equivalent Course(s): SPAN 26020

ARTH 21313. Video Art: The Analog Years. Theory, Technology, Practice. 100 Units.

The course gives a critical introduction to early video and television art - from the proto-television impulses in the historical avant-gardes to the increasing proximity between analog and digital technologies in video art in the late 1970's and early 1980's. We will focus on the various technical aspects of analog video, as well as on artistic practice and early writings on the subject. Topics will include the technics and politics of time; video, feedback systems and ecology; the reconfiguration of the artist's studio; guerilla politics and alternative TV; video and autobiography; the relation between video and painting; the musical history of video; the invention of new machines; and video as a "television viewer".

Instructor(s): I. Blom Terms Offered: Autumn

Equivalent Course(s): CMST 38703, CMST 28703, MAAD 18703, ARTH 31313

ARTH 21316. After You: Curating the Art & Algorithm Debate. 100 Units.

This course offers a unique opportunity to witness the process of - and, more importantly, actively contribute to - the conceptualization of a major exhibition of contemporary art, to be organized at the Neubauer Collegium and Smart Museum of Art in the winter and spring of 2021. The exhibition in question is titled After You: Art and Agency in the Age of Algorithms, and was conceived in dialogue with DoVA associate professor and participating artist Jason Salavon. Alluding to the specter of the post-human regime and the various challenges raised by rapid advances in digital technology in the field of artificial intelligence and machine learning in particular, After You will bring together the work of a dozen artists working at the intersection of more or less traditional modes of artistic production and their algorithmic antitheses. The primary focus of After You, and therefore also of this class, are the philosophical implications of the increased role of artificial intelligence in the creation and reception of art, in particular with regards to questions of artistic intent, authorship, and originality. We will discuss this phenomenon's short but vibrant history, meet artists, read key texts (Bostrom, Joselit, Steyerl, Zuboff), and view artworks, all the while laying the didactic groundwork for the 2021 exhibit in the process: a hands-on curatorial workshop centered on one of the defining debates of our time.

Instructor(s): Dieter Roelstraete Terms Offered: Spring

Note(s): Students must attend first class to confirm enrollment.

Equivalent Course(s): ARTH 31316, MAAD 25316

ARTH 22106. Introduction to the Study of Iconography. 100 Units.

Equivalent Course(s): RLST 28320, ARTH 32106, HCHR 32106, RLIT 32106

ARTH 22402. Perspective as a Challenge to Art History. 100 Units.

Equivalent Course(s): ENGL 42412, SETH 32402, ARTH 32402, ENGL 22402

ARTH 22611. The Politics of Luxury in the Middle Ages. 100 Units.

This course explores conspicuous consumption, the love of costly things, the lure and power of precious materials, and the important role played by the arts in the definition of status, authority, influence, and pleasure in the Middle Ages. Investigating a series of episodes from the history of medieval luxury, we will explore how precious objects participated in western gift-culture (both "sacred" and "secular"), how the patronage of works of art pursued a variety of ideological and social aims, and we will scrutinize the aesthetic and economic conceptions of value transacted via works of art and practices of "ars" (skilled labor). Not least, the course aims to interrogate how the politics of luxury contributed to changing conceptions of the status of the artwork and the artist over the course of the Middle Ages.

Instructor(s): A. Kümmler Terms Offered: Autumn

Equivalent Course(s): MDVL 22611, ARTH 32611

ARTH 23321. Writing and Reading Space(s) in the Italian Renaissance. 100 Units.

This course offers an introduction to the study of the Renaissance in Italian literature. A defining movement in the history of European culture and civilization, the Renaissance is best known for its rediscovery of classical antiquity, its achievements in the arts, literature, philosophy, exploration etc., as well as for the rise of a modern sense of self. Italy represents the gateway to the study of the Renaissance as it was the birthplace of many of its key protagonists. In this course, students will become familiar with some of the major male and female representatives of the Italian Renaissance. From Petrarch to Alberti, from Lorenzo de' Medici to Ficino, from Machiavelli to Michelangelo, from Vittoria Colonna to Moderata Fonte, we will situate their writings against the discrete geographical, political, and cultural backdrops that engendered them. Thematically, the class will focus on the issue of space and the relationship between authors and the built environment. We will compare/contrast the physical milieus in which texts were produced (city/countryside, courts etc.), as well as look at how real and imaginary spaces were represented in literary form in order to examine how location both informs and affects

the production of literary works. Lastly, we will engage with manuscripts and early printed editions of these texts during our in-and-off campus visits to the Special Collections at The University of Chicago Library and the Newberry Library.

Instructor(s): E. Baldassarre Terms Offered: Winter

Note(s): Taught in Italian.

Equivalent Course(s): ARCH 23321, ITAL 23321, ENST 23321

ARTH 23602. Native American Art at The Field Museum: An Anthropological Perspective. 100 Units.

This course explores recent forays into collecting and displaying contemporary Native American Art for the Field Museum, a museum of natural history and anthropology. Through site visits and dialogues with Field Museum staff, contemporary Native American artists, and readings, the course introduces students to the potential and problematic of locating, defining, and representing contemporary art within the colonial context of the Field Museum and how collaboration with artists and community members plays a role in shifting the paradigm toward one that centers collaborative curation and is inclusive of the direct voice of artists. Students will have the opportunity to observe the major renovation currently underway of the Native North American Hall and the role that contemporary art will play in deepening understanding of existing collections and contemporary social concerns.

Instructor(s): A. Wali Terms Offered: Spring

Prerequisite(s): Students must attend first class to confirm enrollment. This course meets at the Field Museum; students should plan their course schedules to accommodate travel.

Equivalent Course(s): ARTH 33602

ARTH 24002. Advanced Nonfiction Workshop: Writing About the Arts. 100 Units.

Thinking about practices is a way of focusing a conversation between art historians, creative writers, and working visual artists, all of whom are encouraged to join this workshop. We ourselves will be practicing and studying a wide variety of approaches to visual art. We'll read critics like John Yau and Lori Waxman, keepers of notebooks like John Berger and Rainer Maria Rilke, meditations by art historians writing for general readers, and by creative writers like Zadie Smith and Mark Doty, and writing by artists, from Anni Albers to Dawoud Bey. The course hopes to support students both in developing useful practices and experimenting boldly. Every class session will begin with student-led observation at the Smart Museum, and we will spend one session on close looking at works on paper at the Smart. Students will also visit five collections, exhibitions and/or galleries and, importantly, keep a looking notebook. Students will write a number of exercises in different forms (immersive meditation, researched portrait, mosaic fragment), and will also write two essays (on any subject and in any mode) to be workshoped in class.

Instructor(s): Rachel Cohen Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu (writing sample required). Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 24002, ARTH 34002, CRWR 44002

ARTH 24008. Advanced Nonfiction Workshop: Drawing from Life. 100 Units.

This is a course for students interested in developing their ability to write about the visual arts, as critics, appreciators, theorists, or memoirists, and, practically, for work in galleries, museums, journals, and magazines. A theme of the course will be to explore ways that art and life may interact, both in the work made by a visual artist, and in the nonfiction that arises in response to a visual artist or their work. Some students may be interested to write biographically about artists and their work, and we'll talk about how to make biography illuminating and not reductive; other students may be interested to draw on their own life experiences as they try to shed light on works of art; still others may be curious to see how certain artists themselves have viewed the questions and practices of drawing from life. We'll use ideas about drawing, and especially drawing repeatedly, as a model and a metaphor for thinking about writing. We'll have some occasions to look at works on paper held at the Smart Museum, and we'll visit some exhibitions and galleries, together and independently. Readings will include works such as James Lord's book *A Giacometti Portrait*, on being drawn by Giacometti, Maggie Nelson on the color blue in life and art from *Bluets*, John Berger on drawing, Rebecca Solnit on photographer Edward Muybridge, Geoff Dyer on street photography from *The Ongoing Moment*, John Yau on Jasper Johns's practice and on those of contemporary artists, Zbigniew Herbert

Instructor(s): Rachel Cohen Terms Offered: Spring

Equivalent Course(s): ARTH 34008, CRWR 44008, CRWR 24008

ARTH 24014. The Veneration of Icons in Byzantium: History/Theory/Practice. 100 Units.

In order to appreciate the pivotal religious significance icons had in Byzantium for private devotion, in the liturgy, in civic ritual, and in military campaigns, we will survey the visual evidence along with a vast array of written sources. We will explore the origins of the Christian cult of icons in the Early Byzantine period and its roots in the Greco-Roman world of paganism. Through the close analysis of icons executed over the centuries in different artistic techniques, we will examine matters of iconography, style and aesthetics. We will also have a close look at image theory, as developed by Byzantine theologians and codified in the era of Iconoclasm.

Instructor(s): Karin Krause Terms Offered: Spring

Equivalent Course(s): MDVL 28704, ARTH 44014, HCHR 44004, RLST 28704, RLVC 44004

ARTH 24090. Japanese Woodblock Prints: From 1660 to the Present. 100 Units.

Despite the availability of moveable type, woodblock printing—in which each printed sheet was produced by an intricately hand-carved block—was the main reproductive technology in early modern Japan (roughly 1600 to 1850) for both texts and images. In these years, Japan's high literacy rates and booming urban publishing industry gave rise to an array of fascinating illustrated books and prints—from theater ephemera and guidebooks to "art" prints, landscape series, and supernatural tales—

that offer interesting points of comparison with early modern printing in the West. Drawing on a recent exhibition at the Smart Museum, this course will consider Japanese woodblock prints as artistic and social objects during the seventeenth through nineteenth centuries. While viewing actual prints in area collections, we will discuss style and technique, the representation of class and gender, the world of the pleasure quarters, illustrated plays and fiction, urban growth and travel, censorship, and the supernatural.

Instructor(s): C. Foxwell Terms Offered: Spring

Equivalent Course(s): ARTH 34090, EALC 24090, EALC 34090

ARTH 24122. Diasporic Practices in Contemporary Art. 100 Units.

The class will examine various phenomena of "Diasporic Practices in Contemporary Art", such as fragmented histories, the question of origin(ality), the limits of translation, social belonging and "the chosen family", and (over-)representation of origin. In class we will discuss readings by (a.o.) Grada Kilomba, Adrian Piper, Édouard Glissant, Langston Hughes, Trinh T. Minh-ha, and Hito Steyerl. Students will be asked to present on contemporary artists highlighting their diasporic strategies, while also producing creative works through assignments that employ diasporic strategies and that will be discussed in class.

Instructor(s): J. Phillips Terms Offered: Autumn

Prerequisite(s): ARTV 10100, 10200 or 10300

Note(s): Please email Julia Phillips juliaphillips@uchicago.edu with a brief description of how your work relates to a diasporic experience and/or your personal investment in the subject (150-300 words).

Equivalent Course(s): GNSE 38122, ARTV 34122, CRES 24122, GNSE 28122, ARTV 24122

ARTH 24190. Imagining Chicago's Common Buildings. 100 Units.

This course is an architectural studio based in the common residential buildings of Chicago and the city's built environment. While design projects and architectural skills will be the focus of the course, it will also incorporate readings, a small amount of writing, some social and geographical history, and several explorations around Chicago. The studio will: (1) give students interested in pursuing architecture or the study of cities experience with a studio course and some skills related to architectural thinking, (2) acquaint students intimately with Chicago's common residential buildings and built fabric, and (3) situate all this within a context of social thought about residential architecture, common buildings, housing, and the city. This course is part of the College Course Cluster program: Urban Design.

Instructor(s): L. Joyner Terms Offered: Autumn

Note(s): Consent is required to enroll in this course. Interested students should email the instructor (Luke Joyner, lukejoy@uchicago.edu) to briefly explain their interest and any previous experience with the course topics. Students must attend first class to confirm enrollment.

Equivalent Course(s): ARTV 20210, ENST 24190, GEOG 24190, AMER 24190, ARCH 24190

ARTH 24194. Projections in the Vivosphere. 100 Units.

This studio course invites students to devise new techniques for imaging the vivosphere: the fragile and reactive film of interactions that sustain human and non-human life around the surface of the earth. This critical zone is both a space of inquiry and topic of concern, crossing geophysical and disciplinary boundaries. Although more than the sum of representations, new techniques of imaging are urgently required for the shape and behavior of this frontier to fully enter our collective imagination and policy conversations. Seminar discussions and hands-on workshops will immerse students in historic and contemporary techniques of drawing as platforms for inquiry and political influence. While students will develop the ability to manipulate the projective geometries that underpin orthographic, perspectival, isometric, anamorphic and cartographic systems of projection, the vivosphere defies these prevailing modes of description. Research in this critical zone struggles to represent its shape, picture interactions across scale, and overcome the dissonance between planetary representations and lived experience, static geometry and dynamic cycles. Students will be invited to devise and attempt novel techniques to overcome these limitations.

Instructor(s): A. Schachman Terms Offered: Autumn

Note(s): Students must attend first class to confirm enrollment.

Equivalent Course(s): ARCH 24194

ARTH 24196. Second Nature: New Models for the Chicago Park District. 100 Units.

The Chicago Park District seems to preserve "first nature" within the metropolitan field. But the motive for establishing this sovereign territory was hardly natural. Today, cultural change raises questions about the significance and operation of this immense network of civic spaces. What opportunities emerge as we rethink them? While this design studio focuses on the development of new model parks for Chicago, it can support students coming from a broad range of disciplines. Texts, seminar discussions, and field trips will complement and nourish the development of architectural proposals.

Instructor(s): A. Schachman Terms Offered: Spring

Equivalent Course(s): ENST 24196, GEOG 24196, ARCH 24196, ARTV 20206

ARTH 24197. Lakefront Kiosk. 100 Units.

Students will design kiosks on Chicago's lakefront, one of the city's most vibrant public spaces. Historically, the shoreline of Lake Michigan has played a central role in Chicago's urban identity. In the 1909 "Plan for Chicago" Daniel Burnham proposed to reclaim the entire length of the lakefront as a place of leisure for all inhabitants of the city—an idea realized during the 20th century. The Chicago Park District oversees over 40 kiosks that punctuate the shoreline, which during the summer offer food, retail, and recreational services. Although these kiosks are, by necessity, modest in size, these structures are an exciting opportunity to explore creative architectural solutions. The design studio will identify the lakefront as a new realm of architectural imagination that operates on the scenic threshold of the city and at a more intimate scale. Though small—a work of micro-architecture—a kiosk can reinforce the city's broader commitment to forward-thinking design. The studio's challenge is to demonstrate how small-scale architectural design can transform public space. The kiosk will be designed as both a seasonal commercial space, and year-round space for exhibiting information about Lake Michigan—from

its history as an industrial machine to its potential future as an ecological preserve. It will explore how a kiosk engages with both visitors and the surrounding environment, and how a kiosk maintains an active presence on the lakefront and attracts visitors year-round.

Instructor(s): M. Felsen Terms Offered: Winter

Equivalent Course(s): ARCH 24197

ARTH 24198. Architecture of the Public Library. 100 Units.

In this architecture studio course, you will learn and practice a range of architectural skills, using as a starting point the library as an institution, and in particular the range of libraries in and around Chicago. You will look at, sketch, and work within libraries across the campus and city, and think about the role the library plays in our time. Studio projects will focus on the library as a locus for learning, a public space, an organizational system, a set of social services, and an architectural opportunity. After a series of short design exercises, you will work in groups to design a proposal for a new library for Chicago, on a real site that you choose. The bulk of your time will be spent on these studio projects, but there will also be reading and conversation. Materials for drawing and making will be provided.

Instructor(s): L. Joyner Terms Offered: Spring

Note(s): This class will not have field trips outside of class time, but will regularly meet at different locations both on-campus and around the city. Please make sure you've built enough time into your schedule to get to and from meeting locations. Consent is required to enroll in this class. Interested students should email the instructor (Luke Joyner, lukejjoy@uchicago.edu) to briefly explain their interest and any previous experience with the course topics. Students must attend first class to confirm enrollment.

Equivalent Course(s): ARCH 24198

ARTH 24205. Skills & Processes for Architecture and Urban Design. 100 Units.

This studio course seeks to acquaint students with a range of skills and methods in design, including manual, digital and hybrid methods. Students will test out several design processes through a series of problem sets and micro-projects, and develop their own personal tools and ways as they go. An emphasis will be put on free play and experimentation, followed by rounds of revision and refinement. We will also consider how historical research, precedent, context and constraint can help meaningfully inform design process, without overly paralyzing it. This is an excellent course to take if you are interested in other studio design courses (such as courses listed ARCH 2419X and ARTV 24267), but want to build up your skills before undertaking a major, quarter-long project.

Instructor(s): L. Joyner Terms Offered: Winter

Prerequisite(s): Consent is required to enroll in this class. Interested students should email the instructor (Luke Joyner, lukejjoy@uchicago.edu) to briefly explain their interest and any previous experience with the course topics, though none is required. Priority will be given to 1st-3rd year undergraduates who have not already taken UAD studio courses, but intend to do so. Students must attend first class to confirm enrollment.

Equivalent Course(s): ARCH 24205

ARTH 24210. Complex Curves/Plastic Shapes. 100 Units.

Complex forms are ever more prevalent in architecture, in large part due to sophisticated software easing their design and fabrication. This course is a formal investigation of these curved forms and plastic shapes, and aims to develop critical understanding of formal issues underlying their use, construction and intention. The format is that of a combined workshop/seminar: in workshop mode, weekly drawing exercises will be done with increasing levels of geometric complexity. This work will be accompanied by discussion of formal issues, including positive and negative space, boundaries, interiority, and distinction between curved surfaces and volumes. Readings and presentations will provide theoretical and historical background. The underlying basis for our investigation are a number of sculptures done in the mid-20th century by Albers, Moholy-Nagy, Gabo, Hepworth, Kobra, and Vantongerloo. Seen as a whole, their work provides methodologies for the construction of complex curved form, and a broad range of positions on materiality and fabrication. The discipline learned from both their and your work is applicable at a variety of scales from the intimate to the architectural, as well as to orthogonal constructions. The exercises build on each other so steady participation is needed. Familiarity with digital software is preferred, although analog methods of drawing and making can work. Some experience with design is recommended.

Instructor(s): G. Goldberg Terms Offered: Winter

Equivalent Course(s): ARCH 24210

ARTH 24250. A Visual History of Latin American Women. 100 Units.

This undergraduate seminar will analyze both visual and literary images of and by women to show their role in society and the transformations experienced in terms of their civil, political, labor, and reproductive rights. These vignettes, which span from Pre-Colombian times to the present, will be examined from an art-historical perspective, thus providing students with the opportunity to discuss Latin America's historical context through visual culture.

Instructor(s): Rosario Granados Terms Offered: TBD

Equivalent Course(s): LACS 24250, GNSE 24250

ARTH 24416. Biocentrism: The Concept of Life in German Literature and Art. 100 Units.

This course explores the notion of life broadly understood, drawing on texts from a variety of disciplines (literature, philosophy, art history, biology) as well as on artworks that reflect on the concept of life. How did artists and writers conceive of the process of life? How did they situate life in relation to movement? How do notions of the organic/inorganic, material/spiritual organize writers' and artists' understanding of life? How did scientific and cultural currents such as organicism, vitalism, constructivism influence literary and aesthetic practices and theoretical frameworks? What are the networks of exchange between literature, the arts, and the emerging life sciences in the period? These and other questions

will be grounded in close consideration of works by Aristotle, Nietzsche, Freud, Rilke, Woolf, Kafka, Benjamin, Haeckel, Murnau, Kandinsky, Klee, Mies.

Instructor(s): M. Christian Terms Offered: TBD

Note(s): Course conducted in German

Equivalent Course(s): GRMN 24416

ARTH 24615. Modern & Contemporary Materialities (Suzanne Deal Booth Conservation Seminar) 100 Units.

This course aims to explore the links between materiality, making and meaning of modern art and investigate how surface, form, texture and color are localized in particular artistic or historical contexts. It can be argued that the discipline of art history still remains substantially divided between those who study what objects mean and those who study how objects are made, where 'meaning' typically derives from cultural hermeneutics, while 'madeness' remains the province of technical analysis. The course will discuss the methods, theory and strategies of a material-based approach, its forms of writing and claims to meaning. Readings will be drawn from a variety of disciplines, including art history, visual and material culture, anthropology, philosophy, and material science.

Instructor(s): M. Kokkori Terms Offered: Autumn

Note(s): Students must have instructor consent to register for this course. Please email Maria Kokkori at

mkokkori@artic.edu by Tuesday, September 8th to express your interest, indicate any previous experience you have with the course topics, and how you envision contributing toward the conservation initiative's goal of diversifying the field of conservation and conservation science.

Equivalent Course(s): ARTH 34615

ARTH 24626. Allure of Matter: Material Art in China. 100 Units.

This seminar examines contemporary art in China through the lens of the Smart Museum of Art's upcoming exhibition, *The Allure of Matter: Material Art in China*. Using works in the exhibition as case studies, the course explores questions about materials and materiality in contemporary art. Throughout the course, we will address the following questions: How have unconventional materials impacted art practices in China? How do these material explorations inform our understanding of contemporary art in China and beyond? How do materials mediate different relationships between the artist, artwork and viewer? Guest speakers, including conservators, will expand our discussions of materiality. The course will meet for approximately half of the time at the Smart Museum or Wrightwood 659.

Instructor(s): O. Cacchione Terms Offered: Winter

Prerequisite(s): Students who have taken a course in modern or contemporary art history preferred.

Equivalent Course(s): ARTH 34626, EALC 34627, EALC 24627

ARTH 24706. Japanese Art in the Sinosphere. 100 Units.

From the earliest centuries of the common era until the 1870s, Japanese writers, artists, and scholars considered themselves to be living in the Sinosphere: the realm of China's cultural and political centrality. Starting with a consideration of Chinese material culture in the Tale of Genji, we will proceed to address topics such as the relation between Chinese and Japanese handscroll paintings, the spread of Chinese-style ink monochrome painting in Japan, the rise of the Kano school as official painters and Chinese-style painting experts, and the immense popularity of literati painting and calligraphy. Korean painting's intersection with Chinese and Japanese art in the medieval and early modern periods will also factor into the discussion. We will evaluate the changing dynamics around political power and gender embodied in the Chinese/Japanese oppositional duality and reassess the prevailing narratives concerning how the Sinosphere faded from view in the Meiji era.

Instructor(s): C. Foxwell Terms Offered: Winter

Note(s): Students must attend first class to confirm enrollment. Registration is permitted by instructor consent only.

Equivalent Course(s): GNSE 34706, GNSE 24706, ARTH 34706

ARTH 24721. Manet, Mallarmé, and Modernism. 100 Units.

Much of the theory, as well as the look and sound of modern art, as it developed in the late nineteenth century, is the result of the individual efforts as well as the friendly collaboration of the Parisian painter Edouard Manet and the Parisian poet and English teacher Stéphane Mallarmé. This course will introduce them, examine their major collaborations (*Le Courbeau*, *L'Après-Midi d'un Faune*), and place them within the developing consensus in experimental art and thought at the fin de siècle, which for reasons having to do with the reception Mallarmé, came to be called symbolism.

Instructor(s): A. Pop Terms Offered: Spring

Equivalent Course(s): FNDL 25007, ARTH 34721, SETH 35007

ARTH 24813. Museums and Art, 1750-1920. 100 Units.

This course considers how the rise of the art museum in the modern era affected the making of modern art and the viewing of past art. It is not designed to be a survey course, but rather a historical investigation of certain issues and developments. We will concentrate on the following: what has been said to happen to objects when they are uprooted and moved into the museum; how and why museums have changed display practices so as to get viewers to look at art in new ways; what artists have understood museums to represent and how they have responded to that understanding in their work and their display preferences. Case studies will be drawn from across Europe and the United States.

Instructor(s): M. Ward Terms Offered: Autumn

Equivalent Course(s): ARTH 34813

ARTH 24814. Museums and Art, 1920-present. 100 Units.

This course considers the history of the art museum in relation to developments in modern and contemporary art. We will focus upon how political, social and commercial factors transformed art institutions and display practices in the early and mid-century 20th century; how various challenges -- artists' critiques, new forms of art making, different audiences - did (or

did not) lead to change in the 1960s; and how museums have continued to evolve in the times since. Case studies will be drawn from across Europe and the United States.

Instructor(s): M. Ward Terms Offered: Spring

Equivalent Course(s): ARTH 34814

ARTH 25101. French Art, criticism and Reception. 100 Units.

France has a long history of inspired writing on art by literary figures and critics. This course will examine in tandem key paintings and writings from the period during which modernism developed, from the Revolution of 1848 to the outbreak of WWI. We will seek to understand the aesthetic and social issues that artists and their literary counterparts shared, but also their sense of the incommensurability of visual and verbal expression. While the emphasis will be on close looking and reading, we will also contextualize these concerns in the French art world by analyzing exhibition practices and modes of reception. Students will be expected to participate in discussions and study sessions at the Art Institute and Regenstein Special Collections, to write an essay exam, and to do a short research project on a topic of their choice.

Instructor(s): Martha Ward Terms Offered: Autumn

Prerequisite(s): Registration is permitted by consent only. Students must attend 1st class to confirm enrollment.

Equivalent Course(s): ARTH 35101

ARTH 25111. Rhoades Seminar: Theory, History, and Practice of Textiles - The Andes. 100 Units.

How many minutes of your day are spent with some form of textile touching your skin? And yet, what do you really know about them? This seminar will introduce you to the basic concepts and techniques of making textiles. While readings and discussions will offer globally-relevant perspectives on textiles, the course's primary lens will be the prolific textile tradition that developed in the region of the Andes Mountains over thousands of years. In this course, you will conduct hands-on experiments with technologies for spinning, dyeing, and weaving in an art historical laboratory setting, in order to understand the tools, techniques, and embodied knowledge that they entail. You will then apply what you have learned in these experiments to your own studies of ancient Andean textiles in the stellar collection of the Art Institute of Chicago. Readings will draw on scholarship, reference works, and how-to manuals. Written assignments will take the form of gallery labels and catalogue essays in order to better understand these genres of writing. This course has no prerequisites, but a willingness to participate in active learning (and not having a fear of perhaps doing something badly the first time) are essential. A background in art practice may be helpful, but is in no way necessary or required. Because wool will be handled extensively, potential allergies should be considered before enrolling.

Instructor(s): A. Hamilton Terms Offered: Winter

Note(s): This course meets at the Art Institute of Chicago. Students should plan their schedules accordingly to account for travel.

Equivalent Course(s): ARTH 35111, LACS 33512, LACS 23512

ARTH 25113. Rhoades Seminar: Possibility and Peril: Material and Technical Innovations in Modern Textiles. 100 Units.

This course will consider the material and technical innovations that attended industrialized textile production in the nineteenth and twentieth centuries. Among the topics considered will be the invention of new fibers such as rayon, Lurex, and polyester, the introduction of synthetic dye stuffs, and the rapid mechanizing of the production process. The promises of these innovations will be examined alongside a consideration of their functional and ecological implications.

Instructor(s): E. Warren Terms Offered: Winter

Note(s): This course meets at the Art Institute of Chicago. Students should plan their schedules accordingly to account for travel. Students must attend first class to confirm enrollment.

Equivalent Course(s): ARTH 35113

ARTH 25115. Winckelmann: Enlightenment Art Historian and Philosopher. 100 Units.

We approach the first great modern art historian through reading his classic early and mature writings and through the art and criticism of his time (and at the end, our own). Reading-intensive, with a field trip to the Art Institute.

Instructor(s): Andrei Pop Terms Offered: Autumn

Prerequisite(s): German reading competence helpful, but NOT required.

Equivalent Course(s): ARTH 35115, GRMN 35015, CLAS 35014, KNOW 35000, SCTH 35000, GRMN 25015

ARTH 25213. Hermeneutics of the Image. 100 Units.

What does it mean to "read" an image? To achieve an understanding of its "meaning"? This is not an easy question since images don't directly offer propositional content, which is the usual habitat of meaning. In this seminar, we will approach this question by considering first some foundational contributions to hermeneutics (Gadamer, Hirsch) and to the theory of pictorial meaning (Wollheim). We will then dig into the tradition of pictorial interpretation as it unfolds starting with Winckelmann and Diderot and extending to the present day (Fried, Clark). Freudian hermeneutics (Freud, Adrian Stokes), iconology (Panofsky), and phenomenology (Merleau-Ponty, Heidegger) will also be considered. In each case, we will endeavor to test the claims and interpretive findings through close examination of the images involved. The emphasis will be on the tradition of European painting and sculpture, but the tools acquired in the seminar should also be applicable in other fields.

Instructor(s): David Wellbery Terms Offered: Winter

Prerequisite(s): For advanced undergrads, consent of instructor required.

Equivalent Course(s): GRMN 35213, GRMN 25213, ARTH 35213, SCTH 38113

ARTH 25540. Fact and Fiction. 100 Units.

Since Grierson's definition of the documentary as "creative treatment of actuality," critics have been struggling to establish distinctions between documentary and fiction. Furthermore, the critical discourse has been constantly challenged by new

artistic meditations of reality and its representation, and works blurring the border between the logic of facts and the logic of fiction. Additionally, this dualism is complicated by the difficult question of truth telling. Cinema has a long and winding history of non-fiction: from staged or dramatized actualities at its beginning, via docudrama, fake documentaries and mockumentary, to trends in recent documentaries that incorporate reenactment and animation. Since the mid-1990s the "documentary turn in contemporary art" has seen more and more artists experimenting with documentary modes through which they are questioning the mediations by which facts/documents acquire their facticity. The aim of this seminar will be to examine films and works in contemporary art that address these difficult questions of fact and fiction. Readings will include work from film and art criticism and theory, as well as critical literature addressing questions of fact and fiction in historiography, narratology, and philosophy. Films may include works by Edison, Robert Flaherty, Ari Folman, Abbas Kiarostami, Chris Marker, George Méliès, Avi Mograbi, Rithy Panh, Peter Watkins. Works by contemporary artists may include Kutlug Ataman, The Atlas Group/

ARTH 25705. New Worlds: Art and Material Culture of Early America, 1500-1877. 100 Units.

This a pre-1877 seminar is focused on the art and material culture of North America from contact to the aftermath of the Civil War. The course tackles the question of cultural encounter, indexed through the art and artifacts of the period. The seminar is organized both thematically and chronologically, beginning with post Columbian contact (early French watercolors of Indian life; church architecture of New Mexico), 18th century economic exchange (Chinoiserie, furniture, silver work), politics (revolutionary visual propaganda-in prints), emergence of a merchant class (portraiture of Copley, Stuart, et al.), history painting (West, Vanderlyn, et. al), neoclassicisms (sculpture), Euro-American westward expansion and Indian resistance (itinerant miniature and self-taught artists; hide painting), religion (Shaker furniture and architecture; Hicks), natural history (Audubon) advent of photography (daguerreotypes, ferrotypes, etc.), westward expansion and landscape painting (Cole, Bierstadt, Carlin), slavery, abolition and Civil War (runaway slave ads, Matthew Brady, Winslow Homer). The course will engage directly with the Special Collections, the Smart Museum, and the Art Institute of Chicago. Instructor(s): C. Allison Terms Offered: Spring
Note(s): This course meets frequently at the Art Institute of Chicago. Plan accordingly to allow for travel time.
Equivalent Course(s): AMER 25705

ARTH 25709. Picturing Moral Autonomy in China and Elsewhere. 100 Units.

This course examines how intellectuals in Preindustrial China maintained their independence, as well as their moral compass, in times of inordinate social and political pressure. Systematic thinking on this topic appears early in China, beginning with Confucius and Mencius, but was by no means limited to the Confucian tradition. Zhuangzi (late 4th c. BCE) devoted an entire chapter to the problem. This course will survey some important meditations on the topic from the Classical period, but will focus on the Song dynasty (960-1278) with its rich body of essays, poems, and paintings touching upon the problem of moral autonomy. To supplement our study of primary sources we'll read secondary sources on Song law, society, and government, as well as relevant secondary studies of European art. Later in the course we will read reflections on Song period Chinese essays by English radicals of the 18th century, and will wrap up with American classics by Henry David Thoreau, Ralph Waldo Emerson, and Wendell Berry. Along the way we will learn how to conduct "close readings" of both written and visual materials for clues to the deep, humanistic themes underlying artistic choice.
Instructor(s): M. Powers Terms Offered: Autumn
Equivalent Course(s): EALC 25709, EALC 35709, ARTH 35709

ARTH 25810. Global Abstraction. 100 Units.

This course investigates twentieth-century abstraction as a global phenomenon, focusing on the period from 1945 through the 1960s. Case studies will be drawn primarily from the United States, Europe, Latin America and East Asia, but individual research projects from other regions will be welcome. Themes and questions to be addressed include: the repetition of historical avant-garde strategies such as the grid, the monochrome, and non-compositional order in Europe, the United States, and South America; the global reception and adaptation of Abstract Expressionism; distinct understandings of gesture, mark-making, and subjectivity; the meaning and use of color; the relationship of abstraction to industry and design; the deployment of abstraction as a "weapon of the Cold War" and a strategy of internationalization; and autochthonous definitions of abstraction outside the West. Artists and groups to be studied include: Jackson Pollock, Barnett Newman, Ellsworth Kelly, Agnes Martin, Zero, Blinky Palermo, Georges Mathieu, Lucio Fontana, Neoconcretism, Alejandro Otero, Gutai, and Tansackhwa.

Instructor(s): M. Sullivan Terms Offered: Spring

ARTH 26106. Exhibition in Practice II. 100 Units.

Students in this course will work together to install an exhibition at the Smart Museum of Art. Building on the work produced in ARTH 2/36015 Exhibition in Practice I (spring 2019), students collaborate to write exhibition texts, coordinate programming, and participate in the installation process. Workshoping texts, trouble-shooting, and hands-on activities will feature in class sessions. Readings for this course explore diverse ways to approach exhibition narratives, from museum labels to catalogue essays.

Instructor(s): L. Wilson Terms Offered: Autumn

Equivalent Course(s): ARTH 36106

ARTH 26110. Ways of Curating and Collecting. 100 Units.

This seminar takes stock of contemporary currents in curating and collecting practices at a time when we are experiencing rapid expansion of the museum sector internationally, and witnessing the growing ubiquity of "curation" within the spheres of leisure, culture, entertainment and tourism. Using institutions across campus, the city of Chicago and beyond as our primary locus, we will explore curatorial and collecting strategies employed by a variety of visual arts institutions and platforms from the scale of the single-room/single curator gallery, to the museum and the international biennial. We will consider how curatorial and exhibition-making practices have evolved from the latter half of the 20th century to the present day. We will consider the socio-cultural and political implications of curatorial work, and reflect on the shifting status of the art object within collecting and non-collecting institutions. Together we will explore significant curatorial projects at a local, national and international level; we will undertake site visits as well as play host to visiting curators, artists and thinkers. Course readings will feature the writings of seminal international curators as well as selections from historians and theorists in the field of curatorial studies. Students will work through a series of independent and collaborative assignments as well as a final project that integrates curatorial theory and practice.

Instructor(s): Y. Umolu Terms Offered: Winter

Equivalent Course(s): ARTV 20008, ARTH 36110, ARTV 30008

ARTH 26200. Magic and the Cinema. 100 Units.

This course will trace relations between motion pictures and traditions of magic, both as a theatrical entertainment and as a belief system. The invention of cinema's roots in the magic lantern and other "philosophical toys" which trick the senses into seeing visual illusions will be explored in relation to traditions of "Natural Magic" as well as a secularization of magical practices into entertainment from the Renaissance on. The early trick films of Méliès and others will be discussed in relation to the tradition of stage magic in the 19th century, as well as a particular reception of the magical nature of new technologies (electricity, photography, sound recording). The relation between cinema and hypnosis, both as a social concern and as metapsychological description of spectatorship will also be explored. A consideration of the appeal of magic systems of thought (spiritualism, theosophy, ritual magic) for Avant-Garde movement and their relation to experimental films by Epstein, Artaud, Deren, Anger, Smith, Fischinger, and others.

Equivalent Course(s): CMST 35600, CMST 25600, ARTH 36200

ARTH 26384. Art and the Archive in Greater Latin America. 100 Units.

How and why do artists engage records of the past in their work? What are the politics of both creating archives and culling from them to visually render or represent the past? Focusing on artists, art-making, and archives in Greater Latin America (including the United States), this course will consider the process of collecting and creating in artistic production from the perspectives of both theory and practice. Students in the course will work directly with archival materials in Chicago and collaborate on contemporary artistic projects that consider issues of relevance to people and places of the Western Hemisphere.

Instructor(s): Diana Schwartz-Francisco Terms Offered: Spring

Equivalent Course(s): LACS 26384, ARTV 20017, HIST 26319

ARTH 26791. Best in Show: Art History as Exhibition History. 100 Units.

In this course, I propose a reading of post-war art history as seen, in part, through the periodical prism of one of the field's most important, signature events - the five-yearly Documenta exhibition in Kassel, Germany. Starting with the founding 1955 edition organized by Arnold Bode and ending with the 2017 edition which I worked on as a curator, we will discuss one chapter of Documenta's history per class alongside related events like the Venice and Sao Paulo biennials and Skulptur. Projekte Münster, touching upon such key issues of contemporary art practice and theory as the dynamics of globalization, identity politics, the vagaries of market influence, history and memory and the pressures of the social realm on aesthetic experience. As a history of exhibition making and curatorial practice, the course will also draw on recent developments

in museum culture and the everyday politics of the art world's various institutions, and will be recounted in part from the perspective of exhibition-making experience. The class will consist of hands-on curatorial exercises, as well as writing and reading assignments that mirror and follow the 64-year arc of our historical periodization.

Instructor(s): D. Roelstraete Terms Offered: Spring

Note(s): Students must attend first section to confirm enrollment.

Equivalent Course(s): ARTV 34265, ARTV 24265, ARTH 36791

ARTH 27301. Aesthetics: Phil/Photo/Film. 100 Units.

Equivalent Course(s): CMST 39300, CMST 29300, PHIL 31301, PHIL 21100, ARTH 37301

ARTH 27440. Buddha Then and Now: Transformations from Amaravati to Anuradhapura. 100 Units.

The Buddhist sculptures in Amaravati are arguably the earliest to influence the early Buddhist art of the other parts of the sub-continent as well as south and southeast Asia. The course begins with the discussion of the context in which the Buddha images were made in Amaravati and the factors including Buddhist doctrinal developments that contributed to the spread of these images to various parts of Sri Lanka. Then it traces the course and function of Buddhist iconography in Sri Lanka until into the 21st century to assess the role of geopolitical factors. The positionality and portrayals of the images of Buddha are also considered and analyzed. The course traces the trajectories that transformed the image of the Buddha from a symbol of peace to jingoist assertiveness. Through the study of the images of the Buddha, the aim is to comprehend the ways Buddhism has changed over centuries from an inclusive posture which helped it sustain and spread to different parts of the world only later to become exclusionary.

Instructor(s): Sree Padma Holt Terms Offered: Winter

Equivalent Course(s): SALC 37440, RLVC 37440, RLST 27440, HREL 37440, SALC 27440, HIST 36704, ARTH 37440

ARTH 27520. There is No Such Place as America. 100 Units.

Description forthcoming.

Instructor(s): D. English Terms Offered: Spring

ARTH 27530. (Re)Producing Race and Gender through American Material Culture. 100 Units.

This course introduces students to the role of the material world in the production and reproduction of ideologies of race, gender, and their intersections. Objects around us are imbued with meaning through their design, construction, use, and disuse. Architecture, art, photography, clothing, quilts, toys, food, and even the body have all been used to define groups of people. Combining secondary literature, theory, documentary evidence, and material culture, this course guides students as they ask questions about how ideologies of race and gender are produced, how they are both historically specific and constantly in flux, and how human interaction with the material world creates, challenges, and changes their construction. The primary course objectives are to (1) provide students with an introduction to material culture as a theory and methodology and (2) teach them how to apply it to research on ideologies of gender and race in history.

Terms Offered: Winter

Equivalent Course(s): CRES 27530, GNSE 27530, ANTH 25214, HIST 27414

ARTH 27724. Material Constructions of State and Nation: Latin America, 1800-1850. 100 Units.

Covering the wars of Independence and the transition to Republican statehood, this course will address the continuities and ruptures affecting the visual traditions and material cultures of the Colonial period in this crucial period in Latin American history. Intended as a broad survey of the region, the course attempts to think through a political history of objects and images as a way to understand the process of nation-state formation.

Terms Offered: Spring

Equivalent Course(s): LACS 27724, LACS 37724, ARTH 37724

ARTH 27800. The Material Science of Art (Suzanne Deal Booth Conservation Seminar) 100 Units.

This course will introduce students to the methods, theories, and strategies of scientific approaches to studying art objects and consider the meaning of different materials and surfaces across artistic media. It will showcase new scholarship generated in the field of conservation science and object-based art history that draws its strength from the collaborative work among scientists, conservators, art historians, and theorists. Conservation science draws on the applied sciences and engineering to understand how to preserve the world's cultural heritage and forge connections between making and meaning. The course will explore scientific examinations to investigate the production and use of art objects. Focusing on material studies of paintings and sculptures, pigments as well as their binding media, students will learn about the material make-up of art objects by employing visual analysis alongside practical studies using scientific analysis and imaging on campus and at the Art Institute of Chicago. Readings will be drawn from a variety of disciplines, including material science and chemistry, art history, visual and material culture, anthropology, and philosophy.

Instructor(s): M. Kokkori Terms Offered: Spring

Note(s): Students must have instructor consent to register for this course. Students must attend first section to confirm enrollment.

Equivalent Course(s): ARTH 37800

ARTH 28212. Photography in Africa and African Diaspora. 100 Units.

From photography in the 19th century to the present, this course explores how and why photography became central to arguments about the modernity of African visual art and the roles it has played throughout the continent, the diaspora, and beyond. Moving from one regional focus to the next, students examine photography's roles in expeditionary and ethnographic projects, identity formation, political activism, spirituality, documenting the landscape, and representing the fantastical and the everyday. This course will include visits to the Art Institute of Chicago among other area institutions.

Instructor(s): L. Wilson Terms Offered: Spring

Equivalent Course(s): ARTH 38212

ARTH 28500-28600. History of International Cinema I: Silent Era; History of International Cinema II: Sound Era to 1960.

This sequence is required of students majoring in Cinema and Media Studies. Taking these courses in sequence is strongly recommended but not required.

ARTH 28500. History of International Cinema I: Silent Era. 100 Units.

This course provides a survey of the history of cinema from its emergence in the mid-1890s to the transition to sound in the late 1920s. We will examine the cinema as a set of aesthetic, social, technological, national, cultural, and industrial practices as they were exercised and developed during this 30-year span. Especially important for our examination will be the exchange of film techniques, practices, and cultures in an international context. We will also pursue questions related to the historiography of the cinema, and examine early attempts to theorize and account for the cinema as an artistic and social phenomenon.

Instructor(s): A. Field Terms Offered: Autumn

Prerequisite(s): Prior or concurrent registration in CMST 10100 required. Required of students majoring or minoring in Cinema and Media Studies.

Note(s): For students majoring in Cinema and Media Studies, the entire History of International Cinema three-course sequence must be taken.

Equivalent Course(s): ENGL 29300, CMLT 22400, CMST 28500, CMLT 32400, MAPH 33600, ARTH 38500, ENGL 48700, CMST 48500, MAAD 18500, ARTV 20002

ARTH 28600. History of International Cinema II: Sound Era to 1960. 100 Units.

The center of this course is film style, from the classical scene breakdown to the introduction of deep focus, stylistic experimentation, and technical innovation (sound, wide screen, location shooting). The development of a film culture is also discussed. Texts include Thompson and Bordwell's *Film History: An Introduction*; and works by Bazin, Belton, Sitney, and Godard. Screenings include films by Hitchcock, Welles, Rossellini, Bresson, Ozu, Antonioni, and Renoir.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): Prior or concurrent registration in CMST 10100 required. Required of students majoring or minoring in Cinema and Media Studies.

Note(s): CMST 28500/48500 strongly recommended

Equivalent Course(s): REES 45005, REES 25005, ENGL 29600, CMST 28600, ENGL 48900, CMST 48600, MAAD 18600, ARTV 20003, MAPH 33700, ARTH 38600, CMLT 22500, CMLT 32500

ARTH 28702. Tales Retold? Modern & Contemporary Chinese Art. 100 Units.

Owing to its revolutionary transformations spanning the 20th and early 21st centuries, China offers a unique access point to exploring key issues in modern and contemporary art. Modern and contemporary artists from China and the Sinophone world have long confronted rather entrenched double-binds, crises of consciousness. We might consider this a double consciousness, on their part-consciousness of being artists in a globalizing context, on the one hand; of being political or national subjects, on the other. Organized thematically, this class will examine selections of artists, movements, and the discourses surrounding them, to unpack the mutual interrelation of key concepts, art and scholarly practices. Questions to be addressed include: How does art history and criticism currently deal with modern and contemporary Chinese art? How does the art world define this category of art practice; and vice versa, how do artists view the art world? Case studies will include artists practicing today as well as historical artists whose work has become a source for the present. While the class deals primarily with art in China, it will necessarily address the wider issues of globalization and the international institutional networks of contemporary art. Students will be encouraged to think broadly about comparative and inter-Asia relations, rather than dividing the globe into East and West.

Instructor(s): J. Lee Terms Offered: Spring

Equivalent Course(s): EALC 28702, ARTH 38702, EALC 38702

ARTH 28703. East Asian Photography Since the Mid-Twentieth Century. 100 Units.

This course will explore the history and practice(s) of photography across East Asia (China, Japan, and Korea) from the mid-20th century to the present day. During the 20th century, these nations moved from the feudal to the industrialized, globalized status. Since their dynamic histories are enmeshed with photographic practices, this course will discuss how photography interprets the history and tells its own stories. We will familiarize ourselves with the most crucial photographers and their practices that emerged in the post-Mao, and post-war periods. Particular emphasis will be given to the ways in which photographers have grappled with legacies of war and revolution, political violence, cultural heritage, and a rapid transition to an industrialized, globalized status. While emphasizing comparative approaches to discuss the rich histories of East Asian photography, this course also takes a close look at how photographic practices of East Asia are converging with global photography.

Instructor(s): Boyoung Chang Terms Offered: Winter

Equivalent Course(s): EALC 28703, ARTH 38703, EALC 38703

ARTH 28705. Christian Iconography. 100 Units.

In Christian culture, visual images have for many centuries played a pivotal role in ritual, devotion, intellectual thought, and religious instruction. The most important aims of this course are that students understand images convey meaning in very unique ways and learn how to decode their visual messages. The study of iconography encompasses a variety of methods used to identify the subject matter of a pictorial image, describe its contents, and analyze its discursive strategies in view of its original cultural context. We will cover some of the most important themes visualized in the arts of Christianity by analyzing imagery spanning different periods, geographical regions, pictorial media, and artistic techniques. While special

emphasis is placed on the intersections of art and literature, we will also examine pictorial themes that are independent of a specific textual basis. Alongside the study of Christian iconography, this course will address broader issues of visual inquiry, such as patronage, viewer response, emotions, and gender roles. In this course, students will acquire a 'visual literacy' that will enable them to explore all kinds of works of art fruitfully as primary sources in their own right.

Instructor(s): Karin Krause Terms Offered: Winter

Prerequisite(s): P/Q: This course is open to all undergraduate students who are interested in the course topic. You certainly do not need to be an adherent of the Christian faith to take this course. However, a basic familiarity with some of the foundational texts of Christianity (esp. the Bible) and its main (Biblical) protagonists is not a disadvantage.

Equivalent Course(s): MDVL 28705, RLST 28705

ARTH 28815. World's Fairs, 1851-1937: Chicago and Paris. 100 Units.

The great era of world's fairs (or universal expositions) lasted about ninety years. Although this golden age originated in London and took expression on every continent, two of its most significant hosts were Paris and Chicago. This course will examine the character and impact of expositions in these two cities, concentrating on Paris expositions held between 1855 and 1937 and the two Chicago fairs of 1893 and 1933. Particular attention will be given to the art, design, and architecture featured, stimulated, and sometimes ignored by the fairs. But technological, racial, political, institutional, and social themes will be examined as well. This colloquium is meant to encourage creation of research papers. It will meet once a week and there will be heavy reliance upon images at each session.

Equivalent Course(s): HIST 28805

ARTH 29001. Painting and Description in the Roman World: Philostratus' Imagines - Religion, Education, Sexuality. 100 Units.

This course explores Roman art, especially painting, through the single most thoughtful, playful and creative text on naturalistic painting written in antiquity. Arguably, it is the most interesting examination of the brilliance and the problems of naturalism ever written in the Western tradition, creating a non-historicist, fictive and rhetorically-inflected model for thinking about art. Philostratus took the rhetorical trope of Ekphrasis to new heights, in an extraordinary intermedial investigation of textuality through the prism of visuality and of visual art through the descriptive prism of fictional prose. The course will involve close readings of Philostratus' descriptions of paintings alongside exploration of the Greek and Roman art of the imperial period from Pompeian paintings via floor Mosaics to sarcophagi. A reading knowledge of Greek could not be described as a disadvantage (!) but is not a requirement. The course will be taught over 5 weeks in the Spring Quarter on an intensive schedule. —Before the course begins, read the *Imagines* of the Elder Philostratus in the Loeb Classical Library translation (by Arthur Fairbanks, 1931, Harvard U.P., much reprinted). This book is not exorbitantly expensive and is worth buying, as we will all need a copy throughout.

Instructor(s): Ja# Elsnor Terms Offered: Spring

Prerequisite(s): Before the course begins, read the *Imagines* of the Elder Philostratus in the Loeb Classical Library translation (by Arthur Fairbanks, 1931, Harvard U.P., much reprinted).

Equivalent Course(s): GNSE 29001, ARTH 39001, GNSE 39001, RLVC 39001, RLST 29001

ARTH 29410. Dimensions of Citizenship: The Venice Architecture Biennale 2018. 100 Units.

In conjunction with the US pavilion at the 2018 Venice Architecture Biennale - co-commissioned by the University of Chicago and co-curated by Professor Niall Atkinson - this Gold Gorvy Traveling Seminar will explore the multiple relationships between architecture and citizenship both in contemporary practice and in historical perspective. The course will be centered around the pavilion's theme of architecture and citizenship at seven spatial scales: Citizen, Civic, Region, Nation, Globe, Network, Cosmos. Through these scales, students will engage critically with the works of participating artists, architects, and designers, works that address the spatial dimensions of belonging in contemporary society. Students will also explore the historical dimensions citizenship through Venice's complex history as a globally connected maritime empire that incorporated multiple linguistic, ethnic, and religious communities. Finally, the seminar will take account of the politics of national display at the root of the biennale itself and the relationship between historical and contemporary spatial experiences of citizenship and rights of abode, belonging and exile, migration and refuge, and the design of liminal spaces such as ships, ports of entry, quarantine centers, and ghettos as places of agonistic cultural exchange.

Instructor(s): N. Atkinson

Note(s): This is a traveling seminar; the course in its entirety will be taught Sept 4-25 in Venice. Registration is limited and by instructor consent only.

Equivalent Course(s): ARTH 39410

ARTH 29504. Art, Community, Activism. 100 Units.

there is no course description

Equivalent Course(s): ARTH 39504

ARTH 29505. Objects of Japanese History. 100 Units.

The collections of Japanese objects held at the University of Chicago's Smart Museum, the Field Museum of Natural History, and the Art Institute of Chicago will be examined as case studies in museum studies, collection research, and, more specifically, in the interpretation of things "Japanese." Individual objects will be examined, not only for religious, aesthetic, cultural, and historical issues, but also for what they tell us of the collections themselves and the relation of these collections to museum studies per se.

Instructor(s): C. Foxwell & J. Ketelaar Terms Offered: Spring

Prerequisite(s): We will make several study trips to the Smart Museum, the Field Museum of Natural History, and the Art Institute of Chicago during class time.

Equivalent Course(s): HIST 34602, EALC 39504, ARTH 39505, HIST 24602, EALC 29504

ARTH 29600. Junior Seminar: Doing Art History. 100 Units.

The aim of this seminar is to deepen an understanding of art history as a discipline and of the range of analytic strategies art history affords to students beginning to plan their honors papers or, in the case of students who are minoring in art history, writing research papers in art history courses. Students read essays that have shaped and represent the discipline, and test their wider applicability and limitations. Through this process, they develop a keener sense of the kinds of questions that most interest them in the history and criticism of art and visual culture. Students develop a formal topic proposal in a brief essay, and write a final paper analyzing one or two works of relevant, significant scholarship for their topics.

Instructor(s): T. Golan; M. Sullivan Terms Offered: Spring Winter

Note(s): Required of third-year students who are majoring in art history; open to nonmajors with consent of instructor. This course does not meet the general education requirement in the arts.

ARTH 29700. Reading Course. 100 Units.

This course is primarily intended for students who are majoring in art history and who can best meet program requirements by study under a faculty member's individual supervision. The subject, course of study, and requirements are arranged with the instructor. Prerequisite(s): Consent of Instructor and Director of Undergraduate Studies Note(s): Students are required to submit the College Reading and Research Form. Must be taken for a quality grade. With adviser's approval, students who are majoring in art history may use this course to satisfy requirements for the major, a special field, or electives. This course is also open to nonmajors with advanced standing. This course does not meet the general education requirement in the dramatic, musical, and visual arts.

Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of Instructor and Director of Undergraduate Studies

Note(s): Students are required to submit the College Reading and Research Form. Must be taken for a quality grade. With adviser's approval, students who are majoring in art history may use this course to satisfy requirements for the major, a special field, or electives. This course is also open to nonmajors with advanced standing. This course does not meet the general education requirement in the arts.

ARTH 29800. Senior Thesis Workshop. 100 Units.

This workshop provides guided research on the topic of the senior thesis. Students arrange their program of study and a schedule of meetings with their assigned section leader. Required of fourth-year Art History majors who wish to pursue honors.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): Possibly required of Fourth-Year Art History Majors; consult the program requirements in the catalog and contact Art History's Director of Undergraduate Studies for more information.

Note(s): This course does not meet the general education requirement in the arts.

ARTH 29900. Preparation for the BA Paper. 100 Units.

This course provides guided research on the topic of the senior paper. Students arrange their program of study and a schedule of meetings with their senior paper advisor.

Instructor(s): Staff Terms Offered: Autumn, Spring, Winter

Prerequisite(s): Consent of instructor and Undergraduate Program Chair

Note(s): Students are required to submit the College Reading and Research Form. May be taken for P/F grading with consent of instructor.

ARTH 29942. XCAP: Food for Thought. 100 Units.

If anthropology and contemporary art have one thing in common, it is the aim to de-familiarize taken-for-granted ways of being in the world by means of ethnographic comparison or aesthetic provocation so as to open up new perspectives on the complexities of human social life. Co-taught by an artist and an anthropologist, this course considers what's at stake when contemporary artists build on this longstanding practice to explore the complexities of current societal, political, and cultural contexts.

Instructor(s): Laura Letinsky & Stephan Palmié Terms Offered: Autumn

Note(s): for 3rd and 4th year students only

Equivalent Course(s): ARTV 36210, CMST 36210, ANTH 25315, ARTV 26210, ANTH 35315, CMST 26210, KNOW 29942

Astrophysics

Department Website: <http://astro.uchicago.edu>

Program of Study

Astronomy is the oldest of the natural sciences; since antiquity astronomers have sought to understand the origin and destiny of the universe and its celestial contents. How did the universe evolve from an early, almost uniform, state to the rich structure that we see at the present epoch? Where did the elements of the periodic table come from? How do stars, along with their systems of planets, form and how do they change with time? Do other life-bearing worlds exist? These questions have evolved over millennia, with answers now sought using the mathematical, technological, and computational tools of modern astronomy.

For students interested in examining fundamental questions through scientific study of the universe, the Department of Astronomy and Astrophysics offers several choices to explore. Options include general education courses, the minor program in Astronomy and Astrophysics (aimed at students not majoring in the sciences), and the major program in Astrophysics, with both BA and BS tracks.

General Education Courses

Many options are available for choosing two- or three-quarter sequences that will satisfy the general education requirement in the physical sciences from among six courses numbered in the 12000s. These courses are designed for students not majoring in the sciences and present a range of foundational topics, from the grand principles governing the universe and understanding its beginning, to the formation and evolution of stars and galaxies, and the search for habitable extrasolar planets. All courses numbered in the 12000s include labs for engaging in astronomical inquiry through classical experiments, opportunities for telescope observing, and data analysis. The Study Abroad program in Paris is another option for completing the general education requirement in the physical sciences.

Students seeking a more in-depth examination of selected astrophysical topics may take a course numbered in the 18000s as a third course in the physical sciences or as a general elective. While the 12000 and 18000 courses are aimed at students not majoring in the sciences, quantitative analysis is an important part of all courses offered by the Department of Astronomy and Astrophysics. Any tools beyond pre-calculus algebra will be taught as needed.

Major in Astrophysics

The major program in Astrophysics reflects Chicago's tradition of interdisciplinary study and emphasis on mastery of the intellectual processes of inquiry and discovery. Courses in Computer Science and Statistics complement a foundational program in Physics, reflecting the essential relationships among the physical sciences. Students will gain broad knowledge of the universal, physical laws from the nuclear to cosmological; familiarity with computational methods and statistical data analysis; and experience with experimental and observational techniques through participation in research. Graduates of the Astrophysics program will be positioned to pursue advanced degrees in physics, astronomy, or similar fields, or enter government service, science education, or scientific journalism.

There are two tracks for students interested in the major. The program leading to a BA in Astrophysics consists of fifteen courses beyond the general education requirement. The program leading to a BS in Astrophysics consists of eighteen courses beyond the general education requirement. The BS track is recommended for students expecting to apply to graduate school in the physical sciences.

Please note that courses counted toward the major must be taken for quality grades (no P/F grading).

ASTR 24300 Cosmological Physics	
One elective to be selected from list of approved courses	100
Total Units	1800

* Credit may be granted by examination.

† CHEM 10100-10200 Introductory General Chemistry I-II and CHEM 12100-12200 Honors General Chemistry I-II also satisfy this requirement. Enrollment into a particular sequence is based on chemistry placement or AP score. Students should consult with the Department of Chemistry regarding Advanced Placement and Accreditation Examinations.

Sample Programs

The sample programs below illustrate different paths for fulfilling requirements for the Astrophysics major. The first example shows a path for the BS in Astrophysics with the introductory sequence in Physics.

First Year		
Autumn Quarter	Winter Quarter	Spring Quarter
PHYS 13100	PHYS 13200	ASTR 13300
MATH 15100	MATH 15200	PHYS 13300
		MATH 15300
Second Year		
Autumn Quarter	Winter Quarter	Spring Quarter
ASTR 20500	ASTR 21200	ASTR 21100
STAT 23400	PHYS 23410	ASTR 29800
	MATH 18400	PHYS 23510
Third Year		
Autumn Quarter	Winter Quarter	Spring Quarter
ASTR 25400	ASTR 24100	Elective
	Elective	
Fourth Year		
Autumn Quarter	Winter Quarter	Spring Quarter
PHYS 27900	Elective	ASTR 24300

This sample shows a path for the BS in Astrophysics with the introductory sequence in Chemistry.

First Year		
Autumn Quarter	Winter Quarter	Spring Quarter
CHEM 11100	CHEM 11200	ASTR 13300
MATH 15100	MATH 15200	CHEM 11300

§ Students in the BA in Astrophysics who matriculated prior to Autumn 2020 may claim this course as an elective.

‡ Students in the BA in Astrophysics may claim this course as an elective. Students in the BS in Astrophysics who matriculated prior to Autumn 2020 may also claim this course as an elective.

Grading

Students in the major or minor programs offered by the Department of Astronomy and Astrophysics must receive a quality grade of at least C in all courses counting toward major/minor requirements. In addition, students who are majoring in Astrophysics must receive a quality grade of at least C- in prerequisite courses offered by other departments.

Honors

Students who have completed the requirements for the BA or BS in Astrophysics are encouraged to prepare an honors thesis based on their work. To be considered for honors, a student must earn a GPA of 3.5 or higher in the required courses for the major and 3.0 overall (or obtain consent from the assistant chair for academic affairs), and have an approved research project that will be supervised by a faculty member.

Eligible students who wish to be considered for honors will first meet with the academic affairs administrator to obtain guidelines and requirements for this option, followed by a meeting with their research mentor resulting in a plan for the supervision of the research. The student enrolls in ASTR 29900 Honors Thesis in any quarter of their graduation year. A goal of the honors track is to mentor students through the process of preparing research and submitting it for publication. Along the way, students present their research to various groups, including Astronomy and Astrophysics faculty, for feedback and discussion.

Minor in Astronomy and Astrophysics

The grand narrative of astronomy holds wide popular appeal and lends itself to interdisciplinary study: there is a deep history and cultural context, the night sky is profoundly inspiring and accessible to everyone, and the spirit of exploration is communicated in daily media reports of new discoveries. The minor in Astronomy and Astrophysics was designed for students not majoring in the sciences to cultivate understanding of science as a human endeavor across multiple social, historical, and cultural contexts, and to develop comprehension of the quantitative reasoning that supports a deep conceptual understanding of science.

Students are allowed flexibility in selecting five courses to compose a rigorous program of study according to individual interest. The selection must include at least two courses numbered in the 12000s and at least one in the 18000s. It is possible for a student pursuing the minor to substitute a course numbered in the 20000s for one of the 18000 courses. Students interested in exploring this option must meet with the academic affairs administrator to discuss course selection. **Please note: courses taken to satisfy the general education requirement in the physical sciences may not be counted towards the minor.** Students who satisfy their general education requirement in the physical sciences in Astronomy and

Astrophysics may pursue the minor through completing the remaining courses numbered in the 12000s and at least one in the 18000s.

There are no Physics or Mathematics prerequisites for the minor. Courses must be taken for quality grades (no P/F grading). Students must meet with the academic affairs administrator before the end of Spring Quarter of their third year to declare their intention to complete the minor and fill out the College's Consent to Complete a Minor Program (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf) form.

Study Abroad Program

Every Spring Quarter a three-course Astronomy program is offered in Paris, composed from the courses numbered in the 12000s that are offered on campus. This sequence was designed for students not majoring in the sciences but may also be of interest to science majors who want to supplement their work in physics and chemistry with a quarter devoted to the cosmos. In Spring Quarter 2021, the Paris program will offer ASTR 12600 Matter, Energy, Space, and Time, ASTR 12610 Black Holes, and ASTR 12620 The Big Bang.

The Astronomy program in Paris satisfies the general education requirement in the physical sciences. Students who have already completed their general education requirement in the physical sciences may count the three courses taken in Paris toward the five required to satisfy the minor in Astronomy and Astrophysics. For details, see the Study Abroad (<https://study-abroad.uchicago.edu>) page for Paris: Astronomy (<http://study-abroad.uchicago.edu/programs/paris-astronomy/>).

Astronomy and Astrophysics Courses

ASTR 11901. Physics of Stars: An Introduction. 100 Units.

Understanding how stars work - what makes them shine - is one of the great accomplishments of 20th-century science. The theory of stellar structure allows us to investigate the interiors of stars, even though what we observe is radiation from their outer atmospheres. This theory also helps us determine how old stars are, how they create heavier nuclei from lighter nuclei in their centers, and how they evolve from birth to death, ending as a white dwarf, a neutron star, or a black hole. This course introduces you to the concepts behind and applications of this crucial breakthrough. We will review the physical principles - gravity, pressure, radiation, and how radiation interacts with matter - and apply these principles to further our understanding of stellar structure. We will collect our own measurements of stellar properties, such as the temperatures and luminosities of stars, using robotic telescopes controlled via the internet. Using these and other data, we will test the theory of stellar structure and explore what it can tell us about the universe. While it is not required, students who have taken this course in the past have found it beneficial to bring their own laptops to class if they have them.

Terms Offered: Summer

Prerequisite(s): Open to high school students only.

ASTR 12600. Matter, Energy, Space, and Time. 100 Units.

A comprehensive survey of how the physical world works, and how matter, energy, space, and time evolved from the beginning to the present. A brief survey of the historical development of mathematics, physics, and astronomy leads to a conceptual survey of the modern theory of the physical universe: space and time in relativity; the quantum theory of matter and energy; and the evolution of cosmic structure and composition. The major theme of this course is the understanding of all nature, from the prosaic to the exotic, using powerful quantitative theory grounded in precise experiments. Although quantitative analysis will be an important part of the course, students will not be expected to employ mathematics beyond algebra. (L)

Instructor(s): Erik Shirokoff Terms Offered: Autumn

Equivalent Course(s): PHSC 12600

ASTR 12610. Black Holes. 100 Units.

Black Holes are the most exotic, extreme and paradoxical systems in the universe. They are the densest concentrations of energy, yet they convert all matter that falls in to pure space-time curvature; they radiate more power than anything else, even though most of their radiation is not even made of light; they are mathematically the most perfectly understood of any physical structure, but their enigmatic behavior is still the subject of a violent disagreement among experts that highlights our ignorance of how quantum physics relates to gravity. This course will survey the physics of space and time, the nature of black holes, their effects on surrounding matter and light, the astrophysical contexts in which they are observed, frontier areas of research as quantum gravity and gravitational waves, and the importance of space-time physics to everyday needs such as navigation and energy. The modern theory of space and time, as well as black holes, will be placed in historical context, with special attention to the work of Albert Einstein. Experimental exercises will include direct measurement of the speed of light and gravitational mass, and experience with interferometry. Quantitative analysis will be an important part of the course, but mathematics beyond algebra will not be required. (L)

Instructor(s): Fausto Cattaneo (Summer Quarter); Nick Gnedin (Spring Quarter) Terms Offered: Spring Summer. Summer Quarter instructor is Fausto Cattaneo.

Prerequisite(s): PHSC 12600 or PHSC 12700

Equivalent Course(s): PHSC 12610

ASTR 12620. The Big Bang. 100 Units.

The Big Bang model describes the Universe on the largest scales and its evolution from the earliest observationally accessible times through the formation of the complex world we live in today. This powerful framework allows us to interpret a wide range of observations and to make detailed and precise predictions for new experiments. The key motivating observations include the expansion of the Universe and how it has changed with time; the existence of radiation indicating a hot and dense early phase; the abundance of the light elements; and how matter is organized over a wide range of physical scales. The model naturally incorporates dark matter and dark energy, two surprising and poorly understood components that

govern the growth of structure over time. The course will explore the history of scientific cosmology and the evidence for the Big Bang model, its consequences for the earliest moments after the Big Bang, and its predictions for the eventual fate of the Universe. Labs will include a hands-on measurement of the relic cosmic microwave background radiation from the early universe and the use of astronomical data to verify key discoveries in the history of Big Bang cosmology. Quantitative analysis will be an important part of the course, but prior experience with mathematics beyond algebra will not be required. (L)

Instructor(s): Rocky Kolb Terms Offered: Winter

Prerequisite(s): PHSC 12600

Equivalent Course(s): PHSC 12620

ASTR 12700. Stars. 100 Units.

Elements such as carbon and oxygen are created in fusion reactions at high temperatures and pressures in the deep interiors of stars, conditions that naturally arise in stars like the Sun. This course will outline the physical principles at work and the history of the development of the key ideas: how nuclear physics and the theory of stellar interiors account for how stars shine, why they live for such long times, and how the heavy elements in their cores are dispersed to form a new generation of stars. Gravity assembles stars out of more diffuse material, a process that includes the formation of planetary systems. The course shows how, taken together, these physical processes naturally lead to the ingredients necessary for the emergence of life, namely elements like carbon, nitrogen, and oxygen, and planets in stable orbits around long-lived stars. The course features quantitative analysis of data; any tools needed beyond pre-calculus algebra will be taught as part of the course. (L) Instructor(s): Fausto Cattaneo (Summer Quarter); Damiano Caprioli (Autumn Quarter) Terms Offered: Autumn Summer. Summer Quarter instructor is Fausto Cattaneo.

Equivalent Course(s): PHSC 12700

ASTR 12710. Galaxies. 100 Units.

Galaxies have been called island universes, places where stars are concentrated, where they are born, and where they die. The study of galaxies reaches back to the Renaissance; Galileo Galilei first pointed a telescope skyward in 1610 and confirmed a then 2000 year-old Greek conjecture about the nature of our own galaxy -- the Milky Way. This course will use extensive modern observational data from a wide range of telescopes to trace the modern picture for the formation and evolution of galaxies and the stars in them. Galaxies will then be used as markers of yet larger scale structures, in order to explore the influence of gravity over cosmic time. The object of study in this course is galaxies, and the narrative arc traced through that extensive data and understanding will highlight our profound discovery that most of the mass in galaxies (and the Universe as a whole) is in fact an exotic form of matter -- dark matter -- that we cannot directly see. Quantitative analysis will be an important part of the course in both laboratory work and lectures, but mathematics beyond algebra and some geometric understanding will not be required. This course will feature several observationally-oriented labs that will allow students to directly experience how some of the modern understanding of galaxies has arisen. (L)

Instructor(s): Jeffrey McMahon Terms Offered: Winter

Prerequisite(s): PHSC 12600 or PHSC 12700. PHSC 12710 can be taken as the first course in a sequence combined with PHSC 12720.

Equivalent Course(s): PHSC 12710

ASTR 12720. Exoplanets. 100 Units.

The past two decades have witnessed the discovery of planets in orbit around other stars and the characterization of extra-Solar (exo-) planetary systems. We are now able to place our Solar System into the context of other worlds and a surprising conclusion that most planetary systems look nothing like our own. A challenging next step is to find planets as small as the Earth in orbit around stars like the Sun. The architecture of planetary systems reflects the formation of the parent star and its protoplanetary disk, and how these have changed with time. This course will review the techniques for discovery of planets around other stars, what we have learned so far about exoplanetary systems, and the driving questions for the future, including the quest for habitable environments elsewhere. Although quantitative analysis will be an important part of the course, students will not be expected to employ mathematics beyond algebra. (L)

Instructor(s): Leslie Rogers Terms Offered: Spring

Prerequisite(s): PHSC 10800, PHSC 10100, PHSC 12700 or PHSC 12710.

Equivalent Course(s): PHSC 12720

ASTR 13300. Introduction to Astrophysics. 100 Units.

The course is intended for first-year students intending to major in Astrophysics as an introduction to the range of important physical processes that operate in astrophysical environments, and how these govern structures across a wide range of scales, from planets to superclusters to the Universe. Throughout the course, we will see that similar physical principles (gravity, radiation, particle physics) come in at different stages and systems (planets, stars, galaxies, the Universe). We will also incorporate into each class relevant current active research areas in Astrophysics, especially focusing on connection with research in the department. We anticipate a highly interactive class with a large number of group activities, demos and discussions.

Instructor(s): Chihway Chang Terms Offered: Spring

Prerequisite(s): PHYS 13300; may be taken concurrently.

ASTR 18000. The Search for Extraterrestrial Life. 100 Units.

The origin of life is one of the biggest questions of modern science. While substantial progress has been made in understanding how life arose on our planet, such research represents just a single case study in how life originates and evolves. This course covers the search for life beyond Earth from the planets and moons of the Solar System to planets orbiting other stars and intelligent life that may have left its mark on macroscopic scales. The discovery of life beyond Earth would be transformative for our understanding of humanity's place in the universe. A range of ongoing and planned

experiments have the potential to detect or put strong constraints on the existence of life during the next few decades. This class will mix traditional lectures with flipped classroom problem-solving sessions.

Instructor(s): Jacob Bean Terms Offered: Autumn

Note(s): Not recommended for students who have taken ASTR/PHSC 12720 Exoplanets.

Equivalent Course(s): PHSC 18000

ASTR 18100. The Milky Way. 100 Units.

Within a largely empty universe, we live in a vast stellar 'island' that we call the Milky Way. As we survey the stellar and interstellar components of the Milky Way-the distribution and motions of stars and interstellar gas, and how these dynamic, ever-changing components interact with each other during their life cycles inside the Milky Way-we will follow the path of ancient astronomers, wonder at their mistakes and prejudices, and form our own understanding.

Instructor(s): Nick Gnedin Terms Offered: Spring. Not offered in 2020-2021.

Prerequisite(s): Any two-course 10000-level general education sequence in chemistry, geophysical sciences, physical sciences, or physics.

Equivalent Course(s): PHSC 18100

ASTR 18200. The Origin and Evolution of the Universe. 100 Units.

This course provides a comprehensive introduction to modern cosmology for students wishing to delve deeper into the subject than PHSC 12620 (which is not a prerequisite) but at a similar mathematical level. It will discuss how the fundamental laws of physics allow us to understand the origin, evolution, and large-scale structure of the universe. After a brief review of the history of cosmology, the course will cover the expansion of the universe, Newtonian cosmology, Einstein's Special and General Relativity, black holes, dark matter, dark energy, the Cosmic Microwave Background radiation, Big Bang nucleosynthesis, the early universe, primordial inflation, the origin and evolution of large-scale structure in the universe, and cosmic surveys that are probing inflation and cosmic acceleration.

Instructor(s): Josh Frieman Terms Offered: Not offered in 2020-2021.

Prerequisite(s): Any two-course 10000-level general education sequence in chemistry, geophysical sciences, physical sciences, or physics.

Equivalent Course(s): PHSC 18200

ASTR 18300. Searching Between the Stars. 100 Units.

With the advent of modern observational techniques (e.g., radio, satellite astronomy), it has become possible to study free atoms, molecules, and dust in the vast space between the stars. The observation of interstellar matter provides information on the physical and chemical conditions of space and on the formation and evolution of stars.

Instructor(s): Al Harper Terms Offered: Spring

Prerequisite(s): Any two-course 10000-level general education sequence in chemistry, geophysical sciences, physical sciences, or physics.

Equivalent Course(s): PHSC 18300

ASTR 18400. Origins: From the Big Bang to Human Consciousness. 100 Units.

In this course we will look at the approaches to, data for, and theories of the big transitions in the evolution of the physical universe and the living world.

Instructor(s): Wendy Freedman and Neil Shubin Terms Offered: Autumn

Prerequisite(s): Any two-course 10000-level general education sequence in chemistry, geophysical sciences, physical sciences, or physics.

ASTR 18700. From Fossils to Fermi's Paradox: Origin and Evolution of Intelligent Life. 100 Units.

The course approaches Fermi's question, 'Are we alone in the universe?', in the light of recent evidence primarily from three fields: the history and evolution of life on Earth (paleontology), the meaning and evolution of complex signaling and intelligence (cognitive science), and the distribution, composition and conditions on planets and exoplanets (astronomy). We also review the history and parameters governing extrasolar detection and signaling. The aim of the course is to assess the interplay between convergence and contingency in evolution, the selective advantage of intelligence, and the existence and nature of life elsewhere in the universe - in order to better understand the meaning of human existence.

Instructor(s): P. Sereno; L. Rogers; S. London Terms Offered: Winter

Prerequisite(s): Third or fourth-year standing

Equivalent Course(s): BIOS 29142, BPRO 28800, PSYC 28810

ASTR 18800. Philosophical Problems in Cosmology. 100 Units.

In this course, we will undertake a comparison of the philosophical underpinnings of the Aristotelian and Copernican cosmologies, including a comparison of mechanistic and teleological approaches to the natural world. The epistemological foundations of the scientific method, in particular as applied to cosmology (from Galileo to the modern context) will be examined, as will positivist vs. realistic outlooks on cosmology. (For example, what does science say-or not say-about the inside of a black hole, or the space beyond the Hubble horizon?) We will ponder questions such as: Do the epistemological foundations of science require us to be able to repeat relevant experiments? If so, does this disqualify cosmology as a science? If not, why? Might our universe be part of a computer simulation? What information could possibly convince us that this is true or false?

Instructor(s): Dan Hooper Terms Offered: Autumn

Prerequisite(s): Any two-course 10000-level general education sequence in chemistry, geophysical sciences, physical sciences, or physics.

Equivalent Course(s): HIPS 18800, PHSC 18800

ASTR 18900. Mapping the Heavens: Early Astronomical Surveys. 100 Units.

The first modern systematic surveys of the night sky were accomplished in the first half of the nineteenth century by William, Caroline, and John Herschel, who published catalogs of double stars, star clusters, and small faint patches of light ('nebulae') that they discovered using their homemade reflector telescopes. By the late nineteenth century, photographic sensitivity to light was useful for mapping the sky, enabling a transition away from visual observations. Professional astronomers at the time preferred refractor (lens-type) telescopes, but these instruments were unsuitable for the detection of diffuse light. Exceptions included lenses designed for studio portraiture, and a few reflector telescopes, now vastly improved with silver-on-glass mirrors. These technological developments enabled the sky to be mapped photographically starting in the 1880's, showing detail that was invisible to the eye. This course will cover the technological developments in astronomy, both telescope optics and the photographic process, that enabled sky surveys such as these. The technological background will be presented in the context of the driving scientific questions of the day: what were the surveys intended to do, and what did they actually accomplish? The course is intended for students interested in the history of the astronomical and imaging sciences.

Instructor(s): Rich Kron Terms Offered: Winter

Equivalent Course(s): HIPS 18900

ASTR 20500. Introduction to Python Programming with Applications to Astro Statistics. 100 Units.

The course will introduce students to programming using Python language and will review basic code elements and data structures commonly used in Python. It will introduce Python libraries, such as numpy and scipy and the concepts of vector operations that greatly aid scientific computations with Python. Plotting of graphs and data using Matplotlib library will also be introduced. Programming techniques will be illustrated and applied to basic statistical concepts that are used in astronomical research.

Instructor(s): Andrey Kratsov Terms Offered: Autumn

Prerequisite(s): Placement into MATH 15100 or higher, or by consent.

ASTR 21100. Computational Techniques in Astrophysics. 100 Units.

This course will introduce basic computational techniques most often used in astronomical research, such as interpolation, transforms, smoothing, numerical differentiation and integration, integration of ordinary differential equations, and Monte Carlo methods, and elements of basic computer algorithms, data structures, and parallel programming using Python as the main course programming language with heavy use of NumPy, SciPy, and Matplotlib packages. Practical examples where these numerical techniques are applied will be covered via homework and in class exercises using real-world astronomical problems and results of recent papers with emphasis on implementing the algorithms from scratch. The course will cover the access to astronomical archival data, and how to search it efficiently, focusing specifically on the Sloan Digital Sky Survey, but with introduction to other data sets. Machine learning methods will be introduced to illustrate how large data sets can be mined for interesting information.

Instructor(s): Andrey Kravtsov Terms Offered: Spring

Prerequisite(s): ASTR 20500 or CMSC 12100 or consent of instructor.

Equivalent Course(s): ASTR 31200

ASTR 21200. Observational Techniques in Astrophysics. 100 Units.

This course will prepare students in methods that will be used in their independent research by introducing observation and analysis techniques in a field of astrophysics chosen by the instructor. Students will learn basics of astronomical instrumentation and will apply that knowledge in a practical context (for example, using an on-campus telescope or telescopes controlled robotically from campus). The process of data reduction and calibration will be illustrated, leading to the extraction of scientifically meaningful results.

Instructor(s): Al Harper Terms Offered: Winter

Prerequisite(s): ASTR 13300 or consent of instructor.

ASTR 21400. Creative Machines and Innovative Instrumentation. 100 Units.

An understanding of the techniques, tricks, and traps of building creative machines and innovative instrumentation is essential for a range of fields from the physical sciences to the arts. In this hands-on, practical course, you will design and build functional devices as a means to learn the systematic processes of engineering and fundamentals of design and construction. The kinds of things you will learn may include mechanical design and machining, computer-aided design, rapid prototyping, circuitry, electrical measurement methods, and other techniques for resolving real-world design problems. In collaboration with others, you will complete a mini-project and a final project, which will involve the design and fabrication of a functional scientific instrument. The course will be taught at an introductory level; no previous experience is expected. The iterative nature of the design process will require an appreciable amount of time outside of class for completing projects. The course is open to undergraduates in all majors (subject to the pre-requisites), as well as Master's and Ph.D. students.

Instructor(s): Stephan Meyer and Scott Wakely Terms Offered: Winter

Prerequisite(s): PHYS 12200 or PHYS 13200 or PHYS 14200; or CMSC 12100 or CMSC 12200 or CMSC 12300; or consent of instructor.

Equivalent Course(s): PSMS 31400, ASTR 31400, CHEM 21400

ASTR 23900. Physics of Galaxies. 100 Units.

This course will provide a comprehensive introduction to galaxies and the interstellar medium and will examine the physical processes involved in their structure and evolution. Topics will include the stellar content of galaxies and the dynamics of stars within galaxies, the physical state of the interstellar medium, central supermassive black holes and power generation in active galactic nuclei, what can be learned about the distribution of mass from gravitational lensing, and processes that shape the relative distributions of dark matter and baryonic matter.

Instructor(s): Irina Zhuravleva Terms Offered: Winter

Prerequisite(s): ASTR 24100 and PHYS 23400 or PHYS 23410; or consent of instructor.

ASTR 24100. The Physics of Stars. 100 Units.

This course develops the physical theory of the internal structure of stars and how their structure changes with time. The material illustrates how to build model stars based on these physical principles and covers observational constraints on these models, such as the neutrino flux from the core of the Sun. Topics include supernovae and the end states of stars-white dwarfs, neutron stars, and black holes.

Instructor(s): Robert Rosner Terms Offered: Winter

Prerequisite(s): ASTR 25400 and PHYS 23400 or PHYS 23410; or consent of instructor.

ASTR 24300. Cosmological Physics. 100 Units.

This course will provide a comprehensive introduction to the principal topics in cosmology, including theoretical and observational foundations. Key topics will include the expansion of the Universe, dark matter and energy, cosmic microwave background, hot Big Bang, and the origin and evolution of structure.

Instructor(s): Wayne Hu Terms Offered: Spring

Prerequisite(s): ASTR 24100 and PHYS 23400 or PHYS 23410. PHYS 27900 recommended.

ASTR 25000. Order-of-Magnitude Astrophysics. 100 Units.

In physics and astrophysics, an approximate answer is often just as (if not more) useful than an exact answer. Making order-of-magnitude estimates is helpful to develop physical intuition, to verify numerical solutions, and to evaluate whether a research problem is worth pursuing. In this course, students will receive coaching and practice in physics-based reasoning, back-of-the-envelope estimation, and thinking on their feet. Students will be encouraged to take a broad perspective, to think critically, and to have fun using physics to understand the universe around them.

Instructor(s): Leslie Rogers Terms Offered: Autumn

Note(s): Open to 3rd and 4th year undergraduates in the Physical Sciences by instructor consent.

Equivalent Course(s): ASTR 35000

ASTR 25400. Radiation Processes in Astrophysics. 100 Units.

Most of what we know about the Universe comes from detection of electromagnetic radiation emitted by individual sources or by diffuse media. #Once we understand the processes by which the radiation was created and the processes by which the radiation is scattered or modified as it passes through matter, we can address the physical nature of the sources. #The physics of radiation processes includes electricity and magnetism; quantum mechanics and atomic and nuclear structure; statistical mechanics; and special relativity.

Instructor(s): Fausto Cattaneo Terms Offered: Autumn

Prerequisite(s): ASTR 13300 and PHYS 23400 or PHYS 23410 are required for students majoring in Astrophysics.

ASTR 25800. Astrophysics of Exoplanets. 100 Units.

Extrasolar planets, a.k.a. exoplanets, are planets orbiting other stars. First definitively detected in the mid 1990s, the planet count has rapidly expanded and their physical characterization has sharpened with improved observational techniques.

Theoretical studies of planetary formation and evolution are now attempting to understand this statistical sample. The field also aspires to address questions about life in the universe. This course emphasizes hands-on activities, like working with real astronomical data to find and characterize exoplanets. Topics are the radial velocity, transit, and other discovery and characterization techniques; statistical distributions of known planets; comparisons among planet structure and planetary system types; formation in a protoplanetary disk and subsequent dynamical evolution; the goal of finding life on an exoplanet; colonization of exoplanets; and the Fermi paradox.

Instructor(s): Jacob Bean and Daniel Fabrycky Terms Offered: Spring

Prerequisite(s): ASTR 24100 and PHYS 23400 or PHYS 23410; or consent of instructor.

Equivalent Course(s): GEOS 32080, ASTR 35800

ASTR 28500. Science with Large Astronomical Surveys. 100 Units.

The last several years have seen a veritable explosion of novel astronomical survey programs covering large areas of sky with unprecedented sensitivity. This course will explore the wide variety of science that can be done with surveys like the Sloan Digital Sky Survey, the Dark Energy Survey, the Gaia satellite, and the upcoming Large Synoptic Survey Telescope. Science topics will include our solar system, our Galaxy, the Local Group, distant galaxies, and cosmological measurements of our Universe. We will familiarize ourselves with the hardware and software components of astronomical surveys, before diving into hands-on analysis of public data sets. Students will learn computational and statistical techniques for analyzing large astronomical data sets.

Instructor(s): Alex Drlica-Wagner Terms Offered: Spring

Prerequisite(s): Third- or fourth-year standing in the College and completion of intermediate-level courses in the Physical Sciences; or by consent of instructor.

ASTR 29001. Field Course in Astronomy and Astrophysics I. 100 Units.

In this two-quarter course students will explore an area of astrophysical research through weekly seminars in preparation for a four-night visit to an observatory during the spring break. In the second quarter of the course students will analyze data collected during their observing experience and will collaborate to produce a single paper similar in format to scientific papers published in professional journals. Students must enroll in both ASTR 29001 and ASTR 29002.

Instructor(s): Michael Gladders Terms Offered: Winter

Prerequisite(s): Open to third-year students majoring in Astrophysics who have completed ASTR 13300, ASTR 21200 and ASTR 29800.

ASTR 29002. Field Course in Astronomy and Astrophysics II. 100 Units.

In this two-quarter course students will explore an area of astrophysical research through weekly seminars in preparation for a four-night visit to an observatory during the spring break. In the second quarter of the course students will analyze data collected during their observing experience and will collaborate to produce a single paper similar in format to scientific papers published in professional journals. Students must enroll in both ASTR 29001 and ASTR 29002.

Instructor(s): Michael Gladders Terms Offered: Spring

Prerequisite(s): ASTR 29001

ASTR 29700. Participation in Research. 100 Units.

Students are assigned to work in the research group of a member of the faculty. Participation in research may take the form of independent work on a small project or assistance to an advanced graduate student or faculty member in his or her research.

Instructor(s): Contact the Academic Affairs Administrator in the Department of Astronomy and Astrophysics for information. Terms Offered: Autumn Spring Summer Winter

Prerequisite(s): Third- or fourth-year standing and consent of instructor. Students must submit a completed Reading and Research Course Form to the Academic Affairs Administrator in Astronomy and Astrophysics before instructor consent will be given.

Note(s): Students must arrange with instructor in advance of the start of the term. Students are required to submit the College Reading and Research Course Form. Available for either quality grades or for P/F grading. Students may register for this course for as many quarters as they wish; they need not work with the same faculty member each time.

ASTR 29800. Undergraduate Research Seminar. 100 Units.

In this course students will engage with various scientific practices to prepare them for participation in research. Students will critically analyze research presented in popular and scholarly scientific literature and practice computational, statistical, and observational techniques to explore astrophysical problems. The course will emphasize student-led discussions and interactive presentations to synthesize previous coursework and strengthen scientific thinking and communication skills. Guest lectures by members of research groups will highlight projects undertaken by faculty in the Astronomy and Astrophysics Department to acquaint students with possibilities for research participation.

Instructor(s): Clarence Chang Terms Offered: Spring

Prerequisite(s): ASTR 13300 and ASTR 20500 or CMSC 12100; or consent of instructor.

Note(s): Intended for students in the Astrophysics Major program.

ASTR 29900. Honors Thesis. 100 Units.

ASTR 29900 Honors Thesis is an independent research course, supervised by a faculty member in the Department of Astronomy and Astrophysics, in which the student either contributes to a faculty research project or engages in an approved independent research project. Eligible students enroll in ASTR 29900 for one quarter during their fourth year. Students intending to complete the Honors Thesis must meet with the Director of Undergraduate Studies in Astronomy and Astrophysics before the third week of Autumn Quarter to obtain Guidelines for the Honors Thesis Course and complete the Honors Thesis Form.

Instructor(s): Contact the Academic Affairs Administrator in the Department of Astronomy and Astrophysics for information. Terms Offered: Autumn Spring Winter

Prerequisite(s): Open to students who are majoring in Astrophysics with fourth-year standing. The student must earn a GPA of 3.50 or higher in the required courses for the Major and 3.0 overall, or obtain consent from the Assistant Chair for Academic Affairs, and have an approved research project that will be supervised by a faculty member. Students are required to submit the College Reading and Research Course Form to the Academic Affairs Administrator in Astronomy and Astrophysics in the quarter in which they enroll in the course.

Note(s): Students intending to complete the Honors Thesis must meet with the Director of Undergraduate Studies before the third week of Autumn Quarter to obtain Guidelines for the Honors Thesis Course and complete the Honors Thesis Form.

Biological Chemistry

Department Website: <http://chemistry.uchicago.edu/kb> (<http://chemistry.uchicago.edu/kb/>)

Program of Study

The Department of Chemistry, in conjunction with the Department of Biochemistry and Molecular Biology (BCMB) in the Division of the Biological Sciences, offers a BS degree in Biological Chemistry. The program is designed to prepare students to enter a variety of interdisciplinary fields in biochemical and biophysical sciences. Undergraduate research is strongly encouraged. By combining resources of both departments, students in this program are given the opportunity to study chemistry and physics of macromolecules, mechanisms of actions of enzymes and hormones, molecular and cellular biology, biotechnology, and other related fields.

Summary of Requirements

GENERAL EDUCATION

CHEM 11100-11200	Comprehensive General Chemistry I-II ^{††‡}	200
One of the following sequences:		200
MATH 15100-15200	Calculus I-II	
MATH 16100-16200	Honors Calculus I-II [†]	
MATH 13100-13200	Elementary Functions and Calculus I-II (requires grade of A- or higher)	
BIOS 20186	Fundamentals of Cell and Molecular Biology ^{**}	100
BIOS 20187	Fundamentals of Genetics (or AP credit, if an AP 5 Fundamentals Sequence is completed) ^{+**}	100
Total Units		600

MAJOR

One of the following: ^{†*}		100
CHEM 11300	Comprehensive General Chemistry III	
CHEM 12300	Honors General Chemistry III	
One of the following:		100
MATH 18300	Mathematical Methods in the Physical Sciences I	
STAT 24300	Numerical Linear Algebra	
MATH 19620	Linear Algebra [†]	
MATH 20250	Abstract Linear Algebra	
MATH 18400 & MATH 18500	Mathematical Methods in the Physical Sciences II and Mathematical Methods in the Physical Sciences III	200
CHEM 20100	Inorganic Chemistry I	100
PHYS 12100-12200-12300	General Physics I-II-III (or higher)	300
One of the following sequences:		300
CHEM 22000-22100-22200	Organic Chemistry I-II-III	
CHEM 23000-23100-23200	Honors Organic Chemistry I-II-III	
CHEM 26100 & CHEM 26200	Quantum Mechanics and Thermodynamics	200
CHEM 26700	Experimental Physical Chemistry	100
One of the following:		100
CHEM 20200	Inorganic Chemistry II	
CHEM 23300	Intermediate Organic Chemistry	
CHEM 26300	Chemical Kinetics and Dynamics	
One appropriate 20000-level course in Biology (under the category Advanced-Level Courses) [§]		100
BIOS 20200	Introduction to Biochemistry	100
BIOS 21317	Topics in Biological Chemistry	100
One approved 30000-level biochemistry or chemistry course [§]		100
Total Units		1900

[†] Credit may be granted by examination.

[‡] CHEM 10100-10200 Introductory General Chemistry I-II and CHEM 12100-12200 Honors General Chemistry I-II also satisfy this requirement. Enrollment into a particular sequence is based on chemistry placement or AP score.

- * See Advanced Placement and Accreditation Examinations sections of this catalog. **Note that no credit is given for IB chemistry.**
- ** Chemistry and Biological Chemistry majors can take these courses without the Biological Sciences prerequisites (BIOS 20153-20151), unless they pursue a double major in the Biological Sciences. They are expected to show competency in mathematical modeling of biological phenomena covered in BIOS 20151.
- + Students with a score of 5 on the AP biology test receive one credit. They are eligible to register for a three-quarter AP 5 Fundamental Sequence. Upon completion of the sequence, students receive an additional AP credit, for a total of two, to meet the general education requirement. Students majoring in Biological Chemistry will count the AP 5 Fundamentals Sequence as three electives.
- § These courses must be chosen in consultation with the departmental counselor; their approval must be conveyed to the student's College adviser for proper documentation.

NOTE: The three-quarter sequence MATH 20300-20400-20500 Analysis in Rn I-II-III may be substituted for MATH 18400 Mathematical Methods in the Physical Sciences II; please note that MATH 20250 Abstract Linear Algebra or STAT 24300 Numerical Linear Algebra is a prerequisite for MATH 20400. MATH 27300 Basic Theory of Ordinary Differential Equations may be substituted for MATH 20100 Mathematical Methods for Physical Sciences II. MATH 18600 Mathematics of Quantum Mechanics is recommended, especially for those who plan to pursue advanced study in physical chemistry.

Advanced Placement

Students who earn a score of 5 on the AP test in chemistry are given credit for CHEM 11100 Comprehensive General Chemistry I. Students with CHEM 11100 Comprehensive General Chemistry I credit may join CHEM 11200 Comprehensive General Chemistry II in the Winter Quarter. A score of 5 on the AP exam also permits students to take CHEM 12100-12200-12300 Honors General Chemistry I-II-III; students may opt to begin with CHEM 12100 Honors General Chemistry I in the Autumn Quarter or CHEM 12200 Honors General Chemistry II in the Winter Quarter. Students who complete the first quarter of Comprehensive General Chemistry or Honors General Chemistry forgo the AP credit. Note that no credit is given for IB chemistry.

Accreditation

The Department of Chemistry also administers accreditation examinations for CHEM 11100-11200-11300 Comprehensive General Chemistry I-II-III to entering College students. Only incoming first-year and transfer students are eligible to take these examinations, which are offered at the beginning of Autumn Quarter. Students may receive credit on the basis of their performance on accreditation examinations.

Grading

Students majoring in biochemistry must earn 1) a major GPA of 2.0 or higher and 2) a C- or higher in all courses required by the Biochemistry major, including those courses counting toward general education requirements in the mathematical, biological, and physical sciences. Nonmajors may take chemistry courses on a P/F basis; only grades of C- or higher constitute passing work.

Honors and Undergraduate Research

By their third year, students majoring in Biological Chemistry are strongly encouraged to participate in research with a faculty member. For more information on research opportunities and honors in Biological Chemistry, visit chemistry.uchicago.edu/undergraduate-chemistry-major-and-research (<http://chemistry.uchicago.edu/undergraduate-chemistry-major-and-research/>).

Excellent students who pursue a substantive research project with a faculty member in the Department of Chemistry or the Department of Biochemistry and Molecular Biology should plan to submit an honors thesis based on their work. Students usually begin this research program during their third year, and they continue their research activities through the following summer and their fourth year. To be considered for honors, students are expected to complete their arrangements with the departmental counselor before the end of their third year and to register for one quarter of CHEM 29900 Advanced Research in Chemistry or one year of CHEM 29600 Research in Chemistry during their third or fourth years.

A BS with honors in Biological Chemistry requires students to write a creditable honors paper describing their research. The paper must be approved by the program advisers in the Department of Chemistry and the Department of Biochemistry and Molecular Biology, and it must be submitted before the deadline established by the department. In addition, an oral presentation of the research is required.

To earn a BS degree with honors in Biological Chemistry, students must also have an overall GPA of 3.0 or higher.

Joint Degree Program

A four-year joint degree program leading to a concurrent award of the BS in Biological Chemistry and the MS in Chemistry is available for a select group of students who have achieved advanced standing through their performance on placement or on accreditation examinations. Special programs are developed for such students. For more information,

consult John Anderson at jsanderson@uchicago.edu and Vera Dragisich at vdragisi@uchicago.edu in the Chemistry Department.

Biological Sciences

Department Website: <https://college.uchicago.edu/academics/biological-sciences-collegiate-division> (<https://college.uchicago.edu/academics/biological-sciences-collegiate-division/>)

Program of Study

Biology is the study of life, past and present. The faculty of the College believe that a sound knowledge of biology is essential for understanding ourselves and the world in which we live, as well as engaging many pressing problems facing humanity and becoming a part of their eventual solution. Our curriculum offers courses in many fields, from theoretical to experimental biology, and from molecular and genetic mechanisms underlying life to the complex interactions of organisms in ecosystems. At a major research institution, the focus of all courses in the Biological Sciences Collegiate Division is on scientific reasoning, research, and discovery. The goals of the Biological Sciences program are to give students (1) an understanding of currently accepted concepts in biology and the experimental support for these concepts, and (2) an appreciation of the gaps in our current understanding and the opportunities for new research in this field.

Bachelor of Arts (BA): The BA is designed for students who wish to gain extensive training in the field of biology but also retain the flexibility to take elective courses outside the major.

Bachelor of Science (BS): The BS is designed for students who wish to delve more deeply into the field of their major through additional electives, participate in scientific research, and complete a BS thesis that summarizes their research. Successful BS students will (1) learn how scientists design and conduct scientific experiments; (2) collect data as part of a research effort; (3) evaluate the strengths and weaknesses of that data; (4) interpret the data in the context of a specific scientific discipline; and (5) describe their work in a BS Thesis.

Bachelor of Arts/Bachelor of Science with Research Honors (Research Honors): Biology Research Honors is reserved for students who excel in the coursework involved in completing the major and have completed original research of high quality suitable for inclusion in a professional publication. Successful Honors students will (1) gain a scholarly understanding of a specific area of biology; (2) conduct scientific experiments, collect original data, analyze that data using appropriate statistics, and evaluate the strengths and weaknesses of the data; (3) interpret their findings in the context of their field; (4) describe their work in an Honors Thesis; and (5) present and defend their work in an oral presentation.

Bachelor of Arts/Bachelor of Science with Scholar Honors (Scholar Honors): Scholar Honors recognizes exceptional academic performance including submission and acceptance of a scholarly thesis.

General Education Requirements

Most students choose one of the following options to meet the general education requirement in the biological sciences. For other options, see Specific General Education Requirement for Certain Majors.

1. A two-quarter general education sequence for non-majors.
2. The Pre-Med Sequence for non-science majors (BIOS 20170 Microbial and Human Cell Biology - BIOS 20175 Biochemistry and Metabolism), of which two courses will be credited towards general education.
3. BIOS 20153 Fundamentals of Ecology and Evolutionary Biology and BIOS 20151 Introduction to Quantitative Modeling in Biology (Basic) or BIOS 20152 Introduction to Quantitative Modeling in Biology (Advanced).
4. Completion of three quarters of the Advanced Biology Fundamentals Sequence (see below).

Advanced Placement Credit

Students with a score of 4 or 5 on the AP Biology test who complete the first three quarters of the Advanced Biology Fundamentals Sequence will be awarded a total of two quarters of credit to be counted toward the general education requirement in the biological sciences. This option is especially appropriate for students who plan to major in the Biological Sciences or prepare for the health professions, but it is open to all qualified students.

Program Requirements for the BA in Biological Sciences

Students can earn a bachelor of arts (BA) in the Biological Sciences by completing the following course work:

Biological Sciences Fundamentals Sequences

Required foundational courses in the Biological Sciences program of study are referred to as Fundamentals Sequences. There are three sequences to choose from:

1. **Molecules to Organisms (Sections 1 and 2) sequence**—begins in the Winter Quarter of the first year and is structured to provide students with a broad-based understanding of contemporary biology:

BIOS 20151	Introduction to Quantitative Modeling in Biology (Basic) ^{*#}	100
or BIOS 20152	Introduction to Quantitative Modeling in Biology (Advanced)	
BIOS 20153	Fundamentals of Ecology and Evolutionary Biology ^{*#}	100
BIOS 20186	Fundamentals of Cell and Molecular Biology	100
BIOS 20187	Fundamentals of Genetics	100

BIOS 20188	Fundamentals of Physiology	100
BIOS 20189	Fundamentals of Developmental Biology	100
BIOS 20200	Introduction to Biochemistry	100

2. Life, Ecosystems, and Evolution sequence (formerly Track C)—designed for students interested in focusing their studies on ecology and evolution or environmental science:

BIOS 20151	Introduction to Quantitative Modeling in Biology (Basic) ^{*#}	100
or BIOS 20152	Introduction to Quantitative Modeling in Biology (Advanced)	
BIOS 20153	Fundamentals of Ecology and Evolutionary Biology ^{*#}	100
BIOS 20186	Fundamentals of Cell and Molecular Biology	100
BIOS 20187	Fundamentals of Genetics	100
BIOS 20196	Ecology and Conservation	100
BIOS 20198	Biodiversity	100

3. Advanced Biology sequence—open to students who have achieved a score of 4 or 5 on the AP Biology test:

BIOS 20234	Molecular Biology of the Cell	100
BIOS 20235	Biological Systems	100
BIOS 20236	Biological Dynamics	100
BIOS 20242	Principles of Physiology	100
BIOS 20200	Introduction to Biochemistry	100

^{*} BIOS 20151/BIOS 20152 and BIOS 20153 fulfill the general education requirement in the biological sciences and are prerequisites for the rest of the courses in the fundamentals sequence. BIOS 20151 may be taken simultaneously with BIOS 20186.

[#] Non-Biological Sciences majors can take a Fundamentals Sequence without the fundamentals prerequisites (BIOS 20151/BIOS 20152) unless they pursue a double major in Biological Sciences. Students opting not to take the prerequisites should be aware that subsequent courses in the sequence expect competency in mathematical modeling of biological phenomena and basic coding in R.

After completion of three quarters of a Fundamentals Sequence, students begin taking upper-level elective courses in the biosciences and may start a specialization.

Mathematical and Physical Sciences Requirements

In addition to taking a Fundamentals Sequence, students completing a bachelor of arts degree in Biological Sciences are required to satisfy general education requirements in the mathematical and physical sciences as follows:

PHYSICAL SCIENCES. One of the following sequences: 200

CHEM 10100 & CHEM 10200	Introductory General Chemistry I and Introductory General Chemistry II (or equivalent)	
CHEM 11100-11200	Comprehensive General Chemistry I-II	

MATHEMATICAL SCIENCES. One of the following sequences: 200

MATH 13100-13200	Elementary Functions and Calculus I-II (or higher)	
MATH 15100-15200	Calculus I-II	
MATH 16100-16200	Honors Calculus I-II	

Total Units 400

In addition, all students completing a bachelor of arts degree in Biological Sciences must complete further courses in physical and mathematical sciences as described in the Summary of Requirements tables below.

Biological Sciences Upper-Level Elective Requirements

In addition to completing a Fundamentals Sequence and the above mathematical and physical sciences requirements, students must take five upper-level courses (course numbers 21000 to 28999) in Biological Sciences to complete the bachelor of arts degree. These courses may be selected by the student or in consultation with the BSCD Senior Advisers (Megan McNulty, mmculty@uchicago.edu, and Christine Andrews, candrews@uchicago.edu).

If the student chooses to complete a specialization (see sections that follow), courses should be chosen in consultation with the specialization adviser (listed below).

NOTE: BIOS 00199 Undergraduate Research, BIOS 00206 Readings: Biology, and BIOS 00299 Advanced Research: Biological Sciences may not be used to meet requirements for the Biological Sciences degree. Courses listed under the heading Specialized Courses (course numbers in the 29000 range) may not be used to meet requirements for the Biological Sciences degree.

Summary of Requirements: Molecules to Organisms/Advanced Biology

CHEM 11300	Comprehensive General Chemistry III (or equivalent)	100
CHEM 22000 & CHEM 22100	Organic Chemistry I and Organic Chemistry II	200
PHYS 12100-12200	General Physics I-II (or higher)	200
One of the following general quantitative courses:		100
BIOS 26210	Mathematical Methods for Biological Sciences I	
PHYS 12300	General Physics III (or higher)	
STAT 22000	Statistical Methods and Applications	
Molecules to Organisms Fundamentals Sequence or Advanced Biology Sequence		500
Five courses, BIOS 21000 and above in Biological Sciences		500
Total Units		1600

Summary of Requirements: Life, Ecosystems, and Evolution

CHEM 11300	Comprehensive General Chemistry III (or equivalent)	100
One of the following two-quarter sequences:		200
CHEM 22000 & CHEM 22100	Organic Chemistry I and Organic Chemistry II	
or		
PHYS 12100-12200	General Physics I-II (or higher)	
One of the following general quantitative courses:		100
BIOS 26210	Mathematical Methods for Biological Sciences I	
PHYS 12300	General Physics III (or higher)	
STAT 22000	Statistical Methods and Applications (or higher)	
Life, Ecosystems, and Evolution Fundamentals Sequence		400
Five courses, BIOS 21000 and above in Biological Sciences		500
Three additional quantitative course*		300
Total Units		1600

* Students can satisfy this requirement with quantitative upper-level BIOS courses or courses from other departments (e.g., MATH, PHYS, STAT, or CMSC). Biological Sciences majors pursuing this track should confirm their quantitative course selections with Senior Biology Advisor Christine Andrews (candrews@uchicago.edu).

NOTE 1: The Biological Sciences major does NOT require the third quarter of calculus in any of the sequences. Students entering the Molecules to Organisms or the Life, Ecosystems, and Evolution sequence MUST take BIOS 20151 Introduction to Quantitative Modeling in Biology (Basic) or BIOS 20152 Introduction to Quantitative Modeling in Biology (Advanced), and students in the Advanced Biology sequence MUST take BIOS 20236 Biological Dynamics. NO Mathematics courses may be substituted for these requirements.

NOTE 2: Students planning to apply to medical school should be aware of individual medical school admissions requirements and should tailor their program accordingly with the help of UChicago Careers in Health Professions (<https://careeradvancement.uchicago.edu/uchicago-careers-in/health-professions/>) (UCHIP).

Program Requirements for the BS in Biological Sciences

Students can earn a bachelor of science (BS) in the Biological Sciences by (1) completing three upper-level elective courses in Biological Sciences beyond those required for the BA degree, including BIOS 28900 (or BIOS 00296 if also pursuing Biology Research Honors); (2) writing a BS thesis under the supervision of an adviser who is a member of the Biological Sciences Division research faculty. Students completing the honors program or a specialization that requires a senior thesis can submit the same thesis for the BS degree. Candidates must declare their intent by submitting a faculty consent form no later than the end of the Spring Quarter of their third year in the College. Details of the BS degree and a timeline for completion of requirements are provided on the BSCD website, bscd.uchicago.edu (<http://bscd.uchicago.edu/>).

Honors

Honors in Biological Sciences can be earned via one of two tracks.

Research Honors: This track emphasizes exceptional achievement in a program of original research (minimum cumulative GPA of 3.30 or above), plus submission and acceptance of an in-depth research thesis.

Scholar Honors: This track recognizes exceptional academic performance (minimum cumulative GPA of 3.75 or above), including submission and acceptance of a scholarly thesis.

Both programs require formal declarations of intent to seek honors by the candidates. The details of each program are provided on the BSCD website (<https://college.uchicago.edu/academics/biological-sciences-collegiate-division/>). Candidates must apply for either program no later than the beginning of Spring Quarter of their third year in the College.

Research Opportunities

Students are encouraged to carry out individual guided research in an area of their interest. A student may propose an arrangement with any faculty member in the Biological Sciences Division to sponsor and supervise research on an individual tutorial basis. Students may register for BIOS 00199 Undergraduate Research or BIOS 00299 Advanced Research: Biological Sciences at any time if they want to receive course credit for their research work, but this is not required. (Please note that there are required research courses for the BS and Research Honors programs.) For more information, see bscd.uchicago.edu/content/undergrad-research (<https://bscd.uchicago.edu/content/undergrad-research/>) or contact John Kennedy (jmkennedy@uchicago.edu). NOTE: Course credit cannot be given for work that is compensated by a salary. BIOS 00199 and BIOS 00299 may not be used to meet the requirements of the Biological Sciences degree.

Limited financial support is available to students for summer research through their research supervisors or through fellowships awarded competitively by the Biological Sciences Collegiate Division. Application deadlines for fellowships range from mid-February to early April. Please see bscd.uchicago.edu/content/undergrad-research for more information about fellowship opportunities in Biological Sciences at the University of Chicago, or the College Center for Research and Fellowships for a searchable database of internal and external research and fellowship opportunities.

Grading and Academic Honesty

Students must receive quality grades in all courses that fulfill requirements for the BA or BS degree in Biological Sciences.

Academic dishonesty is a matter of grave concern to the faculty of the Biological Sciences Collegiate Division and will not be tolerated. Students should become familiar with the guidelines presented in *Doing Honest Work in College* by Charles Lipson and consult with each of their instructors to make sure they understand the specific expectations of each course. Consequences of academic dishonesty (including plagiarism) may result in suspension or expulsion from the University.

Specialization Programs in the Biological Sciences

Specializations represent recommended programs of study for students interested in one particular field within the Biological Sciences. Students who wish to complete a specialization should discuss their plans with the specialization director by Spring Quarter of their second year. Students may complete only one specialization. All courses must be taken for a quality grade in order to count towards a specialization.

Specialization in Cancer Biology

Specialization in Cellular and Molecular Biology

Specialization in Ecology and Evolution

Specialization in Endocrinology

Specialization in Genetics

Specialization in Global Health Sciences

Specialization in Immunology

Specialization in Microbiology

Specialization in Quantitative Biology

Specialization in Cancer Biology. Students who complete the requirements detailed below will be recognized as having completed a “Specialization in Cancer Biology”.

To be eligible to carry out a Specialization in Cancer Biology, students must average a B grade in the Fundamental Sequences BIOS 20180 or 20190.

Students who plan to specialize in Cancer Biology are advised to begin the required specialization courses below in their second or third year in the College. Students who elect to specialize should email Dr. Kay F. Macleod, The Ben May Department for Cancer Research (kmacleod@uchicago.edu) providing contact information, name and contact for your college advisor and a copy of your most recent grade transcript and a half page summary of why you are interested in the Specialization in Cancer Biology and what your long term career goals are. An annual overview meeting is organized for the Fall of each year at which advice will be provided on the objectives of the Specialization, the importance of each of the classes and guidelines on how to identify labs in which individual research projects can be carried out. Interested students are encouraged to attend and to bring forward any questions about requirements and research options at this meeting.

Course Work. *The following courses are required for a Specialization in Cancer Biology. To continue in the Specialization, students must achieve an A or a B grade in both courses.*

BIOS 25108	Cancer Biology	100
BIOS 25308	Heterogeneity in Human Cancer: Etiology and Treatment	100

To complete the specialization in cancer biology, students should also take one of the following two courses in either their third or fourth year, having successfully completed BIOS 25108 and BIOS 25308 above, and started work in their chosen research laboratory.

BIOS 25326	Tumor Microenvironment and Metastasis	100
BIOS 25327	Health Disparities in Breast Cancer	100

To complete the Specialization in Cancer Biology, students will also carry out individual guided research in a cancer research laboratory and attend cancer biology-related seminars. Participation in the research component of the Specialization in Cancer Biology is by invitation only and is based on:

(1) performance in the above-mentioned courses, (2) identification of a research project and mentor, (3) submission of a research abstract for consideration by the end of the winter quarter of their junior year to the Director of the Specialization in Cancer Biology (Dr. Kay Macleod).

Laboratory Research: Independent research projects performed by students in the Specialization in Cancer Biology must be approved by the Director of the Specialization (Dr. Macleod) and to be of sufficiently high standard to qualify as a senior honors project and ideally to produce data that

contributes to peer-reviewed publication.

Students are encouraged to begin their research project no later than the Spring/Summer quarter of their junior year.

Specialization in Cellular and Molecular Biology

Biological Sciences majors can complete the specialization in cellular and molecular biology by either:

1. Successful completion of CHEM 22200 Organic Chemistry III or CHEM 23200 Honors Organic Chemistry III plus four upper-level BIOS courses selected from the list below.

OR

2. Successful completion of CHEM 22200 (Organic Chemistry III) or CHEM 23200 (Honors Organic Chemistry III) plus three upper-level BIOS courses selected from the list below and completion of a senior thesis on an independent research project. This project must either (1) satisfy the requirements for the BSCD honors program, (2) satisfy the requirements for a BS in Biological Sciences, or (3) be approved by the directors of the specialization no later than Spring Quarter of the third year.

Please consult Christine Andrews (candrews@uchicago.edu) or Megan McNulty (mmcnulty@uchicago.edu) for approval of research projects or to request approval for any non-listed course with significant content in cellular and molecular biology.

Courses

BIOS 21236	Genetics of Model Organisms	100
BIOS 21237	Developmental Mechanisms	100
BIOS 21238	Cell Biology II	100
BIOS 21360	Advanced Molecular Biology	100
BIOS 23299	Plant Development and Molecular Genetics	100

* If students choose a developmental course, they must choose from BIOS 21237 Developmental Mechanisms or BIOS 23299 Plant Development and Molecular Genetics.

Specialization in Ecology and Evolution

Students majoring in Biological Sciences who complete the requirements detailed below will be recognized as having completed a specialization in ecology and evolution. This specialization is recommended for students who are interested in pursuing graduate work in the field or in laboratory sciences of ecology, evolution, population genetics, or behavior. Based on the student's particular interest, he or she will select a Faculty Adviser, who then may recommend specific courses necessary to meet the specialization requirements (see following section). The Faculty Advisers may also help the student find an appropriate research lab in which to conduct an individual research project.

The following requirements must be met:

Courses

1. Students intending to pursue the ecology and evolution specialization are strongly encouraged to follow Life, Ecosystems, and Evolution (formerly Track C) for the BIOS Fundamentals sequence. Students who take the Advanced Biology sequence are also eligible for the specialization and should consult with Christine Andrews (candrews@uchicago.edu) to plan their course work.

2. Students in the ecology and evolution specialization must take three courses in statistics (STAT 22000 Statistical Methods and Applications or higher) or other quantitative approaches relevant to their research plans (BIOS 26210 Mathematical Methods for Biological Sciences I and BIOS 26211 Mathematical Methods for Biological Sciences II

recommended). These courses can count toward the quantitative requirements for the Life, Ecosystems, and Environment sequence.

3. Three of the upper-level courses required for completion of the BIOS major must be chosen from the areas of behavior, ecology, evolution, and genetics.

Students must select the courses required for the ecology and evolution specialization in consultation with the Faculty Research Adviser, the director of the specialization (Cathy Pfister, 773.834.0071, cpfister@uchicago.edu) or the BSCD Ecology and Evolution Adviser (Christine Andrews, 773.702.1214, candrews@uchicago.edu).

Laboratory or Field Research

Students specializing in ecology and evolution must perform original research under the guidance of a member of the ecology and evolution faculty and write a senior thesis based on this research. The research paper draft should be submitted before the end of fifth week in Spring Quarter, with the final thesis due in eighth week. NOTE: Students must complete field research by the end of the growing season (summer) of their third year.

The specialization in ecology and evolution is administered by the Department of Ecology and Evolution. For more information, please consult the director of the specialization, Cathy Pfister (773.834.0071, cpfister@uchicago.edu).

Specialization in Endocrinology

Students majoring in Biological Sciences who complete the requirements detailed below will be recognized as having completed a specialization in endocrinology. Students who complete the specialization will be well versed in all aspects of endocrinology, ranging from basic cell signaling to the integration of endocrine systems and their dysregulation in human disease. Students must take three introductory courses listed below plus two additional courses from the elective list. The prerequisite for these courses is completion of the Fundamentals Sequence. It is strongly recommended that students complete a Biochemistry course before enrolling; however, the introductory courses can be completed as Endocrinology I–II–III or Endocrinology II–III–I. Students will also have the option of participating in a hands-on research component in an endocrinology lab.

Introductory Courses

BIOS 25226	Endocrinology I: Cell Signaling (Autumn)	100
BIOS 25227	Endocrinology II: Systems and Physiology (Winter)	100
BIOS 25228	Endocrinology III: Human Disease (Spring)	100

Elective Courses

BIOS 22236	Reproductive Biology of Primates	100
BIOS 22249	Principles of Toxicology	100
BIOS 24248	Biological Clocks and Behavior	100
BIOS 25109	Topics in Reproduction and Cancer	100
BIOS 25126	Animal Models of Human Disease	100
BIOS 29271	The Psychology and Neurobiology of Stress *	100
BIOS 29300	Biological Psychology *	100

* Courses beginning with 29XXX count as general electives, but do not count in the Biological Sciences major.

The specialization in endocrinology is administered by the Section of Endocrinology, Diabetes, and Metabolism, the Committee on Molecular Metabolism and Nutrition, and the NIH-funded Diabetes Research and Training Center. For more information, consult Matthew Brady (mbrady@medicine.bsd.uchicago.edu).

Specialization in Genetics

Students majoring in Biological Sciences who complete the requirements below will be recognized as having completed a specialization in genetics. Students must either:

1. Complete five courses from the categories listed below, including at least one from each category.

OR

2. Complete three courses chosen from the categories listed below, including one course in each category, and complete a senior thesis or an independent research project. This project must either (1) satisfy the requirements for the BSCD honors program, (2) satisfy the requirements for a BS in Biological Sciences, or (3) be approved by the directors of the specialization no later than Spring Quarter of the third year.

Please consult Christine Andrews (candrews@uchicago.edu) or Megan McNulty (mmcnulty@uchicago.edu) for approval of research projects or to request approval for any non-listed course with significant genetics content.

One of the following:

STAT 22000	Statistical Methods and Applications (or higher)	100
------------	--	-----

BIOS 21306	Human Genetics and Evolution	100
One of the following:		
BIOS 21236	Genetics of Model Organisms (Autumn)	100
BIOS 23258	Molecular Evolution I: Fundamentals and Principles (Winter)	100
One of the following with research or three of the following without research:		
BIOS 21216	Intro Statistical Genetics (Winter)	100
BIOS 21229	Genome Informatics: How Cells Reorganize Genomes (Winter)	100
BIOS 21237	Developmental Mechanisms (Winter)	100
BIOS 23299	Plant Development and Molecular Genetics (Spring)	100
BIOS 25216	Molecular Basis of Bacterial Disease (Winter)	100
BIOS 25287	Introduction to Virology (Spring)	100
BIOS 28407	Genomics and Systems Biology (Spring)	100

Please consult Megan McNulty (mmcnulty@uchicago.edu) or Chris Andrews (candrews@uchicago.edu) for more information.

Specialization in Global Health Sciences

Students majoring in Biological Sciences who complete the following requirements will be recognized as having completed a specialization in global health sciences.

Required Courses

Students wishing to specialize in global health sciences are required to take the foundational series of courses either in Chicago (offered as a year-long sequence every year) **OR** at the University of Chicago Center in Paris (offered every year during Winter Quarter. See study-abroad.uchicago.edu/programs/paris-global-health (<http://study-abroad.uchicago.edu/programs/paris-global-health/>)).

The Chicago series of foundational courses:

BIOS 27810	Epidemiology and Population Health: Global Health Sciences I (Autumn)	100
BIOS 27811	Global Health Sciences II: Microbiology (Winter)	100
BIOS 29814	Global Health Sciences III: Biological and Social Determinants of Health (Spring) *	100

* Courses beginning with 29XXX count as general electives, but do not count in the Biological Sciences major.

OR

The Paris series of foundational courses:

BIOS 27813	Global Health Sciences I: Cancer Concepts: Causes and Consequences (Winter)	100
BIOS 27811	Global Health Sciences II: Microbiology (Winter)	100
BIOS 29814	Global Health Sciences III: Biological and Social Determinants of Health (Winter)	100

To complete the specialization, students must take two additional upper level courses relevant to global health from the lists below (one from the BIOS list and one from the non-BIOS list) **OR** complete a research thesis relevant to global health policy:

Non-BIOS upper-level electives:

ANTH 21420	Ethnographic Methods	100
ANTH 24302	Disability in Local and Global Contexts	100
ANTH 24315	Culture, Mental Health, and Psychiatry	100
ANTH 24330	Medical Anthropology	100
CHDV 21000	Cultural Psychology	100
ENST 25460	Environmental Effects on Human Health	100
GLST 23101	Global Studies I	100
GLST 29610	Cultures and Politics of Water	100
PBPL 21501	Environmental Justice	100
PBPL 25370	Social Justice and Social Policy	100
PBPL 25832	Early Human Capital Development	100
PBPL 26530	Environment, Agriculture, and Food: Economic and Policy Analysis	100
PBPL 26690	The Politics of Health Care	100
PBPL 27000	International Economics	100

PBPL 27905	Global Health Metrics	100
PBPL 28150	U.S. Foreign Policy: Inst & Decision making 21st Century	100
PSYC 28791	Behavioral Science and Public Policy	100

BIOS upper-level electives:

BIOS 02280	Drinking Alcohol: Social Problem or Normal Cultural Practice?	100
BIOS 02490	Biology and Sociology of AIDS	100
BIOS 21306	Human Genetics and Evolution	100
BIOS 22249	Principles of Toxicology	100
BIOS 23365	Evolutionary and Genomic Medicine I	100
BIOS 23409	The Ecology and Evolution of Infectious Diseases	100
BIOS 25216	Molecular Basis of Bacterial Disease	100
BIOS 25260	Host Pathogen Interactions	100
BIOS 25287	Introduction to Virology	100
BIOS 25308	Heterogeneity in Human Cancer: Etiology and Treatment	100
BIOS 25327	Health Disparities in Breast Cancer	100
BIOS 27720	Microbiomes Across Environments (given at MBL)	100
BIOS 29271	The Psychology and Neurobiology of Stress	100
BIOS 29314	Topics in Medical Ethics	100

Other courses may be substituted with the consent of the director of the specialization, Professor Sola Olopade (solopade@bsd.uchicago.edu (solopade@bsd.uchicago.edu)).

Research projects must be approved by the director of the specialization in third year. Thesis requirements are fulfilled either by completing a BS thesis or an honors research thesis, or by special arrangement with the director of the specialization.

Summer research fellowships are awarded competitively by the Center for Global Health or the Biological Sciences Collegiate Division. The deadline for applications for fellowships is early February preceding the summer of the fellowship application.

For more information on the Center for Global Health fellowships, students should consult with Ms. Absera Melaku (amelaku@medicine.bsd.uchicago.edu) and for the Biological Sciences Collegiate Division fellowships John Kennedy (jmkennedy@uchicago.edu).

Specialization in Immunology

Students majoring in Biological Sciences will be recognized as having completed a specialization in immunology if they complete the following: (1) three of the four courses listed below, and (2) either two additional courses, selected in consultation with the director of the specialization, or a research project, approved by the director of the specialization.

BIOS 25256	Immunobiology (Autumn)	100
BIOS 25258	Immunopathology (Winter)	100
One of the following:		
BIOS 25266	Molecular Immunology (Spring, offered every other year in odd years)	100
BIOS 26403	Quantitative Immunobiology (Winter)	100

For more information, students should consult with Bana Jabri, Department of Pathology and Committee on Immunobiology (773.834.8670, bjabri@bsd.uchicago.edu).

Accelerated Program in Immunology

The University of Chicago Graduate Program in Immunology permits undergraduate students who have demonstrated outstanding potential for graduate studies in biology to begin graduate school during their fourth year in the College. This is a competitive merit-award program.

Because of the accelerated nature of the curriculum, applicants must have outstanding academic credentials (i.e., GPA typically in the range of 3.7 and GRE scores typically not less than 1400). Eligible students also have a clear understanding of their motivation for immunology. Laboratory experience is not mandatory but highly encouraged.

Candidates will apply to the Graduate Program in Immunology at the University of Chicago during their third year in the College. Eligible students must have completed thirty-three credits (of the forty-two required for a degree in the College) by the end of their third year. These thirty-three credits must include all fifteen general education requirements and one-half of the requirements for their major.

For further information, contact Bana Jabri, Department of Pathology and the Committee on Immunobiology (773.834.8670, bjabri@bsd.uchicago.edu).

Specialization in Microbiology

Students majoring in Biological Sciences who complete the requirements detailed below will be recognized as having completed a specialization in microbiology. Students must take the three courses listed below and either two additional courses or a research project. With prior approval from the director of the specialization, students may substitute BIOS 25206 (<http://collegecatalog.uchicago.edu/search/?P=BIOS%2025206>) Fundamentals of Bacterial Physiology and BIOS 25216 (<http://collegecatalog.uchicago.edu/search/?P=BIOS%2025216>) Molecular Basis of Bacterial Disease with GEOS 26650 (<http://collegecatalog.uchicago.edu/search/?P=GEOS%2026650>) Environmental Microbiology and BIOS 27811 (<http://collegecatalog.uchicago.edu/search/?P=BIOS%2027811>) Global Health Sciences II: Microbiology.

Students are encouraged to begin this sequence in Autumn Quarter of their third year, carry out individual guided research, participate in the honors research program, and attend the Microbiology Seminar series (<https://micro.uchicago.edu/events/>).

For additional information, please contact the director of the specialization, Dominique Missiakas (dmissiak@bsd.uchicago.edu) (dmissiak@bsd.uchicago.edu).

REQUIRED COURSES

BIOS 25206	Fundamentals of Bacterial Physiology (Autumn)	100
BIOS 25216	Molecular Basis of Bacterial Disease (Winter)	100
BIOS 25287	Introduction to Virology (Spring)	100
Total Units		300

ELECTIVE COURSES

Two of the following:		
BIOS 23409	The Ecology and Evolution of Infectious Diseases	100
BIOS 25420	Microbial 'Omics	100
BIOS 25256	Immunobiology	100
BIOS 25260	Host Pathogen Interactions	100
GEOS 26650	Environmental Microbiology (Autumn)	100
BIOS 27720	Microbiomes Across Environments	100
CHEM 22200	Organic Chemistry III	100

Specialization in Quantitative Biology

Students majoring in Biological Sciences who complete the following requirements will be recognized as having completed a specialization in quantitative biology. Quantitative biology is a burgeoning interdisciplinary field that encompasses questions ranging across all scales of biology, from populations to molecules, and uses quantitative methods drawn from computer science, statistics, and mathematics. Students will acquire skills necessary for cutting-edge biological research: to program in a high-level language, to extract information from data sets, and to analyze mathematical models of dynamic and stochastic systems.

Students are required to take two foundational courses and three additional courses from the lists below, including at least one from the list of BIOS courses and one from the list of courses in other departments. Students must also complete a research-based senior thesis.

For additional information, please contact the director of the specialization, Dmitry Kondrashov, at dkon@uchicago.edu.

FOUNDATIONAL COURSES

BIOS 26210	Mathematical Methods for Biological Sciences I (fulfills one of the major course requirements)	100
BIOS 26211	Mathematical Methods for Biological Sciences II	100

BIOS LIST

BIOS 21216	Intro Statistical Genetics	100
BIOS 21249	Organization, Expression, and Transmission of Genome Information	100
BIOS 21328	Biophysics of Biomolecules	100
BIOS 21349	Protein Structure and Functions in Medicine	100
BIOS 21358	Simulation, Modeling, and Computation in Biophysics	100
BIOS 21407	Image Processing in Biology	100
BIOS 21507	Stem Cell Biology, Regeneration, and Disease Modeling	100
BIOS 23258	Molecular Evolution I: Fundamentals and Principles	100
BIOS 23365	Evolutionary and Genomic Medicine I	100
BIOS 23404	Reconstructing the Tree of Life: An Introduction to Phylogenetics	100

BIOS 23409	The Ecology and Evolution of Infectious Diseases	100
BIOS 26120	An Introduction to Bioinformatics and Proteomics	100
BIOS 26318	Fundamentals of Biological Data Analysis	100
BIOS 26403	Quantitative Immunobiology	100
BIOS 28407	Genomics and Systems Biology	100

NON-BIOS LIST, OTHER DEPARTMENTS

MATH 19620	Linear Algebra	100
MATH 21100	Basic Numerical Analysis	100
MATH 21200	Advanced Numerical Analysis	100
MATH 23500	Markov Chains, Martingales, and Brownian Motion	100
MATH 27300	Basic Theory of Ordinary Differential Equations	100
MATH 27500	Basic Theory of Partial Differential Equations	100
STAT 22000	Statistical Methods and Applications	100
or STAT 23400	Statistical Models and Methods	
STAT 22200	Linear Models and Experimental Design	100
STAT 22400	Applied Regression Analysis	100
STAT 22700	Biostatistical Methods	100
STAT 22810	Epidemiology and Population Health	100
STAT 24300	Numerical Linear Algebra	100
STAT 24400-24500	Statistical Theory and Methods I-II	200
STAT 25100	Introduction to Mathematical Probability	100
STAT 25300	Introduction to Probability Models	100
STAT 27725	Machine Learning	100
CMSC 12100-12200-12300	Computer Science with Applications I-II-III	300
CMSC 23900	Data Visualization	100
CMSC 25025	Machine Learning and Large-Scale Data Analysis	100
CMSC 27200	Theory of Algorithms	100
CMSC 27610	Digital Biology	100
MENG 21400	Molecular Engineering Thermodynamics	100
MENG 24100 & MENG 24200	Molecular Engineering Thermodynamics of Phase Equilibria and Molecular Transport Phenomena II	200
MENG 24300	Molecular Modeling	100

Other courses from quantitative programs may be counted by consent of the director of the specialization.

Research Component

Students will develop the skills necessary for quantitative biology research, which is expected to be primarily, though not exclusively, computational in nature. They will work on mini-research projects starting in the foundational BIOS 26210-26211 sequence and in the third year develop a research proposal under the direction of a faculty advisor, which must be approved by the director of the specialization by the Spring Quarter. In their last year students will complete either (1) a senior honors project based on original research or (2) a senior thesis project approved by the director of the specialization. Students are expected to communicate and share their research with their peers through participation in the Quantitative Biology discussion club and by presenting their research in the annual Quantitative Biology undergraduate research conference. Opportunities to further their quantitative biology training and to work on their research project over the summer exist through summer quantitative biology fellowships.

Minor in Biological Sciences

Students who wish to complete a minor in Biological Sciences should meet with one of the BSCD Senior Advisers (Christine Andrews (candrews@uchicago.edu) or Megan McNulty (mmculty@uchicago.edu)) by the Spring Quarter of their second year in order to obtain formal consent (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf) and to plan out the appropriate program of study.

Students must meet general education requirements in the biological sciences and the physical sciences before entering the minor program. Biological Sciences courses at the 10000 level or above and MATH 13100 Elem Functions and Calculus I/Elementary Functions and Calculus I and MATH 13200 Elem Functions and Calculus II/Elementary Functions and Calculus II are the minimal general education requirements for the minor. After completing general education requirements, students complete the minor in Biological Sciences by taking three courses from a Biological Sciences Fundamentals sequence and four upper-level BIOS courses.

Typical minor plan:

General education in the biological sciences: BIOS 20153 Fundamentals of Ecology and Evolutionary Biology and BIOS 20151 Introduction to Quantitative Modeling in Biology (Basic) or BIOS 20152 Introduction to Quantitative Modeling in Biology (Advanced) (recommended), or a two-quarter general education sequence for non-majors (Biological Sciences/The Curriculum)

Three courses from a Biological Sciences Fundamentals sequence or from the Pre-Med Sequence

Four upper-level BIOS courses numbered BIOS 21000-28999

Minor plan for students in the Pre-Med Sequence for Non-Majors:

General education in the biological sciences: BIOS 20170 Microbial and Human Cell Biology and BIOS 20171 Human Genetics and Developmental Biology

Fundamentals-level courses: BIOS 20172 Mathematical Modeling for Pre-Med Students, BIOS 20173 Perspectives of Human Physiology, and BIOS 20175 Biochemistry and Metabolism

Four upper-level courses numbered BIOS 21000-28999

No course in the minor can be double counted with the student's major(s) or with other minors, nor can they be counted toward general education requirements. More than half of the requirements for the minor must be met by registering for courses with University of Chicago course numbers. All courses for the minor must be taken for quality grades.

[Back To Top](#)

Minor in Computational Neuroscience

The minor in computational neuroscience is offered by the Biological Sciences Collegiate Division. Information regarding the program and its requirements can be found on the Neuroscience page of this catalog.

BIOS Courses

Students must confirm their registration with their instructors by the second class meeting or their registration may be canceled.

In the following course descriptions, L indicates courses with a laboratory.

Health Professions Preparation Courses for Non-Majors**BIOS 20170. Microbial and Human Cell Biology. 100 Units.**

This course is the entry point into an integrated biology sequence designed to prepare non-biology majors for application to medical school. We explore topics in human cell biology within the context of evolutionary biology, chemistry, microbiology, and medicine. We pay special attention to the influence of prokaryotes on the history of life and to the ecological interactions between humans and their microbiota, which have major implications for human health and disease. Students read and discuss papers from the scientific literature, attend discussions led by physicians, researchers, and other medical professionals, and gain experience with microbiological basic microscopy techniques in lab.

Instructor(s): C. Andrews, R. Zaragoza, E. Kovar Terms Offered: Winter, L.

Prerequisite(s): First or second-year standing, or consent of instructors.

BIOS 20171. Human Genetics and Developmental Biology. 100 Units.

This course covers the fundamentals of genetics, with an emphasis on human traits and diseases. Topics include Mendelian genetics, simple and complex traits, genetic diseases, the human genome, and testing for human traits and diseases. After establishing a foundation in genetics, we will discuss mechanisms underlying differentiation and development in humans. We will focus on events that lead to gastrulation and the establishment of the body plan (how humans develop from an unpatterned egg into a recognizable human form). Other topics may include limb development and stem cell biology.

Instructor(s): O. Pineda-Catalan, R. Zaragoza Terms Offered: Spring, L.

Prerequisite(s): BIOS 20170

BIOS 20172. Mathematical Modeling for Pre-Med Students. 100 Units.

This course covers mathematical approaches in biology and medicine, including basic statistics and hypothesis testing, mathematical modeling of biological systems, and an introduction to bioinformatics. Students will apply what they learn as they analyze data and interpret primary papers in the biological and clinical literature. BIOS 20172 lays the foundation for biomathematical approaches explored during subsequent courses in the BIOS 20170s sequence.

Instructor(s): E. Haddadian Terms Offered: Spring, L.

Prerequisite(s): BIOS 20170, concurrent enrollment in BIOS 20171

BIOS 20173. Perspectives of Human Physiology. 100 Units.

This course will explore the structure and function of the human body as a set of integrated, interdependent systems. We will continue the cellular, genetic, and developmental themes of the previous courses to explore the emergent functions of the human body, from cells to systems. The laboratory exercises will allow the students to experience the concepts discussed in lecture in a way that introduces them to the methods of academic research, including the application of mathematical models to physiological questions. Students will be asked to serve as test subjects in several of the laboratory exercises. In required weekly discussions, students will present on papers from the scientific literature and attend talks by physicians, researchers, and other medical professionals.

Instructor(s): C. Andrews, E. Kovar Terms Offered: Autumn. L.

Prerequisite(s): BIOS 20170, BIOS 20171, BIOS 20172

BIOS 20175. Biochemistry and Metabolism. 100 Units.

The course introduces cellular biochemical metabolism. The chemical characteristics, biochemical properties, and function of carbohydrates, proteins, and lipids are introduced. Basic protein structure and enzyme kinetics including basic allosteric interactions are considered. The integration of carbohydrates, proteins, and lipids in cellular intermediary metabolism is examined including pathway regulation and bioenergetics. Adaptation of the pathways to changes in nutritional or disease state is used to highlight interrelationships in cellular metabolism.

Instructor(s): P. Strielemann Terms Offered: Winter

Prerequisite(s): BIOS 20170, BIOS 20171, BIOS 20172, BIOS 20173

Prerequisite Courses for Biological Sciences Majors

BIOS 20151. Introduction to Quantitative Modeling in Biology (Basic) 100 Units.

The goal for this course is to give future biologists the quantitative tools to fully participate in modern biological research. These include descriptive statistics, linear regression, stochastic independence and hypothesis testing, Markov models and stationary probability distributions, solutions of linear differential equations, equilibria and stability analysis of nonlinear differential equations. The ideas are applied to different areas of biology, e.g. molecular evolution, allometry, epidemiology, and biochemistry, and implemented by students in computer assignments using the R computational platform.

Instructor(s): D. Kondrashov Terms Offered: Spring. L.

Prerequisite(s): Two quarters of calculus of any sequence (MATH 13200 or 15200 or 16200). First-year Biology Major standing only.

BIOS 20152. Introduction to Quantitative Modeling in Biology (Advanced) 100 Units.

This is a more advanced version of 20151, intended for students with greater mathematical maturity. In addition to the topics covered in the regular version, students will learn about nonlinear least-squares fitting, eigenvalues and eigenvectors, bifurcations and bistability in differential equations. Additional applications will include phylogenetic distance and systems biology.

Instructor(s): D. Kondrashov Terms Offered: Winter. L.

Prerequisite(s): MATH placement of 15200 or higher OR either MATH 15200 or MATH 16200 and second-year standing or higher.

BIOS 20153. Fundamentals of Ecology and Evolutionary Biology. 100 Units.

This course surveys the basic principles of ecology and evolutionary biology to lay the foundation for further study in all fields of biology. Broad ecological concepts, such as population growth, disease dynamics, and species interactions, will be explored through a combination of published data, simulations, and mathematical models. The emphasis is on 'ecological thinking' rather than specific notions. Essential topics in the modern study of evolutionary biology will be covered with a focus on both theory and empirical examples. Examples of topics include history of evolutionary thought, evidence for evolution, mechanisms of microevolution, phylogenetics, molecular evolution, and speciation.

Instructor(s): T. Price, M. Kronforst, C. Andrews, A. Hunter. Terms Offered: Winter. L.

Fundamentals Sequence Courses for Biological Sciences majors

Note: These sequences require completion or concurrent enrollment in BIOS 20151/20152 and 20153. Neuroscience majors and other non-Biological Sciences majors may take BIOS 20186 without BIOS 20151/BIOS 20152 and 20153. However, all students in BIOS 20186 will be expected to possess the competencies in mathematical modeling of biological phenomena and basic coding in R covered in BIOS 20151/BIOS 20152 and BIOS 20153.

BIOS 20186 through 20191 and 20200

Molecules to Organisms Fundamentals Sequence

This sequence is designed for students who are preparing for a career in the Biological Sciences. Topics include cell and molecular biology, genetics, physiology, and developmental biology. Students registering for this sequence must have completed or placed out of general or honors chemistry or be enrolled concurrently in general or honors chemistry.

BIOS 20186. Fundamentals of Cell and Molecular Biology. 100 Units.

This course is an introduction to molecular and cellular biology that emphasizes the unity of cellular processes amongst all living organisms. Topics are the structure, function, and synthesis of nucleic acids and protein; structure and function of cell organelles and extracellular matrices; energetics; cell cycle; cells in tissues and cell-signaling; temporal organization and regulation of metabolism; regulation of gene expression; and altered cell functions in disease states.

Instructor(s): Section 1: D. Kovar, B. Glick, E. Kovar, Staff. Section 2: R. Fehon, D. Arac, C. Schonbaum, E. Kovar. Terms Offered: Spring. L.

Prerequisite(s): BIOS 20150 or 20153 & at least concurrent registration in 20151 or 20152 or similar math prep. Avg. grade of C or higher in, and completion of, CHEM 10100-10200 or 11100-11200 or 12100-12200, a 5 on the AP Chem. exam, or consent. Reg. by lab sec.

Note(s): NSCI majors and other students may take BIO20186 without BIOS 20151/20152, 20153 unless they plan to pursue a double major in Biological Sciences. All students in BIOS20186 will be expected to possess the competency in mathematical modeling of biological phenomena covered in BIOS 20151 or BIOS 20152. Contact BSCD Advisers, Megan McNulty (mmcnulty@uchicago.edu) or Chris Andrews (candrews@uchicago.edu) to petition.

BIOS 20187. Fundamentals of Genetics. 100 Units.

The goal of this course is to integrate recent developments in molecular genetics into the structure of classical genetics with an emphasis on recent advances in genetics and genomics. Topics include Mendelian inheritance, genotype-phenotype relationships, linkage analysis, modern gene mapping techniques, gene expression, model systems genetics and analysis of genetic pathways.

Instructor(s): Section 1: L. Mets, A. Imamoto, E. Kovar, Staff. Section 2: J. Malamy, C. Schonbaum, E. Kovar. Terms Offered: Autumn. L.

Prerequisite(s): BIOS 20186

BIOS 20188. Fundamentals of Physiology. 100 Units.

This course focuses on the physiological problems that animals (including humans) face in natural environments; solutions to these problems that the genome encodes; and the emergent physiological properties of the molecular, cellular, tissue, organ, and organismal levels of organization. Lectures and labs emphasize physiological reasoning, problem solving, and current research.

Instructor(s): Winter: J. Kennedy, E. Kovar. Spring: D. McGehee, J. Kennedy, E. Kovar. Terms Offered: Spring Winter. L.

Prerequisite(s): BIOS 20187. Credit can NOT be earned for both BIOS 20188 and BIOS 20191.

BIOS 20189. Fundamentals of Developmental Biology. 100 Units.

This course covers both the classical experiments that contributed to our understanding of developmental biology and the recent explosion of information about development made possible by a combination of genetic and molecular approaches. Examples from both vertebrate and invertebrate systems are used to illustrate underlying principles of animal development.

Instructor(s): Winter: R. Ho, S. Horne-Badovinac, C. Schonbaum, E. Kovar. Spring: W. Du, A. Imamoto, E. Kovar. Terms Offered: Spring Winter. L.

Prerequisite(s): BIOS 20187. Credit can NOT be earned for both BIOS 20189 and BIOS 20190.

BIOS 20200. Introduction to Biochemistry. 100 Units.

This course meets the biochemistry requirement in the Biological Sciences major. This course examines the chemical nature of cellular components, enzymes, and mechanisms of enzyme activity, energy interconversion, and biosynthetic reactions. Strong emphasis is given to control and regulation of metabolism through macromolecular interactions.

Instructor(s): M. Makinen, E. Özkan, P. Strielemann, M. Zhao. L. Terms Offered: Autumn Spring Summer. L.

Prerequisite(s): Completion of a Biological Sciences fundamentals sequence with an average grade of C and CHEM 22000-22100/23100 with an average grade of C.

BIOS 20196 through 20198**Life, Ecosystems, and Evolution Fundamentals Sequence**

This variation of the Molecules to Organisms sequence is designed for students majoring in Biological Sciences and interested in pursuing a course of study in ecology and evolution or environmental science. In this sequence, students omit BIOS 20188 Fundamentals of Physiology, BIOS 20189 Fundamentals of Developmental Biology, and BIOS 20200 Introduction to Biochemistry and take the following courses:

BIOS 20196. Ecology and Conservation. 100 Units.

This course focuses on the contribution of ecological theory to the understanding of current issues in conservation biology.

We emphasize quantitative methods and their use for applied problems in ecology (e.g., risk of extinction, impact of harvesting, role of species interaction, analysis of global change). Course material is drawn mostly from current primary literature; lab and field components complement concepts taught through lecture. Prerequisite(s): BIOS 20150, BIOS 20151 or BIOS 20152. Note(s): BIOS 20196 is identical to the previously offered BIOS 23251. Students who have taken BIOS 23251 should not enroll in BIOS 20196. Equivalent Course(s): ENSC 24400

Instructor(s): C. Pfister, E. Larsen. Terms Offered: Autumn. L.

Prerequisite(s): BIOS 20150, BIOS 20151 or BIOS 20152

Note(s): BIOS 20196 is identical to the previously offered BIOS 23251. Students who have taken BIOS 23251 should not enroll in BIOS 20196.

Equivalent Course(s): ENSC 24400

BIOS 20198. Biodiversity. 100 Units.

An overview of the diversity of living organisms, both prokaryotes and eukaryotes, is presented. We emphasize the major groups of organisms, their evolutionary histories and relationships, and the biological and evolutionary implications of the characteristic features of each group. We discuss how the biosphere transformed to its present state over the past four billion years.

Instructor(s): M. LaBarbera, C. Andrews. Terms Offered: Spring. L.

Prerequisite(s): PQ: BIOS 20153 for BioSci majors; not required for GeoSci majors or students taking BIOS 20198 as part of a general education sequence

Note(s): BIOS 20198 is identical to the previously offered BIOS 20184. Students who have taken BIOS 20184 should not enroll in BIOS 20198.

BIOS 20234 through 20242**Advanced Biology Fundamentals Sequence**

This is an accelerated four-quarter Fundamentals sequence designed for motivated first-year students with exceptionally strong science and mathematics backgrounds and an intense interest in research in the biological sciences. A score of 4 or 5

on the Biology AP exam is required and successful students usually also have strong preparation in chemistry and calculus as well as some experience in computer programming. Students are expected to devote significant time to this sequence (minimum four to eight hours/week for reading primary literature and background information and for working problem sets, in addition to attendance at lectures and participation in laboratory exercises and discussion sections). Upon completion of the first three quarters of the Advanced Biology sequence, students will have three credits towards the Biological Sciences major and they will have met the general education requirement in the biological sciences.

Note: Biological Sciences majors who opt not to complete the sequence after the first quarter (BIOS 20234 Molecular Biology of the Cell) should take BIOS 20151/BIOS 20152, which will be applied to their general education requirement in the biological sciences along with their AP Biology credit. BIOS 20234 would be counted as a credit towards the Biological Sciences major. Students would then complete the major by following the requirements for either the Molecules to Organisms sequence or the Life, Ecosystems, and Evolution sequence.

BIOS 20234. Molecular Biology of the Cell. 100 Units.

This course covers the fundamentals of molecular and cellular biology. Topics include protein structure and function; DNA replication, repair, and recombination; transcription, translation, control of gene expression; cytoskeletal dynamics; protein modification and stability; cellular signaling; cell cycle control; mitosis; and meiosis. Prerequisite(s): Score of 4 or 5 on the AP biology test

Instructor(s): M. Glotzer, A. Ruthenburg, N. Bhasin. L. Terms Offered: Autumn

Prerequisite(s): Score of 4 or 5 on the AP biology test

Note(s): To continue in the sequence, students must receive a minimum grade of B- in BIOS 20234

BIOS 20235. Biological Systems. 100 Units.

Students preparing for the health professions must take BIOS 20235 and 20242 in sequence. This course builds upon molecular cell biology foundations to explore how biological systems function. Topics include classical and molecular genetics, developmental signaling networks, genomics, proteomics, transcriptomics, and biological networks.

Instructor(s): I. Rebay, M. Pascual, N. Bhasin. L. Terms Offered: Winter

Prerequisite(s): A grade of B- or above in BIOS 20234

BIOS 20236. Biological Dynamics. 100 Units.

This class introduces the use of quantitative approaches to study biological dynamics. Deeper exploration of cellular and developmental processes introduced in BIOS 20234 and BIOS 20235 will emphasize the use of quantitative analysis and mathematical modeling to infer biological mechanisms from molecular interactions. The lab portion of the class will introduce basic approaches for simulating biological dynamics using examples drawn from the lectures.

Instructor(s): E. Munro, M. Rust, E. Kovar. Terms Offered: Spring. L.

Prerequisite(s): BIOS 20234 and BIOS 20235 with a minimum grade of B- in each course.

BIOS 20242. Principles of Physiology. 100 Units.

This course focuses on the physiological problems that animals (including humans) face in natural environments; solutions to these problems that the genome encodes; and the emergent physiological properties of the molecular, cellular, tissue, organ, and organismal levels of organization. We emphasize physiological reasoning, problem solving, and current research.

Instructor(s): M. Feder, E. Kovar. Terms Offered: Autumn. L.

Prerequisite(s): BIOS 20236 or BIOS 20189 or consent of instructor

Upper-level Elective Courses

Course numbers 21000 and above

These courses assume mastery of the material covered in the Fundamentals Sequences, and explore specific areas of biology at an advanced level. In most cases, students will be reading primary scientific literature. Students who have not yet completed the Fundamentals Sequence should consult with the course instructor and the BSCD Senior Advisers before registering for an upper-level elective course. Students must confirm their registration with their instructors by the second class meeting or their registration may be canceled.

BIOS 21216. Intro Statistical Genetics. 100 Units.

This course focuses on genetic models for complex human disorders and quantitative traits. Topics covered also include linkage and linkage disequilibrium mapping and genetic models for complex traits, and the explicit and implicit assumptions of such models.

Instructor(s): Xin He, Hae Kyung Im Terms Offered: Winter

Prerequisite(s): For Biological Sciences majors: Three quarters of a Biological Sciences Fundamentals sequence

Equivalent Course(s): HGEN 47100

BIOS 21229. Genome Informatics: How Cells Reorganize Genomes. 100 Units.

This course deals with the molecular and cellular basis of genetic change. We discuss DNA repair functions, mutator loci, induced mutation, mechanisms of homologous recombination and gene conversion, site-specific recombination, transposable elements and DNA rearrangements, reverse transcription and retrotransposons, transposable vector systems for making transgenic organisms, and genetic engineering of DNA sequences in antibody formation. Discussion section required.

Instructor(s): J. Shapiro Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187 or BIOS 20235

BIOS 21236. Genetics of Model Organisms. 100 Units.

A small number of organisms have been chosen for extensive study by biologists. The popularity of these organisms derives largely from the fact that their genomes can be easily manipulated, allowing sophisticated characterization of biological

function. This course covers modern methods for genetic analysis in budding yeast (*Saccharomyces cerevisiae*), fruit flies (*Drosophila melanogaster*), plants (*Arabidopsis thaliana*), and mice (*Mus musculus*). Case studies demonstrate how particular strengths of each system have been exploited to understand such processes as genetic recombination, pattern formation, and epigenetic regulation of gene expression.

Instructor(s): D. Bishop, H.-C Lee, E. Ferguson, I. Moskowitz Terms Offered: Autumn

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187 or BIOS 20235

BIOS 21237. Developmental Mechanisms. 100 Units.

This course provides an overview of the fundamental questions of developmental biology, with particular emphasis on the genetic, molecular and cell biological experiments that have been employed to reach mechanistic answers to these questions. Topics covered will include formation of the primary body axes, the role of local signaling interactions in regulating cell fate and proliferation, the cellular basis of morphogenesis, and stem cells.

Instructor(s): E. Ferguson, R. Fehon Terms Offered: Winter

Prerequisite(s): For undergraduates only: Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20189, BIOS 20190, or BIOS 20235. AND CONSENT OF INSTRUCTOR

Equivalent Course(s): DVBI 36400, MGCB 36400

BIOS 21238. Cell Biology II. 100 Units.

This course covers the mechanisms with which cells execute fundamental behaviors. Topics include signal transduction, cell cycle progression, cell growth, cell death, cancer biology, cytoskeletal polymers and motors, cell motility, cytoskeletal diseases, and cell polarity. Each lecture will conclude with a dissection of primary literature with input from the students. Students will write and present a short research proposal, providing excellent preparation for preliminary exams.

Instructor(s): M. Glotzer, D. Kovar Terms Offered: Winter

Prerequisite(s): For undergraduates: Three quarters of a Biological Sciences Fundamentals sequence.

Equivalent Course(s): BCMB 31700, DVBI 31700, MGCB 31700

BIOS 21249. Organization, Expression, and Transmission of Genome Information. 100 Units.

This seminar course examines how genomes are organized for coding sequence expression and transmission to progeny cells. The class discusses a series of key papers in the following areas: bacterial responses to external stimuli and genome damage, control of eukaryotic cell differentiation, complex loci regulating developmental expression in animals, centromere structure and function, position effect variegation, chromatin domains, chromatin remodeling, RNAi, and chromatin formatting.

Instructor(s): J. Shapiro Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence. Recommended for Advanced Biology students

BIOS 21306. Human Genetics and Evolution. 100 Units.

The goal of this course is to provide an evolutionary perspective on the molecular genetic bases of human diseases and non-clinical human traits. The course covers fundamental concepts and recent progress in Mendelian and complex trait mapping as well as evolutionary principles as they apply to genomics analyses of DNA sequence variation in human populations. These topics will be introduced through lectures and will be complemented by discussion and student presentations of original research papers.

Instructor(s): A Di Rienzo, Yang Li Terms Offered: Autumn

Prerequisite(s): Three quarters of a Biological Fundamentals Sequence including BIOS 20187 or BIOS 20235.

BIOS 21317. Topics in Biological Chemistry. 100 Units.

Required of students who are majoring in biological chemistry. This course examines a variety of biological problems from a chemical and structural perspective, with an emphasis on molecular machines. Topics include macromolecular structure-function relationships, DNA synthesis and repair, RNA folding and function, protein synthesis, targeting and translocation, molecular motors, membrane proteins, photosynthesis, and mechanisms of signal transduction. Computer graphics exercises and in-class journal clubs complement the lecture topics.

Instructor(s): P. Rice, R. Keenan Terms Offered: Spring

Prerequisite(s): BIOS 20200

BIOS 21328. Biophysics of Biomolecules. 100 Units.

This course covers the properties of proteins, RNA, and DNA, as well as their interactions. We emphasize the interplay between structure, thermodynamics, folding, and function at the molecular level. Topics include cooperativity, linked equilibrium, hydrogen exchange, electrostatics, diffusion, and binding.

Instructor(s): T. Sonic

Equivalent Course(s): BCMB 32200, BPHS 31000

BIOS 21349. Protein Structure and Functions in Medicine. 100 Units.

This course explores how molecular machinery works in the context of medicine (vision, fight or flight, cancer, and action of drugs). We first explore the physical and biochemical properties of proteins in the context of cellular signaling. We then examine how proteins and other cellular components make up the signal transduction pathway of humans and conduct their biological functions. The course engages students to strengthen their scientific communication and teaching skills via the in-class podcast, oral examinations, computer-aided structural presentations, student lectures, and discussions.

Instructor(s): W.-J. Tang Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence. Biochemistry strongly recommended.

Equivalent Course(s): CABI 31900, NURB 33500

BIOS 21356. Vertebrate Development. 100 Units.

This advanced-level course combines lectures, student presentations, and discussion sessions. It covers major topics on the developmental biology of embryos (e.g. formation of the germ line, gastrulation, segmentation, nervous system development, limb patterning, organogenesis). We make extensive use of the primary literature and emphasize experimental approaches including embryology, genetics, and molecular genetics.

Instructor(s): V. Prince, P. Kratsios. Terms Offered: Spring

Prerequisite(s): For Biological Sciences majors: Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20189 or BIOS 20190

Equivalent Course(s): ORGB 33600, DVBI 35600, MGCB 35600

BIOS 21358. Simulation, Modeling, and Computation in Biophysics. 100 Units.

This course develops skills for modeling biomolecular systems. Fundamental knowledge covers basic statistical mechanics, free energy, and kinetic concepts. Tools include molecular dynamics and Monte Carlo simulations, random walk and diffusion equations, and methods to generate random Gaussian and Poisson distributors. A term project involves writing a small program that simulates a process. Familiarity with a programming language or Matlab would be valuable.

Instructor(s): B. Roux Terms Offered: Winter

Prerequisite(s): BIOS 20200 and BIOS 26210-26211, or consent from instructor

Equivalent Course(s): CPNS 31358, BCMB 31358

BIOS 21360. Advanced Molecular Biology. 100 Units.

This course covers genome structures, transcription of DNA to RNA, messenger RNA splicing, translation of RNA to protein, transcriptional and post-transcriptional gene regulations, non-coding RNA functions, epigenetics and epitranscriptomics. Basic methods in molecular biology will also be covered. The course also includes special, current topics on genomics, single molecule studies of gene expression, epitranscriptomics, and others.

Instructor(s): J. Fei, T. Pan. Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187 or BIOS 20235 and Organic Chemistry, or consent of instructor.

BIOS 21407. Image Processing in Biology. 100 Units.

Whether one is trying to read radio signals from faraway galaxies or to understand molecular structures, it is necessary to understand how to read, interpret, and process the data that contain the desired information. In this course, we learn how to process the information contained in images of molecules as seen in the electron microscope. We also deal with the principles involved in processing electron microscope images, including the underlying analytical methods and their computer implementation.

Instructor(s): R. Josephs Terms Offered: Spring. Offered every other year in even years.

Prerequisite(s): For College students: Three quarters of a Biological Sciences Fundamentals sequence and one year of calculus

Equivalent Course(s): MGCB 34300

BIOS 21415. Stem Cells in Development and Diseases. 100 Units.

This course will provide a survey of concepts and biology of stem cells based on experimental evidence for their involvement in developmental processes and human diseases. Topics will discuss classic models as well as recent advance made in the biomedical research community.

Instructor(s): A. Imamoto, X. Wu Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, including BIOS 20186 and BIOS 20187

BIOS 21416. Stem Cells and Regeneration. 100 Units.

The course will focus on the basic biology of stem cells and regeneration, highlighting biomedically relevant findings that have the potential to translate to the clinic. We will cover embryonic and induced pluripotent stem cells, as well as adult stem cells from a variety of systems, both invertebrate and vertebrates.

Instructor(s): E. Ferguson, V. Prince, J. De Jong, X. Wu, J. Duan, J. LaBelle Terms Offered: Spring

Prerequisite(s): For undergraduates only: completion of a Biological Sciences fundamentals sequence

Equivalent Course(s): DVBI 36200

BIOS 21506. Biological Physics. 100 Units.

This course is an introduction to the physics of living matter. Its goal is to understand the design principles from physics that characterize the condensed and organized matter of living systems. Topics include: basic structures of proteins, nucleotides, and biological membranes; application of statistical mechanics to diffusion and transport; hydrodynamics of low Reynolds number fluids; thermodynamics and chemical equilibrium; physical chemistry of binding affinity and kinetics; solution electrostatics and depletion effect; biopolymer mechanics; cellular mechanics and motions; molecular motors.

Terms Offered: Spring

Prerequisite(s): PHYS 13300 or PHYS 14300

Note(s): Students majoring in Physics may use this course either as a Physics elective OR as a upper level elective in the Biological Sciences major.

Equivalent Course(s): PHYS 25500

BIOS 21507. Stem Cell Biology, Regeneration, and Disease Modeling. 100 Units.

In this course, students will gain an understanding of the science and application of tissue engineering, a field that seeks to develop technologies for restoring lost function in diseased or damaged tissues and organs. The course will first introduce the underlying cellular and molecular components and processes relevant to tissue engineering: extracellular matrices, cell/matrix interactions such as adhesion and migration, growth factor biology, stem cell biology, inflammation, and

innate immunity. The course will then discuss current approaches for engineering a variety of tissues, including bone and musculoskeletal tissues, vascular tissues, skin, nerve, and pancreas. Students will be assessed through in-class discussions, take-home assignments and exams, and an end-of-term project on a topic of the student's choice.

Instructor(s): Joyce Chen Terms Offered: Spring. This course will be offered starting in the 2021-2022 academic year

Prerequisite(s): BIOS 20186 or BIOS 20234

Equivalent Course(s): MPMM 34300, MENG 33110, MENG 23110

BIOS 21510. Chromatin & Epigenetics. 100 Units.

This course presents the dynamic nature of the physiological genome - an exquisitely regulated macromolecular polymer termed chromatin - that gives rise to hundreds of cellular identities, each adaptable to various environmental milieu. Students will explore the mechanisms and determinants that shape distinct chromatin conformations and their influences on gene expression and cell fate. Topics include histone modifications, ATP-dependent chromatin remodeling, DNA methylation, Polycomb, heterochromatin, topologically associating domains, phase transition, and non-coding RNA. Students will apply their knowledge to understand the role of chromatin structure in development (e.g. lineage specification), disease (e.g. cancer) and potential therapeutics (e.g. cellular reprogramming). Students will leave the course with an in-depth knowledge of cutting-edge epigenetic methodologies as well as the ability to critically evaluate primary literature and propose original scientific research.

Instructor(s): Koh, A. Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence

BIOS 22233. Comparative Vertebrate Anatomy. 100 Units.

This course covers the structure and function of major anatomical systems of vertebrates. Lectures focus on vertebrate diversity, biomechanics, and behavior (from swimming and feeding to running, flying, seeing, and hearing). Labs involve detailed dissection of animals (muscles, organs, brains) and a focus on skull bones in a broad comparative context from fishes to frogs, turtles, alligators, mammals, birds, and humans. Field trip to Field Museum and visit to medical school lab for human dissection required.

Instructor(s): M. Westneat. L. Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.

Note(s): Offered Winter 2019 and every other year thereafter.

Equivalent Course(s): ORGB 32233

BIOS 22236. Reproductive Biology of Primates. 100 Units.

The aim of this advanced-level course is to provide a comparative overview of adaptations for reproduction in primates as a background to human reproductive biology. Where appropriate, reference will be made to other mammals and some comparisons will be even wider. Ultimately, the aim of all comparisons is to arrive at concrete lessons for human reproduction, notably in the realm of obstetrics and gynecology. For this reason, the course will be of interest for medical students as well as for those studying anthropology, biology or psychology.

Instructor(s): R. Martin Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.

BIOS 22245. Biomechanics: How Life Works. 100 Units.

This course will explore form and function in a diversity of organisms, using the principles of physics and evolutionary theory to understand why living things are shaped as they are and behave in such a diversity of ways. Biomechanics is at the interface of biology, physics, art, and engineering. We will study the impact of size on biological systems, address the implications of solid and fluid mechanics for organismal design, learn fundamental principles of animal locomotion, and survey biomechanical approaches. Understanding the mechanics of biological organisms can help us gain insight into their behavior, ecology and evolution.

Instructor(s): M. Westneat Terms Offered: Spring. L. Spring.

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence. Physics useful.

Note(s): This course will include a lab and will alternate years with BIOS 22233.

Equivalent Course(s): EVOL 32245, ORGB 32245

BIOS 22249. Principles of Toxicology. 100 Units.

This course covers basic concepts of toxicology including routes of exposure and uptake, metabolic conversion, and elimination of toxic agents, as well as fundamental laws governing the interaction of external chemicals with biological systems. In addition to toxins of biological origin, we also consider a set of physical and chemical toxicants in the environment, including air pollution, radiation, manufactured chemicals, metals, and pesticides. Methods of risk assessment will also be considered.

Instructor(s): Y-Y He Terms Offered: Autumn

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and BIOS 20200

BIOS 22250. Chordates: Evolution and Comparative Anatomy. 100 Units.

Chordate biology emphasizes the diversity and evolution of modern vertebrate life, drawing on a range of sources (from comparative anatomy and embryology to paleontology, biomechanics, and developmental genetics). Much of the work is lab-based, with ample opportunity to gain firsthand experience of the repeated themes of vertebrate body plans, as well as some of the extraordinary specializations manifest in living forms. The instructors, who are both actively engaged in vertebrate-centered research, take this course beyond the boundaries of standard textbook content.

Instructor(s): M. Coates Terms Offered: Winter. L.

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, including BIOS 20187 or BIOS 20235

Note(s): Not offered Winter 2019 - Offered Winter 2020 and every other year thereafter.

Equivalent Course(s): EVOL 30200, ORGB 30250

BIOS 22260. Vertebrate Structure and Function. 100 Units.

This course is devoted to vertebrate bones and muscles, with a focus on some remarkable functions they perform. The first part takes a comparative look at the vertebrate skeleton via development and evolution, from lamprey to human. The major functional changes are examined as vertebrates adapted to life in the water, on land, and in the air. The second part looks at muscles and how they work in specific situations, including gape-feeding, swimming, leaping, digging, flying, and walking on two legs. Dissection of preserved vertebrate specimens required.

Instructor(s): P. Sereno. L. Terms Offered: Spring. Not offered 2019; Will be offered 2020

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and consent of instructor. See also http://paulsereno.uchicago.edu/fossil_lab/classes/vertebrate_structure_and_function for more information.

BIOS 22265. Human Origins: Milestones in Human Evolution and the Fossil Record. 100 Units.

This course aims at exploring the fundamentals of human origins by tracking the major events during the course of human evolution. Starting with a laboratory based general introduction to human osteology and muscle function, the latest on morphological and behavioral evidence for what makes *Homo sapiens* and their fossil ancestors unique among primates will be presented. Our knowledge of the last common ancestor will be explored using the late Miocene fossil record followed by a series of lectures on comparative and functional morphology, adaptation and biogeography of fossil human species. With focus on the human fossil record, the emergence of bipedalism, advent of stone tool use and making, abandonment of arboreality, advent of endurance walking and running, dawn of encephalization and associated novel life histories, language and symbolism will be explored. While taxonomic identities and phylogenetic relationships will be briefly presented, the focus will be on investigating major adaptive transitions and how that understanding helps us to unravel the ecological selective factors that ultimately led to the emergence of our species. The course will be supported by fresh data coming from active field research conducted by Prof. Alemseged and state of the art visualization methods that help explore internal structures. By tracing the path followed by our ancestors over time, this course is directly relevant to reconnection of the human condition today and our place in nature.

Instructor(s): Z. Alemseged Terms Offered: Autumn

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, or consent of Instructor.

Equivalent Course(s): ORGB 33265, ANTH 28110

BIOS 22270. Bones and Genes: The Story of Homo Sapiens. 100 Units.

The primary aim of this course is to explore the biological and behavioral makings of our species, anatomically modern *Homo sapiens*, by considering hypotheses, models, evidence, and the latest consensus from the complementary fields of paleoanthropology and genetics. The course is divided into two blocks, one focusing on our origins and the other on migrations across the globe. After a brief introduction to the human skeleton, students will learn about the pool of potential direct ancestors that lived before *Homo sapiens* emerged 300,000 years ago, as well as the environmental and cultural environments that may have led to the arrival of our species. This will be complemented by an evaluation of competing genetic models for the origin of our species and evidence for genetic intermixing with archaic humans such as Neanderthals and Denisovans. We will, then, follow modern humans out of Africa and study the fossil, archaeological, and genetic evidence for the peopling of the planet and adaptations to novel environments. Finally, the contributions of paleoanthropology and genetics to our understanding of behavior, cognition, physical traits/phenotypes, diet, and disease evolution will be explored. Complementary laboratory and discussion sessions will expose students to state-of-the-art methods and current research endeavors in these fields.

Instructor(s): M. Raghavan, Z. Alemseged. Terms Offered: Spring. L.

Prerequisite(s): BIOS Majors: Three quarters of a Biological Sciences Fundamentals sequence. Also open to students in Anthropology and Genetics with an interest in human evolution, or consent of instructors.

BIOS 22306. Evolution and Development. 100 Units.

The course will provide a developmental perspective on animal body plans in phylogenetic context. The course will start with a few lectures, accompanied by reading assignments. Students will be required to present a selected research topic that fits the broader goal of the course and will be asked to submit a referenced written version of it after their oral presentation. Grading will be based on their presentation (oral and written) as well as their contributions to class discussions.

Prerequisite(s): Advanced undergraduates may enroll with the consent of the instructor.

Instructor(s): U. Schmidt-Ott Terms Offered: Autumn

Prerequisite(s): Advanced undergraduates may enroll with the consent of the instructor.

Equivalent Course(s): DVBI 33850, ORGB 33850, EVOL 33850

BIOS 23100. Dinosaur Science. 100 Units.

This introductory-level (but intensive) class includes a ten-day expedition to South Dakota and Wyoming (departing just after graduation). We study basic geology (e.g., rocks and minerals, stratigraphy, Earth history, mapping skills) and basic evolutionary biology (e.g., vertebrate and especially skeletal anatomy, systematics and large-scale evolutionary patterns). This course provides the knowledge needed to discover and understand the meaning of fossils as they are preserved in the field, which is applied to actual paleontological sites. Participants fly from Chicago to Rapid City, and then travel by van to field sites. There they camp, prospect for, and excavate fossils from the Cretaceous and Jurassic Periods. Field trip required.

Instructor(s): P. Sereno. L. Terms Offered: Spring

Prerequisite(s): Consent of instructor, three quarters of a Biological Sciences Fundamentals sequence and a prior course in general science, preferably geology. See also http://paulsereno.uchicago.edu/fossil_lab/classes/dinosaur_science for more information.

Note(s): Need based financial assistance for field trip may be available. Apply to the Master of BSCD (jmalamy@bsd.uchicago.edu)

BIOS 23232. Ecology and Evolution in the Southwest. 100 Units.

This lecture course focuses on the ecological communities of the Southwest, primarily on the four subdivisions of the North American Desert, the Chihuahuan, Sonoran, Mohave, and Great Basin Deserts. Lecture topics include climate change and the impact on the flora and fauna of the region; adaptations to arid landscapes; evolutionary, ecological, and conservation issues in the arid Southwest, especially relating to isolated mountain ranges; human impacts on the biota, land, and water; and how geological and climatic forces shape deserts.

Instructor(s): E. Larsen Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, or consent of instructor

BIOS 23233. Ecology and Evolution in the Southwest:Field School. 100 Units.

This lecture/lab course is the same course as BIOS 13111, but includes a lab section preparatory to a two-week field trip at end of Spring Quarter, specific dates to be announced. Our goal in the lab is to prepare proposals for research projects to conduct in the field portion of this course. Field conditions are rugged. Travel is by twelve-passenger van. Lodging during most of this course is tent camping on developed campsites.

Instructor(s): E. Larsen Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and consent of instructor

BIOS 23242. Primate Evolution and the Roots of Human Biology. 100 Units.

The course is designed to achieve a state-of-the-art synthesis of primate evolution and human origins. An overview of the biology and evolution of the mammalian order Primates provides a broad foundation for considering the special case human evolution. Across primates as a group, the course explores and integrates comparative evidence from anatomy, physiology, behavior, chromosomal studies, and molecular genetics. Both living primates and their fossil relatives are covered, with due reference to theoretical aspects. Particular emphasis is given to evaluation of characters for inference of evolutionary relationships and to explicit examination of scaling effects of body size in between-species comparisons. Within the general framework of origins and adaptations of primates, human evolution is examined with respect to all features covered. Special features of humans are identified and related to an overview of the hominid fossil record. A specific goal of this course is to guide students to read, interpret, and synthesize scientific literature, and exercise critical thinking with respect to selected topics. As shown by examples, the course is directly relevant to the field of Darwinian medicine, which considers health and disease in relation to the evolutionary background of human biology.

Instructor(s): R. Martin Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187 or BIOS 20235, or consent of instructor.

BIOS 23247. Bioarchaeology and the Human Skeleton. 100 Units.

This course is intended to provide students in archaeology with a thorough understanding of bioanthropological and osteological methods used in the interpretation of prehistoric societies by introducing bioanthropological methods and theory. In particular, lab instruction stresses hands-on experience in analyzing the human skeleton, whereas seminar classes integrate bioanthropological theory and application to specific cases throughout the world. Lab and seminar-format class meet weekly.

Instructor(s): M. C. Lozada Terms Offered: Winter. Winter 2021

Note(s): This course qualifies as a Methodology selection for Anthropology majors.

Equivalent Course(s): ANTH 38800, ANTH 28400

BIOS 23249. Animal Behavior. 100 Units.

This course introduces the mechanism, ecology, and evolution of behavior, primarily in nonhuman species, at the individual and group level. Topics include the genetic basis of behavior, developmental pathways, communication, physiology and behavior, foraging behavior, kin selection, mating systems and sexual selection, and the ecological and social context of behavior. A major emphasis is placed on understanding and evaluating scientific studies and their field and lab techniques.

Instructor(s): S. Pruett-Jones (even years), J. Mateo (odd years) Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.

Note(s): CHDV Distribution: A

Equivalent Course(s): CHDV 23249, PSYC 23249

BIOS 23252. Field Ecology. 100 Units.

Open only to students who are planning to pursue graduate research. This course introduces habitats and biomes in North America and the methods of organizing and carrying out field research projects in ecology and behavior, focusing on questions of evolutionary significance. A two-week field trip to southern Florida during the Winter/Spring Quarter break consists of informal lectures and discussions, individual study, and group research projects. During Spring Quarter, there are lectures on the ecology of the areas visited and on techniques and methods of field research. Field trip required.

Instructor(s): S. Pruett-Jones Terms Offered: Spring. This course is offered in alternate (odd) years.

Prerequisite(s): Consent of instructor

BIOS 23254. Mammalian Ecology. 100 Units.

This course introduces the diversity and classification of mammals and their ecological relationships. Lectures cover natural history, evolution, and functional morphology of major taxonomic groups. Lab sessions focus on skeletal morphology, identifying traits of major taxonomic groups, and methods of conducting research in the field. Participation in field trips, occasionally on Saturday, is required.

Instructor(s): E. Larsen Terms Offered: Spring. L. Offered every other year in odd years.

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and third-year standing or consent of instructor.

BIOS 23258. Molecular Evolution I: Fundamentals and Principles. 100 Units.

The comparative analysis of DNA sequence variation has become an important tool in molecular biology, genetics, and evolutionary biology. This course covers major theories that form the foundation for understanding evolutionary forces that govern molecular variation, divergence, and genome organization. Particular attention is given to selectively neutral models of variation and evolution, and to alternative models of natural selection. The course provides practical information on accessing genome databases, searching for homologous sequences, aligning DNA and protein sequences, calculating sequence divergence, producing sequence phylogenies, and estimating evolutionary parameters.

Instructor(s): M. Kreitman Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187 or BIOS 20235 and two quarters of calculus, or consent of instructor.

Equivalent Course(s): EVOL 44001, ECEV 44001

BIOS 23261. Invertebrate Paleobiology and Evolution. 100 Units.

This course provides a detailed overview of the morphology, paleobiology, evolutionary history, and practical uses of the invertebrate and microfossil groups commonly found in the fossil record. Emphasis is placed on understanding key anatomical and ecological innovations within each group and interactions among groups responsible for producing the observed changes in diversity, dominance, and ecological community structure through evolutionary time. Labs supplement lecture material with specimen-based and practical application sections. An optional field trip offers experience in the collection of specimens and raw paleontological data. Several 'Hot Topics' lectures introduce important, exciting, and often controversial aspects of current paleontological research linked to particular invertebrate groups. (L)

Instructor(s): M. Webster Terms Offered: Autumn

Prerequisite(s): GEOS 13100 and 13200, or equivalent. Students majoring in Biological Sciences only; Completion of the general education requirement in the Biological Sciences, or consent of instructor.

Equivalent Course(s): GEOS 36300, EVOL 32400, GEOS 26300

BIOS 23262. Mammalian Evolutionary Biology. 100 Units.

This course examines mammalian evolution-the rise of living mammals from ancient fossil ancestors stretching back over 300 million years. Lectures focus on the evolutionary diversification of mammals, including anatomical structure, evolutionary adaptations, life history, and developmental patterns. Labs involve detailed comparative study of mammalian skeletons, dissection of muscular and other systems, trips to the Field Museum to study fossil collections, and studies of human anatomy at the Pritzker School of Medicine. Students will learn mammalian evolution, functional morphology, and development, and will gain hands-on experience in dissection. Taught by instructors who are active in scientific research on mammalian evolution, the course is aimed to convey new insights and the latest progress in mammalian paleontology, functional morphology, and evolution. Prerequisite(s): Second-year standing and completion of a Biological Sciences Fundamentals sequence; or GEOS 13100-13200 or GEOS 22300, or consent of instructors.

Instructor(s): Z. Luo, K. Angielczyk Terms Offered: Autumn, L.

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187 or BIOS 20235; or GEOS 13100-13200 or GEOS 22300, or consent of instructors.

Equivalent Course(s): ORGB 31201, EVOL 31201

BIOS 23266. Evolutionary Adaptation. 100 Units.

This course deals with the adaptation of organisms to their environments and focuses on methods for studying adaptation. Topics include definitions and examples of adaptation, the notion of optimization, adaptive radiations, the comparative method in evolutionary biology, and the genetic architecture of adaptive traits. Students will draw on the logical frameworks covered in lecture as they evaluate primary papers and prepare two writing assignments on an adaptive question of their choice.

Instructor(s): C. Andrews Terms Offered: Autumn

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187 or BIOS 20235 or consent of instructor.

BIOS 23289. Marine Ecology. 100 Units.

This course provides an introduction into the physical, chemical, and biological forces controlling the function of marine ecosystems and how marine communities are organized. The structures of various types of marine ecosystems are described and contrasted, and the lectures highlight aspects of marine ecology relevant to applied issues such as conservation and harvesting.

Instructor(s): T. Wootton Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and prior introductory course in ecology or consent of instructor.

Equivalent Course(s): ENST 23289

BIOS 23299. Plant Development and Molecular Genetics. 100 Units.

Genetic approaches to central problems in plant development will be discussed. Emphasis will be placed on embryonic pattern formation, meristem structure and function, reproduction, and the role of hormones and environmental signals in development. Lectures will be drawn from the current literature; experimental approaches (genetic, cell biological, biochemical) used to discern developmental mechanisms will be emphasized. Graduate students will present a research proposal in oral and written form; undergraduate students will present and analyze data from the primary literature, and will be responsible for a final paper.

Instructor(s): J. Greenberg Terms Offered: Spring

Prerequisite(s): For undergraduates only: Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187 or BIOS 20235.

Equivalent Course(s): MGCB 36100, DVBI 36100, ECEV 32900

BIOS 23365. Evolutionary and Genomic Medicine I. 100 Units.

Evolution is regularly investigated in free-living organisms, but some of its most fascinating and important examples occur in the interface between free-living and non-free-living states. In this course, we will use evolutionary and ecological principles to study the dynamics of viruses, unicellular organisms and cells in multi-cellular organisms relevant to human medicine. In EGM I, the emphasis will be on the evolution of pathogens, the evolution of cells of the immune system in response to pathogen invasion, the basis of autoimmune disorders, and the population genetics of cancerous cells in light of recent cancer genomic studies. EGM II will cover more general topics including Darwinian medicine, aging, and systems biology/medicine.

Instructor(s): S. Cobey, C-I. Wu Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187 or BIOS 20235.

Background in evolution and population genetics.

Equivalent Course(s): ECEV 33365

BIOS 23404. Reconstructing the Tree of Life: An Introduction to Phylogenetics. 100 Units.

This course is an introduction to the tree of life (phylogeny): its conceptual origins, methods for discovering its structure, and its importance in evolutionary biology and other areas of science. Topics include history and concepts, sources of data, methods of phylogenetic analysis, and the use of phylogenies to study the tempo and mode of lineage diversification, coevolution, biogeography, conservation, molecular biology, development, and epidemiology. One Saturday field trip and weekly computer labs required in addition to scheduled class time. This course is offered in alternate (odd) years.

Instructor(s): R. Ree. Terms Offered: Autumn. L.

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence or consent of instructor

Note(s): This course is offered in alternate (odd) years.

Equivalent Course(s): EVOL 35401

BIOS 23405. Darwinian Health. 100 Units.

This course will use an evolutionary, rather than clinical, approach to understanding why we get sick. In particular, we will consider how health issues such as menstruation, senescence, pregnancy sickness, menopause, and diseases can be considered adaptations rather than pathologies. We will also discuss how our rapidly changing environments can reduce the benefits of these adaptations.

Instructor(s): K. Pagel Terms Offered: Winter

Prerequisite(s): Prerequisite(s): For BIOS Majors: Three quarters of a Biological Sciences Fundamentals sequence or consent of instructor.

Note(s): CHDV Distribution: A

Equivalent Course(s): GNSE 21500, CHDV 21500, HLTH 21500, HIPS 22401

BIOS 23406. Biogeography. 100 Units.

This course examines factors governing the distribution and abundance of animals and plants. Topics include patterns and processes in historical biogeography, island biogeography, geographical ecology, areography, and conservation biology (e.g., design and effectiveness of nature reserves).

Instructor(s): B. Patterson (odd years, lab). L., Heaney (even years, discussion) Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and a course in either ecology, evolution, or earth history; or consent of instructor

Equivalent Course(s): GEOG 35500, GEOG 25500, ENST 25500, EVOL 45500

BIOS 23409. The Ecology and Evolution of Infectious Diseases. 100 Units.

Understanding the ecology and evolution of infectious diseases is crucial for both human health and for preservation of the natural environment. In this course, we combine mathematical modeling with ecological and evolutionary analyses to understand how fundamental mechanisms of host-pathogen interactions are translated into disease dynamics and host-pathogen co-evolution.

Instructor(s): G. Dwyer Terms Offered: Spring. L.

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and Integral calculus.

BIOS 23410. Complex Interactions: Coevolution, Parasites, Mutualists, and Cheaters. 100 Units.

This course emphasizes the enormous diversity of interactions between organisms. It is an introduction to the biology and ecology of parasitic and mutualistic symbiotic associations and their evolution. Topics include endosymbioses and their impact on the evolution of photosynthetic organisms, bacterial symbioses (e.g., nitrogen fixation), symbioses that fungi evolved with plants and animals (e.g., endophytes, mycorrhizae, lichens), pollination biology, insect-plant associations, and associations of algae with animals. Methods to elucidate the evolution of these associations are discussed with a focus on coevolutionary events and the origin of cheaters.

Instructor(s): T. Lumbsch Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.

BIOS 24110. Fundamental Neuroscience. 100 Units.

This course is a rigorous introduction to the study of neurons, nervous systems and brains. The systems anatomy and physiology of the vertebrate brain will be covered in depth. Common features of neural circuits, such as those subserving the stretch reflex, will be examined. The biology of brain evolution and development will be introduced. A highlight of

this course will be student dissections of sheep brains and the laboratory presentation of human brain dissections by the instructors.

Instructor(s): C. Ragsdale, P. Mason Terms Offered: Autumn

Prerequisite(s): At least two quarters of Biological Sciences instruction (including courses taken concurrently) or consent of instructor

Equivalent Course(s): NSCI 20110

BIOS 24120. Cellular Neuroscience. 100 Units.

This course describes the cellular and subcellular properties of neurons, including passive and active electrophysiological properties, and their synaptic interactions. Readings are assigned from a general neuroscience textbook.

Instructor(s): M. Sheffield, W. Wei Terms Offered: Winter

Prerequisite(s): NSCI 20110, along with completion of MATH 13100, or MATH 15100, or MATH 16100, or consent of instructor

Equivalent Course(s): NSCI 20120

BIOS 24130. Systems Neuroscience. 100 Units.

This course covers vertebrate and invertebrate systems neuroscience with a focus on the anatomy, physiology, and development of sensory and motor control systems. The neural bases of form and motion perception, locomotion, memory, and other forms of neural plasticity are examined in detail. We also discuss clinical aspects of neurological disorders.

Instructor(s): J. MacLean Terms Offered: Spring

Prerequisite(s): NSCI 20101, NSCI 20111 or consent of instructors

Equivalent Course(s): NSCI 20130, PSYC 24010

BIOS 24131. Molecular Neuroscience. 100 Units.

This lecture/seminar course explores the application of modern cellular and molecular techniques to clarify basic mechanisms that underlie neural development, synaptic transmission, protein trafficking, and circuit function and the dysfunction of these fundamental processes that results in neurodevelopmental disorders and age-associated neurological diseases.

Instructor(s): S. Sisodia Terms Offered: Spring

Prerequisite(s): NSCI 20111, NSCI 20121 and BIOS 20200, or consent of instructor

Equivalent Course(s): NSCI 22100

BIOS 24208. Survey of Systems Neuroscience. 100 Units.

This lab-centered course teaches students the fundamental principles of vertebrate nervous system organization. Students learn the major structures and the basic circuitry of the brain, spinal cord and peripheral nervous system. Somatic, visual, auditory, vestibular and olfactory sensory systems are presented in particular depth. A highlight of this course is that students become practiced at recognizing the nuclear organization and cellular architecture of many regions of brain in rodents, cats and primates.

Instructor(s): S. Bensmaia Terms Offered: Autumn

Prerequisite(s): NSCI 20130. For Biological Sciences majors: Three quarters of a Biological Sciences fundamentals sequence

Equivalent Course(s): ORGB 32500, NSCI 23500, CPNS 30116, NURB 31600

BIOS 24217. Conquest of Pain. 100 Units.

This course examines the biology of pain and the mechanisms by which anesthetics alter the perception of pain. The approach is to examine the anatomy of pain pathways both centrally and peripherally, and to define electrophysiological, biophysical, and biochemical explanations underlying the action of general and local anesthetics. We discuss the role of opiates and enkephalins. Central theories of anesthesia, including the relevance of sleep proteins, are also examined.

Instructor(s): K. Ruskin Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, CHEM 2200-22100-22200 or BIOS 20200 and prior course in neurobiology or physiology is recommended.

Equivalent Course(s): NSCI 22450

BIOS 24231. Methods in Computational Neuroscience. 100 Units.

Topics include (but are not limited to): relating neural data to behavior, Signal Detection theory, models of vision and artificial neural networks, Information Theory, Generalized Linear Models, dimensionality reduction, classification, and clustering.

Instructor(s): S. Bensmaia, D. Freedman, M. Kaufman Terms Offered: Winter. L.

Prerequisite(s): For Neuroscience Majors: NSCI 20130, BIOS 26210 and BIOS 26211 which must be taken concurrently, or consent of instructor.

Equivalent Course(s): PSYC 24231, NSCI 23700, CPNS 34231

BIOS 24232. Computational Approaches to Cognitive Neuroscience. 100 Units.

This course is concerned with the relationship of the nervous system to higher order behaviors (e.g., perception, object recognition, action, attention, learning, memory, and decision making). Psychophysical, functional imaging, and electrophysiological methods are introduced. Mathematical and statistical methods (e.g. neural networks and algorithms for studying neural encoding in individual neurons and decoding in populations of neurons) are discussed. Weekly lab sections allow students to program cognitive neuroscientific experiments and simulations.

Instructor(s): N. Hatsopoulos Terms Offered: Winter

Prerequisite(s): For Neuroscience Majors: NSCI 20110, NSCI 20130, BIOS 26210, and knowledge using Matlab, or consent of instructor.

Equivalent Course(s): CPNS 33200, PSYC 34410, ORGB 34650, NSCI 23600

BIOS 24248. Biological Clocks and Behavior. 100 Units.

This course will address physiological and molecular biological aspects of circadian and seasonal rhythms in biology and behavior. The course will primarily emphasize biological and molecular mechanisms of CNS function, and will be taught at a molecular level of analysis from the beginning of the quarter. Those students without a strong biology background are unlikely to resonate with the course material.

Instructor(s): B. Prendergast Terms Offered: Spring

Prerequisite(s): A quality grade in PSYC 20300 Introduction to Biological Psychology. Additional biology courses are desirable. Completion of Core biology will not suffice as a prerequisite.

Equivalent Course(s): NSCI 21400, PSYC 21750, HLTH 21750

BIOS 24408. Modeling and Signal Analysis for Neuroscientists. 100 Units.

The course provides an introduction into signal analysis and modeling for neuroscientists. We cover linear and nonlinear techniques and model both single neurons and neuronal networks. The goal is to provide students with the mathematical background to understand the literature in this field, the principles of analysis and simulation software, and allow them to construct their own tools. Several of the 90-minute lectures include demonstrations and/or exercises in Matlab.

Instructor(s): W. van Drongelen Terms Offered: Spring, L.

Prerequisite(s): Undergraduates: Biology Major - BIOS 26210 and 26211, or consent of instructor. Neuroscience Major - NSCI 20130, BIOS 26210 and 26211, or consent of instructor.

Equivalent Course(s): NSCI 24000, CPNS 32111

BIOS 25108. Cancer Biology. 100 Units.

This course covers the fundamentals of cancer biology with a focus on the story of how scientists identified the genes that cause cancer. The emphasis is on 'doing' science rather than 'done' science: How do scientists think, how do they design experiments, where do these ideas come from, what can go wrong, and what is it like when things go right? We stress the role that cellular subsystems (e.g., signal transduction, cell cycle) play in cancer biology, as well as evolving themes in cancer research (e.g., ongoing development of modern molecular therapeutics).

Instructor(s): M. Rosner, W. Du Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.

BIOS 25109. Topics in Reproduction and Cancer. 100 Units.

This course focuses on several aspects of the molecular and cellular biology of human reproduction. We also discuss the basis of chemical/viral carcinogenesis and the progression, treatment, and prevention of cancer. The role of steroid hormones and their receptors in the control of growth, development, and specialized cell function is discussed in the context of normal and abnormal gene expression in human development and disease. Key historical events, research approaches, utilization of knowledge, recent advances in drug design and herbal medicines, and philosophies of scientific research are also covered.

Instructor(s): G. Greene, L. Becker Terms Offered: Spring

Prerequisite(s): For Biology majors: Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187 or BIOS 20235 and Biochemistry, or consent of Instructor.

BIOS 25126. Animal Models of Human Disease. 100 Units.

This course introduces the use of animals in biomedical research for the purposes of understanding, treating, and curing human disease. Particular emphasis is placed on rodent models in the context of genetic, molecular, and immunologic manipulations, as well as on the use of large animal surgical models. University veterinarians also provide information regarding humane animal care.

Instructor(s): K. Luchins Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence including a course in genetics, or consent of instructor

BIOS 25206. Fundamentals of Bacterial Physiology. 100 Units.

This course meets one of the requirements of the microbiology specialization. This course introduces bacterial diversity, physiology, ultra-structure, envelope assembly, metabolism, and genetics. In the discussion section, students review recent original experimental work in the field of bacterial physiology.

Instructor(s): D. Missiakas Terms Offered: Autumn

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, or consent of instructor

Equivalent Course(s): MICR 30600

BIOS 25216. Molecular Basis of Bacterial Disease. 100 Units.

This course meets one of the requirements of the microbiology specialization. This lecture/discussion course involves a comprehensive analysis of bacterial pathogens, the diseases that they cause, and the molecular mechanisms involved during pathogenesis. Students discuss recent original experimental work in the field of bacterial pathogenesis.

Instructor(s): H. Shuman Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.

Equivalent Course(s): MICR 31600

BIOS 25226. Endocrinology I: Cell Signaling. 100 Units.

The subject matter of this course considers the wide variety of intracellular mechanisms that, when activated, change cell behavior. We cover aspects of intracellular signaling, the latter including detailed discussions of receptors, G-proteins, cyclic nucleotides, calcium and calcium-binding proteins, phosphoinositides, protein kinases, and phosphatases.

Instructor(s): M. Brady, R. Cohen Terms Offered: Autumn

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and BIOS 20200.

Equivalent Course(s): NPHP 33600

BIOS 25227. Endocrinology II: Systems and Physiology. 100 Units.

Endocrinology is the study of hormones, which are chemical messengers released by tissues that regulate the activity of other cells in the body. This course covers the classical hormone systems, including hormones regulating metabolism, energy mobilization and storage, calcium and phosphate metabolism, reproduction, growth, 'fight or flight,' and circadian rhythms. We focus on historical perspective, the mechanisms of action, homeostatic regulation, and relevant human diseases for each system.

Instructor(s): M. Brady, R. Cohen Terms Offered: Winter

Prerequisite(s): Completion of the first three quarters of a Biological Fundamentals Sequence.

BIOS 25228. Endocrinology III: Human Disease. 100 Units.

A Fundamentals Sequence (BIOS 20180s or 20190s, or AP 5 sequence) and BIOS 25227 recommended but not required.

This course is a modern overview of the patho-physiologic, genetic, and molecular basis of human diseases with nutritional perspectives. We discuss human diseases (e.g., hypertension, cardiovascular diseases, obesity, diabetes, osteoporosis, alopecia).

Instructor(s): Y. C. Li Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence is required and BIOS 25227 is strongly recommended.

BIOS 25256. Immunobiology. 100 Units.

This comprehensive survey course presents an integrated coverage of the tactics and logistics of innate and adaptive immunity in mammalian organisms. It conveys the elegance and complexity of immune responses against infectious agents. It introduces their implications in autoimmune diseases, cancer and organ transplantation and presents some of the emerging immunotherapeutics that are transforming health care. Prior knowledge of microbiology (e.g., BIOS 25206) will be advantageous. Prerequisite(s): Completion of a Biological Sciences Fundamentals Sequence which includes, Cell, Genetics, Developmental Biology, and Physiology

Instructor(s): M. Alegre Terms Offered: Autumn

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187 or BIOS 20235, and BIOS 20188 and BIOS 20189

BIOS 25258. Immunopathology. 100 Units.

Five examples of diseases are selected each year among the following categories: autoimmune diseases, inflammatory bowel diseases, infection immunity, immunodeficiencies and gene therapy, and transplantation and tumor immunology. Each disease is studied in depth with general lectures that include, where applicable, histological analysis of diseased tissue samples and discussions of primary research papers on experimental disease models. Special emphasis is placed on understanding immunopathology within the framework of general immunological concepts and on experimental approaches to the study of immunopathological models.

Instructor(s): B. Jabri Terms Offered: Winter

Prerequisite(s): BIOS 25256 with a grade of B or higher.

Equivalent Course(s): PATH 30010, IMMU 30010

BIOS 25260. Host Pathogen Interactions. 100 Units.

This course explores the basic principles of host defense against pathogens, including evolutionary aspects of innate and adaptive immunity and immune evasion strategies. Specific examples of viral and bacterial interactions with their hosts are studied in depth. A review of immunological mechanisms involved in specific cases is incorporated in the course.

Instructor(s): A. Chervonsky Terms Offered: Autumn

Prerequisite(s): BIOS 25206 and BIOS 25256

Equivalent Course(s): MICR 31200, IMMU 31200

BIOS 25266. Molecular Immunology. 100 Units.

This discussion-oriented course examines the molecular principles of immune recognition. We explore the roles of protein modification, protein-protein and protein-DNA interactions in the discrimination between self and non-self, and study the molecular fundamentals of cell stimulation and signaling. Primary literature focused on molecular research of the immune system is integrated with lectures on commonly used biochemical, structural and immunological techniques used in the research papers examined.

Instructor(s): E. Adams Terms Offered: Spring. Offered in odd years

Prerequisite(s): BIOS 20200 or 25256, or consent of instructor

Equivalent Course(s): IMMU 30266

BIOS 25268. Barrier Immunity. 100 Units.

Nowhere is the body's immune system so critical in saving an organism from death as at barrier sites, where we are directly exposed to the external environment. However, inflammatory responses to exclude pathogens and toxins need to be balanced with tolerance to benign agents like our microbiome or food, and a homeostatic role of the immune system in tissue repair. Failure to make the right call on defensive versus immunosuppressive reactions leads to severe pathologies such as chronic inflammation, allergies, autoimmunity and cancer. These challenges are met by a plethora of innate and adaptive immune cells, some exclusively found at barriers. Complexity is added by local challenges due to tissue location and function. The fascinating uniqueness of Barrier Immunity is the subject of this course. Using primary literature as a basis, expert faculty will help explore how the immune systems of the intestine, the lung, the skin and the vaginal tract deal with maintaining defense while not jeopardizing tissue function in men and mice. We will then study the immunological diseases at barriers,

what makes a site prone to tissue-specific pathologies, and how a barrier dysfunction may lead to systemic immune diseases. A particular focus will be the critical role of the local microbiome in preventing or promoting barrier pathology. The course will also stimulate thought on the evolution of a complex immune system, the origin of diseases and disease tolerance.

Instructor(s): D. Esterhazy Terms Offered: Spring

Prerequisite(s): BIOS 25256 with a grade of B+ or better, or consent if grade lower than B+.

Equivalent Course(s): IMMU 35000

BIOS 25287. Introduction to Virology. 100 Units.

This class on animal viruses considers the major families of the viral kingdom with an emphasis on the molecular aspects of genome expression and virus-host interactions. Our goal is to provide students with solid appreciation of basic knowledge, as well as instruction on the frontiers of virus research.

Instructor(s): T. Golovkina Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and third- or fourth-year standing

Equivalent Course(s): MICR 34600

BIOS 25308. Heterogeneity in Human Cancer: Etiology and Treatment. 100 Units.

This course addresses the importance of understanding human tumor heterogeneity (organ site by organ site) in terms of predicting whether tumors will progress to malignancy and how tumors will respond to standard treatments or require tailored molecular therapeutics. Alternating lecture and discussion lectures will explore and tease apart the controversies in the field that limit progress in cancer prevention, diagnosis and treatment. At the end of the course, students should have an in-depth understanding of the complexities, challenges and opportunities facing modern cancer researchers and clinical oncologists and be able to discuss novel scientific approaches to solving these issues.

Instructor(s): K. MacLeod Terms Offered: Autumn 2018

Prerequisite(s): A grade of B or better in BIOS 25108

Equivalent Course(s): CABI 30500

BIOS 25326. Tumor Microenvironment and Metastasis. 100 Units.

The tumor microenvironment regulates disease progression and chemoresistance in most cancers. This course addresses the functional contribution of the different cellular and non-cellular constituents of the tumor that surround the malignant cancer cells in cancer progression and metastasis. We will thoroughly discuss the function of stroma, inflammation, tumor senescence, immunity and the interactome in cancer progression and metastasis. Moreover, we will evaluate the translational impact of targeting the tumor microenvironment. Laboratory studies will introduce key techniques and organotypic model systems to elucidate these functions. At the end of the course, students should be able to understand the biology behind cancer metastasis and to evaluate manuscripts reporting novel findings in cancer biology. Prerequisite(s): BIOS 25108 and BIOS 25308

Instructor(s): H. Kenny, E. Lengyel Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.

Note(s): Three optional weekend, one-day workshops will be offered during the quarter. This course qualifies in the Cancer Specialization.

BIOS 25327. Health Disparities in Breast Cancer. 100 Units.

Across the globe, breast cancer is the most common women's cancer. In the last two decades, there have been significant advances in breast cancer detection and treatment that have resulted in improved survival rates. Yet, not all populations have benefited equally from these improvements, and there continues to be a disproportionate burden of breast cancer felt by different populations. In the U.S., for example, white women have the highest incidence of breast cancer but African-American women have the highest breast cancer mortality overall. The socioeconomic, environmental, biological, and cultural factors that collectively contribute to these disparities are being identified with a growing emphasis on health disparities research efforts. In this 10-week discussion-based course students will meet twice weekly and cover major aspects of breast cancer disparities.

Instructor(s): E. Dolan, S. Conzen Terms Offered: Winter

Prerequisite(s): BIOS 25108

Equivalent Course(s): GNSE 30408, CCTS 20400, HLTH 20400, GNSE 20408, CCTS 40400

BIOS 25407. Organ Transplantation. 100 Units.

This course presents biological, technical, ethical, and economic issues associated with organ transplantation. We sharply focus the immunologic knowledge from BIOS 25256 onto the biologic barriers to organ acceptance and the ultimate goal of immunologic tolerance. We also address principles of organ preservation and the mechanisms of ischemia/reperfusion injury. The technical aspects and physiology of organ transplantation (i.e., kidney, liver, heart, lung, pancreas, islet, intestinal) are covered. The social, economic, and ethical issues raised in transplantation (i.e., allografts, xenografts, living donation) are also discussed. This course is offered in alternate years.

Instructor(s): A. Chong Terms Offered: Winter. Offered Winter 2020

Prerequisite(s): BIOS 25256

BIOS 25420-26120-26121. An Introduction to Bioinformatics and Proteomics; Introduction to Transcriptomics; Microbial 'Omics.

These courses may be taken as a sequence.

BIOS 25420. Microbial 'Omics. 100 Units.

Every ecological niche our planet has to offer, including the human body itself, is home to an astonishing number of microbial cells that form complex communities. The last several years witnessed tremendous advances in molecular and computational approaches which now offer unprecedented access to these communities through new 'omics strategies.

Developing an overall understanding of these strategies -including the ability to identify their appropriate applications and shortcomings- has quietly become a de facto necessity in the journey of an independent life scientist. The primary aim of this course is to offer an evaluation of current concepts and methods to study the ecology, evolution, and functioning of naturally occurring microbial communities. Participants will have a chance to acquire hands-on experience with state-of-the-art computational methods and work with real-world microbial data. Through equal proportions of theory and practice, the course will cover concepts and strategies that help us wrap our collective mind around the most diverse form of life on our planet.

Instructor(s): A. Murat Eren Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals Sequence

BIOS 26120. An Introduction to Bioinformatics and Proteomics. 100 Units.

Modern biology generates massive amounts of data; this course is devoted to biological information and the models and techniques used to make sense of it. Students learn about biological databases, algorithms for sequence alignment, phylogenetic tree building, and systems biology. They will also learn about the basics of large-scale study of proteins, particularly their structures and functions. Students will be introduced to basics of high performance computation (HPC) and its application to the field of bioinformatics. They will learn how to use our in-house Super Computer to process and analyze next generation sequencing data. Using state of the art tools, students will align and genotype a group of genes in order to identify disease-relevant variants. The course will be taught as a hands on computer approach (a computation background would be helpful, but not needed).

Instructor(s): E. Haddadian Terms Offered: Autumn. L.

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence or BIOS 20172 or consent of Instructor. No computation background required.

BIOS 26121. Introduction to Transcriptomics. 100 Units.

Transcriptomics is the study of the transcriptome -the complete set of RNA or transcripts that are produced by the genome, using high-throughput methods. In this course, students will learn about modern techniques used to capture and analyze mRNA and the connections of transcriptomics to epi-genomics (study of the epi-genome) and proteomics (study of proteins). The course will be divided into three parts: 1) Introduction of technologies that generate transcriptomics data, 2) Statistical analysis of the data, and 3) Case studies and applications. A range of topics relevant to the current practices in the field will be discussed, including introduction to microarrays, Next-Generation Sequencing (NGS), bulk and single-cell RNA processing, machine learning techniques used in data analyses, data pre-processing, differential expression analysis, and correcting batch effects and other experimental artifacts. Students will obtain hands-on experience in downloading public-domain data and performing analyses using different packages written in R and Python. After taking the class, students will have a working knowledge of the field and acquire experience in RNA-seq data analyses that are currently used in research labs. We will also organize visits to research laboratories and sequencing facility for the students to observe experimental workflows used in cutting-edge research.

Instructor(s): Anindita Basu, Mengjie Chen, Esmail Haddadian Terms Offered: Winter

Prerequisite(s): BIOS 26120 or consent of instructor.

BIOS 26210-26211. Mathematical Methods for Biological Sciences I-II.

The following two courses are intended to be taken as a sequence.

BIOS 26210. Mathematical Methods for Biological Sciences I. 100 Units.

This course builds on the introduction to modeling course biology students take in the first year (BIOS 20151 or 152). It begins with a review of one-variable ordinary differential equations as models for biological processes changing with time, and proceeds to develop basic dynamical systems theory. Analytic skills include stability analysis, phase portraits, limit cycles, and bifurcations. Linear algebra concepts are introduced and developed, and Fourier methods are applied to data analysis. The methods are applied to diverse areas of biology, such as ecology, neuroscience, regulatory networks, and molecular structure. The students learn computations methods to implement the models in MATLAB.

Instructor(s): D. Kondrashov Terms Offered: Autumn. L.

Prerequisite(s): BIOS 20151 or BIOS 20152 or equivalent quantitative experience by consent of instructor, and three quarters of a Biological Sciences Fundamentals sequence or consent of the instructor.

Equivalent Course(s): PSYC 36210, CPNS 31000

BIOS 26211. Mathematical Methods for Biological Sciences II. 100 Units.

This course is a continuation of BIOS 26210. The topics start with optimization problems, such as nonlinear least squares fitting, principal component analysis and sequence alignment. Stochastic models are introduced, such as Markov chains, birth-death processes, and diffusion processes, with applications including hidden Markov models, tumor population modeling, and networks of chemical reactions. In computer labs, students learn optimization methods and stochastic algorithms, e.g., Markov Chain, Monte Carlo, and Gillespie algorithm. Students complete an independent project on a topic of their interest.

Instructor(s): D. Kondrashov Terms Offered: Winter. L.

Prerequisite(s): BIOS 26210 or equivalent.

Equivalent Course(s): CPNS 31100, PSYC 36211

BIOS 26318. Fundamentals of Biological Data Analysis. 100 Units.

This course is intended for students who have original data from a research project and are looking to produce a thesis or publication. Students will learn to organize, process, visualize, and make inferences from biological data sets using the data processing tools of R. We will review statistics concepts, such as probability distributions, linear and nonlinear fitting, estimation and hypothesis testing, and introduce new concepts relevant for the specific research questions identified by the

students. The end result will be a written report that can function as a methods and results section of a research publication and contains high-quality graphics.

Instructor(s): D. Kondrashov, S. Allesina Terms Offered: Autumn, L.

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals Sequence, STAT 22000 or higher, and fourth-year standing, or consent of Instructor. Primarily intended for students that have a data set from original research.

BIOS 26403. Quantitative Immunobiology. 100 Units.

The science of immunology was born at the end of the 19th century as a discipline focused on the body's defenses against infection. The following 120+ years has led to the discovery of a myriad of cellular and molecular players in immunity, placing the immune system alongside the most complex systems such as Earth's global climate and the human brain. The functions and malfunctions of the immune system have been implicated in virtually all human diseases. It is thought that cracking the complexity of the immune system will help manipulate and engineer it against some of the most vexing diseases of our times such as AIDS and cancer. To tackle this complexity, immunology in the 21st century - similar to much of the biological sciences - is growing closer to mathematics and data sciences, physics, chemistry and engineering. A central challenge is to use the wealth of large datasets generated by modern day measurement tools in biology to create knowledge, and ultimately predictive models of how the immune system works and can be manipulated. The goal of this course is to introduce motivated students to the quantitative approaches and reasoning applied to fundamental questions in immunology.

Instructor(s): Nicolas Chevrier Terms Offered: Spring

Prerequisite(s): Completion of the first two quarters of a Biological Sciences Fundamentals Sequence. Knowledge of R is recommended but not required. Courses in immunology and microbiology are an advantage but not required (e.g., BIOS 25256 Immunobiology; BIOS 25206 Fundamentals of Bacterial Physiology).

Equivalent Course(s): IMMU 34800, MENG 23300, MENG 33300

BIOS 27710-27711-27712-27713-27714-27715. Ecology – Marine Biological Laboratory; Biogeochemical Analysis in Terrestrial and Aquatic Ecosystems – Marine Biological Laboratory.; Independent Undergraduate Research in Environmental Sciences – Marine Biological Laboratory; Quantitative Environmental Analyses – Marine Biological Laboratory; Methods in Microbial Ecology – Marine Biological Laboratory.; Roles of Animals in Ecosystems – Marine Biological Laboratory.

Marine Biological Laboratory Semester in Environmental Science Sequence (SES). Courses BIOS 27710-27715 are the College designations for the Semester in Environmental Science that is taught at the Marine Biological Laboratory (MBL) in Woods Hole, Massachusetts. Registration in BIOS 27710, 27711, and 27712, plus one of BIOS 27713, 27714, or 27715 is required. Admission to the Semester in Environmental Science program is by application, which must be received by the MBL in March of the year preceding the start of the semester. Admissions decisions will be mailed in April. Note that these courses start at the beginning of September, typically four weeks prior to the start of the College's Autumn Quarter and are completed by the end of Autumn Quarter. More information on the course content and the application process can be found at <https://college.uchicago.edu/academics/semester-environmental-science>.

BIOS 27710. Ecology - Marine Biological Laboratory. 100 Units.

This course examines the structure and functioning of terrestrial and aquatic ecosystems including the application of basic principles of community and ecosystem ecology. The course also examines contemporary environmental problems such as the impacts of global and local environmental change on community composition and food webs within forest, grassland, marsh and nearshore coastal ecosystems on Cape Cod. This course examines the structure and functioning of terrestrial and aquatic ecosystems including the application of basic principles of community and ecosystem ecology. The course also examines contemporary environmental problems such as the impacts of global and local environmental change on community composition and food webs within forest, grassland, marsh and nearshore coastal ecosystems on Cape Cod.

Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn, L.

Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27711 and BIOS 27712 along with one of BIOS 27713, BIOS 27714 or BIOS 27715.

Equivalent Course(s): ENSC 24100

BIOS 27711. Biogeochemical Analysis in Terrestrial and Aquatic Ecosystems # Marine Biological Laboratory. 100 Units.

This course examines the interface of biological processes with chemical processes in ecological systems. Course content emphasizes aquatic chemistry and the role of microbes in the cycling of nitrogen, carbon, and other elements. Effects of global changes on chemical cycling are emphasized.

Instructor(s): Marine Biological Laboratory Staff. Terms Offered: Autumn, L.

Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710 and BIOS 27712 along with one of BIOS 27713, BIOS 27714 or BIOS 27715.

Equivalent Course(s): ENSC 23820

BIOS 27712. Independent Undergraduate Research in Environmental Sciences Marine Biological Laboratory. 100 Units.

This course is the culmination of the Semester in Environmental Science at the Marine Biological Laboratory. An independent research project, on a topic in aquatic or terrestrial ecosystem ecology, is required. Students will participate in a seminar for scientific communication as well as submit a final paper on their project.

Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn, L.

Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710 and BIOS 27711 along with one of BIOS 27713, BIOS 27714 or BIOS 27715.

Equivalent Course(s): ENSC 29800

BIOS 27713. Quantitative Environmental Analyses # Marine Biological Laboratory. 100 Units.

This course emphasizes the application of quantitative methods to answering ecological questions. Students apply mathematical modeling approaches to simulating biological and chemical phenomena in terrestrial and marine ecosystems.

Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn. L.

Prerequisite(s): Consent Only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710, BIOS 27711 and BIOS 27712.

Equivalent Course(s): ENSC 28100

BIOS 27714. Methods in Microbial Ecology - Marine Biological Laboratory. 100 Units.

This course explores the biology of microbes found in the environment, including relationships with the physical, chemical, and biotic elements of their environment. Emphasis is placed on understanding the science underlying the various methodologies used in the study of these organisms and systems. In the laboratory, students will work with the latest techniques to measure microbial biomass, activity, extracellular enzymes, and biogeochemical processes. Students are also introduced to molecular methods for assessing microbial genomic diversity.

Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn. L.

Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710, BIOS 27711 and BIOS 27712.

Equivalent Course(s): ENSC 24200

BIOS 27715. Roles of Animals in Ecosystems # Marine Biological Laboratory. 100 Units.

This course addresses the question, How do animals, including man, affect the structure and function of ecosystems. The course takes an interdisciplinary approach focused on the interactions of animal diversity, migration patterns, population dynamics, and behavior with biogeochemical cycles, productivity, and transport of materials across ecosystems. This course is an elective option within the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA.

Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn

Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710, BIOS 27711, and BIOS 27712.

Equivalent Course(s): ENSC 24300

BIOS 27720-27721-27723. SEPTEMBER COURSES AT MARINE BIOLOGICAL LABORATORY, WOODS HOLE.

The September courses are taken as part of the Autumn Quarter, but end before classes commence in Chicago. The September courses combine lecture with hands-on learning and development of independent research ideas and projects. All are taught by University of Chicago or MBL faculty, and take advantage of the unique research strengths and the natural environmental resources found at MBL. These are intensive, three-week-long courses that meet for up to eight hours per day for 5–6 days per week, combining morning lectures with afternoon labs and fieldwork. Each student can only enroll in one course at a time. The September courses at MBL have no prerequisites, and can count either to fulfill the general education requirement in Biology OR as an upper-level elective. Also offered in this program is HIPS 15100 - Visualization and Biology: Science, Culture, and Representation. More information, including application details and program fees, can be found at <https://college.uchicago.edu/academics/mbi-september-courses>.

BIOS 27720. Microbiomes Across Environments. 100 Units.

Microbiomes Across Environments provides a comprehensive introduction to microbiome research, tools and approaches for investigation, and a lexicon for biological understanding of the role of microbial communities in environmental and host environments. Microbiome science is an emerging field that bridges disciplines, merging microbiology with genomics, ecosystem science, computation, biogeochemistry, modeling, medicine and many others, including architecture, social science, chemistry and even economics. In this course we will uncover the vast biochemical and metabolic diversity of the microbial world by examining life in coastal and marine systems, (including) host-associated contexts. Students will develop or strengthen biological field/lab techniques, analyze and compare data prepared from student-collected samples, and will integrate fundamental knowledge, modeling, and theory as it pertains to microbiome research.

Instructor(s): D. Mark-Welch, E. L. Peredo, A. Murat Eren Terms Offered: Autumn. L. September 2018.

Note(s): This course will be given at Marine Biological Laboratory, Woods Hole, Massachusetts.

BIOS 27721. Observing Proteins in Action: How to Design and Build Your Own Instruments. 100 Units.

New insights into cell function are now possible using technologies that resolve single molecules. However, as devices become more complicated, we are often faced with three questions: What is it that our instruments actually measure; how can we change the instrument to see a new behavior; and, how do we analyze the data to get the greatest insight? We will learn how to answer these questions by designing, building, and using our own electrical and optical instruments, making measurements, and then analyzing the results. Membrane proteins play an essential

role in the behavior of all cells. We will study membrane protein channels in synthetic membranes, host cells, and giant axons from squid collected in the waters surrounding the MBL. The movement of electrical charge produced by conformational changes will be correlated with both the current passing thru single channels and structural information obtained from light and electron microscopy. The course will proceed from simple measurements to student-designed projects.

Instructor(s): E. Schwartz, F. Bezanilla, E. Perozo Terms Offered: Autumn. L. September 2018.

Note(s): This course will be given at Marine Biological Laboratory, Woods Hole, Massachusetts

Equivalent Course(s): NSCI 22355

BIOS 27723. Biodiversity and Genomics: Exploring the Marine Animal Diversity of Woods Hole Using Molecular Tools. 100 Units.

In this course, student will have the opportunity to explore the large diversity of marine animal species in Woods Hole, Massachusetts and its surroundings. We will combine fieldwork with genomic and bioinformatic approaches to study different aspects of the evolution, ecology, taxonomy, physiology, and biogeography of marine animals in this unique location. Student will integrate knowledge and analytical tools from different biological disciplines to develop short research projects. During the three weeks of the course, student will have access to the Marine Biological Laboratory's collection of living marine animals, participate in ongoing research projects at MBL, and contribute data that will advance our understanding of marine biodiversity.

Instructor(s): O. Pineda-Catalan Terms Offered: Autumn. L. September 2018

Note(s): This course will be given at Marine Biological Laboratories, Woods Hole, Massachusetts.

BIOS 27750-27751. SPRING QUARTER COURSES AT MARINE BIOLOGICAL LABORATORY.

These courses are part of an interdisciplinary four-course program given during Spring Quarter at the Marine Biological Laboratory in Woods Hole, Massachusetts. The non-BIOS courses in this program are PHYS 12300 Waves, Optics, and Modern Physics at MBL and ARTV 10100 Visual Language: On Images.

BIOS 27750. Stem Cells and Regeneration: from aquatic research organisms to mammals. 100 Units.

This course will focus on contemporary stem cell biology and regeneration with emphasis on molecular mechanisms and applications. The course will cover the history of stem cell discoveries through the latest advances, including genome-wide profiling, targeted gene editing, and other techniques used in stem cell and regeneration research. A portion of the course will consist of modules where specific stem cell types will be discussed together with relevant diseases they could impact (i.e. stem cells and neurodegeneration). A focus of the course will be around how discoveries in aquatic research organisms have driven the progress in regeneration biology. In this classroom and lab based course, students will have the opportunity to work on an independent research project under the supervision of a Resident Faculty at MBL. The lab portion of the course will introduce and provide hands-on experience on experimental approaches and techniques used in cell biology, development, and regeneration research. There will be a focus on microscopy (brightfield, fluorescence, high-resolution microscopy) and use of open source software to analyze images. There will be an introduction into the use of stains, antibodies, and genetically-encoded fluorescent markers to analyze cellular structures in aquatic organisms that include axolotls, nematostella, worms, cephalopods and zebrafish. In addition, this course will provide hands-on experience through labs.

Instructor(s): K. Echeverri Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals Sequence.

BIOS 27751. Biological Oceanography. 100 Units.

This intensive four-week course addresses fundamental oceanographic processes that maintain and structure marine biodiversity and productivity, including physical oceanographic processes of dispersal and upwelling, environmental selection, biogeography, nutrient dynamics, primary production, and food web dynamics. Students will design an original research project during an initial week-long shore component at Marine Biological Laboratory (MBL) in Woods Hole, MA, and then address their own questions by collecting samples and data aboard Sea Education Association (SEA)'s oceanographic research sailing vessel, the SSV Corwith Cramer, on a 10-day offshore voyage. At sea students will deploy oceanographic instruments, interpret various data streams, and work as research teams and watch members as they navigate and sail the vessel. During a final week-long shore component at MBL, students will analyze and interpret the data they collected and present their results in written and oral reports. For students unable to participate in the ocean-going component of the course, an alternative onshore research component will explore diverse local marine ecosystems including estuaries, salt marshes, and coastal embayments.

Instructor(s): Schell, J. Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals Sequence.

BIOS 27810. Epidemiology and Population Health: Global Health Sciences I. 100 Units.

Epidemiology is the basic science of public health. It is the study of how diseases are distributed across populations and how one designs population-based studies to learn about disease causes, with the object of identifying preventive strategies. Epidemiology is a quantitative field and draws on biostatistical methods. Historically, epidemiology's roots were in the investigation of infectious disease outbreaks and epidemics. Since the mid-twentieth century, the scope of epidemiologic investigations has expanded to a fuller range non-infectious diseases and health problems. This course will introduce classic studies, study designs and analytic methods, with a focus on global health problems. Prerequisite(s): Completion of the first three quarters of a Biological Sciences Fundamentals Sequence or consent of the Master of BSCD, Laurens Mets (mets@uchicago.edu). STAT 220 or other introductory statistics highly desirable.

Instructor(s): D. Lauderdale. Terms Offered: Autumn

Prerequisite(s): Completion of the three quarters of a Biological Sciences Fundamentals Sequence and completion of the quantitative requirements for the biological sciences major. STAT 22000 or other introductory statistics highly desirable.

BIOS 27811. Global Health Sciences II: Microbiology. 100 Units.

This course will examine infectious diseases with global health impact, analyzing their historic and projected impact, their biological foundations, treatment, and preventative control. Course topics include gastrointestinal infections (e.g., cholera, bacillary dysentery, typhoid fever, rotavirus infections), sexually transmitted diseases (HIV), infections transmitted via aerosol droplets (tuberculosis, meningitis), and vector borne diseases (e.g., malaria, typhus, dengue fever, plague). Special emphasis will be placed on emerging infectious diseases (Ebola, Lassa, Rift Valley fever) and either completed or ongoing studies for infectious disease elimination (smallpox, polio, diphtheria, river blindness). The course encompasses lectures, student presentations, and the preparation of a capstone essay.

Instructor(s): D. Missiakas, O. Schneewind Terms Offered: Winter. This course is offered on campus in alternate years beginning Winter Quarter 2017 and in Paris in alternate years beginning Winter Quarter 2018

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, or consent of Instructor.

BIOS 27813. Global Health Sciences I: Cancer Concepts: Causes and Consequences. 100 Units.

The goal of this course is to build concepts and develop understanding of how cancers arise by addressing the genetic basis of cancer, in addition to the role of environmental stresses in tumorigenesis. Specifically, we will examine how genetic changes, infection, diet and stress all affect tumor cell stemness, tumor evolution & heterogeneity, tumor metabolism and drug resistance. We will focus in on the role of the human papillomavirus (HPV) in humans cancers as a means to dissect basic molecular mechanisms of cancer but also to explore how our understanding of HPV as an etiological factor in cancer has changed in recent years, how efforts to vaccinate against HPV serves as a paradigm (or not) for other cancers and the controversies surrounding all of the above. Finally, we will examine in more detail how obesity, altered metabolism and stress affect tumor metabolism, co-evolution of the tumor with its microenvironment, the gut microbiome and anti-tumor immunity, and how diet may be exploited to prevent cancers (or not). We will conclude with a discussion of possible future directions to better prevent and treat human cancers.

Instructor(s): K. Macleod Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187 or BIOS 20235, or consent of Instructor.

Note(s): This course is offered in Paris.

BIOS 28101-28102-29103. Science Communication: Building a Science Exhibit; Science Communication: Producing a Science Video Story; Science Communication: Writing a Digital Science Story.

The ability to communicate the importance, excitement, and rigor of science to the general public is a critical skill for scientists. By translating scientific research scientists can, among other things, shape public policy, create an informed voting population, and encourage funding for research. In these three courses, open to third- and fourth-year undergraduates, students will critically analyze different communication strategies and practice communicating science through assignments and interactive skill-building sessions. In BIOS 28101, students will translate primary research into written story form and publish their work on a digital platform. In BIOS 28102, students will communicate primary research by creating a TED Talk-style video. In BIOS 29103, the entire class will collectively design and launch a science exhibit for display in the Chicagoland area. Students can take a single course, multiple, or all three. Either BIOS 28101 or BIOS 28102 (but not both) can be applied toward a major in Biological Sciences.

BIOS 28101. Science Communication: Writing a Digital Science Story. 100 Units.

Students will gain skills in written and digital communication, focusing on translating primary scientific research to a general audience. Students will learn what makes an engaging written article and how to write for the public without sacrificing scientific accuracy or complexity. We will explore platforms such as newspapers, magazines, blogs and social media. Students will work with faculty mentors to complete two written pieces that communicate research findings and their significance to a general audience. Student articles may be disseminated on the websites of the Illinois Science Council, Marine Biology Laboratory, the Institute for Translational Medicine, or the National Institutes of Health. Students will walk away with a polished, published work.

Instructor(s): S. Serritella, P. Mason Terms Offered: Autumn

Prerequisite(s): Three quarters of physical or biological (including neuroscience) sciences. Third- or fourth-year standing. This course does not satisfy the general education requirement in the physical sciences.

Equivalent Course(s): PHSC 28101

BIOS 28102. Science Communication: Producing a Science Video Story. 100 Units.

Students will gain skills in oral communication, and will apply these skills to produce a TED-talk style video communicating primary research in a scientific area of the student's choice. The goal is effective, engaging communication of science to a general audience without sacrificing scientific accuracy or complexity. Students will work with faculty to write scripts and design visual and audio elements. The talks will be filmed and edited in collaboration with UChicago Creative, who will assist with visual aids and animation. Students will leave the course with a professionally-produced video that they can use to advance their career and promote their topic. While this course naturally follows BIOS 28101, that course is not a pre-requisite.

Instructor(s): A. Zissimopoulos, S. Serritella Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence. Third- or fourth-year standing. This course does not satisfy the general education requirement in the physical sciences.

Equivalent Course(s): PHSC 28102

BIOS 29103. Science Communication: Building a Science Exhibit. 100 Units.

Students will work as a class to create an interactive physical exhibit that communicates a particular scientific topic to the public. The student-created exhibit will be displayed either on campus or across the city of Chicago. We will welcome guest speakers who are experts in data visualization, visual arts, and museum exhibits to demonstrate the variety of ways science can be communicated. Students will also take field trips to the local museums to observe the different ways in which research and science communication work together. Students will critically analyze exhibits, evaluate how exhibits and approaches across the city are similar and different, and reflect on the variety of approaches. An advisory board of researchers from local Chicagoland museums will inform and review the final exhibits.

Instructor(s): A. Zissimopoulos, S. Serritella Terms Offered: Spring

Prerequisite(s): Third- or fourth-year standing.

Note(s): This course does not meet the requirements for the Biological Sciences major. This course does not satisfy the general education requirement in the physical sciences.

Equivalent Course(s): PHSC 29103

BIOS 28407. Genomics and Systems Biology. 100 Units.

This lecture course explores technologies for high-throughput collection of genomic-scale data, including sequencing, genotyping, gene expression profiling, and assays of copy number variation, protein expression and protein-protein interaction. In addition, the course will cover study design and statistic analysis of large data sets, as well as how data from different sources can be used to understand regulatory networks, i.e., systems. Statistical tools that will be introduced include linear models, likelihood-based inference, supervised and unsupervised learning techniques, methods for assessing quality of data, hidden Markov models, and controlling for false discovery rates in large data sets. Readings will be drawn from the primary literature. Evaluation will be based primarily on problem sets.

Instructor(s): Y. Gilad Terms Offered: Spring

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187 or BIOS 20235 and STAT 23400 or BIOS 26210 and BIOS 26211

Equivalent Course(s): CABI 47300, BPHS 47300, IMMU 47300, HGEN 47300

BIOS 28900. Undergraduate Bachelor of Science Research. 100 Units.

This course is required in the autumn of the fourth year for students who are completing the Biological Sciences major with a BS degree (see guidelines at link to page with guidelines) but are not enrolled in the research course for the BSCD Honors program (BIOS 00296. Undergraduate Honors Research.) BIOS 002?? can be counted toward the Biological Sciences major and may be counted among the three upper-level courses required for the BS. Participants will give short presentations on their thesis research during mandatory evening sessions. Students will receive a quality grade in this course based on their thesis proposal, their research presentation, and a progress report from their thesis advisers.

Instructor(s): C. Andrews Terms Offered: Autumn

Prerequisite(s): Students must be Biological Sciences majors pursuing the BS degree. This course is not open to students in the BSCD Honors program who are enrolled in BIOS 00296. (Undergraduate Honors Research).

BIOS 29330. Contagion: Plague, Power, and Epidemics. 100 Units.

Plagues always take place within social orders, and human communities, causing havoc and chaos and reordering ideas about power and fate, befallenness, and desert. Plagues play a special role in Biblical traditions and text and in contemporary literature. This seminar will explore how epidemic illness is presented and managed within theological and philosophical literature.

Instructor(s): Laurie Zoloth Terms Offered: Autumn

Equivalent Course(s): RETH 54321, RLST 24321

Big Problems Courses

The following two courses are part of the Big Problems Curriculum franke.uchicago.edu/bigproblems/bp-index.html. (<http://franke.uchicago.edu/bigproblems/bp->)

BIOS 02280. Drinking Alcohol: Social Problem or Normal Cultural Practice? 100 Units.

Alcohol is the most widely used psychoactive agent in the world, and, as archaeologists have recently demonstrated, it has a very long history dating back at least 9,000 years. This course will explore the issue of alcohol and drinking from a trans-disciplinary perspective. It will be co-taught by an anthropologist/archaeologist with experience in alcohol research and a neurobiologist who has experience with addiction research. Students will be confronted with literature on alcohol research from anthropology, sociology, history, biology, medicine, psychology, and public health and asked to think through the conflicts and contradictions. Selected case studies will be used to focus the discussion of broader theoretical concepts and competing perspectives introduced in the first part of the course. Topics for lectures and discussion include: What is alcohol? The early history of alcohol; Histories of drinking in ancient, medieval, and modern times; Alcohol and the political economy; Alcohol as a cultural artifact; Styles of drinking and intoxication; Alcohol, addiction, and social problems; Alcohol and religion; Alcohol and health benefits; Comparative case studies of drinking.

Instructor(s): M. Dietler, W. Green Terms Offered: Not offered in 2020-2021; May be offered in 2021-2022

Prerequisite(s): Third or fourth-year standing.

Note(s): This course does not meet requirements for the biological sciences major.

Equivalent Course(s): HLTH 25310, BPRO 22800, ANTH 25310

BIOS 02490. Biology and Sociology of AIDS. 100 Units.

This interdisciplinary course deals with current issues of the AIDS epidemic.

Instructor(s): H. Pollack, J. Schneider Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Note(s): This course does not meet requirements for the biological sciences major.

Equivalent Course(s): BPRO 24900, SSAD 65100

Specialized Courses

These courses include biological sciences content and may be of particular interest to student of biology. They may not be used as an upper-level elective in the major, nor can they be used to satisfy the general education requirement in the biological sciences unless otherwise noted in the course description or approved through petition to the BSCD Senior Advisers.

BIOS 29100. Biology of Toxoplasma. 100 Units.

This course is suitable for undergraduates with a good background in biology and molecular genetics. This course does not meet requirements for the biological sciences major. This course undertakes a study of *Toxoplasma gondii* and toxoplasmosis: a model system to study the cellular and molecular biology, biochemistry, and genetics of an obligate intracellular protozoan parasite; the immune responses it elicits; its interactions with host cells; and the pathogenesis of the diseases it causes. This information is also applied to consideration of public health measures for prevention of infection, for vaccines, and for development of new antimicrobial treatments. General principles applicable to the study of other microorganisms are emphasized.

Instructor(s): R. Mcleod Terms Offered: Autumn, Spring

Prerequisite(s): Consent of instructor. This course does not meet the requirements for the Biological Sciences Major.

BIOS 29142. From Fossils to Fermi's Paradox: Origin and Evolution of Intelligent Life. 100 Units.

The course approaches Fermi's question, "Are we alone in the universe?," in the light of recent evidence primarily from three fields: the history and evolution of life on Earth (paleontology), the meaning and evolution of complex signaling and intelligence (cognitive science), and the distribution, composition and conditions on planets and exoplanets (astronomy). We also review the history and parameters governing extrasolar detection and signaling. The aim of the course is to assess the interplay between convergence and contingency in evolution, the selective advantage of intelligence, and the existence and nature of life elsewhere in the universe - in order to better understand the meaning of human existence.

Instructor(s): P. Sereno; L. Rogers; S. London Terms Offered: Winter

Prerequisite(s): Third or fourth-year standing

Equivalent Course(s): ASTR 18700, BPRO 28800, PSYC 28810

BIOS 29209. XCAP: The Experimental Capstone - The Art of Healing: Medical Aesthetics in Russia and the U.S. 100 Units.

What makes a medical treatment look like it will work? What makes us feel that we are receiving good care, or that we can be cured? Why does the color of a pill influence its effectiveness, and how do placebos sometimes achieve what less inert medication cannot? In this course we will consider these problems from the vantage points of a physician and a cultural historian. Our methodology will combine techniques of aesthetic analysis with those of medical anthropology, history and practice. We will consider the narratology of medicine as we examine the way that patients tell their stories-and the way that doctors, nurses, buildings, wards, and machines enter those narratives. The latter agents derive their meaning from medical outcomes, but are also embedded in a field of aesthetic values that shape their apperception. We will look closely at a realm of medical experience that continues to evade the grasp of instruments: how the aesthetic experience shapes the phenomenon of medical treatment.

Instructor(s): William Nickell; Brian Callender; Elizabeth Murphy Terms Offered: Autumn

Prerequisite(s): for BIOS 29209: This course does not meet the requirements for the Biological Sciences major.

Note(s): This course is one of three offered in The Experimental Capstone (XCAP) in the 2019-20 academic year.

Enrollment in this course is restricted to 3rd and 4th year undergraduates in the College. For more information about XCAP, visit <https://sifk.uchicago.edu/courses/xcap/>

Equivalent Course(s): ARTV 20014, HLTH 29901, KNOW 29901, ANTH 24360, HIPS 28350

BIOS 29271. The Psychology and Neurobiology of Stress. 100 Units.

This course explores the topic of stress and its influence on behavior and neurobiology. Specifically, the course will discuss how factors such as age, gender, and social context interact to influence how we respond to stressors both physiologically and behaviorally. The course will also explore how stress influences mental and physical health.

Instructor(s): G. Norman Terms Offered: Autumn

Note(s): This course does not meet the requirements for the Biological Sciences Major.

Equivalent Course(s): PSYC 25750, NSCI 22535

BIOS 29294. Introduction to Global Health. 100 Units.

This course provides an overview of global health from the historical perspective to the current state of global health. The course features weekly guest lecturers with a broad range of expertise in the field: topics include the social and economic determinants of health, the economics of global health, global burden of disease, and globalization of health risks, as well as the importance of ethics, human rights, and diplomacy in promoting a healthier world. The course is designed for graduate-level students and senior undergraduates with an interest in global health work in resource-limited settings.

Instructor(s): C. Babcock, N. Fenny Terms Offered: Winter

Prerequisite(s): This course does not meet requirements for the Biological Sciences major

Equivalent Course(s): PBPL 29294, CCTS 43000

BIOS 29300. Biological Psychology. 100 Units.

What are the relations between mind and brain? How do brains regulate mental, behavioral, and hormonal processes; and how do these influence brain organization and activity? This course introduces the anatomy, physiology, and chemistry

of the brain; their changes in response to the experiential and sociocultural environment; and their relation to perception, attention, behavioral action, motivation, and emotion.

Instructor(s): S. London, L. Kay Terms Offered: Winter

Prerequisite(s): Some background in biology and psychology.

Note(s): This course does not meet requirements for the Biological Sciences Major.

Equivalent Course(s): PSYC 20300, NSCI 21015, CHDV 20300

BIOS 29314. Topics in Medical Ethics. 100 Units.

Decisions about medical treatment, medical research and medical policy often have profound moral implications. Taught by a philosopher, three physicians, and a medical lawyer, this course will examine such issues as paternalism, autonomy, assisted suicide, abortion, organ markets, research ethics, and distributive justice in health care. (A)

Instructor(s): D. Brudney; Staff Terms Offered: Autumn

Prerequisite(s): Third- or fourth-year standing. This course does not meet requirements for the Biological Sciences major.

Note(s): Philosophy majors: this course fulfills the practical philosophy (A) requirement.

Equivalent Course(s): HLTH 21609, PHIL 21609, HIPS 21609, BPRO 22612

BIOS 29323. Health Care and the Limits of State Action. 100 Units.

In a time of great human mobility and weakening state frontiers, epidemic disease is able to travel fast and far, mutate in response to treatment, and defy the institutions invented to keep it under control: quarantine, the cordon sanitaire, immunization, and the management of populations. Public health services in many countries find themselves at a loss in dealing with these outbreaks of disease, a deficiency to which NGOs emerge as a response (an imperfect one to be sure). Through a series of readings in anthropology, sociology, ethics, medicine, and political science, we will attempt to reach an understanding of this crisis of both epidemiological technique and state legitimacy, and to sketch out options.

Instructor(s): H. Saussy, M. Schwartz Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing. This course does not meet requirements for the biological sciences major.

Equivalent Course(s): HMRT 28602, CMLT 28900, BPRO 28600

BIOS 29326. Introduction to Medical Physics and Medical Imaging. 100 Units.

This course covers the interaction of radiation with matter and the exploitation of such interactions for medical imaging and cancer treatment. Topics in medical imaging include X-ray imaging and radionuclide imaging, as well as advanced technologies that provide three-dimensional images, including X-ray computed tomography (CT), single photon emission computed tomography (SPECT), positron emission tomography (PET), magnetic resonance imaging (MRI), and ultrasonic imaging.

Instructor(s): S. Armato, P. La Riviere Terms Offered: Spring

Prerequisite(s): PHYS 23500. This course does not meet requirements for the Biological Sciences major. Students majoring in physics may use this course either as an elective or as one of the topics courses to meet the general education requirement in the Biological Sciences.

Equivalent Course(s): MPHY 32600, MPHY 29326

BIOS 29327. Topics in Clinical Research. 100 Units.

This course provides an overview of clinical research subject matter from the history and ethics of clinical research to the types and practice of contemporary clinical research. How does clinical research differ from other research traditions? What is special about clinical research? What types of questions can be answered by clinical research (what questions not)? What types of ethical oversight over the responsible conduct of research have arisen over the years? We will learn how to read and critique clinical research, survey the major types of clinical research designs, and the differences between hypothesis generation and hypothesis testing. Finally, we provide an overview of the mechanics of developing and implementing clinical research, including grant writing, regulatory issues, and quality assurance. Along the way, we will be teaching core statistical concepts including prevalence, risk ratios, and sensitivity and validation techniques. The objectives are for students to obtain an understanding of how and why to perform clinical research and to do so in an ethical and responsible manner.

Instructor(s): Valerie Press Terms Offered: Spring. Offered 2020

Prerequisite(s): Completed general education requirement in the social sciences. This course does not meet requirements for the Biological Sciences major.

Equivalent Course(s): CCTS 21003

BIOS 29329. Clinical and Health Services Research: Methods and Applications. 100 Units.

This course will introduce the interdisciplinary field of clinically-oriented health services research with a focus on policy-related implications. Through exposure to theoretical foundations, methodologies, and applications, students without significant investigative experience will learn about the design and conduct of research studies. We will cover the integration of research within the stages of translational medicine, and how science conducted across the translational medicine spectrum informs policy through purveyors of clinical services (e.g. physicians, hospitals), government, insurers, and professional societies. We will use the examples of postmenopausal hormone replacement therapy and autologous bone marrow transplantation to illustrate pitfalls in the progression from basic science research to clinical trials leading to diffusion in clinical medicine that can complicate the creation of logical, evidence-based practice guidelines, reimbursement, and clinical practice.

Instructor(s): Greg Ruhnke Terms Offered: Spring

Equivalent Course(s): CCTS 21007, HLTH 21007, PBPL 23007, CCTS 43007

BIOS 29814. Global Health Sciences III: Biological and Social Determinants of Health. 100 Units.

Global health is an interdisciplinary and empirical field, requiring holistic and innovative approaches to navigate an ever-changing environment in the pursuit of health equity. This course will emphasize specific health challenges facing vulnerable populations in low resource settings including in the United States and the large scale social, political, and economic forces that contribute to them through topical events and case studies. Students will study the importance of science and technology, key institutions and stakeholders; environmental impacts on health; ethical considerations in research and interventions; maternal and child health; health and human rights; international legal frameworks and global health diplomacy. Students will gain skills in technical writing as they construct position statements and policy briefs on global health issues of interest. Career opportunities in global health will be explored throughout the course. Instructor(s): C. Olopade, O. Olopade Terms Offered: Spring Winter. This course is offered every Spring quarter on campus and every Winter quarter in Paris.

Prerequisite(s): This course does not meet the requirements for the Biological Sciences major.

Equivalent Course(s): CCTS 42003, CCTS 22003

Independent Study and Research Courses**BIOS 00199-00299**

Students pursuing independent research in the lab of a BSD faculty member may obtain credit by enrolling in the following courses. These courses cannot be counted towards the major in Biological Sciences.

BIOS 00199. Undergraduate Research. 100 Units.

This course may be elected for up to three quarters. Before Friday of fifth week of the quarter in which they register, students must submit a one-page summary of the research that they are planning to their research sponsor and to the director of undergraduate research and honors. A detailed two to three page summary on the completed work must be submitted to the research sponsor and the Master of BSCD before Friday of examination week.

Instructor(s): BSCD Master Terms Offered: Autumn, Spring, Summer, Winter

Prerequisite(s): Consent of research sponsor and the Master of BSCD.

Note(s): Students are required to submit the College Reading and Research Course Form. This course is graded P/F. This course does not meet requirements for the biological sciences major.

BIOS 00206. Readings: Biology. 100 Units.

Students may register for only one BIOS 00206 tutorial per quarter. Enrollment must be completed by the end of the second week of the quarter. This tutorial offers individually designed readings.

Terms Offered: Summer, Autumn, Winter, Spring

Prerequisite(s): Consent of faculty sponsor

Note(s): Students are required to submit the College Reading and Research Course Form. This course is graded P/F. This course does not meet requirements for the biological sciences major.

BIOS 00296. Undergraduate Honors Research. 100 Units.

This course is required for students accepted into the BSCD Research Honors program. Students must register for this course both Autumn and Winter Quarters of their fourth year. This course can be counted toward the Biological Sciences major and may be counted among the three upper-level courses required for the BS. See also bscd.uchicago.edu/page/honors-biology. Quality grade. Prerequisite(s): Consent Only. Acceptance in BSCD Honors Research Program.

Instructor(s): S. Kron Terms Offered: Autumn, Winter

Prerequisite(s): Consent Only. Acceptance in BSCD Honors Research Program.

BIOS 00299. Advanced Research: Biological Sciences. 100 Units.

Before Friday of fifth week of the quarter in which they register, students must submit a one-page summary of the research that they are planning to their research sponsor and to the director of undergraduate research and honors. A detailed two to three page summary on the completed work must be submitted to the research sponsor and the Master of BSCD before Friday of examination week. This course does may be counted as a general elective but does not meet requirements for the Biological Sciences major. In the first quarter of registration, students must submit College Reading and Research form to their research sponsor and the director of undergraduate research and honors.

Instructor(s): BSCD Master Terms Offered: Autumn, Spring, Summer, Winter

Prerequisite(s): Fourth-year standing and consent of research sponsor and Master of BSCD.

Note(s): Students are required to submit the College Reading and Research Course Form. This course is graded P/F.

Graduate-Level Courses

Many graduate-level courses in the Division of the Biological Sciences are open to qualified College students. Students should consult their Advisers, the BSCD office, or the various departments and committees in the division to identify appropriate courses.

Biological Sciences Courses: Organized by Quarter Offered

The following list provides information for students who are planning programs of study. Letters after course titles refer to the subject matter presented in the course: (C) Cell and Molecular, Genetics, Developmental Biology, or Biochemistry; (CI) Computer Intensive; (E&E) Ecology and Evolution; (F) Fundamentals Sequence; (MIV) Microbiology, Immunology, or Virology; (MBL) course given at Marine Biological Laboratory, Woods Hole, MA; (N) Neuroscience; (O) Organismal; (SB) Systems Biology; and (S) Specialized. L indicates courses with laboratory.

Autumn Quarter

- 20173. Human Physiology. L. (F)
- 20187. Fundamentals of Genetics. L. (F)
- 20196. Ecology and Conservation. L. (F)
- 20200. Introduction to Biochemistry. L. (F)
- 20234. Molecular Biology of the Cell. L. (F)
- 20242. Principles of Physiology. L. (F)
- 21236. Genetics of Model Organisms. (C)
- 21306. Human Genetics and Evolution. (C)
- 21416. Stem Cells and Regeneration. (C)
- 22249. Principles of Toxicology. (O)
- 22265. Human Origins: Milestones in Human Evolution and the Fossil Record. (E&E)
- 22306. Evolution and Development. (O)
- 23261. Invertebrate Paleobiology and Evolution. (E&E)
- 23262. Mammalian Evolutionary Biology. L. (E&E)
- 23266. Evolutionary Adaptation. (E&E)
- 23404. Reconstructing the Tree of Life: An Introduction to Phylogenetics. (E&E)
- 24208. Survey of Systems Neuroscience. (N)
- 24248. Biological Clocks and Behavior. (N)
- 25206. Fundamentals of Bacterial Physiology. (MIV)
- 25226. Endocrinology I: Cell Signaling. (MIV)
- 25256. Immunobiology. (MIV)
- 25260. Host Pathogen Interactions. (MIV)
- 25308. Heterogeneity in Human Cancer: Etiology and Treatment. (MIV)
- 26120. An Introduction to Bioinformatics and Proteomics. L. (CI)
- 26210. Mathematical Models for Biological Sciences I. (CI)
- 26318. Fundamentals of Biological Data Analysis. (CI)
- 27721. Observing Proteins in Action: How to Design and Build Your Own Instruments. (MBL)
- 27723. Biodiversity and Genomics: Exploring the Marine Animal Diversity of Woods Hole Using Molecular Tools. (MBL)

27810. Epidemiology and Population Health: Global Health Sciences I

29271. The Psychology and Neurobiology of Stress. (S)

29313. Medical Ethics: Central Topics. (S)

Winter Quarter

20152. Introduction to Quantitative Modeling in Biology. L. (Advanced) (F)

20153. Fundamentals of Ecology and Evolution. (F)

20170. Microbial and Human Cell Biology. L. (F)

20175. Biochemistry and Nutrition. (F)

20188. Fundamentals of Physiology. L. (F)

20189. Fundamentals of Developmental Biology. L. (F)

20235. Biological Systems. L. (F)

21216. Introductory Statistical Genetics. (C)

21229. Genome Informatics: How Cells Reorganize Genomes. (C)
21237. Developmental Mechanisms. (C)
21238. Cell Biology. (C)
21358. Simulation, Modeling, and Computation in Biophysics. (C)
21360. Advanced Molecular Biology. (C)
21415. Stem Cells in Development and Diseases. (C)
21418. Historical and Conceptual Foundations of Evolutionary Development. (C)
21508. Cellular Engineering. (C)
22233. Comparative Vertebrate Anatomy. (O)
22250. Chordates: Evolution and Comparative Anatomy. (O)
23247. Bioarchaeology and the Human Skeleton. (E&E)
23249. Animal Behavior. (E&E)
23258. Molecular Evolution I: Fundamentals and Principles. (E&E)
23289. Marine Ecology. (E&E)
23365. Evolutionary and Genomic Medicine I. (E&E)
23406. Biogeography. (E&E)
24217. Conquest of Pain. (N)
24231. Methods in Computational Neuroscience. L. (N)
24232. Computational Approaches to Cognitive Neuroscience. (N)
24249. Neurobiology of Seeing. (N)
25108. Cancer Biology. (MIV)
25216. Molecular Basis of Bacterial Disease. (MIV)
25227. Endocrinology II: Systems and Physiology. (MIV)
25258. Immunopathology. (MIV)
25327. Health Disparities in Breast Cancer. (MIV)
25407. Organ Transplantation. (MIV)
26121. Introduction to Transcriptomics. (CI)
26211. Mathematical Models for Biological Sciences II. (CI)
26403. Quantitative Immunobiology. (CI)
27811. Microbiology: Global Health Sciences II. (MIV)
29142. From Fossils to Fermi's Paradox: Origin and Evolution of Intelligent Life. (S)
29294. Introduction to Global Health. (S)
29300. Biological Psychology. (S)
29314. Medical Ethics: Central Topics. (S)
29323. Health Care and the Limits of State Action. (S)

Spring Quarter

20151. Introduction to Quantitative Modeling in Biology. L. (Basic) (F)
20171. Human Genetics and Developmental Biology. L. (F)
20172. Mathematical Modeling for Pre-Med Students I. L. (F)
20186. Fundamentals of Cell and Molecular Biology. L. (F)
20188. Fundamentals of Physiology. L. (F)

20189. Fundamentals of Developmental Biology. L. (F)
20198. Biodiversity. L. (F)
20200. Introduction to Biochemistry. L. (F)
20236. Biological Dynamics. L. (F)
21249. Organization, Expression, and Transmission of Genome Information. (C)
21317. Topics in Biological Chemistry. (C)
21328. Biophysics of Biomolecules. (C)
21349. Protein Structure and Functions in Medicine. (C)
21356. Vertebrate Development. (O)
21407. Image Processing in Biology. (O)
21506. Biological Physics. (C)
21507. Selected Topics in Molecular Engineering. (C)
22236. Reproductive Biology of Primates. (O)
22245. Biomechanics: How Life Works. (O)
22260. Vertebrate Structure and Function. (O)
23100. Dinosaur Science. (O)
23232. Ecology and Evolution in the Southwest. (E&E)
23233. Ecology and Evolution in the Southwest: Field School. (E&E)
23242. Primate Evolution and the Roots of Human Biology. (E&E)
23252. Field Ecology. L. (E&E)
23254. Mammalian Ecology. L. (E&E)
23299. Plant Development and Molecular Genetics. (E&E)
23409. The Ecology and Evolution of Infectious Diseases. (E&E)
23410. Complex Interactions: Coevolution, Parasites, Mutualists, and Cheaters. (E&E)
24408. Signal Analysis and Modeling for Neuroscientists. L. (N)
25109. Topics in Reproductive Biology and Cancer. (MIV)
25126. Animal Models of Human Disease. (MIV)
25228. Endocrinology III: Human Disease. (MIV)
25266. Molecular Immunology. (MIV)
25287. Introduction to Virology. (MIV)
25326. Tumor Microenvironment and Metastasis. (MIV)
25420. Microbial 'Omics. (MIV)
28407. Genomics and Systems Biology. (SB)
29326. Introduction to Medical Physics and Medical Imaging. (S)
29327. Topics in Clinical Research. (S)
29814. Biological and Social Determinants of Health: Global Health Sciences III. (S)

Chemistry

Department Website: <http://chemistry.uchicago.edu/kb> (<http://chemistry.uchicago.edu/kb/>)

Program of Study

Chemistry is concerned with the preparation, composition, and structure of matter and with the equilibrium and kinetic laws that govern its transformations. The BA and BS degrees in chemistry are designed to provide a broad foundation in the three principal branches of the science: inorganic, organic, and physical chemistry. Analytical chemistry, often regarded as an independent branch, is incorporated into the program. Both curricula discuss experimental and theoretical work and emphasize their interdependence. Both degree programs prepare the student for a career in chemistry. However, the BS degree offers a more intensive program of study. The BA degree also offers thorough study in the field of chemistry, but it provides a wide opportunity for elective freedom and for the pursuit of interdisciplinary interests in areas such as biochemistry, biophysics, chemical physics, geochemistry, premedicine, and education.

Program Requirements

The principal distinction between the BA and BS programs is the number of chemistry courses required.

Program Requirements: BA A minimum of eight courses in chemistry beyond the general education requirement (which should be taken in the first year) is required for the BA degree.

Program Requirements: BS A minimum of twelve courses in chemistry beyond the general education requirement (which should be taken in the first year) is typically required for the BS degree.

Summary of Requirements: BA in Chemistry

GENERAL EDUCATION

CHEM 11100-11200	Comprehensive General Chemistry I-II ^{†**}	200
One of the following sequences:		200
MATH 15100-15200	Calculus I-II	
MATH 16100-16200	Honors Calculus I-II [†]	
MATH 13100-13200	Elementary Functions and Calculus I-II (requires a grade of A- or higher)	
Total Units		400

MAJOR

One of the following: ^{†*}		100
CHEM 11300	Comprehensive General Chemistry III	
CHEM 12300	Honors General Chemistry III	
One of the following:		100
MATH 18300	Mathematical Methods in the Physical Sciences I	
STAT 24300	Numerical Linear Algebra	
MATH 19620	Linear Algebra [†]	
MATH 20250	Abstract Linear Algebra	
MATH 18400 & MATH 18500	Mathematical Methods in the Physical Sciences II and Mathematical Methods in the Physical Sciences III	200
PHYS 13100-13200-13300	Mechanics; Electricity and Magnetism; Waves, Optics, and Heat (or higher)	300
CHEM 20100	Inorganic Chemistry I	100
The following sequence:		300
CHEM 22000-22100-22200	Organic Chemistry I-II-III	
CHEM 26100 & CHEM 26200	Quantum Mechanics and Thermodynamics	200
CHEM 26700	Experimental Physical Chemistry	100
Total Units		1400

Summary of Requirements: BS in Chemistry

GENERAL EDUCATION

CHEM 11100-11200	Comprehensive General Chemistry I-II ^{†**}	200

CHEM 26800	Quantum Molecular and Materials Modeling	
Total Units		1800

[†] Credit may be granted by examination.

^{*} See following sections on Advanced Placement and Accreditation Examinations.

[‡] CHEM 10100-10200 Introductory General Chemistry I-II and CHEM 12100-12200 Honors General Chemistry I-II also satisfy this requirement. Enrollment into a particular sequence is based on chemistry placement or AP score.

NOTE: The three-quarter sequence MATH 20300-20400-20500 Analysis in Rn I-II-III may be substituted for MATH 18400 Mathematical Methods in the Physical Sciences II; please note that MATH 20250 Abstract Linear Algebra or STAT 24300 Numerical Linear Algebra is a prerequisite for MATH 20400. MATH 27300 Basic Theory of Ordinary Differential Equations may be substituted for MATH 20100 Mathematical Methods for Physical Sciences II. MATH 19620 Linear Algebra is recommended for Chemistry majors who plan to pursue advanced study in physical chemistry.

Advanced Placement

Students who earn a score of 5 on the AP test in chemistry are given credit for CHEM 11100 Comprehensive General Chemistry I. Students with CHEM 11100 Comprehensive General Chemistry I credit may join CHEM 11200 Comprehensive General Chemistry II in the Winter Quarter. A score of 5 on the AP exam also permits students to take CHEM 12100-12200-12300 Honors General Chemistry I-II-III; students may opt to begin with CHEM 12100 Honors General Chemistry I in the Autumn Quarter or CHEM 12200 Honors General Chemistry II in the Winter Quarter. Students who complete the first quarter of Comprehensive General Chemistry or Honors General Chemistry forgo the AP credit. Note that no credit is given for IB chemistry.

Accreditation

The Department of Chemistry also administers accreditation examinations for CHEM 11100-11200-11300 Comprehensive General Chemistry I-II-III to entering College students. Only incoming first-year and transfer students are eligible to take these examinations, which are offered at the beginning of Autumn Quarter. Students may receive credit on the basis of their performance on accreditation examinations.

Grading

Students majoring in Chemistry must earn (1) a major GPA of 2.0 or higher and (2) a C- or higher in all courses required by the Chemistry major, including those courses counting toward general education requirements in the mathematical and physical sciences. Nonmajors may take chemistry courses on a P/F basis; only grades of C- or higher constitute passing work.

Undergraduate Research and Honors

By their third year, students majoring in chemistry are strongly encouraged to participate in research with a faculty member. For more information on research opportunities, visit chemistry.uchicago.edu/kb (<http://chemistry.uchicago.edu/kb/>).

Excellent students who pursue a substantive research project with a faculty member of the Department of Chemistry should plan to submit an honors thesis based on their work. Students usually begin this research program during their third year and continue through the following summer and their fourth year. Students who wish to be considered for honors are expected to complete their arrangements with the departmental counselor before the end of their third year and to register for one quarter of CHEM 29900 Advanced Research in Chemistry or one year of CHEM 29600 Research in Chemistry during their third or fourth years.

To be eligible to receive honors, students in the BA or BS degree program in chemistry must write a creditable honors paper describing their research. The paper must be submitted before the deadline established by the departmental counselor and must be approved by the Department of Chemistry. In addition, an oral presentation of the research is required. The research paper or project used to meet this requirement may not be used to meet the BA paper or project requirement in another major.

To earn a BA or BS degree with honors in chemistry, students must also have an overall GPA of 3.0 or higher.

Sample Program

The following is a suggested schedule for completing a BA or BS degree in chemistry:

First Year

CHEM 10100-CHEM 10200-CHEM 11300 Introductory General Chemistry I-II + Comprehensive General Chemistry III, or CHEM 11100-11200-11300 Comprehensive General Chemistry I-II-III, or CHEM 12100-12200-12300 Honors General Chemistry I-II-III

MATH 15100-15200-15300 Calculus I-II-III or equivalent

Second Year

CHEM 22000-22100-22200 Organic Chemistry I-II-III

MATH 18400 Mathematical Methods in the Physical Sciences II and MATH 18500 Mathematical Methods in the Physical Sciences III

Physics sequence (three quarters)

Third Year

CHEM 26100-26200-26300 Quantum Mechanics; Thermodynamics; Chemical Kinetics and Dynamics (if physics is taken in the second year)

CHEM 20100 Inorganic Chemistry I

CHEM 20200 Inorganic Chemistry II, CHEM 23300 Intermediate Organic Chemistry, or CHEM 26300 Chemical Kinetics and Dynamics (for BS)

Fourth Year

CHEM 26100-26200-26300 Quantum Mechanics; Thermodynamics; Chemical Kinetics and Dynamics (if physics taken in the third year)

CHEM 23300 Intermediate Organic Chemistry or CHEM 26300 Chemical Kinetics and Dynamics (for BS)

CHEM 22700 Advanced Organic/Inorganic Laboratory or CHEM 26800 Quantum Molecular and Materials Modeling (for BS)

Joint Degree Programs

Students who achieve advanced standing through their performance on placement examinations or accreditation examinations may consider the formulation of a four-year degree program that leads to the concurrent award of the BS and MS degrees in chemistry. For more information, consult John Anderson at jsanderson@uchicago.edu and Vera Dragisich at vdragisi@uchicago.edu in the Chemistry Department.

Laboratory Safety

In chemistry labs, safety goggles must be worn at all times. Students who require prescriptive lenses may wear prescription glasses under goggles; contact lenses may not be worn. Exceptions for medical reasons must be obtained from the lab director.

Minor in Chemistry

Before a student can declare the minor in chemistry, the student must complete the general education requirements in chemistry. A student must receive the director of undergraduate studies' approval for the minor program; this is done through

the Consent to Complete a Minor Program (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf) form, which can be obtained from the student's College adviser. Once signed by the director, this form must then be returned to the student's College adviser by the end of Spring Quarter of the student's third year.

To earn the minor in chemistry, a student must complete five courses as outlined below. All lecture courses in the 20000 level (or above) in chemistry can be used as electives for the minor; the student has to make sure that prerequisites for the chosen courses are fulfilled. Before meeting with the director, students should invest some thought into which courses they would like to complete for the minor and how those courses relate as a set.

Courses in the minor program may not be (1) double counted with the student's major(s) or with other minors, or (2) counted toward general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers. Students minoring in chemistry must earn (1) a minor GPA of 2.0 or higher and (2) a C– or higher in all courses required by the chemistry minor.

Summary of Requirements: Minor in Chemistry

One of the following *	100
CHEM 11300	Comprehensive General Chemistry III
CHEM 12300	Honors General Chemistry III
Four additional 20000-level (or higher) courses in chemistry	400
Total units	500

* If this course is already counted toward the student's major, a 20000-level (or higher) chemistry course can be used as a substitution for this requirement.

Below are some examples of courses that would work as a set:

1. Organic Chemistry Courses

CHEM 22000	Organic Chemistry I	100
CHEM 22100	Organic Chemistry II	100
CHEM 22200	Organic Chemistry III	100
CHEM 23300	Intermediate Organic Chemistry	100

2. Organic/Inorganic Chemistry Courses

CHEM 22000	Organic Chemistry I	100
CHEM 22100	Organic Chemistry II	100
CHEM 20100	Inorganic Chemistry I	100
CHEM 20200	Inorganic Chemistry II	100
OR		
CHEM 22000	Organic Chemistry I	100
CHEM 22100	Organic Chemistry II	100
CHEM 22200	Organic Chemistry III	100
CHEM 20100	Inorganic Chemistry I	100

3. Physical Chemistry Courses

CHEM 26100	Quantum Mechanics	100
CHEM 26200	Thermodynamics	100
CHEM 26300	Chemical Kinetics and Dynamics	100
CHEM 26700	Experimental Physical Chemistry	100
OR		
CHEM 26100	Quantum Mechanics	100
CHEM 26200	Thermodynamics	100
CHEM 26300	Chemical Kinetics and Dynamics	100
CHEM 26800	Quantum Molecular and Materials Modeling	100

4. Organic/Physical Chemistry Courses

CHEM 22000	Organic Chemistry I	100
CHEM 22100	Organic Chemistry II	100
CHEM 26100	Quantum Mechanics	100
CHEM 26200	Thermodynamics	100

OR

CHEM 22000	Organic Chemistry I	100
CHEM 26100	Quantum Mechanics	100
CHEM 26200	Thermodynamics	100
CHEM 26300	Chemical Kinetics and Dynamics	100

5. Inorganic/Physical Chemistry Courses

CHEM 20100	Inorganic Chemistry I	100
CHEM 26100	Quantum Mechanics	100
CHEM 26200	Thermodynamics	100
CHEM 26300	Chemical Kinetics and Dynamics	100

OR

CHEM 20100	Inorganic Chemistry I	100
CHEM 20200	Inorganic Chemistry II	100
CHEM 26200	Thermodynamics	100
CHEM 26300	Chemical Kinetics and Dynamics	100

Chemistry Courses**CHEM 00111-00112-00113. Collaborative Learning in General Chemistry I-II-III.**

This is an optional, limited enrollment workshop for students concurrently enrolled in CHEM 11100-11200-11300 Comprehensive General Chemistry I-II-III. Undergraduate Team Leaders guide small groups of students in weekly workshops. The workshops focus on the analysis of problem sets designed to augment and complement the Comprehensive General Chemistry material. Instead of tutoring or lecturing, Team Leaders coach students as they work collaboratively in small groups on the assigned problems by referencing class lectures and assigned reading materials. The workshops do not repeat but extend the substantive discussions and lectures of the Comprehensive General Chemistry course. Additionally, these workshops aim to develop communication skills, cooperative attitudes, and promote a teamwork environment. Because the benefits of collaborative learning can only be gained through consistent effort and attendance, this zero-credit course is graded P/F based on the student's level of participation and attendance.

CHEM 00111. Collaborative Learning in General Chemistry I. 000 Units.

This is an optional, limited enrollment workshop for students concurrently enrolled in CHEM 11100-11200-11300 Comprehensive General Chemistry I-II-III. Undergraduate Team Leaders guide small groups of students in weekly workshops. The workshops focus on the analysis of problem sets designed to augment and complement the Comprehensive General Chemistry material. Instead of tutoring or lecturing, Team Leaders coach students as they work collaboratively in small groups on the assigned problems by referencing class lectures and assigned reading materials. The workshops do not repeat but extend the substantive discussions and lectures of the Comprehensive General Chemistry course. Additionally, these workshops aim to develop communication skills, cooperative attitudes, and promote a teamwork environment. Because the benefits of collaborative learning can only be gained through consistent effort and attendance, this zero-credit course is graded P/F based on the student's level of participation and attendance. Prerequisite(s): Corequisite: Concurrent enrollment in CHEM 11100 Note(s): Enrollment in CHEM 00111 is section specific: CHEM 11100-01 students should enroll in CHEM 00111-01 while CHEM 11100-02 students should enroll in CHEM 00111-02.

Instructor(s): B. Ratliff Terms Offered: Autumn

Prerequisite(s): Corequisite: Concurrent enrollment in CHEM 11100

Note(s): Enrollment in CHEM 00111 is section specific: CHEM 11100-01 students should enroll in CHEM 00111-01 while CHEM 11100-02 students should enroll in CHEM 00111-02.

CHEM 00112. Collaborative Learning in General Chemistry II. 000 Units.

This is an optional, limited enrollment workshop for students concurrently enrolled in CHEM 11100-11200-11300 Comprehensive General Chemistry I-II-III. Undergraduate Team Leaders guide small groups of students in weekly workshops. The workshops focus on the analysis of problem sets designed to augment and complement the Comprehensive General Chemistry material. Instead of tutoring or lecturing, Team Leaders coach students as they work collaboratively in small groups on the assigned problems by referencing class lectures and assigned reading materials. The workshops do not repeat but extend the substantive discussions and lectures of the Comprehensive General Chemistry course. Additionally, these workshops aim to develop communication skills, cooperative attitudes, and promote a teamwork environment. Because the benefits of collaborative learning can only be gained through consistent effort and attendance, this zero-credit course is graded P/F based on the student's level of participation and attendance. Prerequisite(s): Corequisite: Concurrent enrollment in CHEM 11100 Note(s): Enrollment in CHEM 00111 is section specific: CHEM 11100-01 students should enroll in CHEM 00111-01 while CHEM 11100-02 students should enroll in CHEM 00111-02.

Instructor(s): B. Ratliff Terms Offered: Winter

Prerequisite(s): Corequisite: Concurrent enrollment in CHEM 11200

Note(s): Enrollment in CHEM 00112 is section specific: CHEM 11200-01 students should enroll in CHEM 00112-01 while CHEM 11200-02 students should enroll in CHEM 00112-02. CHEM 00111 is not a prerequisite for this course.

CHEM 00113. Collaborative Learning in General Chemistry III. 000 Units.

This is an optional, limited enrollment workshop for students concurrently enrolled in CHEM 11100-11200-11300 Comprehensive General Chemistry I-II-III. Undergraduate Team Leaders guide small groups of students in weekly workshops. The workshops focus on the analysis of problem sets designed to augment and complement the Comprehensive General Chemistry material. Instead of tutoring or lecturing, Team Leaders coach students as they work collaboratively in small groups on the assigned problems by referencing class lectures and assigned reading materials. The workshops do not repeat but extend the substantive discussions and lectures of the Comprehensive General Chemistry course. Additionally, these workshops aim to develop communication skills, cooperative attitudes, and promote a teamwork environment. Because the benefits of collaborative learning can only be gained through consistent effort and attendance, this zero-credit course is graded P/F based on the student's level of participation and attendance.

Instructor(s): B. Ratliff Terms Offered: Spring

Prerequisite(s): Corequisite: Concurrent enrollment in CHEM 11300

Note(s): Enrollment in CHEM 00113 is section specific: CHEM 11300-01 students should enroll in CHEM 00113-01 while CHEM 11300-02 students should enroll in CHEM 00113-02. CHEM 00111 and CHEM 00112 are not prerequisites for this course.

CHEM 00220-00221-00222. Collaborative Learning in Organic Chemistry I-II-III.

This is an optional, limited enrollment workshop for students concurrently enrolled in CHEM 22000-22100-22200 Organic Chemistry I-II-III. Undergraduate Team Leaders guide small groups of students in weekly workshops. The workshops focus on the analysis of problem sets designed to augment and complement the Organic Chemistry material. Instead of tutoring or lecturing, Team Leaders coach students as they work collaboratively in small groups on the assigned problems by referencing class lectures and assigned reading materials. The workshops do not repeat but extend the substantive discussions and lectures of the Organic Chemistry course. Additionally, these workshops aim to develop communication skills, cooperative attitudes, and promote a teamwork environment. Because the benefits of collaborative learning can only be gained through consistent effort and attendance, this zero-credit course is graded P/F based on the student's level of participation and attendance.

CHEM 00220. Collaborative Learning in Organic Chemistry I. 000 Units.

This is an optional, limited enrollment workshop for students concurrently enrolled in CHEM 22000-22100-22200 Organic Chemistry I-II-III. Undergraduate Team Leaders guide small groups of students in weekly workshops. The workshops focus on the analysis of problem sets designed to augment and complement the Organic Chemistry material. Instead of tutoring or lecturing, Team Leaders coach students as they work collaboratively in small groups on the assigned problems by referencing class lectures and assigned reading materials. The workshops do not repeat but extend the substantive discussions and lectures of the Organic Chemistry course. Additionally, these workshops aim to develop communication skills, cooperative attitudes, and promote a teamwork environment. Because the benefits of collaborative learning can only be gained through consistent effort and attendance, this zero-credit course is graded P/F based on the student's level of participation and attendance. Prerequisite(s): Corequisite: Concurrent enrollment in CHEM 22000

Instructor(s): B. Ratliff Terms Offered: Autumn

Prerequisite(s): Corequisite: Concurrent enrollment in CHEM 22000

CHEM 00221. Collaborative Learning in Organic Chemistry II. 000 Units.

Instructor(s): B. Ratliff Terms Offered: Winter

Prerequisite(s): Corequisite: Concurrent enrollment in CHEM 22100

Note(s): CHEM 00220 is not a prerequisite for this course.

CHEM 00222. Collaborative Learning in Organic Chemistry III. 000 Units.

This is an optional, limited enrollment workshop for students concurrently enrolled in CHEM 22000-22100-22200 Organic Chemistry I-II-III. Undergraduate Team Leaders guide small groups of students in weekly workshops. The workshops focus on the analysis of problem sets designed to augment and complement the Organic Chemistry material. Instead of tutoring or lecturing, Team Leaders coach students as they work collaboratively in small groups on the assigned problems by referencing class lectures and assigned reading materials. The workshops do not repeat but extend the substantive discussions and lectures of the Organic Chemistry course. Additionally, these workshops aim to develop communication skills, cooperative attitudes, and promote a teamwork environment. Because the benefits of collaborative learning can only be gained through consistent effort and attendance, this zero-credit course is graded P/F based on the student's level of participation and attendance.

Instructor(s): B. Ratliff Terms Offered: Spring

Prerequisite(s): Corequisite: Concurrent enrollment in CHEM 22200

Note(s): CHEM 00220 and CHEM 00221 are not prerequisites for this course.

CHEM 10100-10200-11300. Introductory General Chemistry I-II; Comprehensive General Chemistry III.

This three-quarter sequence is a systematic introduction to chemistry for beginning students in chemistry or for those whose exposure to the subject has been moderate. We cover atomic and molecular theories, chemical periodicity, chemical reactivity and bonding, chemical equilibria, acid-base equilibria, solubility equilibria, phase equilibria, thermodynamics, electrochemistry, kinetics, quantum mechanics, and nuclear chemistry. Examples are drawn from chemical, biological, and materials systems. The laboratory portion includes an introduction to quantitative measurements, investigation of the properties of the important elements and their compounds, and experiments associated with the common ions and their separation and identification. Apart from one discussion session per week and a laboratory component, special emphasis

on scientific problem-solving skills is made through two additional structured learning sessions per week devoted to quantitative reasoning. Attendance at discussion, structured learning, and laboratory sessions is mandatory. The first two courses in this sequence meet the general education requirement in the physical sciences. FOR THE THIRD (SPRING) QUARTER OF THE SEQUENCE, STUDENTS WILL ENROLL IN CHEM 11300.

CHEM 10100. Introductory General Chemistry I. 100 Units.

This three-quarter sequence is a systematic introduction to chemistry for beginning students in chemistry or for those whose exposure to the subject has been moderate. We cover atomic and molecular theories, chemical periodicity, chemical reactivity and bonding, chemical equilibria, acid-base equilibria, solubility equilibria, phase equilibria, thermodynamics, electrochemistry, kinetics, quantum mechanics, and nuclear chemistry. Examples are drawn from chemical, biological, and materials systems. The laboratory portion includes an introduction to quantitative measurements, investigation of the properties of the important elements and their compounds, and experiments associated with the common ions and their separation and identification. Apart from one discussion session per week and a laboratory component, special emphasis on scientific problem-solving skills is made through two additional structured learning sessions per week devoted to quantitative reasoning. Attendance at discussion, structured learning, and laboratory sessions is mandatory. FOR THE THIRD (SPRING) QUARTER OF THE SEQUENCE, STUDENTS WILL ENROLL IN CHEM 11300. Prerequisite(s): Enrollment limited to first-year students Note(s): Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences.

Instructor(s): M. Goetz. L: M. Zhao. Terms Offered: Autumn

Prerequisite(s): Enrollment limited to first-year students

Note(s): Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences.

CHEM 10200. Introductory General Chemistry II. 100 Units.

This three-quarter sequence is a systematic introduction to chemistry for beginning students in chemistry or for those whose exposure to the subject has been moderate. We cover atomic and molecular theories, chemical periodicity, chemical reactivity and bonding, chemical equilibria, acid-base equilibria, solubility equilibria, phase equilibria, thermodynamics, electrochemistry, kinetics, quantum mechanics, and nuclear chemistry. Examples are drawn from chemical, biological, and materials systems. The laboratory portion includes an introduction to quantitative measurements, investigation of the properties of the important elements and their compounds, and experiments associated with the common ions and their separation and identification. Apart from one discussion session per week and a laboratory component, special emphasis on scientific problem-solving skills is made through two additional structured learning sessions per week devoted to quantitative reasoning. Attendance at discussion, structured learning, and laboratory sessions is mandatory. FOR THE THIRD (SPRING) QUARTER OF THE SEQUENCE, STUDENTS WILL ENROLL IN CHEM 11300.

Instructor(s): L. Yu. L: M. Zhao. Terms Offered: Spring

Prerequisite(s): Good performance on the mathematics/calculus and chemistry placement tests

Note(s): Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences.

CHEM 11100-11200-11300. Comprehensive General Chemistry I-II-III.

Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences. This three-quarter sequence is a comprehensive survey of modern descriptive, inorganic, and physical chemistry for students with a good secondary school exposure to general chemistry. We cover atomic and molecular theories, chemical periodicity, chemical reactivity and bonding, chemical equilibria, acid-base equilibria, solubility equilibria, phase equilibria, thermodynamics, electrochemistry, kinetics, quantum mechanics, and nuclear chemistry. Examples are drawn from chemical, biological, and materials systems. The laboratory portion includes an introduction to quantitative measurements, investigation of the properties of the important elements and their compounds, and experiments associated with the common ions and their separation and identification. Attendance at one discussion session per week and laboratory sessions is required.

CHEM 11100. Comprehensive General Chemistry I. 100 Units.

Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences. This three-quarter sequence is a comprehensive survey of modern descriptive, inorganic, and physical chemistry for students with a good secondary school exposure to general chemistry. We cover atomic and molecular theories, chemical periodicity, chemical reactivity and bonding, chemical equilibria, acid-base equilibria, solubility equilibria, phase equilibria, thermodynamics, electrochemistry, kinetics, quantum mechanics, and nuclear chemistry. Examples are drawn from chemical, biological, and materials systems. Attendance at discussion, structured learning, and laboratory sessions is mandatory. FOR THE THIRD (SPRING) QUARTER OF THE SEQUENCE, STUDENTS WILL ENROLL IN CHEM 11300.

Instructor(s): N. Scherer. L: M. Zhao. Terms Offered: Winter

Prerequisite(s): Good performance on the mathematics/calculus and chemistry placement tests

Note(s): Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences.

CHEM 11300. Comprehensive General Chemistry III. 100 Units.

This three-quarter sequence is a systematic introduction to chemistry for beginning students in chemistry or for those whose exposure to the subject has been moderate. We cover atomic and molecular theories, chemical periodicity, chemical reactivity and bonding, chemical equilibria, acid-base equilibria, solubility equilibria, phase equilibria, thermodynamics, electrochemistry, kinetics, quantum mechanics, and nuclear chemistry. Examples are drawn from chemical, biological, and materials systems. The laboratory portion includes an introduction to quantitative measurements, investigation of the properties of the important elements and their compounds, and experiments associated with the common ions and their separation and identification. Apart from one discussion session per week and a laboratory component, special emphasis on scientific problem-solving skills is made through two additional structured learning sessions per week devoted to quantitative reasoning. Attendance at discussion, structured learning, and laboratory sessions is mandatory. FOR THE THIRD (SPRING) QUARTER OF THE SEQUENCE, STUDENTS WILL ENROLL IN CHEM 11300.

Instructor(s): L. Yu. L: M. Zhao. Terms Offered: Spring

Prerequisite(s): Good performance on the mathematics/calculus and chemistry placement tests

Note(s): Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences.

CHEM 12100-12200-12300. Honors General Chemistry I-II-III.

Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences. The subject matter and general program of this sequence is similar to that of the Comprehensive General Chemistry sequence. However, this accelerated course on the subject matter is designed for students deemed well prepared for a thorough and systematic study of chemistry. Introductory materials covered in the Comprehensive General Chemistry sequence are not part of the curriculum for this sequence; instead, special topics are included in each quarter to provide an in-depth examination of various subjects of current interest in chemistry. Attendance at one discussion session per week and laboratory sessions is required.

CHEM 12100. Honors General Chemistry I. 100 Units.

Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences. The subject matter and general program of this sequence is similar to that of the Comprehensive General Chemistry sequence. However, this accelerated course on the subject matter is designed for students deemed well prepared for a thorough and systematic study of chemistry. Introductory materials covered in the Comprehensive General Chemistry sequence are not part of the curriculum for this sequence; instead, special topics are included in each quarter to provide an in-depth examination of various subjects of current interest in chemistry. Attendance at one discussion session per week and laboratory sessions is required.

Instructor(s): S. Sibener. L: M. Zhao. Terms Offered: Autumn

Prerequisite(s): Good performance on the chemistry placement test or a score of 5 on the AP chemistry test

Note(s): Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences.

CHEM 12200. Honors General Chemistry II. 100 Units.

Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences. The subject matter and general program of this sequence is similar to that of the Comprehensive General Chemistry sequence. However, this accelerated course on the subject matter is designed for students deemed well prepared for a thorough and systematic study of chemistry. Introductory materials covered in the Comprehensive General Chemistry sequence are not part of the curriculum for this sequence; instead, special topics are included in each quarter to provide an in-depth examination of various subjects of current interest in chemistry. Attendance at one discussion session per week and laboratory sessions is required.

Instructor(s): S. King. L. M. Zhao. Terms Offered: Winter

Prerequisite(s): Good performance on the chemistry placement test or a score of 5 on the AP chemistry test

Note(s): Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences.

CHEM 12300. Honors General Chemistry III. 100 Units.

Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences. The subject matter and general program of this sequence is similar to that of the Comprehensive General Chemistry sequence. Attendance at one discussion session per week and laboratory sessions is required.

Instructor(s): S. Vaikuntanathan. L. M. Zhao. Terms Offered: Spring

Prerequisite(s): Good performance on the chemistry placement test or a score of 5 on the AP chemistry test

Note(s): Enrollment by placement only. The first two courses in this sequence meet the general education requirement in the physical sciences.

CHEM 20100-20200. Inorganic Chemistry I-II.

The extraordinarily diverse chemistry of the elements is organized in terms of molecular structure, electronic properties, and chemical reactivity. CHEM 20100 concentrates on structure and bonding, solid state chemistry, and selected topics in the chemistry of the main group elements and coordination chemistry. CHEM 20200 focuses on organometallic chemistry, reactions, synthesis, and catalysis, as well as bioinorganic chemistry.

CHEM 20100. Inorganic Chemistry I. 100 Units.

CHEM 20100 concentrates on structure and bonding, solid state chemistry, and selected topics in the chemistry of the main group elements and coordination chemistry.

Instructor(s): D. Talapin. Terms Offered: Winter

Prerequisite(s): CHEM 11100-11200-11300 or equivalent, CHEM 22000 and CHEM 22100, or concurrent enrollment in CHEM 22100 or equivalent.

CHEM 20200. Inorganic Chemistry II. 100 Units.

CHEM 20200 focuses on organometallic chemistry, reactions, synthesis, and catalysis, as well as bioinorganic chemistry.

Instructor(s): J. Anderson. Terms Offered: Spring

Prerequisite(s): CHEM 20100 and CHEM 22100

CHEM 21400. Creative Machines and Innovative Instrumentation. 100 Units.

An understanding of the techniques, tricks, and traps of building creative machines and innovative instrumentation is essential for a range of fields from the physical sciences to the arts. In this hands-on, practical course, you will design and build functional devices as a means to learn the systematic processes of engineering and fundamentals of design and construction. The kinds of things you will learn may include mechanical design and machining, computer-aided design, rapid prototyping, circuitry, electrical measurement methods, and other techniques for resolving real-world design problems. In collaboration with others, you will complete a mini-project and a final project, which will involve the design and fabrication of a functional scientific instrument. The course will be taught at an introductory level; no previous experience is expected. The iterative nature of the design process will require an appreciable amount of time outside of class for completing projects. The course is open to undergraduates in all majors (subject to the pre-requisites), as well as Master's and Ph.D. students.

Instructor(s): Stephan Meyer and Scott Wakely Terms Offered: Winter

Prerequisite(s): PHYS 12200 or PHYS 13200 or PHYS 14200; or CMSC 12100 or CMSC 12200 or CMSC 12300; or consent of instructor.

Equivalent Course(s): PSMS 31400, ASTR 31400, ASTR 21400

CHEM 22000-22100-22200. Organic Chemistry I-II-III.

The fundamental structures of organic molecules and the spectroscopic methods used to define them are studied. A comprehensive understanding of the reactions and properties of organic molecules (from kinetic, thermodynamic, and mechanistic viewpoints) is developed and applied to the synthesis of organic compounds and to an appreciation of nature's important molecules.

CHEM 22000. Organic Chemistry I. 100 Units.

The fundamental structures of organic molecules and the spectroscopic methods used to define them are studied. A comprehensive understanding of the reactions and properties of organic molecules (from kinetic, thermodynamic, and mechanistic viewpoints) is developed and applied to the synthesis of organic compounds and to an appreciation of nature's important molecules.

Instructor(s): J. Piccirilli. L: V. Keller. Terms Offered: Autumn

Prerequisite(s): An average grade of C or higher in CHEM 10100-10200-11300 or CHEM 11100-11200-11300 or CHEM 12100-12200-12300, or consent of the Dept.; lab and discussion linked.

CHEM 22100. Organic Chemistry II. 100 Units.

The fundamental structures of organic molecules and the spectroscopic methods used to define them are studied. A comprehensive understanding of the reactions and properties of organic molecules (from kinetic, thermodynamic, and mechanistic viewpoints) is developed and applied to the synthesis of organic compounds and to an appreciation of nature's important molecules.

Instructor(s): S. Snyder. L: V. Keller. Terms Offered: Winter

Prerequisite(s): An average grade of C or higher in CHEM 10100-10200-10300 or CHEM 11100-11200-11300 or CHEM 12100-12200-12300, a 5 on the AP Chemistry exam, or consent of the department

Note(s): (Students who receive a grade of B+ or higher in CHEM 22000 have the option of moving into honors organic chemistry for Winter/Spring. See following listing for CHEM 23100-23200. NOTE: Most medical schools require a full academic year of organic chemistry. A lab is one afternoon a week in addition to scheduled class time each quarter.

CHEM 22200. Organic Chemistry III. 100 Units.

The fundamental structures of organic molecules and the spectroscopic methods used to define them are studied. A comprehensive understanding of the reactions and properties of organic molecules (from kinetic, thermodynamic, and mechanistic viewpoints) is developed and applied to the synthesis of organic compounds and to an appreciation of nature's important molecules.

Instructor(s): W. Tang. L: V. Keller. Terms Offered: Spring

Prerequisite(s): An average grade of C or higher in CHEM 10100-10200-10300 or CHEM 11100-11200-11300 or CHEM 12100-12200-12300, a 5 on the AP Chemistry exam, or consent of the department

Note(s): Students who receive a grade of B+ or higher in CHEM 22000 have the option of moving into honors organic chemistry for Winter/Spring. See following listing for CHEM 23100-23200.) NOTE: Most medical schools require a full academic year of organic chemistry. A lab is one afternoon a week in addition to scheduled class time each quarter.

CHEM 22700. Advanced Organic/Inorganic Laboratory. 100 Units.

This course combines a project approach with exposure to the more advanced techniques of organic and inorganic chemistry. Multistep synthesis, the synthesis of air-sensitive compounds, advanced chromatographic and spectroscopic characterization of products, and the handling of reactive intermediates are a part of the lab. Students who have previously taken Chem 299 in conjunction with conducting experimental research in organic or inorganic chemistry may, in certain circumstances, substitute this credit for the Chem 227 degree requirement. If this applies and is of interest to you, please contact Prof. John Anderson (Undergraduate Advisor for Chemistry; jsanderson@uchicago.edu) as soon as possible to discuss your situation.

Instructor(s): V. Rawal Terms Offered: Spring

Prerequisite(s): CHEM 20100 and 23300, or consent of instructor

Note(s): Consent required. Priority given to 4th and then 3rd year Chemistry/Biochemistry majors. Students in other majors will be considered only if the course has not met capacity by the start of the term.

CHEM 23000-23100-23200. Honors Organic Chemistry I-II-III.

This course studies the fundamental structures of organic molecules and the spectroscopic methods used to define. A comprehensive understanding of the reactions and properties of organic molecules (from kinetic, thermodynamic, and mechanistic viewpoints) is developed and applied to the synthesis of organic compounds and to an appreciation of nature's important molecules.

CHEM 23000. Honors Organic Chemistry I. 100 Units.

This course studies the fundamental structures of organic molecules and the spectroscopic methods used to define. A comprehensive understanding of the reactions and properties of organic molecules (from kinetic, thermodynamic, and mechanistic viewpoints) is developed and applied to the synthesis of organic compounds and to an appreciation of nature's important molecules.

Instructor(s): G. Dong. L: V. Keller Terms Offered: Autumn

Prerequisite(s): An average grade of B+ or higher in CHEM 11100-11200-11300 or equivalent, a 5 on the AP Chemistry exam, or consent of the department, and/or via placement exam.

Note(s): Students who have taken CHEM 22000 or 22100 with an average grade of B+ or higher may petition the department to move into the Honors sequence. Most medical schools require a full academic year of organic chemistry. A lab is one afternoon a week in addition to scheduled class time each quarter.

CHEM 23100. Honors Organic Chemistry II. 100 Units.

This course studies the fundamental structures of organic molecules and the spectroscopic methods used to define. A comprehensive understanding of the reactions and properties of organic molecules (from kinetic, thermodynamic, and mechanistic viewpoints) is developed and applied to the synthesis of organic compounds and to an appreciation of nature's important molecules.

Instructor(s): B. Dickinson. L: V. Keller Terms Offered: Winter

Prerequisite(s): An average grade of B+ or higher in CHEM 11100-11200-11300 or equivalent, a 5 on the AP Chemistry exam, or consent of the department, and/or via placement exam.

Note(s): Students who have taken CHEM 22000 or 22100 with an average grade of B+ or higher may petition the department to move into the Honors sequence. Most medical schools require a full academic year of organic chemistry. A lab is one afternoon a week in addition to scheduled class time each quarter.

CHEM 23200. Honors Organic Chemistry III. 100 Units.

This course studies the fundamental structures of organic molecules and the spectroscopic methods used to define. A comprehensive understanding of the reactions and properties of organic molecules (from kinetic, thermodynamic, and mechanistic viewpoints) is developed and applied to the synthesis of organic compounds and to an appreciation of nature's important molecules.

Instructor(s): S. Rowan. L: V. Keller Terms Offered: Spring

Prerequisite(s): CHEM 22100 and received an A or higher, or CHEM 23100 and received an B or higher, or Organic Chemistry Accreditation exam.

CHEM 23300. Intermediate Organic Chemistry. 100 Units.

Proteins are the dominant natural products of the 21st century. This course will explore the organic chemistry of protein molecules: their chemical structure and biological functions, protein biosynthesis, intein-mediated protein splicing, and the use of chemistry to probe the molecular basis of the remarkable properties of proteins and enzymes.

Instructor(s): Y. Krishnan. Terms Offered: Autumn

Prerequisite(s): A grade of C or higher in CHEM 22200 or 23200, or consent of instructor

CHEM 26100-26200-26300. Quantum Mechanics; Thermodynamics; Chemical Kinetics and Dynamics.

This three-quarter sequence studies the application of physical and mathematical methods to the investigation of chemical systems.

CHEM 26100. Quantum Mechanics. 100 Units.

This three-quarter sequence studies the application of physical and mathematical methods to the investigation of chemical systems. This course presents quantum mechanics, the Schrödinger wave equation with exact and approximate methods of solution, angular momentum, and atomic spectra and structure. Prerequisite(s): CHEM 11300 or equivalent; MATH 20100 and PHYS 13300

Instructor(s): D. A. Mazziotti. Terms Offered: Autumn

Prerequisite(s): CHEM 11300 or equivalent; MATH 18500 or MATH 20100; PHYS 13300. MATH 18600 recommended.

CHEM 26200. Thermodynamics. 100 Units.

This course continues the sequence with the study of thermodynamic principles and applications, as well as statistical mechanics.

Instructor(s): P. M. Guyot-Sionnest Terms Offered: Winter

Prerequisite(s): CHEM 11300 or equivalent; MATH 18500 or MATH 20100, and PHYS 13300

CHEM 26300. Chemical Kinetics and Dynamics. 100 Units.

This course is a discussion of chemical kinetics and dynamics for processes in gases, in liquids, and at interfaces.

Instructor(s): B. Tian Terms Offered: Spring

Prerequisite(s): CHEM 11300 or equivalent; MATH 18500 or MATH 20100, and PHYS 13300

CHEM 26700. Experimental Physical Chemistry. 100 Units.

This course introduces the principles and practice of physical chemical measurements. Techniques used in the design and construction of apparatus are discussed in lectures, and practice is provided through lab exercises and experiments. Subjects covered include vacuum techniques, electronics, optics, use of computers in lab instrumentation, materials of construction, and data analysis. L.

Instructor(s): J. Park Terms Offered: Winter

Prerequisite(s): CHEM 26100

CHEM 26800. Quantum Molecular and Materials Modeling. 100 Units.

Quantum mechanical methods, including quantum chemistry, density functional theory (DFT), and many body perturbation theory, for simulating the properties of molecules and materials will be explored in this course. Numerical algorithms and techniques will be introduced that allow for solution of approximate forms of the Schrodinger and Boltzmann Equations that model structural and transport properties of molecules and materials. The coupling of DFT with molecular dynamics will be detailed for determining finite temperature properties. Coupling of DFT with spin Hamiltonians to study dynamical spin correlations in materials will also be described. Examples of the application of quantum mechanical methods to materials for energy conversion and quantum information technologies will be provided.

Instructor(s): Giulia Galli Terms Offered: Spring

Prerequisite(s): PHYS 23400 or CHEM 26100 or instructor consent

Equivalent Course(s): CHEM 36800, MENG 25510, MENG 35510

CHEM 29600. Research in Chemistry. 000 Units.

Students conduct advanced, individually-guided research. Because this is a 000 credit course, students must submit a written report covering their research activities to the undergraduate counselor, and this course may be taken as a fifth course.

Research activities undertaken in this course may be used towards the writing of a thesis for consideration for departmental honors.

Instructor(s): Staff. Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of a faculty sponsor and/or the undergraduate counselor

Note(s): Graded P/F; Students are required to submit the College Reading/Research Course Form

CHEM 29900. Advanced Research in Chemistry. 100 Units.

Students conduct advanced, individually guided research. Students may submit a written report covering their research activities for consideration for departmental honors.

Instructor(s): Staff Terms Offered: Autumn Spring Summer Winter

Prerequisite(s): Consent of a faculty sponsor and the undergraduate counselor

Note(s): Open only to students majoring in chemistry who are eligible for honors. Available for either quality grades or for P/F grading. Students are required to submit the College Reading and Research Course Form.

CHEM 30100. Advanced Inorganic Chemistry. 100 Units.

Group theory and its applications in inorganic chemistry are developed. These concepts are used in surveying the chemistry of inorganic compounds from the standpoint of quantum chemistry, chemical bonding principles, and the relationship between structure and reactivity.

Instructor(s): W. Lin Terms Offered: Autumn

Prerequisite(s): CHEM 20100 and CHEM 26100

CHEM 30200. Synthesis and Physical Methods in Inorganic Chemistry. 100 Units.

This course covers theoretical and practical aspects of important physical methods for the characterization of inorganic molecules. Topics may include NMR, IR, RAMAN, EPR, and electronic and photoelectron spectroscopy; electrochemical methods; and single-crystal X-ray diffraction.

Instructor(s): W. Lin Terms Offered: Winter

Prerequisite(s): CHEM 30100

CHEM 30400. Organometallic Chemistry. 100 Units.

This course covers preparation and properties of organometallic compounds (notably those of the transition elements, their reactions, and the concepts of homogeneous catalysis).

Instructor(s): G. Dong Terms Offered: Spring

Prerequisite(s): CHEM 20100 and CHEM 26100

CHEM 30500. Nanoscale Materials. 100 Units.

This course provides an overview of nanoscale phenomena in metals, semiconductors, and magnetic materials (e.g., the fundamental aspects of quantum confinement in semiconductors and metals, superparamagnetism in nanoscale magnets, electronic properties of nanowires and carbon nanotubes, surface plasmon resonances in nanomaterials, photonic crystals). Special attention is paid to preparative aspects of nanomaterials, colloidal and gas-phase syntheses of nanoparticles, nanowires, and nanotubes. Engineered nanomaterials and their assemblies are considered promising candidates for a variety of applications, from solar cells, electronic circuits, light-emitting devices, and data storage to catalysts, biological tags, cancer treatments, and drug delivery. The course covers state-of-the art in these and other areas. Finally, the course provides an overview of the experimental techniques used for structural characterization of inorganic nanomaterials (e.g., electron microscopy, X-ray diffractometry, small-angle X-ray scattering, STM, AFM, Raman spectroscopy).

Instructor(s): Staff. Terms Offered: Not offered in 2020-2021

Prerequisite(s): CHEM 20200 and 26300, or consent of instructor

CHEM 30600. Chemistry Of The Elements and Materials. 100 Units.

This course surveys the descriptive chemistries of the main-group elements and the transition metals from a synthetic perspective, and reaction chemistry of inorganic molecules is systematically developed.

Instructor(s): J. Anderson Terms Offered: Winter

Prerequisite(s): CHEM 20100

CHEM 30900. Bioinorganic Chemistry. 100 Units.

This course covers various roles of metals in biology. Topics include coordination chemistry of bioinorganic units, substrate binding and activation, electron-transfer proteins, atom and group transfer chemistry, metal homeostasis, ion channels, metals in medicine, and model systems.

Instructor(s): C. He Terms Offered: Spring

Prerequisite(s): CHEM 20200 and 22200/23200

CHEM 32100. Physical Organic Chemistry I. 100 Units.

This course focuses on the quantitative aspects of structure and reactivity, molecular orbital theory, and the insight it provides into structures and properties of molecules, stereochemistry, thermochemistry, kinetics, substituent and isotope effects, and pericyclic reactions.

Instructor(s): M. Levin Terms Offered: Autumn

Prerequisite(s): CHEM 22200/23200 and 26200, or consent of instructor

CHEM 32200. Organic Synthesis and Structure. 100 Units.

This course considers the mechanisms, applicability, and limitations of the major reactions in organic chemistry, as well as of stereochemical control in synthesis.

Instructor(s): V. Rawal Terms Offered: Autumn

Prerequisite(s): CHEM 22200/23200 or consent of instructor

CHEM 32300. Strategies and Tactics of Organic Synthesis. 100 Units.

This course discusses the important classes for organic transformation. Topics include carbon-carbon bond formation; oxidation; and reduction using a metal, non-metal, or acid-base catalyst. We also cover design of the reagents and the scope and limitation of the processes.

Instructor(s): S. Snyder Terms Offered: Winter

Prerequisite(s): CHEM 22200/23200 or consent of instructor

CHEM 32400. Physical Organic Chemistry II. 100 Units.

Topics covered in this course include the mechanisms and fundamental theories of free radicals and the related free radical reactions, biradical and carbene chemistry, and pericyclic and photochemical reactions.

Instructor(s): Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): CHEM 32100

CHEM 32500. Bioorganic Chemistry. 100 Units.

A goal of this course is to relate chemical phenomena with biological activities. We cover two main areas: (1) chemical modifications of biological macromolecules and their potential effects; and (2) the application of spectroscopic methods to elucidate the structure and dynamics of biologically relevant molecules.

Instructor(s): Staff. Terms Offered: Not offered in 2020-2021

CHEM 33000. Complex Chemical Systems. 100 Units.

This course describes chemical systems in which nonlinear kinetics lead to unexpected (emergent) behavior of the system. Autocatalytic and spatiotemporal pattern forming systems are covered, and their roles in the development and function of living systems are discussed.

Instructor(s): Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): CHEM 22200/23200 and MATH 20100, or consent of instructor

CHEM 33100. New Synthetic Reactions and Catalysts. 100 Units.

This course presents recent highlights of new synthetic reactions and catalysts for efficient organic synthesis. Mechanistic details and future possibilities are discussed.

Instructor(s): Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): CHEM 23300

CHEM 33200-33300. Chemical Biology I-II.

This course emphasizes the concepts of physical organic chemistry (e.g., mechanism, molecular orbital theory, thermodynamics, kinetics) in a survey of modern research topics in chemical biology. Topics, which are taken from recent literature, include the roles of proteins in signal transduction pathways, the biosynthesis of natural products, strategies to engineer cells with novel functions, the role of spatial and temporal inhomogeneities in cell function, and organic synthesis and protein engineering for the development of molecular tools to characterize cellular activities.

CHEM 33200. Chemical Biology I. 100 Units.

The aim of this course is to teach chemical biology using primary literature examples, both classic and modern, focused on fundamental approaches and technologies. A general focus on the course are biomolecules - their biophysics, function, engineering, and repurposing and research tools. This course and the subsequent 'Chemical Biology II' course (CHEM333) are geared toward those interested in pursuing chemical biology in their research endeavors or future career.

Instructor(s): W. Tang Terms Offered: Autumn

Prerequisite(s): CHEM 22200/23200, or consent of instructor

CHEM 33300. Chemical Biology II. 100 Units.

No description available.

Instructor(s): R. Moellering Terms Offered: Winter

Prerequisite(s): CHEM 33200, or consent of instructor

CHEM 33500. Chemistry of Enzyme Catalysis. 100 Units.

The course will cover fundamental aspects of the physical organic chemistry of enzyme catalysis, with special emphasis on the role of pre-oriented local electric fields in catalysis, and will use case studies based on the primary scientific literature--both classic and current papers. For each class, there will be primary scientific papers assigned that the student will be expected to have studied in depth prior to class, including 'reading around' on the same and related topics; suggestions for supplementary reading will be given. Classes will be conducted as discussion sessions; guided by the Instructor--all students will be expected to be prepared to answer questions from the instructor, and to take active part in class discussions. Participation in class will count for a portion of the grade for each student.

Instructor(s): S. Kent Terms Offered: Winter

CHEM 33600. Biological Chemistry of Materials: Principles and Applications. 100 Units.

This course will focus on principles of bioconjugation techniques; preparation of immobilized-enzymes/proteins: adsorption, occlusion, cross-linking and covalent binding. Applications of cofactor-dependent enzymes: building of enzymatic electrodes and biofuel cells. Development of immunosensors based on ELISA, electrochemistry, optics, carbon nanotubes and piezoelectric methods. Principles and design of DNA/RNA based sensors (Ribozymes, SELEX, Aptamers, DNazymes, Molecular Beacons). Amplification methods for nucleic acids detection in test tube and in cells. Preparation and characterization of nanoparticles in nucleic acids and proteins sensing processes.

Terms Offered: Not offered in 2020-2021

Prerequisite(s): CHEM 23300 or consent of instructor

CHEM 33700. RNA Structure, Function, and Biology. 100 Units.

Students will learn principles of RNA structure and function, RNA catalysis, and RNA molecular cell biology as they relate to the field of RNA metabolism. In recent years it has become apparent that much of an organism's genome is transcribed, yielding a far more expansive collection of RNA molecules than previously thought: many of these RNAs are classic messenger RNAs that code for proteins but many serve functions other than protein coding (noncoding RNAs). These RNAs are processed, modified, and usually interact with RNA binding proteins (RBPs) to form ribonucleoprotein (RNP) complexes. We will consider emerging themes in noncoding RNA biology and investigate methods for interrogating their cellular structure and function.

Terms Offered: Not offered in 2020-2021

CHEM 33800. Discovery and Translation of Molecular Therapeutics - I. 100 Units.

The aim of this course is to teach modern chemical biology methods, technologies, and applications as applied to problems and challenges in human health and biotechnology. Both classics in translational chemical biology and emerging technologies will be used to teach general principles in the application of chemistry to therapeutic development and biotechnology. As compared to the Chemical Biology course track (Chem332/Chem333), this course is geared more toward non-experts in chemical biology or those with a less extensive chemistry background.

Instructor(s): B. Dickinson. R. Moellering Terms Offered: Winter

Prerequisite(s): CHEM 22200/23200

CHEM 36100. Wave Mechanics and Spectroscopy. 100 Units.

This course presents the introductory concepts, general principles, and applications of wave mechanics to spectroscopy.

Instructor(s): A. Dinner Terms Offered: Autumn

Prerequisite(s): CHEM 26300

CHEM 36200. Quantum Mechanics. 100 Units.

This course builds upon the concepts introduced in CHEM 36100 with greater detail provided for the role of quantum mechanics in chemical physics.

Instructor(s): D. Mazziotti Terms Offered: Winter

Prerequisite(s): CHEM 36100

CHEM 36300. Statistical Thermodynamics. 100 Units.

This course covers the thermodynamics and introductory statistical mechanics of systems at equilibrium.

Instructor(s): S. Vaikuntanathan Terms Offered: Autumn

Prerequisite(s): CHEM 26100-26200

CHEM 36400. Advanced Statistical Mechanics. 100 Units.

Topics covered in this course may include statistics of quantum mechanical systems, weakly and strongly interacting classical systems, phase transitions and critical phenomena, systems out of equilibrium, and polymers.

Instructor(s): V. Goth Terms Offered: Winter

Prerequisite(s): CHEM 36300 or equivalent

CHEM 36500. Chemical Dynamics. 100 Units.

This course develops a molecular-level description of chemical kinetics, reaction dynamics, and energy transfer in both gases and liquids. Topics include potential energy surfaces, collision dynamics and scattering theory, reaction rate theory, collisional and radiationless energy transfer, molecule-surface interactions, Brownian motion, time correlation functions, and computer simulations.

Instructor(s): G. Voth Terms Offered: Spring

Prerequisite(s): CHEM 36100 required; 36300 recommended

CHEM 37100. Advanced Spectroscopies. 100 Units.

This linear and nonlinear spectroscopy course includes notions on matter-radiation interaction, absorption, scattering, and oscillator strength. They are applied mostly with the optical range, but we briefly touch upon microwave (NMR, ESR) and X-rays at the extreme. We cover nonlinear optical processes such as coherent Raman, harmonic, and sum-frequency; induced transparency; slow light; and X-ray generation. We also cover coherent and incoherent dynamical probes, such as pump-probe, echos, and two-dimensional spectroscopy.

Terms Offered: Not offered in 2020-2021

CHEM 37300. Advanced Special Topics in Theory and Computation. 100 Units.

This course introduces topics in theoretical and computational chemistry beyond those in the traditional graduate physical chemistry sequence. Specific topics will vary from year to year based on the interests of the instructor and students. Representative topics are diagrammatic methods, field theories, renormalization, nonequilibrium statistical mechanics, and quantum dynamics.

Terms Offered: Not offered in 2020-2021

CHEM 38700. Biophysical Chemistry. 100 Units.

This course develops a physicochemical description of biological systems. Topics include macromolecules, fluid-phase lipid-bilayer structures in aqueous solution, biomembrane mechanics, control of biomolecular assembly, and computer simulations of biomolecular systems.

Instructor(s): R. Benoit Terms Offered: Spring

Prerequisite(s): CHEM 23300, CHEM 26200.

CHEM 39000. Solids, Materials, Surfaces. 100 Units.

This course is an introduction to modern materials chemistry. It covers basic chemistry and physics of condensed systems, such as solids, polymers, and nanomaterials. The electronic structure of metals, semiconductors and magnetically ordered phases will be discussed. We will review optical and electronic properties of different classes of materials using examples of hard and soft condensed matter systems and drawing structure-property relationships for conventional solids, polymers, and nanomaterials. Finally, the course will cover the fundamentals of surface science and material synthesis, applying modern understanding of nucleation and growth phenomena.

Instructor(s): D. Talpin Terms Offered: Autumn

Prerequisite(s): CHEM 26100, CHEM 26200, and CHEM 26300, or equivalent

CHEM 39100. Polymer Synthesis. 100 Units.

This course introduces the most important polymerization reactions, focusing on their reaction mechanisms and kinetic aspects. Topics include free radical and ionic chain polymerization, step-growth polymerization, ring-opening, insertion, controlled living polymerization, crosslinking, copolymerization, and chemical modification of preformed polymers.

Instructor(s): Stuart Rowan Terms Offered: Winter

Prerequisite(s): CHEM 22000 and CHEM 22100

Equivalent Course(s): MENG 35110, MENG 25110

Cinema and Media Studies

Department Website: <http://cms.uchicago.edu>

Program of Study

The major program in Cinema and Media Studies provides a framework within which students can approach the history of film and related media from a variety of historical, critical, and theoretical perspectives. Focusing on the study of the moving image, as well as sound, the program enables students to analyze how cinema creates meanings through particular forms, techniques, and styles; how industrial organization affects the way films are produced and received; and how the social context in which they are made and circulated influences our understanding of the medium.

At the same time, the goal is to situate the cinema and related media in broader contexts: modernity, modernism, and the avant-garde; narrative theory, poetics, and rhetoric; commercial entertainment forms and consumer culture; sexuality and gender; constructions of ethnic, racial, and national identities; and international media production and circulation.

Students focusing their studies in the Cinema and Media Studies major will be trained in critical, formal, theoretical, and historical thinking and analysis. The curriculum fosters discussion and writing skills, and students will gain the tools to approach film history as well as today's media environment within specific cultural contexts and broad transnational perspectives.

Major Program in Cinema and Media Studies: Standard Track

Students wishing to major in Cinema and Media Studies should meet with the Director of Undergraduate Studies early in their second year to help construct their course plan going forward; this meeting should take place by the end of Spring Quarter of a student's second year. Participation in the major must be declared to the Director of Undergraduate Studies, and the subsequent approved paperwork will be sent to the student's College adviser for official registration.

The Standard Track in Cinema and Media Studies is designed for students who wish to complete the major, but not complete a BA thesis project. This track is ineligible for honors. Students majoring in Cinema and Media Studies must receive quality grades (not P/F) in all twelve (12) courses to meet the requirements of the program.

The following courses are required:

CMST 10100 Introduction to Film Analysis: This course provides an introduction to the basic concepts of film analysis. It should be completed before other Cinema and Media Studies courses.

CMST 28500 History of International Cinema I: Silent Era

CMST 28600 History of International Cinema II: Sound Era to 1960

CMST 28700 History of International Cinema, Part III: 1960 to Present

Elective Courses: The seven (7) electives should be chosen based upon the student's interest, and must either originate in or be cross-listed with Cinema and Media Studies. Students should choose the courses in conversation with the Director of Undergraduate Studies. Students are encouraged to consider broad survey courses as well as those with more focused topics (e.g., courses devoted to a single genre, director, or national cinema).

CMST 29201 Advanced Seminar - Autumn or CMST 29202 Advanced Seminar - Spring: Open only to upper-year students who have declared a major in Cinema and Media Studies, the Advanced Seminar functions as a capstone course. It will allow students the opportunity to explore in more depth key disciplinary and methodological questions related to the study of cinema and media. Particular topics will be determined by the individual faculty instructor and will vary from the Autumn to Spring Quarters and from instructor to instructor. Majors are required to enroll in one section, but are welcome to use the second as an elective for their major requirements if the subject matter is of interest.

Major Program in Cinema and Media Studies: Intensive Track, Written Thesis or Intensive Track, Production Thesis

The Intensive Tracks of the Cinema and Media Studies major are designed for students who wish to complete the major with a senior thesis, making them eligible to receive honors. **Intensive Track students will complete all coursework required under the Standard Track major;** they will also elect to complete either a written project or a production project and will complete the Thesis Workshop series over the course of their final year. The workshops will be supplemented with one-on-one meetings with their dedicated BA Preceptor, who will help the student with the formation and execution of the student's project. Students must also enroll in CMST 29900 Senior Thesis during the quarter they intend to graduate.

Students in the Intensive Track major must take one (1) of the following two workshop series, depending on whether they are completing a Written or Production Thesis.

CMST 27299 Intensive Track - Written Thesis Workshop: This series of workshops—comprised of approximately 10 meetings across the whole academic year—will provide support for students focusing on the Written Thesis Project through the entire academic year. It is taught by the Director of Undergraduate Studies and

supplemented by regular meetings with a designated preceptor. The workshops are intended to guide students through the process of thesis writing, from developing a research question to determining the most appropriate research method for its exploration to integrating suitable theoretical insights to writing compellingly about media objects to the nuts and bolts of exposition. Students will enroll in this 100-unit course in Autumn Quarter and will receive their grade at the completion of Spring Quarter.

CMST 28999 Intensive Track - Production Thesis Workshop: This series of workshops—comprised of approximately 10 meetings across the whole academic year—will provide support for students focusing on the Production Thesis Project through the entire academic year. It is taught by a production-focused faculty member and supplemented by regular meetings with a designated preceptor. The workshops are intended to guide students through the necessary steps in the realization of a film project, from pre-production to production to post-production. Students will enroll in this 100-unit course in Autumn Quarter and will receive their grade at the completion of Spring Quarter.

CMST 29900 Senior Thesis: Students completing an Intensive Track major must also enroll in the zero-credit course CMST 29900 during the quarter in which they intend to submit their thesis project and graduate. Students enroll in CMST 29900 using the section number of their BA thesis adviser, which can be obtained from the departmental coordinator in Cinema and Media Studies or the student's College adviser. CMST 29900 cannot be used to fulfill any other major coursework requirements.

Proposing a Production Thesis Project

By the seventh week of Spring Quarter in third year, a student will meet with the Director of Undergraduate Studies to declare the student's intention to complete a BA Production Thesis option. At this time, the student will submit a written proposal that describes the project and suggests a timeline for the work to be accomplished. The writing of screenplays alone will not be considered for the production thesis option.

The Director of Undergraduate Studies and one other Cinema and Media Studies faculty member will evaluate all proposals for the BA Production Thesis option. Decisions will be made by the last week of Spring Quarter and will be based primarily on the feasibility and quality of the project and the student's performance in required production courses. The number of projects approved may be limited by the advising capacity of the Cinema and Media Studies faculty.

The Production Thesis Project must be accompanied by a supplemental paper establishing the relationship of the film or video component of the project to film, video, or media history, theory, or modes of production. This paper may incorporate an analysis of the production and post-production process. The paper will be submitted at the time of final submission of the creative work.

Double Majors and the Senior Thesis Project

Whether or not a single BA thesis can satisfy the requirements for a double major in Cinema and Media Studies and another program is decided by the department on a case-by-case basis. The criteria on which the decision is based include:

- the degree to which the resulting thesis is likely to speak from and to cinema and media studies, even as it necessarily speaks from and to another field.
- the feasibility of the proposed advising arrangements for the proposed joint thesis.
- the department's estimation of the student's track record for independent work that bodes well for writing a successful thesis while navigating between two majors.

A student who wishes to write a single BA thesis for a double major in Cinema and Media Studies and another program must meet with the Director of Undergraduate Studies, as well as submit a letter (one page, double-spaced) explaining the student's request for the department's approval. The letter should be addressed to the Director of Undergraduate Studies.

Summary of Requirements: Major Tracks

Standard Track Major

CMST 10100	Introduction to Film Analysis	100
CMST 28500	History of International Cinema I: Silent Era	100
CMST 28600	History of International Cinema II: Sound Era to 1960	100
CMST 28700	History of International Cinema, Part III: 1960 to Present	100
Seven (7) electives originating in or cross-listed with Cinema and Media Studies *		700
One of the following:		100
CMST 29201	Advanced Seminar - Autumn	
CMST 29202	Advanced Seminar - Spring	
Total Units		1200

Intensive Track - Written Thesis Project

CMST 10100	Introduction to Film Analysis	100
CMST 28500	History of International Cinema I: Silent Era	100
CMST 28600	History of International Cinema II: Sound Era to 1960	100
CMST 28700	History of International Cinema, Part III: 1960 to Present	100

Seven (7) electives originating in or cross-listed with Cinema and Media Studies *		700
CMST 27299	Intensive Track - Written Thesis Workshop ¶	100
CMST 29900	Senior Thesis §	000
One of the following:		100
CMST 29201	Advanced Seminar - Autumn	
CMST 29202	Advanced Seminar - Spring	
Total Units		1300

Intensive Track - Production Thesis Project

CMST 10100	Introduction to Film Analysis	100
CMST 28500	History of International Cinema I: Silent Era	100
CMST 28600	History of International Cinema II: Sound Era to 1960	100
CMST 28700	History of International Cinema, Part III: 1960 to Present	100
Seven (7) electives originating in or cross-listed with Cinema and Media Studies *		700
CMST 28999	Intensive Track - Production Thesis Workshop ¶	100
CMST 29900	Senior Thesis §	000
One of the following:		100
CMST 29201	Advanced Seminar - Autumn	
CMST 29202	Advanced Seminar - Spring	
Total Units		1300

* Cinema and Media Studies courses eligible for the general education requirement in the arts (CMST 14400 Film and the Moving Image; CMST 14500-14599) may not be used to satisfy requirements in the Cinema and Media Studies major or minor.

¶ Enrollment for Intensive Track Workshops is open only for students completing a thesis project in Cinema and Media Studies. Student enroll in Autumn Quarter and workshop meetings continue through the whole academic year. Student receive a final grade at the conclusion of Spring Quarter.

§ Students completing an Intensive Track major must enroll in CMST 29900 (zero-unit course) in the quarter they are graduating. This course allows for the Thesis Project grade to appear on the transcript.

Study Abroad

The College's Winter Quarter Cinema and Media Studies program in Paris provides undergraduate students with an opportunity to explore the study of film and related media at the University of Chicago Center in Paris. The program includes two courses that can be used toward the College's general education requirement in the arts, while the third course may be used as either an elective or within the Cinema and Media Studies major. The first two courses may also be eligible for credit within the Cinema and Media Studies major if the general education requirement in the arts has already been fulfilled and with approval from the Director of Undergraduate Studies in Cinema and Media Studies. Program participants also take a French language course. For more information or to apply, visit the Study Abroad website (<http://study-abroad.uchicago.edu/programs/paris-cinema-and-media-studies/>).

Grading

With the exception of the Intensive Track workshops (CMST 27299 and CMST 28999) students majoring on minoring in Cinema and Media Studies must receive a quality grade in all courses required to fulfill requirements. With prior consent of the instructor, non-majors may take Cinema and Media Studies courses for P/F grading.

Advising

In order for students to declare a major in Cinema and Media Studies, they must get a Major Course Agreement Form approved by the Director of Undergraduate Studies; this form grants approval for elective courses (both those originated in Cinema and Media Studies and those cross-listed from other departments). It is also when the student will decide which track to follow through the major—the Standard (non-thesis) Track, the Intensive Track Written Thesis, or the Intensive Track Production Thesis. Students looking to do one of the intensive tracks must declare during their third year in the College.

Students who wish to have courses that are not cross-listed with Cinema and Media Studies count towards their major requirements must consult with the Director of Undergraduate Studies and complete a Further Electives Form. Courses not approved by the Director of Undergraduate Studies cannot be counted towards major requirements.

Honors

Students who have earned an overall GPA of 3.25 or higher and a Cinema and Media Studies major GPA of 3.5 or higher are eligible for honors. To receive honors, the BA thesis must demonstrate exceptional intellectual and/or creative merit in the judgement of the faculty adviser (and second reader, if necessary), the Director of Undergraduate Studies, and

the Master of the Humanities Collegiate Division. If the student's BA thesis adviser is not currently a Cinema and Media Studies faculty member or affiliate, a CMST faculty member or affiliate must act as a second reader.

Minor Program in Cinema and Media Studies

The minor program in Cinema and Media Studies is designed for students who wish to develop substantial knowledge in the discipline. Students minoring in Cinema and Media Studies must receive quality grades (not P/F) in all six (6) courses taken to meet the requirements of the program.

Courses in the minor (1) may not be double counted with the students major(s) or with other minors; and (2) may not be counted toward general education requirements.

The following three (3) courses are required:

CMST 10100 Introduction to Film Analysis: This course provides an introduction to the basic concepts of film analysis. It should be completed before other Cinema and Media Studies courses.

Students in the minor must take **two (2)** of the three offered History of International Cinema courses:

CMST 28500 History of International Cinema I: Silent Era

CMST 28600 History of International Cinema II: Sound Era to 1960

CMST 28700 History of International Cinema, Part III: 1960 to Present

Elective Courses: The three (3) remaining courses must be at the 20000-level or above and must originate in or be cross-listed with Cinema and Media Studies. Students are encouraged to select courses that develop a sustained area of inquiry (e.g., film theory or new media) or demonstrate a breadth of knowledge in the field. Students should choose courses based upon their interest and should discuss their elective choices with the Director of Undergraduate Studies.

Summary of Requirements: Minor Track

CMST 10100	Introduction to Film Analysis	100
Two of the following:		200
CMST 28500	History of International Cinema I: Silent Era	
CMST 28600	History of International Cinema II: Sound Era to 1960	
CMST 28700	History of International Cinema, Part III: 1960 to Present	
Three electives at the 20000 level or above that originate in or have a recognized cross-list with CMST *		300
Total Units		600

* Cinema and Media Studies courses eligible for the general education requirement in the arts (CMST 14400 Film and the Moving Image; CMST 14500-14599) may not be used to satisfy requirements in the Cinema and Media Studies major or minor.

Cinema and Media Studies Courses

Please also visit the Courses page on the Cinema and Media Studies website at cms.uchicago.edu/courses (<http://cms.uchicago.edu/courses/>).

CMST 10100. Introduction to Film Analysis. 100 Units.

This course introduces basic concepts of film analysis, which are discussed through examples from different national cinemas, genres, and directorial oeuvres. Along with questions of film technique and style, we consider the notion of the cinema as an institution that comprises an industrial system of production, social and aesthetic norms and codes, and particular modes of reception. Films discussed include works by Capra, Dash, Deren, Keaton, Hitchcock, Kubrick, Riggs and Sirk.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Note(s): Required of students taking a major or minor in Cinema and Media Studies.

Equivalent Course(s): ARTV 20300, ENGL 10800

CMST 14400. Film and the Moving Image. 100 Units.

This course seeks to develop skills in perception, comprehension, and interpretation when dealing with film and other moving image media. It encourages the close analysis of audiovisual forms, their materials and formal attributes, and explores the range of questions and methods appropriate to the explication of a given film or moving image text. It also examines the intellectual structures basic to the systematic study and understanding of moving images. Most importantly, the course aims to foster in students the ability to translate this understanding into verbal expression, both oral and written. Texts and films are drawn from the history of narrative, experimental, animated, and documentary or non-fiction cinema. Screenings are a mandatory course component.

Instructor(s): R.Majumdar; S.Skvirsky; A.Field Terms Offered: Autumn Spring Winter

Note(s): Attendance in first class is mandatory to confirm enrollment. Open only to non-CMS majors; may not count towards CMS major requirements. For non-majors, any CMST 14400 through 14599 course meets the general education requirement in the arts.

CMST 20400. Problems in the Study of Gender and Sexuality: Media Wars. 100 Units.

In our contemporary moment, we have become accustomed to terms such as 'counter-terrorism' that signal an effort to resist internal and external threats, and those suggesting that we live in an age of 'post-truth' dominated by 'corporate-media,' 'fake news,' and 'fact-challenged' journalism. Taking this platform as our starting place, this class explores how these terms and their use have been gendered; have situated both gender and sexuality as either weapons of resistance or objects of destruction. This class will be historically organized insofar as we will begin our discussion with ways that media - broadly conceived to include cinema, print and visual-cultural forms, television, and the internet - have aimed to 'counter' patriarchal, heteronormative, and hegemonic systems of representation of gender and sexuality.

Instructor(s): J. Wild; L. Janson Terms Offered: Spring

Equivalent Course(s): GNSE 11005, GNSE 31105, MAAD 11005, CMST 40400

CMST 20605. Queer and Trans Cinema and Media. 100 Units.

In this course we explore the history of queer and transgender cinema and media in an effort to situate new developments in queer and trans cinema and media making. We will consider relevant theories about gender and sexuality and their implications for our categories of film and media analysis.

Instructor(s): Kara Keeling Terms Offered: Spring

Equivalent Course(s): GNSE 20107, MAAD 10605, CMST 30605, GNSE 30107

CMST 20904. Media Wars. 100 Units.

Media practices and discourses evoking war or violence are common today, such as the 'weaponization' of social media; 'cyber warfare' and attacks; 'online battlefields'; 'guerilla' media tactics; 'The Great Meme War' and 'Infowars.com,' to name a few. In relationship with terms suggesting that we live in an age of 'post-truth' dominated by 'fake news' or 'fact-challenged' journalism, the media wars of today may seem unique to the twenty-first century. But in fact, the history of the use of media to either combat or spread ideas dates back centuries to the earliest phases of mass media and communication. In this class, we will proceed historically, broadly conceiving of media to include print and visual, cultural, and artistic forms, cinema, television, and the internet. While we will explore how media have historically been used to construct or counter dominant systems of representation, we will also discuss how different media forms function formally, learning to analyze how they construct discourses of truth as texts (documentary; propaganda). This class will also function as a contemporary research laboratory where students will be asked to track, evaluate, and theorize contemporary or historical media that are taking part in a so-called 'media war.'

Instructor(s): Jennifer Wild Terms Offered: Spring

Note(s): Please note: Students who have previously completed the course "Problems in the Study of Gender and Sexuality: Media Wars" are not eligible to receive credit for this class.

Equivalent Course(s): GNSE 30114, CMST 30904, SIGN 26061, MAAD 10904, GNSE 20114

CMST 21650. Irish Literature and Cinema. 100 Units.

Irish literature in English from Swift to Anna Burns (Milkman), including Thomas Moore, Maria Edgeworth, Bram Stoker, Yeats, Synge, Joyce, O'Casey, Brian Friel and Seamus Heaney; Irish Cinema including films by John Ford, Neil Jordan, John Huston, Ken Loach, Lenny Abramson, Jim Sheridan, Kirsten Sheridan, John Crowley. (Fiction, Poetry, Drama, 1650-1830, 1830-1940)

Instructor(s): Jim Chandler Terms Offered: Autumn

Equivalent Course(s): ENGL 18250

CMST 21805. Chicago Film Cultures. 100 Units.

Chicago not only boasts a rich history of film production (from silent comedies to industrial, educational, student, documentary, and contemporary Hollywood filmmaking) but also has a long, significant history of film presentation. Chicago features iconic movie palaces built downtown and in neighborhoods across the city in the 1920s. And it has been the site of a wide variety of film exhibition venues and film-related events that are currently thriving: festivals, conferences, workshops, lectures. Films are screened in every type of museum (history, art, science), in large mainstream venues and in smaller, community-based and artist-run spaces. Our own campus boasts Doc Films, the longest-running film society in the country. This course examines the conceptual and historical frameworks that have been used for presenting cinema - historical and contemporary - in the city's varied institutional and cultural contexts. Students will study past film and current cultures in Chicago by researching particular events, venues, critics and curators, and by employing a variety of methods, including archival research, participant observation and interviews. Topics covered will include exhibition, funding and marketing, debates on curating and film in museums, audience and fan culture studies (with attention to Chicago's particular demographic contours), national cinemas, genre, authorship and multi-media presentational modes.

Instructor(s): J. Stewart Terms Offered: Winter

Equivalent Course(s): CMST 31805

CMST 23002. Modern Italian Cinema: Ways of Representation and Forms of Life. 100 Units.

The course aims to focus on the bond that exists in the Italian tradition between ways of cinematographic representation and forms of life. Italian cinema, especially from the post-war period on, has in fact constructed a unique link between cinematographic images and the practices, values, customs and lifestyles of an entire country. At a time of profound historical crisis, the Italian post-Second World War cinema succeeded to revive Italy and Italian cinema, also constituting the development of a properly cinematographic 'romanesque form,' which the critic André Bazin thought to have profound analogies with the American modern novel. It is only with cinematographic modernity that cinema reaches the complexity

and richness of its forms, through an encounter with a reality that is no longer filtered by the codification of classical generic forms. Authors such as De Sica, Rossellini, Fellini, Pietrangeli, Ferreri, Antonioni and Pasolini will be studied.

Instructor(s): R. De Gaetano Terms Offered: Spring

Note(s): Taught in English.

Equivalent Course(s): ITAL 27020

CMST 23930. Documentary Production I. 100 Units.

Documentary Video Production focuses on the making of independent documentary video. Examples of various modes of documentary production will be screened and discussed. Issues embedded in the genre, such as the ethics, the politics of representation, and the shifting lines between 'the real' and 'fiction' will be explored. Story development, pre-production strategies, and production techniques will be our focus, in particular-research, relationships, the camera, interviews and sound recording, shooting in available light, working in crews, and post-production editing. Students will work in crews and be expected to purchase a portable hard drive. A five-minute string-out/rough-cut will be screened at the end of the quarter. Students are strongly encouraged to take Doc Production 2 to complete their work.

Instructor(s): J. Hoffman Terms Offered: Autumn

Note(s): Prior or concurrent enrollment in CMST 10100 recommended for undergraduate students.

Equivalent Course(s): HMRT 25106, CMST 33930, HMRT 35106, MAAD 23930, ARTV 23930, ARTV 33930

CMST 23931. Documentary Production II. 100 Units.

Documentary Video Production II focuses on the shaping and crafting of a non-Fiction video. Enrollment will be limited to those students who have taken Documentary Production I. The class will discuss issues of ethics, power, and representation in this most philosophical and problematic of genres. Students will be expected to write a treatment outline detailing their project and learn about granting agencies and budgeting. Production techniques will concentrate on the language of handheld camera versus tripod, interview methodologies, microphone placement including working with wireless systems and mixers, and lighting for the interview. Post-production will cover editing techniques including color correction and audio sweetening, how to prepare for exhibition, and distribution strategies.

Instructor(s): J. Hoffman Terms Offered: Winter

Prerequisite(s): CMST 23930, HMRT 25106, or ARTV 23930

Equivalent Course(s): HMRT 25107, ARTV 23931, MAAD 23931, ARTV 33931, CMST 33931, HMRT 35107

CMST 24568. The Underground: Alienation, Mobilization, Resistance. 100 Units.

The ancient and multivalent image of the underground has crystallized over the last two centuries to denote sites of disaffection from-and strategies of resistance to-dominant social, political and cultural systems. We will trace the development of this metaphor from the Underground Railroad in the mid-1800s and the French Resistance during World War II to the Weather Underground in the 1960s-1970s, while also considering it as a literary and artistic concept, from Fyodor Dostoevsky's *Notes from the Underground* and Ellison's *Invisible Man* to Chris Marker's film *La Jetée* and Andrei Tarkovsky's *Stalker*. Alongside with such literary and cinematic tales, drawing theoretical guidance from refuseniks from Henry David Thoreau to Guy Debord, this course investigates how countercultural spaces become-or fail to become-sites of political resistance, and also how dissenting ideologies give rise to countercultural spaces. We ask about the relation between social deviance (the failure to meet social norms, whether willingly or unwittingly) and political resistance, especially in the conditions of late capitalism and neo-colonialism, when countercultural literature, film and music (rock, punk, hip-hop, DIY aesthetics etc.) get absorbed into-and coopted by-the hegemonic socio-economic system. In closing we will also consider contemporary forms of dissidence-from Pussy Riot to Black Lives Matter-that rely both on the vulnerability of individual bodies and global communication networks.

Instructor(s): R. Bird Terms Offered: Spring

Equivalent Course(s): CMST 34568, REES 26068, REES 36068, SIGN 26012

CMST 24603. Topics in EALC: Ghosts & the Fantastic in Literature and Film. 100 Units.

What is a ghost? How and why are ghosts represented in particular forms in a particular culture at particular historical moments and how do these change as stories travel between cultures? This course will explore the complex meanings, both literal and figurative, of ghosts and the fantastic in traditional Chinese, Japanese, and Korean tales, plays, and films. Issues to be explored include: 1) the relationship between the supernatural, gender, and sexuality; 2) the confrontation of death and mortality; 3) collective anxieties over the loss of the historical past 4) and the visualization (and exorcism) of ghosts through performance.

Instructor(s): J. Zeitlin Terms Offered: Spring

Note(s): This course can replace what used to be the Concentrators Seminar to fulfill a requirement as an EALC major.

Equivalent Course(s): EALC 10600, SIGN 26006

CMST 24916. Y#kai Media. 100 Units.

This course centers on y#kai (monsters or fantastic creatures) and theories of the fantastic in cinema and media. Historically, it spans the range from medieval emaki and Edo ch#nin culture through 20th and 21st century manga and anime. Inquiry into y#kai and the fantastic is intended to develop new strategies for putting cinema and media into dialogue with theories of political sovereignty and capitalism in the context of everyday life and its urban myths.

Instructor(s): Thomas Lamarre Terms Offered: Winter

Equivalent Course(s): EALC 24916, MAAD 24916

CMST 25503. Issues in Contemporary Horror. 100 Units.

This course takes the modern horror film as its object. For the purposes of this class, modern horror spans the period from 1960 to the present, although much of our attention will be directed toward the period from the 1980s to the present. We will examine key problems in the genre including, but not limited to an examination of the nature of the horrific, close

formal analysis (which typically is neglected in favor of more culturally oriented approaches), questions of POV and camera movement, the articulation and construction of space, the role of gender in the genre, the changing importance of women as performers, characters, directors, and spectators, found footage/surveillance, and the genre's address to the viewer.
Equivalent Course(s): CMST 35503

CMST 25540. Fact and Fiction. 100 Units.

Since Grierson's definition of the documentary as 'creative treatment of actuality,' critics have been struggling to establish distinctions between documentary and fiction. Furthermore, the critical discourse has been constantly challenged by new artistic meditations of reality and its representation, and works blurring the border between the logic of facts and the logic of fiction. Additionally, this dualism is complicated by the difficult question of truth telling. Cinema has a long and winding history of non-fiction: from staged or dramatized actualities at its beginning, via docudrama, fake documentaries and mockumentary, to trends in recent documentaries that incorporate reenactment and animation. Since the mid-1990s the 'documentary turn in contemporary art' has seen more and more artists experimenting with documentary modes through which they are questioning the mediations by which facts/documents acquire their facticity. The aim of this seminar will be to examine films and works in contemporary art that address these difficult questions of fact and fiction. Readings will include work from film and art criticism and theory, as well as critical literature addressing questions of fact and fiction in historiography, narratology, and philosophy. Films may include works by Edison, Robert Flaherty, Ari Folman, Abbas Kiarostami, Chris Marker, George Méliès, Avi Mograbi, Rithy Panh, Peter Watkins. Works by contemporary artists may include Kutlug Ataman, The Atlas Group/
Equivalent Course(s): ARTH 35540, ARTH 25540, CMST 45540, ARTV 20540, ARTV 45540, MAPH 45540

CMST 25620. Japanese Animation: The Making of a Global Media. 100 Units.

This course offers an introduction to Japanese animation, from its origins in the 1910s to its emergence as global culture in the 1990s. The goal is not only to provide insight into Japanese animation within the context of Japan but also to consider those factors that have transformed it into a global cultural form with a diverse, worldwide fanbase. As such, the course approaches Japanese animation from three distinct perspectives on Japanese animation, which are designed to introduce students to three important methodological approaches to contemporary media - film studies, media studies, and fan studies or cultural studies. As we look at Japanese animation in light of these different conceptual frameworks, we will also consider how its transnational dissemination and 'Asianization' challenge some of our basic assumptions about global culture, which have been shaped primarily through the lens of Americanization.
Instructor(s): Thomas Lamarre Terms Offered: Autumn
Equivalent Course(s): EALC 25620, SIGN 26070, MAAD 15620

CMST 26500. The Films of Alfred Hitchcock. 100 Units.

This course focuses on the films of Alfred Hitchcock, one of the greatest filmmakers of the 20th century. We study both his films and a variety of approaches to them. We investigate the enduring power of his movies; his contributions to genre and popular cinema; his storytelling techniques; his stylistic command; his approach to romance, suspense, and action; his status as a master and auteur; and his remarkable control over the audience's thoughts and feelings.
Instructor(s): Maria Belodubrovskaya Terms Offered: Winter
Equivalent Course(s): CMST 36500, ARTH 38405, ARTH 28405, FNDL 26510

CMST 26603. The Cinema of Miloš Forman. 100 Units.

The films of Miloš Forman (1932-2018) reflect the turbulence of the 1960s, '70s, '80s and '90s, and 2000s by focusing on the underdog, the pariah, the eccentric. The subject matter to which Forman was drawn translated into his cinema with a signature bittersweet tone, emphatic narrative cogency, and lush spontaneity. This course is an intensive study of Forman's work from his 'New Wave' work in Czechoslovakia (Loves of a Blonde, The Fireman's Ball) to his U.S. studio successes (One Flew Over the Cuckoo's Nest, Amadeus), to his idiosyncratic and parabolic last films (Man on the Moon, Goya's Ghosts). Among other topics, the course contemplates the value of a dark sense of humor, cinematic gorgeousness, and artistic dissidence.
Instructor(s): Malynne Sternstein Terms Offered: Winter
Equivalent Course(s): FNDL 22010, REES 32010, REES 22010, CMST 36603

CMST 27011. Experimental Captures. 100 Units.

This production-based class will explore the possibilities and limits of capturing the world with imaging approaches that go beyond the conventional camera. What new and experimental image-based artworks can be created with technologies such as laser scanning, structured light projection, time of flight cameras, photogrammetry, stereography, motion capture, sensor augmented cameras or light field photography? This hands-on course welcomes students with production experience while being designed to keep established tools and commercial practices off-kilter and constantly in question.
Instructor(s): M. Downie Terms Offered: Autumn
Equivalent Course(s): MAAD 21011, CMST 37011, ARTV 27923, ARTV 37923

CMST 27230. Modern Film Theory. 100 Units.

This course will examine influential writings on photography, film, and film narrative published in the post-war period in the context of semiology, structuralism, and narratology. We will examine how questions of form, structure, and narrative in film and photography are addressed by critics writing from the end of World War II until the early seventies, especially in France and Italy. In what ways can the image be considered a sign? How do images come to have meaning in a denotative or connotative sense? What are the principal codes organizing images as narrative media and how do spectators recognise those codes? Readings will include work by Roland Barthes, Christian Metz, Jean Mitry, Noël Burch, Raymond Bellour, Umberto Eco, Pier Paolo Pasolini, and David Bordwell, among others.
Instructor(s): D.N. Rodowick Terms Offered: Winter

Prerequisite(s): CMST 10100, ARTH 20000, ENGL 10800, ARTV 25300, or consent of instructor.

Equivalent Course(s): CMST 37230

CMST 27299. Intensive Track - Written Thesis Workshop. 100 Units.

This series of workshops - comprised of approximately 10 meetings - will provide support for thesis writers across the entire academic year. It is taught by the Director of Undergraduate Studies and supplemented by regular meetings with a designated preceptor. The workshops are intended to guide students through the process of thesis writing from developing a research question to determining the most appropriate research method for its exploration to integrating suitable theoretical insights to writing compellingly about media objects to the nuts and bolts of exposition.

Instructor(s): S.Skivsky Terms Offered: Autumn. Enrollment takes place only in Autumn Quarter, but the workshop is held throughout the academic year

Note(s): Course is only open to students completing a Written Thesis Project in their final year in the College. This course counts towards major coursework requirements for Intensive Track students.

CMST 27558. No Future: Visual Media and Contemporary Life. 100 Units.

No Future seeks to establish the grounds by which we might examine both contemporary and classic theories of the FUTURE --and its perhaps its negation -- through visual media and the production of art in the age of algorithmic capital. We will use this course as a means to consider new forms of subjectivity that arise as effect and response to mutating forms of power and control-and more importantly, how we might refuse these mechanisms. Speeding through (art) history with stops at such examples as the Italian Futurists and their violent reimagining of the human as a productive machine to the Situationists who vowed never to produce again, we will examine the fluxes and flows of subjectivity in the movement from factory Taylorization and Fordist production to the immaterial labor of late stage capitalism. We will discuss issues of work and automation, image production and the labor of the artist, climate change, gender and sexuality, punk, and the economies of inhuman desire that drive our contemporary and future societies. But what is left of the future? Is it already over?

Instructor(s): Andrew Pettinelli Terms Offered: Winter

Note(s): This class will present theory that might be new to us; yet, it should remain our goal to work together to think through these texts and visual texts collectively, utilizing the classroom as a space for collaboration and experimentation.

Equivalent Course(s): MAAD 27558

CMST 27867. 1990s Videogame History. 100 Units.

In this course, we will be turning to the 1990s to learn about videogame history and historiography. Focusing on this period will allow us to examine the videogame medium within broader historical and cultural contexts, and to explore issues related to doing recent and contemporary cultural history. What was the relationship between technological innovations and stylistic changes in the videogame medium? How did the entry of new corporate and creative players into the business affect industrial structures and strategies? What do we make of 'freedom,' 'realism,' and other concepts that dominated videogame press coverage - and how were they connected to broader cultural discourses? How did understandings of what it meant to play videogames and the types of experiences that videogames could offer change over the course of the decade? What was the relationship between developments in the videogame medium and other media - from film and fiction to virtual reality and the Internet? How has this decade been remembered, conceptualized, preserved, and repackaged in subsequent decades? How do we go about doing history of a still-young medium, operating in multiple national and cultural contexts, and focused on such a recent decade? This course will take advantage of the University of Chicago's videogame collection and the Media Arts, Data, and Design Center's hardware collection to provide as comprehensive a view as possible of the videogame medium in this period.

Instructor(s): Chris Carloy Terms Offered: Spring

Equivalent Course(s): CMST 37867, MAPH 34516, MAAD 25416

CMST 27911. Augmented Reality Production. 100 Units.

Focusing on experimental moving-image approaches at a crucial moment in the emerging medium of augmented reality, this class will explore and interrogate each stage of production of AR works. Students in this production-based class will examine the techniques and opportunities of this new kind of moving image. During this class we'll study the construction of examples across a gamut from locative media, journalism, and gameplay-based works to museum installations. Students will complete a series of critical essays and sketches towards a final augmented reality project using a custom set of software tools developed in and for the class.

Instructor(s): M. Downie Terms Offered: Winter

Equivalent Course(s): MAAD 22911, CMST 37911, ARTV 27921, ARTV 37921

CMST 27920. Virtual Reality Production. 100 Units.

Focusing on experimental moving-image approaches at a crucial moment in the emerging medium of virtual reality, this class will explore and interrogate each stage of production for VR. By hacking their way around the barriers and conventions of current software and hardware to create new optical experiences, students will design, construct and deploy new ways of capturing the world with cameras and develop new strategies and interactive logics for placing images into virtual spaces. Underpinning these explorations will be a careful discussion, dissection and reconstruction of techniques found in the emerging VR 'canon' that spans new modes of journalism and documentary, computer games, and narrative 'VR cinema.' Film production and computer programming experience is welcome but not a prerequisite for the course. Students will be expected to complete short 'sketches' of approaches in VR towards a final short VR experience.

Instructor(s): M.Downie Terms Offered: Spring

Note(s): Film production and computer programming experience is welcome but not a prerequisite for the course. Students will be expected to complete short 'sketches' of approaches in VR towards a final short VR experience.

Equivalent Course(s): MAAD 24920, ARTV 27920, CMST 37920, ARTV 37920

CMST 28008. Sound and Scandal: How Media Make Believe. 100 Units.

Why has lip syncing caused so many scandals and successes across media, from Milli Vanilli to drag? Primarily focusing on American film, TV, music videos, and animation, this course investigates how sound synchronization creates alternate identities and realities. We may think we know lip sync and voice synthesis when we see and hear them, but close reading unveils deeper issues of technological construction and gendered performances. For example, Singin' in the Rain dramatizes film's transition to sound as technicians struggled to match the 'right' voice to the 'right' body: a beautiful woman with an ugly voice lip syncs to the lovely voice of a woman who Hollywood deems unsuitable to appear onscreen. From The Jazz Singer to today's alarmingly authentic deepfakes and vocaloids, we will diagnose how vocal appropriation and synthesis conjure states of credibility and belief. We will ask how lip sync authenticates talking animals and faux rockers. Questions of star power and authorship confronting performances of gender and sexuality. No matter the motive, vocal manipulation can never be taken at face value, especially in an age when contortions between sounds and their sources can be passed off as truth.

Terms Offered: Spring

Equivalent Course(s): MUSI 28008, TAPS 20208, MAAD 28008

CMST 28118. Listening to Movies. 100 Units.

This course shifts our critical attention from watching movies to listening to them. Amid a strong emphasis on cinema-ranging from musical accompaniment during the silent era to sound in experimental films; or from classical Hollywood underscoring to Bollywood musical numbers-we will consider the soundtrack of moving pictures within a growing variety of audiovisual media, including television, music videos, and computer games. Interactive lectures (Mondays and Wednesdays) and discussion sections (Fridays) combine a historical overview with transhistorical perspectives. Supplemented by screenings and readings, the course will address a variety of issues and topics: aesthetic and psychological (such as representation, narration, affect); cultural and political (such as race, ethnicity, propaganda); social and economic (such as technology, production, dissemination).

Instructor(s): Berthold Hoeckner Terms Offered: Spring

Equivalent Course(s): MUSI 20918, SIGN 26021

CMST 28201. Political Documentary Film. 100 Units.

This course explores the political documentary film, its intersection with historical and cultural events, and its opposition to Hollywood and traditional media. We will examine various documentary modes of production, from films with a social message, to advocacy and activist film, to counter-media and agit-prop. We will also consider the relationship between the filmmaker, film subject and audience, and how political documentaries are disseminated and, most importantly, part of political struggle.

Instructor(s): J. Hoffman

Equivalent Course(s): CMST 38201, ARTV 28204, ARTV 38204

CMST 28500-28600-28700. History of International Cinema I-II-III.

This sequence is required of students majoring in Cinema and Media Studies. Taking these courses in sequence is strongly recommended but not required.

CMST 28500. History of International Cinema I: Silent Era. 100 Units.

This course provides a survey of the history of cinema from its emergence in the mid-1890s to the transition to sound in the late 1920s. We will examine the cinema as a set of aesthetic, social, technological, national, cultural, and industrial practices as they were exercised and developed during this 30-year span. Especially important for our examination will be the exchange of film techniques, practices, and cultures in an international context. We will also pursue questions related to the historiography of the cinema, and examine early attempts to theorize and account for the cinema as an artistic and social phenomenon.

Instructor(s): A. Field Terms Offered: Autumn

Prerequisite(s): Prior or concurrent registration in CMST 10100 required. Required of students majoring or minoring in Cinema and Media Studies.

Note(s): For students majoring in Cinema and Media Studies, the entire History of International Cinema three-course sequence must be taken.

Equivalent Course(s): ENGL 29300, CMLT 22400, CMLT 32400, MAPH 33600, ARTH 38500, ENGL 48700, CMST 48500, MAAD 18500, ARTH 28500, ARTV 20002

CMST 28600. History of International Cinema II: Sound Era to 1960. 100 Units.

The center of this course is film style, from the classical scene breakdown to the introduction of deep focus, stylistic experimentation, and technical innovation (sound, wide screen, location shooting). The development of a film culture is also discussed. Texts include Thompson and Bordwell's *Film History: An Introduction*; and works by Bazin, Belton, Sitney, and Godard. Screenings include films by Hitchcock, Welles, Rossellini, Bresson, Ozu, Antonioni, and Renoir.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): Prior or concurrent registration in CMST 10100 required. Required of students majoring or minoring in Cinema and Media Studies.

Note(s): CMST 28500/48500 strongly recommended

Equivalent Course(s): REES 45005, REES 25005, ENGL 29600, ENGL 48900, CMST 48600, MAAD 18600, ARTH 28600, ARTV 20003, MAPH 33700, ARTH 38600, CMLT 22500, CMLT 32500

CMST 28700. History of International Cinema, Part III: 1960 to Present. 100 Units.

This course will continue the study of cinema around the world from the late 1950s through the 1990s. We will focus on New Cinemas in France, Czechoslovakia, Germany, the United States, the United Kingdom, and other countries. We

will pay special attention to experimental stylistic developments, women directors, and well-known auteurs. After the New Cinema era we will examine various developments in world cinema, including the rise of Bollywood, East Asian film cultures, and other movements.

Instructor(s): J. Lastra Terms Offered: Spring

Note(s): This course follows the subject matter taught in CMST 28500/48500 and CMST 28600/48600, but these are not prerequisites.

Equivalent Course(s): CMST 38700, MAAD 18700

CMST 28921. Introduction to 16mm Filmmaking. 100 Units.

The goal of this intensive laboratory course is to give its students a working knowledge of film production using the 16mm gauge. The course will emphasize how students can use 16mm technology towards successful cinematography and image design (for use in both analog and digital postproduction scenarios) and how to develop their ideas towards constructing meaning through moving pictures. Through a series of group exercises, students will put their hands on equipment and solve technical and aesthetic problems, learning to operate and care for the 16mm Bolex film camera; prime lenses; Sekonik light meter; Sachtler tripod; and Arri light kit and accessories. For a final project, students will plan and produce footage for an individual or small group short film. The first half of the class will be highly structured, with demonstrations, in-class shoots and lectures. As the semester continues, class time will open up to more of a workshop format to address the specific concerns and issues that arise in the production of the final projects. This course is made possible by the Charles Roven Fund for Cinema and Media Studies.

Instructor(s): T. Comerford Terms Offered: Winter

Equivalent Course(s): MAAD 23808, CMST 38921, ARTV 33808, ARTV 23808

CMST 28922. Intermediate 16mm Filmmaking. 100 Units.

This course will allow students to continue working on projects begun in the Intro to 16mm Production course (or developing a new small-scale project), in addition to developing skills with the following: sophisticated approaches to cinematography (comparative and reflective light metering, color negative exposure); varying workflows for post-production editing (analog and digital); and sound recording and design. Students will meet as a group for lectures, technical demonstrations and a shooting workshop. Course meeting time will also be set aside for individual conferences with the instructor to address project development and completion. Students should expect to budget between 120.00-500.00 for their filmstock and processing costs, depending on the project. This course is made possible by the Charles Roven Fund for Cinema and Media Studies. Instructor permission required.

Instructor(s): T. Comerford Terms Offered: Spring

Prerequisite(s): Permission from instructor is required for registration. Students will bid for entry to the class by emailing tcomerford@uchicago.edu, listing their year, major and previous production experience. Priority will be given to students who have previously completed the Intro to 16mm course, followed by CMS and DOVA majors, from graduate students to first-years. Students whose bids are accepted will be registered officially by the instructor at the first class meeting.

Equivalent Course(s): ARTV 28001, ARTV 38001, CMST 38922

CMST 28933. Developing Your Film. 100 Units.

This seminar is intended to take ideas for a film - be they documentary, narrative, or experimental - and develop those ideas into a concrete film treatment. We will focus on researching the subject, plotting the story arc and filmic structure, character development, establishing a sense of place, and timeline. We will also explore the visual, audio, and editorial styles that best tell the story. Students will be expected to screen assigned films before each class, which address different modes of production and filmmaking issues. There will be class visits by working filmmakers who will share their experiences.

Instructor(s): Judy Hoffman Terms Offered: Autumn

Note(s): Priority registration will be given to students majoring or minoring in Cinema and Media Studies.

CMST 28999. Intensive Track - Production Thesis Workshop. 100 Units.

This series of workshops-comprised of approximately 10 meetings-will provide support for students working on production theses across the entire academic year. It is taught by a production faculty member and supplemented by regular meetings with a designated preceptor. The workshops are intended to systematically guide students through the necessary steps in the realization of a film project from pre-production to production to post-production.

Instructor(s): J. Hoffman Terms Offered: Autumn. Enrollment takes place only in Autumn Quarter, but workshop is held throughout the academic year

Prerequisite(s): Approval to complete a Production Thesis Project.

Note(s): Course is only open to students completing a Production Thesis Project in their final year in the College. This course takes the place of CMST 23907 and CMST 23908, and counts towards major coursework requirements for Intensive Track majors.

CMST 29201. Advanced Seminar - Autumn. 100 Units.

Open only to upper-year students who have declared a major in Cinema and Media Studies, the 'Advanced Seminar' functions as a capstone course. It will allow students the opportunity to explore in more depth key disciplinary and methodological questions related to the study of cinema and media. Particular topics will be determined by the individual faculty instructor, and will vary from the Autumn to Spring Quarters and from instructor to instructor.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): Only open to students in year 3 and year 4 majoring in CMST.

Note(s): The Advanced Seminar will be offered twice during each academic year - as CMST 29201 in Autumn and CMST 29202 in Spring. Students majoring in CMST are required to enroll in one section (preferably during Spring Quarter of Year 3) but are welcome to use the second as an elective for their major requirements if the subject-matter is of interest.

CMST 29202. Advanced Seminar - Spring. 100 Units.

Open only to upper-year students who have declared a major in Cinema and Media Studies, the 'Advanced Seminar' functions as a capstone course. It will allow students the opportunity to explore in more depth key disciplinary and methodological questions related to the study of cinema and media. Particular topics will be determined by the individual faculty instructor, and will vary from the Autumn to Spring Quarters and from instructor to instructor.

Instructor(s): J. Wild Terms Offered: Spring

Prerequisite(s): Only open to students in year 3 and year 4 majoring in CMST.

Note(s): The Advanced Seminar will be offered twice during each academic year - as CMST 29201 in Autumn and CMST 29202 in Spring. Students majoring in CMST are required who wish to enroll in one section (preferably during Spring Quarter of Year 3) but are welcome to use the second as an elective for their major requirements if the subject-matter is of interest.

CMST 29700. Reading and Research CMST. 100 Units.

This course is primarily intended for students who are majoring in Cinema and Media Studies and who can best meet program requirements by studying under a faculty member's individual supervision. The subject matter, course of study, and requirements are arranged with the instructor prior to registration.

Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of faculty adviser and Director of Undergraduate Studies

Note(s): Students are required to submit the College Reading and Research Form. This course may be counted toward distribution requirements for the major.

CMST 29900. Senior Thesis. 000 Units.

Students in the CMS Intensive Track - both Written and Production streams - must enroll in CMST 29900 during the quarter they intend to graduate. Students enroll in 29900 using the section number of their BA thesis adviser which can be obtained from the department staff in CMS or the student's College advisor. This course can not be counted toward requirements for the Intensive Track major.

Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of instructor. Required of students in the Intensive Track majors in Cinema and Media Studies (Written Thesis and Production Thesis)

Classical Studies

Department Website: <http://classics.uchicago.edu>
Programs of Study

The BA degree in Classical Studies allows students to explore Greek and Roman antiquity in a variety of ways and provides excellent preparation for careers that require strong skills in interpretation and writing, such as teaching, scholarly research, law, and publishing, and in the humanities in general. Students may choose from the following three variants based on their preparation, interests, and goals:

- 1. The Language and Literature Variant combines the study of Greek and Latin texts with coverage of diverse areas, including art and archaeology, history, philosophy, religion, and science.
- 2. The Language Intensive Variant focuses on languages with the aim of reading a larger selection of texts in the original languages; it is designed especially for those who wish to pursue graduate studies in classics.
- 3. The Greek and Roman Cultures Variant emphasizes courses in art and archaeology, history, material culture, and texts in translation.

Students in other fields of study may also complete a minor in Classical Studies. Information follows the description of the major.

Language and Literature Variant

The Language and Literature variant combines the study of Greek and Latin texts with coverage of diverse areas, including art and archaeology, history, philosophy, religion, and science. It allows students to focus their language study exclusively on Greek or on Latin, or they may study both languages with an emphasis on one or the other.

- 1. Six courses (or the equivalent) in Greek and/or Latin, including the intermediate level (20100-20200-20300) or above in at least one of those languages. The program assumes that, in addition to the requirements for the major, students have completed or have credit for an initial year of language study in either Latin or Greek. Examples of ways to satisfy the language requirement include: LATN 20100-20200-20300 Intermediate Latin I-II-III AND LATN 21100 Roman Elegy-LATN 21219 Philosophical Prose: Cicero, Tusculan Disputations'-LATN 21300 Vergil; OR LATN 20100-20200-20300 Intermediate Latin I-II-III AND GREK 10100-10200-10300 Introduction to Attic Greek I-II-III.
- 2. Six courses in Greek or Roman art, history, philosophy, religion, science, material culture, or classical literature in translation, with courses divided between at least two of those fields and with approval of the director of undergraduate studies. Any course that carries a Classical Civilization listing, or a Classics listing between 30100 and 39000, meets this requirement. Other eligible courses are offered in disciplines such as Art History, Interdisciplinary Studies in the Humanities, Philosophy, and Political Science. These courses should be chosen in consultation with the director of undergraduate studies.
- 3. By the end of the Spring Quarter of their third year, students are required to submit to the director of undergraduate studies a research skills paper of around 10–12 pages as a Word or PDF file in an email attachment. The paper, which will normally substitute for a final paper in a Greek (above 20300), Latin (above 20300), Classical Civilization, or Classics course, is designed to prepare students for the BA paper. Students will be expected to develop a reasoned argument on a particular topic, based not only on primary materials (ancient literary texts; material culture; etc.) but also on research of relevant secondary bibliography. Students should declare at the start of the quarter if they wish to take a certain course in conjunction with the research skills paper and should work closely throughout the quarter with the faculty instructor, who must approve the paper as satisfying the requirement.
- 4. CLCV 29800 BA Paper Seminar, a one-quarter course spread over Autumn and Winter Quarters. See BA Paper Seminar and BA Paper for more information.

Summary of Requirements: Language and Literature Variant

Six courses in Greek or Latin *	600
Six courses in Greek or Roman art, history, philosophy, science, religion, material culture, or classical literature in translation +	600
CLCV 29800 BA Paper Seminar	100
Total Units	1300

* Must include the intermediate level (20100-20200-20300) or above in at least one of those two languages.
+ Courses must be divided between at least two of those fields.

Language Intensive Variant

The Language Intensive Variant is designed for students who expect to continue Classical Studies at the graduate level. It aims to provide the level of linguistic proficiency in both Greek and Latin that is commonly expected of applicants to rigorous graduate programs. The program assumes that, in addition to the requirements for the major, students have

completed, or have credit for, a year of language study in either Greek or Latin. Students must also use some of their general electives to meet the language requirements of this program variant.

No course that is used to meet one of the following requirements may be used simultaneously to meet a requirement under any other category.

- Six courses (or the equivalent) in one classical language (Greek or Latin) at the 20000 level or above.
- Six courses (or the equivalent) in the other classical language, three of which may be at the introductory level.
- Four courses in Greek or Roman art, history, philosophy, religion, science, material culture, or classical literature in translation, with courses divided between at least two of those fields, and with approval of the director of undergraduate studies. Any course that carries a Classical Civilization listing, or a Classics listing between 30100 and 39000, meets this requirement. Other eligible courses are offered in disciplines such as Art History, Interdisciplinary Studies in the Humanities, Philosophy, and Political Science. These courses should be chosen in consultation with the director of undergraduate studies.
- By the end of the Spring Quarter of their third year, students are required to submit to the director of undergraduate studies a research skills paper of around 10–12 pages as a Word or PDF file in an email attachment. The paper, which will normally substitute for a final paper in a Greek (above 20300), Latin (above 20300), Classical Civilization, or Classics course, is designed to prepare students for the BA paper. Students will be expected to develop a reasoned argument on a particular topic, based not only on primary materials (ancient literary texts; material culture; etc.) but also on research of relevant secondary bibliography. Students should declare at the start of the quarter if they wish to take a certain course in conjunction with the research skills paper and should work closely throughout the quarter with the faculty instructor, who must approve the paper as satisfying the requirement.
- CLCV 29800 BA Paper Seminar, a one-quarter course spread over Autumn and Winter Quarters. See BA Paper Seminar and BA Paper for more information.

Summary of Requirements: Language Intensive Variant

Six courses in Greek *	600	
Six courses in Latin *	600	
4 courses in Greek or Roman art, history, philosophy, religion, science, material culture, or classical literature in translation +	400	
CLCV 29800	BA Paper Seminar	100
Total Units		1700

* Six courses in one classical language (Greek or Latin) at the 20000 level or above, and six courses in the other language, three of which may be at the introductory level.

+ Courses must be divided between at least two of those fields.

Greek and Roman Cultures Variant

This variant is designed for students who are interested in ancient Greece and Rome but wish to focus more on history (political, intellectual, religious, social) and material culture than on language and literature. Because the program allows many courses taught in other departments to count toward the major, it is especially suited to students who declare their major late or who wish to complete two majors.

The program assumes that, in addition to requirements for the major, students have met the general education requirement in civilization studies by taking two or three courses in a sequence related to the Ancient Mediterranean World: HIST 16700-16800-16900 Ancient Mediterranean World I-II-III; Rome: Antiquity to the Baroque sequence (taught in Rome); or Athens: Greek Antiquity and Its Legacy sequence (taught in Athens). Students who have met the general education requirement in civilization studies with a different sequence should complete one of these three sequences, which may then count toward the nine courses in classical civilization required for the major.

No course that is used to meet one of the following requirements may be used simultaneously to meet a requirement under any other category.

- Three courses in Greek or Latin (or the equivalent) at a level appropriate to the student’s prior competency, including at least one course at or above the 10300 level.
- Nine courses in Greek or Roman art, history, philosophy, religion, science, material culture, or classical literature in translation, with courses divided between at least four of those fields, and with approval of the director of undergraduate studies. Any course that carries a Classical Civilization listing, or a Classics listing between 30100 and 39000, meets this requirement. Any course that carries a Classical Civilization listing or a Classics listing between 30100 and 39000 meets this requirement. Other eligible courses are offered in disciplines such as Art History, Interdisciplinary Studies in the Humanities, Philosophy, and Political Science. These courses should be chosen in consultation with the director of undergraduate studies.
- By the end of the Spring Quarter of their third year, students are required to submit to the director of undergraduate studies a research skills paper of around 10-12 pages as a Word or PDF file in an email

attachment. The paper, which will normally substitute for a final paper in a Greek (above 20300), Latin (above 20300), Classical Civilization, or Classics course, is designed to prepare students for the BA paper. Students will be expected to develop a reasoned argument on a particular topic, based not only on primary materials (ancient literary texts; material culture; etc.) but also on research of relevant secondary bibliography. Students should declare at the start of the quarter if they wish to take a certain course in conjunction with the research skills paper and should work closely throughout the quarter with the faculty instructor, who must approve the paper as satisfying the requirement.

4. CLCV 29800 BA Paper Seminar, a one-quarter course spread over Autumn and Winter Quarters. See BA Paper Seminar and BA Paper for more information.

Summary of Requirements: Greek and Roman Cultures Variant

3 courses in Greek or Latin	300
9 courses in Greek or Roman art, history, philosophy, religion, science, material culture, or classical literature in translation ⁺	900
CLCV 29800 BA Paper Seminar	100
Total Units	1300

⁺ Courses must be divided between at least four of those fields.

BA Paper Seminar and BA Paper

Candidates for the BA degree in all variants of the Classical Studies major are required to write a substantial BA paper. The purpose of the BA paper is to enable students to improve their research and writing skills and to give them an opportunity to focus their knowledge of the field upon an issue of their own choosing.

In their *third* year, by Monday of eighth week of Spring Quarter, students must submit to the director of undergraduate studies a short statement proposing an area of research. The statement should include an abstract of a paragraph or more, outlining the problem that you wish to tackle and sketching the argument you hope to elaborate in response. You can, if you wish, discuss questions of method or earlier scholarship. You should make reference here with as much specificity as possible to the primary sources on which you will draw to substantiate your claim.

The statement must be approved in writing by a member of the Classics faculty who agrees to be the director of the BA paper. In certain cases, students may have two co-chairs, including one member of the Classics faculty and one faculty member from another department. Classics faculty at the level of associate professor and above may advise up to three BA papers, while assistant professors may advise as many as two papers. Students needing assistance in finding a faculty member with whom to work should consult with the director of undergraduate studies.

Students may register for CLCV 29800 BA Paper Seminar in either Autumn or Winter Quarter of their fourth year, but they are expected to participate in seminar meetings throughout both quarters. The focus of the seminar is to discuss research problems and compose preliminary drafts of their BA papers. Participants in the regular seminar meetings are expected to exchange criticism and ideas with each other and with the preceptor, as well as to take account of comments from their faculty readers. The grade for the BA Paper Seminar is identical to the grade for the BA paper and, therefore, is not reported to the Registrar until the paper has been submitted in Spring Quarter. The grade for the BA paper depends on participation in the seminar as well as on the quality of the paper. At the end of Autumn Quarter, a provisional grade will be assigned by the preceptor and communicated to the student via the director of undergraduate studies. Once the BA paper has been submitted, the final grade will be determined jointly by the preceptor and faculty director.

The deadline for submitting the BA paper in final form is *Friday of third week of Spring Quarter*. This deadline represents the formal submission, which is final; students should expect to submit and defend substantial drafts much earlier. Both hard copies and digital copies are to be submitted to the faculty director, seminar preceptor, and director of undergraduate studies, unless otherwise indicated. Students who fail to meet the deadline may not be able to graduate in that quarter and will not be eligible for honors consideration.

Students who undertake a *double major* may meet the requirement for a BA paper in Classical Studies by making it part of a single BA paper that is designed to meet the requirements of both majors. This combined paper must have a substantial focus on texts or issues of the classical period, and must have a Classics faculty member as a reader. CLCV 29800 BA Paper Seminar (the two-quarter BA Paper Seminar) is required of all students majoring in Classical Studies, whether as a double major or as a single major. The use of a single essay to meet the requirement for a BA paper in two majors requires approval from directors of undergraduate studies in both majors. A consent form, to be signed by the directors of undergraduate studies, is available from the College advisers. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Grading

All courses taken to meet requirements in the major or minor must be taken for quality grades.

The first-year sequences in Greek and Latin (GREK 10100-10200-10300 Introduction to Attic Greek I-II-III and LATN 10100-10200-10300 Introduction to Classical Latin I-II-III) and the courses in Greek and Latin composition (GREK 34400 Greek Prose Composition and LATN 34400 Latin Prose Composition) are open for P/F grading for students not using these courses to meet language requirements for the major or minor.

Honors

To be recommended for honors, a student (1) must maintain an overall GPA of 3.25 or higher and a GPA of 3.5 or higher in the major and (2) must also demonstrate superior ability in the BA paper to interpret Greek or Latin source material and to develop a coherent argument. For a student to be recommended for honors, the BA paper must be judged worthy of honors by the faculty director, preceptor, and an additional faculty committee. Before the end of the Winter Quarter, the director of undergraduate studies will consult with both the faculty director and the BA preceptor to ascertain which students in the BA Seminar are likely to be nominated for honors and which papers will be forwarded to the faculty committee.

Minor Program in Classical Studies

The minor in Classical Studies requires a total of seven courses in Greek, Latin, or classical civilization. Students may choose one of two variants: a language variant that includes three courses at the 20000 level or higher in one language, or a classical civilization variant.

Students must meet with the director of undergraduate studies before the end of Spring Quarter of their third year to declare their intention to complete the minor. Students choose courses in consultation with the director of undergraduate studies. The director's approval for the minor program should be submitted to a student's College adviser by the deadline above on a form obtained from the adviser.

CLCV courses in the minor (1) may not be double counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements.

Courses in the minor must be taken for quality grades and more than half of the requirements for the minor must be courses completed at the University of Chicago.

The following groups of courses would comprise a minor in the areas indicated. Other programs may be designed in consultation with the director of undergraduate studies. Minor program requirements are subject to revision.

Greek (or Latin) Sample Variant

GREK 10100-10200-10300	Introduction to Attic Greek I-II-III *	300
GREK 20100-20200-20300	Intermediate Greek I-II-III *	300
CLCV 26419	Magic in the Ancient Mediterranean	100
Total Units		700

* Language variant of the minor requires three courses at the 20000 level or higher in Greek or Latin.

Greek (or Latin) Sample Variant

One of the following sequences:		300
GREK 20100-20200-20300	Intermediate Greek I-II-III	
LATN 20100-20200-20300	Intermediate Latin I-II-III	
CLCV 20700-20800-20900	Ancient Mediterranean World I-II-III	300
CLCV 26419	Magic in the Ancient Mediterranean	100
Total Units		700

Classical Civilization Sample Variant

CLCV 20700-20800-20900	Ancient Mediterranean World I-II-III **	300
CLCV 22000	Greek Tragedy and Its Influences	100
CLCV 22100	Epictetus/Marcus Aurelius	100
CLCV 24200	Invention Of Love Poem	100
CLCV 23400	Boethius: Consolation of Philosophy	100
Total Units		700

** or, for example, GREK 10100-10200-10300 Introduction to Attic Greek I-II-III or LATN 10100-10200-10300 Introduction to Classical Latin I-II-III

Credit will not be granted by examination to meet the language requirement for the minor program.

Prizes and Grants

The **Arthur Adkins Summer Research Fellowship** is expected to be worth \$5,000 this year. The fellowship is targeted to third-year undergraduates who are bound for graduate school, and it provides means and opportunity for the writing of a superior research paper on any aspect of the ancient world from the Bronze Age through Late Antiquity. It may be used for travel to classical sites and collections or to other research centers, and/or for living expenses during a summer devoted to research between the third and fourth year. Applicants must submit to the Classics Secretary (**by Monday, April 5, 2021**) a transcript, a statement (2–3 pages) outlining their project and its relationship to existing knowledge in the field, a

plan of research together with a provisional budget for the summer, and a letter from a faculty supervisor. A written report of what was accomplished during the period of the fellowship must be submitted to the director of undergraduate studies by the first week of the following Autumn Quarter.

This fellowship is not limited to Classical Studies majors and minors, or even to students of Greek and Latin, and although it may be used for research abroad, it does not require such research. But it does require that a student have a well-developed research project by the time of application.

The David Grene Fellowship is expected to be worth \$5,000 this year. The fellowship is targeted to undergraduates whose intellectual interests in the classical world have led them to an area of knowledge which they are unable to pursue during the regular academic year, and it allows them an opportunity to explore that interest through independent study during the summer before graduation. The independent study may involve training in a new discipline such as paleography or numismatics, first-hand experience of ancient sites and artifacts, or ancillary language study. It may be carried out under the auspices of an organized program like the American School of Classical Studies at Athens or the American Academy in Rome, or it may be tailored entirely according to the student's own plan. Applicants must submit to the Classics Secretary (**by Monday, April 5, 2021**) a transcript, project statement (2–3 pages), a provisional budget, and a faculty letter of recommendation. A written report of what was accomplished during the period of the fellowship must be submitted to the director of undergraduate studies by the first week of the following Autumn Quarter.

This fellowship is not limited to Classical Studies majors and minors, or even to students of Greek and Latin, and it need not directly involve the study of classics, but applicants must be able to demonstrate a background of interest in the classical world.

The Pausanias Summer Research Fellowship is expected to be worth \$5,000 this year. The fellowship provides support to an undergraduate student in Classical Studies for research abroad in sites of interest for classical studies. It may be used to pursue a project of the student's own design or to participate in appropriate institutional programs abroad. Applicants must submit to the Classics Secretary (**by Monday, April 5, 2021**) a transcript, project statement (2–3 pages), provisional budget, and a faculty letter of recommendation. A written report of what was accomplished during the period of the fellowship must be submitted to the director of undergraduate studies by the first week of the following Autumn Quarter.

This fellowship is limited to Classical Studies majors and minors.

The John G. Hawthorne Travel Prize is expected to be worth \$5,000 this year. The prize is given to an outstanding undergraduate student of classical languages, literature, or civilization for travel to Greece or Italy or for study of classical materials in other countries. It may be used to pursue a project of the student's own design or to participate in appropriate programs conducted in Greece or Italy. Applicants must submit to the Classics Secretary (**by Monday, April 5, 2021**) a transcript, project statement (2–3 pages), provisional budget, and a faculty letter of recommendation. A written report of what was accomplished during the period of the prize must be submitted to the director of undergraduate studies by the first week of the following Autumn Quarter.

This prize is open to any student who has taken a GREK, LATN, or CLCV course in the College, and may be used for travel in Greece and/or Italy, or for classics-related study there or in other appropriate locations.

The Leon Golden Undergraduate Research Fellowship is expected to be worth \$5,000 this year. The fellowship is intended to enable undergraduates majoring in Classical Studies to develop an original research project in the field or to pursue training in ancillary studies that will enrich their work in classics. Applicants must submit to the Classics Secretary (**by Monday, April 5, 2021**) a transcript, a statement (2–3 pages) outlining their project together with a provisional budget, and a letter from a faculty supervisor. A written report of what was accomplished during the period of the fellowship must be submitted to the director of undergraduate studies by the first week of the following Autumn Quarter.

This fellowship is limited to Classical Studies majors, and it requires that a student have a well-developed project by the time of application.

The Nancy P. Helmbold Travel Award is expected to be worth \$5,000 this year. It is awarded to an outstanding undergraduate student of Greek and/or Latin for travel to Greece or Italy. Applicants must submit to the Classics Secretary (**by Monday, April 5, 2021**) a transcript, an itinerary or project statement (2–3 pages), proposed budget, and a faculty letter of recommendation. A written report of what was accomplished during the period of the award must be submitted to the director of undergraduate studies by the first week of the following Autumn Quarter.

This award requires a student to have taken a GREK or LATN course (not merely a CLCV course) in the College. It may or may not be used for study or research, but it must be used in Greece and/or Italy.

The Paul Shorey Foreign Travel Grant is expected to be worth \$3,000 this year. The grant is given to a student of Greek or Latin who has been accepted to participate in the Athens Program or the Rome Program of the College, and it is to be used to defray costs incurred in the program. The terms of the grant stipulate that it is to be awarded to a 'needy and deserving' student. Students who have been accepted into one of the programs and who wish to be considered for the Shorey grant are invited to submit statements explaining their need in the first week of Spring Quarter.

The Classics Prize is a cash award of \$500 made annually to the student who graduates with the best record of achievement in the Classical Studies major.

Examples of past successful application statements for the summer awards are available from the undergraduate prize coordinator, Peter White, (<https://classics.uchicago.edu/faculty/white/>) or the director of undergraduate studies, David Wray (<http://classics.uchicago.edu/faculty/wray/>).

Offered through the Society for Classical Studies (SCS):

The **Lionel Pearson Fellowship** seeks to contribute to the training of American and Canadian classicists by providing for a period of study at an English or Scottish university. The competition is open to students majoring in Classics, or closely related fields. Fellows must undertake a course of study that broadens and develops their knowledge of Greek and Latin literature in the original languages; candidates should therefore have a strong background in the classical languages. Normally, the recipient will hold the fellowship in the academic year immediately after graduating with a bachelor's degree. The term of the fellowship is one year. The recipient may use the fellowship for part of a longer program of study, but under no circumstances will support from the fellowship extend beyond one year. Fellows are responsible for seeking and obtaining admission to the English or Scottish university where they intend to study.

The maximum amount of the fellowship will be \$24,000, which may be used to offset academic fees, travel expenses, housing and subsistence costs, and book purchases. The fellowship amount (\$24,000) is the maximum that the SCS can award, but the Faculties of Classics of both Oxford and Cambridge Universities have generously offered to support the tuition expenses of any Pearson Fellow enrolled at their institution. In these instances funds provided by the SCS should be adequate to offset the fellow's other expenses, and the SCS will attempt (but it cannot guarantee) to obtain a similar accommodation from another institution in the UK should the fellow attend a university other than Oxford or Cambridge. **Note:** The SCS cannot guarantee tuition support from other Faculties at Oxford and Cambridge (such as Philosophy or History). Students should be aware that if they can pursue their preferred course of study under the rubric of Classics, it would be to their advantage.

Candidates for the fellowship require nomination by the director of undergraduate studies by the end of the Spring Quarter for a rising fourth-year student. The Department of Classics may only nominate one student, and therefore requests that interested students submit the following materials by **Friday of eighth week** in the Spring Quarter of their third year:

- A current copy of your transcript
- One paragraph on why you would like to be nominated for the Pearson Fellowship, briefly suggesting what you might like to do with it. This should include which university or universities you are interested in attending, with whom you would like to work, and what kind of topic you would like to research and/or why you think a year doing so in the UK would be especially beneficial for you.

See more information at <https://classicalstudies.org/awards-and-fellowships/lionel-pearson-fellowship>.

Classical Civilization Courses

CLCV 14119. Greek Art and Archaeology. 100 Units.

This course examines the art and archaeology of ancient Greece from ca. 1000 BCE - ca. 200 BCE. Participants will learn a lot of facts about the Greek world; they will see the Greeks emerge from poverty and anarchy to form a distinctive political and social system based on city-states, and they will see that system grow unstable and collapse. They will see the emergence of distinctive forms of sculpture, architecture, pottery, and urban design - many of which are still in use today. Along with these facts, they will acquire a conceptual toolkit for looking at works of art and for thinking about the relation of art to social life.

Instructor(s): S. Estrin Terms Offered: Winter

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): ARTH 14107

CLCV 17319. The Body in Ancient Greek Art and Culture. 100 Units.

This course provides an introduction to the role of the human body in ancient Greek art. We will examine, on the one hand, the various ways in which Greek artists represented the body, and consider how forms of bodily identity such as gender and sexuality were constructed and articulated through artistic practice. But we will also consider the ways in which works of art themselves - statues, paintings, vessels - could function like bodies or in place of bodies, expanding the notion of what it means to be a living being. Readings will range from primary texts - ancient literature in translation - to more theoretical writing on embodiment, gender, and sexuality.

Instructor(s): S. Estrin Terms Offered: Autumn

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): GNSE 17303, ARTH 37303, ARTH 17303

CLCV 20100. Ancient Sparta. 100 Units.

From Herodotos to Hitler, ancient Sparta has continued to fascinate for its supposedly balanced constitution, its military superiority, its totalitarian ideology, and its brutality. Yet the image we possess of the most important state of the Peloponnese is largely the projection of outside observers for whom the objectification of Sparta could serve either as a model for emulation or as a paradigm of "otherness." This course will examine the extant evidence for Sparta from its origins through to its repackaging in Roman times and will serve as a case study in discussing the writing of history and in attempting to gauge the viability of a non-Athenocentric Greek history.

Instructor(s): J. Hall Terms Offered: Autumn

Equivalent Course(s): HIST 20302, CLAS 30100, HIST 30302, ANCM 33600

CLCV 20404. Troy and Its Legacy. 100 Units.

This course will explore the Trojan War through the archaeology, art, and mythology of the Greeks and Romans, as well as through the popular imaginings of it in later cultures. The first half will focus on the actual events of the "Trojan War" at the end of the second millennium BCE. We will study the site of Troy, the cities of the opposing Greeks, and the evidence for contact, cooperation, and conflict between the Greeks and Trojans. Students will be introduced to the history of archaeology and the development of archaeological fieldwork. The second half will trace how the narrative and mythology of Homer's Iliad and the Trojan War were adapted and used by later civilizations, from classical Greece to twenty-first-century America, to justify their rises to political and cultural hegemony in the Mediterranean and the West, respectively.

Instructor(s): M. Andrews Terms Offered: Spring

Equivalent Course(s): HIST 30404, CLAS 30404, HIST 20404, ARCH 20404, ANTH 26120, ANTH 36120

CLCV 20700-20800-20900. Ancient Mediterranean World I-II-III.

Available as a three-quarter sequence (Autumn-Winter-Spring) or as a two-quarter sequence (Autumn-Winter or Winter-Spring). This sequence meets the general education requirement in civilization studies. This sequence surveys the social, economic, and political history of Greece to the death of Alexander the Great (323 BC), the Roman Republic (509 to 27 BC), and late antiquity (27 BC to the fifth century AD).

CLCV 20700. Ancient Mediterranean World I: Greece. 100 Units.

This course surveys the social, economic, and political history of Greece from prehistory to the Hellenistic period. The main topics considered include the development of the institutions of the Greek city-state, the Persian Wars and the rivalry of Athens and Sparta, the social and economic consequences of the Peloponnesian War, and the eclipse and defeat of the city-states by the Macedonians.

Instructor(s): C. Kearns Terms Offered: Autumn

Equivalent Course(s): HIST 16700

CLCV 20800. Ancient Mediterranean World II: Rome. 100 Units.

Part II surveys the social, economic, and political history of Rome, from its prehistoric beginnings in the twelfth century BCE to the end of the Severan dynasty in 235 CE. Throughout, the focus will be upon the dynamism and adaptability of Roman society, as it moved from a monarchy to a republic to an empire. The course will also cover the questions of social organization (free and unfree people, foreigners), gender relations, religion, and specific forms of the way of life of the Romans. It will be based both on lectures and on discussions of textual or archaeological documents in smaller discussion groups.

Instructor(s): A. Bresson Terms Offered: Winter

Equivalent Course(s): HIST 16800

CLCV 20900. Ancient Mediterranean World III. 100 Units.

Part III examines late antiquity, a period of paradox. The later Roman emperors established the most intensive, pervasive state structures of the ancient Mediterranean, yet yielded their northern and western territories to Goths, Huns, Vandals, and, ultimately, their Middle Eastern core to the Arab Muslims. Imperial Christianity united the populations of the Roman Mediterranean in the service of one God, but simultaneously divided them into competing sectarian factions. A novel culture of Christian asceticism coexisted with the consolidation of an aristocratic ruling class notable for its insatiable appetite for gold. The course will address these apparent contradictions while charting the profound transformations of the cultures, societies, economies, and political orders of the Mediterranean from the conversion of Constantine to the rise of Islam.

Instructor(s): R. Payne Terms Offered: Spring

Equivalent Course(s): HIST 16900, MDVL 16900

CLCV 21019. Ancient Stones in Modern Hands. 100 Units.

Objects from classical antiquity that have survived into the modern era have enticed, inspired, and haunted those who encountered or possessed them. Collectors, in turn, have charged ancient objects with emotional, spiritual, and temporal power, enrolling them in all aspects of their lives, from questions of politics and religion to those of race and sexuality. This course explores intimate histories of private ownership of antiquities as they appear within literature, visual art, theater, aesthetics, and collecting practices. Focusing on the sensorial, material, and affective dimensions of collecting, we will survey histories of modern classicism that span from the eighteenth century to the present, from the Mediterranean to the Pacific. Historical sources will include the writings of Johann Gottfried Herder, Johann Joachim Winckelmann, Emma Hamilton, Vernon Lee, and Sigmund Freud, among others; secondary source scholarship will draw from the fields of gender studies, the history of race, art history, and the history of emotions. We will supplement our readings with occasional museum visits and film screenings. Assignments: Active participation in class, one secondary text analysis, one analysis of a controversy, and one proposal for a monument, museum, or school curriculum.

Instructor(s): S. Estrin & A. Goff Terms Offered: Winter

Prerequisite(s): Prerequisite: instructor consent required. Email both instructors describing your interest in the course, how it fits into your broader studies, and any relevant background (sestrin@uchicago.edu and agoff@uchicago.edu). This is a traveling seminar that includes a 4-day trip to visit California museum collections.

Note(s): Making History courses forgo traditional paper assignments for innovative projects that develop new skills with professional applications in the working world. A team-taught and interdisciplinary course; we welcome students from all backgrounds, with no previous experience in ancient art or modern history required.

Equivalent Course(s): HIST 29422, HIST 39422, ARTH 30304, ARTH 20304, CLAS 31019

CLCV 21718. Socrates, Plato and Aristotle on Courage. 100 Units.

What is courage? Is it: doing what you should do, even when you are afraid? Can you be courageous without being afraid? Can you be courageous and know that you are doing the right thing? Can you be courageous if you are not in fact doing the right thing? Can you have precisely the correct amount of fear and still fail to be courageous? Could you be courageous if you weren't afraid to die? Courage is, arguably, the queen of the virtues. In this class, we will use some Socratic dialogues (Laches, Protagoras, Republic, Phaedo) and some Aristotelian treatises (Nicomachean Ethics, Eudemian Ethics) as partners in inquiry into the answers to the questions listed above. (A)

Instructor(s): A. Callard Terms Offered: Autumn

Prerequisite(s): Students who are not enrolled by the start of term but wish to enroll must (a) email the instructor before the course begins and (b) attend the first class.

Equivalent Course(s): CLAS 31718, PHIL 31717, PHIL 21717

CLCV 22216. Italian Renaissance: Petrarch, Machiavelli, and the Wars of Popes and Kings. 100 Units.

Florence, Rome, and the Italian city-states in the age of plagues and cathedrals, Petrarch and Machiavelli, Medici and Borgia (1250-1600), with a focus on literature, philosophy, primary sources, the revival of antiquity, and the papacy's entanglement with pan-European politics. We will examine humanism, patronage, politics, corruption, assassination, feuds, art, music, magic, censorship, education, science, heresy, and the roots of the Reformation. Writing assignments focus on higher level writing skills, with a creative writing component linked to our in-class role-played reenactment of a Renaissance papal election (LARP). This is a History Department Gateway course. First-year students and non-History majors welcome.

Instructor(s): A. Palmer Terms Offered: Spring

Prerequisite(s): Graduate students by consent only; register for the course as HIST 90000 (sect 53) Reading and Research: History.

Note(s): History Gateways are introductory courses meant to appeal to first- through third-year students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): MDVL 12203, SIGN 26034, FNDL 22204, ITAL 16000, HIST 12203, KNOW 12203, RLST 22203

CLCV 22514. Markets and Moral Economies. 100 Units.

This course examines the ways in which economic behavior in the Roman Empire was informed by, and itself came to inform, social and religious mores and practices. We will explore the interrelationship between culture and economy from the accession of Augustus to late antiquity and the conversion of the empire to Christianity. Particular attention will be given to Roman attitudes towards labor, the ethical issues surrounding buying and selling, and alternative allocative mechanisms to the market. Of constant concern will be the tension between the perspectives and prejudices of elites, which stand behind so much surviving literary evidence, and the realities of everyday commerce and economic life as they can be glimpsed in the archaeological and epigraphic record.

Instructor(s): L. Gardner Terms Offered: Autumn

Equivalent Course(s): CLAS 32514

CLCV 22700. History of Philosophy I: Ancient Philosophy. 100 Units.

An examination of ancient Greek philosophical texts that are foundational for Western philosophy, especially the work of Plato and Aristotle. Topics will include: the nature and possibility of knowledge and its role in human life; the nature of the soul; virtue; happiness and the human good.

Instructor(s): G. Richardson Lear Terms Offered: Autumn Spring

Prerequisite(s): Completion of the general education requirement in humanities.

Equivalent Course(s): PHIL 25000

CLCV 22914. The Italian Renaissance. 100 Units.

Florence, Rome, and the Italian city-states in the age of plagues and cathedrals, Dante and Machiavelli, Medici and Borgia (1250-1600), with a focus on literature and primary sources, the recovery of lost texts and technologies of the ancient world, and the role of the Church in Renaissance culture and politics. Humanism, patronage, translation, cultural immersion, dynastic and papal politics, corruption, assassination, art, music, magic, censorship, religion, education, science, heresy, and the roots of the Reformation. Assignments include creative writing, reproducing historical artifacts, and a live reenactment of a papal election. First-year students and non-history majors welcome.

Instructor(s): A. Palmer Terms Offered: Spring

Equivalent Course(s): MDVL 22900, HIST 32900, HIST 22900, RLST 22900, ITAL 22914, ITAL 32914, CLAS 32914, HCHR 32900, KNOW 21405, KNOW 31405

CLCV 22917. How to Build a Global Empire. 100 Units.

Empire is arguably the oldest, most durable, and most diffused form of governance in human history that reached its zenith with the global empires of Spain, Portugal and Britain. But how do you build a global empire? What political, social, economic, and cultural factors contribute to their formation and longevity? What effects do they have on the colonizer and the colonized? What is the difference between a state, an empire, and a "global" empire? We will consider these questions and more in case studies that will treat the global empires of Rome, Portugal, and Britain, concluding with a discussion of the modern resonances of this first "Age of Empires."

Equivalent Course(s): HIST 26128, KNOW 23002, LACS 26128

CLCV 23520. Pity: What's the good of it. 100 Units.

Andromache famously appealed to her husband Hector to take pity on herself and her infant son, and not go out to fight the Greeks; Hector took pity, but said no. What happened to pity since Homer? Aristotle recognized as an essential feature of tragedy, along with fear. Surprisingly, however, it did not enter Greco-Roman political theory except for one short, little noticed mention: Lucretius placed pity for the weak at the foundation of the Epicurean view of justice. This course will

delve into the notion of pity from antiquity to Schopenhauer, with attention to Greeks, Romans, Christians, the period of the Enlightenment, and the Romantics. We will ask: can pity serve as the foundation of morality, as Schopenhauer proposed; or is it shameful, or self-serving?

Instructor(s): E. Asmis Terms Offered: Winter

Equivalent Course(s): RLST 23520, CLAS 33520, BIBL 33520, ANCM 43520

CLCV 23608. Aristophanes's Athens. 100 Units.

The comedies of Aristophanes are as uproarious, biting, and ribald today as they were more than 2,400 years ago. But they also offer a unique window onto the societal norms, expectations, and concerns as well as the more mundane experiences of Athenians in the fifth century BCE. This course will examine closely all eleven of Aristophanes's extant plays (in translation) in order to address topics such as the performative, ritual, and political contexts of Attic comedy, the constituency of audiences, the relationship of comedy to satire, the use of dramatic stereotypes, freedom of speech, and the limits of dissent. Please note that this course is rated Mature for adult themes and language.

Instructor(s): J. Hall Terms Offered: Winter

Equivalent Course(s): HIST 30803, LLSO 20803, CLAS 33608, FNDL 23608, HIST 20803, ANCM 33900

CLCV 23712. Aquinas: On God, Being and Evil. 100 Units.

This course considers sections from Saint Thomas Aquinas's *Summa Theologica*. Among the topics considered are God's existence; the relationship between God and Being; and human nature.

Instructor(s): S. Meredith Terms Offered: Spring

Equivalent Course(s): RLST 23605, MDVL 20700, FNDL 20700

CLCV 23820. Debating Christians and Other Adversaries: Greek and Syriac Dialogues in Late Antiquity. 100 Units.

This course will examine the composition and significance of dialogues for Christian polemic and identity formation. The quarter will begin with an overview of dialogues from Classical Antiquity before examining the new directions Christian writers followed as they staged debates with pagans, Jews, Manichaeans, and alleged "heretical" Christians. Reading these works in light of modern scholarship and with an eye to late antique rhetoric, students will gain insights into the ways theological development took place in the crucible of debate.

Instructor(s): Erin Galgay Walsh Terms Offered: Autumn

Equivalent Course(s): RLST 20360, BIBL 40360, HCHR 40360, CLAS 33820

CLCV 24119. Rome: The Eternal City. 100 Units.

The city of Rome was central to European culture in terms both of its material reality and the models of political and sacred authority that it provided. Students in this course will receive an introduction to the archaeology and history of the city from the Iron Age to the early medieval period (ca. 850 BCE-850 CE) and an overview of the range of different intellectual and scientific approaches by which scholars have engaged with the city and its legacy. Students will encounter a broad range of sources, both textual and material, from each period that show how the city physically developed and transformed within shifting historical and cultural contexts. We will consider how various social and power dynamics contributed to the formation and use of Rome's urban space, including how neighborhoods and residential space developed beyond the city's more famous monumental areas. Our main theme will be how Rome in any period was, and still is, a product of both its present and past and how its human and material legacies were constantly shaping and reshaping the city's use and space in later periods.

Instructor(s): Margaret Andrews Terms Offered: Spring

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): HIST 16603, ARCH 16603, ENST 16603, ANTH 26115

CLCV 25019. Classical Reception Studies: Key Texts and Ideas. 100 Units.

Classical Reception Studies: Key Texts and Ideas Antiquity never really ended. Ancient texts, images, and ideas have continued traveling widely - from Baghdad to Toledo, from Rome to Tokyo - and they are still with us today in our daily lives, not just in literature and art but also in politics and propaganda. How can we study and understand the continued presence of ancient Greece and Rome? One of the still dominant approaches, which has emerged since the 1990s, is 'classical reception studies'. While this label might suggest a homogenous field of study, the field's methods and theoretical positions are quite diverse. This seminar works towards a better understanding of the different theoretical orientations in classical reception scholarship. We will discuss a selection of key texts of classical reception studies by, among others, Charles Martindale, Simon Goldhill, and Edith Hall. How do they conceptualize 'reception'? What is understood by 'the classical'? What traditions of research and thought do they respond to? And how do different approaches to reception relate to ideas about classical 'influence', 'tradition', and 'legacy'? The course is open to graduate students from various humanities disciplines interested in the many ways in which ancient texts, images, and ideas have been transmitted, interpreted, and reused in later periods. All texts will be made available.

Instructor(s): Han Lamers Terms Offered: Spring

Equivalent Course(s): KNOW 44519, CLAS 44519

CLCV 25319. Gender and Sexuality in Late Antiquity: Precursors and Legacies. 100 Units.

In this course students will trace how gender was theorized and normative behavior was prescribed and enforced in the ancient world. We will begin with materials from the Greco-Roman world, Hebrew Bible, and the Second Temple Period. As the quarter progresses, we will turn our attention to early and late ancient Christian authors, focusing on the way asceticism and emergent ecclesial institutions shaped the lives of women and gender non-conforming individuals. Throughout the course students will learn to navigate the pitfalls and opportunities the study of gender affords for understanding the development of biblical interpretation, the transformation of classical Graeco-Roman culture, and the

formation of Christian doctrine. How did Christianity challenge and preserve norms for female behavior? How did Rabbinic and early Christian authors approach questions of sexuality differently? Along the way we will bring 20th-century theorists of sexuality and gender into our conversations to illuminate pre-modern discourses of virginity, sexual experience, and identity. Primarily we will approach texts through a historical lens while paying attention to the theological and ethical issues involved. At the end of the course we will examine the legacy of late ancient debates, tracing how earlier teaching about gender and sexuality co-exists with, challenges, and informs modern secular worldviews.

Instructor(s): Erin Galgay Walsh Terms Offered: Autumn

Prerequisite(s): No languages are required, but there will be ample opportunity for students with skills in Greek, Latin, Syriac, and Hebrew to use them.

Equivalent Course(s): RLST 22910, BIBL 42910, GNSE 42910, CLAS 35319, GNSE 22910

CLCV 25700-25800-25900. Ancient Empires I-II-III.

This sequence introduces three great empires of the ancient world. Each course in the sequence focuses on one empire, with attention to the similarities and differences among the empires being considered. By exploring the rich legacy of documents and monuments that these empires produced, students are introduced to ways of understanding imperialism and its cultural and societal effects—both on the imperial elites and on those they conquered. Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies.

CLCV 25700. Ancient Empires I. 100 Units.

This course introduces students to the Hittite Empire of ancient Anatolia. In existence from roughly 1750-1200 BCE, and spanning across modern Turkey and beyond, the Hittite Empire is one of the oldest and largest empires of the ancient world. We will be examining their history and their political and cultural accomplishments through analysis of their written records - composed in Hittite, the world's first recorded Indo-European language - and their archaeological remains. In the process, we will also be examining the concept of "empire" itself: What is an empire, and how do anthropologists, archaeologists, and historians study this unique kind of political formation?

Instructor(s): James Osborne Terms Offered: Winter

Note(s): Taking these courses in sequence is not required. This sequence meets the general education requirement in civilization studies.

Equivalent Course(s): NEHC 20011, HIST 15602

CLCV 25800. Ancient Empires II. 100 Units.

The Ottomans ruled in Anatolia, the Middle East, South East Europe and North Africa for over six hundred years. The objective of this course is to understand the society and culture of this bygone Empire whose legacy continues, in one way or another, in some twenty-five contemporary successor states from the Balkans to the Arabian Peninsula. The course is designed as an introduction to the Ottoman World with a focus on the cultural history of the Ottoman society. It explores identities and mentalities, customs and rituals, status of minorities, mystical orders and religious establishments, literacy and the use of the public sphere.

Instructor(s): Hakan Karateke Terms Offered: Autumn

Equivalent Course(s): HIST 15603, NEHC 20012, MDVL 20012

CLCV 25900. Ancient Empires III. 100 Units.

For most of the duration of the New Kingdom (1550-1069 BC), the ancient Egyptians were able to establish a vast empire and becoming one of the key powers within the Near East. This course will investigate in detail the development of Egyptian foreign policies and military expansion which affected parts of the Near East and Nubia. We will examine and discuss topics such as ideology, imperial identity, political struggle and motivation for conquest and control of wider regions surrounding the Egyptian state as well as the relationship with other powers and their perspective on Egyptian rulers as for example described in the Amarna letters.

Instructor(s): Brian Muhs Terms Offered: Spring

Equivalent Course(s): HIST 15604, NEHC 20013

CLCV 26119. Muses and Saints: Poetry and the Christian Imagination. 100 Units.

This course provides an introduction to the poetic traditions of early Christians and the intersection between poetic literature, theology, and biblical interpretation. Students will gain familiarity with the literary context of the formative centuries of Christianity with a special emphasis on Greek and Syriac Christians in the Eastern Mediterranean from the fourth through the sixth centuries. While theology is often taught through analytical prose, theological reflection in late antiquity and early Byzantium was frequently done in poetic genres. This course introduces students to the major composers and genres of these works as well as the various recurrent themes that occur within this literature. Through reading poetry from liturgical and monastic contexts, students will explore how the biblical imaginations of Christians were formed beyond the confines of canonical scripture. How is poetry a mode of "doing" theology? What habits of biblical interpretation and narration does one encounter in this poetry? This course exposes students to a variety of disciplinary frameworks for studying early Christian texts including history, religious studies, feminist and literary critique, as well as theology. Students will also analyze medieval and modern poetry with religious themes in light of earlier traditions to reflect on the poetry and the religious imagination more broadly.

Instructor(s): Erin Galgay Walsh Terms Offered: Spring

Note(s): Open to undergraduate and graduate students; Graduate students may choose to attend weekly translation group

Equivalent Course(s): HCHR 33000, ENGL 33809, GNSE 24104, MDVL 23000, RLST 23000, RLVC 33000, BIBL 33000, GNSE 34104, CLAS 36119

CLCV 26518. Introduction to Women and Gender in the Ancient World. 100 Units.

This course provides an introduction to aspects of women's lives in the cultures of the ancient Mediterranean: primarily Greece and Rome, but drawing occasionally on examples also from the Near East and Egypt. We will examine not only what women actually did and did not do in these societies, but also how they were perceived by their male contemporaries and what value to society they were believed to have. The course will focus on how women are reflected in the material and visual cultures, but it will also incorporate historical and literary evidence, as well. Through such a comparative and interdisciplinary approach, we will examine the complexities and ambiguities of women's lives in the ancient Mediterranean and begin to understand the roots of modern conceptions and perceptions of women in the Western world today.

Instructor(s): M. Andrews Terms Offered: Winter

Equivalent Course(s): GNSE 17001, HIST 17001

CLCV 26618. Cities and Urban Space in the Ancient World. 100 Units.

Cities have been features in human landscapes for nearly six thousand years. This course will explore how cities became such a dominant feature of settlement patterns in the ancient Mediterranean and Near East, ca. 4,000 BCE-350 CE. Was there an "Urban Revolution," and how did it start? What various physical forms did cities assume, and why did cities physically differ (or not) from each other? What functions did cities have in different cultures of the past, and what cultural value did "urban" life have? How do past perspectives on cities compare with contemporary ones? Working thematically and using theoretical and comparative approaches, this course will address various aspects of ancient urban space and its occupation, with each topic backed up by in-depth analysis of concrete case studies.

Instructor(s): M. Andrews Terms Offered: Spring

Equivalent Course(s): ENST 20805, HIST 20805, HIST 30805, CLAS 36618, ANCM 36618, ARCH 20805

CLCV 26620. Making the Monsoon: The Ancient Indian Ocean. 100 Units.

The course will explore the human adaptation to a climatic phenomenon and its transformative impacts on the littoral societies of the Indian Ocean, circa 1000 BCE-1000 CE. Monsoon means season, a time and space in which favorable winds made possible the efficient, rapid crossing of thousands of miles of ocean. Its discovery-at different times in different places-resulted in communication and commerce across vast distances at speeds more commonly associated with the industrial than the preindustrial era, as merchants, sailors, religious specialists, and scholars made monsoon crossings. The course will consider the participation of Mediterranean, Middle Eastern, South Asian, and East African actors in the making of monsoon worlds and their relations to the Indian Ocean societies they encountered; the course is based on literary and archaeological sources, with attention to recent comparative historiography on oceanic, climatic, and global histories.

Instructor(s): R. Payne Terms Offered: Spring

Equivalent Course(s): NEHC 36614, CLAS 36620, HIST 36614, SALC 36614, NEHC 26614, SALC 26614, MDVL 26614, HIST 26614

CLCV 27320. Greek Archaeology in 20 Objects. 100 Units.

This course centers the objects of the ancient Greek world, from prehistory to the Hellenistic period, as avenues for exploring the practice, history, and motivations of the discipline of Greek archaeology. From the mundane to the spectacular, we will closely consider twenty things - pots, statues, coins, knives, bones, inscriptions, among others - whose compelling if fragmentary biographies reveal how archaeologists reconstruct and explain ancient social lives. Discussions will interrogate histories of object analysis, identification, and interpretation; schemes of periodization and categorization; theories of gender, class, economy, politics, and religion; developments in technologies and aesthetics; the intersections of artifact discovery and museum or market acquisitions; and the making of Greek archaeology within the wider discipline.

Instructor(s): C. Kearns Terms Offered: Winter

Equivalent Course(s): CLAS 37320

CLCV 27520. Plutarch's Lives in the History of Political Philosophy. 100 Units.

This course will examine the application of ancient Greek political philosophy to particular cases through the study of a number of Plutarch's Parallel Lives of the Noble Grecians and Romans, along with a selection of Plutarch's sources from philosophy, oratory, and historiography. Discussions will consider Plutarch's treatment of questions such as "what is justice?", "do the means justify the ends?" and "what kind of knowledge is required for political virtue?" Readings will fall into three main segments: first, Plutarch's analysis of the good and the truth with an eye to his reading of Plato and its application to practical politics; second, his account of virtue, especially in relation to Aristotle; and third, his assessment of the Athenian and Spartan regimes, with comparisons of his thought and the writings of Xenophon and Thucydides. In writing assignments, students will engage in the careful interpretation of Plutarch's text, and reflect on the possibilities and shortcomings of his methods. Interested students may attend translation sessions on selections from course readings in Greek or Latin.

Instructor(s): Konrad Weeda Terms Offered: Autumn. Course will be taught autumn quarter 2020

Equivalent Course(s): SETH 20673, FNDL 20673

CLCV 27716. Exemplary Leaders: Livy, Plutarch, and Machiavelli. 100 Units.

Cicero famously called history the "schoolmistress of life." This course explores how ancient and early modern authors-in particular, Livy, Plutarch, and Machiavelli-used the lives and actions of great individuals from the Greek and Roman past to establish models of political behavior for their own day and for posterity. Such figures include Solon, Lycurgus, Alexander, Romulus, Brutus, Camillus, Fabius Maximus, Scipio Africanus, Julius Caesar, and Augustus. We will consider how their actions are submitted to praise or blame, presented as examples for imitation or avoidance, and examine how the comparisons and contrasts established among the different historical individuals allow new models and norms to emerge. No one figure can provide a definitive model. Illustrious individuals help define values even when we mere mortals cannot aspire to reach their level of virtue or depravity. Course open to undergraduates and graduate students. Readings will be in English. Students wishing to read Latin, Greek, or Italian will receive support from the professors.

Instructor(s): J. McCormick, M. Lowrie Terms Offered: Winter
 Equivalent Course(s): PLSC 27703, CLAS 37716, PLSC 47703, FNDL 27716

CLCV 29500. Title Senior Seminar. 100 Units.

This is a capstone course in Classics limited to, and required for, fourth-year students majoring in any variant of the Classics major.

CLCV 29700. Reading Course: Classical Civ. 100 Units.

No description available. Prerequisite(s): Consent of faculty sponsor and director of undergraduate studies Note(s): Students are required to submit the College Reading and Research Course Form.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): Consent of faculty sponsor and director of undergraduate studies

Note(s): Students are required to submit the College Reading and Research Course Form.

CLCV 29800. BA Paper Seminar. 100 Units.

This seminar is designed to teach students the research and writing skills necessary for writing their BA paper. Lectures cover classical bibliography, research tools, and electronic databases. Students discuss research problems and compose preliminary drafts of their BA papers. They are expected to exchange criticism and ideas in regular seminar meetings with the preceptor and with other students who are writing papers, as well as to take account of comments from their faculty readers. The grade for the BA Paper Seminar is identical to the grade for the BA paper and, therefore, is not reported until the BA paper has been submitted in Spring Quarter. The grade for the BA paper depends on participation in the seminar as well as on the quality of the paper. Students may register for this seminar in either Autumn or Winter Quarter, but they are expected to participate in meetings throughout both quarters.

Instructor(s): Staff Terms Offered: Autumn Winter

Prerequisite(s): Fourth-year standing

Greek Courses

GREK 10100-10200-10300. Introduction to Attic Greek I-II-III.

This sequence offers a comprehensive introduction to reading Ancient Greek. Course work involves reading practice, presentational writing, and formal study of grammar and vocabulary. Throughout the sequence, students will encounter authentic Ancient Greek text. Students who complete this sequence will be ready to move into the intermediate sequence (GREK 20100-20200-20300).

GREK 10100. Introduction to Attic Greek I. 100 Units.

This course introduces the basic rules of Ancient Greek. Course work involves reading practice, presentational writing, and formal study of grammar and vocabulary. Throughout the course, students will encounter authentic Ancient Greek text. Students who complete this course will be able to understand simple sentences, and often to combine them into larger units of meaning.

Instructor(s): Staff Terms Offered: Autumn

Note(s): Knowledge of Greek not required.

GREK 10200. Introduction To Attic Greek II. 100 Units.

This course continues the study of basic Ancient Greek. Course work involves reading practice, presentational writing, and formal study of grammar and vocabulary. Throughout the course, students will encounter authentic Ancient Greek text. Students who complete this course will be able to understand complex sentences, and often to combine them into larger units of meaning.

Instructor(s): E. Austin Terms Offered: Winter

Prerequisite(s): GREK 10100

GREK 10300. Introduction to Attic Greek III: Prose. 100 Units.

This course continues the study of basic Ancient Greek. Course work involves reading practice, presentational writing, and formal study of grammar and vocabulary. Throughout the course, students will encounter authentic Ancient Greek text. Students who complete this course will be able to track ideas across at least a paragraph of text, and will be ready to move into the intermediate sequence (GREK 20100-20200-20300).

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): GREK 10200

GREK 10123. Summer Intensive Introductory Ancient Greek. 300 Units.

Summer Introductory Ancient Greek comprises a thorough introduction to the Classical Greek language in eight weeks, using the Joint Association of Classical Teachers' Reading Greek (2nd ed.), and supplements from online resources. Through a daily mixture of synchronous and asynchronous activities students learn new grammatical concepts and morphology, practice reading and translating increasingly complex Greek texts, and complete exercises in Greek to gain an active command of the language. In the latter half of the course, students will also read unadapted Greek from classical prose authors, including Plato and Xenophon. By the end of the 8 weeks, students will be thoroughly familiar with Classical Greek idiom and sentence structure, and will be able to proceed to reading courses in the language.

Instructor(s): Staff Terms Offered: Summer

GREK 20100-20200-20300. Intermediate Greek I-II-III.

This sequence is aimed at students who have completed one of the introductory sequences and at students entering university with extensive previous training, as evidenced by a placement exam. As a whole, it provides students with an overview of important genres and with the linguistic skills to read independently, and/or to proceed to advanced courses in the language.

GREK 20100. Intermediate Greek I: Plato. 100 Units.

We read Plato's text with a view to understanding both the grammatical constructions and the artistry of the language. We also give attention to the dramatic qualities of the dialogue. Grammatical exercises reinforce the learning of syntax.

Instructor(s): H. Dik Terms Offered: Autumn

Prerequisite(s): GREK 10300, 11300 or equivalent

GREK 20200. Intermediate Greek II: Sophocles. 100 Units.

This course includes analysis and translation of the Greek text, discussion of Sophoclean language and dramatic technique, and relevant trends in fifth-century Athenian intellectual history.

Terms Offered: Winter

Prerequisite(s): GREK 20100 or equivalent

GREK 20300. Intermediate Greek III. 100 Units.

This course is a close reading of selections from Homer, with an emphasis on language, meter, and literary tropes.

Terms Offered: Spring

Prerequisite(s): GREK 20200 or equivalent

GREK 20123. Summer Intensive Intermediate Ancient Greek. 300 Units.

Summer Intensive Intermediate Greek combines extensive reading of texts with a comprehensive review of Classical grammar and syntax; it prepares students for advanced courses in Greek and for the use of Greek texts in their research. Texts studied are taken from a variety of representative and important Classical authors, and typically include Plato and Herodotus, Demosthenes or Thucydides. The backbone of the review sessions is Mastronarde's Introduction to Ancient Greek combined with sight reading skill practice. The program combines daily synchronous and asynchronous activities. Students are responsible for considerable amounts of class preparation in the evenings, requiring a full-time commitment for the duration of the course. This course equips students to continue with advanced coursework or independent reading in Ancient Greek in all its varieties. Summer Intermediate Greek corresponds to a full year's worth of instruction at the University of Chicago.

Instructor(s): Staff Terms Offered: Summer

Prerequisite(s): Successful completion of GREK 10300 or the equivalent placement.

GREK 21700. Lyric and Epinician Poetry. 100 Units.

This course will examine instances of Greek lyric genres throughout the archaic and classical periods, focusing on the structure, themes and sounds of the poetry and investigating their performative and historical contexts. Readings will include Alcman, Sappho, Alcaeus, Anacreon, Ibycus, Alcaeus, Simonides, Bacchylides, Pindar and Timotheus. In Greek.

Terms Offered: Autumn TBD. Not offered 2020-21. Will be offered 2021-22.

Prerequisite(s): GREK 20300 or equivalent

Equivalent Course(s): GREK 31700

GREK 21800. Greek Epic. 100 Units.

This course is a reading of sections from Homer's Iliad. We will focus on character, emotions, and relationality in the poem, with an eye to evaluating the poem's many perspectives on mortality, relations with the divine, conceptions of the polis, and the nature of excellence.

Terms Offered: TBD Not offered 2020-21, will be offered 2021-22

Prerequisite(s): Two years or more of Greek.

Equivalent Course(s): GREK 31800

GREK 21900. Greek Oratory. 100 Units.

With Isocrates, Greek artistic prose reached its technical perfection," says L. R. Palmer in *The Greek Language*. Yet Isocrates has not found nearly so prominent a place in the university curriculum as have Demosthenes and Lysias. This course will attempt to give the great orator his due. We will start with his speech on Helen, comparing it with Gorgias' famous Encomium. We will also read the ad Demonium, which became something of a handbook in later Hellenistic and Roman-period schools, and the Panegyricus. We will consider carefully Isocratean language and diction, and why it has merited such sustained praise among connoisseurs of Greek prose style, ancient and modern. We will also emphasize the centrality of Isocrates' contribution to Greek paideia.

Terms Offered: TBD Not offered 2020-21 will be offered 2021-22

Prerequisite(s): Two years or more of Greek.

Equivalent Course(s): GREK 31900

GREK 22300. Greek Tragedy: Hellenistic/Imperial Literature. 100 Units.

This class will read selections from the poetry of the Hellenistic period, especially the hymns of Callimachus, the pastoral poetry of Theocritus, and the epic parody "The Battle of the Frogs and Mice." Alongside these Hellenistic texts we will read some of their poetic predecessors (Homer, Hesiod, the Homeric Hymns, choral and monadic lyric), with an eye to the Hellenistic poets' interest in poetic form, self-positioning, and play.

Instructor(s): E. Asmis Terms Offered: Autumn

Prerequisite(s): GREK 20300 or equivalent

Equivalent Course(s): GREK 32300

GREK 22515. Greek Historians: Thucydides. 100 Units.

In this course we will read book 1 of Thucydides, his description of the run-up to the Peloponnesian War, in Greek. We will pay attention to Thucydides' style and approach to historiography, sinking our teeth into this difficult but endlessly fascinating text.

Instructor(s): Helma Dik Terms Offered: Winter. Will be offered 2020-21

Prerequisite(s): At least two years of Greek.

Equivalent Course(s): GREK 32515, FNDL 22517

GREK 23220. Hellenistic Imperial Literature. 100 Units.

This class will read selections from the poetry and or prose of the Hellenistic period, especially the hymns of Callimachus, the pastoral poetry of Theocritus, and the epic parody "The Battle of the Frogs and Mice." Alongside these Hellenistic texts we will read some of the poetic predecessors (Homer, Hesiod, the Homeric Hymns, choral and monadic lyric), with an eye to the Hellenistic poets; interest in poetic form, self-positioning, and play.

Instructor(s): E. Austin. Terms Offered: Autumn

Prerequisite(s): PQ: GREK 20300 or equivalent

Equivalent Course(s): GREK 32320

GREK 29700. Reading Course: Greek. 100 Units.

No description available. Prerequisite(s): Students are required to submit the College Reading and Research Course Form.

Instructor(s): Staff Terms Offered: Autumn Winter

Prerequisite(s): Students are required to submit the College Reading and Research Course Form.

Latin Courses

LATN 10100-10200-10300. Introduction to Classical Latin I-II-III.

This sequence offers a comprehensive introduction to reading Latin. Course work involves reading practice, presentational writing, and formal study of grammar and vocabulary. Throughout the sequence, students will encounter authentic Latin text. Students who complete this sequence will be ready to move into the intermediate sequence (LATN 20100-20200-20300).

LATN 10100. Introduction to Classical Latin I. 100 Units.

This course is intended for students with some experience in Latin to quickly review what they know and upgrade their skills in reading and understanding Latin. In this course, students will expand their vocabulary, learn more advanced grammar, and practice extensive reading.

Instructor(s): Staff Terms Offered: Autumn

LATN 10200. Introduction to Classical Latin II. 100 Units.

This course continues the study of basic Latin. Course work involves reading Latin, translating from Latin into English and vice versa, and study of grammar and vocabulary. Throughout the course, students will encounter authentic Latin text. Students who complete this course will be able to understand complex sentences, and often to combine them into larger units of meaning.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): LATN 10100

LATN 10300. Introduction to Classical Latin III. 100 Units.

This course continues the study of basic Latin. Course work involves reading Latin, translating from Latin into English and vice versa, and study of grammar and vocabulary. Throughout the course, students will encounter authentic Latin text. Students who complete this course will be able to track ideas across at least a paragraph of text, and will be ready to move into the intermediate sequence (LATN 20100-20200-20300).

Terms Offered: Spring

Prerequisite(s): LATN 10200

LATN 10123. Summer Intensive Introductory Latin. 300 Units.

Summer Intensive Introductory Latin offers a comprehensive introduction to Classical Latin language in eight weeks.

In daily classes, students learn new grammatical concepts and morphology, practice reading and translating increasingly complex Latin texts, and complete exercises in Latin to gain an active command of the language. Students will also read unadapted Latin from classical authors, including Caesar, Sallust, and Cicero. By the end of the summer Latin course, students will be thoroughly familiar with Latin idiom and sentence structure and will be able to proceed to reading courses in the language. Summer Introductory Latin is an intensive course that requires a full-time commitment on the part of the student, meeting approximately five hours per day and demanding independent review and memorization in the evenings.

Instructor(s): Staff Terms Offered: Summer

LATN 11400-11500. Latin for Post-Beginners I-II.

This sequence is intended for students with some experience in Latin to quickly review what they know and upgrade their skills in reading and understanding Latin. In this course, students will expand their vocabulary, learn more advanced grammar, and practice extensive reading. Students who complete this sequence will be ready for the intermediate sequence (LATN 20100-20200-20300).

LATN 11400. Latin for Post Beginners I. 100 Units.

This course is intended for students with some experience in Latin to quickly review what they know and upgrade their skills in reading and understanding Latin. In this course, students will expand their vocabulary, learn more advanced grammar, and practice extensive reading.

Instructor(s): C. Shelton Terms Offered: Summer Winter

LATN 11500. Latin for Post Beginners II. 100 Units.

This course is intended for students with some experience in Latin to quickly review what they know and upgrade their skills in reading and understanding Latin. In this course, students will expand their vocabulary, learn more advanced grammar, and practice extensive reading.

Instructor(s): C. Shelton Terms Offered: Autumn

LATN 20100-20200-20300. Intermediate Latin I-II-III.

This sequence is aimed at students who have completed one of the introductory sequences and at entering students with extensive previous training, as evidenced by a placement exam. As a whole, it provides students with an overview of important genres and with the linguistic skills to read independently, and/or to proceed to advanced courses in the language.

LATN 20100. Intermediate Latin I. 100 Units.

Readings concentrate on works of Roman prose (e.g. Cicero), with an aim to improve reading skills, discuss key concepts in Roman history and culture, and study problems of grammar as necessary.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): LATN 10300 or 11300, or equivalent

LATN 20200. Intermediate Latin II. 100 Units.

Readings concentrate on Cicero's Catilinarian Orations, the famous group of speeches he delivered in 63 BC against L. Sergius Catilina, who was plotting to overthrow the Roman government. Some discussion of the history and culture of the period; study of problems of grammar as necessary.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): LATN 11500, LATN 20100 or equivalent

LATN 20300. Intermediate Latin III. 100 Units.

This course is a reading of selections from a major monument of Roman literature, such as Vergil's Aeneid. There will be discussion of the relationship between language and literary art, and the legacy of the work or works studied.

Terms Offered: Spring

Prerequisite(s): LATN 20200 or equivalent

LATN 20123. Summer Intensive Intermediate Latin. 300 Units.

Summer Intermediate Latin combines extensive reading of texts with a comprehensive review of classical grammar and syntax; it prepares students for advanced courses in Latin and for the use of Latin texts in the course of their research. Texts studied are taken from one or more representative and important authors, which may include Cicero, Seneca, Pliny, and others. The backbone of the review sessions is Wheelock's Latin, with supplementary exercises in composition. The program includes synchronous meetings five days a week as well as daily asynchronous assignments. Students are responsible for considerable amounts of class preparation during the evenings, requiring a full-time commitment for the duration of the course. Summer Intermediate Latin equips students to continue with advanced coursework or independent reading in Latin in all its varieties. Summer Intermediate Latin corresponds to a full year's worth of instruction at the University of Chicago.

Terms Offered: Summer

Prerequisite(s): Successful completion of LATN 10300 or equivalent placement.

LATN 21100. Roman Elegy. 100 Units.

This course examines the development of the Latin elegy from Catullus to Ovid. Our major themes are the use of motifs and topics and their relationship to the problem of poetic persona.

Instructor(s): D. Wray Terms Offered: Autumn. Not offered 2020–21; will be offered 2022–23

Equivalent Course(s): CMLT 21101, LATN 31100, CMLT 31101

LATN 21219. Philosophical Prose: Cicero, Tusculan Disputations' 100 Units.

Several months after the death of his beloved daughter and just two years before his own death, Cicero composed a dialog with an imaginary interlocutor arguing that death, pain, grief, and other perturbations were an unimportant part of the big picture. A reading of this famous contribution—all of it in English, selections in Latin—to the genre of consolation literature affords an opportunity to weigh his many examples and his arguments for ourselves.

Instructor(s): P. White. Terms Offered: Spring. Not offered 2020–21; will be offered 2022–23

Note(s): Latin 203 or equivalent.

Equivalent Course(s): FNDL 21219, LATN 31219

LATN 21300. Vergil. 100 Units.

Vergil's ten Eclogues are some of Latin literature's most enigmatic poems. In addition to reading this collection carefully in Latin, we will sample some of Theocritus' pastoral in translation, Calpurnius Siculus' Eclogues in Latin, and Milton's Lycidas. Class time will focus on translation, interpretation, and discussion of secondary readings.

Instructor(s): M. Lowrie Terms Offered: Spring. Not offered 2020–21; will be offered 2022–23

Note(s): Topic: Eclogues

Equivalent Course(s): LATN 31300

LATN 21500. Roman Satire. 100 Units.

We shall read extensively in Latin from the Satires of Juvenal. We shall focus on language, poetic technique, and understanding the text (also with the help of early Latin-language commentaries).

Instructor(s): Michael Allen Terms Offered: Autumn

Equivalent Course(s): LATN 31500

LATN 21600. Roman Oratory. 100 Units.

Marcus Tullius Cicero (106-44BC) was the most accomplished orator of the Roman Republic. Among the most fascinating of his speeches are the three "Caesarian" speeches delivered to Julius Caesar on behalf of persons who had opposed Caesar in the civil war. In the speeches Cicero, in many different ways, uses his hard-won rhetorical and literary skills, practiced over a lifetime in lawsuits, political debates, and philosophizing, not merely to on behalf of the immediate subjects of the speeches, but also to suggest social and political roles for Caesar himself. Caesar's place in the Roman World is as much a topic of the three speeches as immediate issues of each class. The chief purpose of the class is to reach an understanding of the basic issues of speech and the roles that Cicero scripts for Caesar in them.

Instructor(s): Brian Krostenko Terms Offered: Autumn. Topic Cicero's Caesarian Speeches

Prerequisite(s): Latin 20300

Note(s): Topic: Cicero's Caesarian Speeches

Equivalent Course(s): LATN 31600

LATN 21800. Roman Historian. 100 Units.

Primary readings are drawn from the Tiberian books of the Annals, in which Tacitus describes the consolidation of the imperial regime after the death of Augustus. Parallel accounts and secondary readings are used to help bring out the methods of selecting and ordering data and the stylistic effects that typify a Tacitean narrative.

Terms Offered: Spring. This course will be offered 2021-22.

Prerequisite(s): LATN 20300 or equivalent

Note(s): Topic: Tacitus.

Equivalent Course(s): LATN 31800

LATN 21900. Roman Comedy. 100 Units.

Plautus' *Pseudolus* is read in Latin, along with secondary readings that explain the social context and the theatrical conventions of Roman comedy. Class meetings are devoted less to translation than to study of the language, plot construction, and stage techniques at work in the *Pseudolus*.

Terms Offered: Spring. This course will be offered 2021-22.

Prerequisite(s): LATN 20300 or equivalent

Equivalent Course(s): ANCM 41919, LATN 31900

LATN 22100. Lucretius. 100 Units.

We will read selections of Lucretius' magisterial account of a universe composed of atoms. The focus of our inquiry is: how did Lucretius convert a seemingly dry philosophical doctrine about the physical composition of the universe into a gripping message of personal salvation? The selections include Lucretius' vision of an infinite universe, of heaven, and of the hell that humans have created for themselves on earth.

Terms Offered: Autumn. This course will be offered 2020-21.

Equivalent Course(s): LATN 32100

LATN 22120. Vergil: Aeneid. 100 Units.

In this course we will read as much as possible of Vergil's *Aeneid* in the original, and the rest in translation. Our focus will be on the way the poem interrogates some of its most basic claims about empire, piety, heroism, and history, but we will try to avoid falling into the binary trap of "positive" and "negative" readings of the epic's relationship to its Roman imperial context. Requirements: Class presentation; 10 page paper; final.

Instructor(s): Shadi Bartsch-Zimmer Terms Offered: Winter

Prerequisite(s): LATN 20200 or equivalent.

Equivalent Course(s): LATN 32120

LATN 26100. History of Latin. 100 Units.

This course examines the phonological and morphological development of the Latin language from Indo-European to Vulgar Latin. That development is studied both of its own sake and as a point of departure for introducing linguistics concepts useful for the analysis of other layers of language and aspects of literary texts. Discussion of major topics in phonology and morphology will alternate with close examination of sample or otherwise relevant texts and lexical families. Major topics are: the principles of historical and comparative linguistics, the development of the Latin sound inventory; Latin and its sister languages; the creation of the Latin nominal and verbal systems; (some of) the varieties of classical Latin; and the influence of Greek on Latin.

Instructor(s): B. Krostenko Terms Offered: Autumn

Equivalent Course(s): LATN 36100

LATN 29700. Reading Course. 100 Units.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): Students are required to submit the College Reading and Research Course Form.

Comparative Human Development

Department Website: <http://humdev.uchicago.edu>

Program of Study

The program in Comparative Human Development (CHDV) focuses on the study of persons over the course of life; on the social, cultural, biological, and psychological processes that jointly influence development; and on growth over time in different social and cultural settings. The study of human development also offers a unique lens through which we consider broad questions of the social sciences, like the processes and impacts of social change, and the interactions of biology and culture. Faculty members in Comparative Human Development with diverse backgrounds in anthropology, biology, psychology, and sociology conduct research on topics that include (but are not limited to): the social and phenomenological experience of mental illness; comparative education; the impact of socioeconomic context on growth and development; the influence of social interaction on biological functioning; the tensions inherent in living in multicultural societies; the experience and development of psychotherapists in Western and non-Western countries; and the ways in which youth in developing countries are forging new conceptions of adulthood. Given this interdisciplinary scope, the program in Comparative Human Development provides an excellent preparation for students interested in advanced postgraduate study at the frontiers of several social science disciplines, or in careers and professions that require a broad and integrated understanding of human experience and behavior—e.g., mental health, education, social work, health care, or human resource and organizational work in community or corporate settings.

Advising

The first point of contact for undergraduates is the preceptor. Preceptors can be emailed at humdev-preceptors@lists.uchicago.edu. Additional contact information for the year-specific preceptor can be found in Contacts at the bottom of this page, along with the undergraduate chair and administrator contact information.

Electronic Communication

Upon declaring a Comparative Human Development major, undergraduates should promptly join the department undergraduate email listserv to receive important announcements. Students request to join the listserv by logging in with their CNet ID at <https://lists.uchicago.edu> and subscribing to humdev-undergrad@listhost.uchicago.edu (humdev-undergrad@uchicago.edu).

Program Requirements

The requirements below are in effect as of Autumn 2017.

The undergraduate program in Comparative Human Development has the following components:

Core Courses

CHDV 20000 Introduction to Human Development and CHDV 20100 Human Development Research Design, a two-quarter introductory sequence in Comparative Human Development, should be completed prior to the Spring Quarter of a student's third year. CHDV 20000 Introduction to Human Development focuses on theories of development, with particular reference to the development of the self in a social and cultural context. CHDV 20100 Human Development Research Design focuses on modes of research and inquiry in human development, including basic concepts of research design and different methods used in studying human development (e.g., ethnography, experiments, surveys, discourse analysis, narrative inquiry, and animal models). Consideration is given to the advantages and limitations of each approach in answering particular questions concerning person and culture.

Methods

Students must complete one Methods course. It may focus on qualitative or quantitative methods or may be a research methods course from a related department, such as Statistics.

The following are courses since 2012 that have fulfilled the Methods requirement **without a petition**. (Please note courses in this list **may not** be offered this academic year.)

Courses that are not on the following list may be petitioned to count for Methods (see Petitions).

ANTH 21420	Ethnographic Methods	100
BIOS 20151	Introduction to Quantitative Modeling in Biology (Basic)	100
BIOS 20152	Introduction to Quantitative Modeling in Biology (Advanced)	100
BIOS 20172	Mathematical Modeling for Pre-Med Students	100
BIOS 25419	Infectious Disease Epidemiology; Networks and Modeling.	100
CHDV 20101	Applied Statistics in Human Development Research	100
CHDV 26228	Ethnographic Methods	100
CHDV 30102	Introduction to Causal Inference	100
CHDV 32411	Mediation, Moderation, and Spillover Effects	100
CHDV 37802	Seminar: Challenging Legends and Other Received Truths: A Socratic Practicum	100
CHDV 39301	Qualitative Research Methods	100

MATH 19520	Mathematical Methods for Social Sciences	100
PBPL 24800	Urban Policy Analysis	100
PBPL 26301	Field Research Project in Public Policy	100
PLSC 22913	The Practice of Social Science Research	100
PSYC 20100	Psychological Statistics	100
PSYC 20200	Psychological Research Methods	100
PSYC 20250	Introduction to Statistical Concepts and Methods	100
SOCI 20001	Sociological Methods	100
SOCI 20004	Statistical Methods of Research	100
SOCI 20140	Qualitative Field Methods	100
STAT 20000	Elementary Statistics	100
STAT 22000	Statistical Methods and Applications	100
STAT 22400	Applied Regression Analysis	100
STAT 23400	Statistical Models and Methods	100

Electives

All CHDV majors are required to take nine CHDV elective courses. We encourage students to take their elective courses across the four areas of Comparative Human Development, given the department's commitment to transdisciplinary scholarship. All CHDV course numbers are labeled to describe the areas in which they are most closely aligned. The four areas are the following:

1. *Comparative Behavioral Biology*: includes courses on the biopsychology of attachment; evolutionary social psychology; evolution of parenting; biological psychology; primate behavior and ecology; behavioral endocrinology.
2. *Life Course Development*: includes courses on social and psychological development through the life course, including courses on childhood, adolescence, adulthood, and aging; education and development; introduction to language development; the role of early experience in development; sexual and gender identity; the study of lives and families in social and cultural context.
3. *Culture and Community*: includes courses on cultural psychology; psychological anthropology; social psychology; cross-cultural child development; language, culture, and thought; language socialization; education in ethnic and cultural context; psychiatric and psychodynamic anthropology; memory and culture.
4. *Mental Health and Personality*: includes courses on personality theory and research; social and cultural foundations of mental and physical health; modern psychotherapies and their supporting institutions; psychology of well-being; conflict understanding and resolution; core concepts and current directions in psychopathology; emotion, mind, and rationality; body image in health and disorder; advanced concepts in psychoanalysis.

Petitions

Student petitions will be accepted only in very limited circumstances to request that courses not taught or cross-listed in CHDV count toward CHDV major requirements. These limited circumstances may include a relevant course offered during study abroad if a CHDV course is not available. Students may petition for one relevant course per quarter of study abroad to count toward the CHD major, but only one, barring unusual circumstances. Only university-level courses credited by the University of Chicago or study abroad may be petitioned for CHDV requirements; no other form of credit (including Advanced Placement) is allowed. Petitions should be completed using the CHDV petition form found at humdev.uchicago.edu/content/requirements-and-forms (<https://humdev.uchicago.edu/content/requirements-and-forms/>). Petitions should include a copy of the course syllabus, since the course title alone is often not sufficient for evaluating a petition.

BA Honors Guidelines

Students with qualifying GPAs may seek to graduate with honors by successfully completing a BA honors paper that reflects scholarly proficiency in an area of study within Comparative Human Development and successfully completing two required accompanying courses: the CHDV 29800 BA Honors Seminar in the Spring Quarter of their third year and CHDV 29900 Honors Paper Preparation in the Autumn Quarter of their fourth year. CHDV 29800 BA Honors Seminar can count as one of the nine elective courses required for the major. CHDV 29900 Honors Paper Preparation may not count toward major requirements; it may be used for general elective credit only. Qualified students who wish to seek CHDV honors and who plan to study abroad should plan their travel in order to ensure they are in residence at the University of Chicago during the Spring Quarter of their third year and the Autumn Quarter of their fourth year in order to take the two courses required for BA honors. Students will also be required to present their Honors Paper in the Trial Research Conference in the Spring Quarter of their fourth year.

The honors paper should reflect original research of an empirical, scholarly, or theoretical nature and must be rated as worthy of honors by the student's BA Honors Committee. This committee shall consist of two University faculty members: a supervisor (who must be a CHDV faculty member or associate faculty member) and a second reader (who must be a University of Chicago faculty member or associate faculty member). The paper should be about 30 to 40 pages in length. The grade given for it will become the grade of record for the Honors Paper Preparation course (CHDV 29900 Honors Paper Preparation). To receive departmental honors upon graduation, students (1) must have attained a cumulative overall GPA

of 3.25 or higher and a major GPA higher than 3.5 by the end of the quarter prior to the quarter of graduation, and (2) must have completed a meritorious BA honors paper under the supervision of a CHDV faculty member and received a high grade on their BA honors paper.

Permission to undertake a BA honors paper will be granted by the CHDV undergraduate chair to students who (1) have successfully completed CHDV 29800 BA Honors Seminar and (2) have filed a properly completed BA Honors Paper Proposal Form with the departmental Student Affairs Administrator no later than tenth week of Spring Quarter of the third year.

BA Honors Seminar

The CHDV 29800 BA Honors Seminar aims to help qualified students formulate a suitable proposal and find a CHDV faculty supervisor. Qualified students who wish to seek departmental honors must register for the CHDV 29800 BA Honors Seminar during Spring Quarter of their third year. Permission to register for CHDV 29800 BA Honors Seminar will be granted to students with a GPA that, at the end of Autumn Quarter of the third year, shows promise of meeting the standards set for honors (see above). This course must be taken for a quality grade and may be counted as one of the required major electives. This course is a pre-field course where students develop a ten-page research proposal and find both a CHDV supervisor and a second reader (who may be outside of the department). As part of the proposal, they learn to develop an academic “problem” while reviewing the necessary academic literature. They also decide on the discipline and methods (interviewing, ethnography, experimental design) they will use to tackle their research question.

Honors Paper Preparation Course

The CHDV 29900 Honors Paper Preparation course helps students successfully complete work on their BA honors paper. In order to complete honors, students who successfully took CHDV 29800 in Spring Quarter of their third year must also register for CHDV 29900 Honors Paper Preparation during Autumn Quarter of their fourth year. This course is required but does not count as one of the 12 courses in the major; it may be used for general elective credit only. Students are encouraged to collect their data over the summer; then this course scaffolds the process of analyzing data (such as transcription and coding) and writing up BA papers (such as tips on describing methods and peer review). The grade assigned by the thesis supervisor on the final BA paper is retroactively assigned as the grade for this course.

BA Honors Paper for Dual Majors

In very special circumstances, students may be able to write a longer BA honors paper that meets the requirements for a dual major (with prior approval from the undergraduate program chairs in both departments). Students should consult with both chairs before the end of Spring Quarter of their third year. A consent form, available from the student’s College adviser, must be signed by both chairs and returned to the College adviser, with copies filed in both departmental offices, by the end of Autumn Quarter of the student’s graduation year.

Honors Paper Due Date

Honors papers are due by the end of fifth week of the quarter in which a student plans to graduate (typically in Spring Quarter).

Summary of Requirements

CHDV 20000	Introduction to Human Development	100
CHDV 20100	Human Development Research Design	100
One Methods Course		100
Nine Elective Courses *		900
Total Units		1200

* Students applying for CHDV honors must register for CHDV 29800 BA Honors Seminar and CHDV 29900 Honors Paper Preparation. CHDV 29800 may be counted as one of the nine required program electives; however, CHDV 29900 does *not* count toward the major and is used for general elective credit only.

Grading

All courses required for the major in Comparative Human Development must be taken for quality grades.

Earl R. Franklin Fellowship

The Earl R. Franklin Research Fellowship is awarded to select third-year students who are writing a BA thesis in Comparative Human Development. It provides financial support during the summer before the fourth year to carry out research that will be continued as a senior honors project. Applications, which are submitted at the beginning of Spring Quarter, include a research proposal, personal statement, budget, CV, and a letter of recommendation. Details can be found at our website at humdev.uchicago.edu (<https://humdev.uchicago.edu>).

The courses below are a guide. For up-to-date course plans, please visit Class Search (<http://registrar.uchicago.edu/classes/>) or the Anticipated Courses List at humdev.uchicago.edu/content/courses (<http://humdev.uchicago.edu/content/courses/>).

Comparative Human Development Courses

CHDV 12103. Treating Trans-: Practices of Medicine, Practices of Theory. 100 Units.

Medical disciplines from psychiatry to surgery have all attempted to identify and to treat gendered misalignment, while queer theory and feminisms have simultaneously tried to understand if and how trans- theories should be integrated into their respective intellectual projects. This course looks at the logics of the medical treatment of transgender (and trans- more broadly) in order to consider the mutual entanglement of clinical processes with theoretical ones. Over the quarter we will read ethnographic accounts and theoretical essays, listen to oral histories, discuss the intersections of race and ability with gender, and interrogate concepts like 'material bodies' and 'objective science'. Primary course questions include: 1.

Instructor(s): Paula Martin Terms Offered: Spring

Note(s): This course counts as a Foundations Course for GNSE majors

Equivalent Course(s): HLTH 12103, HIPS 12103, ANTH 25212, GNSE 12103

CHDV 20000. Introduction to Human Development. 100 Units.

This course introduces the study of lives in context. The nature of human development from infancy through old age is explored through theory and empirical findings from various disciplines. Readings and discussions emphasize the interrelations of biological, psychological, and sociocultural forces at different points of the life cycle.

Instructor(s): S. Numanbayraktaroglu Terms Offered: Autumn

Prerequisite(s): CHDV majors or intended majors.

Note(s): Required Course for Comparative Human Development Majors

Equivalent Course(s): HLTH 20000, PSYC 20850

CHDV 20100. Human Development Research Design. 100 Units.

The purpose of this course is to expose CHD majors in college to a broad range of methods in social sciences with a focus on human development research. The faculty in Comparative Human Development is engaged in interdisciplinary research encompassing anthropology, biology, psychology, sociology, and applied statistics. The types of data and methods used by faculty span the gamut of possible methodologies for addressing novel and important research questions. In this course, students will study how appropriate research methods are chosen and employed in influential research and will gain hands-on experience with data collection and data analysis. In general, the class will meet as a whole on Mondays and will have lab/discussion sections on Wednesdays. The lab/discussion sections are designed to review the key concepts, practice through applying some of the methods, and prepare students for the assignments. Students in each section will be assigned to small groups. Some of the assignments are group-based while others are individual-based.

Instructor(s): E. Abdelhadi Terms Offered: Winter

Note(s): Required Course for Comparative Human Development Majors

Equivalent Course(s): HLTH 20100, EDSO 20100, PSYC 21100

CHDV 20122. Introduction to Population. 100 Units.

This course provides an introduction to the field of demography, which examines the growth and characteristics of human populations. It also provides an overview of our knowledge of three fundamental population processes: fertility, mortality, and migration. We cover marriage, cohabitation, marital disruption, aging, and population and environment. In each case we examine historical trends. We also discuss causes and consequences of recent trends in population growth, and the current demographic situation in developing and developed countries.

Instructor(s): L. Waite Terms Offered: Winter

Equivalent Course(s): SOCI 20122, ENST 20500, GNSE 20120

CHDV 20209. Adolescent Development. 100 Units.

Adolescence represents a period of unusually rapid growth and development. At the same time, under the best of social circumstances and contextual conditions, the teenage years represent a challenging period. The period also affords unparalleled opportunities with appropriate levels of support. Thus, the approach taken acknowledges the challenges and untoward outcomes, while also speculates about the predictors of resiliency and the sources of positive youth development.

Instructor(s): M. Spencer Terms Offered: Spring

Prerequisite(s): Students will have previously taken one other course in CHDV

Note(s): CHDV Distribution: B

Equivalent Course(s): PSYC 20209, EDSO 20209

CHDV 20305. Inequality in Urban Spaces. 100 Units.

The problems confronting urban schools are bound to the social, economic, and political conditions of the urban environments in which schools reside. Thus, this course will explore social, economic, and political issues, with an emphasis on issues of race and class as they have affected the distribution of equal educational opportunities in urban schools. We will focus on the ways in which family, school, and neighborhood characteristics intersect to shape the divergent outcomes of low- and middle-income children residing with any given neighborhood. Students will tackle an important issue affecting the residents and schools in one Chicago neighborhood. This course is part of the College Course Cluster: Urban Design.

Instructor(s): M. Keels Terms Offered: Autumn

Note(s): CHDV Distribution: B; 2*

Equivalent Course(s): CRES 20305, EDSO 20305, EDSO 40315, PBPL 20305

CHDV 20310. Exploring the Self, Vulnerability, and Resiliency: A Seminar. 100 Units.

This seminar will explore the application of Phenomenological Variant of Ecological Systems Theory (PVEST) as applied to individuals and programming efforts.

Instructor(s): M. Beale Spencer Terms Offered: Spring

Note(s): CHDV Distribution: B

CHDV 20320. Interrogating Self-Processes, Vulnerability, and Resiliency: A Seminar. 100 Units.

This seminar will explore the application of Phenomenological Variant of Ecological Systems Theory (PVEST) as applied to individuals and programming efforts.

Instructor(s): Spencer, Margaret Beale Terms Offered: Winter

CHDV 20440. Inequality, Health and the Life Course. 100 Units.

By virtue of who we are born to and the social world that surrounds us as we grow, some individuals have a better chance of living a long, healthy life than others. In this course, we leverage sociological and social scientific concepts, theories and methods to examine how these inequalities in morbidity, mortality, and health behaviors develop and change across the life course from infancy to later life. We will pay particular attention to how individual characteristics (namely gender, race/ethnicity, socioeconomic status, and sexual orientation, but also genetic vulnerabilities) interact with social-structural, institutional, and cultural realities to shape individual's physical and mental health. We will also discuss how social conditions, particularly during key developmental stages, can have lifelong consequences for individual's health and well-being.

Instructor(s): A. Mueller Terms Offered: Spring

Note(s): CHDV Distribution: B, C; 2*, 4*

Equivalent Course(s): HLTH 20440, CHDV 30440, SOCI 30248, SOCI 20248

CHDV 20450. Educational Inequality: Theory, Policy and Practice. 100 Units.

The problems confronting urban schools are bound to the social, economic, and political conditions of the urban environments in which schools reside. Thus, this course will explore social, economic, and political issues, with an emphasis on issues of race and class as they have affected the distribution of equal educational opportunities in urban schools. We will focus on the ways in which family, school, and neighborhood characteristics intersect to shape the divergent outcomes of low- and middle-income children residing with any given neighborhood. Students will tackle an important issue affecting the residents and schools in one Chicago neighborhood. This course is part of the College Course Cluster: Urban Design.

Instructor(s): M. Keels Terms Offered: Autumn. CHDV Distribution: B

CHDV 20702. Child Language: Socialization, Development and Acquisition. 100 Units.

Child Language: Socialization, Development, and Acquisition. (=LING, PSYC) This course will provide a broad cross-disciplinary introduction to the study of how children learn language. This question is of interest to many fields, in particular: developmental psychology, linguistic anthropology and linguistics, but each of these fields have markedly different perspectives on the nature of the process and outcomes of language learning. This class will use background lectures and seminar discussions to explore theoretical claims and methodological strategies across disciplines. The topics will include case studies from a variety of languages and cultures and students will be encouraged to think critically about the benefits and drawbacks of each of the three disciplinary perspectives to better understand what it means to 'know' a language in a cognitive, cultural and structural sense. Finally, we will consider the implications of linguistic fluency for cognition, in terms of 'semantic accent' as well as the specific kinds of linguistic competence, like literacy, that are the result of specialized training and education.

Instructor(s): L. Horton Terms Offered: Winter

Equivalent Course(s): LING 20702

CHDV 20704. Language and Cognition Across the Lifespan. 100 Units.

In this course, we will explore the relationship between language and cognition, at both the beginning and end of the lifespan, as well as in cases of language disorders. We will cover topics including linguistic relativity, bilingualism and aging, multimodal language and cognition and atypical circumstances of language learning and language attrition.

Instructor(s): L. Horton Terms Offered: Spring

Prerequisite(s): N/A

Note(s): CHDV Distribution: B, C

Equivalent Course(s): LING 26530

CHDV 20774. Multilingualism in Mind & Social Interaction: Language, Self, & Thought in the Multilingual Context. 100 Units.

This course provides an overview of theory and research on bilingualism. Through a critical examination of psycholinguistic and sociolinguistic approaches to bilingualism, we will aim to arrive at a comprehensive account of bilingual experience and its practical implications for education and mental health in a globalizing world. In the course, we will address the following topics: 1.

Instructor(s): Numanbayraktaroglu, S. Terms Offered: Winter

Prerequisite(s): N/A

Note(s): CHDV Distribution: B, C; 3*, 5*

Equivalent Course(s): EDSO 30774, EDSO 20774, CHDV 30774

CHDV 21000. Cultural Psychology. 100 Units.

There is a substantial portion of the psychological nature of human beings that is neither homogeneous nor fixed across time and space. At the heart of the discipline of cultural psychology is the tenet of psychological pluralism, which states that the study of 'normal' psychology is the study of multiple psychologies and not just the study of a single or uniform fundamental psychology for all peoples of the world. Research findings in cultural psychology thus raise provocative questions about the integrity and value of alternative forms of subjectivity across cultural groups. In this course we analyze the concept of 'culture' and examine ethnic and cross-cultural variations in mental functioning with special attention to the cultural psychology of emotions, self, moral judgment, categorization, and reasoning.

Instructor(s): R. Shweder Terms Offered: Autumn

Prerequisite(s): Undergraduates must be in third or fourth year.

Note(s): CHDV Distribution: B, C

Equivalent Course(s): GNSE 31000, PSYC 33000, GNSE 21001, AMER 33000, ANTH 35110, EDSO 21100, PSYC 23000, CRES 21100, ANTH 24320, CHDV 31000

CHDV 21500. Darwinian Health. 100 Units.

This course will use an evolutionary, rather than clinical, approach to understanding why we get sick. In particular, we will consider how health issues such as menstruation, senescence, pregnancy sickness, menopause, and diseases can be considered adaptations rather than pathologies. We will also discuss how our rapidly changing environments can reduce the benefits of these adaptations.

Instructor(s): K. Pagel Terms Offered: Winter

Prerequisite(s): Prerequisite(s): For BIOS Majors: Three quarters of a Biological Sciences Fundamentals sequence or consent of instructor.

Note(s): CHDV Distribution: A

Equivalent Course(s): GNSE 21500, HLTH 21500, HIPS 22401, BIOS 23405

CHDV 23003. Schooling and Identity. 100 Units.

This course examines the dynamic relations between schooling and identity. We will explore how schools both enable and constrain the identities available to students and the consequences of this for academic achievement. We will examine these relations from multiple disciplinary perspectives, applying psychological, anthropological, sociological, and critical theories to understanding how students not only construct identities for themselves within schools, but also negotiate the identities imposed on them by others. Topics will include the role of peer culture, adult expectations, school practices and enduring social structures in shaping processes of identity formation in students and how these processes influence school engagement and achievement. We will consider how these processes unfold at all levels of schooling, from preschool through college, and for students who navigate a range of social identities, from marginalized to privileged.

Instructor(s): Lisa Rosen Terms Offered: Winter. Offered 2020-21

Prerequisite(s): Priority registration will be given to MAPSS students seeking the Education and Society certificate.

Equivalent Course(s): EDSO 33002, EDSO 23002

CHDV 23007. Language, Culture, and Education. 100 Units.

In this course, we will examine current theories and research about differential educational achievement in US schools, including: (1) theories that focus on the characteristics of people (e. g., their biological makeup, their psychological characteristics, their human nature, their essential qualities), (2) theories that focus on the characteristics of groups and settings, (e. g., ethnic group culture, school culture) and (3) theories that examine how cultural processes mediate political-economic constraints and human action. We will discuss the educational consequences of these positions, especially for low income and ethnic and linguistic minority students in the US.

Instructor(s): Lisa Rosen Terms Offered: Spring. Offered 2020-21

Equivalent Course(s): EDSO 23007

CHDV 23010. Blooming, Buzzing Confusion: Making Sense of Language in the First Few Years of Life. 100 Units.

In just a few short years, children are able to master the basics of their home language(s), despite the fact that they are not directly taught by their caregivers. How do they manage to extract relevant language information from their environments? This course considers the diverse contexts and sources of language use children encounter, linking them to major theories about the mechanisms underlying early language learning. We will consider findings from both observational and experimental research on first language development to better understand the potential and limits of different kinds of early language experience.

Instructor(s): M. Casillas Terms Offered: Spring

Note(s): Distribution requirements: B

Equivalent Course(s): CHDV 33510

CHDV 23204. Medical Anthropology. 100 Units.

This course introduces students to the central concepts and methods of medical anthropology. Drawing on a number of classic and contemporary texts, we will consider both the specificity of local medical cultures and the processes which increasingly link these systems of knowledge and practice. We will study the social and political economic shaping of illness and suffering and will examine medical and healing systems-including biomedicine-as social institutions and as sources of epistemological authority. Topics covered will include the problem of belief; local theories of disease causation and healing efficacy; the placebo effect and contextual healing; theories of embodiment; medicalization; structural violence; modernity and the distribution of risk; the meanings and effects of new medical technologies; and global health.

Instructor(s): E. Raikhel Terms Offered: Winter

Prerequisite(s): PQ: Undergraduates must have completed or currently be enrolled in a SOSC sequence. Graduate option is only open to Master's students.

Note(s): CHDV Distribution: C, D; 3, 4

Equivalent Course(s): HIPS 27301, ANTH 40330, KNOW 43204, CHDV 43204, ANTH 24330, HLTH 23204

CHDV 23249. Animal Behavior. 100 Units.

This course introduces the mechanism, ecology, and evolution of behavior, primarily in nonhuman species, at the individual and group level. Topics include the genetic basis of behavior, developmental pathways, communication, physiology and behavior, foraging behavior, kin selection, mating systems and sexual selection, and the ecological and social context of behavior. A major emphasis is placed on understanding and evaluating scientific studies and their field and lab techniques.

Instructor(s): S. Pruett-Jones (even years), J. Mateo (odd years) Terms Offered: Winter

Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.

Note(s): CHDV Distribution: A

Equivalent Course(s): PSYC 23249, BIOS 23249

CHDV 23370. Bright and Dark Sides of Empathy. 100 Units.

This course invites students to critically explore the science of empathy by examining its scope and its limits. It delves into cutting-edge research from evolutionary theory, neurobiology, developmental and social psychology, social neuroscience, clinical neuroscience, and behavioral economics to illuminate the mechanisms behind feeling for and with others. Questions explored in this course include: What are the evolutionary roots of empathy? What are the neural and neuro-endocrinological mechanisms that facilitate empathy? How does empathy develop in young children? Is empathy a limited-capacity resource? How is empathy modulated by unconscious processing and implicit attitudes (e.g., group dynamics, social status)? Is empathy necessarily a good thing for social decision-making? Why empathy can make us act unfairly? Why do some individuals (i.e., psychopaths) lack empathy and concern for the well-being of others? How does empathy improve the overall effectiveness of medical care? This course introduces undergraduate students to current research and theories of empathy. The study of empathy serves as the basis for integrating a variety of perspectives including evolutionary biology, behavioral economics, affective neuroscience, developmental psychology, social psychology, behavioral neurology and psychiatry.

Instructor(s): J. Decety Terms Offered: Autumn

Equivalent Course(s): PSYC 23370

CHDV 23900. Introduction to Language Development. 100 Units.

This course addresses the major issues involved in first-language acquisition. We deal with the child's production and perception of speech sounds (phonology), the acquisition of the lexicon (semantics), the comprehension and production of structured word combinations (syntax), and the ability to use language to communicate (pragmatics).

Instructor(s): S. Goldin-Meadow Terms Offered: Winter

Equivalent Course(s): EDSO 23200, CHDV 31600, LING 21600, PSYC 23200, LING 31600, PSYC 33200

CHDV 24105. Animals, Health and Society. 100 Units.

This course will introduce students to core concepts in medical anthropology through the lens of animal studies. The course is divided into four sections, each of which draws from a broad range of social scientific resources, including historical accounts, contemporary ethnographies, medical journals, media reports and films. We begin the first unit by considering the idea that we cannot understand the topics of health and illness without also examining the role of nonhuman animals. In each of the following three units, we will use a variety of ethnographic contexts and theoretical approaches to explore how animals operate as vectors of pathogens, biotechnologies, and therapeutic tools. Students will emerge from this class able to: 1) think in comparative, cross-cultural terms about biomedicine, 2) analyze how social processes influence health and illness; and 3) interrogate their own beliefs about nonhuman animals, medical knowledge and scientific authority.

Instructor(s): Drake, Ashley Elizabeth Terms Offered: Winter

Note(s): Undergrad distribution: 3, 4

Equivalent Course(s): HLTH 24105

CHDV 24341. Topics in Medical Anthropology. 100 Units.

This seminar will review theoretical positions and debates in the burgeoning fields of medical anthropology and science and technology studies (STS). We will begin this seminar exploring how 'disease' and 'health' in the early 19-century became inseparable from political, economic, and technological imperatives. By highlighting the epistemological foundations of modern biology and medicine, the remainder of this seminar will then focus on major perspectives in, and responses to, critical studies of health and medicine, subjectivity and the body, entanglements of ecology and health, humanitarianism, and psychoanalytic anthropology.

Instructor(s): P. Sean Brotherton Terms Offered: Winter, Winter 2021

Prerequisite(s): Strongly recommended: previous lower-division courses in the social studies of health and medicine through ANTH, HIPS, HLTH, or CHDV

Note(s): This is an advanced reading seminar. Among undergraduates, 3rd and 4th year students are given priority. Consent only: Use the online consent form via the registrar to enroll.

Equivalent Course(s): CHDV 40301, HIPS 24341, ANTH 40310, ANTH 24341, CRES 24341, CHSS 40310, HLTH 24341

CHDV 25002. Feminism, Race, Culture, and Liberation. 100 Units.

Beginning in the twentieth century, a popular global discourse amongst some feminists, anthropologists, and human rights activists has become focused on liberating oppressed peoples from tyrannical systems of power, most often non-Western women of color from traditional patriarchies. However, oftentimes these well-intentioned movements toward liberation are incompatible with the lived realities of the oppressed, and, oftentimes, the 'oppressed' are actually active agents in their own liberations. This course will explore what we mean when we discuss ideas of liberation and social acceptance through a gendered cultural lens, considering the foundations of contemporary feminism and human rights dialogues within different cultural and racial contexts. What and whom are we purportedly liberating with our liberal Western ideals, and what and whom are we failing to consider? Why are gender, sex, and sexuality emphasized to the degree they are, and how do differing emphases produce different sociocultural results? What moral exercises are necessary to most accurately understand the various central elements of a human cultural experience? Can individuals, including ourselves, ever truly be liberated from cultural contexts?

Instructor(s): T. Mandviwala Terms Offered: Winter

Note(s): Request AV room

Equivalent Course(s): CRES 25002, GNSE 25602

CHDV 25250. Disability in Local and Global Contexts. 100 Units.

This is a course about intersections. Disability cuts across age, gender, class, caste, occupation, and religion- or does it? By some measures, people with disabilities are the largest minority group in the world today. In this course, we critically examine both the experiences of people with disabilities in a global context as well as the politics and processes of writing about such experiences. Indeed, questions of representation are perhaps at the core of this course. What role have the United Nations Declaration on the Rights of Persons with Disabilities and international organizations such as the United Nations, the World Health Organization, and other non-governmental social and human service agencies played in the creation of specific understandings of disability experience? We will ask whether disability is a universal category and we will consider how experiences of health, illness, disability, and debility vary. We will engage in 'concept work' by analyzing the relationships between disability and impairment and we will critically evaluate the different conceptual and analytical models employed to think about disability. In doing so, we will engage with broader questions about international development, human rights, the boundaries of the nation, the family and other kinship affiliations, and identity and community formation. How is disability both a productive analytic and a lens for thinking about pressing questions and concerns in today's world?

Instructor(s): M. Friedner Terms Offered: Winter

Equivalent Course(s): HLTH 24302, MAPS 46460, ANTH 24302

CHDV 26000. Social Psychology. 100 Units.

This course examines social psychological theory and research that is based on both classic and contemporary contributions. Topics include conformity and deviance, the attitude-change process, social role and personality, social cognition, and political psychology.

Instructor(s): K. Meidenbauer Terms Offered: Autumn

Equivalent Course(s): PSYC 20600

CHDV 26206. Self in Contexts: Being and becoming in social interaction. 100 Units.

This course critically engages the differential relations of self to the sociohistorical, cultural and interactional contexts in a neoliberal, rapidly globalizing and increasingly diverse world.

Instructor(s): S. Numanbayraktaroglu Terms Offered: Winter

CHDV 26901. Psychology for Citizens. 100 Units.

This course will examine aspects of the psychology of judgment and decision making that are relevant to public life and citizenship. Judgment and decision making are involved when people evaluate information about electoral candidates or policy options, when they vote, and when they choose to behave in ways that affect the collective good. Topics considered in the course will include the following: (1) What is good for people? What do we know about happiness? Can/should happiness be a goal of public policy? (2) How do people evaluate information and make decisions? Why does public opinion remain so divided on so many issues? (3) How can people influence others and be influenced (e.g., by policy makers)? Beyond persuasion and coercion, what are more subtle means of influence? (4) How do individuals' behaviors affect the collective good? What do we know about pro-social behavior (e.g., altruism/charitable giving) and anti-social behavior (e.g., cheating)? (5) How do people perceive and get along with each other? What affects tolerance and intolerance?

Instructor(s): W. Goldstein Terms Offered: Winter

Equivalent Course(s): PSYC 25901

CHDV 27250. Psychological Anthropology. 100 Units.

This course provides a thorough introduction to psychological anthropology, a subdiscipline of anthropology that examines the relationship between culture and mind. The course begins by exploring what is meant by key terms like 'culture' and 'persons' before embarking on an exploration of lives in context. We will critically examine questions relating to the interactions of mind and body. The role of language in thought and development, the role of intuition in human cognition, the feeling and expression of emotions, and reasoning about morality and ethics. The final section of the course examines the interplay between culture and mental health and visits key moments in the life course. Lectures will use the course readings as a basis for presenting concepts, methods, and theories that psychological anthropologists employ in the field. Classes will also include group discussions, activities and films.

Instructor(s): Drake, Ashley Elizabeth Terms Offered: Spring

Note(s): Grad distribution: 4*; Undergrad Distribution: 3, 4

Equivalent Course(s): HLTH 27250

CHDV 27802. Seminar: Challenging Legends and Other Received Truths: A Socratic Practicum. 100 Units.

This seminar is an experiment in honoring the skeptical intellectual tradition. That intellectual tradition, which has its home in the great universities of the world, aims to achieve accuracy and impartiality in human understanding through a principled commitment to explore the other side, even when that requires the articulation of an unpopular, politically incorrect, or against the current point of view. While it may be a matter for debate whether the intellectual virtues we associate with skepticism are at risk of being sacrificed in the academy these days, this seminar engages a social science and public policy literature that raises skeptical doubts about 'received wisdom' on a variety of consequential fronts. Warning to prospective seminar participants: '... a good university, like Socrates, will be upsetting' (The University of Chicago 'Kalven Committee Report,' November 11, 1967).

Instructor(s): R. Shweder Terms Offered: Winter

Prerequisite(s): Open to graduate students and to 3rd and 4th year College students.

Note(s): CHDV Distribution: M, M

Equivalent Course(s): CHDV 37802

CHDV 28301. Disability and Design. 100 Units.

Disability is often an afterthought, an unexpected tragedy to be mitigated, accommodated, or overcome. In cultural, political, and educational spheres, disabilities are non-normative, marginal, even invisible. This runs counter to many of our lived experiences of difference where, in fact, disabilities of all kinds are the 'new normal.' In this interdisciplinary course, we center both the category and experience of disability. Moreover, we consider the stakes of explicitly designing for different kinds of bodies and minds. Rather than approaching disability as a problem to be accommodated, we consider the affordances that disability offers for design. This course begins by situating us in the growing discipline of Disability Studies and the activist (and intersectional) Disability Justice movement. We then move to four two-week units in specific areas where disability meets design: architecture, infrastructure, and public space; education and the classroom; economics, employment, and public policy; and aesthetics. Traversing from architecture to art, and from education to economic policy, this course asks how we can design for access.

Instructor(s): M. Friedner, J. Iverson Terms Offered: Not offered in 2020-2021; May be offered in 2021-2022

Prerequisite(s): Third or fourth-year standing

Equivalent Course(s): MUSI 25719, HLTH 28301, MAAD 28300, BPRO 28300

CHDV 29318. Modern Disability Histories: Gender, Race, and Disability. 100 Units.

This course introduces students to the conceptual apparatus of disability studies and major developments in disability history since the late nineteenth century. The course will consider disability beyond physical impairment, centering the ways in which notions of gender, race, class, sexuality, and ability interact and shape subjects, and how these subject positions shift across political watersheds. Students will engage a variety of sources, such as autobiographies, pamphlets, visual material, laws, and medical texts, as well as historiographical sources. Topics will include late nineteenth-century female 'hysteria,' evolutionary approaches to sign language and orality, and the effects of industrialization on new impairments; early twentieth-century eugenics and the Nazi T4 program; postwar developments in prosthetics and discursive intersections between psychosis and civil rights movement. Students are encouraged to work on creative collective projects (e.g., an exhibit or a short video) in addition to written assignments.

Instructor(s): M. Appeltová Terms Offered: Winter

Equivalent Course(s): HIPS 29318, HIST 29318, HMRT 29318, GNSE 23106, HLTH 29318, CRES 29318

CHDV 29700. Undergraduate Reading and Research. 100 Units.

Select section from faculty list on web.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): Students are required to submit the College Reading and Research Course Form.

Note(s): Must be taken for a quality grade.

CHDV 29800. BA Honors Seminar. 100 Units.

Required for students seeking departmental honors, this seminar is designed to help develop an honors paper project that will be approved and supervised by a HD faculty member. A course preceptor will guide students through the process of research design and proposal writing.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): Consent of the undergraduate program chair.

Note(s): Eligible students should plan to take the BA Honors Seminar in the Spring Quarter of their third year.

CHDV 29900. Honors Paper Preparation. 100 Units.

The CHDV 29900 Honors Paper Preparation course helps students successfully complete work on their BA honors paper. In order to complete honors, students who successfully took CHDV 29800 in Spring Quarter of their third year must register for CHDV 29900 Honors Paper Preparation during Autumn Quarter of their fourth year, as a 13th required course. Students are encouraged to collect their data over the summer; then this course scaffolds the process of analyzing data (such as transcription and coding) and writing up BA papers (such as tips on describing methods and peer review). The grade assigned by their thesis supervisor on the final BA paper is retroactively assigned as the grade for this course.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): CHDV 29800 and an approved honors paper. Students are required to submit the College Reading and Research Course Form.

Comparative Literature

Department Website: <http://complit.uchicago.edu>

The major in Comparative Literature leads to a BA degree and is designed to attract students who wish to pursue an interdisciplinary plan of course work focused on the study of literature as written in various languages and in various parts of the world.

One student might come to the University of Chicago with a strong background in languages other than English and want to work in two or more literatures (one of which can be English). Another student might have a strong interest in literary study and wish to address general, generic, and/or transnational questions that go beyond the boundaries of national literature offered in other literature departments. Or, a student might wish to pursue an in-depth study of the interrelationship of literature and culture, as well as issues that transcend the traditional demarcations of national literary history and area studies.

These descriptions of academic interest are not mutually exclusive. Each student will work with the Director of Undergraduate Studies to design a plan of course work that will suit his or her individual goals and that will take advantage of the rich offerings of the University.

Program Requirements

The requirements outlined below are in effect as of Autumn Quarter 2018 and will apply to all students in the Class of 2020 and beyond.

Students interested in applying to the major in Comparative Literature should review the following guidelines and consult with the Director of Undergraduate Studies in Comparative Literature. These guidelines are to assist students in developing a balanced and cohesive interdisciplinary plan of study.

The major is comprised of seven literature courses selected in consultation with the Director of Undergraduate Studies, one foundational course in comparative literary theory and methodology, two courses in literary theory, methods, or special topics in Comparative Literature, and a BA thesis workshop that serves as a capstone to the major.

A student works with the Director of Undergraduate Studies to identify a primary field (four courses) and secondary field (three courses). A student wishing to work in two literatures might choose two literatures as the primary and secondary fields (note: the second literature can be English). The secondary field might be a particular national literature or a portion of such a literature (e.g., poetry, drama, novel); another discipline (e.g., mathematics, history, film, performance studies, music); or literary theory.

Study abroad offers an attractive means of fulfilling various aims of this program. More than half of the major requirements must be satisfied by courses bearing University of Chicago numbers.

Summary of Requirements

Three language courses in a single language at the intermediate level or above	300
Four courses in a literature other than English, one of which can be in a closely related field	400
Three courses in a secondary field, which can be literature in another language (including English), another discipline (e.g., mathematics, performance studies, music), or literary theory	300
CMLT 20109 Comparative Methods in the Humanities	100
Two 20000-level courses in literary theory, methods, or special topics in Comparative Literature	200
CMLT 29801 BA Project and Workshop: Comparative Literature (See BA Project for details)	100
Total Units	1400

Foreign Language Requirement

The Comparative Literature major requires three language courses in a single language at the intermediate level or above. Students who come in with high proficiency in a language other than English may instead substitute three courses in a second language (other than English) at any level.

A student can provide proof of high language proficiency in two ways:

1. A student may pass one of the College's Practical Language Proficiency Assessments in a foreign language, if available for the relevant language; for more information, see languageassessment.uchicago.edu/flpc/ (<https://languageassessment.uchicago.edu/flpc/>)
2. A student can demonstrate high proficiency on the basis of the student's formal schooling experience in a country outside the United States at the high school (secondary) level. Students should write a brief description of their schooling and submit it, along with a transcript showing at least two years of high school study in the relevant language, to the Director of Undergraduate Studies in Comparative Literature.

Though **all majors** must demonstrate proficiency in a single language through at least the second-year sequence in a foreign language (**or by providing proof that they enter the program with high proficiency in either of the two ways noted above**), they are encouraged to continue their language study beyond the minimum required for the major. The Department of Comparative Literature works closely with the University of Chicago Language Center and will help students

achieve their individual goals in language acquisition by suggesting programs of study that will add to their language expertise as appropriate.

BA Project

The BA capstone project is to be completed in the student's last year of study. The project should be approved by the Director of Undergraduate Studies and is supervised by a faculty member of the student's choice in Comparative Literature. It may be co-advised by a faculty member from another department. Students must complete their formal application to the major by spring of third year and should identify a faculty advisor at that time.

One obvious choice for a BA project is a substantial essay in comparative literary study. This option should not, however, rule out other possibilities. Alternative examples are a translation from a foreign literature with accompanying commentary or a written project based on research done abroad in another language and culture relating to comparative interests. Students are urged to base their project on comparative concepts and to make use of the language proficiency that they will develop as they meet the program's requirements.

NB: This program may accept a BA paper or project used to satisfy the same requirement in another major if certain conditions are met and with approval from both program chairs. Students should consult with the chairs by the earliest BA proposal deadline (or by the end of third year, when neither program publishes a deadline). A consent form, to be signed by both chairs, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Participation in the Program

Students should express their interest in the major as early as possible. The first step is to meet with the Director of Undergraduate Studies to consult about a program of study. Applicants must submit an application form which consists of a list of completed courses and a list of courses in which they are currently registered. Special mention should be made of language courses or other language training that affirms a student's level of language proficiency. Each proposal will be evaluated on the basis of the interest of the student and his or her achievement in the languages needed to meet the goals of the intended course of study. Students will be notified by email of their acceptance to the program. Finally, students will need to formalize their declaration through my.uchicago.edu (<http://my.uchicago.edu>) with the assistance of the College adviser.

Grading

All courses to be used in the major must be taken for a quality grade of B- or higher, except for the BA Workshop course, CMLT 29801, which is graded on a Pass/Fail basis.

Honors

To be eligible for honors in Comparative Literature, students must earn an overall cumulative GPA of 3.25 or higher, and a GPA of 3.5 or higher in the major. They must also complete a BA essay or project that is judged exceptional in intellectual and/or creative merit by the first and second readers.

Advising

Students must consult on an ongoing basis with the Director of Undergraduate Studies for selection and approval of course work for the major. Students will need to regularly provide documentation of any approvals for the major to their College adviser for the necessary processing. Further advice and counseling will be available from the preceptor for the program and from the faculty member who supervises the student's BA project.

Comparative Literature Courses

CMLT 11008. Introduction to Latinx Literature. 100 Units.

From the activist literature of the Chicano Civil Rights Movement to contemporary fiction and poetry, this course explores the forms, aesthetics, and political engagements of U.S. Latinx literature in the 20th and 21st centuries. Theoretical readings are drawn from Chicana Studies, Latinx Studies, American Studies, Latin American Studies, Hemispheric Studies, Indigenous Studies, and Postcolonial Studies, as we explore Latinx literature in the context of current debates about globalization, neoliberalism, and U.S. foreign policy; Latinx literature's response to technological and socio-political changes and its engagement with race, gender, sexuality, class, and labor; and its dialogues with indigenous, Latin American, North American, and European literatures. (Poetry, 1830-1940, Theory)
Instructor(s): Rachel Galvin Terms Offered: Winter
Equivalent Course(s): LACS 11008, ENGL 11008, SPAN 21008

CMLT 20109. Comparative Methods in the Humanities. 100 Units.

This course introduces models of comparative analysis across national literatures, genres, and media. The readings pair primary texts with theoretical texts, each pair addressing issues of interdisciplinary comparison. They include Orson Welles's 'Citizen Kane' and Coleridge's poem 'Kubla Khan'; Benjamin's 'The Storyteller,' Kafka's 'Josephine the Mouse Singer,' Deleuze and Guattari, Kafka: Toward a Minor Literature, and Mario Vargas Llosa's The Storyteller; Victor Segalen's *Stèles*; Fenollosa and Pound's 'The Chinese Character as a Medium of Poetry' and Eliot Weinberger's *Nineteen Ways of Looking at Wang Wei*; Mérimée, 'Carmen,' Bizet, *Carmen*, and the film adaptation *U-Carmen e-Khayelitsha* (South Africa, 2005); Gorky's and Kurosawa's *The Lower Depths*; Molière, *Tartuffe*, Dostoevsky, *The Village Stepanchikovo and its Inhabitants*, and Bakhtin, 'Discourse in the Novel'; Gogol, *The Overcoat*, and Boris Eikhenbaum, 'How Gogol's Overcoat Is Made.'
Instructor(s): Olga Solovieva Terms Offered: Winter

Prerequisite(s): Prerequisite: Completed Humanities, or Civilization Core requirement. The course is designed for the second-year students and above.

Equivalent Course(s): ENGL 28918

CMLT 21200. Literature and Technology: Machines, Humans, and Posthumans from Frankenstein to the Futurists. 100 Units.

Everywhere we remain unfree and chained to technology, whether we passionately affirm or deny it,' wrote Heidegger. In the year 2020, the year of COVID-19 and mass physical lockdown, this statement is more valid than ever. Keeping current events in mind, in this course we will pose anew the question concerning technology and go back to the First and Second Industrial Revolutions when humans first came into intense contact with machines and restructured life and literature around them. We will trace the ecological, economical, and emotional footprints of various machines and technological devices (automata, trains, phonographs, cameras) in major European literary works from Shelley's *Frankenstein* (1818), Zola's *La bête humaine* (1890) to Luigi Pirandello's *The Notebooks of Serafino Gubbio, Cinematograph Operator* (1925), while inquiring into the nature of technology and what it means to be human through key philosophical texts from Plato to N. Katherine Hayles.

Instructor(s): Ana Ilievska Terms Offered: Autumn

Equivalent Course(s): ITAL 28818, PORT 28818, MAAD 25277, ENGL 21277

CMLT 21206. Realms of Uncertainty: Buddhism & Chinese Literature. 100 Units.

During these uncertain times, this course explores the uncertain boundaries between illusion and reality, dream and waking, form and emptiness, and self and other. We will traverse these paired themes of Buddhist significance as they arise in Chinese literary works from another epoch of uncertainty: the twilight of the Ming dynasty (1368-1644). Our starting point will be the Heart Sutra's famous assertion that 'Form is emptiness; emptiness is form.' Accepting the uncertainty this statement inspires, we will investigate this and other distinctive indistinctions through works of fiction, drama, autobiography, and poetry. Along the way, we will examine (and call into question) the distinction between Buddhist and literary concerns: What makes literature suitable for reflecting on Buddhist ideas about being? What insights does Buddhist philosophy grant into how we engage with literature and other forms of mediated experience? No prior knowledge of Chinese language or history is necessary. All materials will be provided by the instructor and read in translation (with Chinese available upon request). A Chinese reading section is available to students who wish to take the course for language credit. ding section is available to students who wish to take the course for language cre

Instructor(s): Alia Breitwieser Terms Offered: Autumn

Equivalent Course(s): EALC 21207

CMLT 21224. Against Interpretation: Philology at the Crossroads. 100 Units.

Susan Sontag closed her essay 'Against Interpretation' calling for 'an erotics of art.' Such an 'erotics' would avoid doing anything to tame the work of art-allowing its hold on the imagination to grow, without trimming down its excrescences. Eros here stands for the irreducibility of the presence of art-the finite or even infinitesimal presence that imposes itself as irrepressibly fractal in its growth. Sontag was challenging us to make a certain kind of intellectual and affective space available-and this challenge has been reprised in recent scholarship that attempts to trace the state of the Humanities and some of its more eminent toolkits. Both philology and close-reading have been exposed as disciplinary 'disciplines' of the Humanities-long having abandoned the 'erotic' power reading as a strategy of unfolding in favor of what might be termed strategies of containment. But this was not always the case. This course seeks to recover what then remains, peeking into the backgrounds of these disciplines as they stand at the crossroads of relevance and retreat-hovering just short of the intimate space of textual experience described by Sontag.

Instructor(s): Claudio Sansone Terms Offered: Winter

Equivalent Course(s): ENGL 21224, KNOW 21224, SALC 21224

CMLT 21233. Black Speculative Fiction. 100 Units.

This course familiarizes students with Black literary speculative fiction, sci-fi, and fantasy. The objective of this course is to read Black speculative fiction alongside the historical contexts the assigned works speak to, as well as orient students to the radical re/imaginings of Black pasts, presents, and futures in the novels and short films at the center of the course. This class will pay particular attention to Black diasporic/international contributions to the genre. (Fiction, Theory)

Instructor(s): Sophia Azeb Terms Offered: Winter

Equivalent Course(s): ENGL 21223, CRES 21233

CMLT 21648. Languages of Migration: Literature, Law, and Language Justice. 100 Units.

For decades, human rights activists and lawmakers in the United States have been fighting for a person's right to speak their native language before the law, implying that language justice could be achieved through the use of interpreters. At the same time, a new generation of poets and fiction writers has been exercising alternative approaches to language justice, shifting the focus from speakers to listeners, and from the legal to the personal. This course brings these seemingly separate discourses into conversation in an attempt to trace the assumptions that undergird different formulations of language justice in the late 20th century and 21st century. Drawing on Edward Said's *The Public Role of Writers and Intellectuals*, we will examine NGO statements and immigration court hearings side by side with poetry and fiction by Monica de la Torre, Antonio Ruiz Camacho, Irena Klepfisz, Joseph Brodsky and others. As we analyze theories of identity, desire, language and responsibility and engage with thinkers such as Andrea Long Chu, Hannah Arendt and Aamir Mufti, we will consider the potential implications of bringing literature and law into conversation with one another.

Instructor(s): Yael Flusser Terms Offered: Spring

Equivalent Course(s): ENGL 21648, HMRT 21648

CMLT 21667. Poetics of Space in Travel: Performance and Place in Japan and Beyond. 100 Units.

How is space imagined and evoked across different media? How might attention to this question lead us to rethink the way that space mediates our experiences of our surroundings? In examining how spatial imaginings travel across time and medium, we will explore questions of space as they are bound up with problems of gender, exile, aesthetics, and performativity. While Japan will be our primary geographic topos, we will interrogate an understanding of these spatialities as 'Japanese' by surveying the role they come to play in discourses of both 'Japanese-ness' and Western modernism. We will pay special attention to performance (namely, noh drama); however, we will also take up short stories, novels, film and more. Centering our investigations on modern and contemporary cultural production, we will also deal with premodern texts to trace the multiple axes along which our diverse array of objects circulate. Figures considered include: Murata Sayaka, Hori Tatsuo, Miyazawa Kenji, Mishima Yukio, Ôe Kenzaburô, Virginia Woolf, and Zeami. No prior background required.

Instructor(s): Anthony Stott Terms Offered: Spring

Equivalent Course(s): EALC 21667, TAPS 21667

CMLT 21748. Global Human Rights Literature. 100 Units.

This course surveys key human rights texts (philosophical texts, literary works, and legal documents) of the 20th and 21st centuries. By reading global literatures alongside international human rights instruments, and by treating literature as an archive of ideas that circulate among a literary public invested in human rights, this course explores the importance of art and literature to legal and political projects and provides students with the opportunity to conceptualize the role of narrative for human rights advocacy and human rights imaginaries. We will chart the rise of the global human rights movement, beginning with the 1940s up to our contemporary moment, paying close attention to key human rights issues such as genocide, citizenship, enforced disappearance, detention, apartheid, refugee crises, and mass incarceration. Readings will include works by Anna Seghers, Primo Levi, Hannah Arendt, Jacobo Timerman, Aleksandr Solzhenitsyn, Rigoberta Menchú, Ng#g# wa Thiong#o, Antje Krog, Dave Eggers, and Albert Woodfox.

Instructor(s): Nory Peters Terms Offered: Winter

Equivalent Course(s): CREC 21748, HMRT 21748

CMLT 21984. Humans and their Predators. 100 Units.

Animals that sometimes prey on humans occupy critical niches in individual imaginations, global culture, and natural ecosystems. While our interactions with these creatures have shifted drastically over the millennia, only recently—thanks to factors such as ecological collapse and urbanization—has the majority of the world's population come to live without the threat of predation. This class draws on a variety of disciplines to interrogate the relationship between people and the mammals, birds, reptiles, and fish that sometimes eat us. We will read epic literature from the Middle East and Europe; examine news reports from 18th-century France and 21st-century Florida; explore the colonial and postcolonial dimensions of tiger-hunting in India; and navigate ways in which ecology, paleontology, and other scientific disciplines can inform humanistic inquiry.

Instructor(s): Sam Lasman Terms Offered: Spring

CMLT 22687. Persian Epic. 100 Units.

TBD

Instructor(s): Sam Lasman Terms Offered: Spring

CMLT 23401. The Burden of History: The Nation and Its Lost Paradise. 100 Units.

What makes it possible for the imagined communities called nations to command the emotional attachments that they do? This course considers some possible answers to Benedict Anderson's question on the basis of material from the Balkans. We will examine the transformation of the scenario of paradise, loss, and redemption into a template for a national identity narrative through which South East European nations retell their Ottoman past. With the help of Žižek's theory of the subject as constituted by trauma and Kant's notion of the sublime, we will contemplate the national fixation on the trauma of loss and the dynamic between victimhood and sublimity.

Instructor(s): A. Ilieva Terms Offered: Autumn

Equivalent Course(s): NEHC 30573, HIST 24005, REES 39013, REES 29013, CMLT 33401, HIST 34005, NEHC 20573

CMLT 23301. Balkan Folklore. 100 Units.

Vampires, fire-breathing dragons, vengeful mountain nymphs. 7/8 and other uneven dance beats, heart-rending laments, and a living epic tradition. This course is an overview of Balkan folklore from historical, political, and anthropological perspectives. We seek to understand folk tradition as a dynamic process and consider the function of different folklore genres in the imagining and maintenance of community and the socialization of the individual. We also experience this living tradition firsthand through visits of a Chicago-based folk dance ensemble, 'Balkan Dance.'

Instructor(s): A. Ilieva Terms Offered: Winter

Equivalent Course(s): REES 39009, ANTH 25908, REES 29009, NEHC 30568, NEHC 20568, ANTH 35908, CMLT 33301

CMLT 23412. (Posthuman) Metamorphoses: Body, Identity and the Modernist Novel. 100 Units.

TBD

Instructor(s): Ana Ilievska Terms Offered: Spring

CMLT 24410. Kurosawa and His Sources. 100 Units.

This interdisciplinary graduate course focuses on ten films of Akira Kurosawa which were based on literary sources, raging from Ryunosuke Akutagawa, Jules Dassin, Georges Simenon, and Shakespeare to Dostoevsky, Tolstoy, Gorky, and Arseniev. The course will not only introduce to some theoretical and intermedial problems of adaptation of literature to film but also address cultural and political implications of Kurosawa's adaptation of classic and foreign sources. We will study how Kurosawa's turn to literary adaptation provided a vehicle for circumventing social taboos of his time and offered a screen for addressing politically sensitive and sometimes censored topics of Japan's militarist past, war crimes, defeat

in the Second World War, and ideological conflicts of reconstruction. The course will combine film analysis with close reading of relevant literary sources, contextualized by current work of political, economic, and cultural historians of postwar Japan. The course is meant to provide a hands-on training in the interdisciplinary methodology of Comparative Literature. Undergraduate students can be admitted only with the permission of the instructor.

Instructor(s): Olga Solovieva Terms Offered: Spring

Equivalent Course(s): SIGN 24410, EALC 34410, EALC 24410

CMLT 24202. Philosophy and Literature in India. 100 Units.

Is philosophy literature? Is literature philosophy? What constitutes either of these seemingly disparate enterprises, formally and thematically, and what kinds of conjunctions can we imagine between them (philosophy in/of/as literature)? Can one translate these terms across cultures? Are they the sole prerogative of leisured elites, or can they harbor and cultivate voices of dissent? Above all, what does it mean to reflect on these categories outside the parochial context of the Western world?

This course explores these questions by introducing some of the literary cultures, philosophical traditions, religious poetry, and aesthetic theories of the South Asian subcontinent. Students will encounter a variety of genres including scriptural commentary, drama and courtly poetry, and the autobiography. Readings, all in translation, will range from Sanskrit literature to Sufi romances and more.

Instructor(s): Anand Venkatkrishnan Terms Offered: Winter

Equivalent Course(s): SALC 20903, SIGN 26073, RLST 24200

CMLT 25640. Trauma and Narrative. 100 Units.

TBD

Instructor(s): Nisha Kommattam Terms Offered: Autumn

Equivalent Course(s): CMLT 35640

CMLT 26111. Queer Asia(s) 100 Units.

This course explores representations of queerness, same-sex love and sexualities and debates around them by introducing students to a variety of literary texts translated from Asian languages as well as Asian films, geographically ranging from India, Pakistan and Sri Lanka to China, Japan, Thailand, Indonesia, Korea and Singapore. We will also read scholarship that will help us place the production and reception of these primary sources in historical, political, cultural and religious contexts. In particular, we will examine questions of history and continuity (recurrent themes and images); form and genre (differences of representation in mythological narratives, poetry, biography, fiction, erotic/legal/medical treatises); the relationship of gender to sexuality (differences and similarities between representations of male-male and female-female relations); queerness as a site for exploring other differences, such as caste or religious difference; and questions of cross-cultural and transnational dialogue and cultural specificity. This course is part one of a two-quarter sequence, with the second part offered in Winter Quarter 2021. Each quarter can also be taken separately. Students need to be available for 2 synchronous online meetings per week.

Instructor(s): Nisha Kommattam Terms Offered: Autumn

Equivalent Course(s): SALC 26111, GNSE 26111, HMRT 26111

CMLT 26211. The World in Ruins. 100 Units.

In this course we will not limit ourselves to the traditional view of 'ruins' as remains of ancient or modern buildings. Our course will involve a variety of different artifacts (literary texts, paintings, films, philosophical tracts, etc.) from different cultural moments, in order to attain a clearer understanding of our notion of ruins, decay, and decadence. We will first examine 'ruins' in classical cultures, focusing on Plutarch's short treatise *On the Obsolescence of Oracles*. We will investigate the 'discovery' of ruins in the Renaissance through Petrarch's *Letters on Familiar Matters*, his *canzoniere*, and his epic poem *Africa*, Francesco Colonna's verbal/visual *Hypnerotomachia Poliphili* (*The Strife of Love in a Dream*), and Joaquim De Bellay's *The Antiquities of Rome*. 17th-century approach to ruins and decay will focus on Benjamin's texts (*Origins of the German Tragic Drama* among others), Agamben's response to Benjamin in *Man Without Content*, and European poetry and paintings. After an analysis of Piranesi's famous etchings *Vedute di Roma*, we will approach Romanticism through Leopardi's and Hölderlin's works. There will be a screening of Pasolini's *The Walls of Sana'a* (1970), which will open our discussion of the concepts of decay and annihilation in modern times. We will read Curzio Malaparte's novel *The Skin* and W. G. Sebald's *On the Natural History of Destruction*, César Aira's *Episode in the Life of a Landscape Painter*, and the recent *Anthropocene: The Human Epoch*.

Instructor(s): A. Maggi Terms Offered: Spring

Note(s): Taught in English.

Equivalent Course(s): CMLT 42311, ITAL 26210, ITAL 36210

CMLT 26856. Queer Theory: Futures. 100 Units.

TBD

Instructor(s): Kris Trujillo Terms Offered: Winter

Equivalent Course(s): CMLT 36856, GNSE 26856, CRES 26856, GNSE 36856, RLST 26856, RLVC 36856, ENGL 36856, ENGL 26856

CMLT 26912. Strangers to Ourselves: Emigre Literature and Film from Russia and Southeast Europe. 100 Units.

Being alienated from myself, as painful as that may be, provides me with that exquisite distance within which perverse pleasure begins, as well as the possibility of my imagining and thinking,' writes Julia Kristeva in 'Strangers to Ourselves,' the book from which this course takes its title. The authors whose works we are going to examine often alternate between nostalgia and the exhilaration of being set free into the breathless possibilities of new lives. Leaving home does not simply mean movement in space. Separated from the sensory boundaries that defined their old selves, immigrants inhabit a warped, fragmentary, disjointed time. Immigrant writers struggle for breath-speech, language, voice, the very stuff of their craft

resounds somewhere else. Join us as we explore the pain, the struggle, the failure, and the triumph of emigration and exile. Vladimir Nabokov, Joseph Brodsky, Marina Tsvetaeva, Nina Berberova, Julia Kristeva, Alexander Hemon, Dubravka Ugrešić, Norman Manea, Miroslav Penkov, Ilija Trojanow, Tea Obreht.

Instructor(s): A. Ilieva Terms Offered: Spring

Equivalent Course(s): CMLT 36912, REES 29010, REES 39010

CMLT 27522. Experimental Futures. 100 Units.

In this class students will get an outline of an emerging area of interdisciplinary research that reframes the category of the 'human' in face of contemporary environmental challenges such as climate change and scarcity of resources. Students will become familiar with concepts and theories associated with post-humanism, new materialisms, and environmental humanities and use them to reflect on examples from architecture, design, and the arts. Assignments involve the reading and preparing of selected literature, written reflections on projects from architecture, design, and the arts, small lectures, and active participation in the class.

CMLT 27701. Imaginary Worlds: The Fantastic and Magic Realism in Russia and Southeastern Europe. 100 Units.

In this course, we will ask what constitutes the fantastic and magic realism as literary genres while reading some of the most interesting writings to have come out of Russia and Southeastern Europe. While considering the stylistic and narrative specificities of this narrative mode, we also think about its political functions -from subversive to escapist, to supportive of a nationalist imaginary-in different contexts and at different historic moments in the two regions.

Instructor(s): Angelina Ilieva Terms Offered: Spring

Equivalent Course(s): REES 29018, CMLT 37701, REES 39018

CMLT 28446. Apocalypse Now: Scripts of Eschatological Imagination. 100 Units.

Apocalyptic fantasies are alive and well today - in beach reads and blue chip fiction; in comic books and YA novels; in streaming TV shows, Hollywood blockbusters, and ironic arthouse cinema. These apocalyptic fantasies follow well-established scripts that often date back millennia. Apocalypse scripts allow their users to make sense of the current crisis and prepare for an uncertain future. The course will be divided into two parts. The first half will be devoted to texts, art, and movies that dwell on the expectation of the end and narratively measure out the time that remains. We will begin with examining the biblical ur-scripts of an apocalyptic imaginary, the Book of Daniel in the Old and the Book of Revelation in the New Testament, as well as Saint Paul's messianism in the Letter to the Romans; and then move on to medieval apocalyptic fantasies of the Joachim of Fiore and others; and end with the apocalypticism underlying the religious reforms of Girolamo Savonarola and Martin Luther. The second half will focus on life after the apocalypse - the new freedoms, and new forms of political life and sociality that the apocalyptic event affords its survivors. Readings will include the political theory of maroonage, capabilities, and neoprimitivism; literary theory of speculative fiction; and post-apocalyptic narratives by Octavia Butler, Jean Hegland, Richard Jefferies, Cormac McCarthy, and Colson Whitehead. Readings and discussions in English.

Instructor(s): Chris Wild Mark Payne Terms Offered: Winter

Equivalent Course(s): RLST 28446, GRMN 28446, RLVC 38446, CMLT 38446, GRMN 38446

CMLT 28775. Racial Melancholia. 100 Units.

This course provides students with an opportunity to think race both within a psychoanalytic framework and alongside rituals of loss, grief, and mourning. In particular, we will interrogate how psychoanalytic formulations of mourning and melancholia have shaped theories of racial melancholia that emerged at the turn of the twenty-first century. Turning to Asian American, African American, and Latinx theoretical and literary archives, we will interrogate the intersections of race, gender, and sexuality and ask: How do literatures of loss enable us to understand the relationship between histories of racial trauma, injury, and grief, on the one hand, and the formation of racial identity, on the other? What might it mean to imagine literary histories of race as grounded fundamentally in the experience of loss? What forms of reparations, redress, and resistance are called for by such literatures of racial grief, mourning, and melancholia? And, finally, how, if understood as themselves rituals of grief, might psychoanalysis and the writing of literature assume the role of religious devotion in the face of loss and trauma?

Instructor(s): Kris Trujillo Terms Offered: Autumn

Equivalent Course(s): ENGL 38775, CMLT 38775, ENGL 28775, RLVC 38775, GNSE 28775, RLST 28775, GNSE 38775, CRES 22775

CMLT 29023. Returning the Gaze: The West and the Rest. 100 Units.

Aware of being observed. And judged. Inferior... Abject... Angry... Proud... This course provides insight into identity dynamics between the 'West,' as the center of economic power and self-proclaimed normative humanity, and the 'Rest,' as the poor, backward, volatile periphery. We investigate the relationship between South East European self-representations and the imagined Western gaze. Inherent in the act of looking at oneself through the eyes of another is the privileging of that other's standard. We will contemplate the responses to this existential position of identifying symbolically with a normative site outside of oneself-self-consciousness, defiance, arrogance, self-exoticization and consider how these responses have been incorporated in the texture of the national, gender, and social identities in the region. Orhan Pamuk, Ivo Andrić, Nikos Kazantzakis, Aleko Konstantinov, Emir Kusturica, Milcho Manchevski.

Instructor(s): Angelina Ilieva Terms Offered: Winter

Equivalent Course(s): HIST 23609, NEHC 39023, REES 39023, NEHC 29023, HIST 33609, REES 29023, CMLT 39023

CMLT 29024. States of Surveillance. 100 Units.

What does it feel to be watched and listened to all the time? Literary and cinematic works give us a glimpse into the experience of living under surveillance and explore the human effects of surveillance - the fraying of intimacy, fracturing sense of self, testing the limits of what it means to be human. Works from the former Soviet Union (Solzhenitsyn, Abram

Tertz, Andrey Zvyagintsev), former Yugoslavia (Ivo Andrić, Danilo Kiš, Dušan Kovačević), Romania (Norman Manea, Cristian Mungiu), Bulgaria (Valeri Petrov), and Albania (Ismail Kadare).

Instructor(s): Angelina Ilieva Terms Offered: Spring

Equivalent Course(s): REES 29024, CMLT 39024, REES 39024

CMLT 29416. Freud. 100 Units.

This course will involve reading Freud's major texts, including, e.g., parts of *The Interpretation of Dreams*, 'Beyond the Pleasure Principle,' and his later work on feminine sexuality. We will consider Freud's views on bisexuality as well. We will also read case studies and consider theoretical responses to Freud's work, by Derrida, Lacan, and other important theorists. Course requirements will be one in-class presentation, based on the reading(s) for that day, and one final paper.

Instructor(s): Françoise Meltzer Terms Offered: Autumn

Equivalent Course(s): CMLT 39416, ENGL 29416, DVPR 39416, ENGL 39416, RLST 29416

CMLT 29801. BA Project and Workshop: Comparative Literature. 100 Units.

This workshop begins in Autumn Quarter and continues through the middle of Spring Quarter. While the BA workshop meets in all three quarters, it counts as a one-quarter course credit. Students may register for the course in any of the three quarters of their fourth year. A grade for the course is assigned in the Spring Quarter, based partly on participation in the workshop and partly on the quality of the BA paper. Attendance at each class section required.

Instructor(s): Alia Breitwieser Terms Offered: Autumn Spring Winter

Note(s): Required of fourth-year students who are majoring in CMLT. Students should register for this course in the term where it best fits in their schedule.

CMLT 31600. Marxism and Modern Culture. 100 Units.

Designed for graduate students in the humanities, this course begins with fundamental texts on ideology and the critique of capitalist culture by Marx, Engels, Lenin, Gramsci, Althusser, Wilhelm Reich and Raymond Williams, before moving to Marxist aesthetics, from the orthodox Lukács to the Frankfurt School (Adorno, Benjamin) to the heterodox (Brecht), and concludes with contemporary debates around Marxism and imperialism (Lenin, Fanon, and others), and Marxism and media, including the internet. This course will have a particular focus on guiding students through the conventions of academic writing in the Humanities.

Instructor(s): Loren Kruger Terms Offered: Winter

Prerequisite(s): MA and PhD students in humanities disciplines only. Not suitable for the MAPSS program or for Social Science PhDs

Equivalent Course(s): ENGL 32300, MAPH 31600

Computational and Applied Mathematics

Program of Study

The Departments of Computer Science, Mathematics, and Statistics offer a BS in Computational and Applied Mathematics. The program is designed for students who intend to specialize in computational and/or applied mathematics, as well as students who want to acquire a strong quantitative background to be applied in such varied areas as physics, biological sciences, engineering, operations research, economics, and finance.

Summary of Requirements

GENERAL EDUCATION

One of the following sequences:	200
CHEM 12100 & CHEM 12200	Honors General Chemistry I and Honors General Chemistry II (or higher)
OR	
PHYS 13100-13200	Mechanics; Electricity and Magnetism (or higher) *
One of the following sequences:	200
MATH 13100-13200	Elementary Functions and Calculus I-II § ⁺
OR	
MATH 15100-15200	Calculus I-II § ⁺
OR	
MATH 16100-16200	Honors Calculus I-II ⁺
Total Units	400

MAJOR

One of the following: ⁺	100	
MATH 16300	Honors Calculus III	
MATH 15910	Introduction to Proofs in Analysis	
One of the following sequences:	300	
MATH 20300-20400-20500	Analysis in Rn I-II-III	
MATH 20700-20800-20900	Honors Analysis in Rn I-II-III	
One of the following:	100	
STAT 24300	Numerical Linear Algebra	
or MATH 20250	Abstract Linear Algebra	
One of the following sequences:	200	
CMSC 12100-12200	Computer Science with Applications I-II	
CMSC 15100-15200	Introduction to Computer Science I-II	
CMSC 16100-16200	Honors Introduction to Computer Science I-II	
CMSC 27100	Discrete Mathematics ^{**}	100
CMSC 27200	Theory of Algorithms	100
MATH 27300	Basic Theory of Ordinary Differential Equations	100
One of the following:	100	
MATH 21100	Basic Numerical Analysis	
MATH 21200	Advanced Numerical Analysis	
STAT 24400-24500	Statistical Theory and Methods I-II	200
One of the following: ^{***}	100	
STAT 25100	Introduction to Mathematical Probability	
STAT 25150	Introduction to Mathematical Probability-A	
MATH 23500	Markov Chains, Martingales, and Brownian Motion	
STAT 28000	Optimization	100
Three approved electives (see Elective Courses below)	300	
Total Units	1800	

- * Students with AP credit for PHYS 12100-12200 may substitute quantitative courses in other scientific departments with permission of the director of undergraduate studies; whether these other courses count as electives within the major or as general electives will be determined by the director of undergraduate studies.
- + Credit may be granted by examination.
- § Students who take MATH 13100-13200 or MATH 15100-15200 must also take the third quarter of the sequence as a prerequisite for MATH 15910; however, neither MATH 13300 nor MATH 15300 will be counted toward the major.
- ** Students may substitute a higher-level Computer Science course in discrete mathematics or algorithms with approval of the director of undergraduate studies.
- *** Students who take STAT 25100 or STAT 25150 may take MATH 23500 as one of their electives with approval of the director of undergraduate studies. STAT 31200 may be substituted for MATH 23500.

Elective Courses

Students will propose a coherent set of three courses to complete the major program. These will be chosen to complete a specialization. Possibilities include: preparation for PhD programs in applied mathematics, scientific computing, machine learning, operations research, economics and finance, physical sciences, or biological sciences. These are intended to be mathematical and computational courses that complement the program and at least at the mathematical level of the advanced classes in the required courses. The program must be approved by the undergraduate adviser, who will also serve as a resource for suggested mentors and programs in different areas.

Grading

Students must receive quality grades in all courses required in the degree program. To qualify for the BS degree, students must complete the 18 courses above with (1) a GPA of 2.0 or higher and (2) no grade lower than C-.

Honors

A BS with honors in Computational and Applied Mathematics requires an overall GPA of at least 3.0, a GPA in the required courses for the major of at least 3.25, and the completion of an honors paper written under the supervision of a faculty member and approved by the undergraduate adviser for the major. Students planning to complete an honors paper should submit a short proposal to the undergraduate adviser for approval by the Computational and Applied Mathematics board by the end of the student's third year. The proposal must be approved by the board no later than the end of fifth week of the Autumn Quarter of the student's fourth year.

Computer Science

Department Website: <https://www.cs.uchicago.edu>

Program of Study

The computer science program offers BA and BS degrees, as well as combined BA/MS and BS/MS degrees. Students who earn the BA are prepared either for graduate study in computer science or a career in industry. Students who earn the BS degree build strength in an additional field by following an approved course of study in a related area. The department also offers a minor.

Where to Start

The Department of Computer Science offers several different introductory pathways into the program. In consultation with their College adviser and the Computer Science Department advisers, students should choose their introductory courses carefully. Some guidelines follow.

For students intending to pursue further study in computer science, we recommend CMSC 15100 Introduction to Computer Science I or CMSC 16100 Honors Introduction to Computer Science I as the first course. CMSC 15100 does not assume prior experience or unusually strong preparation in mathematics. Students with programming experience and strong preparation in mathematics should consider CMSC 16100 Honors Introduction to Computer Science I. First-year students considering a computer science major are strongly advised to register for an introductory sequence in the Winter or Spring Quarter of their first year, and it is all but essential that they start the introductory sequence no later than the second quarter of their second year.

Students who are not intending to major in computer science, but are interested in getting a rigorous introduction to computational thinking with a focus on applications are encouraged to start with CMSC 12100 Computer Science with Applications I. Incoming students should note that while CMSC 12100 can be used as the first course in the major, it is not open to first-year students, and it is not intended as an entry point for students who plan to major in computer science.

Students who are interested in data analysis should consider starting with CMSC 11800 Introduction to Data Science I.

Students who are interested in the visual arts or design should consider a new course, CMSC 11111 Creative Coding.

Program Requirements

Both the BA and BS in computer science require fulfillment of the general education requirement in the mathematical sciences by completing an approved two-quarter calculus sequence. To earn a BA in computer science any sequence or pair of courses approved by the Physical Sciences Collegiate Division may be used to complete the general education requirement in the physical sciences. To earn a BS in computer science, the general education requirement in the physical sciences must be satisfied by completing a two-quarter sequence chosen from the General Education Sequences for Science Majors. These regulations regarding physical sciences courses apply to all computer science majors who have yet to fulfill their general education requirement. Students are encouraged, but not required, to fulfill this requirement with a physics sequence. Students may petition to take more advanced courses to fulfill this requirement. Both BA and BS students take at least fourteen computer science courses chosen from an approved program. BS students also take three courses in an approved related field outside computer science.

Approved Programs

The Computer Science departmental counselor is responsible for approval of specific courses and sequences, and responds as needed to changing course offerings in our program and other programs. Students should consult the departmental counselor with questions about specific courses they are considering taking to meet the requirements. The departmental counselor maintains a website with up-to-date program details at major-advising.cs.uchicago.edu (<http://major-advising.cs.uchicago.edu>).

Approved Computer Science Program

There is one approved general program for both the BA and BS degrees, comprised of introductory courses, a sequence in Theory, and a sequence in Programming Languages and Systems, followed by advanced electives. Students may substitute upper-level or graduate courses in similar topics for those on the list that follows with the approval of the departmental counselor.

The course information in this catalog, with respect to who is teaching which course and in which quarter(s), is subject to change during the academic year. For up-to-date information on our course offerings, please consult course-info.cs.uchicago.edu (<http://course-info.cs.uchicago.edu>).

1. Introductory Sequence (three courses required, one course each from areas A, B, and C):

Area A

CMSC 15100	Introduction to Computer Science I
CMSC 16100	Honors Introduction to Computer Science I
CMSC 12100	Computer Science with Applications I

Area B

CMSC 15200	Introduction to Computer Science II
CMSC 16200	Honors Introduction to Computer Science II

Area C	
CMSC 15400	Introduction to Computer Systems

The standard paths through the required introductory sequence for computer science majors are:

- CMSC 15100 Introduction to Computer Science I - CMSC 15200 Introduction to Computer Science II - CMSC 15400 Introduction to Computer Systems
- CMSC 16100 Honors Introduction to Computer Science I - CMSC 16200 Honors Introduction to Computer Science II - CMSC 15400 Introduction to Computer Systems
- CMSC 16100 Honors Introduction to Computer Science I - CMSC 15200 Introduction to Computer Science II - CMSC 15400 Introduction to Computer Systems

Students may take CMSC 16200 Honors Introduction to Computer Science II (and then CMSC 15400 Introduction to Computer Systems) after completing CMSC 15100 Introduction to Computer Science I with permission of the instructor.

Students who decide to pursue a computer science major or minor after completing CMSC 12100 Computer Science with Applications I or CMSC 12200 Computer Science with Applications II may continue with CMSC 15200 Introduction to Computer Science II followed by 15400. Specifically, these paths are allowed:

- CMSC 12100 Computer Science with Applications I - CMSC 15200 Introduction to Computer Science II - CMSC 15400 Introduction to Computer Systems
- CMSC 12100 Computer Science with Applications I - CMSC 12200 Computer Science with Applications II - CMSC 15200 Introduction to Computer Science II - CMSC 15400 Introduction to Computer Systems

Students may receive credit towards the 4200 units required for graduation for only one of CMSC 12100 Computer Science with Applications I, CMSC 15100 Introduction to Computer Science I, or CMSC 16100 Honors Introduction to Computer Science I. Students who have completed CMSC 15200 Introduction to Computer Science II or CMSC 16200 Honors Introduction to Computer Science II may not register for either CMSC 12100 Computer Science with Applications I or CMSC 12200 Computer Science with Applications II. Students may not register concurrently for CMSC 12200 Computer Science with Applications II and CMSC 15200 Introduction to Computer Science II.

2. Programming Languages and Systems Sequence (three courses required):

Three of the following:

CMSC 22001	Software Construction
CMSC 22100	Programming Languages
CMSC 22200	Computer Architecture
CMSC 22240	Computer Architecture for Scientists
CMSC 22300	Functional Programming
CMSC 22600	Compilers for Computer Languages
CMSC 23000	Operating Systems
CMSC 23010	Parallel Computing
CMSC 23200	Introduction to Computer Security
CMSC 23300	Networks and Distributed Systems
CMSC 23310	Advanced Distributed Systems
CMSC 23320	Foundations of Computer Networks
CMSC 23360	Advanced Networks
CMSC 23400	Mobile Computing
CMSC 23500	Introduction to Database Systems
CMSC 23700	Introduction to Computer Graphics
CMSC 23710	Scientific Visualization

3. Theory Sequence (three courses required):

Students must choose three courses from the following (one course each from areas A, B, and C).

Area A	
CMSC 27100	Discrete Mathematics
CMSC 27130	Honors Discrete Mathematics
Area B	
CMSC 27200	Theory of Algorithms

CMSC 27230	Honors Theory of Algorithms
Area C	
CMSC 27410	Honors Combinatorics
CMSC 27500	Graph Theory
CMSC 27502	Advanced Algorithms
CMSC 27530	Honors Graph Theory
CMSC 27700	Mathematical Logic I
CMSC 27800	Mathematical Logic II
CMSC 28000	Introduction to Formal Languages
CMSC 28100	Introduction to Complexity Theory
CMSC 28130	Honors Introduction to Complexity Theory
CMSC 28400	Introduction to Cryptography

The graduate versions of Discrete Mathematics and/or Theory of Algorithms can be substituted for their undergraduate counterparts. We strongly encourage all computer science majors to complete their theory courses by the end of their third year.

4. Electives (five courses required):

The major requires five additional elective computer science courses numbered 20000 or above. Students may enroll in CMSC 29700 Reading and Research in Computer Science and CMSC 29900 Bachelor's Thesis for multiple quarters, but only one of each may be counted as a major elective.

A small number of courses, such as CMSC 29512 Entrepreneurship in Technology, may be used as College electives, but not as major electives. Courses that fall into this category will be marked as such.

Specializations

Students who major in computer science have the option to complete one specialization. To do so, students must take three courses from an approved list in lieu of three major electives.

Please refer to the Computer Science Department's website (<https://course-info.cs.uchicago.edu/static/specializations.html>) for an up-to-date list of courses that fulfill each specialization, including graduate courses. Students may petition to have graduate courses count towards their specialization via this same page.

The following specializations are currently available:

- Computer Security: CMSC 23200 Introduction to Computer Security and two other courses from this list
 - a. CMSC 23210 Usable Security and Privacy
 - b. CMSC 23280 Cryptocurrencies
 - c. CMSC 28400 Introduction to Cryptography
 - d. Bachelor's thesis in computer security, approved as such
- Computer Systems: three courses from this list, over and above those taken to fulfill the programming languages and systems requirement
 - a. CMSC 22200 Computer Architecture
 - b. CMSC 22240 Computer Architecture for Scientists
 - c. CMSC 23000 Operating Systems
 - d. CMSC 23010 Parallel Computing
 - e. CMSC 23300 Networks and Distributed Systems
 - f. CMSC 23310 Advanced Distributed Systems
 - g. CMSC 23500 Introduction to Database Systems
 - h. Bachelor's thesis in computer systems, approved as such
- Data Science: CMSC 21800 Data Science for Computer Scientists and two other courses from this list
 - a. CMSC 23900 Data Visualization
 - b. CMSC 25025 Machine Learning and Large-Scale Data Analysis
 - c. CMSC 25300 Mathematical Foundations of Machine Learning

- d. CMSC 25400 Machine Learning
 - e. Bachelor’s thesis in data science, approved as such
- Human Computer Interaction: CMSC 20300 Introduction to Human-Computer Interaction and two other courses from this list
 - a. CMSC 20370 Inclusive Technology: Designing for Underserved and Marginalized Populations
 - b. CMSC 20900 Computers for Learning
 - c. CMSC 23210 Usable Security and Privacy
 - d. CMSC 23220 Inventing, Engineering and Understanding Interactive Devices
 - e. CMSC 23240 Emergent Interface Technologies
 - f. CMSC 23400 Mobile Computing
 - g. CMSC 23900 Data Visualization
 - h. Bachelor’s thesis in human computer interaction, approved as such
- Machine Learning: three courses from this list
 - a. CMSC 25025 Machine Learning and Large-Scale Data Analysis
 - b. CMSC 25040 Introduction to Computer Vision
 - c. CMSC 25300 Mathematical Foundations of Machine Learning
 - d. CMSC 25400 Machine Learning
 - e. CMSC 25440 Machine Learning in Medicine
 - f. Bachelor’s thesis in machine learning, approved as such
- Programming Languages: three courses from this list, over and above those courses taken to fulfill the programming languages and systems requirements
 - a. CMSC 22100 Programming Languages
 - b. CMSC 22300 Functional Programming
 - c. CMSC 22500 Type Theory
 - d. CMSC 22600 Compilers for Computer Languages
 - e. Bachelor’s thesis in programming languages, approved as such
- Theory: three courses from this list, over and above those taken to fulfill the theory requirements
 - a. CMSC 27410 Honors Combinatorics
 - b. CMSC 27500 Graph Theory
 - c. CMSC 27502 Advanced Algorithms
 - d. CMSC 27530 Honors Graph Theory
 - e. CMSC 27700 Mathematical Logic I
 - f. CMSC 27800 Mathematical Logic II
 - g. CMSC 28000 Introduction to Formal Languages
 - h. CMSC 28100 Introduction to Complexity Theory
 - i. CMSC 28130 Honors Introduction to Complexity Theory
 - j. CMSC 28400 Introduction to Cryptography
 - k. Bachelor’s thesis in theory, approved as such

Summary of Requirements

GENERAL EDUCATION

MATH 13100-13200	Elementary Functions and Calculus I-II (or higher) *	200
One of the following:		200

BA: Any sequence or pair of courses that fulfills the general education requirement in the physical sciences	
BS: Any two-quarter sequence that fulfills the general education requirement in the physical sciences for science majors	
Total Units	400
MAJOR	
Introductory Sequence (see above)	300
Programming Languages and Systems Sequence (three courses from the list above)	300
Theory Sequence (three courses from the list above)	300
Five electives numbered CMSC 20000 or above [§]	500
Plus the following requirements:	0-300
BA (no other courses required)	
BS (three courses in an approved program in a related field)	
Total Units	1400-1700

* Credit may be granted by examination.

§ While a student may enroll in CMSC 29700 or CMSC 29900 for multiple quarters, only one instance of each may be counted toward the major. A small number of courses, such as CMSC 29512 Entrepreneurship in Technology, may be used as College electives, but not as major electives. Courses that fall into this category will be marked as such.

Grading

Computer science majors must take courses in the major for quality grades. A grade of C- or higher must be received in each course counted towards the major. Any 20000-level computer science course taken as an elective beyond requirements for the major may, with consent of instructor, be taken for P/F grading.

Non-majors may take courses either for quality grades or, subject to College regulations and with consent of instructor, for P/F grading. A Pass grade is given only for work of C- quality or higher. Courses fulfilling general education requirements must be taken for quality grades.

Honors

Students can earn a BA or BS degree with honors by attaining a grade of B or higher in all courses in the major and a grade of B or higher in three approved graduate computer science courses (30000-level and above). These courses may be courses taken for the major or as electives.

Students may also earn a BA or BS degree with honors by attaining the same minimum B grade in all courses in the major and by writing a successful bachelor's thesis as part of CMSC 29900 Bachelor's Thesis. This thesis must be based on an approved research project that is directed by a faculty member and approved by the department counselor.

Minor Program in Computer Science

The Department of Computer Science offers a seven-course minor: an introductory sequence of three courses followed by four approved upper-level courses. Courses in the minor must be taken for quality grades, with a grade of C- or higher in each course.

No courses in the minor can be double counted with the student's major(s) or with other minors, nor can they be counted toward general education requirements. More than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers. Students may not use AP credit for computer science to meet minor requirements. Prospective minors should arrange to meet the departmental counselor for the minor no later than May 1 of their third year. The minor advisor must approve the student's minor consent form and the student must submit that form to the student's College adviser by the end of Spring Quarter of the student's third year.

Introductory Courses

Students must choose three courses from the following (one course each from areas A, B, and C). Please note that not all possible pathways through these courses are valid: for example, CMSC 15200 is not a prerequisite for CMSC 12300. Please consult the prerequisite information below and/or talk to the minor advisor to discuss viable plans.

Area A:		100
CMSC 12100	Computer Science with Applications I	
CMSC 15100	Introduction to Computer Science I	
CMSC 16100	Honors Introduction to Computer Science I	
Area B:		100
CMSC 12200	Computer Science with Applications II	
CMSC 15200	Introduction to Computer Science II	
CMSC 16200	Honors Introduction to Computer Science II	
Area C:		100

CMSC 12300	Computer Science with Applications III
CMSC 15400	Introduction to Computer Systems

Upper-Level Courses

The computer science minor must include four courses chosen from among all 20000-level CMSC courses and above. CMSC 12300 may be used as an elective if a student has used CMSC 15400 as the Area C introductory course. A 20000-level course must replace each 10000-level course in the list above that was used to meet general education requirements. CMSC 29512 may not be used for minor credit.

Joint BA/MS or BS/MS Program

Outstanding undergraduates may apply to complete an MS in computer science along with a BA or BS (generalized to 'Bx') during their four years at the College. Students must be admitted to the joint MS program. There are three different paths to a Bx/MS (<https://www.cs.uchicago.edu/undergraduate/ba-ms-or-bs-ms-program/>): a research-oriented program for computer science majors, a professionally oriented program for computer science majors, and a professionally oriented program for non-majors.

Graduate Courses

Graduate courses and seminars offered by the Department of Computer Science are open to College students with consent of the instructor and department counselor. For more information, consult the department counselor.

Schedule Changes

Please be aware that course information is subject to change, and the catalog does not necessarily reflect the most recent information. Students should consult course-info.cs.uchicago.edu (<http://course-info.cs.uchicago.edu>) for up-to-date information.

Computer Science Courses

CMSC 11000-11100. Multimedia Programming as an Interdisciplinary Art I-II.

Either course in this sequence meets the general education requirement in the mathematical sciences. Like other classic Chicago general education courses, this sequence provides students with both practical programming skills and core ideas in computer science in interdisciplinary applications. Students learn how to perform in a multi-platform (Mac/Linux/Windows) environment using a high-level prototyping language (revTalk) that allows for the quick creation of useful multimedia applications. As a classic Core course in the Chicago tradition, the course presents introductory techniques of problem solving, algorithm construction, program coding, and debugging as interdisciplinary arts adaptable to a wide range of disciplines with their specialized problems.

CMSC 11000. Multimedia Programming as an Interdisciplinary Art I. 100 Units.

This course presented introductory techniques of problem solving, algorithm construction, program coding, and debugging, as interdisciplinary arts adaptable to a wide range of disciplines.
Instructor(s): W. Sterner Terms Offered: Spring
Prerequisite(s): Placement into MATH 13100 or higher, or by consent.
Note(s): This course meets the general education requirement in the mathematical sciences. This course will not be offered again.

CMSC 11100. Multimedia Programming as an Interdisciplinary Art II. 100 Units.

The second course consists of several scientific and humanistic projects such as Turing Machines, biological modeling, and language manipulation with another final project.
Prerequisite(s): Placement into MATH 13100 or higher, or by consent.
Note(s): This course meets the general education requirement in the mathematical sciences.

CMSC 11111. Creative Coding. 100 Units.

This course is an introduction to programming, using exercises in graphic design and digital art to motivate and employ basic tools of computation (such as variables, conditional logic, and procedural abstraction). We will write code in JavaScript or related technologies, and we will work with a variety of digital media, including vector graphics, raster images, animations, and web applications. Throughout the course, we will reflect on how graphical user interfaces of the future might unleash the fundamental building blocks of programming for everyday computer use.
Instructor(s): Professor Ravi Chugh Terms Offered: Spring

CMSC 11710. Networks. 100 Units.

Networks help explain phenomena in such technological, social, and biological domains as the spread of opinions, knowledge, and infectious diseases. Networks also help us understand properties of financial markets, food webs, and web technologies. At the same time, the structure and evolution of networks is determined by the set of interactions in the domain. Our study of networks will employ formalisms such as graph theory, game theory, information networks, and network dynamics, with the goal of building formal models and translating their observed properties into qualitative explanations.
Instructor(s): J. Simon Terms Offered: TBD
Prerequisite(s): Completion of the general education requirement in the mathematical sciences, and familiarity with basic concepts of probability at the high school level.
Note(s): Necessary mathematical concepts will be presented in class.

CMSC 11800. Introduction to Data Science I. 100 Units.

Data science provides tools for gaining insight into specific problems using data, through computation, statistics and visualization. This course introduces students to all aspects of a data analysis process, from posing questions, designing data collection strategies, management+storing and processing of data, exploratory tools and visualization, statistical inference, prediction, interpretation and communication of results. Simple techniques for data analysis are used to illustrate both effective and fallacious uses of data science tools. Although this course is designed to be at the level of mathematical sciences courses in the Core, with little background required, we expect the students to develop computational skills that will allow them to analyze data. Computation will be done using Python and Jupyter Notebook.

Instructor(s): Michael J. Franklin, Dan Nicolae Terms Offered: Autumn

Prerequisite(s): None

Equivalent Course(s): STAT 11800

CMSC 11900. Introduction to Data Science II. 100 Units.

This course is the second quarter of a two-quarter systematic introduction to the foundations of data science, as well as to practical considerations in data analysis. A broad background on probability and statistical methodology as well as a basic proficiency in RStudio will be provided. More advanced topics on data privacy and ethics, reproducibility in science, data encryption, and basic machine learning will be introduced. We will explore these concepts with real-world problems from different domains.

Instructor(s): Michael J. Franklin, Dan Nicolae Terms Offered: Winter

Prerequisite(s): STAT 11800/CMSC 11800 or consent of instructor.

Equivalent Course(s): STAT 11900

CMSC 12100-12200-12300. Computer Science with Applications I-II-III.

This three-quarter sequence teaches computational thinking and skills to students who are majoring in the sciences, mathematics, and economics, etc. Lectures cover topics in (1) programming, such as recursion, abstract data types, and processing data; (2) computer science, such as clustering methods, event-driven simulation, and theory of computation; and to a lesser extent (3) numerical computation, such as approximating functions and their derivatives and integrals, solving systems of linear equations, and simple Monte Carlo techniques.

CMSC 12100. Computer Science with Applications I. 100 Units.

This course is the first in a three-quarter sequence that teaches computational thinking and skills to students in the sciences, mathematics, economics, etc. The course will cover abstraction and decomposition, simple modeling, basic algorithms, and programming in Python. Applications from a wide variety of fields serve both as examples in lectures and as the basis for programming assignments. In recent offerings, students have written programs to simulate a model of housing segregation, determine the number of machines needed at a polling place, and analyze tweets from presidential debates. Students can find more information about this course at <http://bit.ly/cmssc12100-aut-20>.

Instructor(s): B. Sotomayor, B. Ur Terms Offered: Autumn

Prerequisite(s): First year students are not allowed to register for CMSC 12100. Placement into MATH 15100 or completion of MATH 13100.

Note(s): First year students are not allowed to register for CMSC 12100. This course meets the general education requirement in the mathematical sciences.

CMSC 12200. Computer Science with Applications II. 100 Units.

This course is the second in a three-quarter sequence that teaches computational thinking and skills to students in the sciences, mathematics, economics, etc. Lectures cover topics in (1) data representation, (2) basics of relational databases, (3) shell scripting, (4) data analysis algorithms, such as clustering and decision trees, and (5) data structures, such as hash tables and heaps. Applications and datasets from a wide variety of fields serve both as examples in lectures and as the basis for programming assignments. In recent offerings, students have written a course search engine and a system to do speaker identification. Students will program in Python and do a quarter-long programming project.

Instructor(s): A. Rogers, M. Wachs Terms Offered: Winter

Prerequisite(s): CMSC 12100.

Note(s): This course meets the general education requirement in the mathematical sciences.

CMSC 12300. Computer Science with Applications III. 100 Units.

The course revolves around core ideas behind the management and computation of large volumes of data ("Big Data"). Topics include (1) Statistical methods for large data analysis, (2) Parallelism and concurrency, including models of parallelism and synchronization primitives, and (3) Distributed computing, including distributed architectures and the algorithms and techniques that enable these architectures to be fault-tolerant, reliable, and scalable. Students will continue to use Python, and will also learn C and distributed computing tools and platforms, including Amazon AWS and Hadoop. This course includes a project where students will have to formulate hypotheses about a large dataset, develop statistical models to test those hypotheses, implement a prototype that performs an initial exploration of the data, and a final system to process the entire dataset.

Instructor(s): M. Wachs Terms Offered: Spring

Prerequisite(s): CMSC 12200.

CMSC 13600. Introduction to Data Engineering. 100 Units.

Data-driven models are revolutionizing science and industry. Scalable systems are needed to collect, stream, process, and validate data at scale. This course is an introduction to "big" data engineering where students will receive hands-on experience building and deploying realistic data-intensive systems. It will cover streaming, data cleaning, relational data modeling and SQL, and Machine Learning model training. A core theme of the course is "scale," and we will discuss the

theory and the practice of programming with large external datasets that cannot fit in main memory on a single machine. The course will consist of bi-weekly programming assignments, a midterm examination, and a final.

Terms Offered: Spring

Prerequisite(s): CMSC 11900, CMSC 12200, CMSC 15200, or CMSC 16200

CMSC 15100-15200. Introduction to Computer Science I-II.

This sequence, which is recommended for all students planning to take more advanced courses in computer science, introduces computer science mostly through the study of programming in functional (Scheme) and imperative (C) programming languages. Topics include program design, control and data abstraction, recursion and induction, higher-order programming, types and polymorphism, time and space analysis, memory management, and data structures including lists, trees, and graphs. NOTE: Non-majors may use either course in this sequence to meet the general education requirement in the mathematical sciences; students who are majoring in Computer Science must use either CMSC 15100-15200 or 16100-16200 to meet requirements for the major.

CMSC 15100. Introduction to Computer Science I. 100 Units.

This sequence, which is recommended for all students planning to take more advanced courses in computer science, introduces computer science mostly through the study of programming in functional (Scheme) and imperative (C) programming languages. Topics include program design, control and data abstraction, recursion and induction, higher-order programming, types and polymorphism, time and space analysis, memory management, and data structures including lists, trees, and graphs. NOTE: Non-majors may use either course in this sequence to meet the general education requirement in the mathematical sciences; students who are majoring in Computer Science must use either CMSC 15100-15200 or 16100-16200 to meet requirements for the major.

Instructor(s): A. Shaw (Aut), M. Wachs (Aut), J. Reppy (Win) Terms Offered: Autumn Summer Winter

Prerequisite(s): Placement into MATH 15100 or completion of MATH 13100.

Note(s): This course meets the general education requirement in the mathematical sciences. Non-majors may use either course in this sequence to meet the general education requirement in the mathematical sciences; students who are majoring in Computer Science must use either CMSC 15100-15200 or 16100-16200 to meet requirements for the major.

CMSC 15200. Introduction to Computer Science II. 100 Units.

This sequence, which is recommended for all students planning to take more advanced courses in computer science, introduces computer science mostly through the study of programming in functional (Scheme) and imperative (C) programming languages. Topics include program design, control and data abstraction, recursion and induction, higher-order programming, types and polymorphism, time and space analysis, memory management, and data structures including lists, trees, and graphs. NOTE: Non-majors may use either course in this sequence to meet the general education requirement in the mathematical sciences; students who are majoring in Computer Science must use either CMSC 15100-15200 or 16100-16200 to meet requirements for the major.

Instructor(s): A. Feldman, A. Shaw Terms Offered: Spring Summer Winter

Prerequisite(s): CMSC 15100, CMSC 16100, CMSC 12100, or CMSC 10500.

Note(s): This course meets the general education requirement in the mathematical sciences. Non-majors may use either course in this sequence to meet the general education requirement in the mathematical sciences; students who are majoring in Computer Science must use either CMSC 15100-15200 or 16100-16200 to meet requirements for the major.

CMSC 15400. Introduction to Computer Systems. 100 Units.

This course covers the basics of computer systems from a programmer's perspective. Topics include data representation, machine language programming, exceptions, code optimization, performance measurement, memory systems, and system-level I/O. Extensive programming required.

Instructor(s): H. Gunawi (Spring), H. Hoffmann (Spring), M. Wachs (Autumn, Spring) Terms Offered: Autumn, Spring

Prerequisite(s): CMSC 12100, 15100, or 16100, and CMSC 15200, 16200, or 12300.

Note(s): Required of students who are majoring in Computer Science.

CMSC 16100-16200. Honors Introduction to Computer Science I-II.

Both courses in this sequence meet the general education requirement in the mathematical sciences; students who are majoring in Computer Science must use either CMSC 15200 or 16200 to meet requirements for the major.

CMSC 16100. Honors Introduction to Computer Science I. 100 Units.

Programming in a functional language (currently Haskell), including higher-order functions, type definition, algebraic data types, modules, parsing, I/O, and monads. Basic data structures, including lists, binary search trees, and tree balancing. Basic mathematics for reasoning about programs, including induction, inductive definition, propositional logic, and proofs.

Instructor(s): R. Chugh, S. Kurtz Terms Offered: Autumn

Prerequisite(s): Placement into MATH 16100 or equivalent and programming experience, or by consent.

Note(s): This course meets the general education requirement in the mathematical sciences.

CMSC 16200. Honors Introduction to Computer Science II. 100 Units.

This course emphasizes the C Programming Language, but not in isolation. Instead, C is developed as a part of a larger programming toolkit that includes the shell (specifically ksh), shell programming, and standard Unix utilities (including awk). Nonshell scripting languages, in particular perl and python, are introduced, as well as interpreter (!) files that use the command-line version of DrScheme. We cover various standard data structures, both abstractly, and in terms

of concrete implementations—primarily in C, but also from time to time in other contexts like scheme and ksh. The course uses a team programming approach. There is a mixture of individual programming assignments that focus on current lecture material, together with team programming assignments that can be tackled using any Unix technology. Team projects are assessed based on correctness, elegance, and quality of documentation. We teach the "Unix way" of breaking a complex computational problem into smaller pieces, most or all of which can be solved using pre-existing, well-debugged, and documented components, and then composed in a variety of ways.

Instructor(s): F. Chong Terms Offered: Winter

Prerequisite(s): CMSC 16100, or CMSC 15100 and by consent.

Note(s): Students who have taken CMSC 15100 may take 16200 with consent of instructor. This course meets the general education requirement in the mathematical sciences.

CMSC 20300. Introduction to Human-Computer Interaction. 100 Units.

An introduction to the field of Human-Computer Interaction (HCI), with a particular emphasis in understanding and designing user-facing software and hardware systems. This class covers the core concepts of HCI: affordances and mental models, selection techniques (pointing, touch, menus, text entry, widgets, etc), and conducting user studies and interviews. It also includes a project in which students program a simple interactive system.

Instructor(s): Pedro Lopes Terms Offered: TBD

Prerequisite(s): CMSC 15400

CMSC 20370. Inclusive Technology: Designing for Underserved and Marginalized Populations. 100 Units.

Creating technologies that are inclusive of people in marginalized communities involves more than having technically sophisticated algorithms, systems, and infrastructure. It involves deeply understanding various community needs and using this understanding coupled with our knowledge of how people think and behave to design user-facing interfaces that can enhance and augment human capabilities. When dealing with under-served and marginalized communities, achieving these goals requires us to think through how different constraints such as costs, access to resources, and various cognitive and physical capabilities shape what socio-technical systems can best address a particular issue. This course leverages human-computer interaction and the tools, techniques, and principles that guide research on people to introduce you to the concepts of inclusive technology design. You will learn about different underserved and marginalized communities such as children, the elderly, those needing assistive technology, and users in developing countries, and their particular needs. In addition, you will learn how to be mindful of working with populations that can easily be exploited and how to think creatively of inclusive technology solutions. You will also put your skills into practice in a semester long group project involving the creation of an interactive system for one of the user populations we study.

Terms Offered: Winter

Prerequisite(s): CMSC 20300

CMSC 20900. Computers for Learning. 100 Units.

Over time, technology has occupied an increasing role in education, with mixed results. Massive Open Online Courses (MOOCs) were created to bring education to those without access to universities, yet most of the students who succeed in them are those who are already successful in the current educational model. This course focuses on one intersection of technology and learning: computer games. This course covers education theory, psychology (e.g., motivation, engagement), and game design so that students can design and build an educational learning application. Labs focus on developing expertise in technology, and readings supplement lecture discussions on the human components of education.

Instructor(s): D. Franklin Terms Offered: Autumn

Prerequisite(s): CMSC 15400

Equivalent Course(s): MAAD 20900

CMSC 21010. Mathematical Foundations. 100 Units.

This course is an introduction to formal tools and techniques which can be used to better understand linguistic phenomena. A major goal of this course is to enable students to formalize and evaluate theoretical claims.

Equivalent Course(s): CMSC 31010, LING 31010, LING 21010

CMSC 21800. Data Science for Computer Scientists. 100 Units.

Data-driven models are revolutionizing science and industry. This course covers computational methods for structuring and analyzing data to facilitate decision-making. We will cover algorithms for transforming and matching data; hypothesis testing and statistical validation; and bias and error in real-world datasets. A core theme of the course is "generalization"; ensuring that the insights gleaned from data are predictive of future phenomena. The course will include bi-weekly programming assignments, a midterm examination, and a final.

Terms Offered: Autumn

Prerequisite(s): CMSC 15400 or CMSC 22000

CMSC 22000. Introduction to Software Development. 100 Units.

Besides providing an introduction to the software development process and the lifecycle of a software project, this course focuses on imparting a number of skills and industry best practices that are valuable in the development of large software projects, such as source control techniques and workflows, issue tracking, code reviews, testing, continuous integration, working with existing codebases, integrating APIs and frameworks, generating documentation, deployment, and logging and monitoring. The course also emphasizes the importance of collaboration in real-world software development, including interpersonal collaboration and team management. The course will be organized primarily around the development of a class-wide software project, with students organized into teams. Collaboration both within and across teams will be essential to the success of the project.

Instructor(s): B. Sotomayor Terms Offered: Spring

Prerequisite(s): CMSC 15200 or CMSC 16200

CMSC 22001. Software Construction. 100 Units.

Large software systems are difficult to build. The course discusses both the empirical aspects of software engineering and the underlying theory. Topics will include, among others, software specifications, software design, software architecture, software testing, software reliability, and software maintenance. Students will be expected to actively participate in team projects in this course.

Instructor(s): S. Lu Terms Offered: Autumn

Prerequisite(s): CMSC 15400.

CMSC 22010. Digital Fabrication. 100 Units.

Digital fabrication involves translation of a digital design into a physical object. While digital fabrication has been around for decades, only now has it become possible for individuals to take advantage of this technology through low cost 3D printers and open source tools for 3D design and modeling. In this course we will cover the foundations of 3D object design including computational geometry, the type of models that can and can't be fabricated, the uses and applications of digital fabrication, the algorithms, methods and tools for conversion of 3D models to representations that can be directly manufactured using computer controlled machines, the concepts and technology used in additive manufacturing (aka 3D printing) and the research and practical challenges of developing self-replicating machines. We will have several 3D printers available for use during the class and students will design and fabricate several parts during the course.

Instructor(s): R. Stevens Terms Offered: TBD

Prerequisite(s): CMSC 15400 and some experience with 3D modeling concepts.

CMSC 22100. Programming Languages. 100 Units.

This course is an introduction to scientific programming language design, whereby design choices are made according to rigorous and well-founded lines of reasoning. The curriculum includes the lambda calculus, type systems, formal semantics, logic and proof, and, time permitting, a light introduction to machine assisted formal reasoning. Practical exercises in writing language transformers reinforce the theory. While this course is not a survey of different programming languages, we do examine the design decisions embodied by various popular languages in light of their underlying formal systems.

Instructor(s): A. Shaw Terms Offered: Spring

Prerequisite(s): CMSC 15400. To request enrollment in this course, please add yourself to the waitlist at <waitlist.cs.uchicago.edu>. If you do not have the prerequisites for this course and want to request permission to enroll without the prerequisites, please submit a waitlist request at <waitlist.cs.uchicago.edu>.

CMSC 22200. Computer Architecture. 100 Units.

This course is a survey of contemporary computer organization covering CPU design, instruction sets, control, processors, busses, ALU, memory, pipelined computers, multiprocessors, networking, and case studies. We focus on the techniques of quantitative analysis and evaluation of modern computing systems, such as the selection of appropriate benchmarks to reveal and compare the performance of alternative design choices in system design. We emphasize major component subsystems of high-performance computers: pipelining, instruction-level parallelism, memory hierarchies, input/output, and network-oriented interconnections.

Instructor(s): F. Chong (Spring), Y. Li (Autumn) Terms Offered: Autumn, Spring

Prerequisite(s): CMSC 15400.

CMSC 22240. Computer Architecture for Scientists. 100 Units.

Designed to provide an understanding of the key scientific ideas that underpin the extraordinary capabilities of today's computers, including speed (gigahertz), illusion of sequential order (relativity), dynamic locality (warping space), parallelism, keeping it cheap - and low-energy (e-field scaling), and of course their ability as universal information processing engines. These scientific "miracles" are robust, and provide a valuable longer-term understanding of computer capabilities, performance, and limits to the wealth of computer scientists practicing data science, software development, or machine learning. This course can be used towards fulfilling the Programming Languages and Systems requirement for the CS major.

Terms Offered: Winter

Prerequisite(s): CMSC 15400

CMSC 22300. Functional Programming. 100 Units.

We will explore various aspects of advanced functional programming in this course. Topics will vary from quarter to quarter and may include: untyped and typed programming; pure and impure programming; eager and lazy semantics; "object-functional programming"; functional reactive programming; and concurrent functional programming.

Instructor(s): R. Chugh Terms Offered: Spring Winter

Prerequisite(s): CMSC 15400 required, CMSC 15100 or CMSC 16100 recommended. To request enrollment in this course, please add yourself to the waitlist at <waitlist.cs.uchicago.edu>. If you do not have the prerequisites for this course and want to request permission to enroll without the prerequisites, please submit a waitlist request at <waitlist.cs.uchicago.edu>.

CMSC 22500. Type Theory. 100 Units.

Church's λ -calculus, β -reduction, the Church-Rosser theorem. Simple type theory, strong normalization. The Barendregt cube of type theories. Dependent types. The Curry-Howard Isomorphism. Formal constructive mathematics.

Instructor(s): Stuart Kurtz Terms Offered: TBD

Prerequisite(s): CMSC 15100 or CMSC 16100, and CMSC 27100 or CMSC 27700 or MATH 27700, or by consent.

CMSC 22600. Compilers for Computer Languages. 100 Units.

This course covers principles of modern compiler design and implementation. Topics include lexical analysis, parsing, type checking, optimization, and code generation. This is a project oriented course in which students will construct a fully working compiler, using Standard ML as the implementation language.

Instructor(s): J. Reppy Terms Offered: Autumn. Alternate years. Not offered in 2019-2020.

Prerequisite(s): CMSC 15400 required; CMSC 22100 recommended. (Note: Prior experience with ML programming not required.)

Note(s): This course is offered in alternate years.

CMSC 23000. Operating Systems. 100 Units.

This course provides an introduction to basic Operating System principles and concepts that form as fundamental building blocks for many modern systems from personal devices to Internet-scale services. Basic topics include processes, threads, concurrency, synchronization, memory management, virtual memory, segmentation, paging, caching, process and I/O scheduling, file systems, storage devices. The course will also cover special topics such as journaling/transactions, SSD, RAID, virtual machines, and data-center operating systems. The course project will revolve around the implementation of a mini x86 operating system kernel.

Instructor(s): H. Gunawi Terms Offered: Autumn

Prerequisite(s): CMSC 15400 and one of CMSC 22200, CMSC 22600, CMSC 22610, CMSC 23300, CMSC 23400, CMSC 23500, CMSC 23700, CMSC 27310, or CMSC 23800 strongly recommended.

CMSC 23010. Parallel Computing. 100 Units.

This course provides an introduction to the concepts of parallel programming, with an emphasis on programming multicore processors. Topics include: Processes and threads, shared memory, message passing, direct-memory access (DMA), hardware mechanisms for parallel computing, synchronization and communication, patterns of parallel programming. The course will involve a substantial programming project implementing a parallel computations.

Instructor(s): H. Hoffmann Terms Offered: Winter

Prerequisite(s): CMSC 15400 and one of the following: CMSC 22200, CMSC 23000, CMSC 23300; or by consent.

CMSC 23200. Introduction to Computer Security. 100 Units.

This course introduces the principles and practice of computer security. It aims to teach how to model threats to computer systems and how to think like a potential attacker. It presents standard cryptographic functions and protocols and gives an overview of threats and defenses for software, host systems, networks, and the Web. It also touches on some of the legal, policy, and ethical issues surrounding computer security in areas such as privacy, surveillance, and the disclosure of security vulnerabilities. The goal of this course is to provide a foundation for further study in computer security and to help better understand how to design, build, and use computer systems more securely.

Instructor(s): A. Feldman Terms Offered: Autumn

Prerequisite(s): CMSC 15400.

CMSC 23210. Usable Security and Privacy. 100 Units.

Regardless of how secure a system is in theory, failing to consider how humans actually use the system leads to disaster in practice. This course will examine how to design for security and privacy from a user-centered perspective by combining insights from computer systems, human-computer interaction (HCI), and public policy. We will introduce core security and privacy technologies, as well as HCI techniques for conducting robust user studies. Topics will include usable authentication, user-centered web security, anonymity software, privacy notices, security warnings, and data-driven privacy tools in domains ranging from social media to the Internet of Things. Students will complete weekly problem sets, as well as conduct novel research in a group capstone project. No prior experience in security, privacy, or HCI is required.

Instructor(s): B. Ur Terms Offered: Spring

Prerequisite(s): CMSC 12300 or CMSC 15400.

CMSC 23220. Inventing, Engineering and Understanding Interactive Devices. 100 Units.

A physical computing class, dedicated to micro-controllers, sensors, actuators and fabrication techniques. The objective is that everyone creates their own, custom-made, functional I/O device.

Terms Offered: Spring

Prerequisite(s): CMSC 15400

Equivalent Course(s): MAAD 23220

CMSC 23240. Emergent Interface Technologies. 100 Units.

In this class, we critically examine emergent technologies that might impact the future generations of computing interfaces, these include: physiological I/O (e.g., brain and muscle computer interfaces), tangible computing (giving shape and form to interfaces), wearable computing (I/O devices closer to the user's body), rendering new realities (e.g., virtual and augmented reality), haptics (giving computers the ability to generate touch and forces) and unusual auditory interfaces (e.g., silent speech and microphones as sensors). In this class you will: (1) learn about these new developments during the lectures, (2) read HCI papers and summarize these in short weekly assignments, and lastly, (3) start inventing the future of computing interfaces by proposing a new idea in the form of a paper abstract, which you will present at the end of the semester and have it peer-reviewed in class by your classmates.

Terms Offered: Winter

Prerequisite(s): CMSC 15400

CMSC 23300. Networks and Distributed Systems. 100 Units.

This course focuses on the principles and techniques used in the development of networked and distributed software.

Topics include programming with sockets; concurrent programming; data link layer (Ethernet, packet switching, etc.);

internet and routing protocols (IP, IPv6, ARP, etc.); end-to-end protocols (UDP, TCP); and other commonly used network protocols and techniques. This is a project-oriented course in which students are required to develop software in C on a UNIX environment.

Instructor(s): B. Sotomayor Terms Offered: Winter

Prerequisite(s): CMSC 15400.

CMSC 23310. Advanced Distributed Systems. 100 Units.

In recent years, large distributed systems have taken a prominent role not just in scientific inquiry, but also in our daily lives. When we perform a search on Google, stream content from Netflix, place an order on Amazon, or catch up on the latest comings-and-goings on Facebook, our seemingly minute requests are processed by complex systems that sometimes include hundreds of thousands of computers, connected by both local and wide area networks. Recent papers in the field of Distributed Systems have described several solutions (such as MapReduce, BigTable, Dynamo, Cassandra, etc.) for managing large-scale data and computation. However, building and using these systems pose a number of more fundamental challenges: How do we keep the system operating correctly even when individual machines fail? How do we ensure that all the machines have a consistent view of the system's state? (And how do we ensure this in the presence of failures?) How can we determine the order of events in a system where we can't assume a single global clock? Many of these fundamental problems were identified and solved over the course of several decades, starting in the 1970s. To better appreciate the challenges of recent developments in the field of Distributed Systems, this course will guide students through seminal work in Distributed Systems from the 1970s, '80s, and '90s, leading up to a discussion of recent work in the field.

Instructor(s): I. Foster Terms Offered: Spring

Prerequisite(s): CMSC 23300 with at least a B+, or by consent. To request enrollment in this course, please add yourself to the waitlist at <waitlist.cs.uchicago.edu>. If you do not have the prerequisites for this course and want to request permission to enroll without the prerequisites, please submit a waitlist request at <waitlist.cs.uchicago.edu>.

CMSC 23320. Foundations of Computer Networks. 100 Units.

This course focuses on the principles and techniques used in the development of networked and distributed software. Topics include programming with sockets; concurrent programming; data link layer (Ethernet, packet switching, etc.); internet and routing protocols (IP, IPv6, ARP, etc.); end-to-end protocols (UDP, TCP); and other commonly used network protocols and techniques. This is a project-oriented course in which students are required to develop software in C on a UNIX environment. This course can be used towards fulfilling the Programming Languages and Systems requirement for the CS major.

Terms Offered: Winter

Prerequisite(s): CMSC 15400

Note(s): This course can be used towards fulfilling the Programming Languages and Systems requirement for the CS major.

Students who have taken CMSC 23300 may not take CMSC 23320.

CMSC 23360. Advanced Networks. 100 Units.

Advanced networks

Terms Offered: Spring

Prerequisite(s): CMSC 23300 or CMSC 23320

Note(s): A more detailed course description should be available later.

CMSC 23400. Mobile Computing. 100 Units.

Mobile computing is pervasive and changing nearly every aspect of society. Sensing, actuation, and mediation capabilities of mobile devices are transforming all aspects of computing: uses, networking, interface, form, etc. This course explores new technologies driving mobile computing and their implications for systems and society. Current focus areas include new techniques to capture 3d models (depth sensors, stereo vision), drones that enable targeted, adaptive, focused sensing, and new 3d interactive applications (augmented reality, cyberphysical, and virtual reality). Labs expose students to software and hardware capabilities of mobile computing systems, and develop the capability to envision radical new applications for a large-scale course project.

Instructor(s): A. Chien Terms Offered: Winter

Prerequisite(s): CMSC 15400. CMSC 23000 or 23300 recommended. Knowledge of Java required.

CMSC 23500. Introduction to Database Systems. 100 Units.

This course is an introduction to database design and implementation. Topics include DBMS architecture, entity-relationship and relational models, relational algebra, concurrency control, recovery, indexing, physical data organization, and modern database systems. The lab section guides students through the implementation of a relational database management system, allowing students to see topics such as physical data organization and DBMS architecture in practice, and exercise general skills such as software systems development.

Instructor(s): A. Elmore Terms Offered: Winter

Prerequisite(s): CMSC 15400.

CMSC 23700. Introduction to Computer Graphics. 100 Units.

This course introduces the basic concepts and techniques used in three-dimensional computer graphics. The course covers both the foundations of 3D graphics (coordinate systems and transformations, lighting, texture mapping, and basic geometric algorithms and data structures), and the practice of real-time rendering using programmable shaders. Students are required to complete both written assignments and programming projects using OpenGL.

Instructor(s): J. Reppy Terms Offered: Autumn

Prerequisite(s): CMSC 15400.

Note(s): This course is offered in alternate years.

CMSC 23710. Scientific Visualization. 100 Units.

Scientific visualization combines computer graphics, numerical methods, and mathematical models of the physical world to create a visual framework for understanding and solving scientific problems. The mathematical and algorithmic foundations of scientific visualization (for example, scalar, vector, and tensor fields) will be explained in the context of real-world data from scientific and biomedical domains. The course is also intended for students outside computer science who are experienced with programming and computing with scientific data. Programming projects will be in C and C++.

Instructor(s): G. Kindlmann Terms Offered: Winter

Prerequisite(s): CMSC 15400 and knowledge of linear algebra, or by consent.

CMSC 23900. Data Visualization. 100 Units.

Data visualizations provide a visual setting in which to explore, understand, and explain datasets. This class describes mathematical and perceptual principles, methods, and applications of "data visualization" (as it is popularly understood to refer primarily to tabulated data). A range of data types and visual encodings will be presented and evaluated. Visualizations will be primarily web-based, using D3.js, and possibly other higher-level languages and libraries.

Instructor(s): G. Kindlmann Terms Offered: Spring

Prerequisite(s): CMSC 12200, CMSC 15200 or CMSC 16200.

CMSC 25025. Machine Learning and Large-Scale Data Analysis. 100 Units.

This course is an introduction to machine learning and the analysis of large data sets using distributed computation and storage infrastructure. Basic machine learning methodology and relevant statistical theory will be presented in lectures. Homework exercises will give students hands-on experience with the methods on different types of data. Methods include algorithms for clustering, binary classification, and hierarchical Bayesian modeling. Data types include images, archives of scientific articles, online ad clickthrough logs, and public records of the City of Chicago. Programming will be based on Python and R, but previous exposure to these languages is not assumed.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): CMSC 15400 or CMSC 12200 and STAT 22000 or STAT 23400, or by consent. To request enrollment in this course, please add yourself to the waitlist at <waitlist.cs.uchicago.edu>. If you do not have the prerequisites for this course and want to request permission to enroll without the prerequisites, please submit a waitlist request at <waitlist.cs.uchicago.edu>.

Note(s): The prerequisites are under review and may change.

Equivalent Course(s): STAT 37601

CMSC 25040. Introduction to Computer Vision. 100 Units.

This course covers the fundamentals of digital image formation; image processing, detection and analysis of visual features; representation shape and recovery of 3D information from images and video; analysis of motion. We also study some prominent applications of modern computer vision such as face recognition and object and scene classification. Our emphasis is on basic principles, mathematical models, and efficient algorithms established in modern computer vision.

Instructor(s): Michael Maire Terms Offered: Winter

Prerequisite(s): CMSC 25300 or CMSC 25400. Linear algebra strongly recommended; a 200-level Statistics course recommended.

CMSC 25300. Mathematical Foundations of Machine Learning. 100 Units.

This course is an introduction to the mathematical foundations of machine learning that focuses on matrix methods and features real-world applications ranging from classification and clustering to denoising and data analysis. Mathematical topics covered include linear equations, regression, regularization, the singular value decomposition, and iterative algorithms. Machine learning topics include the lasso, support vector machines, kernel methods, clustering, dictionary learning, neural networks, and deep learning. Students are expected to have taken calculus and have exposure to numerical computing (e.g. Matlab, Python, Julia, R).

Instructor(s): Rebecca Willett Terms Offered: Autumn

Prerequisite(s): CMSC 12200 or CMSC 15200 or CMSC 16200, and the equivalent of two quarters of calculus (MATH 13200 or higher).

Equivalent Course(s): STAT 27700

CMSC 25400. Machine Learning. 100 Units.

This course offers a practical, problem-centered introduction to machine learning. Topics covered include the Perceptron and other online algorithms; boosting; graphical models and message passing; dimensionality reduction and manifold learning; SVMs and other kernel methods; artificial neural networks; and a short introduction to statistical learning theory. Weekly programming assignments give students the opportunity to try out each learning algorithm on real world datasets.

Instructor(s): R. Kondor Terms Offered: Winter

Prerequisite(s): CMSC 15400 or CMSC 12300. STAT 22000 or STAT 23400 strongly recommended.

Equivalent Course(s): STAT 27725

CMSC 25440. Machine Learning in Medicine. 100 Units.

In this course we will study the how machine learning is used in biomedical research and in healthcare delivery. We will build and explore a range of models in areas such as infectious disease and drug resistance, cancer diagnosis and treatment, drug design, genomics analysis, patient outcome prediction, medical records interpretation and medical imaging. Students will become familiar with the types and scale of data used to train and validate models and with the approaches to build, tune and deploy machine learned models. We will use traditional machine learning methods as well as deep learning depending on the problem. The course will be fast moving and will involve weekly program assignments. We will introduce

the machine learning methods as we go, but previous familiarity with machine learning will be helpful. Programming assignments will be in python and we will use Google Collaboratory and Amazon AWS for compute intensive training.

Instructor(s): Rick Stevens Terms Offered: Autumn

Prerequisite(s): CMSC 12200 or CMSC 15200 or CMSC 16200. Proficiency in Python is expected.

CMSC 25460. Introduction to Optimization. 100 Units.

Introduction to Optimization

Instructor(s): Lorenzo Orecchia Terms Offered: Spring

Prerequisite(s): (CMSC 27100 or CMSC 27130 or CMSC 37000) and CMSC 25300

CMSC 25610. Computational Linguistics I. 100 Units.

This course is an introduction to topics at the intersection of computation and language. We will study computational linguistics from both scientific and engineering angles: the use of computational modeling to address scientific questions in linguistics and cognitive science, as well as the design of computational systems to solve engineering problems in natural language processing (NLP). The course will combine analysis and discussion of these approaches with training in the programming and mathematical foundations necessary to put these methods into practice. The course is designed to accommodate students both with and without prior programming experience. Our goal is for all students to leave the course able to engage with and evaluate research in cognitive/linguistic modeling and NLP, and to be able to implement intermediate-level computational models.

Instructor(s): Allyson Ettinger Terms Offered: Autumn

Prerequisite(s): At least two courses in linguistics or other cognitive science field (or permission of instructor)

Equivalent Course(s): LING 28610

CMSC 25620. Computational Linguistics II. 100 Units.

This is the second in a two-course sequence providing an introduction to topics at the intersection of computation and language, oriented toward linguists and cognitive scientists. In this quarter we will cover more advanced topics in cognitive/linguistic modeling and natural language processing (NLP), applying more complex programming and mathematical foundations. Our goal in this quarter is for students to leave the course able to implement advanced models and conduct novel research in cognitive/linguistic modeling and NLP.

Instructor(s): Allyson Ettinger Terms Offered: Winter

Prerequisite(s): Computational Linguistics I or permission of instructor

Equivalent Course(s): CMSC 35620, LING 38620, LING 28620

CMSC 25900. Ethics, Fairness, Responsibility, and Privacy in Data Science. 100 Units.

Ethics, fairness, responsibility, and privacy in Data Science.

Instructor(s): R. Castro Fernandez, B. Ur Terms Offered: Spring

Prerequisite(s): CMSC 11900 or CMSC 12300 or CMSC 21800 or CMSC 23710 or CMSC 23900 or CMSC 25025 or CMSC 25300 To request enrollment in this course, please add yourself to the waitlist at <waitlist.cs.uchicago.edu>. If you do not have the prerequisites for this course and want to request permission to enroll without the prerequisites, please submit a waitlist request at <waitlist.cs.uchicago.edu>.

CMSC 27100. Discrete Mathematics. 100 Units.

This course emphasizes mathematical discovery and rigorous proof, which are illustrated on a refreshing variety of accessible and useful topics. Basic counting is a recurring theme and provides the most important source for sequences, which is another recurring theme. Further topics include proof by induction; recurrences and Fibonacci numbers; graph theory and trees; number theory, congruences, and Fermat's little theorem; counting, factorials, and binomial coefficients; combinatorial probability; random variables, expected value, and variance; and limits of sequences, asymptotic equality, and rates of growth.

Instructor(s): S. Kurtz (Winter), J. Simon (Autumn) Terms Offered: Autumn Winter

Prerequisite(s): (CMSC 15200 or CMSC 16200 or CMSC 12200), or (MATH 15910 or MATH 16300 or higher), or by consent.

Note(s): This is a directed course in mathematical topics and techniques that is a prerequisite for courses such as CMSC 27200 and 27400.

CMSC 27130. Honors Discrete Mathematics. 100 Units.

We emphasize mathematical discovery and rigorous proof, which are illustrated on a refreshing variety of accessible and useful topics. Basic counting is a recurring theme. Further topics include proof by induction; number theory, congruences, and Fermat's little theorem; relations; factorials, binomial coefficients and advanced counting; combinatorial probability; random variables, expected value, and variance; graph theory and trees. Time permitting, material on recurrences, asymptotic equality, rates of growth and Markov chains may be included as well. The honors version of Discrete Mathematics covers topics at a deeper level.

Instructor(s): A. Razborov Terms Offered: Autumn

Prerequisite(s): (CMSC 12300 or CMSC 15400), or MATH 16300 or higher, or by consent.

Equivalent Course(s): MATH 28130

CMSC 27200. Theory of Algorithms. 100 Units.

This course covers design and analysis of efficient algorithms, with emphasis on ideas rather than on implementation. Algorithmic questions include sorting and searching, graph algorithms, elementary algorithmic number theory, combinatorial optimization, randomized algorithms, as well as techniques to deal with intractability, like approximation algorithms. Design techniques include "divide-and-conquer" methods, dynamic programming, greedy algorithms, and graph search, as well as the design of efficient data structures. Methods of algorithm analysis include asymptotic notation,

evaluation of recurrent inequalities, amortized analysis, analysis of probabilistic algorithms, the concepts of polynomial-time algorithms, and of NP-completeness.

Instructor(s): Staff Terms Offered: Spring Winter

Prerequisite(s): CMSC 27100 or CMSC 27130 or CMSC 37110, or by consent. To request enrollment in this course, please add yourself to the waitlist at <waitlist.cs.uchicago.edu>. If you do not have the prerequisites for this course and want to request permission to enroll without the prerequisites, please submit a waitlist request at <waitlist.cs.uchicago.edu>.

CMSC 27230. Honors Theory of Algorithms. 100 Units.

This course covers design and analysis of efficient algorithms, with emphasis on ideas rather than on implementation. Algorithmic questions include sorting and searching, discrete optimization, algorithmic graph theory, algorithmic number theory, and cryptography. Design techniques include divide-and-conquer methods, dynamic programming, greedy algorithms, and graph search, as well as the design of efficient data structures. Methods of algorithm analysis include asymptotic notation, evaluation of recurrent inequalities, the concepts of polynomial-time algorithms, and NP-completeness. The honors version of Theory of Algorithms covers topics at a deeper level.

Instructor(s): A. Drucker Terms Offered: Winter

Prerequisite(s): CMSC 27100 or CMSC 27130 or CMSC 37110 or consent of the instructor.

CMSC 27410. Honors Combinatorics. 100 Units.

Methods of enumeration, construction, and proof of existence of discrete structures are discussed in conjunction with the basic concepts of probability theory over a finite sample space. Enumeration techniques are applied to the calculation of probabilities, and, conversely, probabilistic arguments are used in the analysis of combinatorial structures. Other topics include basic counting, linear recurrences, generating functions, Latin squares, finite projective planes, graph theory, Ramsey theory, coloring graphs and set systems, random variables, independence, expected value, standard deviation, and Chebyshev's and Chernoff's inequalities.

Instructor(s): L. Babai Terms Offered: Spring

Prerequisite(s): MATH 15900 or MATH 25400, or CMSC 27100, or by consent. Experience with mathematical proofs.

To request enrollment in this course, please add yourself to the waitlist at <waitlist.cs.uchicago.edu>. If you do not have the prerequisites for this course and want to request permission to enroll without the prerequisites, please submit a waitlist request at <waitlist.cs.uchicago.edu>.

Note(s): This course is offered in alternate years.

Equivalent Course(s): MATH 28410

CMSC 27500. Graph Theory. 100 Units.

This course covers the basics of the theory of finite graphs. Topics include shortest paths, spanning trees, counting techniques, matchings, Hamiltonian cycles, chromatic number, extremal graph theory, Turan's theorem, planarity, Menger's theorem, the max-flow/min-cut theorem, Ramsey theory, directed graphs, strongly connected components, directed acyclic graphs, and tournaments. Techniques studied include the probabilistic method.

Instructor(s): K. Mulmuley

Prerequisite(s): CMSC 27100, or MATH 20400 or higher.

CMSC 27530. Honors Graph Theory. 100 Units.

This course covers the basics of the theory of finite graphs. Topics include shortest paths, spanning trees, counting techniques, matchings, Hamiltonian cycles, chromatic number, extremal graph theory, Turan's theorem, planarity, Menger's theorem, the max-flow/min-cut theorem, Ramsey theory, directed graphs, strongly connected components, directed acyclic graphs, and tournaments. Techniques studied include the probabilistic method.

Instructor(s): Laszlo Babai Terms Offered: Spring

Prerequisite(s): CMSC 27100, CMSC 27130, or CMSC 37110, or MATH 20400 or MATH 20800.

CMSC 27600. Computational Biology. 100 Units.

This course serves as a general introduction to the basic algorithms used to understand current problems in biology.

Topics may include sequence alignment algorithms to study DNA and protein sequences, algorithms and experiments for protein structure prediction, dynamics, and folding, clustering and machine learning methods for gene expression analysis, computational models of RNA structure, and DNA computing and self-assembly.

Terms Offered: Winter. Generally offered alternate years.

Prerequisite(s): Familiarity with basic discrete mathematics/statistics/algorithms and biology recommended but not required.

CMSC 27700-27800. Mathematical Logic I-II.

Mathematical Logic I-II

CMSC 27700. Mathematical Logic I. 100 Units.

This course introduces mathematical logic. Topics include propositional and predicate logic and the syntactic notion of proof versus the semantic notion of truth (e.g., soundness, completeness). We also discuss the Gödel completeness theorem, the compactness theorem, and applications of compactness to algebraic problems. Prerequisite(s): MATH 25400 or MATH 25700 or (CMSC 15400 and (MATH 15910 or MATH 15900 or MATH 19900 or MATH 16300))

Equivalent Course(s): CMSC 27700

Terms Offered: Autumn

Prerequisite(s): MATH 25400 or 25700; open to students who are majoring in computer science who have taken CMSC 15400 along with MATH 16300 or MATH 16310 or Math 15910 or MATH 15900 or MATH 19900

Equivalent Course(s): MATH 27700

CMSC 27800. Mathematical Logic II. 100 Units.

Topics include number theory, Peano arithmetic, Turing compatibility, unsolvable problems, Gödel's incompleteness theorem, undecidable theories (e.g., the theory of groups), quantifier elimination, and decidable theories (e.g., the theory of algebraically closed fields).

Terms Offered: Winter

Prerequisite(s): MATH 27700 or equivalent

Equivalent Course(s): MATH 27800

CMSC 27900. Chaos, Complexity And Computers. 100 Units.

This course presents the mathematical bases for the complex, scale-independent behavior seen in chaotic dynamics and fractal patterns. It illustrates these principles from physical and biological phenomena. It explores these behaviors concretely using extensive computer simulation exercises, thus developing simulation and data analysis skills. L.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): PHYS 13300 or 14300; PHYS 25000 or prior programming experience.

Equivalent Course(s): MATH 29200, PHYS 25100

CMSC 28000. Introduction to Formal Languages. 100 Units.

This course is a basic introduction to computability theory and formal languages. Topics include automata theory, regular languages, context-free languages, and Turing machines.

Instructor(s): S. Kurtz Terms Offered: Spring

Prerequisite(s): CMSC 12300 or CMSC 15400, or MATH 15900 or MATH 25500.

Equivalent Course(s): MATH 28000

CMSC 28100. Introduction to Complexity Theory. 100 Units.

Computability topics are discussed (e.g., the s-m-n theorem and the recursion theorem, resource-bounded computation).

This course introduces complexity theory. Relationships between space and time, determinism and non-determinism, NP-completeness, and the P versus NP question are investigated.

Instructor(s): K. Mulmuley Terms Offered: Autumn

Prerequisite(s): CMSC 27100, or MATH 15900 or MATH 25500; experience with mathematical proofs.

Equivalent Course(s): MATH 28100

CMSC 28130. Honors Introduction to Complexity Theory. 100 Units.

Computability topics are discussed (e.g., the s-m-n theorem and the recursion theorem, resource-bounded computation).

This course introduces complexity theory. Relationships between space and time, determinism and non-determinism, NP-completeness, and the P versus NP question are investigated.

Instructor(s): Ketan Mulmuley Terms Offered: Autumn

Prerequisite(s): CMSC 27100 or CMSC 27130, or MATH 15900 or MATH 19900 or MATH 25500; experience with mathematical proofs.

CMSC 28400. Introduction to Cryptography. 100 Units.

Cryptography is the use of algorithms to protect information from adversaries. Though its origins are ancient, cryptography now underlies everyday technologies including the Internet, wifi, cell phones, payment systems, and more. This course is an introduction to the design and analysis of cryptography, including how "security" is defined, how practical cryptographic algorithms work, and how to exploit flaws in cryptography. The course will cover algorithms for symmetric-key and public-key encryption, authentication, digital signatures, hash functions, and other primitives. Weekly problem sets will include both theoretical problems and programming tasks. No experience in security is required.

Instructor(s): David Cash Terms Offered: Autumn

Prerequisite(s): CMSC 15400 and (CMSC 27100 or CMSC 27130 or CMSC 37110)

CMSC 28510. Introduction to Scientific Computing. 100 Units.

Basic processes of numerical computation are examined from both an experimental and theoretical point of view. This

course deals with numerical linear algebra, approximation of functions, approximate integration and differentiation, Fourier transformation, solution of nonlinear equations, and the approximate solution of initial value problems for ordinary differential equations. We concentrate on a few widely used methods in each area covered.

Instructor(s): T. Dupont Terms Offered: Autumn. Generally offered alternate years.

Prerequisite(s): A year of calculus (MATH 15300 or higher), a quarter of linear algebra (MATH 19620 or higher), and CMSC 10600 or higher; or consent of instructor

CMSC 28515. Introduction to Numerical Partial Differential Equations. 100 Units.

This course deals with finite element and finite difference methods for second-order elliptic equations (diffusion) and the associated parabolic and hyperbolic equations. Some methods for solving linear algebraic systems will be used. Scalar first-order hyperbolic equations will be considered.

CMSC 28540. Numerical Methods. 100 Units.

This is a practical programming course focused on the basic theory and efficient implementation of a broad sampling of common numerical methods. Each topic will be introduced conceptually followed by detailed exercises focused on both prototyping (using matlab) and programming the key foundational algorithms efficiently on modern (serial and multicore) architectures. The ideal student in this course would have a strong interest in the use of computer modeling as predictive tool in a range of disciplines -- for example risk management, optimized engineering design, safety analysis, etc. The numerical methods studied in this course underlie the modeling and simulation of a huge range of physical and social phenomena, and are being put to increasing use to an increasing extent in industrial applications. After successfully completing this

course, a student should have the necessary foundation to quickly gain expertise in any application-specific area of computer modeling.

Terms Offered: Spring

Prerequisite(s): CMSC 15200 or CMSC 16200. Basic apprehension of calculus and linear algebra is essential

CMSC 29512. Entrepreneurship in Technology. 100 Units.

The core theme for the Entrepreneurship in Technology course is that computer science students need exposure to the broad challenges of capturing opportunities and creating companies. Most of the skills required for this process have nothing to do with one's technical capacity. We'll explore creating a story, pitching the idea, raising money, hiring, marketing, selling, and more. Real-world examples, case-studies, and lessons-learned will be blended with fundamental concepts and principles. The course will involve a business plan, case-studies, and supplemental reading to provide students with significant insights into the resolve required to take an idea to market. Class discussion will also be a key part of the student experience.

Prerequisite(s): MPCS 51036 or 51040 or 51042 or 51046 or 51100

Note(s): If an undergraduate takes this course as CMSC 29512, it may not be used for CS major or minor credit.

Non-MPCS students must receive approval from program prior to registering. Request form available online <https://masters.cs.uchicago.edu>

Equivalent Course(s): MPCS 51250

CMSC 29700. Reading and Research in Computer Science. 100 Units.

Students do reading and research in an area of computer science under the guidance of a faculty member. A written report is typically required.

Terms Offered: Autumn, Spring, Summer, Winter

Prerequisite(s): By consent of instructor and approval of department counselor.

Note(s): Open both to students who are majoring in Computer Science and to nonmajors. Students are required to submit the College Reading and Research Course Form.

CMSC 29900. Bachelor's Thesis. 100 Units.

Open to fourth-year students who are candidates for honors in Computer Science.

Terms Offered: Autumn Spring Summer Winter

Prerequisite(s): By consent of instructor and approval of department counselor.

Creative Writing

Department Website: <http://creativewriting.uchicago.edu>

The Program in Creative Writing takes a comprehensive approach to the study of contemporary literature, criticism, and theory from a writer's perspective. In our courses, students work with established poets and prose writers to explore the fundamental practices of creative writing. The program's commitment to interdisciplinary work and academic rigor, coupled with an emphasis on teaching the elements of creative writing that underlie all genres, accounts for the program's vitality and explains why Creative Writing at the University of Chicago is currently the largest initiative in the humanities for the College.

The Program in Creative Writing offers workshops and seminars in poetry, fiction, and nonfiction, as well as an increasing number of translation workshops. The major seminars—including the Technical Seminars and Fundamentals in Creative Writing—are designed to build a critical and aesthetic foundation for students working in each genre. Students can pursue their creative writing interests within the formal requirements of the major or through a joint minor in English and Creative Writing, which is open to students outside those two major programs. Students who do not wish to pursue a formal program in Creative Writing will have access to courses that satisfy the general education requirement in the arts and open-entry 'beginning' workshops. They may also apply for advanced workshop courses. Our workshops and technical seminars are cross-listed with a graduate number and open to students in the graduate and professional schools.

Major in Creative Writing

Students who graduate with a bachelor of arts in Creative Writing will be skilled writers in a major literary genre and have a theoretically informed understanding of the aesthetic, historical, social, and political context of a range of contemporary writing. Students in the major will focus their studies on a primary genre chosen from fiction, poetry, and nonfiction.

The organization of the major recognizes the value of workshop courses, but incorporates that model into a broader education that furthers students' knowledge of historical and contemporary literary practice, introduces them to aesthetic and literary theory, sharpens their critical attention, and fosters their creative enthusiasm. Valuable experience with peer criticism, which comes from the skills central to creative writing pedagogy, will prepare students for success in a range of fields in the public and private sectors.

Program Requirements

The Program in Creative Writing requires a total of 13 courses and the completion of a BA thesis, as described below. Students planning to complete the major must meet with the Director of Undergraduate Studies or the Student Affairs Administrator to file a major worksheet by the end of Autumn Quarter of their third year.

Students contemplating a major or minor in Creative Writing may choose to take one or two Creative Writing courses toward the general education requirement in the arts. These courses will not count towards major requirements, but they offer an opportunity for students to test out the program while satisfying a general education requirement. See Enrolling in Creative Writing Courses for additional details.

One (1) Fundamentals in Creative Writing Course

CRWR 17000 to CRWR 17999

The Fundamentals in Creative Writing course is a cross-genre, one-quarter seminar taken by all students in the major. Every section of the course focuses on a current debate relevant to all forms of literary practice, such as mimesis, empathy, and testimony. This course introduces students to a group of core texts from each major literary genre. Fundamentals in Creative Writing is restricted to students who have declared the major, as it aims to develop cohort solidarity, promote a culture of articulate exchange, and induct students into a reflection on practice that will serve their artistic and professional development. Majors should take either a Fundamentals in Creative Writing or Technical Seminar course before applying to Advanced Workshops. This prerequisite does not apply to minors applying to workshops.

Two (2) Technical Seminars

Fiction: CRWR 20200 to CRWR 20299; Poetry: CRWR 20301 to CRWR 20399; Nonfiction: CRWR 20400 to CRWR 20499

Students in the major must take two technical seminars in their primary genre of fiction, poetry, or nonfiction. The aim of the seminars is to expand students' technical resources through analysis of contemporary literature and practice-based training in elements of craft. Students submit papers that address technical questions, chiefly with reference to contemporary texts. For example, poetry students may write on "the line," where fiction students write on "point of view." In some cases, a student can count a technical seminar in a genre outside of the student's primary genre towards the major requirements. These courses may also count as electives in the minor. Majors should take either a Fundamentals in Creative Writing or Technical Seminar course before applying to Advanced Workshops. This prerequisite does not apply to minors applying to workshops.

Three (3) Advanced Workshops

Fiction: CRWR 22100 to CRWR 22299; Poetry: CRWR 23100 to CRWR 23299; Nonfiction: CRWR 24001 to CRWR 24199

Students in the major must complete three Advanced Workshops, at least two of which must be in the student's primary genre. The Advanced Workshop is the characteristic pedagogical instrument of creative writing as an academic discipline. Workshop practice relies on an understanding of support that is dedicated to improving students' writing, not unconditional approval. Critique is the core value and activity of the workshop, and students will practice it under the guidance of the workshop instructor. Although Advanced Workshops begin with attention to exemplary texts, they typically focus on original student work.

Credit for a Beginning Workshop: Students who have completed a Beginning Workshop in their primary genre with a grade of B+ or above may count this course as one of the required Advanced Workshops. Because students must take at least two Advanced Workshops in their primary genre, those students choosing to count a Beginning Workshop towards the major will not be able to count an Advanced Workshop from a non-primary genre towards the degree. Beginning Workshops offered by other institutions will not count towards the major. Beginning Workshops are open to all students during pre-registration.

Four (4) Literature Requirements

Creative Writing majors are required to take four literature courses offered by other departments. These courses can be focused on the literature of any language, but one must focus on the student's primary genre; one must center on literary theory; one must involve the study of literature written before the twentieth century; and the final one can be any general literature course.

The literary genre course should serve as an introduction to key texts and debates in the history of the student's chosen genre. This requirement can be met by an English course or a comparable course in another department. Courses such as ENGL 10403 (<http://collegecatalog.uchicago.edu/search/?P=ENGL%2010403>) Genre Fundamentals: Poetry: Rhythm and Myth, CMST 27207 Film Criticism, or ENGL 11004 (<http://collegecatalog.uchicago.edu/search/?P=ENGL%2011004>) History of the Novel may be eligible.

The Director of Undergraduate Studies will offer guidance and approve all qualifying courses. Specific courses that satisfy the distribution element of this requirement will be listed at creativewriting.uchicago.edu (<http://creativewriting.uchicago.edu/>). A literature course can potentially satisfy more than one requirement, e.g. both theory and literary genre, but a student can only use the course to fulfill one of the requirements.

Two (2) Research Background Electives

Students should take two courses outside of the Program in Creative Writing to support their thesis projects. Depending on a student's interests, elective courses can be offered by programs ranging from Cinema and Media Studies to Biological Sciences. In cases where a Creative Writing translation workshop relates to a student's thesis, one of these workshops may also be approved as a Research Background Elective. Research Background Electives courses must be approved by the Director of Undergraduate Studies, and the student must provide documentation of these approvals to the College adviser. Students may not use the same course to fulfill a Research Background Elective and a Literature Requirement at the same time.

BA Thesis and Workshop

Students work on their BA Projects throughout their fourth year. In Spring Quarter of the third year, students will submit a signed BA proposal form to the Student Affairs Administrator. During Summer Quarter, students are responsible for completing independent reading and research related to their proposed project. Early in Autumn Quarter of their fourth year, students will be assigned a graduate student preceptor, who will lead a series of mandatory colloquia over the course of the quarter. In Winter Quarter, students will continue meeting with the graduate preceptor and must also enroll in the appropriate Thesis/Major Projects Workshop in their genre (CRWR 29200 Thesis/Major Projects: Fiction, CRWR 29300 Thesis/Major Projects: Poetry, or CRWR 29400 Thesis/Major Projects: Nonfiction). The Thesis/Major Projects Workshop is **mandatory**.

Students are not automatically enrolled in a workshop; they must receive the consent of the workshop instructor, who will also serve as the faculty advisor for their BA Project. Students should be aware that because of the high number of students writing fiction for their BA Projects, students will not necessarily get their first choice of workshop instructor and faculty advisor.

Students will work closely with their faculty advisor and peers in the workshops, and will receive course credit as well as a final grade for the workshop. In consultation with their faculty advisor and graduate preceptor, students will revise and submit a near-final draft of the BA Project by the end of the second week of Spring Quarter. Students will submit the final version of their BA Project to their preceptor, faculty advisor, Student Affairs Administrator, and the Director of Undergraduate Studies by the beginning of the fifth week of Spring Quarter.

Students graduating in other quarters must consult with the Director of Undergraduate Studies about an appropriate timeline before the end of Autumn Quarter of their third year.

Program Honors

The faculty in the Program in Creative Writing will award program honors based on their assessment of the BA theses, with input from graduate student preceptors. To be eligible, students must have a major GPA of at least 3.6 and overall GPA of 3.25. Honors will be awarded only to exceptional projects from a given cohort.

Summary of Requirements

One (1) Fundamentals in Creative Writing Course *	100
Two (2) Technical Seminars (in the student's primary genre) **	200
Three (3) Advanced Workshops (at least two in the student's primary genre) ***	300
Four (4) Literature Requirements	400
Two (2) Research Background Electives	200
One (1) BA Workshop, chosen from:	100
CRWR 29200 Thesis/Major Projects: Fiction	
CRWR 29300 Thesis/Major Projects: Poetry	
CRWR 29400 Thesis/Major Projects: Nonfiction	
Total Units	1300

- * CRWR 17000 to CRWR 17999. Majors should plan to take either a Fundamentals in Creative Writing or Technical Seminar course before applying to Advanced Workshops.
- ** Technical Seminars in Fiction: CRWR 20200 to CRWR 20299; Poetry: CRWR 20301 to CRWR 20399; Nonfiction: CRWR 20400 to CRWR 20499
- *** Advanced Workshops in Fiction: CRWR 22100 to CRWR 22299; Poetry: CRWR 23100 to CRWR 23299; Nonfiction: 24001 to CRWR 24199. Beginning Workshops may count as the third workshop if they meet the stipulations listed under the Program Requirements.

Advising

Students considering the major should meet with the Director of Undergraduate Studies or Student Affairs Administrator as early as possible to discuss program requirements and individual plans of study. Declaration of the major must be formalized through my.uchicago.edu (<http://my.uchicago.edu/>), but students must have also started a major worksheet with the Director of Undergraduate Studies in order to receive priority in application-based CRWR courses.

The student's final major program must be approved by the Director of Undergraduate Studies or Student Affairs Administrator by Autumn Quarter of the third year. Students will need to regularly provide documentation of any approvals for the major to their College advisers.

Graduate student preceptor support will be available to students while they write BA theses and minor portfolios during their final year of study, and faculty instructors will serve as thesis advisors for the students in their winter workshops.

Courses Outside the Department Taken for Program Credit

Students double majoring in Creative Writing and another major (with the exception of English Language and Literature) can count a maximum of three courses towards both majors (pending approval from both departments). Ordinarily, two of these courses will be Research Background Electives. Substitutions for a further course will be subject to approval, but students may not substitute non-literature courses for the Literature Requirement.

Double Majors in English Language and Literature and Creative Writing

When students choose a double major in Creative Writing and English Language and Literature, they may count only up to four courses towards both majors. These four courses will typically include the four Literature requirements, but in some cases one of the slots might be filled by a Creative Writing course (with Director of Undergraduate Studies approval). However, the two Research Background Electives required for the Creative Writing major should be taken outside of the Department of English Language and Literature.

Students who are pursuing only the English Language and Literature major may count up to four Creative Writing courses towards the major in English as electives without a petition. However, when students are pursuing a double major in English Language and Literature and Creative Writing, they must observe the shared four-course maximum, so any eligible Creative Writing courses beyond this cap must be counted towards English only.

Grading

Students in the program must receive quality grades (not Pass/Fail) in all courses counting toward the major or minor. Non-majors and non-minors may take Creative Writing courses for P/F grading with consent of instructor. Students must request this consent by the end of week three of the quarter; otherwise Pass/Fail must be approved by the Program Director.

Sample Plan of Study for the Major

Fundamentals in Creative Writing	100
CRWR 17000 Fundamentals in Creative Writing: Literary Empathy	
Technical Seminars	200
CRWR 20302 Technical Seminar in Poetry: Units of Composition	
CRWR 20301 Technical Seminar in Poetry: Manifestos, Movements, Modes	
Advanced Workshops	300
CRWR 23113 Advanced Poetry Workshop: Waste, Surplus, Reuse	

CRWR 23100	Advanced Poetry Workshop	
CRWR 10306	Beginning Poetry Workshop ⁺	
Literature Requirements		400
ENGL 10403	Genre Fundamentals: Poetry: Rhythm and Myth [*]	
ENGL 17515	Seventeenth-Century Verse ^{**}	
ENGL 22903	Literature of the City: Between Utopia and Dystopia, Design and Occupation ^{***}	
ENGL 28614	Contemporary Latina/o Poetry	
Research Electives		200
CMST 14503	Cinema in Theory and Practice	
ARTV 22502	Data and Algorithm in Art	
BA Workshop		100
CRWR 29300	Thesis/Major Projects: Poetry	
Total Units		1300

⁺ Beginning Workshop is eligible because it met the conditions outlined in the Program Requirements (above).

^{*} Satisfies literary genre requirement

^{**} Satisfies period requirement (pre-20th century)

^{***} Satisfies theory requirement

Minor in English and Creative Writing

Students who are not English Language and Literature or Creative Writing majors may complete a minor in English and Creative Writing. The minor requires six courses plus a portfolio of creative work. At least two of the required courses must be Creative Writing workshop courses, with at least one being an Advanced Workshop. Three of the remaining required courses may be taken in either the Department of English Language and Literature or the Program in Creative Writing. This may include Technical Seminars or general education courses, as long as they are not already counted toward the general education requirement in the arts. In some cases, literature courses outside of English and Creative Writing may count towards the minor, subject to the Director of Undergraduate Studies' approval.

Students who elect the minor program in English and Creative Writing must meet with the Student Affairs Administrator for Creative Writing before the end of Spring Quarter of their third year to declare their intention to complete the minor. Students choose courses in consultation with the administrator. The administrator's approval for the minor program should be submitted to a student's College adviser by the deadline above.

In addition, students must enroll in one of the following workshops offered during the Winter Quarter: CRWR 29200 Thesis/Major Projects: Fiction; CRWR 29300 Thesis/Major Projects: Poetry; CRWR 29400 Thesis/Major Projects: Nonfiction.

Finally, students must submit a portfolio of their work (e.g., a selection of poems, one or two short stories or chapters from a novel, two or three nonfiction pieces) to the Student Affairs Administrator by the end of fifth week in their graduating quarter. Students will work with a graduate student preceptor to compile and refine their final portfolios.

Students completing the minor will be given enrollment preference for Advanced Workshops and Thesis/Major Projects Workshops, and some priority for technical seminars. They must follow all relevant admission procedures described at the Creative Writing (<https://creativewriting.uchicago.edu/>) website. For details, see Enrolling in Creative Writing Courses.

Courses in the minor (1) may not be doubly counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for quality grades (not P/F), and at least half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Summary of Requirements for the Minor Program in English and Creative Writing

Two CRWR workshop courses [*]	200
Three CRWR or ENGL electives ^{**}	300
One Thesis/Major Projects Workshop ^{***}	100
A portfolio of the student's work	
Total Units	600

^{*} At least one must be an Advanced Workshop.

^{**} Exceptions are subject to the Director of Undergraduate Studies' approval.

^{***} CRWR 29200 Thesis/Major Projects: Fiction, CRWR 29300 Thesis/Major Projects: Poetry, or CRWR 29400 Thesis/Major Projects: Nonfiction

Minor to Major and Major to Minor

Student circumstances change, and a transfer between the major and minor programs may be desirable to students who begin a course of study in either program. Workshop courses (including Beginning Workshops) and one Technical Seminar may count towards the minor, and in exceptional circumstances Fundamentals in Creative Writing may count as well. The Thesis/Major Projects Workshop is mandatory for both minors and majors. Students should consult with their College adviser if considering such a transfer and must update their planned program of study with the Student Affairs Administrator or Director of Undergraduate Studies in Creative Writing.

Sample Plan of Study for the Minor

CRWR 10200	Beginning Fiction Workshop	100
CRWR 22110	Advanced Fiction Workshop: Exploring Your Boundaries	100
ENGL 16500	Shakespeare I: Histories and Comedies	100
ENGL 10706	Introduction to Fiction	100
ENGL 24526	Forms of Autobiography in the Twentieth and Twenty-First Centuries	100
CRWR 29200	Thesis/Major Projects: Fiction	100
A portfolio of the student's work (two short stories)		
Total Units		600

Enrolling in Creative Writing Courses

General education courses and Beginning Workshops are open to all students via the standard pre-registration process. Other courses require consent, and some may require submission of work for evaluation. Our consent-based courses prioritize students in the major, minor, and the Creative Writing Option of the Master of Arts Program in the Humanities (MAPH). Note: Students who have not yet met with the Director of Undergraduate Studies or Student Affairs Administrator to begin a worksheet are not considered formally declared and therefore are not guaranteed priority in course enrollment.

With the exception of Autumn Quarter, applications for consent-only courses must be received by the Friday of seventh week of each quarter. Below are the dates for the 2020-2021 academic year:

- Applications for Autumn Quarter: September 9, 2020
- Winter Quarter: November 13, 2020
- Spring Quarter: February 19, 2021

For more information on Creative Writing courses and opportunities, visit the Creative Writing (<https://creativewriting.uchicago.edu/>) website.

Creative Writing courses for the general education requirement in the arts

These multi-genre courses are introductions to topics in creative writing and satisfy the general education requirement in the arts in the College. General education courses are generally taught under two headings—'Reading as a Writer' and 'Intro to Genres'—and will feature class critiques of students' creative work. Open to all undergraduate students during pre-registration. These courses do not count towards the major in Creative Writing, but students may use these courses to satisfy their general education requirement in the arts.

Beginning Workshops

These courses are intended for students who may or may not have writing experience, but are interested in gaining experience in a particular genre. Courses will focus on the fundamentals of craft and feature workshops of student writing. Open to all undergraduate students during pre-registration.

Fundamentals of Creative Writing Courses

These courses focus on a current debate relevant to all forms of literary practice and aim to develop cohort solidarity, promote a culture of exchange, and induct students into a reflection on practice that will service their artistic and professional development. Open to declared majors only, except in circumstances approved by the Director of Undergraduate Studies. Majors should take either a Fundamentals course or a Technical Seminar before applying to Advanced Workshops. Students apply to take the course by submitting a course application form, found at creativewriting.uchicago.edu (<http://creativewriting.uchicago.edu/>).

Technical Seminars

The aim of the seminars is to expand students' technical resources through analysis of contemporary literature and practice-based training in elements of craft. Priority is given to declared majors first, then minors and students in the MAPH Creative Writing Option. Majors should take either a Fundamentals course or a Technical Seminar course before applying to Advanced Workshops. Students apply to take the course by submitting a course application form, found at creativewriting.uchicago.edu (<http://creativewriting.uchicago.edu/>).

Advanced Workshops

These workshops are intended for students with substantive writing experience in a particular genre. Advanced workshops will focus on class critiques of student writing with accompanying readings from exemplary literary texts. Priority is given to students in the major, minor, or the MAPH Creative Writing Option. Students apply to take the course by submitting a course application form, found at creativewriting.uchicago.edu (<http://creativewriting.uchicago.edu/>). A writing sample in the genre of the relevant course is required for faculty review. Specific submission requirements appear in the course descriptions.

Thesis/Major Projects

This course will revolve around workshops of student writing and concentrate on the larger form students have chosen for their creative thesis. Priority is given to students in the major, minor, or the MAPH Creative Writing Option. Students apply to take the course by submitting a course application form, found at creativewriting.uchicago.edu (<http://creativewriting.uchicago.edu/>). A writing sample in the genre of the relevant course is required for faculty review. Specific submission requirements appear in the course descriptions.

Faculty and Visiting Lecturers

For a current listing of Creative Writing faculty, visit the Creative Writing (<https://creativewriting.uchicago.edu/people/>) website.

Creative Writing Courses

CRWR 10206. Beginning Fiction Workshop. 100 Units.

NOTE: This is a sample course description; section descriptions vary. Please visit creativewriting.uchicago.edu for current quarter descriptions by section. Fiction writing is part magic and part mechanics. This course will pay homage to the magic but concentrate on how a story is built: the architecture of structure, the mechanisms of character development, the fluid dynamics of dialogue. We'll take a close look at some of the building blocks that make up fiction writing: character, dialogue, plot, point of view, and setting. We'll also read and discuss a variety of short stories, always with an eye to craft and to what you, as writers, can steal for your own work. That's right, steal. Much of this course is devoted to learning how to steal the tools of great fiction writing, then to using those tools to realize your own vision. You'll write extensively in and out of class, from weekly reading responses to writing exercises that build toward a polished piece of work. Finally, you will write a complete draft and one extensive revision of a short story or novel chapter. The last third of the course will be devoted to student workshops, where each student will turn in a draft of a story or chapter to be read and critiqued by the whole class.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Prerequisite(s): Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 30206

CRWR 10306. Beginning Poetry Workshop. 100 Units.

At its root, the verb compose means to 'put together,' so in this course we will explore poetic composition as the practice of putting words together in ways that help us compose, decompose, and recompose parts of our lives. Our basic premise will be that poetry offers useful forms of attention and construction, so that to write is to observe the world and to fashion ways of living in it. We will pay particular attention to some fundamental elements of poetic composition- sound, diction, syntax, line, stanza, image- and to the skills of observation, memory, and revision. To guide our own writing practices, we will study intensively the work of four poets from last hundred years- William Carlos Williams, Lorine Niedecker, Gwendolyn Brooks, and James Schuyler- as well as a supplemental selection of contemporary poetry. Regular reading assignments will be paired with regular exploratory writing exercises; remote learning activities will include live Zoom discussions and writing workshops, Canvas discussions, and collaborative online writing and editing exercises.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Prerequisite(s): Open bid through my.uchicago.edu. Attendance on the first day is necessary.

Equivalent Course(s): CRWR 30306

CRWR 10406. Beginning Nonfiction Workshop. 100 Units.

NOTE: This is a sample course description; section descriptions vary. Please visit creativewriting.uchicago.edu for current quarter descriptions by section. A personal essay can employ a chain of events, but it's essentially a train of thought. Like thought, it's protean, able to take any shape and yet remain an essay. In this workshop you'll write two drafts of your own essay, or attempt, at the form, while line editing and critiquing your classmates' attempts. You'll also do close readings, starting with 'Why I Write,' by George Orwell, and 'Why I Write,' by Joan Didion. Then James Baldwin's 'Autobiographical Notes.' Once we've had a taste of the present we'll go back four thousand years to the essay's beginnings in Babylon, following its evolution in Greece and Rome-Heraclitus, Plutarch, Seneca-then Europe: Montaigne, Max Beerbohm, Walter Benjamin, and Natalia Ginzburg, returning to contemporary English-language writers, including Adrienne Rich and Margaret Atwood, ending with Didion's 'Goodbye to All That,' paired with Eula Biss's contemporary cover version, also titled 'Goodbye to All That.'

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Prerequisite(s): Open bid through my.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 30406

CRWR 12106. Intro to Genres: Science Fiction. 100 Units.

A monolith manifests in orbit around Jupiter, emitting a signal. A beacon? A man spontaneously discovers the ability to teleport. An evolutionary accident? The origin of human life proves to be malicious. Divine fate? Space travel is enabled by the ingestion of enormous quantities of a geriatric spice a messianic figure auspiciously learns to manipulate. A drug trip?! Among popular genres, science fiction is the riskiest conceptually and among the trickiest to master. The difference between

an amazing idea and a rotten story is often slim. What makes good sci-fi work? And how best to write it? Let's put on our gravity boots and solar visors and see what we can discover. In this course, you'll read some novels (by Frank Herbert, Alfred Bester, and Ursula K. LeGuin), poetry (by Andrew Joron), a graphic novel (by Chris Ware), and screenplays (by Damon Lindelof, and Stanley Kubrick & Arthur C. Clarke). And all the while, you'll try your hand at bending each other's minds with your own science fiction.

Instructor(s): Peter O'Leary Terms Offered: Spring

Prerequisite(s): Open bid through my.uchicago.edu. Attendance on the first day is mandatory. Note(s): This course meets the general education requirement in the arts.

CRWR 12107. Reading as a Writer: Crime and Story. 100 Units.

If prostitution is the earliest profession, then crime is probably the earliest narrative engine. Crime has forever been a driving force behind story, a vehicle not only of plot but of human psychology, social exploration, philosophical investigation, and just plain old suspense. There's something about the darker side of human nature that invites explorations of characters pushed to their extremes. Through analyzing the writing techniques and processes—such as point of view, scene, setting, voice, detail, irony, perspective, narrative structure and research methodologies—of such writers and poets as Raymond Chandler, Patricia Highsmith, Walter Mosley, Joyce Carol Oats, Denis Johnson, Carolyn Forché, CK Williams, Ai, Jo Ann Beard, Joan Didion, and Richard Price among others, students will examine how elements of crime in story can be transformed beyond simple genre. By examining writers' choices, students will explore how they may use these techniques to develop such mechanics of writing as point of view, poetics, dramatic movement, and narrative structure in their own work. Students will turn in weekly reading responses and a final paper.

Instructor(s): Augustus Rose Terms Offered: Spring

Prerequisite(s): Open bid through classes.uchicago.edu. Attendance on the first day is mandatory.

Note(s): This course meets the general education requirement in the arts.

CRWR 12109. Introduction to Genres: Wizards. 100 Units.

Do you believe in wizards? Are you a wizard? Then pack up your talismans, fetishes, and gamelans into the mysterious little satchel you carry at your side and get ready for some incantatory magic. We will investigate the figure of the wizard as an archetype, a literary symbol, a vehicle for fantasy, and as a commanding reality, while considering such things as A Wizard of Earthsea, the figure of Merlin, The Teachings of Don Juan, The Teachings of Ogotemmeli, Harry Potter, Aleister Crowley, the poetry of W. B. Yeats, Nathaniel Mackey, Jay Wright, and Ronald Johnson, as well as some other things too secret to reveal at present, including the nature of esotericism.

Instructor(s): Peter O'Leary Terms Offered: Winter

Prerequisite(s): Open bid through classes.uchicago.edu. Attendance on the first day is mandatory.

Note(s): This course meets the general education requirement in the arts.

CRWR 12112. Reading as a Writer: Chicago 'City on the Remake' 100 Units.

This course invites writers to reconsider the influence of Chicago's public spaces on genre and artistic form. How does one tell a 'Chicago story'? Is the 'City on the Re-Make' best told in prose or poem? Is there a clear boundary between the city's South and North Sides? Is there a 'Chicago epic'? Working through these questions, students will analyze and explore Chicago writers' work in fiction, poetry, and creative nonfiction. Students will then develop their own creative responses, building connections to adopted critical approaches. To these ends, we will examine work by writers including Nelson Algren, Elizabeth Hatmaker, Aleksandar Hemon, and Margo Jefferson, as well as the city's rich legacies in documentary film, the visual arts, and music.

Instructor(s): Garin Cycholl Terms Offered: Autumn

Prerequisite(s): Open bid through classes.uchicago.edu. Attendance on the first day is mandatory. This course meets the general education requirement in the arts.

CRWR 12117. Intro to Genres: Division and Western. 100 Units.

This course explores literary responses to Chicago's boundaries and sites of contention through fiction, drama, poetry, and literary journalism. We'll examine work by writers and artists including Saul Bellow, Lorraine Hansberry, Nate Marshall, Bruce Norris, and Studs Terkel. How does one map the city's conflicts along zoning ordinances, street corners, playgrounds, and rumors? What histories undergird the city's racelines? In exploring these aspects of the city, where does a writer draw the boundary between fiction and nonfiction, between verse and prose? Engaging these larger questions, participants will develop their own individual and collaborative creative responses to 'the city in a garden.'

Instructor(s): Garin Cycholl Terms Offered: Spring

Prerequisite(s): Open bid through my.UChicago.edu. Attendance on the first day is mandatory. Satisfies the College Arts/Music/Drama Core requirement.

CRWR 12121. Intro to Genres: Writing the Visual Arts. 100 Units.

How might language render visual experience? How do verbal representations diverge from visual representations? How might writing help us see art in new ways? How might art objects compel our writing into new forms? With these questions in mind, we will read poems and essays by a variety of writers, visit several of Chicago's excellent museums, and conduct regular writing experiments. Writers studied may include Berger, Williams, Auden, Barthes, Schuyler, Guest, O'Hara, Waldrop, Swensen, Gander, Young, and Cole. Artists studied may include Breughel, Magritte, Cornell, Twombly, Mann, Kentridge, and Basquiat.

Instructor(s): Patrick Morrissey Terms Offered: Winter

Prerequisite(s): Open bid through my.uchicago.edu. Attendance on the first day is mandatory. Note(s): This course meets the general education requirement in the arts.

Equivalent Course(s): ARTV 20500

CRWR 12123. Reading as a Writer: Ecopoetics: Literature & Ecology. 100 Units.

This course will introduce students to recent debates in the environmental humanities while exposing them to a range of works spanning fiction, documentary prose, poetry, and film that engage what has come to be called the Anthropocene era (despite substantive challenges to the term that we will address). We will read foundational texts in environmental perception and activism (John Ruskin's 'Storm-Cloud of the Nineteenth Century' and Rachel Carson's *Silent Spring*) in dialogue with modernist work surrounding urban landscapes (William Carlos Williams's *Paterson*). We will then open onto a wide range of contemporary texts that engage the natural and constructed environment in crisis. Students will be asked to conduct fieldwork on an environmental theme of their choosing (climate change, petrol economies, watershed issues, air quality, pandemics and the management of wild animals, species extinction, etc.) and to produce a portfolio of short creative pieces in response to an issue or debate that interests them.

Instructor(s): Jennifer Scappettone Terms Offered: Autumn

Prerequisite(s): Open bid through my.uchicago.edu. Attendance on the first day is mandatory. Contact the instructor for a spot on the waiting list. Course requires consent after add/drop begins; contact the instructor for a spot in the class or on the waiting list.

CRWR 12127. Reading as a Writer: Hallucinations. 100 Units.

In this course we ask: How is historical material made--figured/disfigured by loss, desire, violence, suffering, exhaustion, death; by restlessness and the unbearable, abyssal, vertigo of living inside time? Where is the aperture of experience? The apparitions, which partition night, its many voices, bodies which are forgotten, and then remembered, why? What is the time of writing, of reading? This course goes a little back and a little forward between the two world wars, hoping to track an itinerary of history material, its incandescence, between situations of mourning and mystical experience. Students will be asked to keep a reading notebook as well as to produce weekly creative responses for class discussion.

Instructor(s): Lynn Xu Terms Offered: Winter

Prerequisite(s): Open bid through my.uchicago.edu. Attendance on the first day is mandatory. Satisfies the College Arts/Music/Drama Core requirement.

CRWR 12128. Reading as a Writer: The Sea. 100 Units.

What is the temporality of the sea? Its consciousness? Where does it begin? Or end? In this course, we will consider the sea both as a figure in our literary, critical, visual, political, historical, and ecological imaginations, as well as a body in itself, iridescent and gleaming at the end of the world. We will look at practices of burial at sea, the infamous 'wine dark sea' of Homer, the Middle Passage, the hold and wake of the ship, necropolitics, the concept of sovereignty and bare life, stowaway and asylum seekers, piracy and floating armories, eco-materialism, the post-human and alien worlds of our oceanic origins, the moon . . . and so on. Students will be asked to keep a reading notebook as well as to produce weekly creative responses for class discussion. 'And as you read /the sea is turning /its dark pages /turning /its dark pages' (Denise Levertov, from *#To The Reader*).

Instructor(s): Lynn Xu Terms Offered: Autumn Spring

Prerequisite(s): Open bid through my.uchicago.edu. Attendance on the first day is mandatory. Satisfies the College Arts/Music/Drama Core requirement.

CRWR 12129. Reading as a Writer: Questions of Travel. 100 Units.

Travel narratives remain a perennial tool for looking outward and understanding places and cultures unlike our own. We'll look at both historical and contemporary accounts of time abroad and explore how technological advances in communication and increasingly cheap and easy travel may be changing this most enduring of forms. Travel writing has often gone hand in hand with imperial and neo-imperial projects, but more and more the global 'south' visits the global 'north.' We'll read poetry, fiction, and nonfiction by writers like Graham Greene, Elizabeth Bishop, George Orwell, Tayeb Salih, George Saunders, James Baldwin, and Natalia Ginzburg. We'll also consider journalistic accounts by Ted Conover, Katherine Boo, and Evan Osnos, as well as documentary films by Ai Weiwei and Joshua Oppenheimer. Students will write short responses over the quarter and synthesize our texts, along with a text of their choosing, into a culminating critical paper.

Instructor(s): William Boast Terms Offered: Autumn

Prerequisite(s): Open bid through my.uchicago.edu. Attendance on the first day is mandatory. Satisfies the College Arts/Music/Drama Core requirement.

CRWR 12136. Reading as a Writer: Adaptation as Form. 100 Units.

The main goal of this course will be to understand the reasons, traditions and methods behind the practice of literary adaptations. From Joyce Carol Oates's 'Blue Bearded Lover,' to Anne Sexton's 'Cinderella', to Angela Carter's 'Wolf-Alice' and Marina Carr's 'By the Bog of Cats,' there are stories that continue to resonate through the centuries, and others that are made to resonate through the labor of new story tellers. Each text will be explored both independently and within the context of its adaptive genealogy. Students will be expected to read each text carefully, come prepared to actively participate in class discussion and respond to both academic and creative writing prompts based on assigned texts and class lecture.

Instructor(s): Lina Ferreira Cabeza-Vanegas Terms Offered: Autumn

Prerequisite(s): Open bid through my.UChicago.edu. Attendance on the first day is mandatory. Satisfies the College Arts/Music/Drama Core requirement.

CRWR 12138. Intro to Genres: Evil Incarnate. 100 Units.

Some of the most compelling pieces of writing across all genre deal with, and often feature, deeply problematic central adversarial characters without which the poem, story, or essay would have no forward motion, and no cause to exist. From Capote's *In Cold Blood* to Milton's *Paradise Lost*, from Bulgakov's *Master and Margarita* to Arendt's *Eichmann in Jerusalem* and Sabato's *The Tunnel*, literature returns again and again to the question of evil and the concept of opposition. This course is designed to explore this question alongside authors who have devoted their lives to understanding the role of evil in literature, its necessity, its appeal, its frivolity and its betrayal. The course will be divided into three sections, each section

devoted to a specific genre during which two to three texts will be explored, discussed and analyzed in class, and at the end of which one brief analysis paper will be due. One creative piece, in any of the three major genres, exploring the said topic will be due at the end of the course.

Instructor(s): Lina Ferreira Cabeza-Vanegas Terms Offered: Winter

Prerequisite(s): Open bid through my.uchicago.edu. Attendance on the first day is mandatory. Contact the instructor for a spot on the waiting list. Course requires consent after add/drop begins; contact the instructor for a spot in the class or on the waiting list.

Note(s): Satisfies the College Arts/Music/Drama Core requirement.

CRWR 12139. Reading as a Writer: The Love Story and Its Tropes. 100 Units.

In this course, we will embark on a contemporary survey of the dazzling assortment of stories about love (or its mirages), from its indoctrinations, blindings, and inevitable misgivings. We will read works on this subject by fiction writers, memoirists, and poets, including Kristen Dombek, Lisa Carver, and Garth Greenwell. Of course, no contemporary survey would be complete without considering Candace Bushnell's original 'Sex and the City' columns, the surprisingly nihilistic vignettes that inadvertently spawned the consumerist fantasia of single-life romance. Expect to engage with creative assignments, and to participate in workshop sessions.

Instructor(s): Ling Ma Terms Offered: Winter

Prerequisite(s): Open bid through my.uchicago.edu. Attendance on the first day is mandatory. Contact the instructor for a spot on the waiting list. Course requires consent after add/drop begins; contact the instructor for a spot in the class or on the waiting list.

Note(s): Satisfies the College Arts/Music/Drama Core requirement.

CRWR 12140. Reading as a Writer: Writing War. 100 Units.

In the aftermath of war, we attempt to make sense of the senseless. We grapple with the pieces, we organize, we mold, and we give shape to the shapeless. In this course, using the Nigeria-Biafra War as a case study, we'll investigate the practices that constitute authorship of war. We'll read works by writers of the war generation, like Ken Saro-wiwa, as well as those who have inherited it, like Chimamanda Ngozi Adichie. We'll identify and study their methods for reconstructing the past-lived experiences, research, and the imagination. We'll consider the ethics of leaps of the imagination as we read works of realism alongside the speculative, like Nnedi Okorafor's AfricanFuturist comic book take LaGuardia. We'll study narratives like Chinelo Okparanta's queer coming-of-age story *Under the Udala Trees* to consider what it means to depart from the national narrative in order to recover silenced or erased voices. In critical papers, we'll analyze how genre, form, and media inform these works. Using the questions, techniques, and practices we identify, you'll be asked to write and research narratives using a real war as its basis.

Instructor(s): Julie Iromuanya Terms Offered: Winter

Prerequisite(s): Open bid through my.uchicago.edu. Attendance on the first day is mandatory. Contact the instructor for a spot on the waiting list. Course requires consent after add/drop begins; contact the instructor for a spot in the class or on the waiting list.

Note(s): Satisfies the College Arts/Music/Drama Core requirement.

CRWR 12141. Intro to Genres: Drawing on Graphic Novels. 100 Units.

Like film, comics are a language, and there's much to be learned from studying them, even if we have no intention of 'writing' them. Comics tell two or more stories simultaneously, one via image, the other via text, and these parallel stories can not only complement but also contradict one another, creating subtexts and effects that words alone can't. Or can they? Our goal will be to draw, both literally and metaphorically, on the structures and techniques of the form. While it's aimed at the aspiring graphic novelist (or graphic essayist, or poet), it's equally appropriate for those of us who work strictly with words. What comics techniques can any artist emulate, approximate, or otherwise aspire to, and how can these lead us to a deeper understanding of the possibilities of point of view, tone, structure and style? We'll learn the basics of the medium via Ivan Brunetti's book *Cartooning: Philosophy and Practice*, as well as Syllabus, by Lynda Barry. Readings include the scholar David Kunzle on the origins of the form, the first avant-garde of George Herriman, Frank King, and Lyonel Feininger, finishing with contemporaries like Joe Sacco, Chris Ware, and Alison Bechdel. Assignments include weekly creative and critical assignments, culminating in a final portfolio and paper.

Instructor(s): Dan Raeburn Terms Offered: Spring

Prerequisite(s): Open bid through my.uchicago.edu. Attendance on the first day is mandatory. Course requires consent after add/drop begins; contact the instructor for a spot in the class or on the waiting list.

CRWR 12142. Reading as a Writer: Voices From the Edge. 100 Units.

When we think of groups that are othered, who and what do we mean? Is the other always defined against hegemonic ideas of race, gender, sexuality, and class? Can we understand American othering outside of post-colonialism? In this seminar, we will read work that investigates othering—which is to say, who and what constitutes an othered literary voice, the ways writers contend with that othering in their work, and the cultural and political forces that push an othered voice to 'the edge' of the mainstream. To give a sense of the breadth of othering in literature, we will take a multi-ethnic/cultural/gender and multi-genre approach to our study, examining texts of fiction, nonfiction, and poetry from Black, Asian, Native American, Latinx, and queer writers. That list will include Natalie Diaz, Nana Kwame Adjei-Brenyah, Ocean Vuong, Audre Lorde. We will work to deepen our facility with the skills needed to critique the ideas in the texts and also situate them in their cultural context. In addition, we will discuss how othering has produced eloquent literary voices and the particular aspects of a given writer's eloquence. During the semester, you will engage in rigorous inquiry, prompted informal writing, and formal writing in the form of response-papers and short creative assignment accompanied by a critical reflection.

Instructor(s): Mitchell Jackson Terms Offered: Spring

Prerequisite(s): Open bid through my.uchicago.edu. Attendance on the first day is mandatory. Course requires consent after add/drop begins; contact the instructor for a spot in the class or on the waiting list.

Note(s): Satisfies the College Arts/Music/Drama Core requirement.

CRWR 17000. Fundamentals in Creative Writing: Literary Empathy. 100 Units.

In this fundamentals course, students will investigate the complicated relationship between writers, fictional characters, and readers, toward determining what place literary empathy has in our conversation about contemporary literature. James Baldwin once observed that, "You think your pain and your heartbreak are unprecedented in the history of the world, but then you read. It was books that taught me that the things that tormented me most were the very things that connected me with all the people who were alive, or who had ever been alive." We will use weekly reading assignments including fiction, poetry, and creative non-fiction to ask questions about what Virginia Woolf described as the 'elimination of the ego' and 'perpetual union with another mind' that take place when we read. Students will write critical responses, creative exercises, and a final paper on a topic to be approved by the instructor. Readings include Baldwin, Bishop, Beard, Carson, Walcott, and Woolf.

Instructor(s): Rachel DeWoskin Terms Offered: Autumn

Prerequisite(s): Students apply for consent by filling out the CW Seminar Consent Form on creativewriting.uchicago.edu.

Students must meet the course application deadline specified on the website. This course is open only to students who have declared the Major in Creative Writing. Attendance on the first day is mandatory.

CRWR 17001. Fundamentals in Creative Writing: Testimony. 100 Units.

To give testimony is to bear witness and to provide evidence. To give testimony is also to draw the reader or listener into an individual point of view. In this course, we will study the first-person voice in various forms of personal testimony. Drawing from a mix of memoirs, personal essays, letters, fiction, and other first-person narratives, we will analyze the techniques and rhetorical devices used by writers, standup comedians, memoirists in transporting the listener or reader into unknowable, unfamiliar experiences. Expect to engage with texts by authors such as Franz Kafka, Patricia Lockwood, Richard Pryor, and William Maxwell. We will compose our own personal writings through creative exercises. A critical paper is also due.

Instructor(s): Ling Ma Terms Offered: Spring

Prerequisite(s): Students apply for consent by filling out the application form on creativewriting.uchicago.edu. Students must meet the course application deadline specified on the website. This course is open only to students who have declared the Major in Creative Writing. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 37001

CRWR 17006. Fundamentals in Creative Writing: The Fantastical Element. 100 Units.

From the short stories of Karen Russell to the conjectures of Danny Glover's TV show *Atlanta*, many contemporary writers of speculative craft often introduce fantastical elements into otherwise ordinary narratives set in everyday reality. In this course, we will examine the fantastical element, its typical characteristics, and what it's trying to do by puncturing the veil of the realism. As a craft course, we will look at how the fantastical element is often implemented, and how the narrative absorbs it or attempts to resolve it. In the process, we will try our hand at writing speculative narratives, along with critical papers on technique. Readings will include poetry, fiction, and nonfiction by authors such as Rachel Ingalls, Carmen Maria Machado, Nana Kwame Adjei-Brenyah, and more.

Instructor(s): Ling Ma Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory. This is class is restricted to students who have declared a major in Creative Writing.

CRWR 17007. Fundamentals in Creative Writing: The Grammar of Narrative. 100 Units.

Storytelling goes nearly as far back as human consciousness, while the ways in which we tell stories has been expanding ever since. This class will look at several different forms of narrative-fiction, creative non-fiction, narrative poetry, and film-and explore the 'grammar' of these different genres, what they share and where they differ and how their particular strengths influence the ways in which they most effectively communicate. How does film (a visual medium) tell a story differently than does fiction (which asks us to project our own imagined version of the story), differently than creative non-fiction, (which must always rely on facts), differently than poetry (which condenses the story to its essences)? How do these different genres and mediums influence the stories they tell and the effects they achieve? Readings will include primary texts as well as critical and fundamentals texts in each genre. Students will complete weekly reading responses, as well as creative exercises. A paper focusing on a specific element derived from the class will be due at the end of the course.

Instructor(s): Augustus Rose Terms Offered: Winter

Prerequisite(s): Students must be a declared Creative Writing major to enroll. Apply via creativewriting.uchicago.edu.

Attendance on the first day is mandatory.

CRWR 17008. Fundamentals in Creative Writing: The Art of Dialogue. 100 Units.

How do you write silence? What is subtext? What is the structure of a joke? Dialogue is one of the most important elements of fiction because of its dynamism. It can, among other effects, reveal character, advance plot, and escalate tension. In this seminar, we will read work that inspires, informs, and expands our understanding of the definition and usages of dialogue. We will read exemplars of fiction, nonfiction, drama, poetry, as well as watch film-all with the objective of discovering the aspects that make the dialogue (or written speech) in each text effective. The class will include work by Grace Paley, Ernest Hemingway, August Wilson, Toni Cade Bambara, Junot Diaz, Joan Didion, Tyehimba Jess, and Sally Rooney. We will discuss stylistic elements of the work, its ideas, and attempt to situate it in its cultural context. Class sessions will consist of informal writing, discussion, and lecture. Coursework includes two short creative assignments (with a critical component), questions for discussion, and informal writing.

Instructor(s): Mitchell Jackson Terms Offered: Winter

Prerequisite(s): Students must be a declared Creative Writing major to enroll. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

CRWR 17009. Fundamentals in Creative Writing: Speaking Silence. 100 Units.

Silence is pouring into the play like water into a sinking ship,' wrote Beckett of the role of silence in his elegiac masterpiece, *Waiting for Godot*. There is the silence of speechlessness, the silence of reticence, the silence of listening, the many silences of history - both personal and geopolitical - and beneath them all there is the silence we break when we're born and to which we return when we die. This class will make a study of silence across a range of literary genres and styles, with the aim of amplifying what silence contains. From stage directions to erasure, from lineation to fragmentation to use of white space, typography, and images, we will examine an assortment of strategies writers like John Cage, Samuel Beckett, Anne Carson, Charles Reznikoff, M Nourbese Philips, W.G. Sebald, and John Keene have deployed in their engagement with silence. Class time will consist of discussions, in-class exercises, and occasional sharing of new work. A final critical paper of 15-20 pages will allow for creativity.

Instructor(s): Suzanne Buffam Terms Offered: Winter

Prerequisite(s): Students must be a declared Creative Writing major to enroll. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

CRWR 17010. Fundamentals in Creative Writing: What is Character? 100 Units.

What is character? And what is a character? How we answer these two questions depends not only on the genre we're writing in, but also on the kind of writer and person we are. Which is also to say that tackling these questions requires a look within ourselves, a confrontation with who we think we are and how we think we see the world around us, even when our characters are nothing like us. In this Fundamentals course, we'll look at the range of ways that 'character' can be seen and constructed—the different technical, aesthetic, and even philosophical approaches to characterization. How does characterization in a poem differ from characterization in a story, or in an essay, play, or memoir? What ultimately makes for a compelling and memorable character? Beyond actual human beings, what does it mean for an idea to be a character, or a city to be one, or the very work itself? Our reading material will include poetry, fiction, and essays, and our assignments will include reading responses, creative writing exercises, short essays, and presentations.

Instructor(s): Vu Tran Terms Offered: Spring

Prerequisite(s): Students must be a declared Creative Writing major to enroll. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

CRWR 18200. Poetry and the Human III. 100 Units.

This spring-quarter Arts course is related to the Humanities course 'Poetry and the Human' and is intended as a potential sequel to its first two quarters, but can also be taken as a freestanding course. Through a combination of seminar discussions and creative writing workshop sessions, it focuses upon creative practice (form, flow, and voice) as way of approaching many of the questions raised over the Autumn and Winter terms. It considers the role of poetry in different traditions (Japanese, English, Persian, etc.) from aesthetic, philosophical, and performative angles. Students in the Poetry and the Human sequence (HUMA) will have priority registration for this course; other students may register for any remaining seats.

Instructor(s): Staff Terms Offered: Spring

Note(s): This course meets the general education requirement in the arts.

CRWR 20200. Technical Seminar in Fiction: Characterization. 100 Units.

This reading and writing seminar will acquaint students with one of the essential tools of fiction writers: characterization. We will read primary texts by authors including Baldwin, Flaubert, Munro, and Wharton, as well as critical work by Danticat, Forester, and Vargas Llosa, toward exploring how some of literature's most famous characters are rendered. How do writers of fiction create contexts in which characters must struggle, and how does each character's conflicts reveal his or her nature? Students will complete both creative and analytical writing exercises, reading responses, and a paper that focuses on characterization in a work of fiction.

Instructor(s): Rachel DeWoskin Terms Offered: Autumn

Prerequisite(s): Students apply for consent by filling out the CW Seminar Consent Form on creativewriting.uchicago.edu.

Students must meet the course application deadline specified on the website.

Equivalent Course(s): CRWR 40200

CRWR 20201. Technical Seminar in Fiction: Auto Fiction, Essayism, Truth. 100 Units.

This inter-genre readings course will be of special interest to student writers interested in both fiction and creative nonfiction. We'll look at hybrid works by W.G. Sebald, Teju Cole, Rachel Cusk, and Shelia Heti and also consider writers like Kathryn Harrison, Tobias Wolff, and Gregor von Rezzori, who have addressed the same subjects in both fiction and nonfiction. Finally, we'll dip into Robert Musil's notion of 'essayism' as a modern mode of thought and the recent debate over the 'lyric essay.' We'll also look at journalistic and/or documentary works by Werner Herzog, Truman Capote, Tom Bissell, Katherine Boo, and Ryszard Kapuściński. By exploring the interestingly smudged line between factual and fictional texts, we'll interrogate both genre categories and ways of perceiving and presenting what's true.

Instructor(s): Will Boast Terms Offered: Spring

Prerequisite(s): Students apply for consent by filling out the CW Seminar Consent Form on creativewriting.uchicago.edu.

Students must meet the course application deadline specified on the website. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40201

CRWR 20203. Technical Seminar in Fiction: Research and World-Building. 100 Units.

Writing fiction is in large part a matter of convincing world-building, no matter what genre you write in. And convincing world-building is about creating a seamless reality within the elements of that world: from character dynamics, to setting, to social systems, and even the story or novel's conceptual conceit. And whether it be within a genre of realism, historical

fiction, or science fiction, building a convincing world takes a good deal of research. So while we look closely at the tools and methods of successful world-building, we will also dig into the process of research. From how and where to mine the right details, to what to look for. We will also focus on how research can make a fertile ground for harvesting ideas and even story. Students will read various works of long and short fiction with an eye to its world-building, as well as critical and craft texts. They will write short weekly reading responses and some creative exercises as well. Each student will also be expected to make a brief presentation and turn in a final paper for the class.

Instructor(s): Augustus Rose Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40203

CRWR 20206. Technical Seminar in Fiction: Setting (Beyond) the Stage. 100 Units.

This technical seminar course will look at fiction and some film to explore the use and function of setting in narrative works. We will consider its uses beyond simply as a tool in world-building or backdrop creation, looking into how it informs character, defines perspective, affects mood, pushes plot, and even makes us see the world differently. Students will read various works of long and short fiction with an eye to their use of setting, as well as critical and craft texts. They will write short weekly reading responses and some creative exercises as well. Each student will also be expected to make a brief presentation and turn in a final paper for the class.

Instructor(s): Augustus Rose Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu (include writing sample). Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40206

CRWR 20210. Technical Seminar in Fiction: Understanding Point-of-View. 100 Units.

TBD

Instructor(s): Will Boast Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40210

CRWR 20211. Technical Seminar in Fiction: The Dilemma. 100 Units.

Some of the most compelling works of fiction are built around moral, social, and psychological dilemmas. Characters are set loose in a dark woods of ambiguity and conflicting values, where they reveal themselves (and their/our humanity) through the decisions they make, the actions they undertake. Such stories present a dramatized prism of arguments and resist easy 'lessons.' Rather, they end with a question mark that invites conversation between reader and narrative long after the story has ended. The challenge for writers, of course, is to avoid polemic, instead exploring this moral, social, and psychological terrain in a way that is even-handed and flows organically out of character. In this technical seminar, we will read fiction (by writers like James Alan McPherson, Graham Greene, Tayari Jones, and Cynthia Ozick, among others) that centers on an uneasy choice between moral positions. We will examine how the dilemma shapes conflict and plot, and, perhaps most important, how the writer invites the reader to get lost in a dark woods alongside the story's characters. The emphasis of this course will be on critical writing, but students will also have opportunities to write creative responses to the readings and experiment with the craft techniques we discuss.

Instructor(s): Stephanie Soileau Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40211

CRWR 20212. Technical Seminar in Fiction: Literary Digressions. 100 Units.

In this technical seminar, we will set about exploding the traditional 'rules' of fiction craft in order to broaden our grasp of intention and technique. Each week, using Charles Baxter's *Burning Down the House* as our textbook, we will focus on a nontraditional approach to a craft element (e.g., anti-epiphanic endings, counterpointed characters, rhyming action, etc.). We will analyze the fictional element in an assigned short story and write a short craft analysis, meditating on both the risk and payoff of these literary digressions. Then we'll experiment with the technique in a short writing exercise. Although this is not a formal workshop, we will share and receive feedback in brief '10 Minute Workshops.' The end of the semester will culminate in a portfolio of exercises and techniques.

Instructor(s): Julie Iromuanya Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40212

CRWR 20213. Technical Seminar in Fiction: Writing Autobiographically. 100 Units.

Many if not most writers draw on their own lives. Transforming the raw stuff of experience, personal and/or family history, and intimate expertise is not, of course, as straightforward as it might seem. Does writing autobiographically necessarily equal 'confession'? Or are there other ways of writing the self? Where exactly is the line between personal essay/memoir and autobiographical fiction? What pact do we form with the reader when the material is explicitly close to our own lives? What pact do we have with ourselves and the real people we write about? Readings will include works by Sylvia Plath, Leslie Feinberg, Kathryn Harrison, Akhil Sharma, Michael Cunningham, Ralph Ellison, and St. Augustine. Critical responses and creative exercises alike will help you understand the nuances, challenges, and pleasures of writing autobiographically.

Instructor(s): Will Boast Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40213

CRWR 20214. Technical Seminar in Fiction: Writers in Conversation. 100 Units.

Whenever we write stories, we are in conversation with other writers, living or dead. Sometimes that conversation is quiet and intimate—a matter of subtle influence, much as we take on unconsciously the diction and cadences of admired mentors and beloved friends. Other times, the conversation is boisterous, a meeting of minds, a deepening of our collective discourse. Still other times, the conversation gets heated. We feel the need to set the record straight, give voice to a neglected or misrepresented character, vindicate a monster or indict a hero. In this technical seminar, we will read writers responding to other writers—Victor Lavalle & H.P. Lovecraft, Haruki Murakami & Franz Kafka, Doris Lessing & Charlotte Perkins Gilman, Joyce Carol Oates & James Joyce, among others—and examine how these writers retell, modernize, and comment upon influential stories, making the stories their own while incorporating familiar elements. The emphasis of this course will be on critical writing, but students will also have opportunities to write creative responses to the readings and experiment with the craft techniques we discuss.

Instructor(s): Stephanie Soileau Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40214

CRWR 20215. Technical Seminar in Fiction: The Mechanics and Aesthetics of Plot. 100 Units.

What is plot—beyond the dramatic events that take place in a work of fiction? Why is it important—beyond engaging us in what happens to a story's characters? Can plot be just as consequential to character-driven, aesthetic-driven, or idea-driven fiction as it is to fiction that privileges incident and action? And what exactly do we mean when we label stories in this fashion? This technical seminar will examine these questions and the many others that concern this crucial but often underrated element of craft. We will begin with the basic mechanics of plot and work towards a deeper understanding of all its effects on a narrative, whether they be dramatic, formal, characterological, even philosophical. Most importantly, we will try to apply these lessons to our own work, no matter the label we assign to our narrative and aesthetic interests. The course will include writing exercises, weekly reading responses, presentations, and a final essay.

Instructor(s): Vu Tran Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40215

CRWR 20302. Technical Seminar in Poetry: Units of Composition. 100 Units.

This course aims to investigate, through a range of readings and writing exercises, various units of composition and the ways that they interact with each other in poems. We will study and imitate traditional formal approaches, such as the poetic foot, meter, caesuras, sprung rhythm, rhymed stanzas, and refrains. We also will study and imitate modernist and contemporary 'units,' such as the word (approached, for example, etymologically or connotatively), the free verse line, the variable foot, vers libre, serial form, the sentence (the 'new' sentence, but also modulations of basic syntax), the paragraph, the page, and forms of call and response. This reading intensive course will draw from a selection of mostly modern and contemporary poetry, poetics, and criticism. Students will be expected to submit weekly technical exercises, complete several short critical responses, write a longer essay, and submit a final portfolio of revised material.

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40302

CRWR 20305. Technical Seminar in Poetry: Imagery and Description. 100 Units.

This technical seminar explores different theoretical and practical approaches to imagery and description in poetry. To begin with, we'll try to distinguish between the two terms, to the extent necessary and possible. Then we will examine and practice writing radically different approaches to image making and description (e.g. synesthetic, collaged, surrealist, eco-poetic, abstract, juxtapositional, haiku, etc.). Along the way, we'll consider theories about the rhetorical functions of imagery and description in the poetic text. Although this course focuses on poetry, it is certainly relevant to prose writers interested in the role of descriptive detail in literary writing, and for comparison we will examine famous examples of description in works of fiction. Students should plan to submit a weekly exercises, write a critical essay, and give a class presentation.

Instructor(s): Nathan Hoks Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40305

CRWR 20307. Technical Seminar in Poetry: Line, Stanza, Syntax, Form. 100 Units.

From the fragmented to the recurrent, from the recurrent to the intricate, from the precise to the vernacular, from the vernacular to the artificial; we'll discuss the why, the how, and the effects of a few of the possible forms and devices of poetry.

Instructor(s): John Wilkinson Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40307

CRWR 20308. Technical Seminar in Poetry: Serious Goofballs, or Humor in Poetry. 100 Units.

Poetry writing is often undertaken with solemnity, but perhaps we've been approaching it all wrong. What if we read Prufrock as stand-up comedy? Dickinson as a dark humorist? Stein as a prankster? Along with rethinking the daring but subtle humor of a few classic poets, this course will trace specific kinds of comedic moves in contemporary poetry. We'll try to understand the maneuvers that make for varieties of humor, such as absurdity, irony, satire, parody, ridicule, and dark humor. Readings may include work by John Ashbery, Sylvia Plath, Russel Edson, Bernadette Mayer, Dortha Lasky, James Tate, Dean Young, Mary Ruefle, Wendy Xu, Anne Carson, and Kenneth Koch. Students should expect to complete a series of writing exercises, give a presentation, and write a final essay. All while smiling.

Instructor(s): Nathan Hoks Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40308

CRWR 20401. Technical Seminar in Nonfiction: The Synecdoche. 100 Units.

Every writer of personal nonfiction knows that ultimately the story isn't about them: it's about something larger, perhaps universal, and their personal story is merely a means to that end. The key to this paradox is the synecdoche, or the part that stands for the whole. It's the grain of sand that contains the universe, the one story that by implication tells other peoples' stories. When Anne Fadiman told the story of a Hmong immigrant to the United States, she told a larger story about immigration in general. So did Joan Didion, in *Where I Was From*; by telling the story of her family, she told the story of California, and by telling the story of California she told the story of the West and thus of America. Rian Malan did the same in *My Traitor's Heart*: by telling the story of his family he told the story of Apartheid, and thus of South Africa, and of our segregated world. Through weekly exercises and analytic essays you'll see how these and other writers locate the universal in their particulars, and you'll apply their examples to your own work.

Instructor(s): Dan Raeburn Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40401

CRWR 20404. Technical Seminar in Nonfiction: Forms of the Essay. 100 Units.

The essay, derived from the French term *essayer* meaning 'to try' or 'to attempt,' is not only a beloved sub-genre of creative nonfiction, but a form that yields many kinds of stories, thus many kinds of structures. Araceli Arroyo writes that the essay can 'reach its height in the form of a lyric, expand in digression, coil into a list, delve into memoir, or spring into the spire of the question itself all with grace and unexhausted energy.' In this course, we will analyze the essay's continuum, marked by traditional, linear narratives on one end, and at the other, everything else. In our class, we will investigate the relationship between content and form. What does it mean to be scene-driven? What happens when a narrative abandons chronology and event, propelled instead by language and image? What is gained through gaps and white space? You will leave this class with a strong grasp of content's relationship to form, prepared to participate effectively in creative writing workshops. You will also create a portfolio of short writings that can be expanded into longer pieces. Readings will include: *Nox* by Anne Carson; *A Bestiary* by Lily Hoang; *Tell Me How It Ends: An Essay in Forty Questions* by Valeria Luiselli; *Citizen: An American Lyric* by Claudia Rankine; *Essays on the Essay* edited by Ned Stuckey-French

Instructor(s): Kathleen Blackburn Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40404

CRWR 20405. Technical Seminar in Nonfiction: Narrative Pacing. 100 Units.

The goal of this course will be to understand the methods and mechanisms of effective narrative pacing in creative nonfiction by carefully dissecting a variety of texts, ranging from Woolf's 'The Death of the Moth,' to Solzhenitsyn's *The Gulag Archipelago*, and Bechdel's *Fun Home*. Students will be expected to actively participate in class discussion, read from a broad assortment of texts, and complete a series of corresponding creative writing prompts testing the principles discussed in class.

Instructor(s): Lina Ferreira Cabeza-Vanegas Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40405

CRWR 20406. Technical Seminar in Nonfiction: Autopsy of a Scene. 100 Units.

Few elements in literature are as effective in constructing both lyric and narrative arcs that capture the attention and imagination of a reader as well crafted scenes. The creation of the illusion of movement, time and rich sensory experiences is by no means an easy task, however, and it must take into consideration pacing, punctuation, spatial references and white space among a vicissitude of other components. In addition, each genre has a different tolerance for and use of the scene itself. Nonfiction brings the added difficulty of much needed research, and the distortion of memory, while poetry thrives on limitations that seem to counter the organic development of a scene, while fiction can be easily overwhelmed by the apparent limits of its limitlessness. This course is intended to address these questions through a series of readings, lectures and writing prompts designed to dissect the matter at hand and equip the writer with the necessary tools to build a well-paced and effective scene.

Instructor(s): Lina Maria Ferreira Cabeza-Vanegas Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40406

CRWR 20407. Technical Seminar in Nonfiction: Characters and Your Character. 100 Units.

The art of nonfiction is sometimes described as the art of leaving things out, and nowhere is this more pronounced and problematic than in capturing character. The way you characterize people, places, and things ultimately says as much about you, the author, as it does about what you're characterizing, and the goal of this class is to teach you to do so economically yet accurately, or at least fairly. Not reductively. We'll start with the surface: with the eccentricities, tics, and quirks that make someone who they are, or appear to be. How to capture these oddities without sliding into caricature? Writers often default to physical description, but we'll devote as much or more effort to the verbal, i.e., to exercises in dialogue, whose true power is not to convey information but character. We'll also practice writing in body language, which is equally revealing of mien, demeanor, and underlying motivation. Beneath it all lies what we call 'true character': the values, morals, and ideals evident in deeds, facts, and what we might call properties, the essential characteristics of a culture, city, or place. Our weekly reading and writing assignments and exercises will culminate in a creative portfolio and a final essay, as well as the skills you'll need to take workshops.

Instructor(s): Dan Raeburn Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40407

CRWR 21500. Advanced Translation Workshop: Prose Style. 100 Units.

Purple, lean, evocative, muscular, literary, exuberant, lucid, stilted, economical. These are all labels that critics and reviewers have used to characterize prose styles that call attention to themselves in distinct ways. Of course, what constitutes style not only changes over time, but also means different things in different literary traditions. How, then, do translators carry style over from one language and cultural milieu to another? And to what extent does style structure storytelling? We will explore these questions by reading a variety of modern and contemporary stylists who either write in English or translate into English, paying special attention to what stylistic devices are at work and what their implications are for narration, characterization, and world building. Further, we'll examine the range of choices that each writer and translator makes when constituting and reconstituting style, on a lexical, tonal, and syntactic scale. By pairing readings with generative exercises in stylistics and constrained writing, we will build toward the translation of a short work of contemporary fiction into English. To participate in this workshop, students should be able to comfortably read a literary text in a foreign language.

Instructor(s): Anne Janusch Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 41500

CRWR 21502. Advanced Translation Workshop. 100 Units.

All writing is revision, and this holds true for the practice of literary translation as well. We will critique each other's longer manuscripts-in-progress of prose, poetry, or drama, and examine various revision techniques-from the line-by-line approach of Lydia Davis, to the 'driving-in-the-dark' model of Peter Constantine, and several approaches in between. We will consider questions of different reading audiences while manuscripts for submission for publication, along with the contextualization of the work with a translator's preface or afterword. Our efforts will culminate in not only an advanced-stage manuscript, but also with various strategies in hand to use for future projects. Students who wish to take this workshop should have at least an intermediate proficiency in a foreign language and already be working on a longer translation project.

Instructor(s): Jason Grunebaum Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu (include writing sample). Attendance on the first day is mandatory. Students who wish to take this workshop should have at least an intermediate proficiency in a foreign language and already be working on a longer translation project.

Equivalent Course(s): CRWR 41502

CRWR 20204. Technical Seminar in Fiction: The First-Person Voice. 100 Units.

As readers, we can all sense when the narrator doesn't seem convincing. What makes a first-person voice seem 'real' to readers? How does this voice naturally move - whether in moments of boredom, of distress, of passion? Ultimately, what we're asking as writers is, How can interiority be achieved within this point-of-view? In this reading course, we will examine the first-person voice in contemporary fiction by authors such as Samantha Hunt, Ben Lerner, Carmen Maria Machado - always with a craft-specific eye on how we can fine-tune our own narrators' voices. Expect to write both critical papers and creative works.

Instructor(s): Ling Ma Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40204

CRWR 20216. Technical Seminar in Fiction: Perspective. 100 Units.

Who (or what) tells a story might be the most important decision a writer makes. The narrator of a work of fiction will tell the story from a particular point in time, will have particular biases, agendas, frames of reference, lexicon, insights, and history. And all of those factors contribute to their perspective-in fact, a story's narrative could be understood as the delivery of the narrator's perspective to the reader. In this seminar, we will examine perspective in works of fiction, with an eye towards discovering the elements that comprise a given perspective and also what we might learn as writers from the work. Along with the reading material, assignments will include reading responses, creative writing exercises, and presentations.

Instructor(s): Mitchell Jackson Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40216

CRWR 20217. Technical Seminar in Fiction: Elements of Style. 100 Units.

What we call style is more than literary flourish. Control of a story begins with a writer's characteristic approach to the line. Style dictates and shapes immersive and impactful worlds of our creation. It's also indicative of a work's larger themes, philosophies, and aesthetic sensibility. In this class, we'll examine fiction by wordsmiths such as James Baldwin, Gabriel García Márquez, Toni Morrison, and Marguerite Duras in order to contemplate the influence that elements such as diction, syntax, rhythm, and punctuation have on a writer's style.

Instructor(s): Julie Iromuanya Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 40217

CRWR 22110. Advanced Fiction Workshop: Exploring Your Boundaries. 100 Units.

This advanced fiction workshop is for students who have taken Beginning or Intermediate Fiction Writing and produced a body of work, large or small, that reflects their developing aesthetic. Our workshops will focus on the fundamentals of craft like language, voice, and plot and character development, but with an eye also on expanding the formal possibilities in our storytelling. To that end, we'll examine the work of writers (Jorge Luis Borges, Julio Cortázar, Donald Barthelme, David Foster Wallace, Alice Munro, Tim O'Brien, et al.) who experiment with form, who unravel the rules of the 'well-made story' and reconfigure it in order to present their unique vision of the world—an encouragement for you not necessarily to be 'experimental' writers, but to explore more meaningful, memorable, and perhaps innovative ways of telling your own stories.

Instructor(s): Vu Tran Terms Offered: Autumn

Note(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 42110

CRWR 22113. Advanced Fiction Workshop: The Love Story. 100 Units.

This advanced fiction workshop will examine the ways we write about love in fiction: romantic love, familial love, unconventional love, etc. Our basis will be the notion that love is ultimately self-knowledge, which lies at the core of all great fiction, and like self-knowledge it involves an endless and inexhaustible act of seeking. We will read and discuss stories centered on the topic of love, this act of seeking, and we will do writing exercises that help us write compellingly, convincingly, and unsentimentally about deeply sentimental things. Every student will also complete and workshop a full-length story that explores the idea of love on some level. They will additionally write a significant revision of this story, which they will either present for a second workshop or turn in at the end of the quarter. Please expect a rigorous but constructive workshop environment where being a critic and an editor is as essential as being a writer.

Instructor(s): Vu Tran Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Submit writing sample via www.creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 42113

CRWR 22119. Advanced Fiction Workshop: Music in Fiction and Improvised Composition. 100 Units.

This workshop-based course is suitable for any student wishing to refine and expand their understanding of how fiction gets made, and will be of particular interest to those exploring new stylistic possibilities or working in both the disciplines of prose writing and music. We'll look at the Modernists' experiments with refrain, repetition, and pure verbal music, their attempts 'to find out what's behind things,' as Woolf put it. We'll consider literary improvisation as Ellison meant the term: the gathering of seemingly disparate materials to synthesize something wildly new. We'll explore how musicians are often allowed (or forced) to cross cultural boundaries through texts like Baldwin's 'This Evening, This Morning, So Soon' and interviews with Wendy Carlos and Fred Hersch. We'll also look at the burgeoning field of rhythmology, and use it as a bridge to examine how music also borrows from fiction, through storytelling in song and a guest lecture from a Pulitzer-Prize-nominated composer.

Instructor(s): Will Boast Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 42119

CRWR 22121. Advanced Fiction Workshop: Young Adult Literature. 100 Units.

The books and stories we read as teenagers are often some of the most influential in developing our tastes as adult readers and writers of fiction. In this advanced workshop course, we'll discuss the genre of young adult literature through evaluation of your own writing: what are its defining characteristics, and what's the difference between writing for a young adult audience versus writing books and stories about teenagers but designed for adult readers? Students should be working on book-length projects involving teenaged protagonists, no matter the intended audience; please come to the first session with either work to submit or a sense of when you'd be able to sign up for a slot. We'll spend most of our time evaluating student work, learning how to become both generous and rigorous critics, and we'll also talk about the books that influenced us the most as young adult readers and the books we're reading today, from contemporary writers like John Green and Rainbow Rowell to classic authors like S. E. Hinton and Madeleine L'Engle. Students will read at least one or two novels during the quarter as well.

Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 42121

CRWR 22131. Advanced Fiction Workshop: Migration Stories. 100 Units.

In this advanced fiction workshop, students will read and write stories of migration. We will use research and imagination to construct narratives about the ways in which human beings move across time and place, and to work on creating characters who are forged and reformed by their cultural, linguistic, and familial contexts (both familiar and unfamiliar). Historical research will be a key component. Half of each class meeting will be devoted to the careful consideration of student work. Readings include fiction by Edwidge Danticat, Gish Jen, Chang Rae Lee, Jamaica Kincaid, Akhil Sharma, and Gene Luen Yang.

Instructor(s): Rachel DeWoskin Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 42131

CRWR 22132. Advanced Fiction Workshop: Strange Magic in Short Fiction. 100 Units.

This course aims to deepen your understanding of the craft of short fiction through intensive study of contemporary writers and through workshops of both your own work and that of your classmates. Together we will examine stories by Mary Gaitskill, Kevin Brockmeier, Charles Yu, and others, reading as writers, searching not for theme but for a sense of how the stories were created, what craft choices the authors made, and what their structures can teach us as we create our own narratives. In addition to these readings, you will complete several short writing exercises and one longer story, which you will workshop and substantially revise. You will also engage with the work of your peers, delivering thoughtful, encouraging, constructive critiques.

Instructor(s): Benjamin Hoffman Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 42132

CRWR 22136. Advanced Fiction Workshop: Writing Social Change. 100 Units.

In this course, we will examine character-driven novels about worlds in the midst, on the brink, or during the aftermath of social change. We'll observe the strategies that authors deploy to construct a compelling and immersive world, and we'll catalog the methods they use to alter social systems and social order. Who has power and who doesn't? How is power maintained and how is it subverted? How does the human spirit engage with a world beyond its comprehension? And how do authors, using characters as the vehicle, illuminate larger thematic and moral questions? This class will concentrate on longer works (novels, novellas, and novels-in-stories), and we will workshop the first 30-40 pages of your manuscript, focusing in particular on its promises and possibilities. The end goal is for you to leave the class with the beginning of your novel, a synopsis, a chapter outline, and a plan for how to proceed with your project.

Instructor(s): Julie Iromuanya Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 42136

CRWR 22137. Advanced Fiction Workshop: The College Novel (& Story) 100 Units.

In this advanced fiction workshop, we will examine and write narratives set at college, the so-called campus and varsity novels (and, in our case, short stories). We will try to capture the attendant promise and uncertainty of life on the cusp of adulthood, asking what it means to come of age, to age, to experiment, and possibly, to regress. We'll attempt to veer away from cultural cliché and caricature to portray the truth of life on campus and come to grips with the way you live right now, as we consider what it means to borrow the title of one novel to make our home among strangers. Students will read published works and submit two stories or novel excerpts for workshops. Please expect a rigorous but constructive workshop environment where being a critic and an editor is essential.

Instructor(s): Ben Hoffman Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 42137

CRWR 22138. Advanced Fiction Workshop: The Short Story Collection. 100 Units.

In this course, we will not only explore how stories function individually, but also how they can come together in a collection to form a coherent and unified story or experience. Please come prepared to read and discuss published story collections, focusing in particular on the formal and thematic ties of discrete narratives. With this in mind, we will also workshop two to three of your own short stories. By the end of the course, you will have written the first three stories of your collection and developed a plan for how to proceed with the project.

Instructor(s): Julie Iromuanya Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 44138

CRWR 22139. Advanced Fiction Workshop: Home. 100 Units.

Where's your home? Why is that home? The great Toni Morrison writes, 'Home is memory and companions and/or friends who share the same memory.' In this advanced fiction workshop, we will write and read work that explores aspects of home:

landscape, people, language, history, customs, memories, etc. The first few weeks we will read and discuss exemplary short stories and novel excerpts from writers including Edward P. Jones, Flannery O'Connor, Junot Diaz, and Jesmyn Ward. In later weeks, each workshop member will write and submit one full-length story or stand-alone chapter for workshop and either a second story or stand-alone chapter or significant revision of the first story. While each submission will receive holistic feedback, we will also pay particular attention to the aspects of home explored in each submission. Furthermore, will also work to deepen the skills necessary to revise your work and to critique the work of others. The course will include writing exercises to assist in exploring a range of strategies, impulses, and ideas.

Instructor(s): Mitchell S. Jackson Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 42139

CRWR 22140. Advanced Fiction Workshop: Killing Cliché 100 Units.

It's long been said that there are no new stories, only new ways of telling old ones, but how do writers reengage familiar genres, plots, and themes without being redundant? This course will confront the literary cliché at all levels, from the trappings of genre to predictable turns of plot to the subtly undermining forces of mundane language. We will consider not only how stories can fall victim to cliché but also how they may benefit from calling on recognizable content for the sake of efficiency, familiarity, or homage. Through an array of readings that represent unique concepts and styles as well as more conventional narratives we will examine how published writers embrace or subvert cliché through story craft. Meanwhile, student fiction will be discussed throughout the term in a supportive workshop atmosphere that will aim not to expose clichés in peer work, but to consider how an author can find balance-between the familiar and the unfamiliar, between the predictable and the unpredictable-in order to maximize a story's effect. Students will submit two stories to workshop and will be asked to write critiques of all peer work.

Instructor(s): Baird Harper Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 42140

CRWR 22141. Advanced Fiction Workshop: First-Generation Stories. 100 Units.

TBD

Instructor(s): Will Boast Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 42141

CRWR 22142. Advanced Fiction Workshop: The Fantastical. 100 Units.

From the short stories of George Saunders to the TV show *Atlanta*, speculative fiction often introduces the fantastical into narratives seemingly set in everyday reality. This workshop will focus on the fantastical in contemporary literature, and the logistical issues and questions that commonly arise around it. We will look at the role of fantastical in puncturing the veil of 'realism.' What is the fantastical doing that can't be done through other narrative modes? How does the narrative metabolize this disruption? How should the fantastical be tempered by the mundane? Students for this course should not only have an interest in speculative fiction, but should have already made some efforts within this mode. Note that this course does not focus exclusively on fantasy or science fiction, though there may be some genre overlap. Readings will include works by Rachel Ingalls, Ted Chiang, Nana Kwame Adjei-Brenyah, and more.

Instructor(s): Ling Ma Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 42142

CRWR 22143. Advanced Fiction Workshop: Plot. 100 Units.

Students will write and turn in two full-length stories or novel chapters for this workshop-based class. The class will pay special attention to plot: what it is, what the specific engines are that drive it, how it's connected to such other elements as character, setting, and dialogue. In addition to submitting and reading for workshop, expect to read and discuss at least one novel and a selection of short stories.

Instructor(s): Augustus Rose Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 42143

CRWR 23110. Advanced Poetry Workshop: The Long Poem. 100 Units.

This advanced writing workshop will explore the many ways in which poets since antiquity have approached the idea of 'the long poem.' In a world of ever-decreasing attention spans, we'll begin by considering what might motivate such a work today, and will read a wide range of contemporary texts, from linked sequences, to 'middle-distance' or multi-part poems, to book- (or books-) length projects, that offer a rich variety of responses. Over the course of the quarter, students will conceive and develop a sustained poetic project that extends beyond the parameters of the conventional 'lyric' poem. In addition to students' original work, primary texts to be considered may include excerpts from Homer's *Illiad*, H.D.'s *Helen* in Egypt, Anne Carson's 'Glass Essay,' Robin Coste Lewis' 'Voyage of the Sable Venus,' Alice Oswald's *Memorial*, Inger Christenson's *Alphabet*, and A.R. Ammon's *Garbage*.

Instructor(s): Suzanne Buffam Terms Offered: Spring

Prerequisite(s): Instructor consent required. Submit writing sample via www.creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 43110

CRWR 23119. Advanced Poetry Workshop: Poetry Of & Off the Page. 100 Units.

Is there a place for poetry in a society in which reading has been declared dead-where at the very least, reading threatens to be eclipsed by scanning? In this workshop/laboratory, we will explore material whose response is a delirious yes-poetry that revels in charging the confines of the page and book. Exposure to an archive of modernist and contemporary visual and sound poetry, artists' books, contemporary installation and performance works, and relevant theories of media dislodgment will help us compose our own answers to the (old) question: what forms are poems obliged or inspired to take as language goes viral, in the face of total information, digitization, and post-literary culture? Readings and viewings in 20th- and 21st-century poetry and poetics, visits to local writing-arts collections, and class visits by local artists will help us generate our own works, which will be workshopped together. Students will complete weekly assignments across media, and engage with the writing of their peers formally, while working toward a culminating piece in a medium of their choice: this final piece can take the form of a chapbook, performance, installation, or other pertinent channel.

Instructor(s): Jennifer Scappettone Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 43119

CRWR 23127. Advanced Poetry Workshop: Make It Old. 100 Units.

Poetry after Modernism has been shaped by Ezra Pound's directive to 'Make it new.' Yet Pound himself derived this slogan from the most ancient of sources—an inscription on the washbasin of the first Shang dynasty king Ch'eng T'ang (1766-1753 BC). In this advanced poetry workshop, we will study some of the ways that contemporary poets revisit ancient texts from various cultures in order to open up new aesthetic and historical dimensions in our own poetry. Students will enjoy considerable freedom in how they conceive of their own poetry's relationship to diverse histories; from one week to the next, they may choose to write in a historical genre or form (the Latin hexameter, the Japanese haibun), in response to some ancient work (the Sundiata epic of old Mali, the ancient Egyptian Book of the Dead), or they may invent their own ways to 'make it old.' Texts may include Armand Schwerner's *The Tablets*, Anne Carson's *Autobiography of Red*, Aga Shahid Ali's *Call Me Ishmael Tonight*, Christopher Logue's *War Music*, and Cecilia Vicuña's *New and Selected Poems*, to name only a few possibilities.

Instructor(s): Srikanth Reddy Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 43127

CRWR 23128. Advanced Poetry Workshop: Apocalyptic Poetry. 100 Units.

It's clear, increasingly, that we live in a time of imperiling crisis-political, ecological, even religious. Apocalypse is one of the genres poets use to make moral claims on the present, as well as to envision the nature of reality to come. Apocalypse also refers to vision, to a way of seeing that is both allegorical and incendiary. How, within the realms and forms of the contemporary poetic imagination, can you persuasively engage apocalypse? In this workshop, students will approach your own apocalyptic claims with those of some visionary masters in hand, including Emily Dickinson, Robert Lax, Fanny Howe, Pam Rehm, Adonis, Lawrence Joseph, Brian Teare, Autumn Richardson, Tim Lilburn, and Richard Skelton. Forms, language, and vision will absorb our study with a focus on visualizing and sharing your own apocalyptic poetry.

Instructor(s): Peter O'Leary Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 43128

CRWR 23129. Advanced Poetry Workshop: Radical Recycling. 100 Units.

In this advance poetry workshop we will turn from the Romantic notion of poetry as 'the spontaneous overflow of powerful feeling...recollected in tranquility' towards a postmodern practice of radical recycling in response to global crisis. We will resurrect, excavate, interrogate, pilfer from, and otherwise raid a variety of archives, as a means of artistic engagement with the circulating materials of civic life. We will study examples of literary works whose principal technique is one of scavenging among such nonliterary sources as court transcripts, weather reports, grammar lessons, a war criminal's memoirs, and the dictionary itself, to create fresh encounters with language. Texts to be studied will include Theresa Hak Kyung Cha's *Dictee*, Robin Coste Lewis' *Voyage of the Sable Venus*, Charles Reznikoff's *Testimony*, Lisa Robertson's *The Weather*, C.D. Wright's *One Big Self*, and M. Nourbese Philips' *Zong*, among others. Students will spend the quarter seeking out and assembling their own archives, and experimenting on the page with acts of salvage. Because this is a workshop, a large part of every class will be devoted to discussions of students' original work.

Instructor(s): Suzanne Buffam Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 43129

CRWR 23130. Advanced Poetry Workshop: Intertext. 100 Units.

Might there be a kind of poem that is a parasite latched on to a host body? This poetry workshop invites students to read and write poetry that, either overtly or subtly, engages with other texts. We'll examine ways that poems create these intertextual relationships (e.g. quoting, alluding, echoing, stealing, sampling, imitating, translating...) and test out these methods in our own writing. Students should expect to engage with the basic question of how their work relates to other texts. Expect to

read a substantial amount of work by modern and contemporary poets, submit new original poems for workshop, complete intertextual writing exercises, keep a reading journal, write critical responses to the readings and peers' work, and submit a final portfolio. A substantial amount of class time will be spent workshoping student work.

Instructor(s): Nathan Hoks Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 43130

CRWR 24004. Advanced Nonfiction Workshop: Writing in Crisis. 100 Units.

In the radically different environment we anticipate for this fall, this course will work creatively to build individual writing projects and collaborative ones. Students will keep observation notebooks and we'll develop an ongoing class publication online with reports from all the locations students are residing in (this might be a room, a neighborhood, a landscape, a city, or other kinds of places). The course will consider creative research methods in constrained times, with special attention to walking and other local kinds of investigation. We'll discuss observation, interviewing, historical research, keeping a notebook, supportive editorial relationships, and working from photography, video, and the internet. Some thematic clusters and possible reading: walking, local, and photographic investigation (Rebecca Solnit, Francisco Cantú, Teju Cole, Hervé Guibert); reckoning with history, ideas of reparations (Claudia Rankine, Layli Long Soldier, Ta-Nehisi Coates, Tommy Orange, Nikole Hannah-Jones) migration, testimony, interview, and borders (Valeria Luiselli, Liu Xiaobo, Edwidge Danticat), climate crisis and slow emergency (Winona LaDuke, Elizabeth Rush), notebook practices (H.D. Thoreau, Sharifa Rhodes-Pitts, Walter Benjamin). Students will write in an ongoing way for our shared publication, produce essays to be workshoped in class, and develop writing, researching, and editorial skills.

Instructor(s): Rachel Cohen Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Submit writing sample via www.creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 44004

CRWR 24007. Advanced Nonfiction Workshop: Long-form Journalism. 100 Units.

This workshop-based nonfiction course is suitable for any student who wants to work on long-form (1500 words and up) journalistic projects. To supplement our workshop submissions, we'll look at a variety of texts touching on (and often combining) reporting on political, cultural, and environmental subjects. We'll consider interviewing techniques and profile writing, as well works concerned with travel (of the non-touristic kind), sports, crime, politics, and the arts. We'll read pieces by the likes of Katherine Boo, Eula Biss, Matthew Power, Ryszard Kapuchinski, Rivka Galchen, Jia Tolentino, Ted Conover, Alex Mar, and Ta-Nehisi Coates. The emphasis of the course will be on written narrative journalism, but other approaches and mediums will be welcomed. Ideally, students will come into the course with projects already in mind, but we will also work on developing stories and pitches and talk about navigating the print, online, and new media landscapes.

Instructor(s): Will Boast Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 44007

CRWR 24013. Advanced Nonfiction Workshop: The Great American Essay. 100 Units.

This course aims to expand the writers' understanding of the genre and broaden their skillset by reading, discussing, responding to and challenging the notion of one cohesive and unquestionable nonfiction canon as we examine the birth and evolution of the cisatlantic essay in all its forms. From the Popol Vuh to the political mural, from the manifesto to the Facebook post, from Tecayehuatzin's elegy for the city that fell to the Spaniards in 1524 to Torrey Peters Facebook elegy for all the transgender people who fell prey to violence and indifference in 2016. Examining the development of the essay within the contained cisatlantic space will allow for, not merely, a focused dissection of what are sometimes termed the foundational elements of the genre, but also a close examination of the development of a literary identity throughout the Americas, and of the concept of Americanness throughout the cisatlantic canon. What did literary nonfiction mean to the earliest American literature? What does 'America' mean to essayists writing at the borders of countries, and the edges of society? What makes the great American essay great and what American? Students will be expected to read and discuss a broad array of cisatlantic nonfiction, respond to prompts crafted around these readings, and then to make their own contribution to this strange and defiant corner of the literary world.

Instructor(s): Lina Ferreira Cabeza-Vanegas Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 44013

CRWR 24014. Advanced Nonfiction Workshop: The Performative Essay. 100 Units.

The advantage of working within a non-genre is best understood as a spatial metaphor: the house of fiction has kicked us out, but so what? That only means we are free to roam a limitless landscape, mingling with other genres and establishing new traditions. In recent years publishers have begun to recognize that nonfiction writers are necessarily hybrid creatures, and as a result we are witnessing an explosion of exciting books that challenge our impulse to categorize literature. To name a few pioneers: Claudia Rankine, Joe Wenderoth, Anne Carson, Solmaz Sharif, and Jenny Boully. In this course, students will close read a variety of works that dissolve the lines between poetry and prose and visual art, exploring what is becoming known as 'the performative essay.' Our aim will be simple: to playfully experiment with innovative sources of narrative momentum each week, and to share our original hybrid works for energetic workshop discussions. A revision of the workshop essay, along with a critical essay on a reading of your choosing, will be turned in at the end of the quarter.

Instructor(s): Dina Peone Terms Offered: Spring

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 44014

CRWR 24015. Advanced Nonfiction Workshop: Inventing the Essay. 100 Units.

The essay is being radically invented, again, as new forms and technologies emerge day by day. In this workshop, students will help to build a curriculum of exciting new creations - podcasts, graphic essays, video essays, online formats following swipes or links, instagram essays, photoessays, and also conceptual timebound essays like experiences, walks, and installations. Students will be free to create and be workshoped in any of these forms as well as in works of print on paper. We'll explore these new forms side by side with some great inventors in the history of the form: Valeria Luiselli, James Baldwin, Virginia Woolf, Michel de Montaigne, and Shen Gua (sometimes rendered Shen Kuo). We'll be looking to see how new forms and new technologies grow up together, giving a historical background by looking at moveable type and encyclopedism in Shen Gua's thought, the printing press and Montaigne, the relationship of diaries, letters, and essays in Woolf, the long form magazine piece of the 1960s and James Baldwin, internet research and Luiselli's *Tell Me How It Ends*. Students will be workshoped twice, and revise their work of the quarter for a final project.

Instructor(s): Rachel Cohen Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 44015

CRWR 24016. Advanced Nonfiction Workshop: Other People's Stories. 100 Units.

Between the autopsical facts of science writing and the adaptations, novelizations and based-on-true-story stories, lies a very specific type of writing. The creative nonfiction exploration of the recounted lives of others. From Solzhenitsyn's 'Gulag Archipelago,' to Brian Doyle's 'Thirsty for the Joy,' from John Hershey's 'Hiroshima' and Art Spiegelman's 'Mouse' to Rebecca Skloot's 'The Immortal Life of Henrietta Lacks,' the world of nonfiction writing is rife with second, third and fourth hand stories in which the essayist must learn to negotiate the researched history of people and places, with the imagined mind of these people moving across equally imaginary spaces. How do we believably and respectfully tell others' stories? How do we learn to find them? How do we draw these stories out, jot them down? How do we know when to make them our own and when to leave them in the liminal space of another's inaccessible and inimitable experience? Where is the line between imaginative nonfiction and imaginary tales? This course is designed to tackle these specific questions through workshops of student work, writing prompts and guided discussions of assigned texts that attempt to unravel this very matter through numerous and varied approaches.

Instructor(s): Lina Ferreira Cabeza-Vanegas Terms Offered: Autumn

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 44016

CRWR 24017. Advanced Nonfiction Workshop: Culpability & Accusation. 100 Units.

Fiction writers say 'If there's no trouble, there's no story' - an easier adage without the presumption of truth. This class will consider techniques for rendering 'trouble' in narrative nonfiction. How can we write about the wrongs of others and the wrongs we ourselves have committed in a way that makes for a compelling story and an ultimately likable narrator? What makes a rendering of hate, abuse, indifference, ingratitude, or jealously compelling or empathetic in the end? What techniques of persona, characterization, humor, pacing, or form might help us write honestly and generously at the same time? And when generosity is not our aim, what other vehicles of connection are available to us? Readings may include essays by Jo Ann Beard, Richard Rodriguez, Shalom Auslander, Jesmyn Ward, Bret Lott, Albert Goldbarth, and Ocean Vuong.

Instructor(s): Tina Post Terms Offered: Winter

Prerequisite(s): Instructor consent required. Apply via creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 44017

CRWR 29200. Thesis/Major Projects: Fiction. 100 Units.

This advanced fiction course is for BA and MA students writing a creative thesis or any advanced student working on a major fiction project. It is primarily a workshop, so please come to our first class with your project in progress (a story collection, a novel, or a novella), ready for you to discuss and to submit some part of for critique. As in any writing workshop, we will stress the fundamentals of craft like language, voice, and plot and character development, with an eye also on how to shape your work for the longer form you have chosen. And as a supplement to our workshops, we will have brief student presentations on the writing life: our literary influences, potential avenues towards publication, etc.

Instructor(s): Vu Tran, Rachel DeWoskin, Ling Ma, Augustus Rose, Julie Iromuanya, Stephanie Soileau Terms Offered: Winter

Prerequisite(s): Required for students working on BA or MA thesis in fiction, as well as students completing a minor portfolio in fiction. Instructor consent required. Submit writing sample via www.creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Note(s): Instructor consent required. Submit writing sample via www.creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 49200

CRWR 29300. Thesis/Major Projects: Poetry. 100 Units.

This course is an advanced seminar intended primarily for students writing a Creative BA or MA thesis, as well as Creative Writing Minors completing the portfolio. Because it is a thesis seminar, the course will focus on various ways of organizing

larger poetic 'projects.' We will consider the poetic sequence, the chapbook, and the poetry collection as ways of extending the practice of poetry beyond the individual lyric text. We will also problematize the notion of broad poetic 'projects,' considering the consequences of imposing a predetermined conceptual framework on the elusive, spontaneous, and subversive act of lyric writing. Because this class is designed as a poetry workshop, your fellow students' work will be the primary text over the course of the quarter.

Instructor(s): Srikanth Reddy Terms Offered: Winter

Prerequisite(s): Required for students working on a BA or MA thesis in poetry, as well as students completing a minor portfolio in poetry.

Note(s): Instructor consent required. Submit writing sample via www.creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 49300

CRWR 29400. Thesis/Major Projects: Nonfiction. 100 Units.

This course is for students writing a creative BA or MA thesis in nonfiction, as well as Creative Writing Minors completing the portfolio. If space allows I'll also admit those who are working on a long piece of nonfiction on their own. It can be an extended essay, memoir, travelogue, literary journalism, or an interrelated collection thereof. It's a workshop, so come to the first day of class with your work underway and ready to submit. You'll edit your classmates' writing as diligently as you edit your own. I focus on editing because writing is, in essence, rewriting. Only by learning to edit other people's work will you gradually acquire the objectivity you need to skillfully edit your own. You'll profit not only from the advice you receive, but from the advice you learn to give. I will teach you to teach each other and thus yourselves, preparing you for the real life of the writer outside the academy.

Instructor(s): Dan Raeburn; Lina Ferreira Cabeza-Vanegas Terms Offered: Winter

Prerequisite(s): Required for students working on the BA/MA thesis in creative nonfiction, as well as Creative Writing Minors completing the portfolio in nonfiction. Instructor consent required. Submit writing sample via www.creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Note(s): Instructor consent required. Submit writing sample via www.creativewriting.uchicago.edu. Attendance on the first day is mandatory.

Equivalent Course(s): CRWR 49400

Critical Race and Ethnic Studies

Department Website: <http://csrpc.uchicago.edu>

Program of Study

The BA program in Critical Race and Ethnic Studies (CRES) offers an interdisciplinary curriculum that leads students to examine both the processes through which members of the human population have been constructed as racial and ethnic groups, and the political, historical, social, and cultural effects of this constitution. It trains students to think critically and comparatively about the varying ways in which race and ethnicity have been constructed in different parts of the world and in different historical periods. Focusing on conquest, subjugation, genocide, slavery, segregation, migration, and diasporas, among other related topics, CRES prompts students to examine the political, social, and cultural practices and institutions of minority or marginalized populations in colonial and postcolonial settings. These populations include, for example, Indigenous peoples in the Americas, Australia, and elsewhere who have been subjugated to subaltern positions by colonizers in their own homelands, and populations in Anglophone North America who originated in Africa, Asia, Europe, and Latin America whose identities have been ethnicized or stigmatized.

The program enables students to understand not only the historical emergence of race and ethnicity but also the conditions that have contributed to the persistence of these ascriptions in various polities, especially as they affect access to education, to the job market, and to welfare services, as well as participation in politics, in power, in the national economy, and in the arts.

A degree in CRES offers training designed to develop fundamental skills in critical thinking, comparative analysis, social theory, reading practices, and research methods regarding social classifications and cultural expressions. A student who obtains a BA in CRES will be well prepared to pursue graduate studies in the humanities, the social sciences, law, medicine, public health, social work, business, or international affairs, as well as in education, journalism, politics, or creative writing.

Program Requirements

Students are encouraged to meet the general education requirements of the College before declaring CRES as their major. They also have the option of combining CRES with any major in the College. They must meet with the director of undergraduate studies to discuss a plan of study as soon as they declare CRES as their major, no later than the end of Spring Quarter of their third year. They should also consult with the director of undergraduate studies to chart their progression in their course of study. It will help them to write a prospectus of what they intend to accomplish and discuss this with the director.

The major requires 13 courses, which must include the following common core: two courses in theories of race and ethnicity; one advanced theory seminar on race and ethnicity; a senior methods/practicum in Critical Race and Ethnic Studies; and a BA thesis or capstone senior project. Students will meet the remaining requirements by selecting from the CRES course list eight other courses that are consistent with the guidelines articulated in the next paragraphs. Four (4) of these courses must help them develop a specialty area, such as Ethnicity on the American Stage, Race in the American Public Sphere, Racial Capitalism in the Caribbean, Race and Slavery, Native Americans in the Colonization of the Americas, and Asians in American History. The options are numerous and cannot be articulated exhaustively here. Students will meet with the director of undergraduate studies to customize the combination of available courses that can help them define a personalized specialty area. This can be topical or geographic, grounded in history. The remaining four (4) courses are free electives that students can take in any combination, based on their availability, bearing in mind that they are pursuing a degree in CRES. Since CRES is an interdisciplinary major, students should bridge divisions in selecting courses for their specialty areas and their electives. They should select courses from at least two different divisions or professional schools, viz., the Humanities, the Social Sciences, the School of Social Service Administration, the Biological Sciences, the Law School, etc. Students will complete their major by either working on a capstone senior project or writing a BA thesis under the supervision of a faculty member teaching in CRES or who is an affiliate of the Center for the Study of Race, Politics, and Culture.

Students will follow one of two options in their requirements for the major beyond the CRES core:

Option 1: Four courses in a specialty area, as explained above, and four other courses drawn from the remaining electives. For example, one may choose to take four courses focused on African Americans, two others dealing exclusively with Asian Americans, and two others on another ethnic or racial diaspora. Students can satisfy their intellectual interests in any combination they like, provided the courses have a CRES number and are consistent with the program requirements articulated above. A student may specialize on any geographic area where racialized or ethnicized groups have been oppressed in or marginalized from the dominant political or socioeconomic structures of their polities.

Option 2: Students who wish to graduate with a double major in CRES and some other traditional discipline will first have to meet the CRES common core course requirements. They can use some courses in the traditional major to meet the CRES four-course requirement to customize a specialty area, by approval of the director of undergraduate studies. They will also have the option of including courses they have taken to meet their traditional-major requirements in their selection of the four remaining electives, provided the courses have a CRES number.

Students have the option of completing one of two senior projects—a capstone senior project or a BA thesis—in their fourth year in the College under the supervision of a CRES adviser who is an affiliate of the Center for the Study of Race, Politics, and Culture.

All CRES majors must take the senior methods/practicum in Critical Race and Ethnic Studies in Spring Quarter of their third year, which is meant to help synthesize the vast knowledge they have gained and to prepare them to write their BA thesis/capstone senior project. Students planning a double major in CRES and a traditional discipline write the same thesis for both. They must thus select a topic that is acceptable to both academic units.

The BA Thesis/Capstone Senior Project

The capstone senior project offers a chance to apply training in the major to tackle issues of race and ethnicity in a variety of settings and media. It could include: planning and organizing an undergraduate conference; creating a performance, play, art installation, or photo-essay; or participating in civic engagement in Chicagoland, among many options. The project can be carried out individually or in collaboration with other graduating seniors. It does not require the completion of an essay. Students must identify a project adviser and submit a short proposal to the director of undergraduate studies by the end of their third year of study. The capstone senior project is to be completed by the fifth week of the student's graduation quarter and will be presented at the CRES Symposium during the week before graduation. A recommendation of the adviser is required for honors.

The BA thesis enables students to apply their CRES coursework toward the development of original, critical research on a topic of their choice. Students must choose a thesis adviser and submit a formal BA thesis proposal to the director of undergraduate studies by the end of their third year of study. BA theses are due on May 1 of the student's fourth year or by the fifth week of the student's quarter of graduation.

Students pursuing a double major should consult with the directors of undergraduate studies in both CRES and their other major before starting work related to the BA thesis. A consent form, to be signed by both directors of undergraduate studies, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Major in Critical Race and Ethnic Studies

The requirements listed here apply to students in the Classes of 2023 and beyond. Students in the Classes of 2021 and 2022 should consult Archived Catalogs (<http://collegecatalog.uchicago.edu/thecollege/archives/>) and meet with the director of undergraduate studies or the student affairs administrator.

Summary of Requirements: Major in Critical Race and Ethnic Studies

2 courses in theories of race and ethnicity		200
1 advanced theory seminar		100
4 courses in one specific area of specialization*		400
4 CRES electives *		400
CRES 29800	BA Colloquium: Theory and Methods in Critical Race and Ethnic Studies	100
CRES 29900	Preparation for the BA Essay	100
Total Units		1300

* Courses should come from at least two different divisions or professional schools, viz., the Humanities, the Social Sciences, the School of Social Service Administration, the Biological Sciences, the Law School, etc.

Theories of Race and Ethnicity

The two courses in theories of race and ethnicity may be selected from the following courses:

All 12xxx CRES courses

CRES 12100	Contentious Natures: Race, Nature, and Power	100
CRES 12200	Introduction to Critical Race Studies: Historical, Global, and Intersectional Perspectives	100
CRES 12300	Discovering Anthropology: Reading Race	100

Advanced Theory Seminar

The advanced theory seminar may be selected from the following courses:

All 22xxx CRES courses

CRES 22000	Lethal Landscapes, Toxic Worlds: Geographies of Race, Risk, and Contingency	100
CRES 22775	Racial Melancholia	100

Grading

All courses must be taken for a quality grade unless a course only offers a P/F grading option.

Honors

The BA with honors is awarded to all students who meet the following requirements: a GPA of at least 3.25 overall and 3.5 in the major, and a grade of A- or above on the BA thesis/capstone senior project.

Advising

Each student must choose an adviser who is a member of the Critical Race and Ethnic Studies core faculty (<https://csrpe.uchicago.edu/people/faculty/>) by the time the BA thesis proposal is turned in at the end of the third year. Students are expected to have consulted with the student affairs administrator to identify a faculty adviser and to design their program of study by the beginning of their third year (after the declaration of the major). Students may continue to seek advice from both the student affairs administrator and their faculty adviser while completing their programs of study.

Minor in Critical Race and Ethnic Studies

The minor in Critical Race and Ethnic Studies (CRES) consists of five courses. Credit toward the minor for courses taken at any other institution must be discussed with the director of undergraduate studies in advance of registration. Language courses may not be used to fulfill the CRES minor requirements. Students must receive the approval of the minor program by the director of undergraduate studies or student affairs administrator on a form obtained from their College adviser. This form must then be returned to the College adviser by the end of Spring Quarter of the student's third year.

Courses in the minor may not be double counted with the student's major(s), other minors, or general education requirements. Courses in the minor must be taken for quality grades unless a course only offers a P/F grading option, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Summary of Requirements: Minor in Critical Race and Ethnic Studies

2 courses in theories of race and ethnicity	200
3 additional CRES courses	300
Total Units	500

Critical Race and Ethnic Studies Courses

The courses listed below were approved for use in the old specializations (see catalogs for years 2019–2020 and earlier) and will be phased out.

Courses: Africa Past and Present

CRES 18108. Culture and the Police. 100 Units.

How do cultural products facilitate, abet, and enable the form of social ordering that we call policing? This course will explore the policing function of what modernity calls 'culture' by exploring the parallel histories of policing, the emergence of modern police theory, and the rise of the novel. We will focus in particular on how both literature and the police emerge to navigate a series of linked epistemological and political problematics: the relation between particularity and abstraction, the relation between deviance and normalcy, and indeed that of authority as such. While we will focus on texts from the eighteenth- and nineteenth-century Atlantic world, students with a broader interest in policing are encouraged to enroll. Readings will include Daniel Defoe, Patrick Colquhoun, Henry Fielding, G.W.F. Hegel, Louis Althusser, Michel Foucault, Michael McKeon, Mary Poovey, and Mark Neocleous. (Fiction, 1650-1830, 1830-1940, Theory)
Instructor(s): Christopher Taylor Terms Offered: Spring
Prerequisite(s): This course is limited to 15 third- and fourth-year students who have already fulfilled the Department's Genre Fundamentals (previously Gateway) requirement and taken at least two further English courses.
Equivalent Course(s): ENGL 18108

CRES 20701. Introduction to African Civilization I. 100 Units.

Part one considers literary, oral, and archeological sources to investigate African societies and states from the early Iron Age through the emergence of the Atlantic World. We will study the empires of Ghana and Mali, the Swahili Coast, Great Zimbabwe, and medieval Ethiopia. We will also explore the expansion of Islam, the origins and effects of European contact, and the trans-Atlantic slave trade.
Instructor(s): E. Osborn Terms Offered: Autumn
Equivalent Course(s): ANTH 20701, MDVL 10101, HIST 10101

CRES 20802. Introduction to African Civilization II. 100 Units.

Part two examines the transformations of African societies in the long nineteenth century. At the beginning of the era, European economic and political presence was mainly coastal, but by the end, nearly the entire continent was colonized. This course examines how and why this occurred, highlighting the struggles of African societies to manage internal reforms and external political, military, and economic pressures. Topics include the Egyptian conquest of Sudan, Omani colonialism on the Swahili coast, Islamic reform movements across the Sahara, and connections between the end of the transatlantic slave trade and the formal colonization of the African continent. Students will examine memoirs of African soldiers, religious texts, colonial handbooks, and visual and material sources, including ethnographic artifacts, photographs, and textiles. Assignments: team projects, document and material analyses, response papers, essays, and written exams. The course will equip students with a working knowledge of the struggles that created many of the political and social boundaries of modern Africa.
Instructor(s): K. Hickerson Terms Offered: Winter

Equivalent Course(s): HIST 10102, ANTH 20702

CRES 20303. Introduction to African Civilization III. 100 Units.

Part three uses anthropological perspectives to investigate colonial and postcolonial encounters in sub-Saharan Africa, with a particular focus on Southern Africa. The course is centered on the twentieth and twenty-first centuries. It begins with an examination of colonialism, the institutionalization of racism, and dispossession, before examining anti-colonialism and the postcolonial period. The class draws on scholarship on and by African writers: from poets to novelists, ethnographers, playwrights, historians, politicians, political theorists, and social critics. Over the course of the quarter, students will learn about forms of person-hood, subjectivity, gender, sexuality, kinship practices, governance, migration, and the politics of difference.

Instructor(s): K. Takabvirwa Terms Offered: Spring

Equivalent Course(s): ANTH 20703, HIST 10103

CRES 24813. South African Fictions and Factions. 100 Units.

This course examines the intersection of narrative in print and film (fiction and documentary) in Southern Africa since mid-20th-century decolonization. We begin with *Cry, the Beloved Country*, a best seller written by South African Alan Paton while in the US, and the original film version by a Hungarian-born, British-based director (Zoltan Korda) and an American screenwriter (John Howard Lawson), which together show both the international impact of South African stories and the important elements missed by overseas audiences. We will continue with fictional and nonfictional narrative responses to apartheid and decolonization in film and in print, and examine the power and the limits of what critic Louise Bethlehem has called the 'rhetoric of urgency' on local and international audiences. We will conclude with writing and film that grapples with the complexities of the post-apartheid world, whose challenges, from crime and corruption to AIDS and the particular problems faced by women and gender minorities, elude the heroic formulas of the anti-apartheid struggle era. (B)

Equivalent Course(s): ENGL 24813, CMST 24813, CMLT 24813

Courses: African American Studies

CRES 20050. Narrating Diaspora. 100 Units.

This course explores how Black writers in the twentieth century variously crafted and defined the African Diaspora while actively navigating this diaspora. Alongside scholarly works in African diaspora theory, readings will include essays and novels by Black writers from the Americas, Europe, and Africa. (Fiction, Theory)

Instructor(s): Sophia Azeb Terms Offered: Autumn

Equivalent Course(s): ENGL 20050

CRES 20104. Urban Structure and Process. 100 Units.

This course reviews competing theories of urban development, especially their ability to explain the changing nature of cities under the impact of advanced industrialism. Analysis includes a consideration of emerging metropolitan regions, the microstructure of local neighborhoods, and the limitations of the past American experience as a way of developing urban policy both in this country and elsewhere.

Instructor(s): M. Garrido Terms Offered: Spring

Equivalent Course(s): GEOG 22700, GEOG 32700, ARCH 20104, SOCI 20104, SOSC 25100, SOCI 30104, ENST 20104

CRES 22150. Contemporary African American Politics. 100 Units.

This course explores the issues, actions, and arguments that comprise black politics today. Our specific task is to explore the question of how do African Americans currently engage in politics and political struggles in the United States. This analysis is rooted in a discussion of contemporary issues, including the election of the first African American president, Barack Obama, the emergence of the Movement for Black Lives, the exponential incarceration of black people, and the intersection of identities and the role black feminism in shaping the radical freedom tradition in black politics. Throughout the course we attempt to situate the politics of African Americans into the larger design we call American politics. Is there such a thing as black politics? If there is, what does it tell us more generally about American politics?

Instructor(s): C. Cohen Terms Offered: Autumn

Equivalent Course(s): LLSO 25902, PLSC 22150

CRES 24601. Martin and Malcolm: Life and Belief. 100 Units.

This course examines the religious, social, cultural, political, and personal factors behind the two most prominent public leaders and public intellectuals emerging from the African American community in the 1950s and 1960s: Malcolm X and Martin Luther King Jr. We review their autobiographies, domestic trends within the United States, and larger international forces operating during their times. Their life stories provide the contexts for the sharp differences and surprising commonalities in their political thought and religious beliefs. The operative question is: What can Malcolm and Martin tell us about America during one of the most dynamic periods in the nation's personality metamorphosis? We use documentary videos of each man's speeches and of the social contexts in which they lived.

Instructor(s): D. Hopkins Terms Offered: Winter

Equivalent Course(s): RLST 24601

CRES 25405. Child Poverty and Chicago Schools. 100 Units.

This discussion- and debate-based course begins with a sociological and historical examination of child poverty, focusing on its origin, experience, and perpetuation in disadvantaged Chicago communities. Class meetings will involve debating school reform efforts, such as 'turnaround' schools, charter schools, Promise Neighborhoods, and stepped-up teacher evaluations. Further, the barriers that have contributed to the failure of previous reform initiatives—barriers that include social isolation, violence, and the educational system itself—will be identified and analyzed in-depth.

Instructor(s): C. Broughton Terms Offered: Spring

Prerequisite(s): 2nd year standing required; attendance on the first day of class is required or registration will be dropped.

Equivalent Course(s): PBPL 25405, EDSO 25405

CRES 27502. Africans in the Early Americas. 100 Units.

During the era of the transatlantic slave trade, more than 350,000 Africans were forcibly trafficked to what is now the United States. The experiences of these men and women and their descendants-particularly their exploitation under a system of racialized slavery-profoundly shaped the course of US history up to and including the present day. These individuals were significant, but they were also only one part of the more than 12 million people who came from Africa to the Americas in the colonial period. Focusing on the diverse experiences of Africans and their descendants-as slaves, but also as colonizers, soldiers, revolutionaries, family members, and free men and women-this course surveys the history of Africans in the Americas from the late fifteenth through the late nineteenth century. Adopting a broad geographic and temporal perspective allows for an exploration of the evolving relationships between labor, gender, and race in North, Central, and South America, including the Spanish, French, and English Caribbean. In this course we will ask: How did the experiences of Africans in the colonial and early republican United States compare with those of Africans in other parts of early America? How might learning about and comparing the experiences of free and enslaved Africans and Afro-descended peoples in different parts of the Americas re-shape our understanding of the multiple origins, meanings, and possibilities of race and national belonging?

Instructor(s): T. Murphy Terms Offered: Winter

Equivalent Course(s): HIST 29004, LACS 27502

Note(s): Taking these courses in sequence is not required.

Equivalent Course(s): EALC 11000, HIST 15300, SOSC 23700

CRES 20004. Introduction to Asian American Studies. 100 Units.

On May 6, 1882, the United States passed the Chinese Exclusion Act, the first major federal legislation of its kind to explicitly exclude an entire ethnic group. More than a century later, as the U.S. grappled with a deadly outbreak of COVID-19, President Donald Trump insisted upon referring to the virus as 'Chinese,' reigniting historical and racialized anxieties of 'Yellow Peril' and 'Asian invasion,' even as Asians across the country reported incidents of anti-Asian discrimination and violence. This course seeks to bridge these two moments by providing a critical examination of contemporary Asian American experience through the social, political, and historical contexts that come to bear upon it. Focusing on East and Southeast Asian communities, it will interrogate theories of race, class, and identity, alongside issues of immigration/migration, transnationalism, labor, citizenship, generational dissonance, and activism. Engaging a variety of historical events, social movements, racialized imaginaries, critical writings, and cultural representations, we will consider how Asian American history is vitally shaped by not only repression and assimilation, but also radicalism and innovation.

Instructor(s): Victoria Nguyen Terms Offered: Winter

Equivalent Course(s): ANTH 23608, GLST 20004

CRES 24255. Everyday Maoism: Work, Daily Life, and Material Culture in Socialist China. 100 Units.

The history of Maoist China is usually told as a sequence of political campaigns: land and marriage reform, nationalization of industry, anti-rightist campaign, Great Leap Forward, Cultural Revolution, etc. Yet for the majority of the Chinese population, socialism was as much about material changes as about politics: about the two-story brick houses, electric lights and telephones (loushang lousia, diandeng dianhua) that the revolution had promised; about new work regimes and new consumption patterns-or, to the contrary, about the absence of such change. If we want to understand what socialism meant for different groups of people, we have to look at the 'new objects' of socialist modernity, at changes in dress codes and apartment layouts, at electrification and city planning. We have to analyze workplaces and labor processes in order to understand how socialism changed the way people worked. We also have to look at the rationing of consumer goods and its effects on people's daily lives. The course has a strong comparative dimension: we will look at the literature on socialism in the Soviet Union and Eastern Europe, to see how Chinese socialism differed from its cousins. Another aim is methodological. How can we understand the lives of people who wrote little and were rarely written about? To which extent can we read people's life experiences out of material objects?

Instructor(s): J. Eyferth Terms Offered: Spring

Equivalent Course(s): HIST 34507, EALC 24255, EALC 34255, HIST 24507

CRES 24514. Colonial Power in East Asia. 100 Units.

This course takes a transnational and comparative approach to the study of colonialism in East Asia from the Opium Wars through the end of World War I. Using foundational theories of postcolonial scholarship as a starting template, we will explore the interrelationship of colonial power and ideologies of race and gender across China, Japan, and Korea during the nineteenth century. Critically evaluating both primary and secondary sources will help us contextualize the development of the Japanese empire within a larger narrative of the expansion of Euro-American colonial power into East Asia. In doing so, we will discover that sites of empire in East Asia often destabilize the most common binaries of postcolonial study: Occident/Orient, colonizer/colonized, white/other, and premodern/modern.

Instructor(s): J. Dahl Terms Offered: Winter

Equivalent Course(s): GNSE 24514, GLST 24514, EALC 24514, HIST 24514

CRES 24706. Edo/Tokyo: Society and the City in Japan. 100 Units.

This course will explore the cultural and cultural history of Edo/Tokyo from its origins in the early seventeenth century through circa 1945. Issues to be explored include the configuration of urban space and its transformation over time in relation to issues of status, class, and political authority; the formation of the 'city person' as a form of identity; and the tensions between the real city of lived experience and the imagined city of art and literature. We will pay particular attention to two periods of transformation, the 1870s when the modernizing state made Tokyo its capital, and the period of reconstruction after the devastating earthquake of 1923. Assignments include a final research paper of approximately 15 to 18 pages.

Instructor(s): S. Burns

CRES 19880. Inhabiting the Borderlands: Latinx Embodiment in Literature, Art, and Popular Culture. 100 Units.

How does a Latinx cultural identity become legible? What are the conditions of its recognition? What kinds of embodied practices and performances serve to point to the particular intersections of race, ethnicity, class, sexuality, and gender that can be termed 'Latinx'? To approach these questions, this course will explore critical texts by Diana Taylor, Gloria Anzaldúa, Julia Alvarez, Coco Fusco, José Esteban Muñoz, and Tomás Ybarra-Frausto, among others, as well as performances, artwork, and literature by La Lupe, Walter Mercado, Yalitza Aparicio, Cherríe Moraga, Judith Baca, Carmen Maria Machado, and more. (Theory)

Instructor(s): Carmen Merport Terms Offered: Winter

Equivalent Course(s): GNSE 19880, ENGL 19880, LACS 19880

CRES 21748. Global Human Rights Literature. 100 Units.

This course surveys key human rights texts (philosophical texts, literary works, and legal documents) of the 20th and 21st centuries. By reading global literatures alongside international human rights instruments, and by treating literature as an archive of ideas that circulate among a literary public invested in human rights, this course explores the importance of art and literature to legal and political projects and provides students with the opportunity to conceptualize the role of narrative for human rights advocacy and human rights imaginaries. We will chart the rise of the global human rights movement, beginning with the 1940s up to our contemporary moment, paying close attention to key human rights issues such as genocide, citizenship, enforced disappearance, detention, apartheid, refugee crises, and mass incarceration. Readings will include works by Anna Seghers, Primo Levi, Hannah Arendt, Jacobo Timerman, Aleksandr Solzhenitsyn, Rigoberta Menchú, Ngũgĩ wa Thiong'o, Antje Krog, Dave Eggers, and Albert Woodfox.

Instructor(s): Nory Peters Terms Offered: Winter

Equivalent Course(s): CMLT 21748, HMRT 21748

CRES 21903. Intro. a las lit. hispánicas: textos hispanoamericanos desde la colonia a la independencia. 100 Units.

This course examines an array of representative texts written in Spanish America from the colonial period to the late nineteenth century, underscoring not only their aesthetic qualities but also the historical conditions that made their production possible. Among authors studied are Christopher Columbus, Hernán Cortés, Sor Juana Inés de la Cruz, Simón Bolívar, and José Martí.

Instructor(s): L. Brewer-García Terms Offered: Spring

Prerequisite(s): SPAN 20300 or consent of instructor.

Note(s): Taught in Spanish.

Equivalent Course(s): LACS 21903, SPAN 21903

CRES 25001. Queer and Trans Mutual Aid for Survival and Mobilization. 100 Units.

This course will examine contemporary and historical queer and trans-focused mutual aid projects, including support for migrants, prisoners, psychiatric survivors, people with HIV/AIDS, and violence survivors. We will look at why mutual aid projects are often under-celebrated in contemporary narratives of social change, when compared with media advocacy and law and policy reform work. Using materials created by activists engaged in building mutual aid projects, as well as scholarly analysis of such efforts, we will look at what principles and methods characterize politicized survival work and how it intentionally departs from charity frameworks.

Instructor(s): Dean Spade, Pozen Visiting Professor Terms Offered: Autumn

Equivalent Course(s): GNSE 25002, HMRT 35002, GNSE 35002, HMRT 25002

CRES 25004. Multicultural Development and Gender. 100 Units.

This course will focus on gender scripts and performance as they are developed within multicultural contexts. We will focus on the mainstream and sub-cultures of the contemporary U.S. as the nation is both famously and infamously a place where individuals from multiple cultural backgrounds coexist. Traditionally, patriarchal norms have shaped many cultures worldwide, including American, so women's and non-gender-conforming individuals' experiences have been relegated to sub-culture status even for culturally mainstream (i.e., White) individuals. The subculture dynamic becomes even more charged when conflicting scripts of gender must be grappled with between cultures an individual is a member of; for example, for immigrants or people of color. In this course, we will take an intersectional approach to examining the lived experiences of individuals from multicultural backgrounds, pulling apart the multiple racial, cultural, and gendered elements that comprise their realities, shape their decision-making and identity development, and ultimately craft their life trajectories. B,C

CRES 27101. Intro to Brazilian Culture: Essay, Fiction, Cinema and Music. 100 Units.

During the twentieth century, literature, social thought, music and cinema were completely intertwined in Brazil. This class is an introduction to Brazilian culture through these four types of cultural production and their interaction. We will read authors such as Euclides da Cunha, Gilberto Freyre, Mario de Andrade, Clarice Lispector, and listen to samba, bossa nova, and tropicalismo.

Instructor(s): A. Melo Terms Offered: Spring

Equivalent Course(s): LACS 27105, PORT 37100, PORT 27100, LACS 37105

CRES 27303. Topics in US-Mexico Borderlands History. 100 Units.

This course explores the history of the U.S.-Mexican borderlands, from its native past to its present, as a geographical place and as a site of contested sovereignties. It is organized around major themes in the history of the region, including indigenous and European imperialism, settler colonialism, nationalism, migration, labor, and citizenship. Special attention will also be given to the themes of cultural hybridity, transculturation, and the fluidity of social identities defined by the categories of class, ethnicity, gender, nationality, and race. The structure of this course emphasizes the interaction of historical forces across imperial, national, and cultural boundaries, highlighting the dynamism of borderlands as historical phenomena and as a method of interpreting and understanding the past. Students enrolled in this course will gain critical thinking and analytical skills as well as a broader understanding of topics in U.S. and Mexican history that continue to influence contemporary political debates. They will be encouraged to look beyond the rigid dichotomies that often divide the borderlands and investigate the full spectrum of cultural, economic, and social relationships that bring people together as well as those that push them apart. Students will also learn to look for common patterns that emerge across time and space while remaining attentive to the nuances of local identities, cultures, and histories.

Instructor(s): D. Webb Terms Offered: Autumn

CRES 27504. Racism without Race. 100 Units.

In early 2010 a member of staff at the Regenstein library contacted the police to report an unruly student. The police arrived at the scene and charged the student with criminal trespass and resisting arrest. The student was put in a choke hold and handcuffed before being taken to the local police station where he was held in a cell overnight. According to witnesses, the library staff member's response was unwarranted and so too were the actions taken by the police officers. Individuals later interviewed for the Chicago Maroon described the student's treatment as an instance of 'racial profiling.' How are we to make sense of this incident and others similar to it? There is strong evidence to suggest that the reactions of the authority figures involved were shaped by their attitudes toward skin color. It would seem farfetched, however, to conclude that these reactions reflected an ideology of racial differentiation or what we might call 'traditional' race ideology: the view that human beings can be classified scientifically according to race and that some races are better than, or superior to, others. Theories of race and racial difference have largely been discredited and there are no longer any official institutions, respected academics or public individuals who espouse these. How then do we explain the continued salience of skin color, and what value is there in applying terms such as 'race' and 'racism' to describe it? The following course seeks to reframe the way we go about analyzing contemporary forms of social differentiation based on skin color. It looks at skin color as a culturally recognizable sign, which, like other signs, acquires significance only within the context of a broader set of semiotic ideologies and practices. This means directing our attention to the ways in which color-as-sign takes on meaning in the world we live. Such an approach offers a conceptual framework for a comparative study of past and present forms of discrimination based on skin color while also remaining sensitive to the particularities that define these.

Instructor(s): Y. Hilal

Equivalent Course(s): ANTH 22155

CRES 28000. United States Latinos: Origins and Histories. 100 Units.

An examination of the diverse social, economic, political, and cultural histories of those who are now commonly identified as Latinos in the United States. Particular emphasis will be placed on the formative historical experiences of Mexican Americans and mainland Puerto Ricans, although some consideration will also be given to the histories of other Latino groups, i.e., Cubans, Central Americans, and Dominicans. Topics include cultural and geographic origins and ties; imperialism and colonization; the economics of migration and employment; legal status; work, women, and the family; racism and other forms of discrimination; the politics of national identity; language and popular culture; and the place of Latinos in US society. Equivalent Course(s): AMER 28001, CRES 28000, GNSE 28202, HIST 38000, LACS 28000, LACS 38000, CRES 38000, GNSE 38202, AMER 38001

Equivalent Course(s): LACS 26500, LACS 36500, LLSO 26500, CRES 26500, HIST 26500, HIST 36500

Courses: Native American Studies

CRES 27501. Urban Indians: Native Americans and the City. 100 Units.

The majority of Native Americans in the United States now live in urban areas and this has been the case for more than half a century, but discussions about cities rarely acknowledge their presence beyond (sometimes) lumping them in with catchall categories often labeled 'Other.' In this course, students will encounter and examine the distinct experiences and contributions of Native Americans in cities, large and small, past and present. We'll look, first, at the context in which the population shift away from rural and reservation spaces took place and discuss the ways in which being/becoming 'urban' and the process of 'urbanization' may not be as straightforward as expected. Students will then dive into studies of the daily struggles and successes of Native American city-dwellers, with an emphasis on mid-20th-century Chicago. Readings and in-class activities will explore issues related to: housing, work, stereotypes and discrimination, cultural survival and traditionalism, physical and mental health, the rise of pan-Indianism, activism, schooling, class divisions, multi/locality, generational differences, identity and intersectionality, representation and the arts, and the very recognition or lack thereof mentioned above. The knowledge and analytic skills developed in this course will therefore serve as an uncommon window into Native American studies and urban studies, as well as broader race- and place-conscious work in the social sciences and humanities.

Instructor(s): A. Jenkins Terms Offered: Winter

Courses: Comparative/General Studies

CRES 10200. Introduction to World Music. 100 Units.

This course is a selected survey of classical, popular, and folk music traditions from around the world. The goals are not only to expand our skills as listeners but also to redefine what we consider music to be and, in the process, stimulate a fresh approach to our own diverse musical traditions. In addition, the role of music as ritual, aesthetic experience, mode of communication, and artistic expression is explored.

Terms Offered: Autumn Spring Winter

Note(s): Background in music not required. Students must confirm enrollment by attending one of the first two sessions of class. This course meets the general education requirement in the arts.

Equivalent Course(s): MUSI 10200

CRES 12100. Contentious Natures: Race, Nature, and Power. 100 Units.

Drawing on anthropology, critical race theory, feminist studies, postcolonial studies, and STS, this course examines how race and nature work in tandem as domains of power. Tracking how race and nature are vitally intertwined, we interrogate the racial politics of climate, wilderness, local ecologies, biology, and space and place. Ultimately, the course considers how contested and essentialized notions of nature are crucial to environmental politics, as well as the formation of citizenship, territory, projects of development, and modern regimes of governance.

Instructor(s): Victoria Nguyen Terms Offered: Winter

Equivalent Course(s): ANTH 23609, GLST 22100

CRES 12200. Introduction to Critical Race Studies: Historical, Global, and Intersectional Perspectives. 100 Units.

This course offers an introduction to the core theoretical foundations of critical race studies, with an emphasis on historical, global, and intersectional approaches to the study of race and ethnicity. Critical race studies, which posits that race is endemic to society, is an interdisciplinary study that calls us to address unequal relationships of power and domination by analyzing the historical and global construction, emergence, and consequences of race. Drawing on historical, global, and intersectional case studies, this course aims to establish a foundation of key terms, theories, and ideas in the field as well as familiarize students with a broad survey across time and world regions. It challenges us to question how race has informed ideas about power, oppression, and liberation in history and the modern world. Readings will draw on classic and contemporary texts from critical race theory, history, feminist studies, post-colonial studies, disability studies, and anthropology, as well as films, podcasts, and class excursions. Evaluation will be based on class participation, short papers, and an independent presentation.

Instructor(s): Deirdre Lyons Terms Offered: Autumn

Equivalent Course(s): LACS 13200, GLST 22200, HIST 19010, GNSE 15200

CRES 18804. America in the Nineteenth Century. 100 Units.

This lecture course will examine major conflicts that shaped American life during the nineteenth century. Focusing on contemporaries' attempts to seize upon or challenge the nation's commitment to the ideals of liberty and equality, we will examine pivotal moments of contestation, compromise, and community building. Central questions that will frame the course include how were notions of freedom negotiated and reshaped? What were the political and socioeconomic conditions that prompted the emergence of reform movements, including antislavery, women's rights, temperance, and labor? How did individuals mobilize and stake claims on the state? How were the boundaries of American citizenship debated and transformed over the course of the century?

Instructor(s): N. Maor Terms Offered: Winter

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): AMER 18804, GNSE 18804, LLSO 22106, HIST 18804

CRES 18860. Black Shakespeare. 100 Units.

This course explores the role played by the Shakespearean canon in the shaping of Western ideas about blackness, in processes of racial formation, and racial struggle from the early modern period to the present. Students will read

Shakespearean plays portraying black characters (Othello, Titus Andronicus, The Tempest, Antony and Cleopatra) in conversation with African-American and post-colonial rewritings of those plays (by Toni Morrison, Amiri Baraka, Keith Hamilton Cobb, and Aimé Césaire, among others). (Drama, Pre-1650 ; Med/Ren)

Instructor(s): Noémie Ndiaye Terms Offered: Spring

Equivalent Course(s): TAPS 30040, TAPS 20040, ENGL 18860, ENGL 38860

CRES 19980. Trans* Forms: On Gender and Genre. 100 Units.

Gender and genre share the common root term, 'genus,' which refers to classification. In this class, students will engage how authors make use of decolonial, antiracist, feminist and queer theory and praxis to approach and refigure gender's colonial legacies. Reading across genres--memoir, poetry, and speculative fiction, to name a few --Trans* Forms attends to the remaking and proliferation of gender as matters of form. (Theory) This class counts as a Problems course for GNSE majors.

Instructor(s): Riley Snorton Terms Offered: Winter

Equivalent Course(s): GNSE 20110, ENGL 19980

CRES 20104. Urban Structure and Process. 100 Units.

This course reviews competing theories of urban development, especially their ability to explain the changing nature of cities under the impact of advanced industrialism. Analysis includes a consideration of emerging metropolitan regions, the microstructure of local neighborhoods, and the limitations of the past American experience as a way of developing urban policy both in this country and elsewhere.

Instructor(s): M. Garrido Terms Offered: Spring

Equivalent Course(s): GEOG 22700, GEOG 32700, ARCH 20104, SOCI 20104, SOSC 25100, SOCI 30104, ENST 20104

CRES 20140. Qualitative Field Methods. 100 Units.

This course introduces techniques of, and approaches to, ethnographic field research. We emphasize quality of attention and awareness of perspective as foundational aspects of the craft. Students conduct research at a site, compose and share field notes, and produce a final paper distilling sociological insight from the fieldwork.

Instructor(s): O. McRoberts Terms Offered: Spring

Equivalent Course(s): CHDV 20140, SOCI 20140

CRES 20207. Race, Ethnicity, and Human Development. 100 Units.

Twenty-first century practices of relevance to education, social services, health care and public policy deserve buttressing by cultural and context linked perspectives about human development as experienced by diverse groups. Although generally unacknowledged as such post-Brown v. 1954, the conditions purported to support human development for diverse citizens remain problematic. The consequent interpretative shortcomings serve to increase human vulnerability. Specifically, given the problem of evident unacknowledged privilege for some as well as the insufficient access to resources experienced by others, the dilemma skews our interpretation of behavior, design of research, choice of theory, and determination of policy and practice. The course is based upon the premise that the study of human development is enhanced by examining the experiences of diverse groups, without one group standing as the 'standard' against which others are compared and evaluated. Accordingly, the course provides an encompassing theoretical framework for examining the processes of human development for diverse humans while also highlighting the critical role of context and culture.

Instructor(s): M. Spencer Terms Offered: Autumn

Prerequisite(s): Students should have one course in either Human Development or Psychology.

Note(s): CHDV Distribution, B*, C

Equivalent Course(s): CHDV 20207, EDSO 20207

CRES 20282. Immigrant America. 100 Units.

Nearly 60 million immigrants have arrived in the U.S. in the past 50 years, mostly from Latin America and Asia, but also from Africa and the Middle-East. Today, a near-record 14% of the country's population is foreign born compared with just 5% in 1965. These profound demographic changes raise critical questions: Why do immigrants come to the U.S.? What impact do they have on U.S. society? Are today's immigrants fundamentally different from previous waves of immigrants? Are these immigrants assimilating to the U.S. or retaining their culture? Why do some immigrant groups appear to fare better than others? This course will expose students to the latest social science research on contemporary immigration to the United States. We will explore its origins, adaptation patterns, and long-term effects on American society.

Instructor(s): R. Flores Terms Offered: Autumn

Equivalent Course(s): SOCI 20282

CRES 20305. Inequality in Urban Spaces. 100 Units.

The problems confronting urban schools are bound to the social, economic, and political conditions of the urban environments in which schools reside. Thus, this course will explore social, economic, and political issues, with an emphasis on issues of race and class as they have affected the distribution of equal educational opportunities in urban schools. We will focus on the ways in which family, school, and neighborhood characteristics intersect to shape the divergent outcomes of low- and middle-income children residing with any given neighborhood. Students will tackle an important issue affecting the residents and schools in one Chicago neighborhood. This course is part of the College Course Cluster: Urban Design.

Instructor(s): M. Keels Terms Offered: Autumn

Note(s): CHDV Distribution: B; 2*

Equivalent Course(s): EDSO 20305, EDSO 40315, CHDV 20305, PBPL 20305

CRES 21206. Philosophy of Race and Racism. 100 Units.

The idea that there exist different 'races' of human beings is something that many--perhaps even most--people in the United States today take for granted. And yet modern notions of 'race' and 'racial difference' raise deep philosophical problems: What exactly is race? Is race a natural kind (like water) or a social kind (like citizenship)? If race is a social kind--i.e.

something human beings have constructed—are there any good reasons to keep using it? According to many philosophers, these questions cannot be properly analyzed in abstraction from the history of modern racism and the liberation struggles racial oppression has given rise to. Together, we'll read classic and contemporary texts on these themes by authors such as W.E.B. Du Bois, Frantz Fanon, Angela Davis, Charles Mills, Naomi Zack, Chike Jeffers, Kwame Anthony Appiah, and Lucius Outlaw. (A)

Instructor(s): T. Zimmer Terms Offered: Spring

Equivalent Course(s): PHIL 21206

CRES 21233. Black Speculative Fiction. 100 Units.

This course familiarizes students with Black literary speculative fiction, sci-fi, and fantasy. The objective of this course is to read Black speculative fiction alongside the historical contexts the assigned works speak to, as well as orient students to the radical re/imaginings of Black pasts, presents, and futures in the novels and short films at the center of the course. This class will pay particular attention to Black diasporic/international contributions to the genre. (Fiction, Theory)

Instructor(s): Sophia Azeb Terms Offered: Winter

Equivalent Course(s): ENGL 21223, CMLT 21233

CRES 21348. Anthropology, Criminality, and Transgression. 100 Units.

Alongside other disciplines in the social sciences, anthropology has a vexed and complicated history in the study of crime since the 19th-century. This course aims to consider this broader history of criminality within anthropology with specific attention to readings of transgressive criminal action, or the potential of 'illegality' to destabilize particular ways of life beyond the maintenance of an existing world. This attention is a departure from other anthropological foci on crime as - for instance - pathological, symptomatic, opportunistic, reactionary, constructed, or in collusion with 'legitimate' political and economic orders. While still attending to these themes through key texts in the anthropology of crime, this course reflects on how conceptualizations of 'change' (particularly political change) and criminality have been historically transformed and renewed within this literature. This course draws from anthropological studies alongside work in other disciplines and traditions of the social sciences such as political science, providing tools to identify the potentials and limits of studying crime as acts of resistance, insurgency, and/or political opposition.

Instructor(s): R. Noll Terms Offered: Winter, Winter 2020

Equivalent Course(s): HMRT 21348, ANTH 21348, PLSC 21348

CRES 21405. Inventing Race in the British Empire. 100 Units.

This course reveals how the British encounter with racial difference in the Caribbean, Australasia, and India could both validate and subvert the project of empire- building. We will begin by examining the ways in which ethnographical and anthropological societies in the metropole clashed over the question of racial differentiation in the nineteenth century. We will then determine how these 'scientific' theories of race were deployed in colonial settings; did they inform relations between colonized and settler populations, or did the local states innovate novel race-based policies to undergird their rule? By investigating how an array of actors instrumentally invoked race to accomplish specific objectives, we will further deconstruct the narrative of a unitary, overarching 'civilizing mission.' A host of primary sources, including anthropological treatises, missionary accounts, public speeches, and fictional works, will aid us in this pursuit.

Instructor(s): Z. Leonard Terms Offered: Spring

Equivalent Course(s): SALC 21405, HIST 21405, GLST 21405

CRES 21903. Intro. a las lit. hispánicas: textos hispanoamericanos desde la colonia a la independencia. 100 Units.

This course examines an array of representative texts written in Spanish America from the colonial period to the late nineteenth century, underscoring not only their aesthetic qualities but also the historical conditions that made their production possible. Among authors studied are Christopher Columbus, Hernán Cortés, Sor Juana Inés de la Cruz, Simón Bolívar, and José Martí.

Instructor(s): L. Brewer-García Terms Offered: Spring

Prerequisite(s): SPAN 20300 or consent of instructor.

Note(s): Taught in Spanish.

Equivalent Course(s): LACS 21903, SPAN 21903

CRES 22000. Lethal Landscapes, Toxic Worlds: Geographies of Race, Risk, and Contingency. 100 Units.

This advanced seminar critically examines environmental racism and injustice with an eye toward the social, historical, and political forces that create, sustain, and ultimately challenge environmental inequalities. We explore recent work at the intersection of anthropology, political ecology, and science studies that investigate unequal exposures and the politics of containment. Connecting local and international case studies with larger social and settler colonial logics, the seminar will investigate relations of power, segregation, contingency, and kinship in uneven terrains of vulnerability and risk.

Instructor(s): Victoria Nguyen Terms Offered: Spring

Prerequisite(s): CRES 12100, or CRES 12200, or consent of instructor

Equivalent Course(s): ANTH 23612

CRES 22755. The Idea of Africa. 100 Units.

The Idea of Africa, a new interdisciplinary course, offers undergraduates students an opportunity to engage critically with key philosophical and political debates about contemporary Africa on the continent and globally. The course takes its title from V.Y. Mudimbe's 1994 book which builds on his earlier work *The Invention of Africa*. It asks three questions: (1) How and to what purposes has Africa been conceived as metaphor and concept. (2) How might we locate Africa as a geographic site and conceptual space to think through contemporary debates about citizenship, migration and new structures of political economy? (3) What futures and modes of futurity are articulated from the space and metaphor of Africa? This lecture course co-thought in an interdisciplinary mode will include public guest lectures, field trips, and engagement with visual arts, and

film related to the themes of the course. The course will be divided into the following four sections: 1) Inventing Africa; 2) Political Trajectories; 3) Afro-Mobilities; 4) Afro-Futures.

Instructor(s): Natacha Nsibimana & Adom Getachew Terms Offered: Spring, Spring 2021

Equivalent Course(s): ANTH 22755, PLSC 22755

CRES 22845. Xenophobia and the Politics of Belonging. 100 Units.

What work does xenophobia do in the making and marking of nation-states? What does it mean to belong, in a world structured by migration? In this course, we will examine the practices and politics of exclusion, of othering and of unbelonging. Drawing on cases from North America and Sub-Saharan Africa, we will study xenophobia at different points along its spectrum of intensity - from mass atrocities to the seemingly banal ways in which othering and exclusion are baked into everyday life. We will study each case in depth in its own right, as well as how it sits within broader experiences of exclusion and violence around the world and across time. In the course, we will explore theoretical debates surrounding nativism, autochthony, and different forms of nationalism, and the ways they relate to xenophobia. Scholars of migration and belonging have long shown that collective identities are constructed in large part in relation to an external other. Does (one person's) belonging necessitate (another's) unbelonging? In this course we ask: how does the 'stranger' come to be seen as threatening or destabilizing? How does one come to be seen as a 'stranger'?

Instructor(s): Kathryn Takabvirwa Terms Offered: Autumn, Autumn 2020

Equivalent Course(s): ANTH 22845

CRES 23807. Toxic: Body Burdens and Environmental Exposures. 100 Units.

Toxicity is a pervasive and often elusive presence in our lives today. In this seminar class, we begin to address this condition by asking: what exactly is toxic? Who bears the burden of this classification? And, how then, are these understandings of toxicity defined and deployed in broader historical, political, and scientific contexts? From these preliminary questions, we explore the pathways through which toxic exposure, contamination, and fallout accumulates in disproportionate and uneven ways, especially for minoritized populations and upon Indigenous territories. Drawing upon a variety of social science literature and community-based research we trace these challenges through overlapping structures of race, class, gender, citizenship, and coloniality. This transnational and interdisciplinary orientation will acquaint students with case studies of exposure across different scales and geographies, from Chernobyl to Chicago. Through mixed approaches of ethnography and media curation, students will also have the opportunity to research and document their own cases studies of body burdens and environmental exposure.

Instructor(s): Teresa Montoya Terms Offered: Autumn, Autumn 2020

Equivalent Course(s): HLTH 23807, ENST 23807, ANTH 23807

CRES 24001-24002-24003. Colonizations I-II-III.

This sequence meets the general education requirement in civilization studies. This three-quarter sequence approaches the concept of civilization from an emphasis on cross-cultural/societal connection and exchange. We explore the dynamics of conquest, slavery, colonialism, and their reciprocal relationships with concepts such as resistance, freedom, and independence, with an eye toward understanding their interlocking role in the making of the modern world.

CRES 24001. Colonizations I. 100 Units.

This sequence meets the general education requirement in civilization studies. This three-quarter sequence approaches the concept of civilization from an emphasis on cross-cultural/societal connection and exchange. We explore the dynamics of conquest, slavery, colonialism, and their reciprocal relationships with concepts such as resistance, freedom, and independence, with an eye toward understanding their interlocking role in the making of the modern world. Themes of slavery, colonization, and the making of the Atlantic world are covered in the first quarter. Note(s): This sequence meets the general education requirement in civilization studies. This course is offered every year. These courses can be taken in any sequence.

Terms Offered: Autumn

Note(s): This sequence meets the general education requirement in civilization studies. This course is offered every year. These courses can be taken in any sequence.

Equivalent Course(s): SOSC 24001, ANTH 24001, HIST 18301

CRES 24002. Colonizations II. 100 Units.

Modern European and Japanese colonialism in Asia and the Pacific is the theme of the second quarter.

Terms Offered: Winter

Note(s): This sequence meets the general education requirement in civilization studies. These courses can be taken in any sequence.

Equivalent Course(s): ANTH 24002, SOSC 24002, HIST 18302

CRES 24003. Colonizations III. 100 Units.

The third quarter considers the processes and consequences of decolonization both in the newly independent nations and the former colonial powers.

Terms Offered: Spring

Note(s): This sequence meets the general education requirement in civilization studies. These courses can be taken in any sequence.

Equivalent Course(s): ANTH 24003, SALC 20702, SOSC 24003, HIST 18303

CRES 24111. The Soviet Empire. 100 Units.

What kind of empire was the Soviet Union? Focusing on the central idea of Eurasia, we will explore how discourses of gender, sexuality and ethnicity operated under the multinational empire. How did communism shape the state's regulation of the bodies of its citizens? How did genres from the realist novel to experimental film challenge a cohesive patriarchal,

Russophone vision of Soviet Eurasia? We will examine how writers and filmmakers in the Caucasus and Central Asia answered Soviet Orientalist imaginaries, working through an interdisciplinary archive drawing literature and film from the Soviet colonial 'periphery' in the Caucasus and Central Asia as well as writings about the hybrid conception of Eurasia across linguistics, anthropology, and geography.

Instructor(s): Leah Feldman Terms Offered: Autumn

Equivalent Course(s): REES 24110, REES 34110, CMLT 24111, CMLT 34111, CRES 34111, NEHC 24110, NEHC 34110

CRES 24341. Topics in Medical Anthropology. 100 Units.

This seminar will review theoretical positions and debates in the burgeoning fields of medical anthropology and science and technology studies (STS). We will begin this seminar exploring how 'disease' and 'health' in the early 19-century became inseparable from political, economic, and technological imperatives. By highlighting the epistemological foundations of modern biology and medicine, the remainder of this seminar will then focus on major perspectives in, and responses to, critical studies of health and medicine, subjectivity and the body, entanglements of ecology and health, humanitarianism, and psychoanalytic anthropology.

Instructor(s): P. Sean Brotherton Terms Offered: Winter. Winter 2021

Prerequisite(s): Strongly recommended: previous lower-division courses in the social studies of health and medicine through ANTH, HIPS, HLTH, or CHDV

Note(s): This is an advanced reading seminar. Among undergraduates, 3rd and 4th year students are given priority. Consent only: Use the online consent form via the registrar to enroll.

Equivalent Course(s): CHDV 40301, HIPS 24341, ANTH 40310, ANTH 24341, CHDV 24341, CHSS 40310, HLTH 24341

CRES 24515. Social Outcasts: Exclusion and Discontent in Late Imperial and Modern China. 100 Units.

This course considers the often neglected presence of 'social outcasts' in Chinese history as a gateway to understanding ideas and practices of discrimination from the late Qing to modern-day China. It traces changes in the intersection of law, custom, and daily social practices, focusing on attempts aimed at legitimizing discrimination across class, territory, ethnicity, religion, gender and disability. Thus a theoretical objective of the course is to analyze legal and social dimensions of exclusion along the axis of empire and state building. Chronologically, this course begins with the collapse of status order in the late Qing and explores how the Republic and the PRC managed transgressive elements of society, from beggars, prostitutes, and the insane to ethnic and religious minorities. We will use legal documents, police records, and visual materials to explore how sociocultural processes shape the experience of discrimination and its resistance. Another focus of this course will be asking how disenfranchised groups might enhance our understanding of mainstream values. Through discussions, in-class presentations, and written assignments, students will develop skills to analyze historical evidence and critically reflect on its implication for cross-cultural issues.

Instructor(s): C. Wang Terms Offered: Spring

Equivalent Course(s): GNSE 24515, HIST 24515, EALC 24515

CRES 25002. Feminism, Race, Culture, and Liberation. 100 Units.

Beginning in the twentieth century, a popular global discourse amongst some feminists, anthropologists, and human rights activists has become focused on liberating oppressed peoples from tyrannical systems of power, most often non-Western women of color from traditional patriarchies. However, oftentimes these well-intentioned movements toward liberation are incompatible with the lived realities of the oppressed, and, oftentimes, the 'oppressed' are actually active agents in their own liberations. This course will explore what we mean when we discuss ideas of liberation and social acceptance through a gendered cultural lens, considering the foundations of contemporary feminism and human rights dialogues within different cultural and racial contexts. What and whom are we purportedly liberating with our liberal Western ideals, and what and whom are we failing to consider? Why are gender, sex, and sexuality emphasized to the degree they are, and how do differing emphases produce different sociocultural results? What moral exercises are necessary to most accurately understand the various central elements of a human cultural experience? Can individuals, including ourselves, ever truly be liberated from cultural contexts?

Instructor(s): T. Mandviwala Terms Offered: Winter

Note(s): Request AV room

Equivalent Course(s): CHDV 25002, GNSE 25602

CRES 25021. TUT: The World's Columbian Exposition: Science, Race, Gender, & Music at the 1893 Chicago World Fair. 100 Units.

This course surveys the sights, sounds, and tastes that filled Jackson Park and the Midway Plaisance between May 1 and October 30, 1893. During those six months, over 27 million people flocked to Chicago's south side from across the United States and beyond the Atlantic to experience the marvels illuminating the World's Columbian Exposition. Visitors weaved their way through the newly-designed Midway Plaisance, where they passed exhibits of 'authentic villages of native peoples' in 'traditional' garb until they reached the entrance of the American White City-or, as it was presented, 'the apex of civilization'-where exhibits and lectures on the newest theories and innovations filled 200 Neoclassical buildings under 100,000 incandescent lights. Walking up the Midway demonstrated progress in human development in tune with the main topic of the White City's Congress of Evolution-Social Darwinism. In this course, students will learn about explicit displays of 'progress' during the Gilded Age and will be challenged to interrogate allegories of it at the Columbian Exposition. Together, we will practice close-reading of primary and secondary texts, close-looking of images and objects, and close-listening of music and sounds. We will investigate how 'progress' was staged and cogitated in terms of: Evolutionary theory, Race, Gender, Music, Architecture, and Technology.

Instructor(s): A. Clark Terms Offered: Autumn. Autumn 2020

Equivalent Course(s): GNSE 25021, HIPS 29639, HIST 25021

CRES 25218. American Epidemics, Past and Present. 100 Units.

This course explores how disease epidemics have shaped watershed periods in US history from the late eighteenth century to the present. Through readings, lectures, and in-class discussions, we will employ different categories of analysis (e.g., race, gender, class, and citizenship) to answer a range of historical questions focused on disease, health, and medicine. For instance, to what extent did smallpox alter the trajectory of the American Revolution? How did cholera and typhoid affect the lived experiences of slaves and soldiers during the Civil War? In what ways did the US government capitalize on fears over yellow fever and bubonic plague to justify continued interventions across the Caribbean and the Pacific? What do these episodes from the American past reveal about contemporary encounters with modern diseases like HIV/AIDS, Ebola, and COVID-19? Course readings will be drawn from book chapters and scholarly articles, as well as primary sources ranging from public-health reports, medical correspondence, and scientific journals to newspapers, political cartoons, maps, and personal diaries. Grades will be based on participation, weekly Canvas posts, peer review, and a series of written assignments (a proposal and an annotated bibliography, primary source analysis, book review, and rough draft) all of which will culminate in a ten-page final research paper.

Instructor(s): C. Kindell Terms Offered: Winter

Equivalent Course(s): HIPS 25218, ENST 25218, GNSE 25210, GLST 25218, HLTH 25218, HIST 25218, AMER 25218

CRES 25320. Debate, Dissent, Deviate: Literary Modernities in South Asia. 100 Units.

This class introduces students to the modernist movement in post-independence South Asia. Modernism will be understood here as a radical experimental movement in literature, film, photography and other arts, primarily aimed at critiquing mainstream narratives of history and culture. Given its wide scope, we will analyze a variety of texts over the ten-week duration of the class. These include novels, short stories, manifestos, essays, photographs, and films. The chronological span of the class is from the 1930s to the 1970s. Our aim will be to understand the diverse meanings of modernism as we go through our weekly readings. Was it a global phenomenon that was adopted blindly by postcolonial artists? Or were there specifically South Asian innovations that enable us to think about the local story as formative of global modernism? What bearings do such speculations have on genre, gender, and medium, as well as on politics? I will help situate the readings of each week in their specific literary and political contexts. Students will be able to evaluate, experiment with, and analyze various forms of modernist literary expressions emerging out of South Asia. This class will provide them with critical tools to interpret, assess, compare, and contrast cultural histories of non-Western locations and peoples, with an eye for literary radicalism. No prior knowledge of any South Asian language is necessary.

Instructor(s): S. Dasgupta Terms Offered: Autumn

Equivalent Course(s): KNOW 25320, SALC 25320, GLST 25132, ENGL 25320, GNSE 25320

CRES 25323. Tolerance and Intolerance in South Asia. 100 Units.

Few places in the world are as embroiled in the problem of diversity as South Asia, where sectarian violence-fought mainly along religious lines, but also along caste, gender, and linguistic lines-is at the center of political maneuvering. South Asia offers important lessons in how people manage to live together despite histories of mutual strife and conflict about communities and castes. Focusing on the period of British colonial rule, this class explores different instances and ideologies of toleration and conflict. How were South Asian discourses of toleration by such leaders as Gandhi and Nehru different from their European counterparts (e.g., John Locke and John Rawls)? How did their ideologies differ from those articulated by their minority peers such as Ambedkar, Azad, and Madani? We will analyze constitutive precepts, namely secularism, syncretism, toleration. Our attention here will be on the universal connotations of these ideas and their South Asian expression. Fifth week onward, we will turn our attention to select thinkers: Gandhi, Ambedkar, Azad, Madani. Our focus here will be on the ways that each intellectual negotiated the thorny issues of toleration, difference, ethnicity, and belonging. All the thinkers covered in this class had an active presence in nationalist era politics. Finally, we will read historical accounts of some of the most frequent causes of intolerance, namely cow slaughter, music played before the mosque, and desecration of sacred objects.

Instructor(s): T. Reza Terms Offered: Spring

Note(s): All reading materials will be available in English. No prior knowledge of South Asian history or South Asian languages is required.

Equivalent Course(s): KNOW 25323, SALC 25323, HIST 26812, RLST 25323

CRES 25630. Poverty, Work, and Family Policy. 100 Units.

This course examines contemporary policy questions regarding the dual spheres of work and family life, with a particular focus on economically impoverished families and communities. Students will analyze the relative merits of different policies designed to improve the conditions of work and family life and mitigate the effects of poverty on children's wellbeing. Throughout the ten-week quarter, we will consider demographic, labor market, and policy trends contributing to family poverty and income inequality in American society; interrogate policy debates concerning the responsibility of government, corporate, and informal sectors to address these critical social problems; and examine specific policy and program responses directed at (1) improving employment and economic outcomes and (2) reconciling the competing demands of employment and parenting. Although our primary focus will be on policies that promote the wellbeing of low-income families in the United States, relevant comparisons will be made cross-nationally, across race/ethnicity, and across income. This course is part of the Inequality, Social Problems, and Change minor.

Equivalent Course(s): SSAD 25630, LLSO 25630

CRES 25732. Prejudice and Discrimination: Individual Cost and Response. 100 Units.

This foundational diversity class explores the origins and practices of racial/ethnic prejudice, stereotypes, and discrimination, and how demographic factors such as class, gender, sexuality, and nationality intersect to solidify and perpetuate inequality. We will explore the resulting psychological, economic, and sociopolitical tolls on individuals, and also examine various individual responses that can mitigate the negative impacts of or engage in resistance towards such discrimination (such as

racial/ethnic identity development, deliberate retention of heritage culture, and social/political mobilization). Moreover, we will examine how these individual responses together with organized and collective efforts can bring about social changes. This class consciously expands a dominant binary discourse of race to develop a more inclusive and complex paradigm that accurately reflects the diversity of contemporary America.

Equivalent Course(s): SSAD 45732, CRES 45732, SSAD 25732

CRES 25790. Psychology of Race, Ethnicity, and Social Class: Perspectives and Impact. 100 Units.

This course will explore contemporary theories, findings, and social issues concerning the study of race, ethnicity, and social class as they relate to human behavior from the perspective of the individual in various social contexts. Drawing from disciplines such as cognitive, developmental, and social psychology, this course will also incorporate perspectives from social epidemiology, health disparities research, and critical race theory. Therefore, this course will be guided by a critical analysis lens that recognizes the intersection of gender, race/ethnicity, and social class, using the United States as a 'case study' to evaluate the complexities of social inequality. Learning will take place through a series of lectures, in-class activities, and weekly readings, and will emphasize interdisciplinary research, multilevel analysis, and critical evaluation of empirical research articles.

Instructor(s): C. Cardenas-Iniguez Terms Offered: Winter

Prerequisite(s): PSYC 20200. Third or fourth-year standing.

Equivalent Course(s): PSYC 25790

CRES 25990. Stereotype Effects on Cognition. 100 Units.

This course introduces the concept of stereotypes and how stereotypes about group difference affect members of stigmatized groups in terms of their physical and mental health, self-esteem, memory, and cognitive performance. We also discuss research methods for investigating stereotype effects and recent research findings, as well as consider several different kinds of models and theories of stereotype effect. We will cover different stereotypes, including race, gender, aging, mental illness, disabilities, sexual orientation, and social class.

Instructor(s): Y. Chen Terms Offered: Spring

Equivalent Course(s): GNSE 25990, PSYC 25990

CRES 26000. Race and Politics. 100 Units.

Fundamentally, this course is meant to explore how race, both historically and currently, influences politics in the United States. For example, is there something unique about the politics of African Americans? Does the idea and lived experience of whiteness shape one's political behavior? Throughout the quarter, students interrogate the way scholars, primarily in the field of American politics, have ignored, conceptualized, measured, modeled, and sometimes fully engaged the concept of race. We examine the multiple manifestations of race in the political domain, both as it functions alone and as it intersects with other identities such as gender, class, and sexuality.

Instructor(s): C. Cohen Terms Offered: Autumn

Equivalent Course(s): PLSC 26000

CRES 26856. Queer Theory: Futures. 100 Units.

TBD

Instructor(s): Kris Trujillo Terms Offered: Winter

Equivalent Course(s): CMLT 36856, GNSE 26856, GNSE 36856, RLST 26856, RLVC 36856, CMLT 26856, ENGL 36856, ENGL 26856

CRES 27302. Gender, Sexuality, Indigenous Women in the Colonial Encounter. 100 Units.

This course is premised on the belief that the history of gender and sexuality in colonial contexts is just as crucial and revealing as other more geopolitical, military, or diplomatic topics. In this sense, laws regulating marriage or Europeans exchanging of postcards of 'exotic women' are just as significant as land annexations or military technology. Through the quarter, we will think through not only what the history of imperialism tells us about gender and sexuality, but also what this type of analysis reveals about colonialism and empire. What was the relationship between the socio-political organization of European empires and ideologies of gender and sexuality in both colony and metropole? We will also consider intersectional questions, such as the connections between regulating intimacy and the creation of race-based imperial hierarchies. To gain historical precision in examining these more abstract or theoretical questions, we will anchor our readings and discussion around particular indigenous woman and their contexts. While the study of gender and sexuality in a colonial context has come a long way in recent years, the majority of sources for examining gender and colonialism are about white women. To push back against this absence, we will take a case study approach to consider the lives and narratives surrounding indigenous women in colonial cultures.

Instructor(s): E. Fransee Terms Offered: Autumn, TBD

CRES 27503. Reading the Border: Gender, Texts, and Performance. 100 Units.

Course description unavailable.

Terms Offered: Spring

Equivalent Course(s): LACS 27503, GNSE 27503

CRES 27529. Intoxication and Dispossession in Colonialism. 100 Units.

Manhattan, according to one folk etymology, means 'the place at which we were drunk.' Supposedly the Lenape (Delaware) people named the island after their 'general intoxication,' in 1609, on wine and aqua vitae offered by the English explorer Henry Hudson. That derivation, though false, nonetheless puts drunkenness intriguingly close to the center of an originary colonial encounter. In this course, students will examine how such scenes were reiterated, transformed, and exploited throughout the 19th century. As we move along these historical itineraries, we will ask how toxic ideology distills and reinforces logics of racial dispossession. But we will also ask how intoxication opens onto altered states, draws out chronic

conditions, and expands repertoires of conviviality. Our readings will weave between multiple genres in pursuit of these questions. Juxtaposing antiquarian files and execution sermons, medical inquiries and autobiographies, bureaucratic reports and romantic episodes, we will retrace scenes of intoxication through the texts, images, and institutions that configured them over time.

Instructor(s): Matthew Boulette Terms Offered: Spring
Equivalent Course(s): ENGL 27529

CRES 27535. Whose Hybridity?: 'Mixing' Language, Race, and Identity. 100 Units.

Throughout the modern world, members of racial, ethnic, and other groups perform their identities, in part, through the use of multiple languages or linguistic sub-varieties. It is a commonplace assumption that some of these performed identities—and their linguistic modes of expression—are 'hybrid' or 'mixed.' Whether viewed as a cause for celebration or alarm, such assumptions often rely on the idea of previously 'pure' things that were later made 'hybrid.' In various accounts in a range of media, 'hybridity' spells the end of desirable ways of life, even the 'natural order of things.' In other accounts, 'hybridity' is celebrated for producing novel relations between discrete categories, practices, and identifications. Yet upon closer inspection, even such supposedly 'pure' categories themselves frequently turn out to be anything but 'pure.' This course will critically explore how 'hybridity' is constructed as a matter of concern across a range of intellectual-, geopolitical-, cultural-, and media contexts. It focuses on language as a privileged marker of and resource in identity-construction, both self and other. This class uses theories and methods from anthropology, sociolinguistics, history, and sociology to explore how 'hybridity' can be—and has been—used to construct social boundaries, exclusions, and erasures as much as solidarities, inclusions, and recognitions. The class focuses also on the material media in which these inclusions and exclusions are produced.

Instructor(s): Joshua Babcock Terms Offered: TBD
Equivalent Course(s): ANTH 27445

CRES 27536. The Transatlantic Slave Trade & the Making of the Black Lusophone Atlantic, 1450-1888. 100 Units.

By the abolition of Brazilian slavery in 1888, an estimated 4.3 million men, women, and children had been imported from Africa to Brazil. Yet, the narratives of slavery and freedom in the North Anglophone and Francophone Atlantic often dominate the popular imagination. This course is aimed at increasing knowledge about how slavery and the transatlantic slave trade shaped the Atlantic World through an examination of the deeply intertwined histories of Brazil and West Africa. This course offers a critical 'genealogy of the present' by investigating the historical roots of racial, gendered, and social inequality that persist in Brazil and Lusophone West Africa today. It will focus on the diverse social, cultural, and political linkages that were forged as a result of the transatlantic trade with particular attention to the Portuguese in West Africa; the development and growth of the slave trade to Brazil; the relationship between slavery and gender; the continuity and adaptation of African social and cultural practices; and resistance, rebellion, and freedom. We will end the course with a look at how different communities, individuals, and nations continue to grapple with the memory and legacy of slavery today.

Instructor(s): Erin McCullugh Terms Offered: Spring
Equivalent Course(s): HIST 29009, HMRT 27536, GNSE 27536, LACS 27536

CRES 27537. Poetry for the People': Global Black Politics and Culture in the Age of Marcus Garvey. 100 Units.

When Jamaican activist Marcus Garvey established the Universal Negro Improvement Association, he at once catalyzed a global mass movement for racial equality, projected a new Black diasporic identity, and redrew the fault-lines of modern racial politics. He also created the organizational and ideological framework for a global Black literature. Poets, workers, and political organizers from across the Black Diaspora sent both poetic and prosaic expressions of race-consciousness to the pages of Garvey's newspaper *Negro World*. These writers and activists challenged the legitimacy of world white supremacy, developed new modes of transnational racial affiliation, and enshrined Africa as the normative symbolic center of global Black politics. Despite its historical importance, however, Garveyism occupies an ambiguous place in African American studies. Controversies that trace back to the inception of UNIA, in addition to the loss of the organization's records, have impeded a full reckoning with the movement's global impact. Nonetheless, the great multivolume anthology of UNIA papers edited by Robert A. Hill, in addition to recent revisionist scholarship, suggest unexplored avenues of inquiry. The history of Garveyism, it seems, remains unfinished. 'Poetry for the People' will introduce students to the real and imagined worlds of Garveyist Pan-Africanism, and explore the legacies of Garvey's movement for contemporary debates on race, empire, nationalism, and the politics of culture.

Instructor(s): Noah Hansen Terms Offered: Spring
Equivalent Course(s): ENGL 27537

CRES 27538. Racial Universalisms. 100 Units.

This class will discuss the relationship between race and universalism. At first glance, one might think that both terms are opposed, with race as a particular and the universal that which transcends it. The universalism of equal rights, this view would suggest, stands against the divisions drawn along racial lines. But closer inspection reveals that the interplay between race and the discourse of universalism is more complex. In fact, their juxtaposition - as in the seemingly oxymoronic 'racial universalisms' in the plural - arguably leads to the heart of what both concepts are about, both in their theoretical contours and historical trajectories. Particular attention will be given to contemporary debates on race and 'epistemologies of ignorance,' which have provided theoretical tools to understand the systematic and racialized blinding effects that universalist discourse might entail.

Instructor(s): Niklas Plaetzer Terms Offered: Winter
Equivalent Course(s): PLSC 21538

CRES 27539. The Politics of Black Queer Feminist Praxis. 100 Units.

This course critically interrogates contemporary 'status quo' power dynamics through a lens of Black Queer Feminism. This course understands Black Queer Feminism as a political praxis that operationalizes intersectionality by seeking to deconstruct normative and hegemonic systems of power. While many of the attendees of the Women's March of 2017 were white, over 53% of white women had just voted for Donald Trump in the 2016 presidential election. This comes at a stark comparison with the 94% of Black women that voted for Hillary Clinton. As one journalist cleverly wrote, this highlights a '53 percent problem in American Feminism'. This seminar-style course, through critical engagement with Black Queer Feminist praxis (thought and action), attempts to reconcile this 53 percent problem. We will begin with a history of Black feminist thought and transition to its contemporary iterations, including trans politics and queer theory. Along with a diasporic and transnational analysis, we will investigate: how do contemporary iterations of radical Black feminism engage with and resist against the state? How does Black Queer Feminism shape politics and society? The syllabus will incorporate readings from various disciplines including political science, sociology, and Black studies and will focus on how the simultaneity of hegemony shapes access to and relationships with power.

Instructor(s): Laterricka Smith Terms Offered: Spring

Equivalent Course(s): PLSC 21539, GNSE 27539

CRES 27540. Slave Abolition and Its Afterlives. 100 Units.

In recent years scholars and activists have (re)turned to the abolitionist movement of the 19th century in order to gain critical traction on the interlocking operations of racism, capitalism, and patriarchy. The return of abolitionism reveals an aspiration to learn from the failures of the past in order to generate new strategies to overcome the structures of domination that pervade our social and political lives. This quarter we will read a series of texts produced before and after the formal end of slavery in the United States with particular attention paid to the revisions, retrospections, and reformulations made to conceptions of freedom. How did abolitionists understand the meaning of freedom before Emancipation? What political transformations did they endorse? Did formal emancipation actualize or reframe the abolitionist imaginary? We will also track two unfulfilled promises in the thought of black scholars and activists: the attempt to secure economic independence for freed slaves and critiques of patriarchal rule within the family. By tracking these political projects, we will raise questions about the re-emergence of abolitionist promises. How does the present trend to appropriate abolition occlude key political disagreements among early and mid-nineteenth century activists? Which strand of abolitionism are we inheriting in the twenty-first century? Why? These questions will anchor our course and help us think about the uses of history for our own political present.

Instructor(s): Larry Svabek Terms Offered: Winter

Equivalent Course(s): PLSC 21540, HIST 29008

CRES 27541. Race, Capitalism and the Atlantic World. 100 Units.

This course serves as an introduction to the long history of racial capitalism. While understandings of racial capitalism vary across disciplines and historical periods, this interdisciplinary course will focus on the construction of the Black Atlantic world as a way of understanding how race, capitalism and gender are constitutive elements of modernity. Taking the Black Atlantic as both a discursive formation and historical world-event, the course will explore the articulations of power made possible by the modern geography of the Atlantic world. The course will necessarily draw from sources both historically minded and theoretically rich, encouraging students to consider how the development of modern regimes of racialization and capitalism inform contemporary understandings of race, gender and power.

Instructor(s): Cameron Cook Terms Offered: Autumn

Equivalent Course(s): PLSC 27541

CRES 27542. Racial Consciousness and the Asian American Perspective. 100 Units.

What does it mean to be Asian American today? At once marginalized and woefully unspecific, Asian American identity seems to occupy a purgatorial status in the American racial imagination. How have Asian Americans been understood within, and how do they understand themselves within, White institutions, anti-Black hierarchies, and capitalist orders? And what are the cumulative psychic effects of their quotidian, uneventful, and often unspoken of racializations? This seminar examines how Asian American writers, artists, and thinkers reckon with in/visibility, ambiguity, and the 'minor intensities' of Asian American life through stories, poetry, films, and visual art. We will engage in close reading and analysis of these materials, with an eye toward their specific social, historical, and political contexts as we read them alongside a range of critical theory on the politics of identity and subjectivity.

Instructor(s): Victoria Nguyen Terms Offered: Spring

Equivalent Course(s): ANTH 23611

CRES 27605. United States Legal History. 100 Units.

This course focuses on the connections between law and society in modern America. It explores how legal doctrines and constitutional rules have defined individual rights and social relations in both the public and private spheres. It also examines political struggles that have transformed American law. Topics to be addressed include the meaning of rights; the regulation of property, work, race, and sexual relations; civil disobedience; and legal theory as cultural history. Readings include legal cases, judicial rulings, short stories, and legal and historical scholarship.

Instructor(s): A. Stanley Terms Offered: Autumn

Equivalent Course(s): GNSE 27605, HMRT 27061, AMER 27605, HIST 27605, GNSE 37605, CRES 37605, LLSO 28010, HIST 37605, HMRT 37605

CRES 27720. Race and Religion in Chicago. 100 Units.

This course is a chronological and thematic overview of a number of key themes and theoretical concerns in the study of race and religion in the U.S. from 1865 to the present. Taking Chicago as a case study, the course will introduce students to key topics in the study of race and religion in the U.S. Most of the course will focus on black-white racialization in Chicago

during this period-interrogating the construction of and contestation over whiteness among Catholics, Protestants, Jews, and new religious movements from the late nineteenth century and through much of the twentieth century, as well as tracing the 'spiritual afterlife of slavery' in Chicago's churches, synagogues, mosques, and other places of worship, and also in the everyday lives of Chicago's religious citizens. The readings and class discussions will also open out to consider other religio-racial issues and projects in Chicago (e.g., Latinx, Indian American, and Indigenous religious communities). Topics for class readings and discussions will be ordered by the week and will alternate between broader theoretical and historiographical issues pertaining to race and religion in the U.S. (first meeting of the week) and closer examinations of the same themes/questions in the context of the religious life of Chicago (second meeting of the week). In this way, Chicago provides a 'laboratory' for observing, testing, and refining historical and theoretical claims about race and religion in the United States.

Instructor(s): Joel Brown Terms Offered: Spring

Equivalent Course(s): HIST 27311, RLST 27720

CRES 28011. Religions of the African Diaspora. 100 Units.

This course is intended as an introduction to religions of the African Diaspora. We will engage a range of themes relevant to the history, beliefs and practices, world-views, and communities of African-derived religions around the globe, including issues of race and race-making, class, gender, sexuality, the body, and representations in the media. We will begin with a discussion of the central terms and major challenges of the field. With those concerns in mind, we will trace the historical movements of Africans across the globe, examining the spread and development of religions through key themes and case studies. We will address a large number traditions, including Santeria, Condemble, Vodoun, Palo, Obeah, Christianity, Islam, and Judaism.

Equivalent Course(s): RLST 28011

CRES 29007. Capitalism and Revolution in the Atlantic World. 100 Units.

What was the relationship between the 'Age of Revolutions' and the rise of capitalism? This course places the social and political upheavals in France, Haiti, and the Americas between 1776 and 1821 in the context of broader developments in the long eighteenth century, including innovations in finance (debt, credit, banks, corporations), the expansion of overseas commerce and colonial slavery, and the emergence of Enlightenment political economy. Above all, we will consider the extent to which the institutional and intellectual structures of the world economy determined both the causes and the outcomes of the revolutions. Readings will cover long-standing debates in the scholarship concerning social class and revolution; the imperial origins of national consciousness; humanitarian reform and the abolition of slavery; colonialism and industry; and the legacy of eighteenth-century revolutions in the twenty-first century.

Instructor(s): O. Cussen Terms Offered: Autumn

Equivalent Course(s): HIST 29007, LACS 29007, AMER 29007

CRES 29302. Human Rights II: History and Theory. 100 Units.

This course is concerned with the theory and the historical evolution of the modern human rights regime. It discusses the emergence of a modern 'human rights' culture as a product of the formation and expansion of the system of nation-states and the concurrent rise of value-driven social mobilizations. It proceeds to discuss human rights in two prevailing modalities. First, it explores rights as protection of the body and personhood and the modern, Western notion of individualism. Second, it inquires into rights as they affect groups (e.g., ethnicities and, potentially, transnational corporations) or states.

Instructor(s): TBA Terms Offered: Winter

Equivalent Course(s): HMRT 20200, HIST 39302, HIST 29302, LLSO 27100, INRE 31700, HMRT 30200

CRES 29313. Childhood and Human Rights in the Twentieth Century. 100 Units.

How and when did we come to embrace the idea that children are innocent and defenseless? What are the implications of framing children's rights as human rights? In this course, we will explore key historical transformations in the legal, social, and cultural construction of childhood in modern Western societies. We will examine children's own experiences and how adults rendered them the subjects of study and state regulation. Topics of discussion will include work, leisure, education, sexuality, criminality, consumerism, and censorship. Throughout, we will discuss how ideas about race, gender, class, and age have shaped the way that the public and the state had defined childhood: who was entitled to a protected period of nurture, care, and play; who was allowed to be disobedient, or even lawless, and still avoid legal consequences. We will explore how and why some children have been and continue to be excluded from this idealized vision.

Instructor(s): N. Maor Terms Offered: Spring

Equivalent Course(s): AMER 29313, HIST 29313, GNSE 29313, HMRT 29313, LLSO 20301

CRES 29318. Modern Disability Histories: Gender, Race, and Disability. 100 Units.

This course introduces students to the conceptual apparatus of disability studies and major developments in disability history since the late nineteenth century. The course will consider disability beyond physical impairment, centering the ways in which notions of gender, race, class, sexuality, and ability interact and shape subjects, and how these subject positions shift across political watersheds. Students will engage a variety of sources, such as autobiographies, pamphlets, visual material, laws, and medical texts, as well as historiographical sources. Topics will include late nineteenth-century female 'hysteria,' evolutionary approaches to sign language and orality, and the effects of industrialization on new impairments; early twentieth-century eugenics and the Nazi T4 program; postwar developments in prosthetics and discursive intersections between psychosis and civil rights movement. Students are encouraged to work on creative collective projects (e.g., an exhibit or a short video) in addition to written assignments.

Instructor(s): M. Appeltová Terms Offered: Winter

Equivalent Course(s): HIPS 29318, CHDV 29318, HIST 29318, HMRT 29318, GNSE 23106, HLTH 29318

CRES 29800. BA Colloquium: Theory and Methods in Critical Race and Ethnic Studies. 100 Units.

Students are encouraged to register for the BA Colloquium in the Autumn Quarter of their fourth-year. Fourth-year CRES majors will meet weekly in Autumn Quarter and every other week in Winter Quarter, and will register for this course either of those quarters. This course is designed to introduce students to a range of qualitative research methods and to help determine which method would fit a research project of their own design in the field of race and ethnic studies. It functions as a research workshop in which students identify a research topic, develop a research question, and explore a range of methods that may or may not be appropriate for the research project. Students read each other's work and work through ideas that can serve as the proposal for a BA project.

Instructor(s): Staff Terms Offered: Autumn Winter

Prerequisite(s): Consent of instructor and director of undergraduate studies

Note(s): Students are required to register for CRES 29800 in either Autumn or Winter of their fourth year. They must attend course meetings both quarters.

CRES 29900. Preparation for the BA Essay. 100 Units.

Students may register for Preparation for the BA Essay during any quarter of their fourth year. Students should consult the CRES entry in the Time Schedules to locate the section numbers for faculty advisers.

Terms Offered: Autumn,Winter, Spring

Prerequisite(s): CRES 29800; consent of the faculty supervisor and director of undergraduate studies

Note(s): Students are required to submit the College Reading and Research Course Form. Must be taken for a quality grade.

Data Science

The technological revolution has led to an explosion of data in domains of knowledge ranging from medicine to social science and from commerce to high energy physics. Data science is the study of extracting value from data. It combines insights, techniques, and tools from computer science, statistics, social science, and elsewhere. The minor program in data science is intended to equip students with computational and analytical comprehension and tools that will allow them to work on a variety of data-driven problems in any discipline. The program also emphasizes important issues in data privacy, ethics, and communication.

Minor in Data Science

The minor in data science targets students from all disciplines and consists of four required courses and two electives drawn from an approved list. Students may petition to take electives other than those listed below, if they can demonstrate substantial data science content in those courses. A successful petition requires students to obtain approval from the program director, who will contact College Advising on the student's behalf.

1. Introductory Sequence (four courses required):

CMSC 11800	Introduction to Data Science I	100
CMSC 11900	Introduction to Data Science II	100
CMSC 25300	Mathematical Foundations of Machine Learning	100
CMSC 25900	Ethics, Fairness, Responsibility, and Privacy in Data Science	100

2. Elective Sequence (two courses required):

Two of the following:		200
CMSC 13600	Introduction to Data Engineering	
CMSC 23900	Data Visualization	
CMSC 25025	Machine Learning and Large-Scale Data Analysis	
STAT 22200	Linear Models and Experimental Design	

Grading and Advising

Courses in the minor may not be double counted with the student's major(s) or with other minors. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Prospective minors must meet with the data science program director to discuss their course plans and to obtain advice and approval. Together the student and the program director will fill out a Consent to Complete a Minor Form (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf). Students should submit completed, signed forms to their College adviser by the end of Spring Quarter of their third year.

Summary of Requirements for the Minor in Data Science

Introductory Sequence: Four courses	400
Electives: Two courses	200
Total Units	600

Digital Studies of Language, Culture, and History

Department Website: <https://digitalstudies.uchicago.edu>

The minor in Digital Studies of Language, Culture, and History introduces students to computer programming and the use of cutting-edge software tools for representing, exploring, analyzing, and publishing the products of human language and culture. These products range from everyday speech and writing to historical documents and literary texts, and they encompass music and art as well as mundane objects, places, and institutions. The courses in this minor will help students not just to understand and use digital tools but to see digital computing as a cultural activity in its own right—an activity to be studied with respect to its historical development, social setting, cultural impact, and aesthetic qualities, as well as the ethical problems it creates in our increasingly digitized and networked world. This minor does not require a background in mathematics or computing but is designed for students who are majoring in the humanities or humanistic social sciences. It will also be of interest to students majoring in the sciences who want to acquire programming skills in the context of linguistic, cultural, and historical studies.

Minor in Digital Studies of Language, Culture, and History

Students must take six courses to complete the minor in Digital Studies of Language, Culture, and History. They break down as follows:

1. One course in computer programming. Students are encouraged to take DIGS 20001 Introduction to Computer Programming, but the following are acceptable substitutes: CMSC 12100 Computer Science with Applications I, CMSC 15100 Introduction to Computer Science I, CMSC 16100 Honors Introduction to Computer Science I.
2. One course in statistics. Students are encouraged to take STAT 22000 Statistical Methods and Applications, which is offered every quarter. Alternatively, they may take DIGS 20002 Data Analysis for the Humanities I, which is offered in the Autumn Quarter.
3. One course in data analysis using the R programming environment: DIGS 20004 Data Analysis for the Humanities II. This course has the prerequisites of DIGS 20001 and DIGS 20002 (or equivalent courses in computer programming and statistics).
4. One of the following three courses:
 - DIGS 20003 Data Management for the Humanities (Autumn)
 - DIGS 20005 Data Publication for the Humanities (Winter)
 - DIGS 20006 Natural Language Processing (Spring)Note that each of these courses has a prerequisite of DIGS 20001 (or an equivalent introduction to computer programming), and DIGS 20006 also requires DIGS 20002 (or an equivalent introduction to statistics).
5. A required seminar course: DIGS 20007 Introduction to Digital Humanities
6. One elective course approved by the faculty director of the Digital Studies of Language, Culture, and History program. This will normally be a course in the humanities or social sciences that entails computational methods or explores the history and cultural significance of digital media or of computation in general. Suitable courses are offered in several different departments and programs.

Note that the particular courses on offer will vary from year to year and some courses may have prerequisites. Examples of potentially suitable courses include:

- CMST 25204 Media Ecology: Embodiment & Software
- CMST 27110 Digital Cinema
- CMST 27815 Introduction to Art, Technology, and Media
- CMST 27920 Virtual Reality Production
- ENGL 25980 Technorelations: Intimacy, Bodies, Machines
- ENGL 25990 Always Already New - Printed Books & Electronic Texts
- GEOG 20500 Introduction to Spatial Data Science
- GEOG 28201 Intro to Geographic Information Systems
- HIPS 25205 Computers, Minds, Intelligence & Data
- HIST 25415 History of Information
- HIST 25425 Censorship, Info Control, & Revolutions in Info Technology from the Printing Press to the Internet
- HIST 29523 Data History: Information Overload from the Enlightenment to Google
- LING 28600 Computational Linguistics
- MUST 26618 Electronic Music I

Summary of Requirements for the Minor

DIGS 20001	Introduction to Computer Programming	100
or CMSC 12100	Computer Science with Applications I	
or CMSC 15100	Introduction to Computer Science I	

or CMSC 16100	Honors Introduction to Computer Science I	
DIGS 20002	Data Analysis for the Humanities I	100
or STAT 22000	Statistical Methods and Applications	
DIGS 20004	Data Analysis for the Humanities II	100
One of the following three courses:		100
DIGS 20003	Data Management for the Humanities	
or DIGS 20005	Data Publication for the Humanities	
or DIGS 20006	Natural Language Processing	
DIGS 20007	Introduction to Digital Humanities	100
One elective, approved by the faculty director		100
Total Units		600

Advising and Grading

Courses in the minor may not be double counted with the student's major(s), other minors, or general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Students who elect the minor must meet with the academic director before the end of Spring Quarter of their third year to declare their intention to complete the minor. The director's approval for the minor program should be submitted to a student's College adviser by the deadline above using the Consent to Complete a Minor Program (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf) form.

Digital Studies of Language, Culture, and History Courses

DIGS 20001. Introduction to Computer Programming. 100 Units.

This course provides an introduction to computer programming and computational concepts using the Python programming language. It is a prerequisite for the other Digital Studies core courses (students who are already experts in Python may request an exemption from taking this course, subject to the approval of the Director of Digital Studies). The Spring Quarter version of this course is open to all undergraduate and graduate students; however, students doing the undergraduate Minor or the joint BA/MA in Digital Studies are given priority in enrollment. An equivalent but accelerated course (DIGS 30000) is offered in September for incoming students in the one-year Digital Studies MA program.

Terms Offered: Spring Summer. DIGS 20001/30001 is offered every Spring Quarter as a full-length course and in Summer as an intensive three-week course in the September term.

Equivalent Course(s): DIGS 30001

DIGS 20002. Data Analysis for the Humanities I. 100 Units.

This course provides an introduction to statistics and computational data analysis with emphasis on linguistic, cultural, and historical data. Programming exercises in Python will help students build on what they learned in DIGS 20001/30000/30001. Digital Studies MA students who have taken the University of Chicago course STAT 22000 or an equivalent statistics course may request an exemption from taking this course, subject to the approval of the Director of Digital Studies.

Terms Offered: Autumn

Prerequisite(s): DIGS 20001/30000/30001, "Introduction to Computer Programming" (or equivalent expertise in Python)

Equivalent Course(s): DIGS 30002

DIGS 20003. Data Management for the Humanities. 100 Units.

This course introduces concepts and techniques related to the representation and management of digital data, with emphasis on the forms of data encountered in linguistic, cultural, and historical research. Topics covered include: (1) digital text encoding using the Unicode and XML standards, with attention to the TEI-XML tagging scheme of the Text Encoding Initiative; (2) digital typefaces ('fonts') for displaying encoded characters; (3) digital encoding of 2D images, 3D models, sound, and video; (4) database models and querying languages, both relational and non-relational, with attention to methods for integrating and querying semi-structured and heterogeneous data; (5) ontologies, the Semantic Web, and related technical standards; and (6) cartographic concepts (e.g., coordinate systems and map projections) and the basics of geospatial data management using Geographic Information Systems.

Terms Offered: Autumn

Prerequisite(s): DIGS 20001/30000/30001, "Introduction to Computer Programming" (or an equivalent course in computer programming)

Equivalent Course(s): DIGS 30003

DIGS 20004. Data Analysis for the Humanities II. 100 Units.

This course builds on DIGS 20002/30002, "Data Analysis for the Humanities I," by introducing students to the R language and R packages for data analysis. Topics covered include data mining, data visualization, and high-performance computing techniques for analyzing large datasets. This course provides a high-level conceptual introduction to machine learning, social network analysis, and spatial data analysis. The goal is to make students familiar with these methods and aware of their role in linguistic, cultural, and historical studies, as a basis for further study of these methods.

Terms Offered: Winter

Prerequisite(s): DIGS 20001/30000/30001, "Introduction to Computer Programming" (or an equivalent course in computer programming) and DIGS 20002/30002, "Data Analysis for the Humanities I" (or an equivalent statistics course)

Equivalent Course(s): DIGS 30004

DIGS 20005. Data Publication for the Humanities. 100 Units.

This course introduces software techniques and tools for building Web browser apps written in HTML5, CSS, and JavaScript with emphasis on user interfaces for presenting information to researchers and students in the humanities. Topics covered include: (1) the use of application programming interfaces (APIs) to integrate into Web apps the various analysis, visualization, and database services provided by external systems; (2) the transformation of data into formats appropriate for publication on the Web; and (3) the use of persistent identifiers for reliable citation of published data and the problems of archiving and preserving scholarly data.

Terms Offered: Winter

Prerequisite(s): DIGS 20001/30000/30001, "Introduction to Computer Programming" (or an equivalent course in computer programming)

Equivalent Course(s): DIGS 30005

DIGS 20006. Natural Language Processing. 100 Units.

This course introduces software techniques and tools for natural language processing (NLP) using Python. Topics covered include a review of character-string processing and NLP methods for part-of-speech tagging, lemmatization, morphological segmentation, sentence splitting, named entity recognition, co-reference resolution, sentiment analysis, and topic modeling. This course also provides a high-level conceptual overview of recent work in machine translation via neural networks and deep learning.

Terms Offered: Spring

Prerequisite(s): DIGS 20001/30000/30001, "Introduction to Computer Programming" (or equivalent expertise in Python) and DIGS 20002/30002, "Data Analysis for the Humanities I" (or an equivalent statistics course)

Equivalent Course(s): DIGS 30006

DIGS 20007. Introduction to Digital Humanities. 100 Units.

This course is a discussion-oriented seminar that introduces students to theoretical debates in digital humanities, broadly defined, with attention to underlying philosophical issues. It touches upon the history and theory of digital computing within its social and institutional settings, as well as the history of the application of digital computing to texts, images, sound, geospatial data, and other information relevant to cultural and historical studies. Among other topics, this course introduces students to debates about the cultural impact of digital media and about ethical issues related to the ownership, accessibility, and legitimate uses of digital data.

Terms Offered: Autumn

Prerequisite(s): DIGS 20001/30000/30001, "Introduction to Computer Programming" (or an equivalent course in computer programming)

Equivalent Course(s): DIGS 30007

DIGS 20015. Musical Robotics. 100 Units.

Musical Robotics is a skills and discussion-based class for students interested in learning analog and digital electronics to build robotic musical instruments or sound art installations. Discussions will be organized around readings related to art and technology with a special focus on sound-based works. Students will learn to program Arduinos to control DC motors, solenoids, and servos with music applications like Logic Pro and Max/MSP. As a final project students will present a new instrument they've created or plans for an art installation featuring a kinetic sculpture element.

Instructor(s): Bryan Jacobs Terms Offered: Autumn

Prerequisite(s): For this advanced course, a background in low-level, functional, or graphical (Max/MSP, PD) computer programming is assumed. It is also assumed that students have done some work to develop musical ideas or worked towards developing an aesthetic perspective.

Equivalent Course(s): MAAD 26720, DIGS 30015, MUSI 26720, MUSI 36620

East Asian Languages and Civilizations

Department Website: <http://ealc.uchicago.edu>

Program of Study

The Department of East Asian Languages and Civilizations (EALC) offers a BA program in East Asian studies that introduces students to the traditional and modern civilizations of China, Japan, and Korea, and provides them with the opportunity to achieve a basic reading and speaking knowledge of Chinese, Japanese, and Korean. This program is interdisciplinary and students may take relevant courses in both the humanities and the social sciences.

Students in other fields of study may also complete a minor in EALC. Information follows the description of the major.

Before declaring their major in EALC, students must meet with the Director of Undergraduate Studies (typically before the end of their second year) to discuss their areas of interest.

Program Requirements

Students must complete 1300 units toward an EALC major. No courses may be double-counted toward general education requirements or minor requirements. Students who plan to major in EALC are strongly encouraged (but not required) to meet the general education requirement in civilization studies by taking EALC 10800-10900-11000 Introduction to the Civilizations of East Asia I-II-III. Students planning to major in EALC should meet with EALC's Director of Undergraduate Studies to discuss their program of study, ideally by the end of their second year.

Language Requirement

To graduate with an EALC major, students must demonstrate competency in a primary East Asian language that is equivalent to the intermediate (second-year) level of the language. Beginning with the Class of 2021, language credit toward the major will be awarded ONLY for courses taken and successfully completed either at the University of Chicago or through a study abroad or summer program pre-approved by the Director of Undergraduate Studies. To demonstrate extant competency, students have the following options: (1) place into and complete a higher-level language course (20300 or higher), including Literary Chinese or Literary Japanese; or (2) successfully complete an EALC content course that requires the use of texts in the original. For this second option, students are required to meet with the Director of Undergraduate Studies to find a suitable course and to get permission to count the course in advance.

Topics in East Asian Languages and Civilizations (EALC)

All students are required to take three Topics in EALC courses (EALC 10500-10799). These courses are meant to introduce students to issues in East Asian studies.

Electives in the Major

Students are required to complete an additional 1000 units. Up to 600 units of these may be language credit. Many students will take an additional year of their primary East Asian language or a year of a secondary East Asian language. A beginning language sequence in the primary East Asian language cannot be counted toward the major; beginning sequences are acceptable for secondary languages.

Up to three quarters (300 units) of Literary Chinese or Literary Japanese may count either as language or as content courses.

Students who complete their general education requirement in civilization studies with a sequence other than EALC 10800-10900-11000 (Introduction to the Civilizations of East Asia I-II-III) may take any of those courses as an elective in the major. Students may also take additional Topics in EALC courses as electives in the major.

A maximum of six approved courses taken while studying abroad may be counted toward program requirements by petition to the Director of Undergraduate Studies.

Summary of Requirements

Three courses in a second-year or more advanced level East Asian language *	300
Three Topics in EALC courses +	300
Seven elective courses related to East Asia §	700
Total Units	1300

* Students who have demonstrated competency through course work, placement, or extensive prior experience/exposure to a language may substitute these courses with additional electives as approved by the Director of Undergraduate Studies.

+ EALC 10500-10799

§ Up to three of which may be a further year of the same language or a year of a second East Asian language

Grading

Students must receive quality grades in all courses taken to meet requirements in the major. No P/F grades are offered in language courses.

Bachelor's Thesis and Honors

Students who have maintained an overall GPA of 3.5 or higher are eligible for honors, but only students who complete a bachelor's thesis that earns an "A" grade will be awarded honors in the department. Students who do not wish to be considered for honors are not required to submit a bachelor's thesis for graduation. To be eligible to write a bachelor's thesis, students must have maintained an overall GPA of 3.5 or higher and submit an acceptable proposal to the department. Students typically choose an adviser for their BA project in Spring Quarter of their third year. The project must be approved by both the adviser and the director of undergraduate studies early in the student's fourth year, typically no later than second week of Autumn Quarter. Interested students should consult the Director of Undergraduate Studies for details concerning the proposal.

Minor Program in East Asian Languages and Civilizations

Students in other fields of study may complete a minor in EALC. The minor in EALC requires a total of seven courses chosen in consultation with the director of undergraduate studies. No more than three of these courses may be in an East Asian language (credit by petition may not be used for this language option). Students who plan to pursue an EALC minor are encouraged to take EALC 10800-10900-11000 Introduction to the Civilizations of East Asia I-II-III to meet the general education requirement in civilization studies.

Students who elect the minor program in EALC must meet with the director of undergraduate studies before the end of Spring Quarter of their third year to declare their intention to complete the minor by submitting a form obtained from their College adviser. Students choose courses in consultation with the director of undergraduate studies. The director's approval for the minor program should be submitted to the student's College adviser by the deadline above on a form obtained from the adviser.

Courses in the minor (1) may not be double counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Chinese Courses

CHIN 10100-10200-10300. Elementary Modern Chinese I-II-III.

This three-quarter sequence introduces the fundamentals of modern Chinese. By the end of Spring Quarter, students should have a basic knowledge of Chinese grammar and vocabulary. Listening, speaking, reading, and writing are equally emphasized. Accurate pronunciation is also stressed. In Spring Quarter, students are required to submit a video project for the Chinese Video Project Award. The class meets for five one-hour sessions a week. A drill session with the TA is held one hour a week in addition to scheduled class time. All courses in this sequence must be taken for a quality grade. No auditors permitted. Two sections.

CHIN 10100. Elementary Modern Chinese I. 100 Units.

This three-quarter sequence introduces the fundamentals of modern Chinese. By the end of Spring Quarter, students should have a basic knowledge of Chinese grammar and vocabulary. Listening, speaking, reading, and writing are equally emphasized. Accurate pronunciation is also stressed. In Spring Quarter, students are required to submit a video project for the Chinese Video Project Award. The class meets for five one-hour sessions a week. A drill session with the TA is held one hour a week in addition to scheduled class time. All courses in this sequence must be taken for a quality grade. No auditors permitted.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): Consent of EALC Director of Undergraduate Studies

CHIN 10200. Elementary Modern Chinese II. 100 Units.

Part 2 of this three-quarter sequence introduces the fundamentals of modern Chinese. By the end of the spring quarter, students should have a basic knowledge of Chinese grammar and vocabulary. Listening, speaking, reading, and writing are equally emphasized. Accurate pronunciation is also stressed. A video project is required in spring quarter, which will be entered in the competition for the Chinese Video Project Award. Class meets for five one-hour sessions each week. Additional small group discussions of 40 minutes per week will be arranged. Maximum enrollment for each section is 18.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): CHIN 10100, or placement, or consent of instructor

Note(s): Must be taken for a letter grade. No auditors permitted.

CHIN 10300. Elementary Modern Chinese III. 100 Units.

Part 3 of this three-quarter sequence introduces the fundamentals of modern Chinese. By the end of the spring quarter, students should have a basic knowledge of Chinese grammar and vocabulary. Listening, speaking, reading, and writing are equally emphasized. Accurate pronunciation is also stressed. A video project is required in spring quarter, which will be entered in the competition for the Chinese Video Project Award. Class meets for five one-hour sessions each week. Additional small group discussions of 40 minutes per week will be arranged. Maximum enrollment for each section is 18.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): CHIN 10200, or placement, or consent of instructor

Note(s): Must be taken for a letter grade. No auditors permitted.

Equivalent Course(s): CHIN 33300

CHIN 10123. Summer Intensive Introductory Chinese. 300 Units.

This course provides 140 contact hours and participants may be eligible to receive a FLAS grant from their home institution or from UChicago to support their study. The SLI accepts the FLAS award as full tuition for summer Chinese. All students participating Summer CHIN 10123 will participate in a four skills proficiency assessment for the course. Students will receive University of Chicago certification describing their language skills in reading, writing, speaking and listening, based on the results of the proficiency assessment.

Instructor(s): Staff Terms Offered: Summer

CHIN 11100-11200-11300. First-Year Chinese for Bilingual Speakers I-II-III.

This three-quarter series is intended for bilingual speakers of Chinese. Our objectives include teaching students standard pronunciation and basic skills in reading and writing, while broadening their communication skills for a wider range of contexts and functions. The class meets for three one-hour sessions a week. Consultation with instructor encouraged prior to enrollment. All courses in this sequence must be taken for a quality grade.

CHIN 11100. First-Year Chinese for Heritage Students I. 100 Units.

Part 1 of this three-quarter sequence introduces the fundamentals of modern Chinese to bilingual speakers. Bilingual Speakers are those who can speak Chinese but do not know how to read or write. By the end of the spring quarter, students should have a basic knowledge of Chinese grammar and vocabulary. Listening, speaking, reading, and writing are equally emphasized. Accurate pronunciation is also stressed. A video project is required in spring quarter, which will be entered in the competition for the Chinese Video Project Award. Class meets for three one-hour sessions each week MWF. Must be taken for a letter grade. No auditors permitted.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): Consent of Director of Chinese Language Program

CHIN 11200. First-Year Chinese for Heritage Students-II. 100 Units.

Part 2 of this three-quarter sequence introduces the fundamentals of modern Chinese to bilingual speakers. Bilingual Speakers are those who can speak Chinese but do not know how to read or write. By the end of the spring quarter, students should have a basic knowledge of Chinese grammar and vocabulary. Listening, speaking, reading, and writing are equally emphasized. Accurate pronunciation is also stressed. A video project is required in spring quarter, which will be entered in the competition for the Chinese Video Project Award. Class meets for three one-hour sessions each week MWF.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): CHIN 11100, or placement, or consent of instructor

Note(s): Must be taken for a letter grade. No auditors permitted.

CHIN 11300. First-Year Chinese for Heritage Students-III. 100 Units.

Part 3 of this three-quarter sequence introduces the fundamentals of modern Chinese to bilingual speakers. Bilingual Speakers are those who can speak Chinese but do not know how to read or write. By the end of the spring quarter, students should have a basic knowledge of Chinese grammar and vocabulary. Listening, speaking, reading, and writing are equally emphasized. Accurate pronunciation is also stressed. A video project is required in spring quarter, which will be entered in the competition for the Chinese Video Project Award. Class meets for three one-hour sessions each week MWF.

Instructor(s): Staff Terms Offered: Spring

CHIN 20100-20200-20300. Intermediate Modern Chinese I-II-III.

The goal of this sequence is to enhance students' reading, listening, speaking, and writing skills by dealing with topics at an intermediate linguistic level. In addition to mastering the content of the textbook, students are required to complete two language projects each quarter. Chinese computing skills are also taught. The class meets for five one-hour sessions a week. All courses in this sequence must be taken for a quality grade. No auditors permitted. Two sections.

CHIN 20100. Intermediate Modern Chinese I. 100 Units.

Part 1 of this sequence aims to enhance students' reading, listening, speaking, and writing skills by dealing with topics at an intermediate linguistic level. In addition to mastering the content of the textbook, students are required to complete two language projects each quarter. Chinese computing skills are also taught. Class meets for five one-hour sessions each week.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): CHIN 10300, or placement, or consent of instructor

Note(s): Must be taken for a letter grade. No auditors permitted.

CHIN 20200. Intermediate Modern Chinese II. 100 Units.

Part 2 of this sequence aims to enhance students' reading, listening, speaking, and writing skills by dealing with topics at an intermediate linguistic level. In addition to mastering the content of the textbook, students are required to complete two language projects each quarter. Chinese computing skills are also taught. Class meets for five one-hour sessions each week.

CHIN 20101. Intermediate Modern Chinese for CPS Students. 100 Units.

StarTalk Chinese-Year 2

CHIN 20123. Summer Intensive Intermediate Chinese. 300 Units.

Summer Intermediate Chinese is an 8-week course designed for students who have already completed one year of college-level study of Modern Chinese (Mandarin). Listening, speaking, reading, and writing are equally emphasized, and materials from Chinese culture will also be incorporated into the course. Class will meet for five three-hour periods a week, with additional speaking practice during the afternoon. This intensive summer Chinese course requires students to spend several additional hours per day preparing for class through drill sessions, independent study, and other activities. The curriculum for Intensive Intermediate Chinese is the equivalent of the CHIN 20100-20200-20300 sequence during the regular academic year at the University of Chicago.

Terms Offered: Summer

CHIN 20401-20402-20403. Advanced Modern Chinese I-II-III.

The goal of this sequence is to help students develop advanced proficiency in reading, listening, speaking, and writing. This sequence emphasizes more advanced grammatical structures. We begin with discussion in Chinese on topics relevant to modern China and then shift to authentic Chinese texts in an effort to better prepare students to deal with original Chinese source materials. Discussion in Chinese required. The class meets for five one-hour sessions a week.

CHIN 20401. Advanced Modern Chinese I. 100 Units.

For both graduates and undergraduates. The goal of this sequence is to help students develop advanced proficiency in reading, listening, speaking, and writing. This sequence emphasizes more advanced grammatical structures, and requires discussion in Chinese on topics relevant to modern China. Over the course of this sequence, the emphasis will shift to authentic Chinese texts in an effort to better prepare students to deal with original Chinese source materials. Class meets for five one-hour sessions each week.

Instructor(s): X. Wang Terms Offered: Autumn

Prerequisite(s): CHIN 20300, or placement, or consent of instructor

Note(s): No auditors. Must be taken for a quality grade.

CHIN 20402. Advanced Modern Chinese II. 100 Units.

The goal of this sequence is to help students develop advanced proficiency in reading, listening, speaking, and writing. This sequence emphasizes more advanced grammatical structures, and requires discussion in Chinese on topics relevant to modern China. Over the course of this sequence, the emphasis will shift to authentic Chinese texts in an effort to better prepare students to deal with original Chinese source materials. Class meets for five one-hour sessions each week.

Instructor(s): Kuo, Wang Terms Offered: Winter

Prerequisite(s): CHIN 20401 or placement, or consent of instructor

Note(s): For both graduates and undergraduates. No auditors. Must be taken for a quality grade.

CHIN 20403. Advanced Modern Chinese III. 100 Units.

For both graduates and undergraduates. The goal of this sequence is to help students develop advanced proficiency in reading, listening, speaking, and writing. This sequence emphasizes more advanced grammatical structures, and requires discussion in Chinese on topics relevant to modern China. Over the course of this sequence, the emphasis will shift to authentic Chinese texts in an effort to better prepare students to deal with original Chinese source materials. Class meets for five one-hour sessions each week.

Instructor(s): Kuo, Wang Terms Offered: Spring

Prerequisite(s): CHIN 20402, or placement, or consent of instructor

Note(s): For both graduates and undergraduates. No auditors. Must be taken for a quality grade.

CHIN 20501-20502-20503. Fourth-Year Modern Chinese I-II-III.

This sequence introduces a range of influential literary works and scholarly essays on Chinese cultural and social issues from the 1920s to the 1990s. Students not only expand their vocabulary and knowledge of grammatical structures but also learn sophisticated speaking and writing skills through intensive readings and discussions. The class meets for three one-hour sessions a week.

CHIN 20501. Fourth-Year Modern Chinese I. 100 Units.

Open to both graduate and undergraduate students. This sequence introduces a range of essays by journalists and scholars on Chinese cultural and social issues after 2001. Students will not only expand their vocabulary and knowledge of grammatical structures, but also learn sophisticated speaking and writing skills through intensive readings and discussions. Class meets for three one-hour sessions each week. Additional two one-to-one tutorial sessions during the quarter will be arranged for each student to prepare for their language projects.

Instructor(s): Meng Li Terms Offered: Autumn

Prerequisite(s): CHIN 20403, or placement, or consent of instructor

Note(s): No auditors. Must be taken for a quality grade.

CHIN 20502. Fourth-Year Modern Chinese II. 100 Units.

This sequence introduces a range of influential literary works and scholarly essays on Chinese cultural and social issues from the 1920s to the 1990s. Students not only expand their vocabulary and knowledge of grammatical structures but also learn sophisticated speaking and writing skills through intensive readings and discussions. The class meets for three one-hour sessions a week.

Instructor(s): M. Li Terms Offered: Winter

Prerequisite(s): CHIN 20501, or placement, or consent of instructor

Note(s): For both graduates and undergraduates. No auditors. Must be taken for a quality grade.

CHIN 20503. Fourth-Year Modern Chinese III. 100 Units.

This sequence introduces a range of influential literary works and scholarly essays on Chinese cultural and social issues from the 1920s to the 1990s. Students will not only expand their vocabulary and knowledge of grammatical structures, but also learn sophisticated speaking and writing skills through intensive readings and discussions. Class meets for three one-hour sessions each week.

Instructor(s): M. Li Terms Offered: Spring

Prerequisite(s): CHIN 20502, or placement, or consent of instructor

Note(s): For both graduates and undergraduates. No auditors. Must be taken for a quality grade.

CHIN 20601-20602-20603. Fifth-Year Modern Chinese I-II-III.

This sequence is designed to prepare students for academic research and activities in a Chinese language environment. Modern classic essays, documentary film and TV broadcasts will be included among the teaching materials. Students will learn not only general listening, speaking and reading skills but also academic writing. Class meets for three one-hour sessions each week. Students can arrange two additional one-on-one tutorial sessions to prepare for assigned language projects.

CHIN 20601. Fifth Year Modern Chinese, Fifth-Year Modern Chinese I. 100 Units.

This course is designed to prepare students for academic research and activities in Chinese language environment. Besides selected influential Chinese articles, TV and Radio broadcast will be also included among the teaching materials. Students will learn not only general skills of listening and reading but also speaking and writing skill in academic style through the teaching materials and instructor-guided language projects. Class meets for three one-hour sessions each week. Additional two one-to-one tutorial sessions during the quarter will be arranged for each student to prepare for their language projects. PQ: Chinese 20503 or placement. For both graduates and undergraduates. No auditors permitted. Open to both grads and undergrads. This course is designed to prepare students for academic research and activities in Chinese language environment. Besides selected influential Chinese articles, TV and Radio broadcast will be also included among the teaching materials. Students will learn not only general skills of listening and reading but also speaking and writing skill in academic style through the teaching materials and instructor-guided language projects. Class meets for three one-hour sessions each week. Additional two one-to-one tutorial sessions during the quarter will be arranged for each student to prepare for their language projects.

Instructor(s): Y. Wang Terms Offered: Autumn

Prerequisite(s): CHIN 20503 or placement, or consent of instructor

Note(s): note I have made the UG number primary and gotten rid of grad number. Please make this open to both grad/undergrad

CHIN 20602. Fifth-Year Modern Chinese II. 100 Units.

Open to both grads and undergrads. This course is designed to prepare students for academic research and activities in Chinese language environment. Besides selected influential Chinese articles, TV and Radio broadcast will be also included among the teaching materials. Students will learn not only general skills of listening and reading but also speaking and writing skill in academic style through the teaching materials and instructor-guided language projects. Class meets for three one-hour sessions each week. Additional two one-to-one tutorial sessions during the quarter will be arranged for each student to prepare for their language projects.

Terms Offered: Winter

Prerequisite(s): CHIN 51100, or CHIN 20601, or placement, or consent of instructor

CHIN 20603. Fifth-Year Modern Chinese III. 100 Units.

PQ: 51200 or placement. Both undergrad and grads can take this course. This sequence is designed to prepare students for academic research and activities in a Chinese language environment. Modern classic essays, documentary film and TV broadcasts will be included among the teaching materials. Students will learn not only general listening, speaking, and reading skills but also academic writing. Class meets for three one-hour sessions each week. Students can arrange two additional one-on-one sessions to prepare for assigned language projects. Open to both grads and undergrads. This sequence is designed to prepare students for academic research and activities in a Chinese language environment. Modern classic essays, documentary film and TV broadcasts will be included among the teaching materials. Students will learn not only general listening, speaking, and reading skills but also academic writing. Class meets for three one-hour sessions each week. Students can arrange two additional one-on-one sessions to prepare for assigned language projects.

Terms Offered: Winter

Prerequisite(s): CHIN 51200, or CHIN 20602, or placement, or consent of instructor

CHIN 20611. Sixth-Year Modern Chinese. 100 Units.

This course is designed to help students attain the proficiency level of a well-educated Chinese speaker. Teaching materials include TV programs, novels, movies, newspaper articles, WeChat conversations and research papers published in recent years. This course also teaches students how to use Chinese reference materials for their research. The class meets for two 90-minute sessions each week. Two additional one-on-one tutorial sessions during the quarter will be arranged for each student to prepare for their language projects and special research needs.

Instructor(s): Youqin Wang Terms Offered: Autumn

Prerequisite(s): CHIN 20603/51300, placement or consent of instructor

Equivalent Course(s): CHIN 61100

CHIN 20701-20702-20703. Business Chinese I-II-III.

This three-quarter sequence aims at improving overall language skills and introduces business terminology. Students learn about companies and their services and/or products, the stock market, real estate market, insurance, and e-commerce. The class meets for three ninety-minute sessions a week.

CHIN 20701. Business Chinese I. 100 Units.

Part one of this three-quarter sequence aims at improving overall language skills and introduces business terminology. Students will learn about companies and their services and/or products, the stock market, real estate market, insurance, and e-commerce. Class meets for five one-hour sessions each week.

Terms Offered: Autumn

Prerequisite(s): CHIN 20300, or placement, or consent of instructor

Equivalent Course(s): CHIN 31100

CHIN 20702. Business Chinese II. 100 Units.

Terms Offered: Winter

Prerequisite(s): CHIN 20701, or CHIN 31100, or placement, or consent of instructor

Equivalent Course(s): CHIN 31200

CHIN 20703. Business Chinese III. 100 Units.

Terms Offered: Spring

Prerequisite(s): CHIN 20702, or CHIN 31200, or placement, or consent of instructor

Equivalent Course(s): CHIN 31300

CHIN 20800-20900-21000. Elementary Literary Chinese I-II-III.

This sequence introduces the basic grammar of the written Chinese language from the time of the Confucian Analects to the literary movements at the beginning of the twentieth century. Students will read original texts of genres that include philosophy, memorials, and historical narratives. Spring Quarter is devoted exclusively to reading poetry. The class meets for two eighty-minute sessions a week. All courses in this sequence must be taken for a quality grade.

CHIN 20800. Elementary Literary Chinese I. 100 Units.

Introduction to the Chinese literary language from the first millennium B.C.E. to the end of the imperial period. While surveying a variety of literary genres (such as, philosophical and historical texts, poetry, and essays), focus is on grammatical structures and translation methods.

Instructor(s): L. Skosey Terms Offered: Autumn

Prerequisite(s): CHIN 20300, or placement, or consent of instructor. Auditing is not permitted. Must be taken for a quality grade.

CHIN 20900. Elementary Literary Chinese II. 100 Units.

Introduction to the Chinese literary language from the first millennium B.C.E. to the end of the imperial period. While surveying a variety of literary genres (such as, philosophical and historical texts, poetry, and essays), focus is on grammatical structures and translation methods.

Instructor(s): L. Skosey Terms Offered: Winter

Prerequisite(s): CHIN 20800, or placement, or consent of instructor. Auditing is not permitted. Must be taken for a quality grade.

CHIN 21000. Elementary Literary Chinese III. 100 Units.

Introduction to the Chinese literary language from the first millennium B.C.E. to the end of the imperial period. While surveying a variety of literary genres (such as, philosophical and historical texts, poetry, and essays), focus is on grammatical structures and translation methods.

Instructor(s): L. Skosey Terms Offered: Spring

Prerequisite(s): CHIN 20900, or placement, or consent of instructor. Auditing is not permitted. Must be taken for a quality grade.

CHIN 21801. Introduction Classical Chinese Poetry. 100 Units.

This course introduces students to the fundamentals of Classical lyric poetry. The emphasis is on learning how to read poems in the original, but some critical writings in English on Chinese poetry and poetics will also be assigned to provide a context for interpretation.

Equivalent Course(s): EALC 31801, CHIN 31801

CHIN 22110. Second-Year Chinese for Heritage Students I. 100 Units.

This three-quarter sequence is intended for bilingual/heritage speakers of Mandarin Chinese. Paralleled with the Intermediate sequence for non-heritage speakers, the goal of this sequence is to further develop students' reading, speaking, and writing skills by dealing with topics in personal settings and some academic or professional settings. Upon completing this sequence, students are expected to pass the Practical Proficiency Test to earn a certificate on their transcript. The class meets for three one-hour sessions a week. PQ: Chin 11300 or placement of 20100. Students must take a quality grade. No auditors permitted.

Instructor(s): Meng Li Terms Offered: Autumn

Prerequisite(s): PQ: Chin 11300 or placement of 20100. Students must take a quality grade. No auditors.

CHIN 22120. Second-Year Chinese for Heritage Students-II. 100 Units.

This three-quarter sequence is intended for bilingual/heritage speakers of Mandarin Chinese. Paralleled with the Intermediate sequence for non-heritage speakers, the goal of this sequence is to further develop students' reading, speaking, and writing skills by dealing with topics in personal settings and some academic or professional settings. Upon completing this sequence, students are expected to pass the Practical Proficiency Test to earn a certificate on their transcript. The class meets for three one-hour sessions a week. PQ: Chin 22110 or placement. Students must take a quality grade. No auditors permitted.

Instructor(s): M. Li Terms Offered: Winter

Prerequisite(s): PQ: Chin 22110 or placement. Students must take a quality grade. No auditors permitted.

CHIN 22130. Second-Year Chinese for Heritage Students-III. 100 Units.

This three-quarter sequence is intended for bilingual/heritage speakers of Mandarin Chinese. Paralleled with the Intermediate sequence for non-heritage speakers, the goal of this sequence is to further develop students' reading, speaking, and writing skills by dealing with topics in personal settings and some academic or professional settings. Upon completing this sequence, students are expected to pass the Practical Proficiency Test to earn a certificate on their transcript. The class meets for three one-hour sessions a week. PQ: CHIN 22120 or placement. Students must take a quality grade. No auditors permitted.

Instructor(s): M. Li Terms Offered: Spring

Prerequisite(s): PQ: CHIN 22120 or placement. Students must take a quality grade. No auditors permitted.

CHIN 23110. Third-Year Chinese for Heritage Students I. 100 Units.

This three-quarter series are intended for bilingual speakers of Chinese who already have intermediate level ability to understand and speak mandarin Chinese in daily communication, although they may have some accent or some difficulty

using the language in formal settings. While all the communicative skills of listening, speaking, reading, and writing will be trained in CHIN23100, the emphasis will be on standard Mandarin pronunciation, discourse level discussion on topics about modern China, and advanced reading and writing. The class meets for three one-hour sessions a week.

Instructor(s): S. Xiang Terms Offered: Autumn

Prerequisite(s): CHIN 22130 Second-Year Chinese for Bilingual Speakers-3 or placement exam

CHIN 23120. Third-Year Chinese for Heritage Students-II. 100 Units.

Please see description for CHIN 23110

Instructor(s): S. Xiang Terms Offered: Winter

Prerequisite(s): CHIN 23110 or placement exam

CHIN 23130. Third-Year Chinese for Heritage Students-III. 100 Units.

Please see the description for CHIN 23110.

Instructor(s): S. Xiang Terms Offered: Spring

Prerequisite(s): CHIN 23120 or placement

Japanese Courses

JAPN 10100-10200-10300. Elementary Modern Japanese I-II-III.

This is the first year of a three-year program, which is intended to provide students with a thorough grounding in modern Japanese. Grammar, idiomatic expressions, and vocabulary are learned through oral work, reading, and writing in and out of class. Daily practice in speaking, listening, reading, and writing is crucial. Students should plan to continue their language study through at least the second-year level to make their skills practical. The class meets for five fifty-minute sessions a week. All courses in this sequence must be taken for a quality grade. No auditors permitted.

JAPN 10100. Elementary Modern Japanese I. 100 Units.

This is the first year of a three-year program, which is intended to provide students with a thorough grounding in modern Japanese. Grammar, idiomatic expressions, and vocabulary are learned through oral work, reading, and writing in and out of class. Daily practice in speaking, listening, reading, and writing is crucial. Students should plan to continue their language study through at least the second-year level to make their skills practical. The class meets for five fifty-minute sessions a week. All courses in this sequence must be taken for a quality grade. No auditors permitted.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): Placement, or consent of instructor

JAPN 10200. Elementary Modern Japanese II. 100 Units.

Must be taken for a letter grade. No auditors permitted. This is the first year of a three-year program designed to provide students with a thorough grounding in Modern Japanese. Grammar, idiomatic expressions, and vocabulary are learned through oral work, reading, and writing in and out of class. Daily practice in speaking, listening, reading and writing is crucial. Students should plan to continue their language study through at least the second-year level to make their skills practical. The class meets for five fifty-minute periods a week.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): JAPN 10100, or placement, or consent of instructor

JAPN 10300. Elementary Modern Japanese-III. 100 Units.

This is the first year of a three-year program designed to provide students with a thorough grounding in Modern Japanese. Grammar, idiomatic expressions, and vocabulary are learned through oral work, reading, and writing in and out of class. Daily practice in speaking, listening, reading and writing is crucial. Students should plan to continue their language study through at least the second-year level to make their skills practical. The class meets for five fifty-minute periods a week.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): JAPN 10200, or placement, or consent of instructor

JAPN 10123. Summer Intensive Elementary Japanese. 300 Units.

This 8-week summer intensive course is the equivalent of three quarters of Elementary Japanese (10100-10300) in the regular academic year (30 weeks). Students will develop four skills-speaking writing, listening and reading. Students are expected to spend four to six hours outside of class every day for review and for preparation for the following day. The course is so intense that knowledge of ## (kanji) is very helpful to finish this course successfully. Please do the following as preparation before starting this course. 1) Access the Japanese site on Canvas and take a look at the syllabus and files under Module. 2) Order the textbook Communicating in Japanese. Please see instructions on Canvas for how to purchase online. 3) Memorize how to read and write Hiragana and Katakana, using the textbook

Instructor(s): Staff Terms Offered: Summer. Summer 2017 dates: 6/19/17-8/11/17

JAPN 14405. Japan and the West: 19th Century. 100 Units.

This course explores the cultural interactions between Japanese and Westerners in the second half of the nineteenth century, the first period of sustained contact and the time in which enduring modes of perception and misperception were formed.

We will examine travelogues, memoirs, guidebooks, histories, and other works written about Japan by Americans and Europeans, as well as works by Japanese authored for Western readership. Requirements: one short midterm paper (5-6 pages) and a longer final paper (15-16 pages).

Instructor(s): S. Burns Terms Offered: Autumn

Equivalent Course(s): HIST 14400, EALC 14405, CRES 14400

JAPN 20100-20200-20300. Intermediate Modern Japanese I-II-III.

The emphasis on spoken language in the first half of the course gradually shifts toward reading and writing in the latter half. Classes conducted mostly in Japanese. The class meets for five fifty-minute sessions a week. All courses in this sequence must be taken for a quality grade. No auditors permitted.

JAPN 20100. Intermediate Modern Japanese I. 100 Units.

JAPN20100 continues to work on building a solid foundation for basic Japanese language skills while preparing students to progress to an Intermediate level. The emphasis on the spoken language gradually shifts toward reading and writing in JAPN 20200 and 20300, but spoken Japanese continues to be enriched throughout the sequence. Students at this level will be able to handle successfully a variety of uncomplicated communicative tasks in straightforward social situations. The class meets for five fifty-minute sessions each week, conducted mostly in Japanese. All courses in this sequence must be taken for a quality grade. No auditors permitted.

Terms Offered: Autumn

Prerequisite(s): JAPN 10300, or placement, or consent of instructor

JAPN 20200. Intermediate Modern Japanese II. 100 Units.

The emphasis on spoken language in the first half of the course gradually shifts toward reading and writing in the latter half. The course is conducted mostly in Japanese and meets for five fifty-minute periods a week.

Terms Offered: Winter

Prerequisite(s): JAPN 20100, or placement, or consent of instructor

Note(s): Must be taken for a letter grade.

JAPN 20300. Intermediate Modern Japanese III. 100 Units.

The emphasis on spoken language in the first half of the course gradually shifts toward reading and writing in the latter half. The course is conducted mostly in Japanese and meets for five fifty-minute periods a week.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): JAPN 20200, or placement, or consent of instructor

Note(s): Must be taken for a letter grade. No auditors permitted.

JAPN 20401-20402-20403. Advanced Modern Japanese I-II-III.

The third year marks the end of the basic modern language study. Our goal is to help students learn to understand authentic written and spoken materials with reasonable ease. The texts are all authentic materials with some study aids. Classes conducted in Japanese. The class meets for three eighty-minute sessions a week. All courses in this sequence must be taken for a quality grade.

JAPN 20401. Advanced Modern Japanese I. 100 Units.

The goal is to help students learn to understand authentic written and spoken materials with reasonable ease and to solidify the grammar, vocabulary and kanji foundation built during the students' study at Elementary and Intermediate Modern Japanese levels. Students will expand their four language skills (speaking, listening, reading, and writing) as well as the socio-cultural knowledge they need for communication, thereby easing their transition into Advanced Japanese. The class meets for three eighty-minute sessions each week. All courses in this sequence must be taken for a quality grade. No auditors permitted.

Terms Offered: Autumn

Prerequisite(s): JAPN 20300, or placement, or consent of instructor

JAPN 20402. Advanced Modern Japanese II. 100 Units.

The third year marks the end of the basic modern language study. Our goal is to help students learn to understand authentic written and spoken materials with reasonable ease. The texts are all authentic materials with some study aids. Classes conducted in Japanese. The class meets for three eighty-minute sessions a week. All courses in this sequence must be taken for a quality grade.

Terms Offered: Winter

Prerequisite(s): JAPN 20401, or JAPN 30100, or placement, or consent of instructor

Equivalent Course(s): JAPN 30200

JAPN 20403. Advanced Modern Japanese III. 100 Units.

The third year marks the end of the basic modern language study. The purpose of the course is to help students learn to understand authentic written and spoken materials with reasonable ease. The texts are all authentic materials with some study aids. All work in Japanese. The class meets for three eighty-minute periods a week.

Terms Offered: Spring

Prerequisite(s): JAPN 20402, or JAPN 30200, or placement, or consent of instructor

JAPN 20500-20600-20700. Fourth-Year Modern Japanese I-II-III.

This sequence is intended to improve Japanese reading, speaking, writing, and listening ability to the advanced high level as measured by the ACTFL (American Council on the Teaching of Foreign Languages) Proficiency Guidelines. Weekly assignments require students to tackle modern Japanese texts of varying length and difficulty. Organized around a range of thought-provoking themes (from brain death and organ transplants to Japanese values on work and religion), reading assignments include academic theses in psychology and anthropology, literary texts, and popular journalism. After each reading, students are encouraged to discuss the topic in class. Videos/DVDs are used to improve listening comprehension skills. There are also writing assignments. The class meets for two eighty-minute sessions a week.

JAPN 20500. Fourth-Year Japanese-1. 100 Units.

This course is intended to improve Japanese reading, speaking, writing, and listening ability to the advanced low level as measured by the ACTFL (American Council on the Teaching of Foreign Languages) Proficiency Guidelines. Weekly assignments require students to tackle modern Japanese texts of varying length and difficulty. Organized around a range of thought-provoking themes, reading assignments include academic theses, literary texts, and popular journalism. After each reading, students are encouraged to discuss the topic in class and are required to write their own thoughts on each reading along with a summary. The class meets for two eighty-minute sessions each week. All courses in this sequence must be taken for a quality grade.

Terms Offered: Autumn

Prerequisite(s): JAPN 20403, or JAPN 30300, or placement, or consent of instructor

JAPN 20600. Fourth-Year Modern Japanese II. 100 Units.

Open to both undergraduates and graduates. This course is designed to improve Japanese reading, speaking, writing and listening ability to the advanced high level as measured by the ACTFL (American Council on the Teaching of Foreign Languages) Proficiency Guidelines. Weekly assignments will require students to tackle modern Japanese texts of varying length and difficulty. Organized around a range of thought-provoking themes (from brain death and organ transplants to Japanese values on work and religion), reading assignments will include academic theses in psychology and anthropology, literary texts, and popular journalism. After completing the readings, students will be encouraged to discuss each topic in class. Videos/DVDs will be used to improve listening comprehension skills. There will also be writing assignments.

Terms Offered: Winter

Prerequisite(s): JAPN 20500, or JAPN 40500, or placement, or consent of instructor

Equivalent Course(s): JAPN 40600

JAPN 20700. Fourth-Year Modern Japanese III. 100 Units.

Open to both undergraduates and graduates. This course is designed to improve Japanese reading, speaking, writing and listening ability to the advanced high level as measured by the ACTFL (American Council on the Teaching of Foreign Languages) Proficiency Guidelines. Weekly assignments will require students to tackle modern Japanese texts of varying length and difficulty. Organized around a range of thought-provoking themes (from brain death and organ transplants to Japanese values on work and religion), reading assignments will include academic theses in psychology and anthropology, literary texts, and popular journalism. After completing the readings, students will be encouraged to discuss each topic in class. Videos/DVDs will be used to improve listening comprehension skills. There will also be writing assignments.

Terms Offered: Spring

Prerequisite(s): JAPN 20600, or JAPN 40600, or placement, or consent of instructor

JAPN 20800. Reading Scholarly Japanese I. 100 Units.

This course focuses on reading of scholarly Japanese materials that will enable students to read academic Japanese. The materials are selected from a wide range of disciplines by the instructor and by students.

Terms Offered: Autumn

Prerequisite(s): JAPN 20300, or placement, or consent of instructor

Equivalent Course(s): JAPN 30800

JAPN 20900. Reading Scholarly Japanese II. 100 Units.

This course focuses on reading of scholarly Japanese materials that will enable students to read academic Japanese. The materials are selected from a wide range of disciplines by the instructor and by students.

Terms Offered: Winter

Prerequisite(s): JAPN 20300, or placement, or consent of instructor

Equivalent Course(s): JAPN 30900

JAPN 21200-21300. Intermediate Modern Japanese through Japanimation I-II.

This sequence focuses on learning spoken Japanese that is aimed at native speakers. Our goals are to get students accustomed to that sort of authentic Japanese and to enable them to speak with high fluency. To keep the balance, writing and reading materials are provided. Students are encouraged to watch videos and practice their speaking.

JAPN 21200. Intermediate Modern Japanese Through Japanimation I. 100 Units.

This course focuses on learning spoken Japanese through full-length Japanese animated films. To ensure balance in learning, writing and reading materials are also provided. Students at this level are able to handle successfully a variety of uncomplicated communicative tasks in straightforward social situations. The class meets for five fifty-minute sessions each week. All courses in this sequence must be taken for a quality grade. No auditors permitted.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): JAPN 20100, or placement, or consent of instructor

JAPN 21300. Intermediate Modern Japanese through Japanimation II. 100 Units.

This course focuses on learning spoken Japanese that is aimed at native speakers. The goals are getting accustomed to that sort of authentic Japanese and being able to speak with a high degree of fluency. To keep a balance, writing and reading materials are provided. Watching videos and practicing speaking are the keys to success in this course.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): JAPN 21200, or placement, or consent of instructor

JAPN 24900. Pre-Modern Japanese: Kindai Bungo I. 100 Units.

The course is a systematic introduction to pre-modern texts written in classical Japanese (bungo or kogo), the standard written language in Japan up to the early twentieth century. We will focus on the fundamentals of grammar as well as read original texts dating primarily to the medieval period. The goal is to acquire a firm foundation in bungo and to be able to read pre-modern texts with the help of a dictionary.

Instructor(s): O. Porath Terms Offered: Spring

Prerequisite(s): JAPN 20300 or equivalent, or consent of instructor.

Equivalent Course(s): JAPN 34900

JAPN 24902. Pre-Modern Japanese: Kindai Bungo II. 100 Units.

TBD

Terms Offered: Spring

Prerequisite(s): JAPN 20300 or equivalent, or consent of instructor.

Equivalent Course(s): JAPN 34902

JAPN 24903. Pre-Modern Japanese: Kindai Bungo III. 100 Units.

TBD

Equivalent Course(s): JAPN 34903

Korean Courses**KORE 10100-10200-10300. Introduction to the Korean Language I-II-III.**

This introductory sequence is designed to provide a basic foundation in modern Korean language and culture by focusing on the balanced development of the four basic language skills of speaking, listening comprehension, reading, and writing. Students in KORE 10100 begin by learning the complete Korean writing system (Hangul), which is followed by lessons focusing on basic conversational skills and grammatical structures. To provide sufficient opportunities to apply what has been learned in class, there are small group drill sessions, weekly Korean television drama screenings, and a number of other cultural activities (e.g., Korean New Year's game competitions). The class meets for five fifty-minute sessions a week. All courses in this sequence must be taken for a quality grade.

KORE 10100. Introduction to the Korean Language I. 100 Units.

This introductory course is designed to provide beginners with a solid foundation in modern Korean focusing on the balanced development of the four basic language skills of speaking, listening comprehension, reading, and writing. Along with basic conversational and grammatical patterns, the course introduces students to Korean culture through various channels such as Korean movies, music, and a number of other cultural activities. Must be taken for a letter grade.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): Placement, or consent of instructor

KORE 10200. Introduction to the Korean Language II. 100 Units.

Must be taken for a letter grade. This introductory course is designed to provide beginners with a solid foundation in modern Korean focusing on the balanced development of the four basic language skills of speaking, listening comprehension, reading, and writing. Along with basic conversational and grammatical patterns, the course introduces students to Korean culture through various channels such as Korean movies, music, and a number of other cultural activities.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): KORE 10100, or placement, or consent of instructor

KORE 10300. Introduction to the Korean Language III. 100 Units.

Must be taken for a letter grade. This introductory course is designed to provide beginners with a solid foundation in modern Korean focusing on the balanced development of the four basic language skills of speaking, listening comprehension, reading, and writing. Along with basic conversational and grammatical patterns, the course introduces students to Korean culture through various channels such as Korean movies, music, and a number of other cultural activities.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): KORE 10200, or placement, or consent of instructor

KORE 10123. Summer Intensive Introductory Korean. 300 Units.

This eight-week course will provide beginners with a solid basic foundation in modern Korean. In particular, this course offers a balanced emphasis on oral communication practice, listening, and reading comprehension, and also develops students' writing abilities and familiarity with formal speech situations. Students will thus gain the skills for interpersonal interactions and interpretation, as well as for delivering presentations. Korean culture will also be incorporated into the course by working with contemporary Korean media, among other material. The course will also include visits to the Korean-speaking communities in the Chicago area for more direct experience of the language in its local context. The curriculum for Intensive Introductory Korean is the equivalent of the KORE 10100-10200-10300 sequence during the regular academic year at the University of Chicago.

Instructor(s): Staff Terms Offered: Summer. Summer 2017 dates: 6/19/17-8/11/17

KORE 20100-20200-20300. Intermediate Korean I-II-III.

As a continuation of KORE 10100-10200-10300, this sequence is intended to continue to build on students' language skills with an emphasis on enhancing the speaking ability, presentational skills, composition writing skills, and usage of more complex constructions. Approximately 150 Chinese characters are introduced for the achievement of basic literacy and

vocabulary expansion. The curriculum also includes media, authentic reading materials, and weekly Korean language table meetings to maximize cultural exposure and opportunities to apply Korean language skills in real life situations. The class meets for five fifty-minute sessions a week. All courses in this sequence must be taken for a quality grade.

KORE 20100. Intermediate Korean I. 100 Units.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): KORE 10300, or placement, or consent of instructor

KORE 20200. Intermediate Korean II. 100 Units.

As a continuation of Beginning Korean, this course is to help students increase their communication skills (both oral and written) in the Korean language. Through an integrated framework of listening, speaking, reading, and writing, this course aims to increase fluency and accuracy in Korean. Videotapes and additional reading materials will be used in a supplementary fashion and approximately 100 Chinese characters will be introduced for the achievement of basic literacy. Classes are conducted mostly in Korean and meet for fifty-minute periods five times a week. Must be taken for a letter grade.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): KORE 20100, or placement, or consent of instructor

KORE 20300. Intermediate Korean III. 100 Units.

KORE 21100-21200-21300. Fourth-Year Modern Korean I-II-III.

Fourth-Year Modern Korean I-II-III

KORE 21100. Fourth-Year Modern Korean I. 100 Units.

The first in a series of three consecutive courses focuses on improving speaking, listening, reading, and writing skills to high-advanced level. Through intensive readings and discussions, students will build extensive vocabulary and complex grammatical structures as well as developing sophisticated speaking skills and academic writing skills. The materials introduced in this class include newspaper articles dealing with current social, cultural, or economic issues in Korea, literary works such as poems and novels, and authentic media such as TV documentaries or movies.

Equivalent Course(s): KORE 41100

KORE 21200. Fourth-Year Modern Korean II. 100 Units.

The second of three consecutive courses focuses on improving speaking, listening, reading, and writing skills to high-advanced level. Through intensive readings and discussions, students will build extensive vocabulary and complex grammatical structures as well as developing sophisticated speaking skills and academic writing skills. The materials introduced in this class include newspaper articles dealing with current social, cultural, or economic issues in Korea, literary works such as poems and novels, and authentic media such as TV documentaries or movies.

Equivalent Course(s): KORE 41200

KORE 21300. Fourth-Year Modern Korean III. 100 Units.

The third of three consecutive courses focuses on improving speaking, listening, reading, and writing skills to high-advanced level. Through intensive readings and discussions, students will build extensive vocabulary and complex grammatical structures as well as developing sophisticated speaking skills and academic writing skills. The materials introduced in this class include newspaper articles dealing with current social, cultural, or economic issues in Korea, literary works such as poems and novels, and authentic media such as TV documentaries or movies.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): KORE 41200 or consent

Note(s): Must be taken for a letter grade. No auditors.

KORE 21400. Business Korean. 100 Units.

TBD

Equivalent Course(s): KORE 51400

KORE 22100. Korean Contemporary TV and Language. 100 Units.

This content-based language course is designed to meet the needs of high-advanced level students of Korean, including international/heritage language students who have studied in Korea up to the primary school levels. We study and analyze genres of Korean TV programs on the internet (e.g., such dramas as soap operas and sitcoms, entertainment talk shows,

children's shows, news programs). Main discussion topics are sociolinguistics and socio-cultural issues (e.g., speech levels, honorifics and address terms, language and gender, pragmatics and speech acts, language and nationalism).

Terms Offered: Autumn

Prerequisite(s): KORE 20403 or KORE 30300, or placement, or consent of instructor

Equivalent Course(s): KORE 42100

KORE 22110. Understanding Contemporary Korean Society Through Media. 100 Units.

This content-based language course designed to meet the needs of high-advanced level students of Korean, including international/heritage language students who have studied in Korea up to the primary school levels. There are two main goals for the course. The first objective of the course is to foster speed, accuracy, and comprehension in advanced listening and reading of authentic contemporary texts as well as the refinement of writing skills in various styles. The second objective is for the students to acquire a deeper analytic knowledge of cultural and social issues in contemporary Korea. By examining various articles, TV shows, and films, we are going to discuss contemporary Korean culture, politics and society. The themes that will be dealt with in the class are "The Hell Chos#n discourse and Korean youth culture" "Pain and Sympathy: South Korean Society after the Sewol Ferry Disaster" and "Korea as Multi-Ethnic Society."

Equivalent Course(s): KORE 42110

KORE 22200. Contemporary Korean Society and History through Fiction and Film. 100 Units.

This content-based language course is designed to meet the needs of high-advanced level students of Korean, including international/heritage language students who have studied in Korea up to the primary school levels. We analyze cultural and historical issues in contemporary Korea through four contemporary short novels and related film and media. Other goals are to foster fluency, accuracy, and comprehension in reading authentic contemporary texts, as well as advancing language skills for formal presentation, discussion, and writing.

Terms Offered: Winter

Prerequisite(s): KORE 20403 or KORE 30300, or placement, or consent of instructor

Equivalent Course(s): KORE 42200

KORE 22300. Changing Identity of Contemporary Korean Through Film and Literature. 100 Units.

KORE 42300 is a content-based language course designed to meet the needs of high-advanced level students of Korean, including international/heritage language students who have studied in Korea up to the primary school levels. In particular, we deal with how contemporary Korean society can be understood through the diverse perspectives of emergent minority groups. Topics include Korean language and identity, gender and sexuality, and Korea as a multi-ethnic society. Class activities include watching contemporary films featuring minorities in Korea. We also read essays written by minorities (e.g., Korean-Japanese, Russian-Korean) and Korean social activists. Student are encouraged to foster their own views on contemporary social issues through diverse activities of discussion, debate, presentation, and writing.

Terms Offered: Spring

Prerequisite(s): KORE 20403, or KORE 30300, or placement, or consent of instructor

Equivalent Course(s): KORE 42300

KORE 23001. Advanced Korean I. 100 Units.

This sequence introduces a wide selection of authentic reading materials from Korean newspaper articles, college-level textbooks, and literary prose as an entry point to discuss topics and issues in Korean society, culture, and history. The primary objective is further enhancement of advanced reading comprehension, composition writing, and presentational skills. In addition, Chinese character (Hanja) lessons are incorporated into each lesson with the purpose of expanding vocabulary to the advanced level. The class meets for two eighty-minute sessions a week. All courses in this sequence must be taken for a quality grade.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): KORE 20300 or equivalent or consent of instructor. For graduates and advanced undergraduates. Must be taken for a letter grade.

KORE 23002. Advanced Korean II. 100 Units.

For graduates and advanced undergraduates. Must be taken for a letter grade. This course introduces readings from a wide selection of written styles including journalistic pieces, college-level textbooks and literary prose. The class focuses on exercises in reading comprehension and discussions on various topics/issues related to contemporary Korea. Some audio and videotapes (e.g., televised news programs, movies, and dramas) will be used in order to improve the students' capacity in advanced Korean. Classes are conducted in Korean and meet for eighty-minute periods two times a week.

Terms Offered: Winter

Prerequisite(s): KORE 20401, or KORE 30100, or placement, or consent of instructor. Must be taken for a letter grade.

KORE 23003. Advanced Korean III. 100 Units.

This course introduces readings from a wide selection of written styles including journalistic pieces, college-level textbooks and literary prose. The class focuses on exercises in reading comprehension and discussions on various topics/issues related to contemporary Korea. Some audio and videotapes (e.g., televised news programs, movies, and dramas) will be used in order to improve the students' capacity in advanced Korean. Classes are conducted in Korean and meet for eighty-minute periods two times a week.

Terms Offered: Spring

Prerequisite(s): KORE 20402, or KORE 30400, or placement, or consent of instructor

KORE 29000. Business Korean. 100 Units.

This course aims to help students build an advanced-level speaking, vocabulary, and communication skills needed for a variety of Korean business settings. Students will become familiar with Korean business language and culture through

classroom activities and homework assignments based on authentic materials. Topics will include searching for job opportunities related to Korea, composing CVs, preparing for job interviews and presentations, discussing business cases, and introducing current issues related to Korean economy and society.

Instructor(s): Won Kyung Na Terms Offered: Autumn

Prerequisite(s): Prerequisite: Successful completion of third year Korean or equivalent skills

Note(s): No auditors allowed. Must be taken for a letter grade.

East Asian Languages and Civilizations Courses

EALC 10503. Topics in EALC: Korean Diaspora and 'Homecomings' in East Asia. 100 Units.

The course examines a selection of cinematic and literary works that recount the personal and communal history of the Korean diaspora. It is a conceptual and thematic exploration of the Korean diaspora through the narratives that recount personal and communal history of Korean diaspora, from the Japanese colonial to the era of globalization in the recent decades. The objective of the course is to study the unusually complex and intricate relationships between the homeland and host countries as well as the vexed subjective belongings and longings that characterize narratives about Korean diasporic experiences. By analyzing the filmic and literary representations of and by Korean diasporic subjects in China and Japan, the class not only examines ethnic Koreans' pressing issues in their own terms but aims to generate inter-disciplinary and intra-regional discussions on the paths that different national groups and generations have crossed towards larger collective memories of twentieth-century East Asia. No knowledge of Korean is required.

Instructor(s): S. Kim Terms Offered: Spring

Equivalent Course(s): CRES 10503

EALC 10510. Topics in EALC: East Asian Popular Music. 100 Units.

This course surveys a variety of scholarly approaches to the study of popular music in East Asia since 1900, including questions of authenticity, gender, media technologies, circulation, and translation. The course will introduce a variety of musical genres from China, Japan, Korea, Hong Kong and Taiwan, ranging from forms considered 'traditional' to contemporary idol and hip-hop music. All readings will be available in English, and no background in music is required or expected.

Instructor(s): M. Bourdaghs Terms Offered: Winter

EALC 10512. Topics in EALC: East Asian Cinema. 100 Units.

The course offers panoramic views as well as close-ups of cinematic landscapes of East Asia and Southeast Asia. We will cover a variety of films-including animation and documentary-from Japan, Korea, China, Taiwan, Hong Kong, Indonesia, and Malaysia, with a focus on site-specific works and trans-regional co-productions, circulations, and exchanges. Combining critical readings with truly close analyses of films, this course seeks to develop: (1) solid understandings of cinema's peculiar and intricate relations to space and time; (2) conversations between cinema and other art forms, such as photography, painting, and calligraphy; (3) methods and skills of conducting film analysis. Proficiency in East Asian languages is NOT required.

Instructor(s): P. Yang Terms Offered: Autumn

Equivalent Course(s): CMST 24605

EALC 10590. Topics in EALC: Introduction to East Asian Philosophy. 100 Units.

This course serves as an introduction to dominant trends and concepts in East Asian philosophy, including topics in Confucianism, Daoism, and Buddhism. Though the course overwhelmingly focuses on premodern traditions, topics in the final weeks extend to early modern and modern philosophical movements in East Asia, including texts from the Neo-Confucian canon and the Kyoto School. The course serves not only to acquaint students with significant moments in the history of Asian thought, but also to demonstrate the possibility for Asian philosophy to contribute to topics in Western philosophy, including issues in epistemology, phenomenology, ontology, and metaphysics.

Instructor(s): K. Peters Terms Offered: Winter

EALC 10600. Topics in EALC: Ghosts & the Fantastic in Literature and Film. 100 Units.

What is a ghost? How and why are ghosts represented in particular forms in a particular culture at particular historical moments and how do these change as stories travel between cultures? This course will explore the complex meanings, both literal and figurative, of ghosts and the fantastic in traditional Chinese, Japanese, and Korean tales, plays, and films. Issues to be explored include: 1) the relationship between the supernatural, gender, and sexuality; 2) the confrontation of death and mortality; 3) collective anxieties over the loss of the historical past 4) and the visualization (and exorcism) of ghosts through performance.

Instructor(s): J. Zeitlin Terms Offered: Spring

Note(s): This course can replace what used to be the Concentrators Seminar to fulfill a requirement as an EALC major.

Equivalent Course(s): SIGN 26006, CMST 24603

EALC 10602. Topics in EALC: Past, Present, & Future of the Novel. 100 Units.

This is an introductory course to the study of fiction in modern East Asia. In particular, it examines the evolution of the novel in Japan, China, and Korea as a form of imaginative writing. We will examine major canonical works from each country: three from the early 20th century; three from mid-century; and three from the early 21st century. How did the novel form develop in East Asia relative to creative writing elsewhere around the world? How did it respond to East Asia's shifting political and economic position? What is the cultural role of the novel in contemporary East Asian society? These are just a few of the questions that will animate our exploration of these texts. All works will be read in their English translation.

Instructor(s): Hoyt Long Terms Offered: Autumn

EALC 10603. Topics in EALC: The Chinese Classics. 100 Units.

In this course we will explore the Chinese classics (Classics of Changes, Documents, Poetry, Spring and Autumn Annals, and the three Ritual classics) at different moments in their traditions: at the time of their first creation, at the time of their canonization as classics, at different moments throughout China's imperial history, and today. Because the Chinese classics have also been regarded as classics in both Korea and Japan, we will also consider their adaptation within those contexts.

Instructor(s): E. Shaughnessy Terms Offered: Winter

EALC 10701. Topics in EALC: Poets/Teachers/Fighters: Writing Women in China and Beyond. 100 Units.

A survey of essays, poetry, diaries and fiction by women writers from the 12th to the 21st century in China, Hong Kong, and Taiwan. No previous knowledge of Chinese is required.

Instructor(s): P. Iovene Terms Offered: Winter

Equivalent Course(s): GNSE 20700

EALC 10704. Topics in EALC: The Modern Short Story in East Asia. 100 Units.

Why does the short story emerge as a major literary form across East Asia in the early 20th century? Which institutional, social, and political factors contributed to its diffusion? What are the main characteristics of the short story, how does it organize time and space, and how does it differ from earlier forms of short fiction? What do various authors hope to achieve by writing short stories? Has their writing changed with the rise of new media? Informed by these questions, this course explores the variety of forms that the short story takes in modern East Asia. We will read a selection of influential Chinese, Japanese, and Korean works from the early 20th century to the present, including those by Lu Xun, Shiga Naoya, Hwang Sun-wŏn, Miyamoto Yuriko, Xiao Hong, Na Hye-sŏk, Akutagawa Ryŏnosuke, Hoshi Shin'ichi, Lin Bai, Han Shaogong, Yu Hua, and Murakami Haruki, along with theoretical and critical essays. Discussions will be organized around themes that allow for transregional comparisons. All readings in English translation.

Instructor(s): P. Iovene Terms Offered: Autumn

EALC 10705. Topics in EALC: Imagining Environment. 100 Units.

This course introduces students to the fiction of East Asia through the themes of nature and environment. How have writers imagined the relation between the human and the non-human in the modern era? How have they drawn on indigenous ideas and attitudes? How have they responded to global environmental change and destruction? The course surveys a variety of sources for environmental imaginings, including philosophical and religious attitudes; aesthetic practices; political ideas; and modern environmentalism. All readings are in English.

Instructor(s): H. Long Terms Offered: Spring

EALC 10707. Topics in EALC: Vernacular Poetics. 100 Units.

This course explores the formation of vernacular poetic writing in China, Japan, and Korea from the perspective of literary history. Poets from the late nineteenth and early twentieth century were confronted with the task of renewing poetry, which they met by adopting language closer to that of everyday life but also inspired by poetic production in the West. By reading poems from the period alongside contemporary scholarship, this course is a unique opportunity to examine how poets transitioned away from traditional modes of poetry and song in East Asia. Students will discuss fundamental questions about the nature and purpose of poetry that poets and theorists debated at the time and answered in the form of poems and criticism. Given the constraints of time, the course does not aim for comprehensiveness or equal coverage of the three major regions of East Asia. Instead, the reading list is organized around discrete issues designed to spur comparative thinking in the attempt to locate individual actors and their literary output within a specific historical moment. Topics covered include the break between poetry and song, translation as a creative process, the influence of print upon poetic composition, and the relationship between poetry and society. Major poets from China, Japan, and Korea will be read throughout the quarter. All material is provided in English. No knowledge of Chinese, Japanese or Korean is required.

Instructor(s): D. Krolkoski Terms Offered: Winter

EALC 10710. Topics in EALC: Intertwined Literatures of Postwar Asia. 100 Units.

This course explores literature that illustrates the interconnectedness of Asia in the decade following the conclusion of the Second World War. While the surrender of Japan and the onset of the Cold War contributed to the re-entrenchment of fiercely independent national literatures in Asia, national frameworks tend to obscure the ongoing links across Asia evoked in the works of many writers dealing with this period. Further, the notion of the "postwar" tends to disregard the ways in which war's effects continued to shape the Asian continent through Allied occupations and such widespread conflicts as the Chinese Civil War and the Korean War. By putting the postwar literatures of Asia in conversation with one another, we will aim to achieve a fuller understanding of these texts that have both depicted international circulation and spread through international communities themselves. Course materials include short stories, novels, plays, reportage, and autobiographical writings from Japan, China, Hong Kong, Tibet, Mongolia, Okinawa, and North and South Korea. All readings for this course are available in English; no knowledge of any Asian language is required.

Instructor(s): N. Lambrecht Terms Offered: Spring

EALC 10711. Topics in EALC: Mother tongues--Language in East Asian Literature and Film. 100 Units.

What does it mean to write as a native speaker? How do we hear in our mother tongue? It is often said that people have a natural affinity with their native language, one which allows creators to more freely and wholly express their thoughts and experiences, and which allows audiences to understand the full nuances of a work. But there are also many who do not have a straightforward relationship with a native language. For instance, colonized writers who are forced to write in a language that is not their own, films which depict people in multilingual environments, writers who can speak but not write in their first language. This course surveys literary and artistic works from China, Japan, and Korea that mourn, celebrate, and push the boundaries and potentials of language. Through the analysis of these works, we will explore the ways in which language

relates to larger social, political, and cultural contexts including ethnic minorities, diaspora, gender, technology, and more.

All works will be provided in English translation

Instructor(s): S. Su Terms Offered: Autumn

EALC 10780. Topics in EALC: Sonic Modernities in East Asia. 100 Units.

Whether heard in the radios and gramophones of Shanghai's roaring twenties, the military sound clashes and survivors' songs of postcolonial Korea and Taiwan, or the sound trucks, street bands and virtual idols of contemporary Japan, the modern transformations of East Asia form a vibrant, complex sonic field. This course asks: how can we grasp the diverse experiences and understandings of modernity in East Asia through a study of its sounds? How has sound been historically experienced, represented, and marshaled to construct or contest narratives of progress, difference, and sociality, and how have media technologies of sound and voice functioned therein? With these questions in mind, we will work to develop our skills in "close listening" through a range of sources comprised of sound recordings as well as literary texts, films, and videos. All materials will be accompanied by or provided in English translation. This course is open to MAPH students.

Instructor(s): A. Murphy Terms Offered: Winter

Note(s): Open to MAPH students but not PhD students.

Equivalent Course(s): EALC 30780

EALC 10799. Topics in EALC: The Family in East Asian Cinemas. 100 Units.

How would you describe your family? Who do you count as its members? Nuclear family, extended family, socialist commune, totemic kinship-the list goes on. Despite the etymological affinity, it turns out that little about the family is familiar. From its inception, cinema has participated in the project of imagining different ways of constructing family life. Sundry families have been rendered on screen, soliciting our physical departure from the confine of domiciles into the movie theater where they appear. This is particularly true and prominent in contemporary films produced across East Asian societies and diasporic communities-places that are often perceived to foreground familial connection as the primary source of identity. Indeed, while the ideological ordering of these regimes frequently presumes a standard model of the family life for which they can legislate, families on the ground hardly cohere to any single structure. All the films we will study in this class pivot around the negotiation between conformity and rebellion, predictability and strangeness, the urge to integrate and the force of diffusion behind family formation. We shall explore how the idea and ideal of the family have routinely been pursued, interrogated, destroyed, and, occasionally, rebuilt in films by such directors as Sylvia Chang, Hou Hsiao-hsien, Ann Hui, Kawase Naomi, Kore-eda Hirokazu, Clara Law, Tsai Ming-liang, Wang Shaudi, Wong Kar-wai, Edward Yang, Zhang Yimou, among others.

Instructor(s): P. Tang Terms Offered: Spring

Equivalent Course(s): CMST 24621

EALC 10800-10900-11000. Introduction to the Civilizations of East Asia I-II-III.

This sequence meets the general education requirement in civilization studies. This is a sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present.

EALC 10800. Introduction to the Civilizations of East Asia I. 100 Units.

This sequence meets the general education requirement in civilization studies. This is a sequence on the civilizations of China, Japan, and Korea, with emphasis on major transformation in these cultures and societies from the Middle Ages to the present.

Instructor(s): G. Alitto Terms Offered: Autumn Summer

Prerequisite(s): Open to undergraduates only; all students attend the MW lecture and register for one F discussion section.

Note(s): Taking these courses in sequence is not required.

EALC 13010. Introduction to the History and Civilizations of Central Eurasia I: Pre-1500s. 100 Units.

This course will explore narrative and thematic histories of Central Asia up to the fifteenth century, starting from the development of pastoral nomadism and ending during the rule of the Timurids. We will discuss the everyday practices of the peoples in the area, the formation and influence of political, economic, and religious forces, and the region's wider interactions with other parts of the premodern world. While acknowledging the disparate peoples and cultures of the region, the course nevertheless assumes that Central Asia can be studied as a cohesive unit of historical inquiry. Throughout the course, we will also address the problems of historiography and methodology in the study of premodern Central Asian history and will explore possible solutions to these issues.

Instructor(s): H.S. Sum Cheuk Shing Terms Offered: Winter

Note(s): This course is open to MAPH students with consent of instructor.

EALC 14302. Early Modern China: An Age of Global Transformation, 1500-1800. 100 Units.

The period between 1500 and 1800 was pivotal in the emergence of the modern world. We tend to focus on Europe and the Americas when we think of the changes that occurred in this period. However, this was also an age of dramatic transformation for China in ways that were connected and/or similar to changes unfolding elsewhere. After reviewing how the legacy of the Mongol conquests shaped early modern Eurasia, we will examine a series of intertwined developments that were characteristic of not only China but also global experiences in this period: population growth, expanded commercial activity, silver imports from the Americas, and the adoption of "New World" crops, such as maize and sweet potatoes. We will then look at how new intellectual currents and major shifts in government policies responded to these new social and economic realities. We will examine two developments—print culture and colonialism—that play important roles in narratives of early modern European history but are no less applicable to Chinese history. Our course will end with a consideration of how the growth of the early modern period generated not only tremendous wealth but also considerable political and ecological challenges that modern actors would struggle to overcome. For the final project, students will design a museum exhibit that focuses on one aspect of China's early modern history and underscores the global interconnectedness of this period.

Instructor(s): D. Knorr Terms Offered: Winter

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): GLST 24302, HIST 14302, ENST 24302

EALC 14303. Modern Korean History. 100 Units.

This course focuses on the modern history of a country that is well known for shifting its course at dizzying speed.

Beginning with the last monarchic dynasty's "opening" to the world in the late nineteenth century, the course will move on to deal with radical transformations such as Japanese colonization and Korea's subsequent liberation in 1945; the civil war, national division, and dictatorship in the two Koreas; and the economic miracle and democratization in the South and nuclear development in the North. How do we understand recent events, such as the South Korean president's impeachment in 2017 and the North Korean leader's high-profile diplomatic *détentes* in 2018? Do they come out of nowhere, or can we find an underlying consistency based on an understanding of the long twentieth century? Through a careful study of Korea's modern history, this course is designed to reveal the longer trajectories of Korea's historical development, showing how the study of this contentious peninsula becomes a study of modern world history.

Instructor(s): J. Jeon Terms Offered: Winter

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): HIST 14400, CRES 14400, JAPN 14405

EALC 15100. Beginning the Chinese Novel. 100 Units.

This course will look at the four great novels of sixteenth-century China: *Romance of the Three Kingdoms*, *Water Margin*, *Journey to the West*, and *Plum in the Golden Vase*. Deeply self-conscious about the process of their own creation and their place within the larger literary canon, these novels deploy multiple frames, philosophical disquisitions, invented histories, and false starts before the story can properly begin. By focusing on the first twelve chapters of each novel, this course will serve as both an introduction to the masterworks of Chinese vernacular literature and an exploration of the fraught beginnings of a new genre.

Instructor(s): A. Fox Terms Offered: Winter

Note(s): Open to MAPH students.

Equivalent Course(s): FNDL 20301

EALC 16100. Art of the East: China. 100 Units.

This course is an introduction to the arts of China focusing on the bronze vessels of the Shang and Zhou dynasties, the Chinese appropriation of the Buddha image, and the evolution of landscape and figure painting traditions. This course considers objects in contexts (from the archaeological sites from which they were unearthed to the material culture that

surrounded them) to reconstruct the functions and the meanings of objects, and to better understand Chinese culture through the objects it produced.

Instructor(s): Wu Hung Terms Offered: Spring

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): ARTH 16100

EALC 16806. Arts of Japan. 100 Units.

This course surveys the arts of the Japanese archipelago through the study of selected major sites and artifacts. We will consider objects in their original contexts and in the course of transmission and reinterpretation across space and time. How did Japanese visual culture develop in the interaction with objects and ideas from China, Korea, and the West? Prehistoric artifacts, the Buddhist temple, imperial court culture, the narrative handscroll, the tea ceremony, folding screens, and woodblock prints are among the topics covered.

Instructor(s): C. Foxwell Terms Offered: Spring

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

EALC 16911. Modern Japanese Art and Architecture. 100 Units.

This course takes the long view of modern Japanese art and architecture with a focus on the changing relationships between object and viewer in the 19th and 20th centuries. Beginning in the late eighteenth century with the flowering of revivalist and individualist trends and the explosion of creativity in the woodblock prints of Hokusai and others, we will then turn to examine Western-style architecture and painting in the late nineteenth century; socialism, art criticism, and the emergence of the avant garde in the early twentieth century. Also covered are interwar architectural modernism, art during World War II, and postwar movements such as Gutai and Mono-ha. No familiarity with art history or Japan is required.

Instructor(s): C. Foxwell Terms Offered: Winter

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): ARTH 16910

EALC 18803. Woodblock Prints Of Japan. 100 Units.

Despite the availability of moveable type, woodblock printing—in which each printed sheet was produced by an intricately hand-carved block—was the main reproductive technology in Japan from roughly 1600 to 1870 for both texts and images. In these years, Japan's high literacy rates and booming urban publishing industry supported an array of fascinating illustrated books and prints—from theater ephemera and guidebooks to "art" prints, landscape series, and supernatural tales—that offer interesting points of comparison with early modern printing in the West. This course will consider Japanese woodblock prints as artistic and social objects during the 17th through 19th centuries. We will discuss style and technique, class and gender representations, the world of the pleasure quarters, illustrated plays and fiction, urban growth and travel, censorship, and the supernatural.

Instructor(s): C. Foxwell Terms Offered: Spring

Note(s): Students must attend 1st class to confirm enrollment. If a student is not yet enrolled in this course, s/he must fill out the online consent form & attend the first class. This course meets the Gen. Edu. Reqmt. in the dramatic, musical, & visual arts.

Equivalent Course(s): ARTH 18803

EALC 20450. Peking Opera. 100 Units.

Peking opera (jingju) is the one nationally prominent form of traditional performing arts in China. This course will introduce concepts and methods that can be applied to the study of Peking opera. Emphasis will be put on understanding artistic elements essential to the living tradition of performance—the visual aspects including stylized stage gesture and movement, sets and costumes, and colors; the music and oral transmission. Topics for discussion include "realism," alienation, time and space, connoisseurship, and film. Students will not only engage with scholarly literature that cuts across different disciplines, but also be introduced to a rich body of sources ranging from gramophone recordings to photographs, opera films, and documentaries. Motivated students will also learn some basics of singing and moves. Field trips to Chinese community

Peking opera troupes may be arranged.

Elementary Literary Chinese

Terms Offered: Autumn

Prerequisite(s): CHIN 20300 or consent of instructor

EALC 21010. Archaeology of Bronze Age in China. 100 Units.

Bronze Age" in China conventionally refers to the time period from ca. 2000 to about 500 BC, during which bronze, an alloy of copper and other metals such as tin and lead, was the predominant medium used by the society, or to be more precise, the elite classes of the society. Bronze objects, in the forms of vessels, weapons, and musical instruments, were reserved for the

upper ruling class of the society and were used mostly as paraphernalia during rituals and feasting. "Bronze Age" in China also indicates the emergence and eventual maturation of states with their bureaucratic systems, the presence of urban centers, a sophisticated writing system, and advanced craft producing industries, especially metal production. This course surveys the important archaeological finds of Bronze Age China, and the theoretical issues such as state formation, craft production, writing, bureaucratic systems, urbanization, warfare, and inter-regional interaction, etc. It emphasizes a multi-disciplinary approach with readings and examples from anthropology, archaeology, art history, and epigraphy. This course will also visit the Smart Museum, the Field Museum, and the Art Institute of Chicago to take advantage of the local collections of ancient Chinese arts and archaeology.

Equivalent Course(s): EALC 31010

EALC 21207. Realms of Uncertainty: Buddhism & Chinese Literature. 100 Units.

During these uncertain times, this course explores the uncertain boundaries between illusion and reality, dream and waking, form and emptiness, and self and other. We will traverse these paired themes of Buddhist significance as they arise in Chinese literary works from another epoch of uncertainty: the twilight of the Ming dynasty (1368-1644). Our starting point will be the Heart Sutra's famous assertion that "Form is emptiness; emptiness is form." Accepting the uncertainty this statement inspires, we will investigate this and other distinctive indistinctions through works of fiction, drama, autobiography, and poetry. Along the way, we will examine (and call into question) the distinction between Buddhist and literary concerns: What makes literature suitable for reflecting on Buddhist ideas about being? What insights does Buddhist philosophy grant into how we engage with literature and other forms of mediated experience? No prior knowledge of Chinese language or history is necessary. All materials will be provided by the instructor and read in translation (with Chinese available upon request). A Chinese reading section is available to students who wish to take the course for language credit. ding section is available to students who wish to take the course for language cre

Instructor(s): Alia Breitwieser Terms Offered: Autumn

Equivalent Course(s): CMLT 21206

EALC 21667. Poetics of Space in Travel: Performance and Place in Japan and Beyond. 100 Units.

How is space imagined and evoked across different media? How might attention to this question lead us to rethink the way that space mediates our experiences of our surroundings? In examining how spatial imaginings travel across time and medium, we will explore questions of space as they are bound up with problems of gender, exile, aesthetics, and performativity. While Japan will be our primary geographic topos, we will interrogate an understanding of these spatialities as 'Japanese' by surveying the role they come to play in discourses of both 'Japaneseness' and Western modernism. We will pay special attention to performance (namely, noh drama); however, we will also take up short stories, novels, film and more. Centering our investigations on modern and contemporary cultural production, we will also deal with premodern texts to trace the multiple axes along which our diverse array of objects circulate. Figures considered include: Murata Sayaka, Hori Tatsuo, Miyazawa Kenji, Mishima Yukio, Ôe Kenzaburô, Virginia Woolf, and Zeami. No prior background required.

Instructor(s): Anthony Stott Terms Offered: Spring

Equivalent Course(s): TAPS 21667, CMLT 21667

EALC 21920. Mediating Japanese Gesture. 100 Units.

What is gesture and how should we understand the aesthetic and political work it performs? How does technological medium alter the shape and significance of bodily movements? This course takes up gesture as a concept through which to explore the relationship between Performance Studies and Japanese Studies. Through close readings of literary, cinematic, and theoretical texts, we will examine a range of issues related to embodiment in Japanese culture. The centerpiece of the course will be a two-week residency by award-winning choreographer and filmmaker Yasuko Yokoshi during which she will engage students as she develops her newest dance composition, which melds Kabuki and ballet. Students will develop skills of performance analysis and critical writing. Readings by Tanizaki, Sontag, Sedwick, Zeami, Lamarre, Berlant, J. Butler, A. Lippit, Kittler, Uchino.

Instructor(s): Reginald Jackson Terms Offered: Autumn 2012

EALC 22031. Scholars and Society in Early Modern Japan. 100 Units.

In this course we will read a number of works by renowned Confucian, Shinto, and the Nativist scholars in Japan's early modern period, while concurrently reading the major historiographical debates about them. We will also study the social context of these thinkers in which they attempted to define the core of Japan's cultural identity. Prior knowledge of early modern Japanese history is recommended.

Instructor(s): N. Toyosawa Terms Offered: Spring

Prerequisite(s): Prior knowledge of early modern Japanese history is recommended.

Equivalent Course(s): HIST 24114, EALC 32031, HIST 34114

EALC 22235. Revolutionary Romance in Socialist China. 100 Units.

One of the goals of the socialist revolution was to transform social relations, not only those between classes but also family and romantic relations. One of the first laws that the Chinese Communist Party issued after the founding of the People's Republic was the New Marriage Law, which banned arranged marriages, concubinage, and arrangements involving minors. 1950s cinema and literature advertised romantic love as an important achievement of the new society. At the same time, loyalty to the Party and to the collectivity were also core values that the media emphasized. In this class, we will look at how literature and cinema instructed viewers on how to select one's object of love in Revolutionary China, and how love for a romantic partner, for the party, and for the people were differently foregrounded at specific historical moments. How did ideas of romantic love change from the 1940s to the 1980s, and how did cinema contribute to promoting them? What forms of intimacy and models of attachment characterized revolutionary romance? Which kind of person constituted an ideal romantic partner? Who was to be loved, how, and why? Should one orient one's passion toward one person, many, or none?

Instructor(s): P. Iovene Terms Offered: Winter

EALC 22322. Society, Empire, and the Law in East Asia, c. 1700-1950s. 100 Units.

This course examines dynamic interactions between law and society in China, Japan, and Korea from 1700 through 1950s. The course deals with law as a realm of high politics especially in an age of nineteenth-century imperialism and colonialism, but it focuses on family and communal relations, gender and sexuality, and crime and punishment in relations to law because these topics can highlight not only theoretical discussions of law in domestic and international politics but also down-to-earth practices of law and societal implications that followed them. To consider the historically rich experiences of law in East Asian societies, we engage with a body of scholarly works on these topics, actual codes and cases, and novels and films. The aim of the course is to help us to understand how significantly East Asia has had its own local experiences of law that were simultaneously entangled with Western legal thoughts and practices in the nineteenth and twentieth centuries. All readings are available in English.

Instructor(s): Ishikawa Terms Offered: Spring

EALC 22451. Social and Economic Institutions of Chinese Socialism, 1949 to 1980. 100 Units.

The socialist period (for our purposes here, c. 1949-1990) fundamentally transformed the institutions of Chinese social and economic life. Marriage and family were redefined; rural communities were reorganized on a collective basis; private property in land and other means of production was abolished. Industrialization created a new urban working class, whose access to welfare, consumer goods, and political rights depended to a large extent on their membership in work units (danwei). Migration between city and countryside came to a halt, and rural and urban society developed in different directions. This course will focus on the concrete details of how this society functioned. How did state planning work? What was it like to work in a socialist factory? What role did money and consumption play in a planned economy? Our readings are in English, but speakers of Chinese are encouraged to use Chinese materials (first-hand sources, if they can be found) for their final papers.

Equivalent Course(s): EALC 32451, HIST 34511, HIST 24511

EALC 22501. Political and Intellectual History of China, A.D. 100-700. 100 Units.

Dynastic failures to maintain both court and local control after about 150 AD: Local leading families during E. Han and Three Kingdoms periods, Political pressures from non-Chinese states to the north and northwest, Elite concerns that led to personal and factional power: management of political legitimation; reading, editing, and pedagogy; antiquarianism and collecting that led to reevaluations of history. Voices of interiority and selfhood: Poetic voices of entertainment and independence among leading personalities, Other voices of counter-culture and cultural hierarchies. Factions and dynastic turnover in the Jin and the South Dynasties (265-525 AD): Cultural and religious trends of this time: political implications, Social organization in northern China in this period. The nature of our sources: Collections and transmissions of texts, Texts from discovered tombs, Other sources. The Tang Dynasty as a New Military Type, 600-750 AD: Organization of the Tang state, Tang China and the wider world. Trends in Tang-era thought: Belles lettres as social and career process, statecraft, institutions. Overview of major changes from late-Han to Tang.

Instructor(s): Howard Goodman Terms Offered: Winter 2013

EALC 22612. Inequalities in Chinese Literature and Media. 100 Units.

In this class we will explore how the various forms and dimensions of inequality that characterize contemporary China are reflected in literature, cinema, and internet. We will engage with concepts of subalternity, peasant worker, and new working class, and investigate emerging spaces of self-representation. Readings in Chinese and English. Ample time will be devoted to students' research projects.

Instructor(s): P. Iovene Terms Offered: Autumn

Prerequisite(s): Knowledge of modern Chinese

Note(s): Open to undergraduates.

Equivalent Course(s): EALC 44612

EALC 23001. Censorship in East Asia: The Case of Colonial Korea. 100 Units.

This course examines the operation and consequences of censorship in the Japanese Empire, with focus on its effects in colonial Korea. It begins with two basic premises: first, both the Japanese colonial authorities' measures of repression, and the Korean responses to them, can be understood as noticeably more staunch and sophisticated when compared to any other region of the Empire; and second, the censorship practices in Korea offers itself as a case that is in itself an effective point of comparison to better understand other censorship operations in general and the impact of these operations across different regions. With a view to probing an inter- and intra-relationship between censorship practices among a variety of imperial/colonial regions, this course studies the institutions related to censorship, the human agents involved in censorship-both external and internal-and texts and translations that were produced in and outside of Korea, and were subject to censorship. Overall, the course stresses the importance of establishing a comparative understanding of the functions of censorship, and on the basis of this comparative thinking we will strive to conceptualize the characteristics of Japanese colonial censorship in Korea.

EALC 23210. Spells, Talismans, Alchemy, Zen: Language and Religious Practice in China and Japan. 100 Units.

We will explore pictures of the efficacies of ritual language featured across a range of East Asian religious practices. Sources examined will include religious scriptures, commentaries, ritual manuals, and art; philosophical, alchemical, and magical

treatises; works of traditional poetics; Chan and Zen discourse records and essays; and a range of modern theorists of language, nonsense, and religion. All works will be in English. We will consider questions such as: why do some ritual utterances center passages in obscure foreign languages, or even simple nonsense? Why do some religious practices feature claims for the absolute accuracy, profundity, and magical potencies of scriptural language, while others are at least in part based on the idea that all language, in every way, always fails? Why are some religious texts written such that they seem not to mean what they say? Can a mere painting of a cake offer nourishment?

EALC 23901. Histories of Chinese Dance. 100 Units.

TBD

Equivalent Course(s): EALC 33901

EALC 23903. Ethics, Nature, Dao. 100 Units.

Some worldviews assert that human beings exist somehow apart from the natural world. Humans are to have dominion over it, for example, or to transcend it entirely. In many works of traditional Chinese religion, philosophy, and art, however, we find something quite different, a picture in which the human being is seamlessly of the world. The cosmos is at play within her, Daoist traditions teach; Chinese landscape paintings were at times understood to depict a world in which rivers, trees, and humans alike follow cosmic patterns; the great Song Dynasty poet Su Shi, in a line beloved of later Chan and Zen Buddhist writers, wrote that "the sounds of valleys are [the Buddha's] long broad tongue." These worldviews are not ecological, precisely-ecology is a modern science, not a traditional ethos-but works of Chinese philosophy and art that evince them offer profound resources for thinking in the mode known now as the environmental humanities. We will explore our works as resources for thinking in our age of climate crisis-at least in part. We will also read them, and stay true to them, as works of traditional Chinese art and thought.

Instructor(s): P. Copp Terms Offered: Autumn

Equivalent Course(s): RLST 23906

EALC 23970. Histories of Chinese Dance. 100 Units.

This class is an introduction to the forms, practices, and meanings of dance in China and the diaspora from ancient times to the present day. Through readings, videos, class demonstrations, and performances, we will explore the reconstruction of court dance in early China; Central Asian dance and dancers in the medieval imagination; the development of operatic movement in the late imperial period; the introduction and transformation of concert dance in the first half of the 20th century; socialist dance and the model ballets of the Cultural Revolution; folk dance and PRC ethno-nationalist discourse; the post-reform transnational avant-garde; ballroom dancing and everyday urban street life; Han revivalism, Shen Yun, and "classical Chinese dance" in the 21st century. Across these varied materials we will ask: what do we mean when we speak of dance, and what makes a dance Chinese? All materials in English; no background required.

EALC 24090. Japanese Woodblock Prints: From 1660 to the Present. 100 Units.

Despite the availability of moveable type, woodblock printing-in which each printed sheet was produced by an intricately hand-carved block-was the main reproductive technology in early modern Japan (roughly 1600 to 1850) for both texts and images. In these years, Japan's high literacy rates and booming urban publishing industry gave rise to an array of fascinating illustrated books and prints-from theater ephemera and guidebooks to "art" prints, landscape series, and supernatural tales-that offer interesting points of comparison with early modern printing in the West. Drawing on a recent exhibition at the Smart Museum, this course will consider Japanese woodblock prints as artistic and social objects during the seventeenth through nineteenth centuries. While viewing actual prints in area collections, we will discuss style and technique, the representation of class and gender, the world of the pleasure quarters, illustrated plays and fiction, urban growth and travel, censorship, and the supernatural.

EALC 24201. China's Eco-Environmental Challenges and Society's Responses. 100 Units.

In nearly four decades of reform and opening policies, China's economic achievements have come at a high cost for its ecological environment; air pollution, water pollution, and soil contamination, among other problems, are facts of life for most Chinese citizens. In addition, China is now the world's biggest emitter of carbon dioxide and has recently acknowledged its contributions to global warming and the need for drastic mitigation of greenhouse gases. Facing these tremendous challenges, remarkable shifts in the way that Chinese society communicates and tackles these problems are occurring. This seminar will look, in particular, at relevant public debates, crucial policies, as well as popular initiatives and protest, to approach this wide topic. How is the relationship between humans/society and nature/environment conceptualized and communicated? Can we detect shifts from traditional to modern, even contemporary 'Chinese approaches'? And to what extent and how do political authorities, media, the general population and scientists in China interact in the face of the acknowledged risks that environmental pollution poses to communities, to China's (economic) development and, not least, to individual health and well-being. Basic knowledge about modern Chinese society and politics as well as Chinese reading skills are helpful, but not a strict requirement for participation in this course.

Equivalent Course(s): EALC 34201, ENST 24201

EALC 24202. Citizenship in China: Concepts, Practices, Dynamics. 100 Units.

How are instances such as the arrest of Gui Minhai, a publisher and Hong Kong business owner who was born in China but has a Swedish passport, in Thailand - apparently by Chinese authorities -, and the large-scale eviction of migrant workers in Beijing due to the lack of residency permits in their own country, related? They raise questions as to how citizenship, i.e. in this case membership in a community, a country/nation state, or a social system is defined and which rights and duties it entails, as well as what are the prerequisites for obtaining and losing it. In this class we will discuss concepts of citizenship and analyze their representations in modern Chinese society. This includes historical and conceptual-history dimensions and encompasses notions of citizenship that are pertaining to the local, national (incl. empire/civilization), and the global level. Over the course of the semester we will touch upon topics such as forms of inclusion into (and exclusion from) the emerging Chinese 'welfare' model ("social citizenship"), political representation and participation ("political citizenship"), law and rights ("legal citizenship"), domestic and international (im)migration, nationalism, and many more. Basic knowledge about Chinese society and politics as well as Chinese reading skills are helpful, but not a strict requirement for participation in this course.

Equivalent Course(s): EALC 34202

EALC 24210. Oral Hist & the Politics of Memory in Socialist China. 100 Units.

Perhaps more than most other national histories, the history of China has been shaped by selective remembering and forgetting. This course will look at how history was and is produced in China. We will look at official sites of memory (museums and memorials) and at official historiography. At the same time, we will ask to which extent local, unofficial memories can be recovered. We will look not only at the methodology of oral history interviewing but also at the interface of written and oral cultures: who wrote, and why? What was written down and what is not? How did transcription and ritualized retelling affect memory? We will look at the numerous collections and sound recordings of oral texts and memories produced in twentieth century China: recorded folk songs and folk stories in the Republican era; the Maoist "Four Histories" of families, villages, communes, and factories; the memoir literature of the 1980s; the systematic cataloging and appropriation of local "cultural heritage" in the last decade. The course should also provoke self-critical reflections about how our work as historians differs from state attempts to permanently fix memories for administrative and political purposes

EALC 24211. Family, State, & Community in China, 1750-present. 100 Units.

This course explores the history of Japan from the 1830s through the 1990s. Topics to be examined include Japan's transformation into a powerful nation-state and empire, the social and cultural developments that followed, the devastation of the war and its aftermath, and the era of remarkable economic rebuilding that followed. The emphasis will be on the interconnectedness of politics and culture, and we will seek to understand modern Japanese history in light of regional and global changes. Course requirements include an in-class midterm, a final, and a research paper of 10-12 pages.

Instructor(s): S. Burns Terms Offered: Winter

Equivalent Course(s): HIST 24211

EALC 24212. Family, State, and Community in China, 1750-Present. 100 Units.

Upper-level undergraduate course, combining lectures, discussions, and other formats (e.g., group projects) as appropriate. No previous background in Chinese history is required, but students who are complete novices in this area may find some additional reading helpful. Major themes include the breakdown of the Qing empire and the formation of a modern national state which had different expectations of its citizens than the Qing had had of their subjects; changes in kinship and family life; gender roles; notions of the individual; and changing bases of authority in local society.

Instructor(s): K. Pomeranz Terms Offered: Spring

Equivalent Course(s): HIST 24212

EALC 24214. Cities in Modern China: History and Historiography. 100 Units.

China's shift from a predominantly rural country to an urban majority is one of the greatest social and demographic transformations in world history. This course begins with the roots of this story in the early modern history of China's cities

and traces it through a series of momentous upheavals in the nineteenth and twentieth centuries. We will learn about how global ideas and practices contributed to efforts to make Chinese cities "modern," but also how urban experiences have been integral to the meaning of modernity itself. We will discuss urban space, administration, public health, commerce and industry, transportation, foreign relations, and material culture. In addition to tackling these important topics in urban history and tracing the general development of Chinese cities over time, another primary concern of our course will be the place of urban history in English-language scholarship on Chinese history more broadly. We will track this development from Max Weber's observations on Chinese cities through the rise of "China-centered" scholarship in the 1970s to the "global turn" of the 2000s. Students will develop the skills necessary for writing an effective historiography paper, i.e., doing background research, writing annotated bibliographies, and using citation-management software. Students will put these skills to work by writing a critical historiographical review of scholarship on a topic of their choice.

Instructor(s): D. Knorr Terms Offered: Spring

Prerequisite(s): Students taking ARCH 24214 should explain the relationship between their final projects and architectural studies.

EALC 24250. China in Revolution, 1927-1976. 100 Units.

Rather than starting with the customary date of 1949, this course looks at continuities and changes across the 1949 divide. We will compare China's rival revolutionary regimes—the Nationalist Guomindang and the CCP—with each other and with other "late modernizing" regimes. What were the similarities and differences in their attempts to modernize China's economy and transform its social structures? How did they extend their power into villages, factories, and families? How did they mobilize and organize the population? We will look at GMD social policies and industrialization strategies before moving on to CCP political campaigns in the 1950s and 1960s. We will also ask how far Maoist policies after 1958 represented a break with the top-down developmentalism that characterized earlier CCP and GMD approaches. All readings are in English and will be available on CHALK.

Equivalent Course(s): EALC 34250, HIST 24205, HIST 34205

EALC 24255. Everyday Maoism: Work, Daily Life, and Material Culture in Socialist China. 100 Units.

The history of Maoist China is usually told as a sequence of political campaigns: land and marriage reform, nationalization of industry, anti-rightist campaign, Great Leap Forward, Cultural Revolution, etc. Yet for the majority of the Chinese population, socialism was as much about material changes as about politics: about the two-story brick houses, electric lights and telephones (loushang lousia, diandeng dianhua) that the revolution had promised; about new work regimes and new consumption patterns—or, to the contrary, about the absence of such change. If we want to understand what socialism meant for different groups of people, we have to look at the "new objects" of socialist modernity, at changes in dress codes and apartment layouts, at electrification and city planning. We have to analyze workplaces and labor processes in order to understand how socialism changed the way people worked. We also have to look at the rationing of consumer goods and its effects on people's daily lives. The course has a strong comparative dimension: we will look at the literature on socialism in the Soviet Union and Eastern Europe, to see how Chinese socialism differed from its cousins. Another aim is methodological. How can we understand the lives of people who wrote little and were rarely written about? To which extent can we read people's life experiences out of material objects?

Instructor(s): J. Eyferth Terms Offered: Spring

Equivalent Course(s): CRES 24255, HIST 34507, EALC 34255, HIST 24507

EALC 24256. Everyday Maoism: Revolution, Daily Life, and Material Culture in Socialist China. 100 Units.

The history of Maoist China is usually told as a sequence of political campaigns, from land reform to the Cultural Revolution. Yet for the majority of the Chinese population, the promise of socialism was as much about material transformations as it was about political change: a socialist revolution would bring better living conditions, new work regimes and new consumption patterns. If we want to understand what socialism meant for different groups of people, we have to look at the "new objects" of socialist modernity, at changes in dress codes and apartment layouts, at electrification and city planning—or at the persistence of an older material life under a new socialist veneer. In this course, we will analyze workplaces in order to understand how socialism changed the way people worked, and look at rationing and consumption in the households to see how socialism affected them at home. We will look at how specific objects came to stand in for the Maoist revolution, for socialist modernity, or for feudal backwardness. The course has a strong comparative dimension: we will read some of the literature on socialism in the Soviet Union and Eastern Europe, to see how Chinese socialism differed from its cousins. Another aim is methodological. How can we understand the lives of people who wrote little and were rarely written about? To which extent can we read people's life experiences out of the material record of their lives?

EALC 24312. Korean War, Family & Generational Difference Under Division. 100 Units.

This course examines a selection of literary and cinematic texts that engage with the Korean War and the various political, ideological, and cultural divisions that occurred against the backdrop of the Cold War. The thematic focus of the course is placed on the family as an institution and experience, as well as the generational differences with which the war, division, and family matters were experienced. We will discuss texts with a view to exploring the formative and derivative effects of the war and its divisions upon the individual self-fashioning amidst disasters, crises, and unavoidable dilemmas. Discussion will pay special attention to the ways in which the dynamics between the trope of family, a rhetorically unifying force, and the effects of generational difference, an often divisive factor, reinforced and/or challenged the conventional ideological discourses on the Korean War and Korea's various divisions. All the film and literary texts chosen for the course have English translation/English subtitles.

Instructor(s): K. Choi Terms Offered: Spring

Equivalent Course(s): EALC 34312

EALC 24403. Folklore in the Modern Chinese Cultural Imagination. 100 Units.

Beginning in the 1910s, Chinese intellectuals discovered a new source of cultural identity for China in the songs, myths, legends and life-ways of the countryside. Over the course of the century, various modes of representing this folk culture were enlisted to help define the nation, from the appropriation of folkloric genres for the creation of modern literary works to the critical study of Chinese history and society through the lens of folk culture, including the politicization of folklore as it was adapted for the dissemination of revolutionary ideology during wartime and afterward. Through the study of folklore itself, modern fiction and poetry, historical sources on the study of folklore, and music and film recordings, this course critically examines how folklore and notions of cultural authenticity have contributed to the construction of the modern Chinese nation.

Instructor(s): M. Bohnenkamp Terms Offered: Autumn

EALC 24410. Kurosawa and His Sources. 100 Units.

This interdisciplinary graduate course focuses on ten films of Akira Kurosawa which were based on literary sources, ranging from Ryunosuke Akutagawa, Jules Dassin, Georges Simenon, and Shakespeare to Dostoevsky, Tolstoy, Gorky, and Arseniev. The course will not only introduce to some theoretical and intermedial problems of adaptation of literature to film but also address cultural and political implications of Kurosawa's adaptation of classic and foreign sources. We will study how Kurosawa's turn to literary adaptation provided a vehicle for circumventing social taboos of his time and offered a screen for addressing politically sensitive and sometimes censored topics of Japan's militarist past, war crimes, defeat in the Second World War, and ideological conflicts of reconstruction. The course will combine film analysis with close reading of relevant literary sources, contextualized by current work of political, economic, and cultural historians of postwar Japan. The course is meant to provide a hands-on training in the interdisciplinary methodology of Comparative Literature. Undergraduate students can be admitted only with the permission of the instructor.

Instructor(s): Olga Solovieva Terms Offered: Spring

Equivalent Course(s): SIGN 24410, EALC 34410, CMLT 24410

EALC 24411. The Science of Literature. 100 Units.

This course examines the modern history of literature as an object of scientific study. In particular, it introduces key moments in the conversation between quantitative methods and literary interpretation from the late-19th century to today. These include physiological theories of the novel; stylistics; book history; sociologies of reading; distant reading; and cultural analytics. At each moment we consider the intellectual contexts that encouraged dialogue between the sciences and literature; probe the theories and models by which this dialogue was framed; and consider its relevance to the practice of literary criticism today.

Instructor(s): H. Long Terms Offered: Spring

Equivalent Course(s): ENGL 24422, EALC 34411, ENGL 34422

EALC 24422. Japan and the Japanese: Society, Identity, History. 100 Units.

In this course, we will explore the shifting meanings of the terms "Japan" and "Japanese" focusing primarily on the early modern and modern periods as a way to trace the dynamics of identity formation. Using primary source excerpts from Japanese and foreign official and personal accounts, secondary texts, and visual materials, we will discuss the questions of nationalism, anti-foreignness, exceptionalism, and how the "Japanese" defined themselves against others and within their own society. The critical analysis of various communities, groups, individuals, and ideologies will help us delineate the key factors that shaped society, culture, and politics. Further, the course will train students in analyzing, comparing, and evaluating textual materials and in presenting their ideas orally and in writing. Topics covered: myths, power and status, individualism and collective identity, honor and shame, print culture and information, social networks and outcasts, foreign relations. No Japanese knowledge is required. Open to both BA and MA students.

Equivalent Course(s): HIST 24809, EALC 34422

EALC 24502. China's New Documentary Cinema. 100 Units.

Since the early 1990s, the "new documentary" has emerged as one of the most prominent phenomena in Chinese film and video, widely circulating at international film festivals and eliciting considerable critical debate. This course examines the styles and functions of China's "new documentary" over the last fifteen years, paying particular attention to the institutional, cultural, economic, and political conditions that underpin its flourishing. This overview will lead us to consider questions that concern the recent explosion of the documentary form worldwide, and to explore the tensions and imbalances that characterize the global circulation of the genre. We will address such issues as: what is "new" about China's recent documentary cinema; the "national" and "transnational" dimensions of documentary filmmaking, and the ways in which

these dimensions intersect in its production and circulation; the extent to which the international demand for "unofficial" images from China has contributed to its growth; the politics involved in documentary filmmaking, and the forms and meanings of "independent" cinema in the wake of intensified globalization; the links between Chinese documentary and the global rise of documentary filmmaking, and the ways in which they challenge extant concepts and theorizations of the genre.

Instructor(s): P. Iovene

Equivalent Course(s): CMST 44606, EALC 35402, CMST 24606

EALC 24508. Human Rights in Japanese History. 100 Units.

This course examines how the modern concept of "rights" and "human rights" localized in Japan and how different parties in Japan have used the language of human rights in attempts to remake Japan's social, cultural, and legal landscape. We will explore a wide range of topics including the translation of Eurocentric rights talk in East Asia, colonization and decolonization, statelessness and migration, transitional justice and reconciliation, biopolitical rights and bio-citizenship, indigenous rights, and women and gender-specific rights. Throughout the course we pay special attention to the ways in which rights talk and human-rights politics in Japan intertwine with the country's efforts to modernize and build the "nation within the empire" and, after its defeat in WWII, to close off its "long postwar" and reconcile with its neighbors. This is an introductory course, and no previous knowledge of Japanese history or the international history of human rights is required. However, you should be prepared to read (and watch, browse, and listen to) a wide array of primary and secondary sources that destabilize the most common vocabulary and concepts we take for granted in contemporary human-rights talk such as race, state responsibility, and the very notion of universalism so central to the idea of human rights.

Instructor(s): K. Pan Terms Offered: Winter

Equivalent Course(s): HMRT 25408, HIST 24508

EALC 24513. Documentary Chinese. 100 Units.

This course guides students through critical readings of primary historical documents from approximately 1800 through 1950. These documents are translated sentence by sentence, and then historiographically analyzed. Most of these documents are from the nineteenth century. Genres include public imperial edicts, secret imperial edicts, secret memorials to the throne from officials, official reports to superiors and from superiors, funeral essays, depositions ("confessions"), local gazetteers (fangzhi), newspapers, and periodicals. To provide an introduction to these genres, the first six weeks of the course will use the Fairbank and Kuhn textbook "The Rebellion of Chung Jen-chieh" (Harvard-Yenching Institute). The textbook provides ten different genres of document with vocabulary glosses and grammatical explanations; all documents relate to an 1841-42 rebellion in Hubei province. Assignments: Each week prior to class students electronically submit a written translation of the document or documents to be read; a day after the class they electronically submit a corrected translation of the document or documents read. A fifteen-page term paper based on original sources in documentary Chinese is also required.

Instructor(s): G. Alitto Terms Offered: Autumn

Prerequisite(s): A reading knowledge of modern (baihua) Chinese and some familiarity with classical Chinese (wenyan) or Japanese Kanbun. Other students may take the course with permission from the instructor.

Equivalent Course(s): HIST 34513, EALC 34513, HIST 24513

EALC 24514. Colonial Power in East Asia. 100 Units.

This course takes a transnational and comparative approach to the study of colonialism in East Asia from the Opium Wars through the end of World War I. Using foundational theories of postcolonial scholarship as a starting template, we will explore the interrelationship of colonial power and ideologies of race and gender across China, Japan, and Korea during the nineteenth century. Critically evaluating both primary and secondary sources will help us contextualize the development of the Japanese empire within a larger narrative of the expansion of Euro-American colonial power into East Asia. In doing so, we will discover that sites of empire in East Asia often destabilize the most common binaries of postcolonial study: Occident/Orient, colonizer/colonized, white/other, and premodern/modern.

Equivalent Course(s): GNSE 24514, GLST 24514, CRES 24514, HIST 24514

EALC 24515. Social Outcasts: Exclusion and Discontent in Late Imperial and Modern China. 100 Units.

This course considers the often neglected presence of "social outcasts" in Chinese history as a gateway to understanding ideas and practices of discrimination from the late Qing to modern-day China. It traces changes in the intersection of law, custom, and daily social practices, focusing on attempts aimed at legitimizing discrimination across class, territory, ethnicity, religion, gender and disability. Thus a theoretical objective of the course is to analyze legal and social dimensions of exclusion along the axis of empire and state building. Chronologically, this course begins with the collapse of status order in the late Qing and explores how the Republic and the PRC managed transgressive elements of society, from beggars, prostitutes, and the insane to ethnic and religious minorities. We will use legal documents, police records, and visual materials to explore how sociocultural processes shape the experience of discrimination and its resistance. Another focus of this course will be asking how disenfranchised groups might enhance our understanding of mainstream values. Through discussions, in-class presentations, and written assignments, students will develop skills to analyze historical evidence and critically reflect on its implication for cross-cultural issues.

Instructor(s): C. Wang Terms Offered: Spring

Equivalent Course(s): CRES 24515, GNSE 24515, HIST 24515

EALC 24607. Chinese Independent Documentary Film. 100 Units.

This course explores the styles and functions of Chinese independent documentary since 1989, with particular attention to the social and political contexts that underpin its flourishing in Mainland China and Taiwan. We will discuss the ways in which recent Chinese documentaries challenge current theories of the genre, how they redefine the relationship between fiction and non-fiction, and the problems of media aesthetics, political intervention, and ethics of representation that they pose. We will look at their channels of circulation in Asia and elsewhere, and will discuss the implications and limits of the

notion of independence. Readings will include theorizations of the documentary genre in relation to other visual media and narrative forms, analyses of specific works, and discussions on the impact of digital media.

Instructor(s): P. Iovene Terms Offered: Spring

Equivalent Course(s): CMST 24607, EALC 34607, CMST 34607

EALC 24608. Chinese Social History, Eighteenth to the Twenty-First Century. 100 Units.

This class provides an overview of major developments in Chinese social history from the high Qing period (roughly the eighteenth century) until very recent times. It focuses on the lives of "ordinary people," especially in the countryside, where over 80 percent of China's population lived until roughly 1980, and over 40 percent still live today. Topics include family organization, relations between the generations, and gender roles; property rights, class relations, and their implications for economic activity; the nature of village communities and their relationship to political/legal authority; migration, frontier settlement, and changes in ethnic and national identity; twentieth-century urbanization, consumerism, and changing notions of the individual; and collective protest, violence, and revolution. A secondary theme is more theoretical: what is it possible to know about the lives of people who left few records of their own, and how do we evaluate what are often, inevitably, thinly documented claims? The class format will include a lot of lecture, but mixed with both in-class and online discussion. No background knowledge is required.

Instructor(s): K. Pomeranz Terms Offered: Winter

Equivalent Course(s): HIST 24607, CRES 24607

EALC 24626. Japanese Cultures of the Cold War: Literature, Film, Music. 100 Units.

This course is an experiment in rethinking what has conventionally been studied and taught as "postwar Japanese culture" as instances of global Cold War culture. We will look at celebrated works of Japanese fiction, film and popular music from 1945 through 1990, but instead of considering them primarily in relation to the past events of World War Two, we will try to understand them in relation to the unfolding contemporary global situation of the Cold War. We will also look at English-language writing on Japan from during and after the Cold War period. Previous coursework on modern Japanese history or culture is helpful, but not required. All course readings will be in English.

Instructor(s): M. Bourdagh Terms Offered: Winter

Equivalent Course(s): EALC 34626

EALC 24627. Allure of Matter: Material Art in China. 100 Units.

This seminar examines contemporary art in China through the lens of the Smart Museum of Art's upcoming exhibition, *The Allure of Matter: Material Art in China*. Using works in the exhibition as case studies, the course explores questions about materials and materiality in contemporary art. Throughout the course, we will address the following questions: How have unconventional materials impacted art practices in China? How do these material explorations inform our understanding of contemporary art in China and beyond? How do materials mediate different relationships between the artist, artwork and viewer? Guest speakers, including conservators, will expand our discussions of materiality. The course will meet for approximately half of the time at the Smart Museum or Wrightwood 659.

Instructor(s): O. Cacchione Terms Offered: Winter

Prerequisite(s): Students who have taken a course in modern or contemporary art history preferred.

Equivalent Course(s): ARTH 34626, EALC 34627, ARTH 24626

EALC 24700. Histories of Japanese Religion. 100 Units.

An examination of select texts, moments, and problems to explore aspects of religion, religiosity, and religious institutions of Japan's history.

Instructor(s): J. Ketelaar Terms Offered: Spring

Equivalent Course(s): RLST 22505, HIST 24700, EALC 34700, HIST 34700, HREL 34705

EALC 24712. Chinese Frontier History, circa 1600-Present. 100 Units.

A study of frontier regions, migration, and border policies in Qing (1644-1912) and twentieth-century China, focusing on selected case studies. Cases will include both actual border regions (where the Qing/China was adjacent to some other polity it recognized), ethnically diverse internal frontiers, and places where migrants moved into previously uninhabited regions (e.g., high mountains). Topics include the political economy and geopolitics of migration and frontier regions, the formation of ethnic and national identities in frontier contexts, borderland society (e.g., marriage, social stratification, and social mobility), and the environmental effects of migration.

Instructor(s): K. Pomeranz Terms Offered: Autumn

Note(s): Friday discussion section registration is required, but only if you plan to attend. Discussions are optional and attendance is not required to receive course credit. Sect 1 (1.30) is for undergrads and sect 2 (2.30) is for grads.

Equivalent Course(s): HIST 24612, HIST 34612, EALC 34712

EALC 24720. Japanese Empire & Nation Formation in East Asia. 100 Units.

The rise and fall of the Japanese colonial empire in the first half of the twentieth century is an event of singular importance in the history of modern Japan as well as its concurrent East Asia. This course surveys the imperial or colonial roots of the formation of modern East Asian nations—mainly Japan but also Taiwan, Korea, and China—with a focus on the complex interplays between nationalism and imperialism or colonialism. By examining several key issues of colonial studies, we will look at the intertwining and tensions between empire-building and nation-forming. All readings are in English.

Instructor(s): W. Chen Terms Offered: Winter

Equivalent Course(s): CRES 24720, HIST 24111

EALC 24811. China and Global Capitalism since 1911. 100 Units.

This course examines China's violent encounter with capitalism over the last century. How are we to explain the "failure" of China to follow the classical free-market path of development? Why did Marxism become such a powerful ideology

in a country that was so incompletely capitalist, and what is the relation of the Mao era's "socialism" to capitalism? Is contemporary China a case of free-market excess or of state domination? How does today's US-China trade war rise from this history? In order to answer these questions, this course will develop capitalism as a category that goes beyond a narrow focus on economic issues. We will apply and evaluate several competing frameworks that allow us to conceptualize capitalism as simultaneously a global structure and an everyday practice of social life. Drawing upon these different approaches, we will interpret not just the movement of commodities and the dynamics of class division in China, but changing concepts and practices of gender and nation as well. Through these discussions we aim to understand how capitalism has shaped China while using China's experience to enrich our understanding of capitalism.

Terms Offered: Spring

Prerequisite(s): J. Werner

Equivalent Course(s): HIST 24810, GNSE 24811

EALC 24812. Women Writing Women in Modern Japanese Literature. 100 Units.

This course surveys the literary works by women writers of Japan through the modern period from late Meiji (early 1900s) through mid-Shōwa (1970s). Throughout this period, Japanese writers and critics have been preoccupied with questions related to self-expression: How does one know and represent one's self in writing? Can a true self be expressed through the artifice of literature? What is the relationship between writing and self-consciousness? Yet literature written by women has largely been left out of this conversation, and often chronically consigned to the margins as mere 'women's writing', a pale imitation of pure (male-authored) literature. Aiming to address this unevenness, this course engages with Furthermore, in order to transcend insubstantial and limiting categories such as "women's writing", this course focuses students' analysis using the dynamic lens of women writing women: that is, women's self-representation in literature. Readings for the course are grouped by larger themes which are key not only to students' analysis of literary works, but in relation to the larger social, political and cultural contexts in which the works were produced. All works will be read in English translation.

Instructor(s): P. Mazza-Hilway Terms Offered: Autumn

Equivalent Course(s): GNSE 24812

EALC 24821. Modern Chinese Satirical Novel in History. 100 Units.

This course takes the fictional genre of satire as a unique window on Chinese history. Placing novels and novellas from Republican China, the PRC, and Taiwan alongside excerpts from classic satirical novels from world literature, we will focus not only on the literary merits and themes of these diverse texts but also on their social, political, and historical contexts.

What essential elements constitute satire, and how can we understand a historical moment better if we think with this form of literature? What does literature reveal and what does it deliberately or inadvertently obscure? We will consider the ways in which satire advances -- or declines to advance -- or advocate alternative realities (utopias/dystopias), the cultural critique offered by satire and its national and supra-national contexts.

Instructor(s): Johanna Ransmeier Terms Offered: Autumn

Equivalent Course(s): HIST 34811, EALC 34821, HIST 24811

EALC 24916. Y#kai Media. 100 Units.

This course centers on y#kai (monsters or fantastic creatures) and theories of the fantastic in cinema and media. Historically, it spans the range from medieval emaki and Edo ch#n'in culture through 20th and 21st century manga and anime. Inquiry into y#kai and the fantastic is intended to develop new strategies for putting cinema and media into dialogue with theories of political sovereignty and capitalism in the context of everyday life and its urban myths.

Instructor(s): Thomas Lamarre Terms Offered: Winter

Equivalent Course(s): MAAD 24916, CMST 24916

EALC 24950. Fictions of Selfhood in Modern Japanese Literature. 100 Units.

As Japanese leaders in the mid-19th century faced the threat of colonization at the hands of the Western powers, they launched a project to achieve "Civilization and Enlightenment," quickly transforming Japan into a global power that possessed its own empire. In the process fiction became a site for both political engagement and retreat. A civilized country, it was argued, was supposed to boast "literature" as one of its Fine Arts. This literature was charged with representing the inner life of its characters, doing so in a modern national language that was supposed to be a transparent medium of communication. Between the 1880s and the early 1900s, a new language, new literary techniques, and a new set of ideologies were constructed to produce the "self" in novels and short stories. As soon as these new practices were developed, however, they became the objects of parody and ironic deconstruction. Reading key literary texts from the 1880s through the 1930s, as well as recent scholarship, this course will re-trace this historical and literary unfolding, paying special attention to the relationship between language and subjectivity. All readings will be in English.

Terms Offered: Spring

Equivalent Course(s): EALC 34950

EALC 25010. Premodern Japanese Literature and East Asia. 100 Units.

This course will explore the relationship of premodern Japanese literature to East Asia. How did elites in premodern Japan understand their place within the larger East Asian world? How did they construct their identities in relation to their continental neighbors? We will consider the complexities surrounding Japan's adaptation of Sinographic (Chinese) script, the production of vernacular literature vis-à-vis kanbun texts, and moments in premodern Japanese literary works that highlight actors, objects, themes, and genres from the greater East Asian world.

Instructor(s): M. Burge Terms Offered: Autumn

Equivalent Course(s): EALC 35010

EALC 25025. The Real and the Fake in Early Modern China. 100 Units.

This class explores the late imperial fascination with the boundaries between reality and illusion, genuine and counterfeit, self and role. Focusing on the period from the sixteenth to the eighteenth century—a period marked by both tremendous commercial growth and devastating political turmoil—we will trace the development of a discourse that at once imposes and seeks to overcome these categories of real and fake. In addition to readings from drama, fiction, and poetry, materials will include manuals on forgeries and scams, dream encyclopedias, designs for imaginary gardens, and guidebooks to fantastical realms. All readings available in English, but students with Chinese reading ability will be encouraged to read the original texts.

Instructor(s): Ariel Fox Terms Offered: Spring

Equivalent Course(s): EALC 45025

EALC 25200. Early Daoist Texts. 100 Units.

In this course, we will focus primarily on reading (in English) the Laozi and Zhuangzi, paying attention both to philosophical and historical issues. We'll also read several ancillary texts, such as the "Nei ye" chapter of the Guanzi and the "Yu Lao" and "Jie Lao" chapter of the Han Feizi, as well as such unearthed manuscripts as the *Tai Yi sheng shui* and *Heng xian*. In all cases, we will be concerned first of all with what these texts may have meant to people in the Warring States period, and then only incidentally with how they have been understood in subsequent periods and places.

Instructor(s): E. Shaughnessy Terms Offered: Spring

Equivalent Course(s): FNDL 25200

EALC 25301. Inventing the Chinese Short Story. 100 Units.

This class will trace the emergence of the vernacular short story as a new genre in the late Ming and early Qing. We will focus on the seventeenth-century story collections of Feng Menglong, Ling Mengchu, Aina Jushi, and Li Yu, whose stories map the social whole of late imperial China—from merchant schemes to courtesan romances, from the friendships of students to the follies of emperors. Alongside close readings of selected stories, we will examine the structure, sources, and publication histories of these collections and locate them in a broader discussion of the meanings and functions of vernacular literature. All readings in English, though students with Chinese reading ability will be encouraged to read the original texts.

Instructor(s): Ariel Fox Terms Offered: Winter

Note(s): Although this course has a grad number, this quarter it will be offered to undergraduates only.

Equivalent Course(s): FNDL 25305, EALC 35301

EALC 25305. Dream of the Red Chamber and the Culture of Late Imperial China. 100 Units.

The main focus of this course will be a careful reading of Cao Xueqin's eighteenth-century masterpiece *Dream of the Red Chamber* (*Honglou meng*). In the process, we will examine some of the range of texts, images, and issues across various literary and cultural genres in late-imperial China that this immensely complex novel draws on. The hope is that in doing so we will gain a deeper appreciation both of the novel itself and of the culture of late-imperial China. We will read about and discuss such topics as gender, erotic desire, relations between text and commentary, and the world of theater and performance, as well as dimensions of material culture and theories of medicine and illness. Adaptions of the novel into various media—opera, film, and TV—may also be incorporated into class discussions or occasionally screened outside class. All readings are in English, using the Penguin translation entitled *The Story of the Stone*. An optional section introducing selections from the original text in Chinese will be available for if there is sufficient student interest.

Instructor(s): J. Zeitlin Terms Offered: Winter 2015

Note(s): Prior knowledge of Chinese language and literature is not required.

Equivalent Course(s): GNSE 25305, FNDL 24314, EALC 35305

EALC 25306. Gender and Modernity in East Asia. 100 Units.

What are the salient forms, manifestations, and performances found at the intersections of gender and modernities in East Asia? This seminar aims at identifying the characteristics of modern gendering that East Asians experienced in the first half of the twentieth. It aims to generating a broad discussion on the form and patterns of "new" cultural experiences that came to shape themselves under the hegemony of Western modernities outside as well as those of "old" counterparts. While considering the shared questions of modernized gender, gendered consciousness, and personal/private spaces, discussions will respond to the diverse interests, backgrounds, and initiatives of student participants so as to best facilitate comparative and theoretical discussions on gender and modernity in East Asia.

Instructor(s): K. Choi Terms Offered: Autumn

Equivalent Course(s): GNSE 25601, GNSE 35601, EALC 35306

EALC 25315. Rock, Paper, Surface: Matters of Meaning in Pre-Modern China. 100 Units.

17th- and 18th-century Chinese writers drew a correlation between textual traces of the past and stones: both seemingly solid objects that convey but also resist revealing their origins. With these stony surfaces in mind, we will examine literary commentaries that aim to make meaning out of history (Zuo Tradition), philosophy (Zhuangzi), poetry (Bai Juyi and Su Shi), drama (Romance of the Western Chamber), and fiction (short stories by Feng Menglong and Li Yu). We will assess each commentator's approach to their base text and develop our own methods for making sense of unyielding textual surfaces. Previous acquaintance with pre-modern Chinese literature is helpful but not necessary. Students with at least two quarters of classical Chinese may participate in an additional section focused on readings of the Zuo Tradition and Jin Shengtan's commentaries on fiction and classical prose.

Instructor(s): Alia Breitwieser Terms Offered: Spring

Equivalent Course(s): CMLT 25315

EALC 25415. Poetry and its Powers in Early China: Explorations in Poetic, Prophetic, and Philosophical Verse. 100 Units.

This course will survey the religious, political, and magical powers of verse during the development of literary and intellectual traditions in early China (~10th to ~1st c. BCE). Much of our time will be devoted to two major compendia of poetry: 1) the *Shijing* ##, (Classic of Odes; Book of Songs), a compilation of ancient song lyrics that was allegedly compiled by Confucius (~500 BCE); and 2) the *Chu ci* ## (Elegies of Chu; Songs of the South), an anthology of pre-imperial songs traditionally attributed to Qu Yuan ##, a spurned official who served in the southern state of Chu #during the fourth century BCE. Reading ability in Chinese is not a pre-requisite for the course, and we will work from English translations. Many of the texts we will read are archaic and difficult, and since translations are all imperfect, we will sometimes refer to more than one. This will help us to better triangulate the meaning of the text, to discover areas where interpreters diverge in their understanding, and to consider the pros and cons of different strategies of translation.

Instructor(s): D. Lebovitz Terms Offered: Autumn

Equivalent Course(s): EALC 35415

EALC 25600. Gender and Modernity in Colonial Korea. 100 Units.

What are the salient forms, manifestations, and performances that can be discussed as aspects found at the intersection between gender experience and Korean colonial modernity? This seminar aims at identifying the characteristics of Japanese or colonially mediated modernization that Koreans experienced in the first half of the twentieth century in order to ultimately generate a broadly meaningful discussion on the texture of colonial cultural experience under its abiding colonial legacy. At the core of the class is a concern with gender. While considering the universal questions of modernized gender, gendered consciousness, and personal/private spaces, discussions will respond to the diverse interests and backgrounds of student participants so as to best facilitate comparative and theoretical discussions on colonial modernity and its postcolonial manifestations.

Instructor(s): K. Choi Terms Offered: Autumn

Equivalent Course(s): GNSE 25600, GNSE 35600, EALC 35600

EALC 25620. Japanese Animation: The Making of a Global Media. 100 Units.

This course offers an introduction to Japanese animation, from its origins in the 1910s to its emergence as global culture in the 1990s. The goal is not only to provide insight into Japanese animation within the context of Japan but also to consider those factors that have transformed it into a global cultural form with a diverse, worldwide fanbase. As such, the course approaches Japanese animation from three distinct perspectives on Japanese animation, which are designed to introduce students to three important methodological approaches to contemporary media - film studies, media studies, and fan studies or cultural studies. As we look at Japanese animation in light of these different conceptual frameworks, we will also consider how its transnational dissemination and 'Asianization' challenge some of our basic assumptions about global culture, which have been shaped primarily through the lens of Americanization.

Instructor(s): Thomas Lamarre Terms Offered: Autumn

Equivalent Course(s): CMST 25620, SIGN 26070, MAAD 15620

EALC 25709. Picturing Moral Autonomy in China and Elsewhere. 100 Units.

This course examines how intellectuals in Preindustrial China maintained their independence, as well as their moral compass, in times of inordinate social and political pressure. Systematic thinking on this topic appears early in China, beginning with Confucius and Mencius, but was by no means limited to the Confucian tradition. Zhuangzi (late 4th c. BCE) devoted an entire chapter to the problem. This course will survey some important meditations on the topic from the Classical period, but will focus on the Song dynasty (960-1278) with its rich body of essays, poems, and paintings touching upon the problem of moral autonomy. To supplement our study of primary sources we'll read secondary sources on Song law, society, and government, as well as relevant secondary studies of European art. Later in the course we will read reflections on Song period Chinese essays by English radicals of the 18th century, and will wrap up with American classics by Henry David Thoreau, Ralph Waldo Emerson, and Wendell Berry. Along the way we will learn how to conduct "close readings" of both written and visual materials for clues to the deep, humanistic themes underlying artistic choice.

Instructor(s): M. Powers Terms Offered: Autumn

Equivalent Course(s): ARTH 25709, EALC 35709, ARTH 35709

EALC 25803. Confucius and the Analects. 100 Units.

This course will focus on Confucius, both the historical man and the legendary figure, and on the *Analects*, which purports to record his teachings. Through readings of the *Analects* in translation and of secondary scholarship in English, we will seek to determine to what extent it is possible to understand the relationship between the man and the book. For students with a basic knowledge of classical Chinese, extra sessions will be arranged to read the *Analects* in Chinese.

Instructor(s): E. Shaughnessy Terms Offered: Winter

Equivalent Course(s): FNDL 25803, EALC 35803

EALC 25811. Foundations of Chinese Buddhism. 100 Units.

An introduction to the Buddhism of premodern China, examined through lenses of philosophy, texts, and art. We will examine important sources for the major currents of Chinese Buddhist thought and practice stretching from the earliest days of the religion in China through around the 13th century (with some attention to modern connections), giving special consideration to major textual and artistic monuments, such as translated scriptures, Chan literature, and the cave-shrines of Dunhuang.

Equivalent Course(s): HREL 35811, RLST 22501, EALC 35811

EALC 25844. Daoism and Chinese Religion. 100 Units.

Daoism is the collective name for a group of interrelated Chinese religious traditions, including the "Ways" of the Celestial Masters, of Highest Clarity, of Numinous Treasure, and of Complete Reality, among many others. Taken together, they have sometimes been characterized as "China's indigenous higher religion," in part for the ways they grew out and systematized the myriad disparate religious practices of China's antiquity, such as a vast range of "shamanic" and therapeutic techniques, and the philosophical and visionary ideas found in classic texts such as the Laozi, the Zhuangzi, and the Songs of Chu. More than this, however, the various forms of Daoism also grew by absorbing and remaking religious practices and ideas from across Eurasia, most importantly those found in the various styles of Buddhist religion that entered China in the first millennium AD and often formed, in this period and later, Daoism's main rival. In this course we will cover the entirety of Daoism's history in China, but focus mainly on its formative periods and on its place in China (and the world at large) today.

Instructor(s): P. Copp Terms Offered: Winter

Note(s): Open to MAPH and MA Divinity students, not PhD students

Equivalent Course(s): HREL 35844, EALC 35844, RLST 25844

EALC 26101. Buddhism. 100 Units.

This course will survey central features of the Buddhist traditions in South, Central, and East Asia, over its roughly 2500 year history. Attention will be paid to the variety of disciplinary orientations (historical, philological, anthropological, sociological, economic, archaeological, philosophical) that may be taken to illuminate various aspects of the traditions. Consideration will also be given to the concurrent rise of distinctive Buddhist responses to modernity and the modern/academic study of Buddhism.

Equivalent Course(s): RLST 26101, SALC 26102

EALC 26206. The Yi Jing. 100 Units.

In this course, we will survey the creation and development of the I Ching or Yi Jing, one of the most unique classics in world literature. Originally used as a divination manual, the Yi Jing came to be viewed as the paramount wisdom text in the Chinese intellectual tradition. We will pay equal attention to how the text was first created and to how it came to be interpreted over the course of Chinese history. All readings will be in English, though students taking the course for graduate credit will be encouraged to extend their readings to Chinese sources.

Instructor(s): E. Shaughnessy Terms Offered: Spring

Equivalent Course(s): EALC 36206, FNDL 26208

EALC 26212. The Da Xue and Zhong Yong. 100 Units.

This course will focus on the Da Xue or Great Learning and the Zhong Yong or Doctrine of the Mean, to use the familiar translations. These two texts, the composition of which is traditionally dated to the first two generations after the death of Confucius, were later included as chapters in the Li ji or Record of Ritual, one of the Chinese classics. Still later, they were selected to be two of the Four Books of Confucianism. Using several new translations, we will give close readings to both texts, paying equal attention to their historical contexts and philosophical implications. For students with a basic knowledge of classical Chinese, additional sessions will be arranged to read the texts in Chinese.

Instructor(s): E. Shaughnessy Terms Offered: Spring

Equivalent Course(s): EALC 36212

EALC 26220. Buddhism and Modernity: East and West. 100 Units.

In the height of nineteenth-century triumph of progress, rationalism, and disenchantment with religion, many European and American intellectuals found inspiration in Buddhism as a spirituality fit for modern times, and expressed it in philosophy, literature, and even opera. On the other side, in Asian societies struggling with colonization, many intellectuals condemned Buddhism as a remnant of premodern superstition, while others hailed it as an essential element for the construction of modern identity and of the superiority of the "spiritual East" against the "materialist West." These debates and images still determine the way in which Buddhism is globally represented today. In this course, we will discuss Buddhism and modernity using examples from various geographical and historical contexts, ranging from Nietzsche, to the American Beat generation, and to contemporary issues of nationalism and violence in South Asia. We will place the careful examination of these topics within the discussion of broader issues, such as the place of religion in modernity, cultural difference and appropriation, and the intersection of religion, gender, and race.

Instructor(s): Paride Stortini Terms Offered: Spring

Equivalent Course(s): HIST 24116, RLST 26220, SALC 29701, KNOW 26220

EALC 26500. The Shi Jing: Classic of Poetry. 100 Units.

In this course, we will read in and about the Shi jing, or Classic of Poetry, China's earliest poetry anthology. All readings will be in English, though there will be a separate section for those who wish to read the poems in the original.

Instructor(s): E. Shaughnessy Terms Offered: Winter

Equivalent Course(s): EALC 36500

EALC 26613. Literature and Public Intellectuals in Twentieth-Century Korea. 100 Units.

Korean intellectuals played a leading role in the rapid transformation of twentieth-century Korean society, and literature provided a crucial space for conveying their thoughts, as well as their social and political imagination. The grave consciousness of social responsibility weighing on their shoulders in particular has been a significant subject of literature and has been often reproduced in popular culture as well. This course examines major works of Korean literature with a focus on two of the most distinctive groups—writers and university students. By doing so, this course explores the history of Korean intellectuals and their interactions with the public, as well as basic literary and cultural concepts in modern Korea. Along with literary works, films, TV dramas, newspaper and journal articles, and visual images, related scholarly works

are also explored in order to help our understanding of the historical and cultural context. The main topics of discussion in class range from Korea's historical events of colonization and decolonization, collaboration and conversion, and the democratization movement and anti-Americanism, to broader theoretical issues, including the Sartrean idea of engaged literature, and global discussions regarding (post)colonialism and intellectuals. All materials are available in English and no previous knowledge of Korean language or literature is necessary.

Instructor(s): J. Kim Terms Offered: Spring

EALC 26631. Place and Identity in Korean Literature. 100 Units.

This undergraduate course will examine how different identities have been imagined in relation to a particular place in pre-modern and modern Korean literature. We will consider issues and problems with "the sense of place," as well as with "the sense of displacement" that defined diverse identities in each historical moments in Korea. Questions we will pose include how the spatial imagination constitutes the intrinsic nature of identity, how the change of place disturbs or reconstitutes the preexisting sense of identity, and how the experience of displacement or border-crossing creates new identities. Readings include the major literary works since the seventeenth up until the mid-twentieth century.

Instructor(s): H. Park Terms Offered: Autumn

EALC 26800. Korean Literature, Foreign Criticism. 100 Units.

Ever since the introduction of the modern/Western concept of "literature" to early twentieth-century Korea, literary production, consumption, and reproduction have gone hand in hand with the reception of the trends of "criticism" and "theory" propagated elsewhere, in the West in particular. This course examines the relationship between the ideas of "indigenous" and "foreign" as embodied by Korean writers in the fields of creative writing, journalism, and academia with a view to engaging and interrogating the idea of "national literature" and its institutional manifestations. It further examines artistic and theoretical endeavors by Korean writers and intellectuals to critically reflect upon and move beyond the unquestioned linguistic, ideological, and ethno-national boundaries.

Instructor(s): K. Choi Terms Offered: Autumn

Equivalent Course(s): EALC 36800

EALC 27000. Chinese Drama and Theater: 12th to 21st Centuries. 100 Units.

This course studies texts and performances (the latter through filmed stage performances and contemporary movies, and class activities) of Chinese drama and theater. We will study the traditional theatrical forms such as Variety Plays (zaju) and Southern Plays (nanxi), 20th century revolutionary Model Operas (yangban xi), and the post-modern re-production of ancient Chinese plays in and for a global market. All readings will be in English. The goal is to understand the history, stagecraft (e.g. costumes and face paintings), and changing social significance of Chinese drama and theater.

Instructor(s): Y. He Terms Offered: Winter

Equivalent Course(s): EALC 37000, TAPS 28460

EALC 27014. Voices from the Iron House: Lu Xun's Works. 100 Units.

An exploration of the writings of Lu Xun (1881-1936), widely considered the greatest Chinese writer of the past century. We will read short stories, essays, prose poetry, and personal letters against the backdrop of the political and cultural upheavals of early 20th century China and in dialogue with important English-language scholarly works.

Instructor(s): P. Iovene Terms Offered: Spring

Equivalent Course(s): FNDL 21907, EALC 37014, CMLT 27014

EALC 27016. Comparative Metahistory. 100 Units.

The seminar will focus on classical, medieval, and modern historiography from China, India, and Tibet seeking answers to three general questions: (1) How are senses of historical time created in Asian historiographies by means of rhetorical figures of repetition, parallelism, dramatic emplotment, frame stories, and interweaving storylines? (2) How are historical persons and events given meaning through use of poetic devices, such as comparison, simile, and metaphor? And (3) How do Asian histories impose themselves as realistic accounts of the past by means of authoritative devices using citation of temporal-spatial facts, quotation of authority, and/or reliance on established historical genres? The methods employed to answer these questions are here adapted from pre-modern Asian knowledge systems of literary theory, poetics, dramaturgy, and epistemology, and thus permit looking at other knowledge formations from within the discourse of the traditions themselves.

Instructor(s): Haun Saussy (University of Chicago) & Ulrich Timme Kragh (Adam Mickiewicz University, Poland) Terms Offered: Autumn

Equivalent Course(s): CMLT 27016, KNOW 37016, EALC 37016, KNOW 27016

EALC 27421. The Body Religious in East Asia. 100 Units.

The course will explore the multifaceted discourse on the body across East Asian religious traditions as well as investigate precedents from other religions in Asia. Students will discuss multiple analytical categories of the body (cosmic body, divine body, etc.) from the point of view of East Asian religions, and assess their usefulness in making sense of religious experiences and ritualized embodied practices.

Instructor(s): Or Porath Terms Offered: Spring

Equivalent Course(s): RLST 27421, GNSE 27421, GNSE 37421, EALC 37421

EALC 27501. The Worlds of Honglou meng (Dream of the Red Chamber): Traditional Chinese Novel & Literary Culture. 100 Units.

Written by Cao Xueqin ### (?-1763), Honglou meng (Dream of the Red Chambers###) has been regarded as the greatest masterpiece of Chinese prose fiction. The novel not only displays the unprecedented usage of realistic language in portraying the quotidian life, but also shows intricate literary skills in narrative and lyricism. This class investigates the internal and external worlds of Honglou meng, and reflects on the ethics and aesthetics of novel in late imperial China. We will explore,

on the one hand, literary choices that made the novel sophisticated, such as the narrative strategies, the complexity in characterization, and the high degree of intertextuality which shows the creative use of other literary genres (poetry, drama, riddle). On the other hand, reading alongside recent scholarship on material culture and gender studies, we examine the interactive relations between the novel and the fashion of exquisite domestic life in the late imperial society and answer these questions. In what ways did the fashion shape the novel text, and how such fashion affects the production and reception of the novel and influences the ways of reading?

Instructor(s): N. Feng Terms Offered: Winter

Note(s): Open to MAPH students. All readings are in English. Students with Chinese reading ability are encouraged to read the original texts. Optional discussion sessions for learning to read the Chinese text. The Languages Across the Curriculum component of this class is contingent upon enrollment.

Equivalent Course(s): EALC 37501

EALC 27512. Dream of the Red Chamber: Forgetting About the Author. 100 Units.

The great Chinese-Manchu novel *„Honglou meng_“* (ca. 1750) has been assigned one major author, Cao Xueqin, whose life has been the subject of much investigation. But before 1922 little was known about Cao, and interpreters of the novel were forced to make headway solely on the basis of textual clues. The so-called "Three Commentators" edition (*„Sanjia ping Shitou ji_“*) shows these readers at their creative, polemical, and far-fetched best. We will be reading the first 80 chapters of the novel and discussing its reception in the first 130 years of its published existence (1792-1922), with special attention to hermeneutical strategies and claims of authorial purpose. Familiarity with classical Chinese required.

Instructor(s): Haun Saussy Terms Offered: Spring

Prerequisite(s): Familiarity with classical Chinese required.

Equivalent Course(s): CMLT 27512, CMLT 37512, EALC 37512, SETH 37512, FNDL 27512

EALC 27515. Beijing: Past and Present. 100 Units.

This class explores the history and cultural life of Beijing from the Yuan dynasty to the present. First, in what ways did the city develop over the course of the past millennium and how did the material space of the city impact people's daily life? Using materials from archaeology and architecture, we will track the permutation of the city plan, the process of construction and destruction, and the social and cultural life of urban residents. Second, how was Beijing experienced, understood, and represented in varied literary and art forms from the imperial period to today? Through literature (Lao She, Lin Yutang), art (Xu Bing, Song Dong.), and film (directed by Chen Kaige, Jia Zhangke, Guan Hu) that features Beijing and its people, we will study the city not only as an imagined site of remembrance and nostalgia, but also a political site constructing cultural identities and reflecting social conflicts. This class has a Language across the Curriculum section, and we will read selected novels and poems on Beijing. Open to MAPH students.

Instructor(s): N. Feng Terms Offered: Autumn

Note(s): Open to MAPH students but not open to PhD students

Equivalent Course(s): EALC 37515

EALC 27610. The Tale of Genji. 100 Units.

The Tale of Genji, sometimes called "the world's first novel," is an early eleventh century romance spanning fifty-four chapters written by a court lady known to posterity as Murasaki Shikibu. The Tale of Genji was an instant classic: it was read widely by both women and men at the Heian (794-1185) court, spawned a number of medieval *noh* plays based on its characters, and became the basis for satirical works in the Edo period (1600-1868). Its interpretation has also resulted in a rich commentarial tradition that spans centuries. While this course will primarily focus on reading the original text, we will explore facets of its reception and interpretation beginning in the Heian period through the present. All readings will be in English translation.

Instructor(s): M. Burge Terms Offered: Winter

EALC 27611. Language and Gender in Premodern Japanese Literature. 100 Units.

This course will look at the intersection of vernacular literature and women's spaces in premodern Japan, focusing particularly on the Heian (794-1185) and Kamakura (1185-1333) periods. Elite women's literature has become central to modern narratives of premodern Japanese literary history, but in the Heian period, women's writing was a distinct and "lower" mode relative to men's writing, which was primarily composed in Classical Chinese. Women were usually denied access to education in Classical Chinese, and therefore found recourse in the creation of their own inscriptive spaces in the vernacular language (Japanese). We will consider how women used the vernacular language for self expression and self-representation, and focus on particular moments where vernacular language and texts are specifically coded as female. In the process, we will touch upon issues of women's education, marriage practices, female friendship/animosity, sexuality, gender identity, and sexual violence. Readings will be in English translation. Students wishing to do some readings in original texts may meet separately with instructor.

Instructor(s): M. Berge Terms Offered: Winter

Note(s): Open to MAPH students

Equivalent Course(s): EALC 37611, GNSE 27611

EALC 27907. Asian Wars of the Twentieth Century. 100 Units.

This course examines the political, economic, social, cultural, racial, and military aspects of the major Asian wars of the twentieth century: the Pacific War, the Korean War, and the Vietnam War. At the beginning of the course we pay particular attention to just war doctrines and then use two to three books for each war (along with several films) to examine alternative approaches to understanding the origins of these wars, their conduct, and their consequences.

Instructor(s): B. Cumings Terms Offered: Spring

Equivalent Course(s): EALC 37907, HIST 27900, CRES 37900, CRES 27900, HIST 37900

EALC 28010. Archaeology of Anyang: Bronzes, Inscriptions, and World Heritage. 100 Units.

Anyang is one of the most important archaeological sites in China. The discoveries of inscribed oracle bones, the royal cemetery, clusters of palatial structures, and industrial-scale craft production precincts have all established that the site was indeed the last capital of the Shang dynasty recorded in traditional historiography. With almost continuous excavations since the late 1920s, work at Anyang has in many ways shaped and defined Chinese archaeology and the study of Early Bronze Age China. This course intends to examine the history of research, important archaeological finds, and the role of Anyang studies in the field of Chinese archaeology. While the emphasis is on archaeological finds and the related research, this course will also attempt to define Anyang in the modern social and cultural contexts in terms of world heritage, national and local identity, and the looting and illegal trade of antiquities.

Instructor(s): Y. Li Terms Offered: Winter

Note(s): Open to undergraduates with consent of instructor

Equivalent Course(s): ANTH 26765, ANTH 36765, EALC 48010

EALC 28015. Archaeology of Bronze Age China. 100 Units.

Bronze Age" in China conventionally refers to the time period from ca. 2000 BC to about 500 BC, during which bronze, an alloy of copper and other metals such as tin and lead, was the predominant medium used by the society, or to be more precise, the elite classes of the society. Bronze objects, in the forms of vessels, weapons, and musical instruments, were reserved for the upper ruling class of the society and were used mostly as paraphernalia during rituals and feasting. "Bronze Age" in China also indicates the emergence and eventual maturation of states with their bureaucratic systems, the presence of urban centers, a sophisticated writing system, and advanced craft producing industries, especially metal production. This course surveys the important archaeological finds of Bronze Age China and the theoretical issues such as state formation, craft production, writing, bureaucratic systems, urbanization, warfare, and inter-regional interaction, etc. It emphasizes a multi-disciplinary approach with readings and examples from anthropology, archaeology, art history, and epigraphy. This course will also visit the Smart Museum, the Field Museum, and the Art Institute of Chicago to take advantage of the local collections of ancient Chinese arts and archaeology.

Instructor(s): Y. Li Terms Offered: Spring

Equivalent Course(s): ANTH 46760, EALC 48015, ANTH 26760

EALC 28150. Women and Work in 20th Century China. 100 Units.

This course examines changes in the working lives of East Asian women from the late nineteenth to the 21st century. Most of the readings will be on China but we will also discuss Korea and Japan. All readings are in English.

Instructor(s): J. Eyferth Terms Offered: Winter

Equivalent Course(s): EALC 38150, HIST 24705, GNSE 27703

EALC 28200. Reading the Revolution: Chinese Social History in Documents. 100 Units.

How can we reconstruct the life experience of "ordinary" people at a time of revolutionary change? What are the sources for a history of the Chinese revolution? What can we learn from newspaper articles and official publication? What kind of information can we expect to find in unpublished sources, such as letters and diaries? How useful is oral history, and what are its limitations? We will look at internal and "open" publications and at the production of media reports to understand how the official record was created and how information was channeled, at official compilations such as the Selections of Historical Materials (wenshi ziliao), at "raw" reports from provincial archives, and finally at so-called "garbage materials" (laji cailiao), i.e. archival files collect from flea markets and waste paper traders.

Instructor(s): J. Eyferth Terms Offered: Spring

Equivalent Course(s): HIST 24504, HIST 34505, EALC 38200

EALC 28202. New Directions in the Study of Japanese Religion. 100 Units.

The course will explore diverse topics in the study of Japanese religion, including recent cutting-edge research. We will cover the most prominent religious traditions in Japan, including but not limited to Buddhism, Shinto, Folk Religion, and Confucianism. Each week we will read a recent monograph and analyze the main arguments and its methodological contribution to the field of religious studies. Students are expected to write a research paper by the end of the course.

Instructor(s): O. Porath Terms Offered: Winter

Equivalent Course(s): RLST 28202, HREL 38202, EALC 38202

EALC 28350. Chan and Zen Buddhism. 100 Units.

An overview of the development of Chan and Zen Buddhism in China and Japan, focusing on the philosophical and doctrinal underpinnings of distinctive Chan and Zen practices and rhetorics (including basic Buddhist premises concerning impermanence and non-self and specifically Mahāyāna ideas such as Emptiness, Two Truths and Buddha-nature) as they morph through the stages of early proto-Chan, East Mountain Chan, the Northern School/Southern School split, the development of "Recorded Sayings" and gong'an (kōan) literatures, and the Linji (Rinzai) and Caodong (Sōtō) schools.

Instructor(s): Brook Ziporyn Terms Offered: Spring

Equivalent Course(s): RLST 28350

EALC 28400. Modern Chinese Literature: Communities, Media & Selves. 100 Units.

In this in-depth introduction to modern Chinese literature we will combine close readings of texts with a survey of the ideas, media, and institutions that shaped literary practices from the 1900s to the 1930s. We will discuss authors, literary circles and associations, journals and publishers, as well as notions of self, language, and community. In doing so, we will pursue the following questions: What is a modern Chinese literary text, and what are its relevant contexts? How to connect literary writing-per se a highly individualized and largely solitary activity-with the forms of sociality and the collaborative practices in which it is embedded? How did various communities and institutions affect, and how were they affected by, the writing and reading of literature? Our focus will be on the ways in which authors and groups redefined the function of literature in

times of upheaval, the transformations in language and media that shaped their efforts, and the ways in which they conceived of and sought to reach out to readers. Our explorations will be both historical and historiographical, and will touch on the main debates in modern Chinese literary studies today.

Instructor(s): P. Iovene Terms Offered: Winter

Equivalent Course(s): EALC 38400

EALC 28459. Performance Theory in East Asia. 100 Units.

This course introduces students to the field of performance studies through East Asian performance. We will consider the relationship between performance, critical theory, and the discursive production of "East Asia" as an object of study.

The two main goals of the course will be (1) to introduce students to the major texts and methodological approaches of performance studies and (2) to consider the role performance plays in discussions of East Asian cultural production. We will consider the disciplinary formations of performance studies and East Asian studies in relation to one another as we explore theories of embodiment, performativity, and nationality. Students will learn different methods of reading performance closely, using documented and live performance material. Performance workshops with artists and scholars will be incorporated whenever possible. Readings will include works by such authors as Suzuki Tadashi, Rey Chow, J. L. Austin, Eve Sedgwick, Uchino Tadashi, Hijikata Tatsumi, Judith Butler, Fred Moten, Peggy Phelan, and Kandace Chuh. Students from all disciplines are welcome.

Terms Offered: Winter 2015

Equivalent Course(s): EALC 38459, TAPS 28459

EALC 28600. Contemporary Chinese Literature. 100 Units.

TBD

Instructor(s): P. Iovene Terms Offered: Winter

Equivalent Course(s): EALC 38600

EALC 28702. Tales Retold? Modern & Contemporary Chinese Art. 100 Units.

Owing to its revolutionary transformations spanning the 20th and early 21st centuries, China offers a unique access point to exploring key issues in modern and contemporary art. Modern and contemporary artists from China and the Sinophone world have long confronted rather entrenched double-binds, crises of consciousness. We might consider this a double consciousness, on their part-consciousness of being artists in a globalizing context, on the one hand; of being political or national subjects, on the other. Organized thematically, this class will examine selections of artists, movements, and the discourses surrounding them, to unpack the mutual interrelation of key concepts, art and scholarly practices. Questions to be addressed include: How does art history and criticism currently deal with modern and contemporary Chinese art? How does the art world define this category of art practice; and vice versa, how do artists view the art world? Case studies will include artists practicing today as well as historical artists whose work has become a source for the present. While the class deals primarily with art in China, it will necessarily address the wider issues of globalization and the international institutional networks of contemporary art. Students will be encouraged to think broadly about comparative and inter-Asia relations, rather than dividing the globe into East and West.

Instructor(s): J. Lee Terms Offered: Spring

Equivalent Course(s): ARTH 38702, ARTH 28702, EALC 38702

EALC 28703. East Asian Photography Since the Mid-Twentieth Century. 100 Units.

This course will explore the history and practice(s) of photography across East Asia (China, Japan, and Korea) from the mid-20th century to the present day. During the 20th century, these nations moved from the feudal to the industrialized, globalized status. Since their dynamic histories are enmeshed with photographic practices, this course will discuss how photography interprets the history and tells its own stories. We will familiarize ourselves with the most crucial photographers and their practices that emerged in the post-Mao, and post-war periods. Particular emphasis will be given to the ways in which photographers have grappled with legacies of war and revolution, political violence, cultural heritage, and a rapid transition to an industrialized, globalized status. While emphasizing comparative approaches to discuss the rich histories of East Asian photography, this course also takes a close look at how photographic practices of East Asia are converging with global photography.

Instructor(s): Boyoung Chang Terms Offered: Winter

Equivalent Course(s): ARTH 38703, ARTH 28703, EALC 38703

EALC 29200. Reading and Research EALC. 100 Units.

TBD

EALC 29300. Books, Prints, and Texts in Late Imperial China. 100 Units.

The specific dynamics of production, marketing, and circulation of printed materials, along with the various modes of their reception and use, are central to our understanding of late imperial Chinese culture. In this course we will read a wide range of popular texts and images against the specific conditions of the book trade and other forms of textual circulation during the period. We will address issues such as the culture and technology of printing, the dialogue between page and stage, texts as physical artifacts and aesthetic objects, and the values, life styles, and tastes Chinese books and prints came to reflect and embody. We will also consider relevant scholarship on the history of books in general and the history of Chinese books in particular, including the field of banben studies

Instructor(s): Y. He Terms Offered: Winter

Equivalent Course(s): EALC 39300

EALC 29401. The Ghost Tradition in Chinese Literature, Opera, and Film. 100 Units.

What is a ghost? How and why are ghosts represented in particular forms in a particular culture at particular historical moments? This course will explore the complex meanings, both literal and figurative, of ghosts and spirits in Chinese

culture across a range of genres: the ghost story, opera, visual imagery, and film. Issues to be explored include: 1) the confrontation of individual mortality and collective anxieties over the loss of the historical past; 2) the relationship between the supernatural, gender, and sexuality; 3) the visualization of ghosts and spirits in art, theater, and cinema; 4) the politics of ghosts in modern times. Course readings will be in English translation, and no prior background is required, but students who read Chinese will be encouraged to work with sources in the original. This year's class will be designed to take full advantage of special Chicago events in spring 2014, notably the exhibition "Performing Images: Opera in Chinese Visual Culture" at the Smart Museum and Mary Zimmerman's new production of *The White Snake* at the Goodman Theatre.

Instructor(s): J. Zeitlin Terms Offered: Spring

Equivalent Course(s): GNSE 29401, EALC 39401, GNSE 39401, TAPS 28491

EALC 29402. The Human and its Others in Early Modern China. 100 Units.

This course explores the ways in which personhood was constituted in early modern China. Focusing on the years 1500-1800—a period marked by commercial expansion, political rupture, ethnic conflict, social fluidity, and literary experimentation—we will ask how the subhuman, the superhuman, and the nonhuman were used to police or subvert traditional hierarchies, to expand or delimit the possibilities of the human and the humane. Areas of discussion will include gods, ghosts, barbarians, women, children, eunuchs, slaves, animals, and things; readings will come from a wide range of sources, including classical tales, unofficial histories, vernacular novels, drama and popular songs, encyclopedias, medical texts, and natural histories. Open to graduate students and advanced undergraduates. Texts available in both English and Chinese; students with Chinese reading ability will be encouraged to read the original.

Instructor(s): A. Fox Terms Offered: Spring

Equivalent Course(s): EALC 49402

EALC 29410. Sound and Silence in Chinese Literature. 100 Units.

Rather than a silent medium, a text is a literary phonograph where sounds, voices, and noises come to life. By studying the representation of sounds within literary texts from the eras predating the advent of electric sound reproduction technology, we will explore how attention to these sounds enrich our experience as modern listeners. In particular, we will rethink the relationship between sound and silence in order to develop new perspectives on understanding literary texts. By destabilizing the opposition between sound and silence, we will study literary sound to examine unconventional understandings of the nature of expression and representation. For example, the stringless zither owned by the 4th-century Chinese poet Tao Yuanming reflects a key idea in pre-modern Chinese poetics that the best sound is inaudible. How does silence convey things that cannot be expressed in sound and language? In this course, we will explore a selection of major works in Chinese literature from the antiquity (4th-century BC) to the 20th century that present a variety of relationships between sound and silence. We will also read foundational theoretical texts on sound developed in pre-modern China in conjunction with major theories of sound, voice, music, and noise developed in media studies, including works by Murray Schafer, Michel Chion, Friedrich Kittler, and Jacques Attali.

Instructor(s): Y. Zheng Terms Offered: Spring

Note(s): This course is open to undergraduates and MAPH students.

Equivalent Course(s): EALC 39410

EALC 29430. The Planned Economy: A Global History of Central Planning, from Bismarck to the Green New Deal. 100 Units.

This course will change the way you think about politics. One of the most urgent political questions for any modern society is what economic activity to leave to private actors and what economic activity to place under state control. Today we hear much political debate over whether capitalism or socialism is superior, and what these terms mean. This debate can obscure the historical fact that many different ideological systems around the globe have experimented with highly centralized, state-directed economic organization. In what contexts have these experiments succeeded and failed? What counts as success and failure? To what extent has one experiment in central planning studied and/or learned from examples that preceded it? This course pursues these questions beginning with the origins of modern central planning in Prussia and later during World War I. It goes on to assess other experiments in central planning, including the New Deal, the Soviet Union and Maoist China; the Axis Powers of Italy, the Third Reich, and Imperial Japan; and later in the postcolonial global south from India to Ghana. The class ends by contemplating the Green New Deal and the role of central planning in the future of the United States.

Instructor(s): M. Lowenstein Terms Offered: Autumn

Equivalent Course(s): GLST 29430, HIST 29430

EALC 29491. Introduction to Japanese Theater. 100 Units.

In this course we will explore a variety of Japanese theatrical forms from the fourteenth century to the present, including Noh, Kyogen, Bunraku, Kabuki, Shimpa, Shingeki, Butoh, and Takarazuka. Our emphasis will be on understanding the forms in their historical and performative contexts through close textual analysis as well as performance analysis of video footage, whenever possible. No background assumed or required in Japanese language or theater.

Instructor(s): R. Jackson Terms Offered: Autumn

Equivalent Course(s): TAPS 28492

EALC 29500-29600-29700. Senior Thesis Tutorial I-II-III.

One quarter of this sequence may be counted for credit in the major.

EALC 29500. Senior Thesis Tutorial I. 100 Units.

For this course students are required to obtain a "College Reading and Research Course Form" from their College adviser and have it signed both by their faculty reader and by the Director of Undergraduate Studies. Two quarters of this sequence may count as one credit for the EALC major, and are required for any undergraduate writing a B.A.

Honors Thesis in EALC. It is highly recommended that students take this sequence autumn and winter, but a spring quarter course is offered for unusual circumstances.

Terms Offered: Autumn

Prerequisite(s): Consent of EALC Director of Undergraduate Studies

Note(s): Students are required to submit the College Reading and Research Course Form.

EALC 29600. Senior Thesis Tutorial II. 100 Units.

Senior Thesis Tutorial-II. PQ: signed consent form. For this course students are required to obtain a "College Reading and Research Course Form" from their College adviser and have it signed both by their faculty reader and by the Director of Undergraduate Studies. Two quarters of this sequence may count as one credit for the EALC major, and are required for any undergraduate writing a B.A. Honors Thesis in EALC. It is highly recommended that students take this sequence autumn and winter, but a spring quarter course is offered for unusual circumstances.

Terms Offered: Winter

Prerequisite(s): Consent of EALC Director of Undergraduate Studies

Note(s): Students are required to submit the College Reading and Research Course Form.

EALC 29700. Senior Thesis Tutorial III. 100 Units.

The spring quarter section of the Senior Thesis Tutorial is devoted to making corrections and rewrites to the B.A. Paper, which is usually due to the Reader at the end of winter quarter.

Instructor(s): arranged Terms Offered: Spring

Prerequisite(s): EALC 29500 and/or EALC 29600

Note(s): Students continue to meet with the Preceptor for help with their papers.

EALC 29504. Objects of Japanese History. 100 Units.

The collections of Japanese objects held at the University of Chicago's Smart Museum, the Field Museum of Natural History, and the Art Institute of Chicago will be examined as case studies in museum studies, collection research, and more specifically, in the interpretation of things "Japanese." Individual objects will be examined, not only for religious, aesthetic, cultural, and historical issues, but also for what they tell us of the collections themselves and the relation of these collections to museum studies per se.

Instructor(s): C. Foxwell & J. Ketelaar Terms Offered: Spring

Prerequisite(s): We will make several study trips to the Smart Museum, the Field Museum of Natural History, and the Art Institute of Chicago during class time.

Equivalent Course(s): HIST 34602, ARTH 29505, EALC 39504, ARTH 39505, HIST 24602

EALC 29527. The Spatial History of Nineteenth-Century Cities: Tokyo, London, New York. 100 Units.

The late-nineteenth century saw the transformation of cities around the world as a result of urbanization, industrialization, migration, and the rise of public health. This course will take a spatial history approach; that is, we will explore the transformation of London, Tokyo, and New York over the course of the nineteenth century by focusing on the material "space" of the city. For example, where did new immigrants settle and why? Why were there higher rates of infectious disease in some areas than in others? How did new forms of public transportation shape the ability to move around the city, rendering some areas more central than others? To explore questions such as these, students will be introduced to ArcGIS in four lab sessions and asked to develop an original research project that integrates maps produced in Arc. No prior ArcGIS experience is necessary, although students will be expected to have familiarity with Microsoft Excel and a willingness to experiment with digital methods. Assignments: Discussion posts, homework (mapping), and a final research project.

Instructor(s): S. Burns Terms Offered: Autumn

Note(s): Making History courses forgo traditional paper assignments for innovative projects that develop new skills with professional applications in the working world. Open to students at all levels, but especially recommended for 3rd- and 4th-yr students.

Equivalent Course(s): ENST 29527, HIST 39527, GLST 29527, HIST 29527, EALC 39527

EALC 29710. Russian Anarchists, Revolutionary Samurai: Introduction to Russian-Japanese Intellectual Relations. 100 Units.

This course introduces a current of Russian-Japanese exchange and cross-fertilization of ideas running from the late nineteenth century to now. Our focus will be on the historical role that Russia came to play in anarchist movement in Japan. We will read such revolutionary intellectuals as Lev Mechnikov, Peter Kropotkin, and Lev Tolstoy; compare the visions of civilizational progress of the state modernizer Fukuzawa Yukichi and Japanese anarchists Kōtoku Shūsui and Ōsugi Sakae; and study the post-WW II continuation of the anarchist tradition in the films of Kurosawa Akira, music of Takemitsu Toru, and writings of Ōe Kenzaburō.

Instructor(s): Olga Solovieva Terms Offered: Spring

Equivalent Course(s): EALC 39710, CMLT 39710, REES 29815, CMLT 29710, REES 39815

Economics

Department Website: <http://economics.uchicago.edu>

Program of Study

The program in economics is intended to equip students with the basic tools to understand the operation of a modern economy: the origin and role of prices and markets, the allocation of goods and services, and the factors that enter into the determination of income, employment, and the price level. The specialization in data science provides training in computation and data analysis beyond the basic methods discussed in the empirical methods sequence. The specialization in business economics is organized around the fundamental economic theory and empirical methods that students interested in pursuing careers in the private sector, the non-profit sector, and the public sector (among others) will find useful in carrying out their day-to-day tasks.

BA in Economics, Tracks A and B

The program in economics can be divided into five component parts:

1. **Fundamentals:** provides students with the basic skills required to be successful in the major.
2. **Core curriculum:** consists of three courses designed to introduce students to the "economic approach."
3. **Empirical Methods sequence:** provides students with the fundamental techniques of data analysis.
4. **Economic Policy course:** applies the tools developed in the core curriculum to issues of fiscal policy, monetary policy, and other policy discussions relevant to the current state of the economy.
5. **Electives:** allows students to tailor the economics major to their interests.

Program Requirements, Tracks A and B

Fundamentals

Students must begin the economics major by demonstrating competence in basic calculus and principles of economics. The fundamentals sequence consists of the following courses. The first two are required; the second two are strongly recommended:

MATH 13300	Elementary Functions and Calculus III	100
or MATH 15300	Calculus III	
or MATH 16300	Honors Calculus III	
MATH 19520	Mathematical Methods for Social Sciences	100
or MATH 20400	Analysis in Rn II	
or MATH 20800	Honors Analysis in Rn II	
ECON 10000	Principles of Microeconomics	100
or ECON 19800	Introduction to Microeconomics	
ECON 10200	Principles of Macroeconomics	100
or ECON 19900	Introduction to Macroeconomics	

Students who wish to complete the major with more rigorous mathematics may substitute MATH 20400 Analysis in Rn II for MATH 19520 Mathematical Methods for Social Sciences.

Calculus

Students who have an interest in the major should take calculus at the highest level for which they qualify. Students should complete MATH 19520 Mathematical Methods for Social Sciences prior to or concurrently with ECON 20000 The Elements of Economic Analysis I. Students must not postpone completion of MATH 19520 Mathematical Methods for Social Sciences beyond concurrent registration with ECON 20000 The Elements of Economic Analysis I.

1. **MATH 13000s:** Students must complete MATH 13300 Elementary Functions and Calculus III prior to enrolling in ECON 20000 The Elements of Economic Analysis I. Students may find it useful to complete MATH 19520 Mathematical Methods for Social Sciences prior to enrolling in the Elements of Economic Analysis sequence.
2. **MATH 15000s:** Students enrolling in the MATH 15000s sequence must complete MATH 15300 Calculus III before enrolling in ECON 20000 The Elements of Economic Analysis I.
3. **MATH 16000s and 16010s:** Students enrolling in the MATH 16000s sequences must complete MATH 16200 Honors Calculus II or MATH 16210 Honors Calculus II (IBL) before enrolling in ECON 20000 The Elements of Economic Analysis I. Enrollment in ECON 20000 The Elements of Economic Analysis I requires completion or concurrent enrollment in MATH 16300 Honors Calculus III/MATH 16310 Honors Calculus III (IBL) and demonstrated competency in Microeconomics (see Core Curriculum for details).

Students may satisfy the third quarter of calculus requirement by placement (based on the Higher-Level Math Test administered by the College prior to Orientation). In this case, students should continue their mathematics training with the highest mathematics level for which they qualify.

Principles of Economics

Students are expected to begin their study of economics with ECON 10000 Principles of Microeconomics (formerly ECON 19800 Introduction to Microeconomics) and ECON 10200 Principles of Macroeconomics (formerly ECON 19900 Introduction to Macroeconomics). These courses provide a good overview of basic concepts. These two introductory courses are designed for students with limited or no prior course work in economics. While these two courses provide basic economics knowledge, they are not required in the major. Students who matriculated at the University of Chicago in 2016–17 or later may use ECON 19900 Introduction to Macroeconomics or ECON 10200 Principles of Macroeconomics to fulfill one of the economics elective requirements.

Students may not receive credit for both ECON 10000 Principles of Microeconomics and ECON 19800 Introduction to Microeconomics. Likewise, students may not receive credit for both ECON 10200 Principles of Macroeconomics and ECON 19900 Introduction to Macroeconomics.

Students are strongly encouraged to complete ECON 10000 Principles of Microeconomics or ECON 19800 Introduction to Microeconomics prior to ECON 20000 The Elements of Economic Analysis I (or ECON 20010 The Elements of Economic Analysis I Honors) and ECON 10200 Principles of Macroeconomics or ECON 19900 Introduction to Macroeconomics prior to ECON 20200 The Elements of Economic Analysis III (or ECON 20210 The Elements of Economic Analysis III Honors).

Core Curriculum

The core curriculum consists of three courses. Students may use the standard or honors sequence to satisfy this requirement. The honors sequence is designed for students interested in economics research and/or use of more sophisticated mathematical models.

Standard Core Sequence	300
ECON 20000	The Elements of Economic Analysis I
ECON 20100	The Elements of Economic Analysis II
ECON 20200	The Elements of Economic Analysis III
or Honors Core Sequence	300
ECON 20010	The Elements of Economic Analysis I Honors
ECON 20110	The Elements of Economic Analysis II Honors
ECON 20210	The Elements of Economic Analysis III Honors

Most students begin the core curriculum in their second year. Those who wish to begin it during their first year must demonstrate competence with the fundamental skills needed in that sequence in the following ways:

- Students must either pass the economics placement test or complete ECON 10000 Principles of Microeconomics/ECON 19800 Introduction to Microeconomics prior to starting ECON 20000 The Elements of Economic Analysis I (or ECON 20010 The Elements of Economic Analysis I Honors). No standardized external exams (IB, AP, nor A-Levels) will substitute, and they rarely serve as sufficient preparation for the economics placement test. Note that the placement test will only be offered in the evening of the first day of Autumn Quarter.
- Students must satisfy the calculus requirement as discussed in Calculus.

Note: Students who are completing the previous major requirements and are on track to complete ECON 20300 Elements of Economic Analysis IV after Autumn Quarter 2017 should take ECON 23950 Economic Policy Analysis in place of ECON 20300, regardless of matriculation date.

Empirical Methods

In the modern economy, quantitative methods are highly valued skills. Students must satisfy the empirical methods component of the economics major in one of two ways, either as a three-quarter sequence or a two-quarter sequence.

Option A: The three-quarter empirical methods sequence is comprised of a course in linear algebra, a course in statistics, and a course in econometrics, and is designed for students who complete the MATH 15000s sequence or higher. This three-quarter empirical methods sequence covers the broad ranges of scope that the disciplines provide, which will be useful for further quantitative training in the major.

Option B: The two-quarter empirical sequence, comprised of a course in statistical methods in economics and a course in econometrics, is provided as an alternative for students who want to focus only on the relevant materials in linear algebra and statistics that pertain to econometrics. ECON 21010 Statistical Methods in Economics teaches the fundamental methods and materials from linear algebra and statistics that are utilized in many economic applications.

Details about each sequence are below. We strongly encourage students to choose the highest mathematical tracks for which they are qualified. Students unsure of which sequence to choose should consult with the Undergraduate Office in the Department of Economics as well as the Department of Mathematics and Department of Statistics.

Option A: Three-Quarter Empirical Methods Sequence

In order to satisfy the empirical methods component of the economics major using a three-quarter sequence, students must complete the following courses. They must be taken in consecutive quarters, beginning with Linear Algebra and concluding with Econometrics:

One of the following:		100
MATH 19620	Linear Algebra	
or STAT 24300	Numerical Linear Algebra	
or MATH 20250	Abstract Linear Algebra	
or MATH 20700	Honors Analysis in Rn I	
One of the following:		100
STAT 23400	Statistical Models and Methods	
or STAT 24400	Statistical Theory and Methods I	
or STAT 24410	Statistical Theory and Methods Ia	
One of the following:		100
ECON 21020	Econometrics	
or ECON 21030	Econometrics - Honors	
Total Units		300

Students may not use AP Statistics credit to satisfy the statistics requirement. Students with AP credit will need to expand on their training with STAT 23400 Statistical Models and Methods, STAT 24400 Statistical Theory and Methods I, or STAT 24410 Statistical Theory and Methods Ia. Students may not earn credit for both STAT 22000 Statistical Methods and Applications (via course enrollment or AP exam) and STAT 23400 Statistical Models and Methods.

Students who wish to pursue more advanced training in empirical methods may complete STAT 24300 Numerical Linear Algebra or MATH 20250 Abstract Linear Algebra or MATH 20700 Honors Analysis in Rn I; either STAT 24400 Statistical Theory and Methods I or STAT 24410 Statistical Theory and Methods Ia; and ECON 21030 Econometrics - Honors.

Option B: Two-Quarter Empirical Methods Sequence

In order to satisfy the empirical methods component of the economics major using a two-quarter sequence, students must complete the following:

ECON 21010	Statistical Methods in Economics	100
ECON 21020	Econometrics	100
Total Units		200

Students should not begin the empirical methods sequence earlier than concurrently with ECON 20100 The Elements of Economic Analysis II and should take ECON 21010 Statistical Methods in Economics and ECON 21020 Econometrics in consecutive quarters. Students must complete the empirical methods sequence by the end of third year.

Students with credit for both MATH 19620 Linear Algebra and STAT 23400 Statistical Models and Methods (or more advanced equivalents) may not also earn credit for ECON 21010 Statistical Methods in Economics.

Students who complete the empirical methods component of the major with just two courses (ECON 21010 Statistical Methods in Economics and ECON 21020 Econometrics) must complete an additional economics elective, as discussed in Electives.

Economic Policy

The economic policy requirement provides students the opportunity to apply methods and tools taught in the economics core sequence to analyze current issues centered around monetary and fiscal policy. Most students will complete the economic policy requirement with ECON 23950 Economic Policy Analysis, but students interested in learning more formal approaches may use one of the other macroeconomics courses listed below to satisfy the requirement.

ECON 23950	Economic Policy Analysis	100
or ECON 23200	Topics in Macroeconomics	
or ECON 23220	Introduction to Advanced Macroeconomic Analysis	
or ECON 23330	Introduction to Dynamic Economic Modeling	

Students who complete more than one of the above courses may apply the additional courses to satisfy the economics elective requirements. ECON 23950 Economic Policy Analysis may not count as an economics elective. Students may not earn credit for both ECON 23950 Economic Policy Analysis and ECON 20300 Elements of Economic Analysis IV.

Note: Students on track to complete ECON 20300 Elements of Economic Analysis IV after Autumn Quarter 2017 should take ECON 23950 Economic Policy Analysis in place of ECON 20300, regardless of matriculation date.

Electives

All students in the economics major must complete a minimum of four additional economics courses to broaden their exposure to areas of applied economics or economic theory. Students who complete the empirical methods component with the two-quarter sequence must complete five economics electives. These courses must have a higher course number than ECON 20200 The Elements of Economic Analysis III, with a couple of exceptions: Neither ECON 21010 Statistical Methods in Economics nor ECON 21030 Econometrics - Honors nor ECON 23950 Economic Policy Analysis can be used to satisfy the economics elective requirements; students who matriculated in 2016–17 or later may use ECON 10200 Principles of Macroeconomics OR ECON 19900 Introduction to Macroeconomics to satisfy one of the economics elective requirements.

Students may use one course (pre-approved or approved by petition) outside of the University of Chicago Department of Economics to satisfy their elective requirements. Students may apply only one of the following two exceptions to this rule:

Exception (A): Students who participate in a College-sponsored Study Abroad program may petition to count an additional outside course completed at the host institution to satisfy elective requirements of the major. Petitions must be submitted prior to course enrollment to be considered.

Exception (B): Students may count an additional outside course to satisfy elective requirements of the major as long as it is drawn from the list of the pre-approved electives.

These rules imply that at most two courses completed outside the University of Chicago Department of Economics may be used to satisfy the elective requirements of the major. For example, if a student completes two courses as part of a College-sponsored Study Abroad program, then the student has fulfilled the outside electives two-course maximum and must complete the remaining elective requirements in the Department of Economics.

The following are pre-approved outside electives:

Computer Science (only one may be used)

CMSC 10600	Fundamentals of Computer Programming II
or CMSC 12100	Computer Science with Applications I
or CMSC 15100	Introduction to Computer Science I
or CMSC 16100	Honors Introduction to Computer Science I

Statistics

STAT 24500	Statistical Theory and Methods II
or STAT 24510	Statistical Theory and Methods IIa
STAT 25100	Introduction to Mathematical Probability
or STAT 25150	Introduction to Mathematical Probability-A
STAT 25300	Introduction to Probability Models
STAT 26100	Time Dependent Data

Mathematics

MATH 20500	Analysis in Rn III
MATH 20900	Honors Analysis in Rn III
MATH 27300	Basic Theory of Ordinary Differential Equations

University of Chicago Booth School of Business *

BUSN 20410	Corporation Finance
or BUSN 35200	Corporation Finance
BUSN 20620	Data Driven Marketing
or BUSN 37105	Data Science for Marketing Decision Making
BUSN 20710	Behavioral Economics
or BUSN 38120	The Study of Behavioral Economics
BUSN 20800	Big Data
or BUSN 41201	Big Data
BUSN 20820	Financial Econometrics
or BUSN 41203	Financial Econometrics
BUSN 20810	Machine Learning
or BUSN 41204	Machine Learning
BUSN 20900	Competitive Strategy
or BUSN 42001	Competitive Strategy

- * BUSN 2XXXX-level (undergraduate-only) versions of these courses will follow some College policies regarding registration, scheduling, grading, etc. The BUSN 3XXXX-level (and higher) courses will be subject to Chicago Booth's academic and administrative policies. Consult the Chicago Booth website (<https://www.chicagobooth.edu/programs/taking-courses-at-booth/>) for details.

Courses in other degree programs may be considered for elective credit through petition. To be considered, these courses must require the equivalent prerequisite course work of ECON 20100 The Elements of Economic Analysis II. Petitions must be submitted prior to course enrollment to be considered. Graduate level economics courses will be counted for elective credit, but consultation with the Undergraduate Office in advance of course registration is required. Note: Provisional and early final grades are not given for economics graduate courses or BUSN 3XXXX-level (and higher) courses. Economics graduate courses and BUSN 3XXXX-level (and higher) courses should not be taken in the student's graduating quarter unless the student will have completed all forty-two credits required for graduation, not counting the graduate course, and all requirements for all majors.

Summary of Requirements

For summaries of requirements for the BA in economics (Tracks A and B), see below.

Sample Programs for Tracks A and B

The following is a recommended sample plan of study (excluding four elective courses) for those students entering with the MATH 13000s sequence:

First Year		
Autumn Quarter	Winter Quarter	Spring Quarter
MATH 13100	MATH 13200	MATH 13300
		ECON 10000
Second Year		
Autumn Quarter	Winter Quarter	Spring Quarter
ECON 20000	ECON 20100	ECON 20200
MATH 19520	ECON 10200	
Third Year		
Autumn Quarter	Winter Quarter	Spring Quarter
ECON 23950	STAT 23400	ECON 21020
MATH 19620		

The following is a recommended plan of study (excluding four economics elective courses) for those students entering with the MATH 15000s or MATH 16000s sequence:

First Year		
Autumn Quarter	Winter Quarter	Spring Quarter
MATH 15100	MATH 15200	MATH 15300
		ECON 10000
Second Year		
Autumn Quarter	Winter Quarter	Spring Quarter
ECON 20000	ECON 20100	ECON 20200
MATH 19520	MATH 19620	STAT 23400
	ECON 10200	
Third Year		
Autumn Quarter		
ECON 23950		
ECON 21020		

The following is a recommended plan of study (excluding five elective courses) for those students completing the two-quarter empirical methods sequence. Note that this plan of study can be used in conjunction with any calculus sequence:

First Year		
Autumn Quarter	Winter Quarter	Spring Quarter
MATH 13100	MATH 13200	MATH 13300
		ECON 10000
Second Year		
Autumn Quarter	Winter Quarter	Spring Quarter
ECON 20000	ECON 20100	ECON 20200
MATH 19520	ECON 10200	
Third Year		
Autumn Quarter	Winter Quarter	
ECON 23950	ECON 21020	
ECON 21010		

Students wanting to appropriately plan their economics major with the courses MATH 20400 Analysis in Rn II, STAT 24400 Statistical Theory and Methods I, or STAT 24410 Statistical Theory and Methods Ia should consult with the Undergraduate Program Office in the Department of Economics.

BA in Economics with Specialization in Business Economics

The specialization in business economics is organized around the fundamental economic theory and empirical methods that students interested in pursuing careers in the private sector, the non-profit sector, and the public sector (among others) will find useful in carrying out their day-to-day tasks. Students who begin by following the standard economics major path have several decision points at which they can choose to specialize in business economics. Students should consult early in the first year with the Department of Economics Undergraduate Program to design a curriculum that satisfies their professional goals.

Students pursuing the standard Economics major must complete a Calculus sequence. However, it is not required for the Specialization in Business Economics. Students are still strongly urged to take Calculus to ensure sufficient quantitative understanding and competence.

Note that BUSN 2XXXX-level (undergraduate-only) versions of courses offered by the University of Chicago Booth School of Business (Chicago Booth) will follow some College policies regarding registration, scheduling, grading, etc. The BUSN 3XXXX-level (and higher) courses will be subject to Chicago Booth's academic and administrative policies. Consult the Chicago Booth website (<https://www.chicagobooth.edu/programs/taking-courses-at-booth/faq/#beecf17b3e304bae93c50f4f595c27d6>) for details.

Early final grades will be given for graduating students in BUSN 2XXXX-level courses. The Booth Registrar's Office will coordinate with instructors to issue early final grades for graduating students in College-level Booth courses.

Note: Early final grades are not given for BUSN 3XXXX-level (and higher) courses. These courses should not be taken in the student's graduating quarter unless the student will have completed all graduation requirements, irrespective of the BUSN 2XXXX-level course.

As with the standard economics program, this specialization is divided into five component parts:

1. Core: The core component is designed to introduce students to the tools of basic economic analysis. These courses include fundamental course work in microeconomics, macroeconomics, and business education.
2. Methods: The methods component is designed to introduce students to the different toolkits on which economists rely to analyze problems in both microeconomics and macroeconomics.
3. Empirical Analysis: The empirical analysis component provides students with the fundamental techniques of data analysis. These courses emphasize the application of empirical methods to relevant examples and develop the essential computer skills students need to lead successful careers.
4. Perspectives: The perspectives requirement recognizes that successful careers require broad-based understanding of the markets and industries in which our potential majors are likely to participate. This requirement is intended to facilitate both the acquisition of sector-specific knowledge and/or job-specific skills that are likely to provide context for the student's economics and business training.
5. Electives: Electives from the University of Chicago Booth School of Business and the Department of Economics allow students to tailor the program to their interests.

Core

The core component is designed to introduce students to the tools of basic economic analysis. These courses include fundamental course work in microeconomics and macroeconomics. These courses introduce theory but emphasize the application of these tools to standard problems that students are likely to encounter as they carry out their professional activities. The core component consists of three courses:

ECON 10000	Principles of Microeconomics [^]	100
or ECON 20000	The Elements of Economic Analysis I	
ECON 10200	Principles of Macroeconomics [#]	100
or ECON 20200	The Elements of Economic Analysis III	
One Foundations of Business Education course, chosen from: ⁺		100
BUSN 20100	Financial Accounting	
BUSN 20330	Building the New Venture	
BUSN 20400	Investments	
BUSN 20410	Corporation Finance	
BUSN 20702	Managerial Decision Making	
BUSN 20600	Marketing Management	
BUSN 20500	Operations Management	
BUSN 20800	Big Data	

BUSN 20900	Competitive Strategy	
Total Units		300

- ^ Students who have previously completed ECON 19800 (but not ECON 20000) will have satisfied this requirement
- # Students who have previously completed ECON 19900 (but not ECON 20200) will have satisfied this requirement
- + BUSN 2XXXX-level (undergraduate-level) versions of these courses will follow some College policies regarding registration, scheduling, grading, etc. The BUSN 3XXXX-level (and higher) versions will be subject to Chicago Booth's academic and administrative policies. Consult the Chicago Booth website for details. Students who have taken a BUSN 2XXXX-level course cannot enroll in the 3XXXX-level (or higher) equivalent course and vice-versa.

Methods

The methods component of the major is designed to expose students to the different toolkits on which economists rely to analyze problems. These methods courses include offerings in basic price theory, game theory, and experimental methods. This component also includes course work that will be useful in macroeconomic and financial analysis. Students must complete one microeconomic methods course and one macroeconomic methods course from the lists below:

One Microeconomic Methods course, chosen from:		100
ECON 11700	Introduction to Behavioral and Experimental Economics	
ECON 20100	The Elements of Economic Analysis II	
ECON 20700	Game Theory and Economic Applications	
ECON 21800	Experimental Economics	
One Macroeconomic Methods course, chosen from:		100
ECON 13000	Introduction to Money and Banking	
ECON 16020	Introduction to Public Sector Economics	
ECON 17100	Introduction to International Trade	
ECON 23950	Economic Policy Analysis	
Total Units		200

Note: Students may count either ECON 13000 or ECON 23950, but not both, toward the forty-two credits required for graduation.

Empirical Analysis

The objective of the empirical analysis component is to ensure that students who complete the major are comfortable carrying out data analysis in various forms. This requires that students gain familiarity with basic statistics and basic econometric methods. These courses will emphasize the application of empirical methods to relevant examples and develop essential computer skills.

ECON 21010	Statistical Methods in Economics	100
or STAT 22000 Statistical Methods and Applications *		
or STAT 23400 Statistical Models and Methods		
or STAT 24400 Statistical Theory and Methods I		
ECON 11020	Introduction to Econometrics	100
or ECON 21020	Econometrics	
or ECON 21030	Econometrics - Honors	
Total Units		200

* Examination credit for STAT 22000 will not count toward the requirements for the major

Perspectives

The perspectives requirement consists of one course that can come from any division in the University. This requirement recognizes that successful careers require broad-based understanding of the markets and industries in which our potential majors are likely to participate. This requirement is intended to facilitate the acquisition of sector-specific knowledge and/or job-specific skills that are likely to provide context for the economics and business training to which students will receive exposure while completing the specialization business economics. It is expected that students use this perspectives component as a stepping-stone to design a meaningful set of courses that complement their training in business economics.

It is important to emphasize that there are *many* courses across the University that students can use to satisfy the perspectives requirement. A list of courses pre-approved for this requirement may be found on the departmental website (<https://economics.uchicago.edu/content/ba-economics-specialization-business-economics/>), but students may petition the Department of Economics to use other suitable courses.

Electives

Students must take five electives to complete the specialization in business economics: three from the University of Chicago Booth School of Business, as defined below, and two from the University of Chicago Department of Economics. A student may, by petition, use a course from outside Chicago Booth and the Department of Economics as, at most, one business economics elective. Petitions must be submitted prior to course enrollment to be considered.

A note on professional school courses: The rules of the College allow students to use no more than four courses from professional schools to satisfy degree requirements. The specialization in business economics requires four courses taken at Chicago Booth. If a student successfully petitions to use a course from a professional school other than Chicago Booth (e.g., the Law School or the Harris School of Public Policy) in the major, then College rules require that the approved course substitute for a Chicago Booth elective. Be aware that undergraduates may enroll in a total of six professional school courses, but the last two courses would be ineligible to satisfy any undergraduate degree requirement.

Courses in the University of Chicago Booth School of Business

The courses at Chicago Booth that students can use to meet the electives requirements are categorized in eight different “bundles.” Courses in the table below with an asterisk (*) are also eligible for the Foundations of Business Education requirement; however, a course used to satisfy the core requirement in the major cannot be also counted as an elective. Students must complete four distinct Booth courses: one Foundations in Business Education and three electives. In order to expose students to different subfields in business education, the four Booth courses used to fulfill the core and elective requirements must be drawn from at least three of the thematic bundles listed below.

Note: BUSN 2XXXX-level (undergraduate-level) versions of these courses will follow some College policies regarding registration, scheduling, grading, etc. The BUSN 3XXXX-level and above versions will be subject to Chicago Booth's academic and administrative policies. Consult the Chicago Booth website (<https://www.chicagobooth.edu/programs/taking-courses-at-booth/faq/#beecf17b3e304bae93c50f4f595c27d6>) for details. Students who have taken a BUSN 2XXXX-level course cannot enroll in the 3XXXX-level (or higher) equivalent, and vice versa.

CHICAGO BOOTH COURSES THAT MEET THE ELECTIVES REQUIREMENT

Accounting	
BUSN 20100	Financial Accounting *
BUSN 20101	Managerial Accounting
BUSN 20140	Accounting and Financial Analysis
BUSN 20150	Financial Statement Analysis
Entrepreneurship	
BUSN 20330	Building the New Venture *
BUSN 20340	Developing a New Venture
BUSN 20160	Accounting for Entrepreneurship
Finance	
BUSN 20405	Financial Instruments
BUSN 20410	Corporation Finance *
BUSN 20400	Investments
Management	
BUSN 20702	Managerial Decision Making *
BUSN 20710	Behavioral Economics
BUSN 20701	Managing in Organizations
Marketing	
BUSN 20600	Marketing Management *
BUSN 20610	Pricing Strategy
BUSN 20620	Data Driven Marketing
Operations	
BUSN 20500	Operations Management *
BUSN 20510	Managerial Decision Modeling
BUSN 20520	Supply Chain Management
Statistics	
BUSN 20800	Big Data *
BUSN 20810	Machine Learning
BUSN 20820	Financial Econometrics
Strategy and the Business Environment	

BUSN 20900	Competitive Strategy *
BUSN 20230	International Financial Policy

* These courses are also eligible for the Foundations of Business Education requirement; however, a course used to satisfy the core requirement in the major cannot also be counted as an elective. Students must complete four distinct Chicago Booth courses: one Foundations of Business Education course and three electives. In order to expose students to different subfields in business education, the four Chicago Booth courses used to fulfill the core and elective requirements must be drawn from at least three of the thematic bundles listed here.

Students may further their business education by completing two additional Booth courses, potentially from Booth courses outside of the bundle list below (subject to the discretion of the instructor). However, per College rules, they will not count toward any degree requirements.

Courses in the Department of Economics

Students in the specialization in business economics must complete at least two electives in the Department of Economics. These may be ECON courses with numbers between 10200 and 19800, or numbers above 20200, assuming that the student has the appropriate prerequisites for the course. Note that ECON 19000, ECON 19100, ECON 21010, ECON 21020, ECON 21030, and ECON 23950 are exceptions to this and cannot be used to satisfy the elective requirement for the specialization in business economics.

Summary of Requirements

For a summary of requirements for the BA in Economics with Specialization in Business Economics, see below.

BA in Economics with Specialization in Data Science

The specialization in data science provides training in computation and data analysis beyond the basic methods discussed in the empirical methods sequence. The specialization in data science and the standard BA in economics share eight courses:

Two fundamentals courses:		200
MATH 13300 Elementary Functions and Calculus III OR MATH 15300 Calculus III OR MATH 16300 Honors Calculus III		
MATH 19520 Mathematical Methods for Social Sciences OR MATH 20400 Analysis in Rn II OR MATH 20800 Honors Analysis in Rn II		
One of the following:		300
ECON 20000-20100-20200	The Elements of Economic Analysis I-II-III	
ECON 20010-20110-20210	The Elements of Economic Analysis: Honors I-II-III	
One three-quarter empirical methods sequence:		300
MATH 19620 Linear Algebra (OR STAT 24300 Numerical Linear Algebra OR MATH 20250 Abstract Linear Algebra OR MATH 20700 Honors Analysis in Rn I)		
STAT 23400 Statistical Models and Methods (OR STAT 24400 Statistical Theory and Methods I OR STAT 24410 Statistical Theory and Methods Ia)		
ECON 21020 Econometrics (OR ECON 21030 Econometrics - Honors)		
Total Units		800
The specialization in data science is designed to begin after completion of the core sequence and the empirical methods sequence. Students pursuing the specialization in data science are not required to complete ECON 23950 Economic Policy Analysis. Instead, they must complete basic training in computer science and at least two data science courses in the Department of Economics:		
One of the following:		
CMSC 12300	Computer Science with Applications III	100
or CMSC 15200	Introduction to Computer Science II	
or CMSC 16200	Honors Introduction to Computer Science II	
Two chosen from:		200
ECON 21300	Data Construction and Interpretation in Economic Applications	
ECON 21320	Applications of Econometric and Data Science Methods	
ECON 21330	Econometrics and Machine Learning	
Total Units		300

Students pursuing the specialization in data science are encouraged to complete all ECON 213xx courses. These economics courses can also be used as electives by student pursuing the standard BA in economics.

Students pursuing the specialization in data science must also complete two electives drawn from the following sets of courses:

At most one of:		100
ECON 21110	Applied Microeconometrics	
ECON 21150	Topics in Applied Econometrics	
At most one of:		100
ECON 21200	Time Series Econometrics	
STAT 26100	Time Dependent Data	
BUSN 20820	Financial Econometrics	
or BUSN 41203	Financial Econometrics	
ECON 21410	Computational Methods in Economics	100
ECON 23040	Cryptocurrencies	100
STAT 27400	Nonparametric Inference	100
STAT 27725	Machine Learning	100

Students who have entered the specialization in data science but no longer wish to pursue it must complete ECON 23950 Economic Policy Analysis and the necessary electives to satisfy the requirements of the standard BA in economics. All economics courses completed in the pursuit of the specialization in data science will count toward the degree requirements of the BA in economics. These students may also count course work in computer science as the outside elective as discussed in the Electives section.

Summary of Requirements

For a summary of requirements for the BA in economics with specialization in data science, see below.

Summaries of Requirements

- BA in Economics, Track A: Three-Quarter Empirical Methods Sequence
- BA in Economics, Track B: Two-Quarter Empirical Methods Sequence
- BA in Economics with Specialization in Business Economics
- BA in Economics with Specialization in Data Science

Summary of Requirements: BA in Economics, Track A: Three-Quarter Empirical Methods Sequence

GENERAL EDUCATION

One of the following:		200
MATH 13100-13200	Elementary Functions and Calculus I-II	
MATH 15100-15200	Calculus I-II *	
MATH 16100-16200	Honors Calculus I-II	
MATH 16110 & MATH 16210	Honors Calculus I (IBL) and Honors Calculus II (IBL)	

Total Units	200
-------------	-----

MAJOR

One of the following:		100

Total Units		1100

* Credit may be granted by examination.

Grading

Successful completion of the economics major requires both a major GPA of 2.0 or higher *and* a minimum grade of C– in all courses counted for the major program. In addition, students majoring in economics must receive quality grades in all courses required as part of the major. Non-majors may take economics courses on a P/F basis; only grades of C– or higher constitute passing work.

Honors

To be considered for honors in economics, students must meet the following requirements: (1) a GPA of 3.5 or higher in the major and a GPA of 3.2 or higher overall, (2) participation in the honors workshop and sole authorship of an independent research paper on a topic in economics, and (3) a faculty sponsor's letter evaluating this independent research paper. For award of honors, the project must receive a grade of A or A–. At the beginning of the student's fourth year, the

economics honors committee must have a letter from an economics faculty sponsor expressing willingness to oversee the student's writing of an independent research paper and recommending the student be admitted into the honors workshop program. Honors papers should be outgrowths of economics electives or research assistant work for the faculty sponsor.

Participation in the ECON 29800 Undergraduate Honors Workshop is mandatory throughout the year. Upon completion of the paper in the Spring Quarter, the student will then be retroactively registered for the course in the fourth-year quarter of the student's choosing. Plan for this retroactive registration with your College adviser.

The research paper, a transcript, and a recommendation letter from the faculty sponsor evaluating the independent research paper must be submitted to the undergraduate economics program office for consideration by the economics honors committee no later than the end of fourth week of the quarter in which the student plans to graduate. Students wishing to qualify for honors should (1) engage in preparatory course work in the area of interest no later than Spring Quarter of their third year and (2) consult with the program advisers no later than Winter Quarter of their third year.

This program may accept a BA paper or project used to satisfy the same requirement in another major if certain conditions are met and with the consent of the other program chair. Approval from both program chairs is required. Students should consult with the chairs by the earliest BA proposal deadline (or by the end of third year, when neither program publishes a deadline). A consent form, to be signed by both chairs, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Preparation for PhD Programs in Economics

Students preparing to pursue a PhD program in economics should complete advanced course work in mathematics, statistics, and computer science. The real analysis sequence offered by the Mathematics Department, MATH 20300-20400-20500 Analysis in Rn I-II-III (or its honors variant MATH 20700-20800-20900 Honors Analysis in Rn I-II-III) contains material that is particularly important for economics graduate school. Students who used MATH 13300 Elementary Functions and Calculus III or MATH 15300 Calculus III to fulfill the calculus requirement will need to take MATH 15910 Introduction to Proofs in Analysis to transition into the real analysis sequence. Completion of this course work allows students to participate in higher level electives that may also be helpful for their chosen path of study in graduate school.

Completion of either STAT 24400 Statistical Theory and Methods I or STAT 24410 Statistical Theory and Methods Ia and either MATH 20250 Abstract Linear Algebra or STAT 24300 Numerical Linear Algebra will allow students to continue their training in statistics and econometrics at an advanced level.

Increasingly, graduate programs expect students to have sophisticated programming skills. Completion of CMSC 15100-15200 Introduction to Computer Science I-II is strongly encouraged.

In addition, students who are interested in pursuing graduate study are encouraged to take appropriate courses from other departments in the social sciences to obtain a well-rounded perspective of their areas of interest.

Students are encouraged to seek research assistant jobs and may self-subscribe to the Research Assistant Jobs (https://lists.uchicago.edu/web/info/chicago_economics-researchasst/) listhost to receive updates on job postings.

Provisional and early final grades are not given for economics PhD courses. Economics graduate courses should not be taken in the student's graduating quarter unless the student will have completed all forty-two credits required for graduation, not counting the economics graduate course, and all requirements for all majors.

Advanced economics undergraduates are encouraged to enroll in Economics master's-level (ECMA) courses. For more information, consult with juliew@uchicago.edu.

It is important that such students consult early in the second year with one of the directors of the undergraduate program to design a plan of course work and research. Contact juliew@uchicago.edu for appointments.

Economics Courses

ECON 10000. Principles of Microeconomics. 100 Units.

By way of economic theory, applications, and contemporary issues, this course treats (1) the behavior and decision making on the part of individuals, business firms, and governments; and (2) the function of costs, prices, incentives, and markets in the American economy. We discuss contemporary topics (e.g., distribution of income, the environment, education, sports, health care). This course is formerly known as Econ 19800: Introduction to Microeconomics. Students may substitute 'Econ 20000: The Elements of Economic Analysis I' for this course in the business economics track.

Instructor(s): A. Sanderson; M. Lee Terms Offered: Autumn Spring Winter

ECON 10200. Principles of Macroeconomics. 100 Units.

By way of theory and public policy applications, this course covers current major domestic and international macroeconomic issues in the U.S. economy, including the determination of income and output, inflation, unemployment, and economic growth; money, banking, and the Federal Reserve System; federal spending, taxation, and deficits; and international trade, exchange rates, and the balance of payments. This course is formerly known as Econ 19900: Introduction to Macroeconomics. Students may substitute 'Econ 20200: The Elements of Economic Analysis III' for this course in the business economics track.

Instructor(s): A. Sanderson Terms Offered: Autumn Spring Winter

ECON 11020. Introduction to Econometrics. 100 Units.

The objective of this course is to introduce students to the practice of econometrics. The course will focus on the use of multiple regression as a tool to establish causal relations. The course emphasizes all steps of the process of empirical research: data collection, analysis, and presentation (both written and oral). Multiple examples of this process will be discussed and students will be expected to read and evaluate existing research. Students will apply the techniques discussed in class to a topic of their choosing. They will write a paper and present results to the class.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Prerequisite(s): ECON 10000 and ECON 10200; ECON 2010 or STAT 22000 or STAT 23400 or STAT 24400

ECON 11050. Introduction to Empirical Methods for Social Science Research. 100 Units.

The goal of the course is to provide basic training in how to analyze and interpret quantitative data. The first part is a description of methods to graph and represent data sets. Emphasis will be given on methods that provide an intuitive sense of empirical relationships, using examples from discontinuity designs and difference-in-differences ('diff in diff'). Then, regression analysis will be covered, explaining how linear regression methods can be used to uncover rich and informative patterns from the data, including nonlinear relationships. Students will be introduced to causality and instrumental variables methods. The course will use a variety of empirical examples from published papers. Students will be asked to experiment with data sets and apply the methods by themselves.

Instructor(s): S. Bonhomme Terms Offered: Winter

Prerequisite(s): ECON 10000/20000/20010 and STAT 22000/23400/24400/ECON 2010

ECON 11700. Introduction to Behavioral and Experimental Economics. 100 Units.

This is an introductory course to experimental economics and on how to gather your own data using experimental methods to answer important economic questions. This methodology will be applied to learn the main topics in behavioral economics that leverages psychological insights to decision making and its effects on markets. Students may use this course to satisfy the microeconomics method requirement for the business economics specialization.

Instructor(s): Staff Terms Offered: TBD

Prerequisite(s): ECON 10000 or ECON 19800 or ECON 20000 or ECON 20010

ECON 12410. Pathways in Economics. 100 Units.

This program introduces students to the approaches to economic research and experimentation that make UChicago a world leader in the field. Full-time lecturers in the Department of Economics teach classes on topics in macroeconomics, microeconomics, game theory, and field experiments, which are supplemented by guest lectures delivered by preeminent UChicago faculty in economics and other departments whose research applies the tools and insights of the field in new and exciting ways. Participants can apply what they hear about in lectures during small group discussion sections facilitated by a team of outstanding current UChicago students, as well as in labs and site visits to locations such as the Federal Reserve Bank of Chicago.

Terms Offered: Summer

ECON 12411. Pathways in Economics C. 100 Units.

This program introduces students to the approaches to economic research and experimentation that make UChicago a world leader in the field. Full-time lecturers in the Department of Economics teach classes on topics in macroeconomics, microeconomics, game theory, and field experiments, which are supplemented by guest lectures delivered by preeminent UChicago faculty in economics and other departments whose research applies the tools and insights of the field in new and exciting ways. Participants can apply what they hear about in lectures during small group discussion sections facilitated by a team of outstanding current UChicago students, as well as in labs and site visits to locations such as the Federal Reserve Bank of Chicago.

Terms Offered: Summer

ECON 12412. A Survey of Chicago Economics. 50 Units.

This two-week program will provide an introduction to UChicago-style, rigorous economics education; it is open only to approved visiting third-year students from Universidad Panamericana. Led by a team of full-time lecturers from the Department of Economics, this course will explore topics in four foundational areas: price theory, game theory, experimental economics, and macroeconomics. Participants will also develop skills that will prepare them for further graduate study or other professional pursuits, such as interviewing, networking, and academic and professional communications. Evening and weekend residential program activities will enable students to experience American life and culture and explore the vibrant city of Chicago. Throughout the program, students will have the opportunity to practice both academic and informal spoken English.

Terms Offered: Summer

ECON 12413. A Survey of Chicago Economics and its Business Applications. 000 Units.

This two-week program will provide an introduction to UChicago-style, rigorous economics education, as well as its business applications. Fulltime lecturers in the Department of Economics will explore topics in four foundational areas: price theory, game theory, experimental economics, and macroeconomics. Evening and weekend residential program activities will enable students to experience American life and culture and explore the vibrant city of Chicago. Throughout the program, students will have the opportunity to practice both academic and informal spoken English.

Terms Offered: Summer

ECON 13000. Introduction to Money and Banking. 100 Units.

The course focuses on monetary policy and central bank's attempts to stabilize prices and promote maximum sustainable economic growth. Topics include the structure of the Federal Reserve, the conduct of monetary policy, the term structure of interest rates, risk valuation, management of banking, and financial crises.

Instructor(s): K. Kuevibulvanich Terms Offered: TBD

Prerequisite(s): ECON 10200/19900/20200/20210

Note(s): Students may not receive credit for both ECON 13000 and ECON 23950. Students may not receive credit for both ECON 13000 and ECON 23000.

ECON 13110. Household Finance: Theory and Applications. 100 Units.

This course will examine the choices households make about important financial decisions and how these individual choices can impact the aggregate economy. Each week, basic predictions from economic theory will be discussed and compared with empirical findings. Topics will include: asset market participation and household portfolio choice; human capital and student loans; housing and mortgages; retirement planning; credit card debt; payday loans; and the gig/sharing economy. Focus will also be placed on government policies affecting these topics, including so-called household financial engineering, the creation of Government Sponsored Enterprises (GSEs) like 'Fannie' and 'Freddie,' and regulatory agencies like the Consumer Financial Protection Bureau (CFPB). The course will provide an introduction to structural modeling for conducting policy counterfactuals. Assessment will be based on problem sets, a midterm and a final. These problem sets will require students to work in R, Stata or other statistical package of the student's choice (with permission of instructor).

Instructor(s): D. Koustas Terms Offered: Spring

Prerequisite(s): PBPL 20000 or ECON 20000 required; PBPL 22200 preferred.

Equivalent Course(s): PBPL 28528

ECON 16020. Introduction to Public Sector Economics. 100 Units.

The course studies public policy issues in the world from both micro- and macroeconomic perspectives. Covered topics include tax, antitrust, and trade policies (micro) as well as fiscal and monetary policies (macro). International case studies will be discussed in comparison to the US experiences (e.g., industrial policies and development in Asia, exchange rate policies in Latin America, the currency union in Europe, and ECB's monetary policy).

Instructor(s): Staff Terms Offered: TBD

Prerequisite(s): ECON 10000 (or ECON 19800), ECON 10200 (ECON 19900)

Note(s): Students may not receive credit for both ECON 16020 and ECON 26010/ECON 26020.

ECON 16510. Water: Economics, Policy and Society. 100 Units.

Water is inextricably linked to human society. While modern advances in technology and new economic and policy mechanisms have emerged to address water stressors from overconsumption, development pressures, land use changes and urbanization, challenges continue to evolve across the globe. These problems, while rooted in scarcity, continue to become more complex due to myriad human and natural forces. In addition to water quality impairments, droughts and water shortages persist, putting pressure on agricultural production and urban water use, while the increased frequency and severity of rainfall and tropical storms, already being experienced globally, are only projected to grow in intensity and duration under climate change. Students will explore water from the perspective of the social sciences and public policy, with attention on behavioral dimensions of water use and water conservation. Qualitative and quantitative approaches to examining how humans use and affect water will be considered, and a case study using visualizations of campus water data will be conducted by students in the course.

Instructor(s): Sabina Shaikh Terms Offered: Spring

Note(s): No prerequisites but the following courses are recommended prior to enrollment in ENST 21310: one economics course and ENST/MENG 20300: The Science, History, Policy, and Future of Water (Winter 2020) ENST/MENG 20300: The Science, History, Policy, and Future of Water (Winter 2020)

Equivalent Course(s): LLSO 21310, GLST 21310, ENST 21310, PBPL 21310

ECON 16520. Economics and Environmental Policy. 100 Units.

This course combines basic microeconomic theory and tools with contemporary environmental and resources issues and controversies to examine and analyze public policy decisions. Theoretical points include externalities, public goods, common-property resources, valuing resources, benefit/cost analysis, and risk assessment. Topics include pollution, global climate change, energy use and conservation, recycling and waste management, endangered species and biodiversity, nonrenewable resources, congestion, economic growth and the environment, and equity impacts of public policies.

Instructor(s): S. Shaikh Terms Offered: Autumn

Prerequisite(s): ECON 19800 or higher, or PBPL 20000

Note(s): Not offered in Autumn of the 2020-21 academic year.

Equivalent Course(s): ENST 21800, PBPL 21800, LLSO 26201

ECON 17110. International Monetary Systems. 100 Units.

This course studies the principles of monetary policy across international markets, global banking markets, and optimum currency areas and their impact on and from business cycles and economic development. Students will be introduced to simplified theoretical models with which to analyze data, relevant empirical findings, and policy decisions. Practice is provided in understanding recent international economic events and current policy topics.

Instructor(s): G. Pieters Terms Offered: Autumn

Prerequisite(s): ECON 10200/ECON 19900/ECON 20200/ECON 20210

ECON 18010. Introduction to Managerial Microeconomics. 100 Units.

This course presents several classic microeconomic models applicable in business contexts. The topics covered include self-selection, commitment, product differentiation, matching, and mechanism design, among others. The theoretical insights of each model are analyzed. Real-world applicability is discussed using practical examples. Students are required to write two short papers applying two of the models presented in the course to real-world situations in the context of business.

Instructor(s): P. Pena Terms Offered: Spring

Prerequisite(s): ECON 10000 (or ECON 19800)

ECON 19000. Economics for Everyone: Micro. 100 Units.

The field of economics has generated a powerful set of insights which have fundamentally shaped the modern world. Because modern economics puts such a heavy stress on mathematical rigor, the most interesting economic ideas often get pushed to the background. In this course, we will explore these big economic ideas, without the math. Our goal is to make the beauty and power of economic thinking available to everyone. We will discuss what it means to think like an economist, how you can use economic thinking to make the world a better place (or to take advantage of your friends and enemies, if you prefer), and also how sometimes thinking like an economist can get you into trouble.

Instructor(s): J. List, S. Levitt Terms Offered: Spring

ECON 19100. Economics for Everyone: Macro. 100 Units.

This course explores the big ideas in macroeconomics in a way that is enjoyable and accessible, with minimal reliance on mathematics. The goal is to provide an introduction to macroeconomic issues for people who have never before studied macroeconomics (and who might never study it again), so that they can understand and contribute to ongoing discussions in the news and on social media. We will demystify some of the major macroeconomic questions of our times: Why is there unemployment? Why are some countries poor? What's the big deal about government debt? How high should we set taxes? What gives money and stocks their value? What does the Fed do? And why did all those economists win Nobel Prizes? We will show the fun, interesting, and strange sides of macroeconomics.

Instructor(s): G. Kaplan Terms Offered: Autumn

ECON 20000-20100-20200-20300. The Elements of Economic Analysis I-II-III-IV.

ECON 20000. The Elements of Economic Analysis I. 100 Units.

This course develops the economic theory of consumer choice. This theory characterizes optimal choices for consumers given their incomes and preferences, as well as the relative prices of different goods. This course develops tools for analyzing how these optimal choices change when relative prices and consumer incomes change. Finally, this course presents several measures of consumer welfare. Students learn how to evaluate the impact of taxes and subsidies using these measures. Completion of ECON 10000 (or ECON 19800) is strongly recommended of students without a prior microeconomics course.

Terms Offered: Autumn Spring

Prerequisite(s): MATH 13300 (with prior completion of or at least concurrent with MATH 19520), MATH 15300, or 16300. First-year students must also pass the economics placement exam or complete ECON 10000 (or ECON 19800).

ECON 20100. The Elements of Economic Analysis II. 100 Units.

This course is a continuation of ECON 20000. The first part of this course discusses markets with one or a few suppliers. The second part focuses on demand and supply for factors of production and the distribution of income in the economy. This course also includes some elementary general equilibrium theory and welfare economics.

Instructor(s): Staff Terms Offered: Autumn Winter

Prerequisite(s): ECON 20000 or 20010

ECON 20200. The Elements of Economic Analysis III. 100 Units.

As an introduction to macroeconomic theory and policy, this course covers the determination of aggregate demand (i.e., consumption, investment, the demand for money); aggregate supply; and the interaction between aggregate demand and supply. We also discuss economic growth, business cycle, inflation and money. Completion of ECON 19900 is strongly recommended of students without a prior macroeconomics course.

Instructor(s): Staff Terms Offered: Spring Winter

Prerequisite(s): ECON 20100 or 20110

ECON 20300. Elements of Economic Analysis IV. 100 Units.

This is a course in money and banking, monetary theories, the determinants of the supply and demand for money, the operation of the banking system, monetary policies, financial markets, and portfolio choice.

Instructor(s): Staff

Prerequisite(s): ECON 20200 or 20210

ECON 20010-20110-20210. The Elements of Economic Analysis: Honors I-II-III.

The Elements of Economic Analysis: Honors I-II-III

ECON 20010. The Elements of Economic Analysis I Honors. 100 Units.

The scope of the honors section is the same as the standard section, but it covers material at greater depth and using more sophisticated mathematical methods. This course develops the economic theory of consumer choice. This theory characterizes optimal choices for consumers given their incomes and preferences, as well as the relative prices of different goods. This course develops tools for analyzing how these optimal choices change when relative prices and consumer incomes change. Finally, this course presents several measures of consumer welfare. Students learn how to evaluate the impact of taxes and subsidies using these measures. Completion of ECON 10000 (or ECON 19800) is strongly recommended of students without a prior microeconomics course.

Instructor(s): Staff Terms Offered: Autumn Spring

Prerequisite(s): MATH 13300 (with prior completion of or at least concurrent with MATH 19520), MATH 15300, or 16300. First-year students must also pass the economics placement exam or complete ECON 10000 (or ECON 19800).

ECON 20110. The Elements of Economic Analysis II Honors. 100 Units.

The scope of the honors section is the same as the standard section, but it covers material at greater depth and using more sophisticated mathematical methods. This course is a continuation of ECON 20000/20010. The first part of this course discusses markets with one or a few suppliers. The second part focuses on demand and supply for factors of production and the distribution of income in the economy. This course also includes some elementary general equilibrium theory of welfare economics.

Instructor(s): Staff Terms Offered: Autumn Winter

Prerequisite(s): ECON 20000 or 20010

ECON 20210. The Elements of Economic Analysis III Honors. 100 Units.

The scope of the honors section is the same as the standard section, but it covers material at greater depth and using more sophisticated mathematical methods. As an introduction to macroeconomic theory and policy, this course covers the determination of aggregate demand (i.e., consumption, investment, the demand for money); aggregate supply; and the interaction between aggregate demand and supply. We also discuss economic growth, business cycle, inflation and money. Completion of ECON 10200 (or ECON 19900) is strongly recommended of students without a prior macroeconomics course.

Instructor(s): Staff Terms Offered: Spring Winter

Prerequisite(s): ECON 20100 or 20110

ECON 20510. Political Economy. 100 Units.

Political Economy bridges the gap between economics and politics by showing how governments and political institutions are composed of people who respond to incentives and whose behavior and choices can be studied through the lens of economics. In this class, we will open a refresher on microeconomics and an introduction to the toolkit of political economy, making sure that the necessary building blocks are in place before building up from the level of the individual and the firm to show how a political-economic equilibrium can be achieved. The final goal is to demonstrate that economic and political issues alike can be studied within the same general framework of analysis.

Instructor(s): R. Corbi Terms Offered: Autumn

Prerequisite(s): ECON 20100 or ECON 20110

ECON 20520. Formal Models of Political Economics. 100 Units.

This course introduces formal economic models adopted in the modern inquiry into the incentives of participants in political processes. The approach is largely game theoretical, while topics covered include electoral competition, checks and balances, delegation, legislative bargaining, political agency, special interest politics and campaign finance.

Instructor(s): R. Fang

Prerequisite(s): ECON 20100 (ECON 20700 strongly recommended)

ECON 20700. Game Theory and Economic Applications. 100 Units.

ECON 20700 or 20770 may be used as an economics elective, but only one may be used toward degree requirements. This course introduces the basic ideas and applications of game theory. Topics include models of games in extensive and strategic form, equilibria with randomization, signaling and beliefs, reputation in repeated games, bargaining games, investment hold-up problems, and mediation and incentive constraints.

Instructor(s): R. Fang Terms Offered: Autumn Spring Winter

Prerequisite(s): ECON 20100 (or ECON 10000 for declared business economics specialization). No first-year students.

ECON 21010. Statistical Methods in Economics. 100 Units.

This course provides a solid foundation in probability and statistics for economists. We emphasize topics needed for further study of econometrics in ECON 21020. Topics include elements of probability theory, sampling theory, estimation, hypothesis testing, and an introduction to linear algebra.

Instructor(s): C. Roark Terms Offered: Autumn

Prerequisite(s): MATH 13300/15300/16300/16310 and ECON 10200/20000/20010 (Standard Economics students should complete the third quarter calculus and ECON 20000/20010 before taking ECON 21010. Students who have declared business economics specialization should complete the third quarter of calculus and at least ECON 10200 before taking ECON 21010.)

ECON 21020. Econometrics. 100 Units.

Required of students who are majoring in economics; those students are encouraged to meet this requirement by the end of their third year. This course covers the single and multiple linear regression model, the associated distribution theory, and testing procedures; corrections for heteroskedasticity, autocorrelation, and simultaneous equations; and other extensions as time permits. Students also apply the techniques to a variety of data sets using PCs.

Instructor(s): Staff Terms Offered: Autumn, Spring, Winter

Prerequisite(s): ECON 20100, ECON 21010, or STAT 23400 and MATH 19620 (or MATH 20000 or STAT 24300 or MATH 20250)

ECON 21030. Econometrics - Honors. 100 Units.

The topics are essentially the same as those covered in ECON 21020, but this foundations course in econometrics gives a more systematic introduction to the application of statistical theory to economic applications. This course is intended for students who are planning to study economics at the graduate level.

Instructor(s): Staff Terms Offered: Spring, Winter

Prerequisite(s): ECON 20100, and STAT 24400, 24410 or 24500, and MATH 20250 or STAT 24300; or consent of instructor

ECON 21110. Applied Microeconometrics. 100 Units.

This course will cover a broad set of applications in labor economics, public economics, industrial organization, economics of education, environmental economics, and development economics. There will be a strong focus on how economic theory, institutional details, and experiments can be used to draw causal inferences on economic relationships. There will be emphasis on applying a number of commonly used microeconomic methods to economic data; including the linear regression model, fixed and random effects models, instrumental variables, and discrete choice models. When interpreting the empirical results, we will also discuss the importance of omitted variables bias and measurement error.

Instructor(s): J. Joensen

Prerequisite(s): ECON 21020 or ECON 21030

ECON 21200. Time Series Econometrics. 100 Units.

This course focuses on theory, and covers a broad range of topics, both mathematical and statistical, on stationary time series models in time and frequency domains. The models include ARMA, VAR, ARCH/GARCH and their variants. It also covers nonstationary time series models with unit roots and cointegration, and the theories and methodologies to estimate and test them statistically.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): ECON 20200/20210 and ECON 21020/21030

ECON 21300. Data Construction and Interpretation in Economic Applications. 100 Units.

In this course we will explore the process of extracting insights from real-world data. What can one learn from a particular data set? How do you know what sets of tools will be 'right' for the job? How can you increase your degree of confidence that the inferences you are drawing are correct? How can you best communicate the insights you glean from the data? Unlike standard econometrics courses, this class emphasizes hands-on work with actual data sets rather than the development of sophisticated tools and techniques (which are also useful, you just won't learn them here!).

Instructor(s): S. Levitt Terms Offered: TBD

Prerequisite(s): ECON 10000/19800/20000/20010 and STAT 22000/23400/24400 (or ECON 21010)

ECON 21320. Applications of Econometric and Data Science Methods. 100 Units.

This course builds on the theoretical foundations set in Econ 21030 and explores further topics pertinent to modern economic applications. While the course content may change from year to year according to student and instructor interests, some potential topics are panel data methods, treatment effects/causal inference, discrete choice/limited dependent variable models, demand estimation, and topics in economic applications of supervised and unsupervised learning algorithms. The course will involve analytically and computationally intensive assignments and a significant empirical project component.

Instructor(s): A. Hortacsu Terms Offered: TBD

Prerequisite(s): CMSC 12300/15200/16200 and ECON 21020 (ECON 21030 Honors Econometrics preferred)

ECON 21330. Econometrics and Machine Learning. 100 Units.

This course reviews a number of modern methods from econometrics, statistics and machine learning, and presents applications to economic problems. Examples of methods covered are simulation-based techniques, regularization via coefficient and matrix penalization, and regression and classification methods such as trees, forests and neural networks. Applications include economic models of network formation, and dimension reduction for structural economic models. The course involves programming and work with data. Beyond econometric background such as Econ 21030, students should have a solid background in computation.

Instructor(s): S. Bonhomme Terms Offered: Not offered in 2019-2020

Prerequisite(s): CMSC 12300/15200/16200 and ECON 21020 (ECON 21030 Honors Econometrics preferred)

ECON 21410. Computational Methods in Economics. 100 Units.

This course introduces the empirical and computational techniques necessary for numerical estimation and simulation in economics. Through examples in economics, the course covers topics such as optimization, function approximation, and monte carlo techniques. Emphasis will be placed on developing effective programming and research practices. The course is structured through a series of applications in such topics as segregation, occupational choice, and repeated games. The course will be taught in R and STATA. Though helpful, no previous experience with R or STATA is required.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): ECON 20100 and ECON 21020 or ECON 21030

ECON 21730. Applied Behavioral Economics. 100 Units.

This class covers recent work in behavioral economics. Topics include discrimination, social pressure, social norms, identity and gender. Applications will cover a wide range of fields, including labor economics, finance, and political economy.

Instructor(s): L. Bursztyn Terms Offered: Winter

Prerequisite(s): ECON 20100 and ECON 21020 (or ECON 21030).

ECON 21740. Behavioral Economics and Experiments. 100 Units.

This is a hands-on course in behavioral economics. Basic concepts of preferences, traits, and behavioral biases are reviewed that link economics and psychology. Methods for eliciting traits and preferences will be taught and implemented in actual lab experiments. Grade will be determined by reports and quality of lab work.

Instructor(s): J. Heckman Terms Offered: Autumn

Prerequisite(s): ECON 10000/19800/20000/20010 AND STAT 22000/23400/24300/24400/24410/ECON 21010 (Lab students require one economics course.)

ECON 21800. Experimental Economics. 100 Units.

This course provides the necessary tools to be an avid consumer of the experimental literature and instructs students on how to become a producer of that literature. Topics include a summary of recent experimental findings and details on how to gather and analyze data using experimental methods.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): ECON 20100 and ECON 21020 (or ECON 21030); No first-year students.

ECON 21830. Social Neuroscience. 100 Units.

Social species, by definition, create emergent organizations beyond the individual - structures ranging from dyads and families to groups and cultures. Social neuroscience is the interdisciplinary field devoted to the study of neural, hormonal, cellular, and genetic mechanisms, and to the study of the associations and influences between social and biological levels of organization. The course provides a valuable interdisciplinary framework for students in psychology, neuroscience, behavioral economics, and comparative human development. Many aspects of social cognition will be examined, including but not limited to attachment, attraction, altruism, contagion, cooperation, competition, dominance, empathy, isolation, morality, and social decision-making.

Instructor(s): J. Decety Terms Offered: Autumn

Equivalent Course(s): PSYC 22350, NSCI 21000, HLTH 22350, BIOS 24137, CHDV 22350

ECON 22200. Topics in American Economic History. 100 Units.

Economic analysis is applied to important issues in American economic history. Specific topics vary, but may include the following: the economics of colonization, the transatlantic slave trade, the role of indentured servitude and slavery in the colonial labor market, the record and sources of 19th-century economic growth, economic causes and effects of 19th-century immigration, the expansion of education, the economics of westward migration, determinants of long-run trends in the distribution of income and wealth, the quantitative analysis of economic and social mobility, and the economics of racial discrimination in the twentieth-century South.

Instructor(s): D. Galenson Terms Offered: Autumn

Prerequisite(s): ECON 20100

Equivalent Course(s): ECON 32000

ECON 22410. UChicago Economics: The People and the Seminal Ideas. 100 Units.

Econ 24720 or Econ 22410 may be used as an economics elective, but only one of the two may be used toward economics major requirements. This course will trace in general the history and evolution of economic thought as an intellectual discipline, from the Middle Ages through Adam Smith and the Classical dominance in the 18th and 19th centuries, to the neoclassical period and alternative schools, and then the rise of Keynesian economics and the emergence of the Chicago School of economics in the 20th century. With this background and context, the focus will turn to the theoretical and empirical contributions of important historical UChicago figures such as Veblen, Knight, Hayek, Friedman, Stigler, Coase and Becker as well as the seminal ideas of contemporary scholars, including several Nobel laureates, in the Department, other academic units on campus, and economists elsewhere with deep Chicago roots.

Instructor(s): A. Sanderson and Staff Terms Offered: Winter

Prerequisite(s): ECON 20200. Third- or fourth-year standing.

ECON 22600. Innovators. 100 Units.

Economists believe that innovation is a primary source of economic growth. Yet although most innovations are made by individuals or small groups, until recently economists have not studied how those exceptional people produce their discoveries. Recent research has shown that there are two very different types of innovators, who have different goals and follow different processes. This course surveys this research, examining the careers and innovations of important practitioners in a range of modern arts, including painters, novelists, sculptors, poets, movie directors, photographers, songwriters, and architects, as well as entrepreneurs and scientists. The material covered in this course adds a new dimension to our understanding of creativity and of how innovators in many different activities produce new forms of art and science.

Instructor(s): D. Galenson Terms Offered: Autumn

Prerequisite(s): ECON 20100

Equivalent Course(s): ECON 42900

ECON 22650. Creativity. 100 Units.

This seminar examines recent research on how creative people innovate in a wide range of intellectual activities. The main project for the course is a term paper that analyzes the creative life cycle of one or more innovators of the student's choice, using both quantitative and qualitative evidence. Students present their research in progress for discussion. The seminar is designed to give students all the tools needed to do this research, including choosing a subject, finding and using an appropriate data set, and negotiating the relevant scholarship.

Instructor(s): D. Galenson Terms Offered: Winter

Prerequisite(s): ECON 20100

Equivalent Course(s): ECON 42800

ECON 23000. Money and Banking. 100 Units.

This course covers economic theories and topical issues in money and banking. We discuss such 'traditional' topics as the quantity theory, the Phillips curve, and the money creation process. We also investigate models of bank runs and financial crises, the tradeoff between rules and discretion, and the New Macroeconomic Synthesis of New Classical. Other topics include New Keynesian approaches to modeling money and monetary policy, practical and institutional issues in European and U.S. monetary policy, and the 2008 financial crisis.

Instructor(s): H. Uhlig Terms Offered: Winter

Prerequisite(s): ECON 20200 (or ECON 20210); ECON 21020 and ECON 23950 are strongly recommended.

ECON 23200. Topics in Macroeconomics. 100 Units.

This course focuses on the use of dynamic general equilibrium models to study questions in macroeconomics. Topics include long-run growth and dynamic fiscal policy (Ricardian equivalence, tax smoothing, capital taxation), labor market search, industry investment, and asset pricing. On the technical side, we cover basic optimal control (Hamiltonians) and dynamic programming (Bellman equations).

Instructor(s): N. Stokey Terms Offered: Autumn

Prerequisite(s): ECON 20200 (or ECON 20210) and MATH 20300 (or MATH 20310 or MATH 20700)

ECON 23230. Macroeconomic Crises. 100 Units.

This course introduces students to economic theories of 'crises' or particular periods of rapid (negative) changes in real and financial variables that are distinct from long-run growth and regular business cycles. In particular, we will cover the origin and end of speculative bubbles, runs and credit crunches. We will study capital flows in the open macroeconomy and the effects of sudden stops. Furthermore, we will analyze sovereign debt crises and defaults -- their causes and consequences for labor market, banking sector, and aggregate income. Looking at some recent episodes, we will also discuss fiscal policy.

Instructor(s): N. Balke Terms Offered: Spring

Prerequisite(s): ECON 23950 and ECON 21020 (or ECON 21030)

ECON 23240. Quantitative Analysis of Macroeconomic Policy. 100 Units.

This course focuses on application and covers three commonly used models in macroeconomics, including structural VAR, DSGE models and state space and regime switching models. Various research tools developed to implement these models, such as how to identify structural shocks and analyze their dynamic effects, and how to conduct counter-factual policy simulations, will be discussed and implemented.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): ECON 21200 or STAT 26100 or BUSN 41202 or Instructor Consent

ECON 23330. Introduction to Dynamic Economic Modeling. 100 Units.

This course provides an introduction to dynamic economic models, with applications to macroeconomics, labor economics, financial economics, and other subfields of economics. The core methodology will be consistent over time, but the applications will vary from year to year. The course will analyze decentralized equilibrium and social planner's problems in dynamic environments. It will focus on developing techniques for analyzing such models graphically, analytically, and computationally. Students should be familiar with constrained optimization (e.g. Lagrangians), linear algebra, and difference equations, as well as microeconomics, macroeconomics, and econometrics at an intermediate level.

Instructor(s): R. Shimer

Prerequisite(s): ECON 20200 (or ECON 20210) and ECON 21020 (or ECON 21030)

ECON 23410. Economic Growth. 100 Units.

The process of economic growth and the sources of differences in economic performance across nations are some of the most interesting, important and challenging areas in modern social science. You cannot travel or read the news without wondering why differences in standards of living among countries are so large. The primary purpose of this course is to introduce undergraduate students to these major issues and to the theoretical tools necessary for studying them. The course therefore strives to provide students with a solid background in dynamic economic analysis, as well as empirical examples and data analysis. We will cover models at an abstract and advanced level. You must have the degree of mathematical maturity associated with the concepts of functions, derivatives, integrals, Taylor series, optimization, ordinary differential equations. Some basic knowledge on regression analysis is also required.

Instructor(s): U. Akcigit Terms Offered: TBD

Prerequisite(s): ECON 20200 (or ECON 20210) and ECON 21020 (or ECON 21030)

ECON 23950. Economic Policy Analysis. 100 Units.

Building on the tools and methods that are developed in the core courses, this course analyzes fiscal and monetary policy and other topical issues. We use both theoretical and empirical approaches to understand the real-world problems.

Instructor(s): Staff Terms Offered: Autumn Spring

Prerequisite(s): ECON 20200; ECON 21020 or 21030 strongly recommended.

ECON 24000. Labor Economics. 100 Units.

Topics include the theory of time allocation, the payoffs to education as an investment, detecting wage discrimination, unions, and wage patterns. Most of the examples are taken from U.S. labor data, although we discuss immigration patterns and their effects on U.S. labor markets. Some attention is also given to the changing characteristics of the workplace.

Instructor(s): Staff Terms Offered: TBD

Prerequisite(s): ECON 20100 and ECON 21020 (or ECON 21030)

ECON 24450. Inequality and the Social Safety Net: Theory, Empirics, and Policies. 100 Units.

This course will introduce students to key economic and conceptual issues surrounding inequality and the social safety net. We will study the theoretical underpinnings and empirical analysis of the social safety net, focusing on the effects of social insurance and public assistance programs on individual and societal outcomes. After studying models of the insurance-incentive tradeoff, we will apply these models and econometric strategies to the empirical analysis of social safety net programs. We will study how social safety net programs interact with labor markets, specifically human capital investment and work decisions, and how they affect long-term outcomes such as income, health, well-being, and inequality. Students will learn how to analyze the tradeoffs involved in social safety net programs and will learn the current state of evidence on these programs.

Instructor(s): M. Deshpande Terms Offered: Spring

Prerequisite(s): ECON 20100 and ECON 21020 or ECON 21030

ECON 24720. Inequality: Origins, Dimensions, and Policy. 100 Units.

For the last four decades, incomes in the United States and across the globe have grown more unequal. That fact has attracted worldwide attention from scholars, governments, religious figures, and public intellectuals. In this interdisciplinary course, participating faculty members drawn from across the University and invited guest speakers will trace and examine the sources and challenges of inequality and mobility in many of its dimensions, from economic, political, legal, biological, philosophical, public policy, and other perspectives. This course is part of the College Course Cluster program: Inequality.

Instructor(s): A. Sanderson and Staff Terms Offered: May be offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Note(s): ECON 24720 or ECON 22410 may be used as an Economics elective, but only one of the two may be used toward Economics major requirements.

Equivalent Course(s): BPRO 28900, PBPL 28920

ECON 25000. Introduction To Finance. 100 Units.

This course develops the tools to quantify the risk and return of financial instruments. These are applied to standard financial problems faced by firms and investors. Topics include arbitrage pricing, the capital asset pricing model, and the theory of efficient markets and option pricing. Prerequisite(s): ECON 20300, STAT 23400, and ECON 21000

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): ECON 20200/20210 and ECON 21020 (or ECON 21030)

ECON 25100. Financial Economics; Speculative Markets. 100 Units.

This course focuses on the description, pricing, and hedging of basic derivative claims on financial assets. We study the characteristics, uses, and payoffs of a variety of contracts where the underlying claims include commodities, foreign currencies, bonds, stocks, or stock indices. We examine contracts such as options, swaps, and futures contracts. We use a unified approach (the technique of portfolio replication) to study pricing of these claims. Students also gain an understanding of strategies for hedging of the risks inherent in holding these derivative claims.

Instructor(s): F. Alvarez Terms Offered: Spring

Prerequisite(s): ECON 20100 and STAT 23400 (or ECON 21010)

ECON 25130. Behavioral Finance. 100 Units.

This course is designed to give students an overview of psychological biases in financial decision-making and examine the impacts of these biases in financial markets. It will also introduce students to behavioral and experimental methodologies--both in the lab and in the field--used in finance. Topics include: non-expected utility theories under risk and ambiguity, biases in probabilistic judgment, framing, loss aversion, self-control and non-exponential discounting, mental accounting and herding.

Instructor(s): G. Ponti Terms Offered: Spring

Prerequisite(s): ECON 20100 and ECON 21020 (or ECON 21030)

ECON 25710. China's Economic Development & Transition. 100 Units.

TBD

Equivalent Course(s): PBPL 27150

ECON 26010. Public Finance. 100 Units.

This course addresses the measurement, explanation, and consequences of government activity including tax systems, expenditure programs, and regulatory arrangements. Topics include cross-country comparisons of government behavior, market analyses of public policy, the incidence of government activity, and effects of economic activity on politics and public policy.

Instructor(s): M. Golosov, C. Clapp Terms Offered: Autumn Winter

Prerequisite(s): ECON 20200 and ECON 21020 (or ECON 21030)

Note(s): ECON 26010 or 26020 may be used as an economics elective, but only one may be used toward degree requirements.

ECON 26020. Public Sector Economics. 100 Units.

ECON 26010 or 26020 may be used as an economics elective, but only one may be used toward degree requirements. This course addresses the measurement, explanation, and consequences of government activity including tax systems, expenditure programs, and regulatory arrangements. Topics include cross-country comparisons of government behavior, market analyses of public policy, the incidence of government activity, and effects of economic activity on politics and public policy.

Instructor(s): C. Mulligan

Prerequisite(s): ECON 23950 AND ECON 21020 (or ECON 21030); or consent of instructor

ECON 26030. The Economics of Socialism. 100 Units.

The course examines the economic theories of socialism ranging from Karl Marx's to market socialism, as well as theories of market power, collective action, and price regulation. These theories are applied to the measurement of socialism, income distribution, surplus value, and the degree of exploitation of labor. These metrics are used to compare various mixed economies including the Nordic model and various sectors in the United States. We consider how the economics of socialism might evolve as the health sector grows in the near future and artificial intelligence transforms the workplace in the long run.

Instructor(s): C. Mulligan Terms Offered: Autumn

Prerequisite(s): Econ 20100/20110

ECON 26040. Human Capital and the Economy. 100 Units.

This course introduces the concept of human capital, its accumulation process, its role in family decisions, and its impact on the economy. Several models are presented and discussed, covering a wide range of topics, including parental altruism, education, bequests, health, fertility, support in old age, income inequality, intergenerational transmission of wealth, specialization, division of labor, and economic growth. The theory is complemented with historical evidence from different countries and periods.

Instructor(s): P. Pena Terms Offered: Autumn

Prerequisite(s): Econ 20200/20210

ECON 26500. Environmental Economics. 100 Units.

This course applies theoretical and empirical economic tools to environmental issues. We discuss broad concepts such as externalities, public goods, property rights, market failure, and social cost-benefit analysis. These concepts are applied to areas that include nonrenewable resources, air and water pollution, solid waste management, and hazardous substances. We emphasize analyzing the optimal role for public policy.

Instructor(s): S. Shaikh

Prerequisite(s): ECON 20100

Equivalent Course(s): ENST 26500, PBPL 32631

ECON 26530. Environment, Agriculture, and Food: Economic and Policy Analysis. 100 Units.

The connections between environment, agriculture, and food are inherent in our social, cultural, and economic networks. Land use, natural resource management, energy balances, and environmental impacts are all important components in the evolution of agricultural systems. Therefore it is important to develop ways in which to understand these connections in order to design effective agricultural programs and policies. This course is designed to provide students with guidance on the models and tools needed to conduct an economic research study on the intersecting topics of environment, agriculture, and food. Students learn how to develop original research ideas using a quantitative and applied economic policy analysis for professional and scholarly audiences. Students collect, synthesize, and analyze data using economic and statistical tools. Students provide outcomes and recommendations based on scholarly, objective, and policy relevant research rather than on advocacy or opinions, and produce a final professional-quality report for a workshop presentation and publication. This small seminar course is open by instructor consent to undergraduate and graduate students who meet the prerequisites. For consideration, please submit a one-page proposal of research to pge@uchicago.edu.

Instructor(s): S. Shaikh Terms Offered: Winter

Prerequisite(s): ECON 20000 or ECON 20100 or PBPL 20000 or PBPL 22200 (or equivalent), STAT 22000 or STAT 23400 or PBPL 26400 (or equivalent); for ECON Enrollment: ECON 20000 and ECON 20100, STAT 23400

Equivalent Course(s): PPHA 32510, PBPL 26530, ENST 26530

ECON 26540. Environment, Agriculture, and Food: Advanced Economic and Policy Analysis. 100 Units.

This course is an extension of ENST 26530 but also stands alone as a complete course itself. Students don't need to take ENST 26530 to enroll in this course. This small seminar course is open by instructor consent to undergraduate and graduate students who meet the prerequisites. For consideration, please submit a one-page proposal of research to pge@uchicago.edu.

Instructor(s): S. Shaikh Terms Offered: Spring

Prerequisite(s): ECON 20000 or ECON 20100 or PBPL 20000 or PBPL 22200 (or equivalent), STAT 22000 or STAT 23400 or PBPL 26400 (or equivalent); for ECON Enrollment: ECON 20000 and ECON 20100, STAT 23400

Equivalent Course(s): PBPL 26531, PPHA 32520, ENST 26531

ECON 26700. Economics of Education. 100 Units.

This course explores economic models of the demand for and supply of different forms of schooling. The course examines the markets for primary, secondary, and post-secondary schooling. The course examines numerous public policy questions, such as the role of government in funding or subsidizing education, the design of public accountability systems, the design of systems that deliver publicly funded (and possibly provided) education, and the relationship between education markets and housing markets.

Instructor(s): D. Neal Terms Offered: TBD

Prerequisite(s): ECON 21020 or ECON 21030

Equivalent Course(s): EDSO 26700, PBPL 26705

ECON 26920. Behavioral Economics and Policy. 100 Units.

The standard theory of rational choice exhibits explanatory power in a vast range of circumstances, including such disparate decision making environments as whether to commit a crime, have children, or seek to emigrate. Nonetheless, shortfalls from full rationality seem not to be uncommon, and are themselves, to some extent, systematic. Behavioral economics documents and tries to account for these departures from full rationality. This course looks at areas in which some modification of the traditional rational choice apparatus might most be warranted; these include decisions that unfold over time, involve low probability events, or implicate willpower. To what extent should public policy respond to shortfalls from rationality or concern itself with promoting happiness?

Instructor(s): J. Leitzel Terms Offered: Autumn

Equivalent Course(s): PBPL 28805

ECON 27000. International Economics. 100 Units.

This course covers international economics with an emphasis on international trade. The basic theories of international trade are introduced and used to analyze welfare and distributional effects of international trade, government policies, and technology diffusion. In addition, this course also discusses the main empirical patterns of international trade and international investment.

Instructor(s): F. Tintelnot Terms Offered: Winter

Prerequisite(s): ECON 20100

Equivalent Course(s): PBPL 27000

ECON 27210. Topics in International Macroeconomics. 100 Units.

This course introduces students to a variety of topics in international finance and open economy macroeconomics. Focusing on theory we will consider questions such as: What are the gains from international financial integration? Should nations attempt to 'manage' capital flows? Are persistent current account deficits 'sustainable'? How do macroeconomic shocks get transmitted across countries? To what extent is the risk of these shocks shared across countries? Should currency area borders coincide with national borders?

Instructor(s): N. Balke Terms Offered: Autumn

Prerequisite(s): Econ 23950

ECON 27700. Health Economics and Public Policy. 100 Units.

This course analyzes the economics of health and medical care in the United States with particular attention to the role of government. The first part of the course examines the demand for health and medical and the structure and the consequences of public and private insurance. The second part of the course examines the supply of medical care, including professional training, specialization and compensation, hospital competition, and finance and the determinants and consequences of technological change in medicine. The course concludes with an examination of recent proposals and initiatives for health care reform.

Instructor(s): Meltzer, D Terms Offered: Spring

Prerequisite(s): PBPL 20000 or ECON 20000 and one undergraduate course in quantitative research methods (Statistics or Econometrics) or the equivalent or consent of the instructor

Equivalent Course(s): PPHA 38300, PBPL 28300, CCTS 38300

ECON 27720. Economics and Regulation of Health Care Markets: Theory and Empirics. 100 Units.

This course explores theoretical and empirical facets of the economics of health care and the industrial organization of the health care sector. The course primarily follows the approach of model-driven empirical work, combining economic modelling with experimental and observational data to test for and quantify theoretical predictions. Topics include asymmetric information, adverse selection, demand for medical care, health care externalities, regulation of health insurance markets, health care outside the US, and public and private incentives for medical research. A particular emphasis is on how government regulation and market incentives interact in generating socially relevant outcomes.

Instructor(s): P. Tebaldi Terms Offered: Spring

Prerequisite(s): ECON 20100 required, ECON 21020 strongly preferred

ECON 28000. Industrial Organization. 100 Units.

This course extends the analysis from ECON 20100, with a focus on understanding the way firms make decisions and the effects of those decisions on market outcomes and welfare. The course examines the structure and behavior of firms within industries. Topics include oligopolistic behavior, the problems of regulating highly concentrated industries, and the implementation of U.S. antitrust policy.

Instructor(s): M. Dinerstein Terms Offered: Spring

Prerequisite(s): ECON 20100/20110

ECON 28060. The Economics of Organizations: An Experimental Perspective. 100 Units.

This course offers an introduction to the experimental methodology while at the same time providing the students with up-to-date insights and findings on how to run an organization and how to manage a workforce. Students will learn the basics of the experimental methodology, learn about the most ground-breaking findings in experimental economics related to the functioning of firms, and know the relevant papers and findings in organizational and personnel economics with a particular emphasis on the question of how to set incentives for workers.

Instructor(s): S. Neckermann Terms Offered: Winter

Prerequisite(s): ECON 20100 and STAT 23400 (or ECON 21010)

ECON 28100. The Economics of Sports. 100 Units.

This is a course in microeconomics that applies traditional product and factor market theory and quantitative analysis to contemporary economic issues in professional and college athletics. Topics include the sports business; market structures and outcomes; the market for franchises; barriers to entry, rival leagues, and expansion; cooperative, competitive, and collusive behavior among participants; labor markets, productivity, and compensation of players; racial discrimination; public policies and antitrust legislation; and financing of stadiums.

Instructor(s): A. Sanderson Terms Offered: Spring

Prerequisite(s): ECON 20100; ECON 21020 or ECON 21030 strongly recommended

ECON 28600. Economic Analysis of Law. 100 Units.

This course involves the application of the choice theory of economics to the opportunities obtainable within different legal environments. The likelihood that a person will choose to return a lost wallet, keep a promise, drive more carefully, or heed the terms in a will is partly a function of the applicable laws and regulations. Alternative rules, under the standard Law and Economics approach, are compared in terms of the economic efficiency of their subsequent outcomes. This efficiency lens of Law and Economics is applied to rules concerning property, torts, contracts, and criminal behavior.

Instructor(s): J. Leitzel Terms Offered: Spring

Prerequisite(s): ECON 20100

Equivalent Course(s): PBPL 28605

ECON 28620. Crony Capitalism. 100 Units.

The economic system prevailing in most of the world today differs greatly from the idealist version of free markets generally taught in economic classes. This course analyzes the role played by corporate governance, wealth inequality, regulation, the media, and the political process in general in producing these deviations. It will explain why crony capitalism prevails in most of the world and why it is becoming more entrenched also in the United States of America. The course, which requires only basic knowledge of economics, welcomes undergraduates. Grades will be determined as follows: 40% by the sum of all the homework, 30% by class participation and 30% by the final. Registration for this class concludes at the end of week 1.

ECON 28700. The Economics of Crime. 100 Units.

This course uses theoretical and empirical economic tools to analyze a wide range of issues related to criminal behavior. Topics include the police, prisons, gang behavior, guns, drugs, capital punishment, labor markets and the macroeconomy, and income inequality. We emphasize the analysis of the optimal role for public policy.

Instructor(s): S. Levitt

Prerequisite(s): ECON 20100 required; STAT 23400, ECON 21010, or ECON 21020 strongly recommended

Equivalent Course(s): PBPL 23200

ECON 29700. Undergraduate Reading and Research. 100 Units.

Students are required to submit the College Reading and Research Course Form. Prerequisite(s): Consent of directors of the undergraduate program

Instructor(s): J. Wong Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of directors of the undergraduate program

ECON 29800. Undergraduate Honors Workshop. 100 Units.

For details, see the preceding Honors section.

Instructor(s): K. Yoshida, V. Lima Terms Offered: Autumn Spring Winter

Prerequisite(s): Faculty sponsorship and consent of honors workshop supervisors

Economics (ECMA) Courses**ECMA 30770. Decision and Strategy. 100 Units.**

ECON 20700 or 30770 may be used as an economics elective, but only one may be used toward degree requirements.

This course provides a formal introduction to game theory with applications in economics. We will study models of how individuals make decisions, and how those decisions are shaped by strategic concerns and uncertainty about the world. The topics will include the theory of individual choice, games of complete and incomplete information, and equilibrium concepts such as Nash equilibrium. The applications will include oligopoly, auctions, and bargaining. The course is appropriate for advanced undergraduates who are interested in a rigorous mathematical approach to understanding human behavior.

Instructor(s): B. Brooks Terms Offered: Winter

Prerequisite(s): Prerequisites for Undergraduates: ECON 20100/ECON 20110 and MATH 20300/MATH 20310/MATH 20700, or consent of instructor

ECMA 30780. Decision and Strategy II. 100 Units.

We continue the formal introduction to decision theory and game theory begun in ECMA 30780, with a specific focus on models of incomplete information. Topics covered include subjective expected utility, Bayesian games, contract theory, and mechanism design. Among the applications we will consider are auctions, collusion, entry deterrence, and strategic communication. The course is appropriate for advanced undergraduates who are interested in a rigorous mathematical approach to decision making in strategic situations.

Instructor(s): B. Brooks Terms Offered: Spring

Prerequisite(s): ECMA 30770 or consent of instructor

ECMA 30800. Theory of Auctions. 100 Units.

In part, this course covers the analysis of the standard auction formats (i.e., Dutch, English, sealed-bid) and describes conditions under which they are revenue maximizing. We introduce both independent private-value models and interdependent-value models with affiliated signals. Multi-unit auctions are also analyzed with an emphasis on Vickrey's auction and its extension to the interdependent-value setting.

Instructor(s): P. Reny Terms Offered: Winter

Prerequisite(s): PQ for Undergraduates: ECON 20100 (or Econ 20110), and MATH 20300 (or Math 20310 or Math 20700), and STAT 24400 (or STAT 24410)

ECMA 31000. Introduction to Empirical Analysis. 100 Units.

This course is an introduction to applied econometrics. Students will obtain a theoretical and practical understanding of how to use a variety of tools in their own work. The first part of the course covers estimation and testing in the linear regression model. We begin the analysis under the Gauss-Markov assumptions, discuss problems that arise when these assumptions are violated and present some solutions. Topics include ordinary and generalized least squares and instrumental variables methods (IV/2SLS/GMM). The second part of the course will cover topics among: Binary Response, LASSO, Panel Data, Difference in Differences, Synthetic Controls, Identification of (Local) Average treatment effects, Regression Discontinuity, Nonparametric Regression. Assignments will include both theoretical questions and problems involving data. Necessary tools from linear algebra and statistics will be reviewed as needed.

Instructor(s): J. Hardwick Terms Offered: Autumn

Prerequisite(s): PQs for Undergraduates: Econ 21030 or Econ 21110 or Econ 21130

ECMA 31130. Topics in Microeconometrics. 100 Units.

This course focuses on micro-econometric methods that have applications to a wide range of economic questions. We study identification, estimation, and inference in both parametric and non-parametric models and consider aspects such as consistency, bias and variance of estimators. We discuss how repeated measurements can help with problems related to unobserved heterogeneity and measurement error, and how they can be applied to panel and network data. Topics include duration models, regressions with a large number of covariates, non-parametric regressions, and dynamic discrete choice models. Applications include labor questions such as labor supply, wage inequality decompositions and matching between workers and firms. Students will be expected to solve programming assignment in R.

Instructor(s): T. Lamadon Terms Offered: Autumn

Prerequisite(s): Prerequisites for Undergraduates: ECON 21020 OR ECON 21030

ECMA 31340. Big Data Tools in Economics. 100 Units.

The goal of the class is to learn how to apply microeconomic concepts to large and complex datasets. We will first revisit notions such as identification, inference and latent heterogeneity in classical contexts. We will then study potential concerns in the presence of a large number of parameters in order to understand over-fitting. Throughout the class, emphasis will be put on project-driven computational exercises involving large datasets. We will learn how to efficiently process and visualize such data using state of the art tools in python. Topics will include fitting models using Tensor-Flow and neural nets, creating event studies using pandas, solving large-scale SVDs, etc.

Instructor(s): T. Lamadon Terms Offered: Autumn

Prerequisite(s): PQs for Undergraduates: ECON 20100/20110 and ECON 21020/21030

Business Economics Courses**BUSN 20550. Application Development. 100 Units.**

The new reality is that every company is a software company. Even in traditionally brick-and-mortar industries, software is performing more and more of the work. Many companies (especially 'lean startups') are purely software-based. Lacking an understanding of how software works and how software is built puts you at a disadvantage. Our goal is to develop an understanding of both. We believe the best way to do that is to build something yourself, using modern languages and workflows. You will build a functional prototype of your own app idea, and will learn the Ruby on Rails web application framework. Higher-level goals are to: 1. Understand the general, platform-independent patterns of how apps work. 2. Communicate more effectively and credibly. 3. Develop a builder's eye for problems that can be solved with technology. 4. Prioritize features more intelligently by developing a better feel for their costs. 5. Implement a modern software development workflow, from task management to version control to quality assurance to deployment. 6. Be able to make and test small changes to an app yourself. This course is entirely project-driven. We will build a series of apps in class. Also, you will build your own app idea which will be your final project. This course is designed for a beginner who has never programmed before. Note: Due to the intensive support requirements and volume of requests, we can't allow auditors.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20550 if BUSN 36110 Application Development taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course. BUSN 20550 (and BUSN 36110) cannot count toward the standard economics major electives or the business economics specialization electives.

Accounting Courses**BUSN 20100. Financial Accounting. 100 Units.**

This course provides an introduction to financial statements and the financial reporting process from a user's perspective. The focus of the course is on fundamental accounting concepts and principles. Students learn how the economic transactions of a firm are reported in the financial statements and related disclosures. The objective of the course is to provide students with basic skills necessary to read and analyze financial statements as well as to prepare students for more advanced financial statement analysis courses.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20100 if BUSN 30000 Financial Accounting taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20101. Managerial Accounting. 100 Units.

This course focuses on internal operations, cost analysis, and performance evaluation, as opposed to the evaluation of external financial statements. Its targeted audience includes students intending become management consultants, entrepreneurs, managers (e.g., CEOs, CFOs, COOs, and product managers), and anyone with an interest in understanding how firms (1) make decisions about products and services and (2) evaluate performance and control risk. Topics covered include overhead allocation, activity based costing, opportunity cost of excess capacity, customer profitability, capital budgeting, transfer pricing, performance evaluation, risk management, internal controls, and fraud. Applications cover both the manufacturing and services sectors.

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20101 if BUSN 30001 Cost Analysis and Internal Controls taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>

BUSN 20140. Accounting and Financial Analysis. 100 Units.

The course is designed to provide the tools necessary to conduct a reasonably sophisticated financial statement analysis. The focus is on the use of financial statements, although this requires some understanding of the process by which financial

statements are produced. We will not limit our study to the financial statements per se. We will also work with supplemental disclosures, which help the analyst to interpret the financial statements and to understand better the economic transactions that gave rise to them. The techniques we will employ will be useful for both equity and credit analysis. Although this course does not cover forecasting or valuation per se, a thorough understanding of financial reporting issues is critical to being able to do a thoughtful financial forecast and valuation. As a result, this course will be especially useful as a prelude to Financial Statement Analysis (BUSN 20150/30130). Specific topics include basic concepts of financial statement analysis, revenue recognition, leasing, financial analysis when there is discontinuity (acquisitions, divestitures, accounting changes), accounting for income taxes, earnings per share. Other topics may be included as well.

Terms Offered: Spring

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20140 if BUSN 30116 Accounting and Financial Analysis taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course. Financial Accounting (BUSN 20100 or BUSN 30000) is a strict prerequisite.

BUSN 20150. Financial Statement Analysis. 100 Units.

This course teaches you how to analyze financial statements in order to develop financial statement models, assess credit risk, and, ultimately, value a company. The course provides both a framework and the tools necessary to analyze financial statements. Its primary objective is to advance your understanding of how financial reporting can be used in a variety of decisions (e.g., lending and investment decisions) and analyses (e.g., financial distress and bankruptcy prediction). It is applied in nature and stresses the use of actual financial statements. Throughout the course, I draw heavily on real business examples and use cases to illustrate the application of the techniques and tools. Topics include traditional ratio analysis techniques, accounting analysis (i.e., identifying earnings management and accounting quality issues), and financial risk assessment. The second part of the course focuses on equity valuation, e.g., the preparation of pro forma financial statements, and the use of various valuation models. While students with a multitude of interests will benefit from this course, students with an interest in investment banking, equity or credit analysis, consulting, strategy, corporate finance, or management will find this course particularly relevant.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20150 if BUSN 30130 Financial Statement Analysis taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course. Financial Accounting (BUSN 20100 or BUSN 30000) is a strict prerequisite.

Entrepreneurship Courses

BUSN 20160. Accounting for Entrepreneurship. 100 Units.

This course provides the core set of tools needed to effectively provide the accounting functions for private, entrepreneurial companies. The course follows the life-cycle of a company that begins life as a start-up, and the course covers the accounting-related financial metrics that are needed by an entrepreneur. We will cover topics relevant at the earliest states of a business, such as setting up the initial accounting infrastructure, through to the companies exit to a strategic buyer, a private equity firm or an IPO.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Booth Book Fee may be assessed. Cannot enroll in BUSN 20160 if BUSN 30121 Accounting for Entrepreneurship: From Start-Up through IPO taken previously. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20330. Building the New Venture. 100 Units.

This course is intended for students who are interested in starting new entrepreneurial businesses. It is tactical, hands-on, and covers the nuts and bolts of starting a company with a lesser emphasis on investing in entrepreneurial ventures. Students will learn how to raise seed funding, compensate for limited human and financial resources, establish brand values and positioning, secure a strong niche position, determine appropriate sourcing and sales channels, and develop execution plans in sales, marketing, product development and operations. The emphasis is managerial and entrepreneurial, essentially a working model for starting an enterprise. Paralleling the course content is the YourCo 'game' in which teams of four to five students simulate building a new venture through the first 18 months of the life of a startup. At the beginning of the class, teams describe a product or service they would like to bring to market, determine the necessary seed funding amount, and outline current staffing and development status. Throughout the quarter, students explore the critical activities required to engage customers, build their product or service, scale operations and build teams. Each week, teams have specific written deliverables for their 'company' based on the course material. Assignments include identifying key hires, choosing an initial target customer set, executing a marketing campaign, creating a sales pitch, completing a development or production plan, identifying important strategic partners, and determining next round funding requirements. 'Game' points are awarded based on feasibility of actions, creativity of solutions, and adherence to seed budget constraints. The course content and structure is applicable to all types of businesses. Class projects range from high tech commercialization to retail concepts to small manufacturing firms. Through class lectures, 'game' assignments, and real world cases, the course covers such topics as new product innovation; building a start-up management team; identifying target customers; inexpensive promotion/advertising techniques; professionalizing a sales process; and leveraging strategic partners. Emphasis is placed on marketing and sales for new enterprises, because this is a major area of entrepreneurial weakness.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20330 if BUSN 34103 Building the New Venture taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20340. Developing a New Venture. 100 Units.

This course is designed to guide groups of students through the new venture creation process. Students will have passed through the first round of the College New Venture Challenge, and will be developing their own original new business ideas. Students may enter the course with ideas that are traditionally for-profit in nature or more socially oriented (either for- or not-for-profit ventures). Students in this course can expect to learn: • how to evaluate the potential and viability of their entrepreneurial ideas • how to conduct research on specific market opportunities • how to analyze the competitive landscape • have to evaluate the merits and drawbacks of unique business models • how to pitch their idea/venture to investors, experts, mentors, and fellow entrepreneurs Additional topics include financial projections, product /technology development, legal issues for startups, and entrepreneurial marketing tactics. Students must prepare and submit original feasibility summaries prior to the application deadline. During the course, students will expand these summaries into full business plans, and will be required to present their ventures multiple times to venture capital investors, entrepreneurs, and startup mentors. Students interested in careers in: startups, technology, business, consulting, and management are encouraged to take this course. Enrollment by permission based on the feasibility summary application. This course is not open to MBA students.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20340 if BUSN 34104 Special Topics in Entrepreneurship: Developing a New Venture (New Venture Challenge) taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course. Consent only: Students will have passed through the first round of the College New Venture Challenge.

BUSN 20920. Social Entrepreneurship and Innovation. 100 Units.

TBD

Terms Offered: TBD

Finance Courses

BUSN 20400. Investments. 100 Units.

This course offers the financial theory and quantitative tools necessary for understanding how stock, bond, and option prices are determined, and how financial assets are used for investment decisions. Topics covered include the following: the term structure of interest rates; portfolio selection based on mean-variance analysis; models of risk and return (including the CAPM and multifactor models); performance evaluation; market efficiency and the random walk hypothesis; asset pricing anomalies and behavioral finance; derivative security pricing (including options, futures, forwards, and swaps); and international investment. This course is not open to MBA students.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20400 if BUSN 35000 Investments taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20405. Financial Instruments. 100 Units.

This course develops, critically assesses, and applies theories of pricing derivatives. Topic discussed are: forward and futures contracts; interest rate and currency swaps; option trading strategies; binomial option pricing; the Black-Scholes-Merton option pricing model and extensions; risk management with options; empirical evidence and time-varying volatility; the pricing and hedging of corporate securities (common stock, senior and junior bonds, callable bonds, warrants, convertible bonds, and puttable bonds); credit risk; and real options.

Terms Offered: Autumn

Prerequisite(s): There are no enforced prerequisites but Investments (Business 20400/35000) is helpful. This course is not open to MBA students. Cannot enroll in BUSN 20405 if BUSN 35100 Financial Instruments taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20410. Corporation Finance. 100 Units.

This course provides you with an understanding of major decisions made by corporate financial managers and to familiarize you with the tools used to make these decisions. The first part of the course covers methods used to value investment opportunities. Particular attention is given to discounted cash flow valuation, including the methods of weighted average cost of capital (WACC) and adjusted present value (APV). The second part of the course focuses on issues of corporate financial structure. The focus will be on the choice of financing through equity, debt and other types of securities and on payout policies through dividends. Specialized topics, such as mergers and acquisitions and corporate hedging will be covered as time permits.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20410 if BUSN 35200 Corporation Finance taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

Management Courses

BUSN 20701. Managing in Organizations. 100 Units.

Successfully managing other people - be they competitors or co-workers - requires an understanding of their thoughts, feelings, attitudes, motivations, and determinants of behavior. Developing an accurate understanding of these factors, however, can be difficult to achieve because intuitions are often misguided and unstructured experience can be a poor teacher. This course is intended to address this development by providing the scientific knowledge of human thought and behavior that is critical for successfully managing others, and also for successfully managing ourselves.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20701 if BUSN 38001 Managing in Organizations taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20702. Managerial Decision Making. 100 Units.

This course is designed to make you a better decision maker. Good decision makers know how to recognize decision situations, then how to represent the essential structure of the situations, and how to analyze them with the formal tools from decision theory. But, perhaps more important, they need to be able to think effectively about the inputs into a decision analysis, whether to trust the analysis, and how to use the outputs to guide actions by themselves and their firms. And, maybe most important of all, they need to know how to make effective, unaided intuitive decisions, and to recognize the limits on their intuitive skills. This course will move back and forth between formal, optimal models and behavioral, descriptive models to help you understand and improve your native decision making abilities.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20702 if BUSN 38002 Managerial Decision Making taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20710. Behavioral Economics. 100 Units.

Behavioral economics applies psychological insights to economic markets and decision making. In this class, we will discuss the recent theoretical and empirical advances that have been made in this increasingly important field of economics. Being thoughtful about the role of psychology can lead to a greater understanding of how the economy works.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20710 if BUSN 38120 The Study of Behavioral Economics taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

Marketing Courses

BUSN 20600. Marketing Management. 100 Units.

The objective of the course is to provide an introduction to marketing strategy. The course develops a common framework (3Cs/4Ps) to analyze real world problems presented in business cases and synthesize recommendations addressing strategic marketing issues. Numerous tools that are used to support the framework are also introduced. GOALS: 1. Introduce marketing strategy and the elements of marketing analysis or business situation analysis: Customer analysis, Company analysis, and Competitor analysis (3Cs). 2. Develop familiarity with tactical use of elements of the marketing mix - product policy, pricing, promotion, and placement/distribution (4 Ps) - in a manner consistent with marketing analysis and strategy. 3. Integrate elements of the framework prescriptively into real world business situations. 4. Provide exposure to business case analysis and critical thinking common in case based business classes. FORMAT: Approximately half of each class is discussion of business cases. Remainder of the class is dedicated to the presentation and discussion of theories, concepts, analytical techniques and empirical findings useful in marketing management. Study groups of 4 to 5 students will work on exercises and brief in-class presentations using tools from lectures. Students will also write-up (typically 1 to 2 pages long) several cases individually using a format provided in class. Content includes some light quantitative work. This course is not open to MBA students.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20600 if BUSN 37000 Marketing Strategy taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20610. Pricing Strategy. 100 Units.

This course blends marketing analytic frameworks, marketing strategy & microeconomic theory, and data to formulate actionable pricing strategies. Students will learn how to coordinate pricing decisions with the rest of the marketing value proposition. Numerous pricing structures are developed in the course, along with their microeconomic foundations. Students will learn the underlying theory for each pricing structure, along with the practical considerations for implementation

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20610 if BUSN 37202 Pricing Strategies taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20620. Data Driven Marketing. 100 Units.

Marketing decisions in the era of big data are increasingly based on a statistical analysis of large amounts of transaction and customer data that provides the basis for profitability and ROI predictions. The goal of this class is to introduce modern data-driven marketing techniques and train the students as data scientists who can analyze data and make marketing decisions using some of the state-of-the-art tools that are employed in the industry. We will cover a wide range of topics, including

demand modeling, the analysis of household-level data, customer relationship management (CRM) and database marketing, and elements of digital marketing. The focus throughout is on predicting the impact of marketing decisions, including pricing, advertising, and customer targeting, on customer profitability and the return on investment (ROI) from a customer interaction.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): BUSN 20600 or BUSN 37000 required prereq. Previous stats background helpful. This course is not open to MBA students. Cannot enroll in BUSN 20620 if BUSN 37105 Data Science for Marketing Decision Making taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

Operations Courses

BUSN 20500. Operations Management. 100 Units.

This core course focuses on understanding levers for structuring, managing, and improving a firm's recurring business processes to achieve competitive advantage in customer responsiveness, price, quality, and variety of products and services. These levers are broadly applicable to service firms, for example banks, hospitals, and airlines, as well as to traditional product-based firms. Processes within firms, as well as between firms, i.e. supply chains, are explored. The fundamental principles underlying state-of-the-art practices, such as Lean, Mass Customization, and Time-Based Competition, are explored so that students learn to critically evaluate these and other operational improvement programs. Students learn the basics of how to manage the operations of a firm, and how operations issues affect and are affected by the many business decisions they will be called upon to make or recommend in their careers. As such, this course is essential to students aspiring to become consultants, entrepreneurs, or general managers. A working knowledge of operations is also indispensable to those interested in marketing, finance, and accounting, where the interface between these functions and operations is critical. Finally, an understanding of how firms become market leaders through operations is important in investment careers. This course is not open to MBA students.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20500 if BUSN 40000 Operations Management: Business Process Fundamentals taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20510. Managerial Decision Modeling. 100 Units.

This course is designed to sharpen students' analytical skills and elucidate quantitative modeling as an aid in managerial decision-making. The course teaches various ways to frame, set up and solve managerial questions about resource allocation, revenue management, finance, marketing, operations and risk analysis using Microsoft Excel, as well as various tools and add-ins. The course will introduce various modeling frameworks and analytical tools in optimization and simulation. Students in this course will become proficient in formulating relevant managerial questions in the language of optimization and simulation modeling, as well as in solving the resulting problems using the frameworks covered in the course and interpreting the results. The course involves hands-on active learning through in-class cases and examples, homework and term project which applies the tools and modeling frameworks learned in the course to a business problem.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20510 if BUSN 36106 Managerial Decision Modeling taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20520. Supply Chain Management. 100 Units.

The supply chain of a firm is critical to its performance. Supply chains are networks of organizations that supply and transform materials and distribute final products to consumers. If designed and managed properly, these networks can be a crucial source of competitive advantage for both manufacturing and service enterprises. Students will learn how to examine and improve the flow of materials and information through this network of suppliers, manufacturers, distributors, and retailers in order to match supply with demand (i.e., to get the right products to the right customers in the right amount and at the right time). Key topics include inter- and intra-firm coordination, incentive design, the impact of uncertainty, and the role of information technology. Special emphasis is given to understanding how the business context shapes managerial decisions regarding the strategic design and management of the supply chain.

Terms Offered: Spring

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20520 if BUSN 40101 Supply Chain Strategy and Practice taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

Statistics Courses

BUSN 20800. Big Data. 100 Units.

Big Data is a course about data mining: the analysis, exploration, and simplification of large high-dimensional datasets. Students will learn how to model and interpret complicated 'Big Data' and become adept at building powerful models for prediction and classification. Techniques covered include an advanced overview of linear and logistic regression, model choice and false discovery rates, multinomial and binary regression, classification, decision trees, factor models, clustering, the bootstrap and cross-validation. We learn both basic underlying concepts and practical computational skills, including techniques for analysis of distributed data. Heavy emphasis is placed on analysis of actual datasets, and on development of application specific methodology. Among other examples, we will consider consumer database mining, internet and social media tracking, network analysis, and text mining.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20800 if BUSN 41201 Big Data taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20810. Machine Learning. 100 Units.

Students will learn about state-of-the-art machine learning techniques and how to apply them in business related problems. Techniques will be introduced in the context of business applications and the emphasis will be put on how machine learning can be used to create value and provide insights from data. First, and the biggest, part of the class will focus on predictive analytics. Students will learn about decision trees, nearest neighbor classifiers, boosting, random forests, deep neural networks, naive Bayes and support vector machines. Among other examples, we will apply these techniques to detecting spam in email, click-through rate prediction in online advertisement, image classification, face recognition, sentiment analysis and churn prediction. Students will learn what techniques to apply and why. In the second part of the class, students will learn about unsupervised techniques for extracting actionable patterns from data. Examples include clustering, collaborative filtering, probabilistic graphical modelling and dimension reduction with applications to customer segmentation, recommender systems, graph and time series mining, and anomaly detection.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20810 if BUSN 41204 Machine Learning taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20820. Financial Econometrics. 100 Units.

This course covers a variety of topics in financial econometrics. The topics covered are of real- world, practical interest and are closely linked to material covered in other advance finance courses. Topics covered include ARMA models, volatility models (GARCH), factor models, models for time varying correlations, analysis of panel data, cointegration models for long-run co-movement between prices and models for transactions data and the analysis of transactions cost.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20820 if BUSN 41203 Financial Econometrics taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

Strategy and the Business Environment Courses

BUSN 20230. International Financial Policy. 100 Units.

This course will help students develop an understanding of issues in international macroeconomics that are important for investors and managers operating in the global marketplace. It will cover theories of the determination of exchange rates and interest rates, the management of foreign exchange risk, international capital flows, debt and currency crises, international monetary and exchange rate regimes, the roles of the international financial institutions in developing countries, and other characteristics of international financial markets.

Instructor(s): Faculty TBD Terms Offered: TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20230 if BUSN 33502 International Financial Policy taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

BUSN 20900. Competitive Strategy. 100 Units.

The course applies microeconomics (including elements of price theory, game theory, and industrial organization) to analyze decisions firms face in business environments. There will be specific focus on strategic decisions and the factors that influence firms' competitive advantages. Class time will be devoted to lectures and case discussions. Topics covered include sources of competitive advantage, scope of the firm, efficient performance, pricing, entry and exit, vertical structure, and network externalities.

Instructor(s): Faculty TBD

Prerequisite(s): This course is not open to MBA students. Cannot enroll in BUSN 20900 if BUSN 42001 Competitive Strategy taken previously. Booth Book Fee may be assessed. Refer to FAQ webpage for registration and schedule details: <https://tinyurl.com/y8wz3oge>. All first year college students are restricted from enrolling into this course.

Education and Society

Department Website: <https://voices.uchicago.edu/coed/about-minor/>

Minor in Education and Society

Courses in the Education and Society minor probe fundamental questions about the interplay between human development and the institution of schooling using the tools of the social science disciplines. Courses explore how people learn and teach as well as the complex relationships between education and the communities and societies it is situated within. Courses are theory-driven yet also provide important insights into the social contexts of education, strategies for strengthening educational practice, and levers for reducing social inequality in academic achievement. The minor spans a diverse set of course listings because education as a discipline spans the life course and happens in many contexts: in the schoolhouse, the family, communities, workplaces, and political arenas. Psychological, social, economic, political, and cultural factors influence educational trajectories and outcomes ranging from individual health and income to forms of social inequality and trajectories of economic development. The interactions among educational organizations and other institutions shape the possibilities for innovation and intentional reform. To understand the intersection of educational institutions and the broader societies, these courses cross boundaries among theory, research, policy, and practice. This minor is focused on education topics from a theoretical and methodological perspective. College students in any field of study may complete a minor in Education and Society. The flexibility of this course of study complements majors in any of the disciplines.

Program Requirements

Students pursuing the Education and Society minor are required to enroll in CHDV 20100 Human Development Research Design. This is predicated on the belief that the theoretical study of education should be rooted in a broad understanding of methods, and that the course of study lends itself to the use of both qualitative and quantitative methods. Students must also complete four approved electives that consider psychological, social, economic, political, or cultural factors in education. The four approved courses may be taken from the list of courses outlined by the faculty co-administrators annually. Students may also petition for other courses not on the list to be counted toward the minor with the faculty co-administrators.

The Education and Society minor requires a total of five courses, including:

- 1. CHDV 20100 Human Development Research Design (Students majoring in Comparative Human Development must complete an alternative methods course, as described below.)
- 2. Four approved courses designated as counting toward the Education and Society minor.

Summary of Requirements

CHDV 20100	Human Development Research Design *	100
Four approved electives		400
Total Units		500

* CHDV majors must complete an alternative course. Please see below.

Alternative Methods Courses for CHDV Majors

The following methods courses are approved alternatives for Comparative Human Development majors. Additional methods courses may also be approved by consent from the faculty co-administrators.

ANTH 21420	Ethnographic Methods	100
CHDV 26228	Ethnographic Methods	100
ECON 21010	Statistical Methods in Economics	100
PBPL 26400	Quantitative Methods in Public Policy	100
PSYC 20200	Psychological Research Methods	100
SOCI 20001	Sociological Methods	100

Approved Elective Courses

CHDV 20100	Human Development Research Design	100
CHDV 20207	Race, Ethnicity, and Human Development	100
CHDV 20209	Adolescent Development	100
CHDV 20305	Inequality in Urban Spaces	100
CHDV 23305	Critical Studies of Mental Health in Higher Education	100
CHDV 25120	Child Development and Public Policy	100
CHDV 44220	Schools as a Social Context	100
ECON 26700	Economics of Education	100

EDSO 23001	From the State House to the School House: Educational Policy and Student Achievement	100
EDSO 23002	Schooling and Identity	100
EDSO 23003	The Urban High School: History, Policy and Reform	100
EDSO 23004	Ethnography of Children and Childhood	100
EDSO 23005	Education and Social Inequality	100
EDSO 23007	Language, Culture, and Education	100
EDSO 23008	Approaches to K-12 Teaching and Learning	100
EDSO 23009	Research Practice Partnerships in Education	100
EDSO 27919	Research in School Improvement	100
HIPS 23000	The Organization of Knowledge	100
HIST 27307	Schools and Space: A Chicago History	100
PBPL 25405	Child Poverty and Chicago Schools	100
PBPL 25860	Crime, Justice, and Inequality in the American City	100
PBPL 27809	Violence in the Early Years	100
PBPL 27821	Urban Schools and Communities	100
PBPL 28029	Education Policy	100
PBPL 28350	Education and Development: Policy and Research	100
PLSC 22819	Philosophy of Education	100
PSYC 20100	Psychological Statistics	100
PSYC 20250	Introduction to Statistical Concepts and Methods	100
PSYC 20400	Cognitive Psychology	100
PSYC 20500	Developmental Psychology	100
PSYC 21116	The Development of Social Cognition	100
PSYC 22580	Child Development in the Classroom	100
PSYC 23000	Cultural Psychology	100
PSYC 23200	Introduction to Language Development	100
PSYC 23800	Introduction to Learning and Memory	100
SOCI 20192	The Effects of Schooling	100
SOSC 26008	Principles and Methods of Measurement	100
SOSC 26009	Introductory Statistical Methods	100
SSAD 21000	Race & American Public Schools	100
SSAD 63412	Cultural Studies in Education	100
SSAD 66000	History of American Urban Education	100

Approved, eligible courses for the Education and Society minor will be listed each year on the Education and Society minor website (<https://voices.uchicago.edu/coed/about-minor/>).

Advising and Grading

Students who elect the minor program in Education and Society must meet with the program director before the end of Spring Quarter of their third year to declare their intention to complete the minor. The director's approval for the minor program should be submitted to a student's College adviser by the Spring Quarter of a student's third year.

Courses in the minor may not be double counted with the student's major(s), other minors, or general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Education and Society Courses

The following EDSO courses are for reference only. See Class Search at registrar.uchicago.edu/classes (<http://registrar.uchicago.edu/classes/>) for specific offerings. See the Education and Society webpage at <https://voices.uchicago.edu/coed/minor-courses/> for further information on quarterly offerings.

EDSO 20100. Human Development Research Design. 100 Units.

The purpose of this course is to expose CHD majors in college to a broad range of methods in social sciences with a focus on human development research. The faculty in Comparative Human Development is engaged in interdisciplinary research encompassing anthropology, biology, psychology, sociology, and applied statistics. The types of data and methods used by faculty span the gamut of possible methodologies for addressing novel and important research questions. In this course, students will study how appropriate research methods are chosen and employed in influential research and will gain hands-on experience with data collection and data analysis. In general, the class will meet as a whole on Mondays and will have

lab/discussion sections on Wednesdays. The lab/discussion sections are designed to review the key concepts, practice through applying some of the methods, and prepare students for the assignments. Students in each section will be assigned to small groups. Some of the assignments are group-based while others are individual-based.

Instructor(s): E. Abdelhadi Terms Offered: Winter

Note(s): Required Course for Comparative Human Development Majors

Equivalent Course(s): HLTH 20100, CHDV 20100, PSYC 21100

EDSO 20209. Adolescent Development. 100 Units.

Adolescence represents a period of unusually rapid growth and development. At the same time, under the best of social circumstances and contextual conditions, the teenage years represent a challenging period. The period also affords unparalleled opportunities with appropriate levels of support. Thus, the approach taken acknowledges the challenges and untoward outcomes, while also speculates about the predictors of resiliency and the sources of positive youth development.

Instructor(s): M. Spencer Terms Offered: Spring

Prerequisite(s): Students will have previously taken one other course in CHDV

Note(s): CHDV Distribution: B

Equivalent Course(s): PSYC 20209, CHDV 20209

EDSO 20305. Inequality in Urban Spaces. 100 Units.

The problems confronting urban schools are bound to the social, economic, and political conditions of the urban environments in which schools reside. Thus, this course will explore social, economic, and political issues, with an emphasis on issues of race and class as they have affected the distribution of equal educational opportunities in urban schools. We will focus on the ways in which family, school, and neighborhood characteristics intersect to shape the divergent outcomes of low- and middle-income children residing with any given neighborhood. Students will tackle an important issue affecting the residents and schools in one Chicago neighborhood. This course is part of the College Course Cluster: Urban Design.

Instructor(s): M. Keels Terms Offered: Autumn

Note(s): CHDV Distribution: B; 2*

Equivalent Course(s): CRES 20305, EDSO 40315, CHDV 20305, PBPL 20305

EDSO 20774. Multilingualism in Mind & Social Interaction: Language, Self, & Thought in the Multilingual Context. 100 Units.

This course provides an overview of theory and research on bilingualism. Through a critical examination of psycholinguistic and sociolinguistic approaches to bilingualism, we will aim to arrive at a comprehensive account of bilingual experience and its practical implications for education and mental health in a globalizing world. In the course, we will address the following topics: 1.

Instructor(s): Numanbayraktaroglu, S. Terms Offered: Winter

Prerequisite(s): N/A

Note(s): CHDV Distribution: B, C; 3*, 5*

Equivalent Course(s): EDSO 30774, CHDV 20774, CHDV 30774

EDSO 21100. Cultural Psychology. 100 Units.

There is a substantial portion of the psychological nature of human beings that is neither homogeneous nor fixed across time and space. At the heart of the discipline of cultural psychology is the tenet of psychological pluralism, which states that the study of 'normal' psychology is the study of multiple psychologies and not just the study of a single or uniform fundamental psychology for all peoples of the world. Research findings in cultural psychology thus raise provocative questions about the integrity and value of alternative forms of subjectivity across cultural groups. In this course we analyze the concept of 'culture' and examine ethnic and cross-cultural variations in mental functioning with special attention to the cultural psychology of emotions, self, moral judgment, categorization, and reasoning.

Instructor(s): R. Shweder Terms Offered: Autumn

Prerequisite(s): Undergraduates must be in third or fourth year.

Note(s): CHDV Distribution: B, C

Equivalent Course(s): GNSE 31000, PSYC 33000, GNSE 21001, AMER 33000, ANTH 35110, PSYC 23000, CHDV 21000, CRES 21100, ANTH 24320, CHDV 31000

EDSO 23001. From the State House to the School House: Educational Policy and Student Achievement. 100 Units.

This class explores the nature of K-12 education policy and practice in the context of improving teaching and learning, as well as outcomes for students. The class will be discussion-based, allowing students to learn about instructional capacity in relation to education policy. For students interested in K-12 education, this class will provide a helpful survey of a range of issues around improving of teaching and learning, including charter schools, teacher professional development and evaluation, as well as accountability systems in general, policy interventions, and market-based reforms. Students will be expected to make site visits outside of class time.

Instructor(s): C. Abelman Terms Offered: Spring

Equivalent Course(s): CHDV 23001

EDSO 23002. Schooling and Identity. 100 Units.

This course examines the dynamic relations between schooling and identity. We will explore how schools both enable and constrain the identities available to students and the consequences of this for academic achievement. We will examine these relations from multiple disciplinary perspectives, applying psychological, anthropological, sociological, and critical theories to understanding how students not only construct identities for themselves within schools, but also negotiate the identities imposed on them by others. Topics will include the role of peer culture, adult expectations, school practices and enduring social structures in shaping processes of identity formation in students and how these processes influence school engagement

and achievement. We will consider how these processes unfold at all levels of schooling, from preschool through college, and for students who navigate a range of social identities, from marginalized to privileged.

Instructor(s): Lisa Rosen Terms Offered: Winter. Offered 2020-21

Prerequisite(s): Priority registration will be given to MAPSS students seeking the Education and Society certificate.

Equivalent Course(s): EDSO 33002, CHDV 23003

EDSO 23005. Education and Social Inequality. 100 Units.

How and why do educational outcomes and experiences vary across student populations? What role do schools play in a society's system of stratification? How do schools both contribute to social mobility and to the reproduction of the prevailing social order? This course examines these questions through the lens of social and cultural theory, engaging current academic debates on the causes and consequences of social inequality in educational outcomes. We will engage these debates by studying foundational and emerging theories and examining empirical research on how social inequalities are reproduced or ameliorated through schools. Through close readings of historical, anthropological and sociological case studies of schooling in the U.S, students will develop an understanding of the structural forces and cultural processes that produce inequality in neighborhoods and schools, how they contribute to unequal opportunities, experiences, and achievement outcomes for students along lines of race/ethnicity, class, gender, and immigration status, and how students themselves navigate and interpret this unequal terrain. We will cover such topics as neighborhood and school segregation; peer culture; social networks; elite schooling; the interaction between home, society and educational institutions; and dynamics of assimilation for students from immigrant communities.

Instructor(s): Lisa Rosen Terms Offered: Autumn. Offered 2020-21

Equivalent Course(s): CHDV 23005, SOCI 20297, CRES 23005

EDSO 23007. Language, Culture, and Education. 100 Units.

In this course, we will examine current theories and research about differential educational achievement in US schools, including: (1) theories that focus on the characteristics of people (e. g., their biological makeup, their psychological characteristics, their human nature, their essential qualities), (2) theories that focus on the characteristics of groups and settings, (e. g., ethnic group culture, school culture) and (3) theories that examine how cultural processes mediate political-economic constraints and human action. We will discuss the educational consequences of these positions, especially for low income and ethnic and linguistic minority students in the US.

Instructor(s): Lisa Rosen Terms Offered: Spring. Offered 2020-21

Equivalent Course(s): CHDV 23007

EDSO 23008. Approaches to K-12 Teaching and Learning. 100 Units.

This course will explore contemporary approaches to K-12 teaching and learning, looking at how the theoretical foundations that ground each approach lead to different perspectives on the purpose of public education, what students should learn, and how teachers should teach. The class will put these approaches in conversation with one another, exploring areas of agreement and conflict. Students will learn to observe and analyze classroom instruction, and hear firsthand from local practitioners about how each approach manifests in schools. For students interested in K-12 education, this course will provide a helpful survey of some of the current debates around teaching and learning in public education.

Instructor(s): Alex Seeskin Terms Offered: Winter. Offered 2020-21

EDSO 23009. Research Practice Partnerships in Education. 100 Units.

Research and data are vital for educational improvement, yet researchers often wonder why their findings are not used in practice while policymakers and practitioners long for useful information to guide their work. Research-practice partnerships provide a mechanism for producing research that is relevant to decision-making and useful to practice. They focus research on questions that are immediately pressing to practice, incorporate practitioner knowledge, and communicate findings in ways that are attentive to the broader political context in which educators work. In this class, we will examine the ways in which data and research are used in policy and practice. We will consider the various conceptual models that exist around the production and use of research, and the realities of how those models operate in practice. We will learn about different approaches to conducting research-practice partnerships, and examine particular examples of work-considering how the work was done, what was learned, and how the research was used in policy or practice. The course will also consider the challenges involved in developing and maintaining research-practice partnerships, and structures that can facilitate the work.

Instructor(s): Elaine Allensworth Terms Offered: Spring. Offered 2020-21

Prerequisite(s): It is recommended that students take Introductory Statistics or a research methods course concurrent with or prior to this course.

Note(s): Students will find it helpful to have prior knowledge of education policy, and a basic understanding of research methods and policy evaluation.

Equivalent Course(s): MAPS 33009, EDSO 33009

EDSO 27919. Research in School Improvement. 100 Units.

Research evidence and data play an increasingly important and complex role in efforts to reform underperforming school systems in the United States. Both education policy and practice increasingly rely on sophisticated understandings of a dynamic interplay of complex organizations, systems, and policymaking. This course introduces students to cutting edge research for using research and data public school reform efforts, including examples of randomized control trials, district-based research, research-practice partnerships, and quality improvement strategies. The course includes concrete illustrations of research that reshaped educational practice drawn from the UChicago Consortium on School Research.

Instructor(s): David Johnson Terms Offered: Winter. Offered 2020-21

Equivalent Course(s): PBPL 27919

EDSO 30774. Multilingualism in Mind & Social Interaction: Language, Self, & Thought in the Multilingual Context. 100 Units.

This course provides an overview of theory and research on bilingualism. Through a critical examination of psycholinguistic and sociolinguistic approaches to bilingualism, we will aim to arrive at a comprehensive account of bilingual experience and its practical implications for education and mental health in a globalizing world. In the course, we will address the following topics: 1.

Instructor(s): Numanbayraktaroglu, S. Terms Offered: Winter

Prerequisite(s): N/A

Note(s): CHDV Distribution: B, C; 3*, 5*

Equivalent Course(s): CHDV 20774, EDSO 20774, CHDV 30774

EDSO 33006. Schooling and Social Inequality. 100 Units.

How and why do educational outcomes and experiences vary across student populations? What role do schools play in a society's system of stratification? How do schools both contribute to social mobility and to the reproduction of the prevailing social order? This course examines these questions through the lens of social and cultural theory, engaging current academic debates on the causes and consequences of social inequality in educational outcomes. We will engage these debates by studying foundational and emerging theories and examining empirical research on how social inequalities are reproduced or ameliorated through schools. Through close readings of historical, anthropological and sociological case studies of schooling in the U.S, students will develop an understanding of the structural forces and cultural processes that produce inequality in neighborhoods and schools, how they contribute to unequal opportunities, experiences, and achievement outcomes for students along lines of race/ethnicity, class, gender, and immigration status, and how students themselves navigate and interpret this unequal terrain. We will cover such topics as neighborhood and school segregation; peer culture; social networks; elite schooling; the interaction between home, society and educational institutions; and dynamics of assimilation for students from immigrant communities.

Instructor(s): Lisa Rosen Terms Offered: Autumn. Offered 2020-21

Note(s): Priority registration given to MAPSS students seeking the Education and Society certificate. Undergraduate enrollment by consent.

Equivalent Course(s): SOCI 20298, SOCI 30298, EDSO 22006, MAPS 33007, CRES 22006

English Language and Literature

Department Website: <http://english.uchicago.edu>

The Program of Study

The undergraduate program in English Language and Literature provides students with the opportunity to intensively study works of literature originally written in English. Courses address fundamental questions about topics such as the status of literature within culture, the literary history of a period, the achievements of a major author, the defining characteristics of a genre, the politics of interpretation, the formal subtleties of individual works, and the methods of literary scholarship and research.

The study of English may be pursued as preparation for graduate work in literature or other disciplines, or as a complement to general education. Students in the Department of English Language and Literature learn how to ask probing questions of a large body of material; how to formulate, analyze, and judge questions and their answers; and how to present both questions and answers in clear, cogent prose. To the end of cultivating and testing these skills, which are central to virtually any career, each course offered by the English Department stresses writing.

Although the main focus of the English Department is to develop reading, writing, and research skills, the value of bringing a range of disciplinary perspectives to bear on the works studied is also recognized. Besides offering a wide variety of courses in English, the English Department encourages students to integrate the intellectual concerns of other fields into their study of literature. This is done by permitting up to three courses outside the English Department to be counted as part of the major if a student can demonstrate the relevance of these courses to his or her program of study. Those interested in creative writing should see Creative Writing below.

Program Requirements

The Department of English requires a total of 13 courses: 11 courses taken within the Department of English and two language courses beyond the College requirement or their equivalent as outlined under the Language Requirement section below, as well as a statement of academic concentration within the major to be submitted by the end of the third week of Spring Quarter of a student's third year. The program presupposes the completion of the general education requirement in the humanities (or its equivalent), in which basic training is provided in the methods, problems, and disciplines of humanistic study.

Language Requirement

Because literary study itself attends to language and is enriched by some knowledge of other cultural expressions, the major in English requires students to extend their work in a language other than English beyond the level required of all College students. All students must complete one of the following:

- Two quarters of study at the second-year level in a language other than English;
- Two quarters of course work outside the English Department in literature originally written in a language other than English*;
- Two quarters of a computer language as outlined below;
- Two quarters of ENGL electives, if the student has a language placement of 20300-level or higher.

* Students should consult the Director of Undergraduate Studies or the Student Affairs Administrator for a list of courses that would fulfill this requirement.

NOTE: If students have placed into a language's 20200-level course, they should take the course they have tested into and will be able to substitute an ENGL elective for the second language course. Students who place into a language course beyond 20200 (that is, the third course of the intermediate level, or above) can petition for the previous sequences to complete the language requirement. All students should set up an appointment with the Student Affairs Administrator to go through the English department language petition process. Please note that language back credit is not permitted. **Students who petition out of the language distribution requirement must still take 13 courses in total for the English major. An approved petition enables them to count ENGL electives towards the language distribution requirement.**

Students may take two courses in an advanced computer language. As of Autumn 2013, the following course combinations may be taken to satisfy the language requirement:

CMSC 12100-12200 Computer Science with Applications I-II,

CMSC 15100-15200 Introduction to Computer Science I-II, or

CMSC 16100-16200 Honors Introduction to Computer Science I-II.

Course Distribution Requirements

The major in English requires at least 11 departmental courses. Students may substitute up to three courses from departments outside English with the permission of the Director of Undergraduate Studies. Departmental courses should be distributed among the following:

Genre Fundamentals Requirement

Early on, students are required to take at least one of our three genre fundamentals courses (fiction, poetry, or drama), all of which introduce students to techniques for formal analysis and close reading. Alternatively, one course from the 'Approaches to Theater' sequence (ENGL 10950 Approaches to Theater I: Ancient to Renaissance or ENGL 10951 Approaches to Theater II: Late 17th Century to the Present) may be taken to fulfill this requirement. NOTE: ENGL 10800 Introduction to Film Analysis does NOT satisfy the genre fundamentals requirement and may only be used as an elective. Please note that the genre fundamentals requirement was previously referred to as the 'gateway' requirement in earlier editions of the program's College Catalog page.

One English genre fundamentals (poetry, fiction, drama) or 'Approaches to Theater' course

Genre Requirement

Because an understanding of literature demands sensitivity to various conventions and genres, students are required to take at least one course in each of the genres of fiction, poetry, and drama (one of these courses may be one of the genre fundamentals courses above).

One English course in fiction

One English course in poetry

One English course in drama

Period Requirement

Reading and understanding works written in different historical periods require skills and historical information that contemporary works do not require. Students are accordingly asked to study a variety of historical periods in order to develop their abilities as readers, to discover areas of literature that they might not otherwise explore, and to develop their knowledge of literary history. To meet the period requirement in English, students should take at least one course in each of the following:

One English course in literature written before 1650

One English course in literature written between 1650 and 1830

One English course in literature written between 1830 and 1940

One English course in literary or critical theory. Courses fulfilling this requirement are designated in our course listings.

NOTE: Many courses satisfy several requirements. For example, a genre fundamentals course could also satisfy a genre requirement, or a course on Chaucer could satisfy both the genre requirement for poetry and the pre-1650 requirement. The description for each English course includes the distribution areas the course is eligible to satisfy. For details about the requirements met by specific courses, students should consult the Student Affairs Administrator.

Statement of Concentration in the Major

The purpose of the statement of concentration in the major is to help students organize and give coherence to their individual program of study. By the end of the third week in Spring Quarter of their third year, students should submit their one-to-two-page statement to their departmental advisor and the Student Affairs Assistant outlining their emerging scholarly interests. Current majors should please visit the English Department website (<http://english.uchicago.edu/undergrad/undergrad-requirements/#Cluster>) for more information regarding this requirement.

Electives

Electives make up a total of 11 courses. These may include:

Seminars in Research and Criticism

These courses examine different topics and change from year to year. All seminars focus on the analytical, research, and bibliographic skills necessary for producing a substantial seminar paper (around 15–20 pages). They are particularly recommended for those wishing to pursue graduate studies in English, those who wish to write a strong critical BA paper, or those interested in research methods in English.

Makers Seminars

These courses culminate in a final project that can take a variety of forms beyond the research paper.

For updated course information, visit english.uchicago.edu/courses (<http://english.uchicago.edu/courses/>). For required student forms, visit english.uchicago.edu/undergrad/resources (<http://english.uchicago.edu/undergrad/resources/>).

BA Project

The BA Project is an optional component of the English major, but students who wish to be considered for departmental honors must submit a Critical BA Project.

All BA writers must attend a mandatory research info session, which will be held towards the end of Spring Quarter of their third year. The session will prepare students for the preliminary work they will complete for their project during the summer before their fourth year. The student is required to work on an approved topic over the course of the fourth year of

study and to submit a final version to the Director of Undergraduate Studies that has been critiqued by both a faculty advisor and a graduate student preceptor and has gone through revisions based on this feedback and guidance.

Students who wish to use the BA Project in English to meet the same requirement in another major should discuss their proposals with both Directors of Undergraduate Studies no later than the end of their third year. A consent form, to be signed by both departments, is available from the College advising office. It must be completed and returned to the student's College adviser by the end of Autumn Quarter of the student's year of graduation.

The BA Project may develop from a paper written in an earlier course or from independent research. Students who wish to complete a BA Project must submit a proposal (available on the English Department website (<http://english.uchicago.edu/undergrad/resources/>)) by the end of Spring Quarter of their third year. On this form, they identify a faculty member who will serve as their project advisor.

Students work on their BA Project over three quarters. Prior to the Autumn Quarter of their fourth year, students will be assigned a graduate student preceptor who will help them develop pieces of their project and suggest revisions. Over Autumn Quarter, students will attend a series of mandatory colloquia led by the preceptors to prepare them for the upcoming quarter when the bulk of the writing occurs. In the Winter and Spring Quarters, students will continue to meet with their preceptors and will also consult with their individual faculty advisor.

In consultation with the faculty advisor and graduate preceptor, students submit a near-final draft of their paper by the end of week two of Spring Quarter. By the beginning of the fifth week, students submit the final version of their project to their preceptor, faculty advisor, and the Student Affairs Assistant.

Students may elect to register for the BA Project Preparation Course (ENGL 29900) for one quarter credit. Note that the grade for this course is on work toward the BA Project and is normally submitted in Spring Quarter even when the course has been taken in an earlier quarter. See Reading Courses for other information.

Honors

Completion of a BA Project does not guarantee a recommendation for departmental honors. For honors candidacy, a student must have at least a 3.25 grade point average overall and a 3.6 GPA in the major (grades received for transfer credit courses are not included into this calculation).

To be eligible for honors, a student's BA Project must be judged to be of the highest quality by the graduate student preceptor, faculty advisor, and Director of Undergraduate Studies. Honors recommendations are made to the Master of the Humanities Collegiate Division by the department and it is the Master of the Humanities Collegiate Division who makes the final decision.

Summary of Requirements for the Major

The Department of English requires a total of 13 courses: 11 courses taken within the Department of English and two language courses or their equivalent as outlined under the Language Requirement section, as well as a statement of concentration in the major to be submitted by the end of the third week of Spring Quarter of a student's third year. By Winter Quarter of their third year, students must also meet with the Student Affairs Assistant to review their English Requirements Worksheet.

Two quarters of study at the second-year level in a language other than English	200
or two quarters of course work outside the English Department in literature originally written in a language other than English	
or two quarters of a computer language	
or two quarters of ENGL electives, if the student has a language placement of 20300-level or higher	
A total of 11 additional English courses is required to meet the distribution requirements of the major (one course may satisfy more than one requirement):	1100
One genre fundamentals course or 'Approaches to Theater' course	
One English course in fiction	
One English course in poetry	
One English course in drama	
One English course in literature written before 1650	
One English course in literature written between 1650 and 1830	
One English course in literature written between 1830 and 1940	
One English course in literary or critical theory	
One to seven English electives (may include ENGL 29900)	
Statement of Concentration in the Major *	000
BA Project (optional)	000
Total Units	1300

- * The Statement of Concentration in the Major must be submitted by the end of the third week of Spring Quarter of a student's third year. This requirement is worth 000 units. See the section Statement of Concentration in the Major above for details.

Courses Outside the Department Taken for Program Credit

A maximum of three courses outside the Department of English may count toward the total number of courses required by the major. The student, after discussion with the Student Affairs Assistant, may submit a petition for course approval to the Director of Undergraduate Studies before taking courses outside the English Department for credit toward the major. Such courses may be selected from related areas in the University (history, philosophy, religious studies, social sciences, etc.) or they may be taken from a study abroad program.

Four total Creative Writing (CRWR) courses may be counted toward the elective requirement without a petition. However, students double majoring in English and Creative Writing must adhere to a different policy. Please see the Double Majors in English Language and Literature and Creative Writing section below for further details.

Transfer credits for courses taken at another institution are subject to approval by the Director of Undergraduate Studies and are limited to a maximum of three courses. Transferred courses do not contribute to the student's University of Chicago grade point average for the purpose of computing an overall GPA, dean's list, or honors. NOTE: The Office of the Dean of Students in the College must approve the transfer of all courses taken at other institutions, with the exception of courses taken as part of a University-sponsored study abroad program. For details, visit the Transfer Credit page.

Creative Writing

Students who are not majoring in English Language and Literature or Creative Writing may declare the minor in English and Creative Writing. Students interested in pursuing these options should contact the Student Affairs Administrator for Creative Writing for further information. Please note that there is no minor solely in English. The minor in English and Creative Writing for non-English majors is the only minor available through the Department of English Language and Literature.

For more information, visit the Creative Writing website (<https://creativewriting.uchicago.edu/academic-programs/major-creative-writing/>).

Double Majors in English Language and Literature and Creative Writing

Students pursuing double majors may double-count *four courses maximum* between the English and Creative Writing majors. Students who double major in Creative Writing and English typically double-count courses to fulfill the Creative Writing major's four literature requirements: one literary genre course (in a primary genre), one literary theory course, one pre-20th-century literature course, one general literature course.

The two research background electives required for the Creative Writing major can also be English courses, as long as the student observes the shared four-course maximum. Beyond the maximum, students may continue counting Creative Writing courses towards the English major, so long as the course is only counted towards the English major and not Creative Writing.

Minor in English and Creative Writing

Students who are not English Language and Literature or Creative Writing majors may complete a minor in English and Creative Writing. Such a minor requires six courses plus a portfolio of creative work. At least two of the required courses must be Creative Writing (CRWR) workshop courses, with at least one being an Advanced Workshop. Three of the remaining required courses may be taken in either the Department of English Language and Literature (ENGL) or the Program in Creative Writing (CRWR). This may include CRWR Technical Seminars or general education courses, as long as they are not already counted toward the general education requirement in the arts. In some cases, literature courses outside of ENGL and CRWR may count towards the minor, subject to the approval of the Director of Undergraduate Studies for Creative Writing.

In addition, students must enroll in one of the following workshops offered during the Winter Quarter: CRWR 29200 (<http://collegecatalog.uchicago.edu/search/?P=CRWR%2029200>) Thesis/Major Projects: Fiction; CRWR 29300 (<http://collegecatalog.uchicago.edu/search/?P=CRWR%2029300>) Thesis/Major Projects: Poetry; CRWR 29400 (<http://collegecatalog.uchicago.edu/search/?P=CRWR%2029400>) Thesis/Major Projects: Creative Nonfiction. Finally, students must submit a portfolio of their work (e.g., a selection of poems, one or two short stories or chapters from a novel, two or three nonfiction pieces) to the Creative Writing program coordinator by the end of the fifth week in the quarter in which they plan to graduate. Students will work with a graduate student preceptor to compile and refine their final portfolios.

Students who elect the minor program in English and Creative Writing must meet with the program administrator for Creative Writing before the end of Spring Quarter of their third year to declare their intention to complete the minor. Students choose courses in consultation with the administrator. The administrator's approval for the minor program should be submitted to a student's College adviser by the deadline above on a form obtained from the adviser.

Students completing this minor will be given enrollment preference for CRWR Advanced Workshops and Thesis/Major Projects Workshops, and they must follow all relevant admission procedures described at the Creative Writing (<https://creativewriting.uchicago.edu/>) website. For details, see Enrolling in Creative Writing Courses (<http://collegecatalog.uchicago.edu/thecollege/creativewriting/#Enrolling%20in%20Creative%20Writing%20Courses>).

Courses in the minor (1) may not be doubly counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for quality grades (not P/F), and at least half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Summary of Requirements for the Minor Program in English and Creative Writing

Two CRWR workshop courses *	200
Three CRWR or ENGL electives	300
One Thesis/Major Projects Workshop +	100
A portfolio of the student's work	
Total Units	600

* At least one must be an Advanced Workshop.

+ CRWR 29200 (<http://collegecatalog.uchicago.edu/search/?P=CRWR%2029200>) Thesis/Major Projects: Fiction, CRWR 29300 (<http://collegecatalog.uchicago.edu/search/?P=CRWR%2029300>) Thesis/Major Projects: Poetry, or CRWR 29400 (<http://collegecatalog.uchicago.edu/search/?P=CRWR%2029400>) Thesis/Major Projects: Creative Nonfiction.

Minor to Major and Major to Minor

Student circumstances change, and thus a transfer between the major and minor programs may be desirable to students who begin a course of study in either program. Workshop courses (including Beginning Workshops) and one Technical Seminar may count towards the minor, but Fundamentals in Creative Writing will not. The Thesis/Major Projects Workshop will also function as a portfolio workshop for minors. Students should consult with their College adviser if considering such a change and must update their planned program of study with the Program Coordinator or Director of Undergraduate Studies in Creative Writing.

Sample Plan of Study for the Minor

CRWR 10200	Beginning Fiction Workshop	100
CRWR 22110	Advanced Fiction Workshop: Exploring Your Boundaries	100
ENGL 16500	Shakespeare I: Histories and Comedies	100
ENGL 10706	Introduction to Fiction	100
CRWR 29200	Thesis/Major Projects: Fiction	100
ENGL 10703	20th Century Short Fiction	100
A portfolio of the student's work (two short stories)		
Total Units		600

Reading Courses

ENGL 29700	Reading Course	100
ENGL 29900	Independent BA Paper Preparation	100

Enrollment in ENGL 29700 Reading Course or ENGL 29900 Independent BA Paper Preparation requires approval from the Director of Undergraduate Studies. They may be eligible to fulfill requirements for the major if they are taken for a quality grade (not P/F) and include a final paper assignment. A student may only take one Independent BA Paper Preparation course. No student may use more than two reading courses in the major, with the Independent BA Paper Preparation course counting as one of the two. Critical BA writers who wish to register for ENGL 29900 Independent BA Paper Preparation must arrange for appropriate faculty supervision and obtain the permission of the Director of Undergraduate Studies. ENGL 29900 Independent BA Paper Preparation counts as an English elective but not as one of the courses fulfilling distribution requirements for the major.

NOTE: Reading courses are special research opportunities that must be justified by the quality of the proposed plan of study; they also depend upon the availability of faculty supervision. No student can expect a reading course to be arranged automatically.

Grading

Students majoring in English must receive quality grades (not P/F) in all 13 courses taken to meet the requirements of the program. Non-majors may take English courses for P/F grading with consent of instructor.

Advising

Students are encouraged to declare a major in English as early as possible, ideally before the end of their second year. Students who declare the major after their second year should contact the Student Affairs Assistant who will make departmental advising arrangements.

After declaring the major, students should arrange a meeting with the Student Affairs Assistant, who will help students fill out the English Requirements Worksheet. Students should also subscribe to the departmental email list for majors (ugrad-

english@lists.uchicago.edu) (ugrad-english@lists.uchicago.edu) to ensure that they do not miss important communications from the undergraduate office.

Third-year students will be assigned a departmental faculty advisor. Students should meet with their faculty advisor at least twice a year to discuss their academic interests, progress in the major, and long-term career goals. The Student Affairs Assistant and Director of Undergraduate Studies are also available to assist students. Students should meet with the Student Affairs Assistant early in their final quarter to be sure they have fulfilled all requirements.

The London Program

This program, offered in Autumn Quarter, provides students with an opportunity to study British literature and history in the cultural and political capital of England in the Autumn Quarter. In the ten-week program, students take four courses, three of which are each compressed into approximately three weeks and taught in succession by Chicago faculty. The fourth, project-oriented, course is conducted at a less intensive pace. The program includes a number of field trips (e.g., Cornwall, Bath, Canterbury, Cambridge). The London program is designed for third- and fourth-year students with a strong interest and some course work in British literature and history. Applications are available on the University of Chicago's Study Abroad home page (study-abroad.uchicago.edu (<http://study-abroad.uchicago.edu>)) and typically are due in mid-Winter Quarter.

English Language and Literature Courses

ENGL 10606. Genre Fundamentals: Drama. 100 Units.

This course explores the unique challenges of experiencing performance through the page. Students will read plays and performances closely, taking into account not only form, character, plot, and genre, but also theatrical considerations like staging, acting, spectatorship, and historical conventions. We will also consider how various agents—playwrights, readers, directors, actors, and audiences—generate plays and give them meaning. While the course is not intended as a survey of dramatic literature or theater history, students will be introduced to a variety of plays from across the dramatic tradition. (Genre Fundamentals, Drama)

Instructor(s): Tina Post Terms Offered: Winter

Equivalent Course(s): TAPS 16606

ENGL 10620. Literature, Medicine, and Embodiment. 100 Units.

This class explores the connections between imaginative writing and embodiment, especially as bodies have been understood, cared for, and experienced in the framework of medicine. We'll read texts that address sickness, healing, diagnosis, disability, and expertise. The class also introduces a number of related theoretical approaches, including the medical humanities, disability studies, narrative medicine, the history of the body, and the history of science. (Pre-1650, 1830-1940, Theory)

Instructor(s): Julie Orlemanski Terms Offered: Winter

ENGL 10703. 20th Century Short Fiction. 100 Units.

This course presents America's major writers of short fiction in the 20th century. We will begin with Willa Cather's "Paul's Case" in 1905 and proceed to the masters of High Modernism, Hemingway, Fitzgerald, Faulkner, Porter, Welty, Ellison, Nabokov; on through the next generation, O'Connor, Pynchon, Roth, Mukherjee, Coover, Carver; and end with more recent work by Danticat, Tan, and the microfictionists. Our initial effort with each text will be close reading, from which we will move out to consider questions of ethnicity, gender, and psychology. Writing is also an important concern of the course. There will be two papers and an individual tutorial with each student. (Fiction, 1830-1940)

Instructor(s): William Veeder Terms Offered: Autumn

Equivalent Course(s): AMER 10703

ENGL 10709. Genre Fundamentals: Fiction. 100 Units.

This course explores the various strategies and techniques that authors have used to tell stories that claim in one way or another to be realistic. As we take up how storytellers "make it real" we will address key elements of narrative, including point of view, characterization, voice, tone, diction, syntax, setting, symbolism, pacing, modes of mediation, intertextuality, motifs, and figuration. We will focus primarily on novels and short stories, with a nod to the graphic novel at the conclusion of the course. (Fiction, Genre Fundamentals)

Instructor(s): Heather Keenleyside Terms Offered: Spring

ENGL 10800. Introduction to Film Analysis. 100 Units.

This course introduces basic concepts of film analysis, which are discussed through examples from different national cinemas, genres, and directorial oeuvres. Along with questions of film technique and style, we consider the notion of the cinema as an institution that comprises an industrial system of production, social and aesthetic norms and codes, and particular modes of reception. Films discussed include works by Capra, Dash, Deren, Keaton, Hitchcock, Kubrick, Riggs and Sirk.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Note(s): Required of students taking a major or minor in Cinema and Media Studies.

Equivalent Course(s): ARTV 20300, CMST 10100

ENGL 11004. History of the Novel. 100 Units.

We will read one or more novels and novellas from each of the last four centuries and also study movie adaptations of these works. Likely novelists to be studied include Miguel de Cervantes, Samuel Richardson, Henry Fielding, Choderlos de Laclos, Jane Austen, Gustave Flaubert, Charles Dickens, George Eliot, Henry James, Vladimir Nabokov, Franz Kafka, Tom McCarthy, and Zadie Smith. Film screenings will be scheduled and will also be available for watching in the library.

(Fiction, 1650-1830, 1830-1940, Theory) Requirements: one paper of 5-6 pages, one paper of 7-8 pages, regular postings to the online discussion board, and in-class exercises.

Instructor(s): Maud Ellmann Terms Offered: Autumn

ENGL 11008. Introduction to Latinx Literature. 100 Units.

From the activist literature of the Chicano Civil Rights Movement to contemporary fiction and poetry, this course explores the forms, aesthetics, and political engagements of U.S. Latinx literature in the 20th and 21st centuries. Theoretical readings are drawn from Chicana Studies, Latinx Studies, American Studies, Latin American Studies, Hemispheric Studies, Indigenous Studies, and Postcolonial Studies, as we explore Latinx literature in the context of current debates about globalization, neoliberalism, and U.S. foreign policy; Latinx literature's response to technological and socio-political changes and its engagement with race, gender, sexuality, class, and labor; and its dialogues with indigenous, Latin American, North American, and European literatures. (Poetry, 1830-1940, Theory)

Instructor(s): Rachel Galvin Terms Offered: Winter

Equivalent Course(s): CMLT 11008, LACS 11008, SPAN 21008

ENGL 11200. Fundamentals of Literary Criticism. 100 Units.

An introduction to the practice of literary and cultural criticism over the centuries, with a particular emphasis on theoretical debates about meaning and interpretation in the late 20th century and present. Critics and theorists will include Sigmund Freud, Roland Barthes, Barbara Johnson, Raymond Williams, Saidya Hartman, Eve Sedgwick, René Girard, Jacques Derrida, Fredric Jameson, Lauren Berlant, Catherine Gallagher and others. (Genre Fundamentals, Theory)

Instructor(s): Sianne Ngai Terms Offered: Winter

ENGL 12002. Critique of Humanism. 100 Units.

This course will provide a rapid-fire survey of the philosophical sources of contemporary literary and critical theory. We will begin with a brief discussion of the sort of humanism at issue in the critique-accounts of human life and thought that treat the individual human being as the primary unit for work in the humanities and the humanistic social sciences. This kind of humanism is at the core of contemporary common sense. It is, to that extent, indispensable in our understanding of how to move around in the world and get along with one another. That is why we will conduct critique, rather than plain criticism, in this course: in critique, one remains indebted to the system under critical scrutiny, even while working to understand its failings and limitations. Our tour of thought produced in the service of critique will involve work by Hegel, Marx, Gramsci, Freud, Fanon, Lacan, and Althusser. We will conclude with a couple of pieces of recent work that draws from these sources. The aim of the course is to provide students with an opportunity to engage with some extraordinarily influential work that continues to inform humanistic inquiry. (A) (I)

Instructor(s): C. Vogler Terms Offered: Spring

Equivalent Course(s): PHIL 21225, ENGL 34407, PHIL 31225

ENGL 12106. Women of the Avant-Garde. 100 Units.

This course provides an introduction to the written materials of women artists who belonged to various twentieth-century avant-garde movements and circles. The institutions of "woman art" and "the avant-garde" will come under scrutiny as we consider the literary and archival miscellany of pan- & non-sexual, cross-generational, inter-aesthetic, multilingual, and transnational works by such makers as Gertrude Stein, Gwendolyn Brooks, Clarice Lispector, Frida Kahlo, and Yoko Ono. How do these artists conceive of their work and process as interventions into social, political, and historical realities? How does their subjective view of those realities provide an account of the identificatory powers of their gender and sexuality? We will examine the ways in which abstraction in writing becomes useful for commenting on issues raised by feminist and queer theory, periodization, canonization, and institution. Taking to the Regenstein's Special Collections Research Center, we will also open up the criticism, diaries, and letters of these artists to gain a new perspective on their creative processes. In addition to learning how to constellate these materials with the course readings, students will acquire hands-on experience in archival research, annotation, and curation as they make an archival project of their own. Students' final projects will serve as the basis for a prospective library exhibition in concert with Special Collections.

Instructor(s): Rivky Mondal Terms Offered: Winter

Note(s): This course counts as a Foundations course for GNSE majors.

Equivalent Course(s): GNSE 12106

ENGL 12720. Inventing Consciousness: Literature, Philosophy, Psychology. 100 Units.

What is consciousness? What is it like to be conscious? This course answers these questions by examining the emergence and development of consciousness as a concept. As a phenomenon, consciousness probably came into being deep in evolutionary time. Yet as a concept consciousness is relatively new: the European notion of consciousness emerges in the late seventeenth century. This course draws on literature, history, philosophy, and psychology to examine how the concept of consciousness came to possess its explanatory dominance. We will start by acquiring a sense of what consciousness now means in philosophy, biology, neuroscience, and fiction, paying particular attention to how the concept differs from similar ideas in ancient Indian philosophy. We will then turn to two important historical moments. First, we will examine the interplay between philosophy and literature in the late seventeenth century, reading texts by René Descartes, John Milton, Thomas Traherne, and John Locke. Second, we will focus on how, in the late nineteenth and early twentieth centuries, the psychology of William James relates to the "stream of consciousness" techniques in the work of Virginia Woolf. This course stresses historical contingency-consciousness has a birthdate-in order to explore a consequence that follows from this fact: the extent to which current uses of this concept are still shaped by the historical circumstances that conditioned its emergence. (Pre-1650, 1650-1830)

Instructor(s): Timothy Harrison Terms Offered: Spring

Equivalent Course(s): SIGN 26042

ENGL 13000. Academic and Professional Writing (The Little Red Schoolhouse) 100 Units.

Academics and professionals need advanced writing skills if they are to communicate effectively and efficiently. In this intensive, pragmatic course, students master the writing skills they need by first studying and then applying fundamental structures of effective writing. Each week, students meet in a synchronous small-group seminars to discuss each other's papers and then watch asynchronous lecture videos on a new principle. Discussion, editing, critiques, and rewrites ensure that all students sharpen their ability to write with clarity and power.

Instructor(s): L. McEnerney, K. Cochran, T. Weiner Terms Offered: Spring Winter

Prerequisite(s): Third- or fourth-year standing

Note(s): This course does not count towards the ISHU program requirements. May be taken for P/F grading by students who are not majoring in English. Materials fee \$20.

Equivalent Course(s): ENGL 33000

ENGL 15107. Some Versions of Apocalypse. 100 Units.

From prophetic texts of the ancient world to today's fascination with zombie plagues, environmental disaster, and nuclear winter, the genre of apocalypse has given extraordinarily fertile expression to religious, moral, political, and economic beliefs and anxieties. In this course we will explore what is both fearful and alluring about catastrophe on an unimaginable scale, as we read and view apocalyptic works across a wide historical range. (Fiction)

Instructor(s): Mark Miller Terms Offered: Winter

Equivalent Course(s): MDVL 15107, SIGN 26040

ENGL 15220. Unrequited Love in Fiction and Film. 100 Units.

Unrequited love stories are some of the most beloved romances in literature and film. Why do readers and audiences find unique pleasure in the agonizing tragedy of feelings not returned? And what does "unrequited" really mean anyway? This class focuses on unrequited love from the perspective of mostly British women fiction writers and film writer/directors, toggling between eighteenth- and nineteenth-century literature and contemporary romances on screen. From Jane Austen to Céline Sciamma, Eliza Haywood to Sofia Coppola, we will consider how women tell stories of attractions plagued by lack of reciprocity, misunderstandings, persistent longing and social obstacles. Moving across centuries, genre and media, we will consider what changes and what remains consistent in how these women illustrate yearning and dissatisfaction. We will read theories of desire in literature and film by Lauren Berlant, Laura Mulvey, Renata Salecl and others in order to work towards a definition of "unrequited love." Our class will examine unrequitedness across registers, including as a source of dark humor in *The Favourite* and Austen, and as an occasion for psychological and real violence in *Mary Wollstonecraft* and *The Riot Club*. Throughout the course, we will ask ourselves as readers and viewers to interrogate our own investment in the resolution (or, more importantly, the lack thereof) of unrequitedness. (Fiction, 1650-1830, 1830-1940)

Instructor(s): Madison Chapman Terms Offered: Spring

Equivalent Course(s): GNSE 15220

ENGL 15240. Medieval Death. 100 Units.

This course will examine late medieval representations of death and dying, considering it in terms of both a conceptual problematic and a practice, especially as it appears in the literature and art of fourteenth and fifteenth century England. In addition to reading poetic, theological, and philosophical texts from the medieval period, students will examine visual art, architecture, and other media to the end of asking questions about how people and cultures understand and prepare themselves for death. (Pre-1650)

Instructor(s): Jack Dragu Terms Offered: Spring

Equivalent Course(s): MDVL 15240

ENGL 15260. Writing of the Working Class. 100 Units.

The abuse, misery, squalor and disturbances of the working class gripped the Victorian imagination in an urgent and unprecedented way, permeating all aspects of British social and political life-and no less, its literature. At the same time, "the lower orders" increasingly became not only the subject, but the consumers and even producers of this literature. This course will explore the major historical and political events that shaped the lives of the working class in nineteenth-century Britain through the literature that represented and responded to those lives and events. Following E.P. Thompson's notion of class as a process, a historical relationship, a lived experience, we will pay attention to the ways in which the working class was present at its own writing. Major topics will include industrialization, Chartism and other working-class movements, Parliamentary Reform, the New Poor Law, emigration, colonialism, and women's employment. Our survey of literature will cover a range of genres- pamphlets, journalism, political economy and government reports-but we will focus on narrative fiction, contrasting its radical, popular, and bourgeois forms, in order to reflect on how class conflict manifested in the literary marketplace. Major authors will include Charles Dickens, Karl Marx, Elizabeth Gaskell, and Harriet Martineau. (Fiction, 1830-1940)

Instructor(s): Kevin King Terms Offered: Winter

ENGL 15270. Strange Worlds. 100 Units.

Medieval Literature often conjures worlds of almost science-fictional strangeness. We will focus on the fantastic spaces of romance and visionary religious literature to explore the affective, conceptual, and ideological experiments enabled by medieval forms of estrangement. (Poetry, Pre-1650)

Instructor(s): Mark Miller Terms Offered: Spring

ENGL 16003. Ventriloquism in Literature and Culture. 100 Units.

In this class we will collectively identify the conventions that have come to define theatrical tradition known as ventriloquism. While this course will be rooted in the study of performance, we will also look at instances when ventriloquism appears in literature and film as a metaphor and as a trope. By looking at ventriloquism both in its technique

and its thematics we will investigate the extent to which the ventriloquist and the dummy are sexed and racialized categories. Our texts will span from the recorded performances of famous ventriloquists such as Edgar Bergen and Charlie McCarthy, episodes of *The Twilight Zone*, horror films like *Dead of Night* and popular fiction. We will also consult several theoretical texts such as Freud on the uncanny and Winnicott on transitional objects. (Fiction, Drama, Theory)

Instructor(s): Marissa Fenley Terms Offered: Spring

Equivalent Course(s): TAPS 16003

ENGL 16004. Protest Puppetry: Materializing American Publicness. 100 Units.

This course will explore the structural dynamics of protests through a close examination of giant puppets. We will engage with both practices and theories of protest puppetry. You will learn how to craft insurgent objects out of papier maché and other found materials. We will think through this practice alongside theories of the public sphere and ethnographies of protests, uprisings and social movements (on the left and the right) from the 1960s to the present day. Rather than maintain the division between theory and practice, we will investigate the ways in which social movements mobilize theory as liberatory practice and how the practice of "puppetganda" generates theories of publicity from the mechanical and technical demands it makes on its puppeteers, participants and spectators. We will study specific protest events, from pioneers of the artform like Bread and Puppet in the 1960s to the height of protest puppetry during the environmental and global justice movements in the 1980s-2000s. We will ask why protest puppets were especially popular during the rise of neoliberalism and ultimately examine their usefulness in today's political climate in the context of the Black Lives Matter movement and Black uprising as well as the alt-right "rally." (Drama, Theory)

Instructor(s): Marissa Fenley Terms Offered: Winter

ENGL 16500. Shakespeare I: Histories and Comedies. 100 Units.

An exploration of some of Shakespeare's major plays from the first half of his professional career when the genres in which he primarily worked were comedies and (English) histories. Plays to be studied include *The Comedy of Errors*, *The Taming of the Shrew*, *A Midsummer Night's Dream*, *Twelfth Night*, *Richard III*, *Richard II*, *Henry IV Parts 1 and 2*, and *Henry V*. A shorter and a longer paper will be required. (Pre-1650, Drama)

Instructor(s): Ellen MacKay Terms Offered: Winter

Prerequisite(s): general education requirement in the humanities

Equivalent Course(s): FNDL 21403, TAPS 28405

ENGL 17501. Milton. 100 Units.

A study of Milton's major writings in lyric, epic, tragedy, and political prose, with emphasis upon his evolving sense of his poetic vocation and career in relation to his vision of literary, political, and cosmic history. Graduate students will be expected to do additional secondary reading. (Pre-1650, 1650-1830, Poetry), (Med/Ren)

Instructor(s): Joshua Scodel Terms Offered: Spring

Equivalent Course(s): RLST 25405, FNDL 21201

ENGL 17516. Religious Poetry from Donne to Eliot. 100 Units.

This course will study some of the greatest religious poems in our language, focusing on major poets in the 17th century (Donne & Herbert), in the 19th century (Dickinson & Hopkins), and in the 20th century, where we will study T. S. Eliot's *Four Quartets* in its entirety. Mid-term exercise and final paper required. (Poetry, Pre-1650, 1830-1940)

Instructor(s): Richard Strier Terms Offered: Winter

Prerequisite(s): Must have completed HumCore & 1 other poetry course

Equivalent Course(s): RLST 27516

ENGL 17950. The Declaration of Independence. 100 Units.

This course explores important intellectual, political, philosophical, legal, economic, social, and religious contexts for the Declaration of Independence. We begin with a consideration of the English Revolution, investigating the texts of the Declaration of Rights of 1689 and Locke's *Second Treatise* and their meanings to American revolutionaries. We then consider imperial debates over taxation in the 1760s and 1770s, returning Benjamin Franklin's *Autobiography* to its original context. Reading Paine's *Common Sense* and the letters of Abigail Adams and John Adams we look at the multiple meanings of independence. We study Jefferson's drafting process, read the Declaration over the shoulders of people on both sides of the Atlantic, and consider clues to contemporary meanings beyond the intentions of Congress. Finally, we briefly engage the post-revolutionary history of the place and meaning of the Declaration in American life. (1650-1830, 1830-1940) This is a 2018-19 College Signature Course.

Instructor(s): Eric Slauter Terms Offered: Winter

Note(s): This was a 2018-19 College Signature Course.

Equivalent Course(s): HMRT 17950, HIST 17604, SIGN 26039, FNDL 27950, LLSO 27950

ENGL 18250. Irish Literature and Cinema. 100 Units.

Irish literature in English from Swift to Anna Burns (Milkman), including Thomas Moore, Maria Edgeworth, Bram Stoker, Yeats, Synge, Joyce, O'Casey, Brian Friel and Seamus Heaney; Irish Cinema including films by John Ford, Neil Jordan, John Huston, Ken Loach, Lenny Abramson, Jim Sheridan, Kirsten Sheridan, John Crowley. (Fiction, Poetry, Drama, 1650-1830, 1830-1940)

Instructor(s): Jim Chandler Terms Offered: Autumn

Equivalent Course(s): CMST 21650

ENGL 18600. Zizek on Film. 100 Units.

Slavoj Zizek has used film as the great expositor of his theories of ideology, perversion, sexuality, politics, nostalgia, and otherness. In this discussion-heavy course we will watch a lot of film from the directorial subjects of his main discussions (Chaplin, Rossellini, Lynch, Haneke, Kieślowski, Tarkovsky, von Trier, Hitchcock, and others) alongside Zizek's theoretical

writings on their film. The course examines why for the man who has been called the "Elvis of cultural theory" film is such a perfect lens through which to examine social situatedness and intersubjective "aporia." There is no "paperwork" assigned for the course. The course is conducted seminar style and participants are expected to be vocal, prepared, and somewhat ornery.

Instructor(s): M. Sternstein

Equivalent Course(s): CMST 27201

ENGL 18660. The World's a Stage: Performance in Politics, Culture, and Everyday Life. 100 Units.

This course traces the history of the double-edged notion that the world might resemble a stage from its ancient roots to its current relevance in politics, social media, and gender expression, among other areas. We will explore these questions by reading performance texts and performance theory from classical to contemporary, by attending plays and watching films, and by visiting non-theatrical events in order to consider them as occasions for performance. (Drama, Theory)

Instructor(s): John Muse Terms Offered: Autumn

Equivalent Course(s): TAPS 20060, SIGN 26049

ENGL 18860. Black Shakespeare. 100 Units.

This course explores the role played by the Shakespearean canon in the shaping of Western ideas about blackness, in processes of racial formation, and racial struggle from the early modern period to the present. Students will read Shakespearean plays portraying black characters (Othello, Titus Andronicus, The Tempest, Antony and Cleopatra) in conversation with African-American and post-colonial rewritings of those plays (by Toni Morrison, Amiri Baraka, Keith Hamilton Cobb, and Aimé Césaire, among others). (Drama, Pre-1650 ; Med/Ren)

Instructor(s): Noémie Ndiaye Terms Offered: Spring

Equivalent Course(s): TAPS 30040, TAPS 20040, ENGL 38860, CRES 18860

ENGL 18950. Nineties Feminisms. 100 Units.

This course will survey feminist literatures of the 1790s, 1890s, and 1990s. We will cover works by authors like Mary Wollstonecraft, Sarah Grand, and Greta Gaard as well as feminist movements from New Woman ideal in the 1890s to ecofeminism and material feminisms in the 1990s. (1650-1830, 1830-1940, Theory)

Instructor(s): Caroline Heller Terms Offered: Autumn

Equivalent Course(s): GNSE 18950

ENGL 19500. Mary Wollstonecraft and Mary Shelley. 100 Units.

This course examines the major works—novels, political treatises, letters, travel essays—of two of Romanticism's most influential women writers. We will attend to historical, intellectual, and cultural contexts as well as matters of literary concern, such as their pioneering development of modes like gothic and science/speculative fiction, Wollstonecraft's stylistic theories, and Shelley's scenes of imaginative sympathy. (Fiction, 1650-1830).

Instructor(s): Alexis Chema Terms Offered: Spring

Equivalent Course(s): FNDL 29501, GNSE 19500

ENGL 19560. Celebrity: Culture and History. 100 Units.

This course introduces students to the history of celebrity culture, moving from 19th century Britain to the 20th century United States. It focuses on the history of celebrity as it pertains to capitalist culture industries: commercial theater, popular literature, and film. Topics may include the history of tabloids, gossip columns, and fan mail; the origins of the "personal brand"; and debates about inequality and privacy. (Fiction, Drama, 1830-1940, Theory)

Instructor(s): Jordan Pruett Terms Offered: Winter

ENGL 19570. Text as Data: Interpretation in the Digital Humanities. 100 Units.

In recent years, the digitization of large text archives has enabled new ways of researching culture and history at scale. This course gives students a conceptual, beginner-level introduction to these methods, which are sometimes referred to as the "digital humanities." How does literary and cultural history look different when seen from the point of view of an entire nation or society rather than from the point of view of an individual reader? What can we learn about, for instance, the history of tabloids, the rise of the novel, or the political struggles of nineteenth century Black organizers? The course itself presumes no technical expertise whatsoever. Rather, we will explore tools and archives designed for beginners and non-specialists. Our focus will be on the philosophical and interpretive aspects of quantitative research in the humanities rather than on techniques. (Fiction, 1830-1940, Theory)

Instructor(s): Pruett, Jordan Terms Offered: Winter

ENGL 19856. Orientalisms. 100 Units.

Orientalism: in the 19th century, this word referred both to the disciplined study of Asian cultures in Western academia, and to a school of European painting characterized by its fanciful and exotic depictions of Asia (and the Middle East in particular). Since Edward Said's landmark 1978 book of the same title, Orientalism has come to name a complex and historically varied Western tendency to relate to Asia on the terms of stereotyping fantasy. Surveying the development of orientalist themes from about 1890 to the present—including the craze for japonisme in late-19th century European art, and the mix-and-match approach to Eastern (and other) spiritualities that constitutes the "New Age"—this course unravels the tropes and conventions that have historically shaped how Asia is imagined, perceived, and represented in the modern West. Along the way, we will ask how and why orientalist tropes have historically framed the exploration of issues like gender, sexuality, cultural decline, and futurity. Starting with Said as a springboard, we'll read a series of literary and cinematic texts—Gilbert and Sullivan's comic opera *The Mikado*, Wong Kar-Wai's film *In the Mood For Love*—alongside more recent theoretical accounts of orientalism by scholars such as Anne Anlin Cheng, Grace Lavery, and R. John Williams. We will also look at the ways in which Asian writers and artists have adopted orientalist modes of representation for their own critical purposes. (Fiction, 1830-1940, Theory)

Instructor(s): Jacob Harris Terms Offered: Autumn

ENGL 19860. Ladies Nite: Women Beatniks in Literary Counterculture. 100 Units.

Three writers do not a generation make." Often relegated to status of wife or muse in the writings and history of the Beat Generation, women's literary contributions to this experimental zeitgeist remain largely unknown and unread. This course explores the dynamic body of work produced by female Beatniks from the 1950s-1970s. We first trace the Beat Generation's aesthetic roots within the experimental poetics of Romanticism and American Transcendentalism and then shift our focus to post-war Greenwich Village, Mexico, and the American West. We will delve into works from authors like Elise Cowen, Diane diPrima, Denise Levertov and Lucia Berlin, to investigate how women's authorship across place and form--chapbooks, poetry, memoirs, travel journals and films--gave voice to a vibrant, complex feminism awash with psychedelic drugs, sexual liberation and the metaphysical exploration deeply inherent to Beat counterculture. (Fiction, Poetry, 1830-1940)

Instructor(s): Carrie Taylor Terms Offered: Spring

Equivalent Course(s): GNSE 19860

ENGL 19920. I, too, am America': Ethnic Minority Poetry in the US. 100 Units.

This course is designed as a survey of the various minority traditions excluded from canonical understandings of the history of US poetry. Centered around the twentieth century yet bookended by earlier and later poetry, the course is divided into four sections: African American, Native American, Latinx, and Asian American. Among many others, we'll read poems by Myung Mi Kim, Amiri Baraka, Simon J. Ortiz, and Claudia Rankine. (Poetry, Theory)

Instructor(s): Sarmiento Cruz, Geronimo Terms Offered: Autumn

ENGL 19980. Trans* Forms: On Gender and Genre. 100 Units.

Gender and genre share the common root term, "genus," which refers to classification. In this class, students will engage how authors make use of decolonial, antiracist, feminist and queer theory and praxis to approach and refigure gender's colonial legacies. Reading across genres--memoir, poetry, and speculative fiction, to name a few --Trans* Forms attends to the remaking and proliferation of gender as matters of form. (Theory) This class counts as a Problems course for GNSE majors.

Instructor(s): Riley Snorton Terms Offered: Winter

Equivalent Course(s): GNSE 20110, CRES 19980

ENGL 20001. Theories of Sexuality and Gender. 100 Units.

This is a one-quarter, seminar-style course for undergraduates. Its aim is triple: to engage scenes and concepts central to the interdisciplinary study of gender and sexuality; to provide familiarity with key theoretical anchors for that study; and to provide skills for deriving the theoretical bases of any kind of method. Students will produce descriptive, argumentative, and experimental engagements with theory and its scenes as the quarter progresses.

Instructor(s): C. Riley Snorton Terms Offered: Autumn

Prerequisite(s): Prior course experience in gender/sexuality studies (by way of the general education civilization studies courses or other course work) is strongly advised.

Equivalent Course(s): GNSE 20001, CHDV 20001, LLSO 20001, SOCI 20290

ENGL 20040. Borders, Migration, and Refugees. 100 Units.

This course explores the complex geopolitical issues of migration and national borders through visual and literary representations of the refugee in the twentieth- and twenty-first centuries. How have artists, writers, and filmmakers rendered their experiences of exile and displacement as a result of forced migration? In what ways do art and literature help us to understand migration as an embodied experience? What does the border mean in both aesthetic and political terms? To answer these and many other related questions, we will read across a dynamic and wide range of national and cultural contexts, from the mass displacement of World War II in Europe and the Great Migration in the United States to experiences across the African Diaspora and the contemporary global refugee crisis. Artists and writers may include Richard Wright, Jacob Lawrence, Sam Selvon, Etel Adnan, Mounira Al Solh, and Ocean Vuong, as well as theory and criticism by Hannah Arendt, Gloria Anzaldúa, Paul Gilroy, and Christina Sharpe. (Fiction, Poetry, Theory)

Instructor(s): Brandon Truett Terms Offered: Autumn

ENGL 20154. London Program: The Country and the City. 100 Units.

Following loosely in the track of Raymond Williams's 1973 book of the same title, this course will consider the interplay of urban and rustic life in literary productions of the early British Industrial Revolution. Writers we read will include William Blake, William Wordsworth, Samuel Taylor Coleridge, Jane Austen, and possibly Charles Dickens. We will take advantage of the major exhibition of William Blake that will be on offer at London's spectacular Tate Britain gallery (the first there in two decades), and we will probably make an excursion to Chawton, about 40 miles outside of London, to see Jane Austen's village, including the 16th-century country house where her brother Edward presided.

Instructor(s): James Chandler Terms Offered: Autumn

Prerequisite(s): Admission to the London Program (study abroad) is required.

ENGL 20212. Romantic Natures. 100 Units.

Our survey of British Romantic literary culture will combine canonical texts (especially the major poetry) with consideration of the practices and institutions underwriting Romantic engagement with the natural world. We will also address foundational and recent critical-theoretical approaches to the many "natures" of Romanticism. Our contextual materials will engage the art of landscape, an influx of exotic and dangerously erotic flora, practices of collection and display, the emergent localism of the naturalist Gilbert White, the emergence of geological "deep time," and the (literal) fruits of empire and vegetarianism. (Poetry, 1650-1830)

Instructor(s): Timothy Campbell Terms Offered: Autumn

ENGL 20240. Prime Times of American Television. 100 Units.

In this course, students will learn to articulate the formal features of scripted television dramas by considering examples from the late 1980s alongside more recent programs from the 2010s. They will practice describing how the formal features of a program articulate the world its viewers and activate those viewers' fantasies. They will learn to harmonize new ways of writing about television with new ways of watching it. And they will contextualize the formal innovations of one contemporary program using earlier experiments in televisual form. Series will likely include *Magnum P.I.*, *Dynasty*, *Hill Street Blues*, *thirtysomething*, *Star Trek: TNG*, *Twin Peaks*, *American Horror Story*, *Westworld*, and *Mindhunter*. (Drama, Theory)

Instructor(s): Maye, Steven Terms Offered: Autumn

ENGL 20266. Coming of Age: Autobiography, Bildungsroman, and Memoir in Victorian Britain and its Empire. 100 Units.

In this course, we will consider the broad generic category of "coming of age" stories that characterized the literary writing of the nineteenth century. Across several different kinds of writing, a focus on the growth and development of the child into adulthood became an obsessive focus. We will read autobiographies by Mill and Martineau, *Bildungsroman* by Brontë and Eliot, memoirs by Dickens but also lesser known figures: working class autodidacts, women in childbirth, colonial subjects. We will, along the way, learn more about Victorian childhood, the emergence of developmental psychology, psychoanalysis, and the socio-psychological "invention" of adolescence. (1830-1940)

Instructor(s): Elaine Hadley Terms Offered: Winter

Equivalent Course(s): GNSE 22266

ENGL 20360. Shrews! Unladylike Conduct on Stage and Page in Early Modern England. 100 Units.

This course will move between three sites of inquiry to investigate the social and material history of an evergreen trope: the domestication of a refractory servant or wife. From rare book libraries and museum collections, we will track the common features of popular entertainments that traffic in this scenario. We will then bring our findings to bear in a theatre lab environment, where we will assay scenes from *The Taming of the Shrew*, *The Tamer Tamed*, and *the City Madam*. (Drama, Pre-1650)

Instructor(s): Ellen MacKay Terms Offered: Spring

Equivalent Course(s): TAPS 20360

ENGL 20620. Film Noir. 100 Units.

This course examines the phenomenon known as film noir, a style or genre-created retrospectively by critics-that continues to exert widespread influence and appeal. Spanning noir's progenitors in the early 20th century to the canonical films of the 1940s and 50s to more recent neo-noir, the course introduces students to the principles of film analysis while also looking at the crucial role that noir has played in discussions of film style and aesthetics, gender and sexuality, and the relations between modernism and popular culture. (Fiction)

Instructor(s): Joseph Bitney Terms Offered: Autumn

ENGL 20667. London Program: Virginia Woolf and the Bloomsbury Group. 100 Units.

A controversial art exhibition organized by Roger Fry, "Manet and the Post-Impressionists," provoked Virginia Woolf to write that "on or about December 1910 human character changed." The Bloomsbury Group, renowned for its role in vilifying Victorian culture and promoting English modernism, was no less famous for its own efforts to change human character: for its unprecedented understanding of aesthetics, economics, social politics, and sexuality. Taking advantage of our particular location in London (the neighborhood in which the group lived, met, wrote, and painted), this course will provide the opportunity to engage a broad spectrum of Bloomsbury work: the essays and fiction of Virginia Woolf; the art of Vanessa Bell, Duncan Grant, and Roger Fry; the macroeconomics of John Maynard Keynes. This engagement will unfold through different analytics (formalist, psychoanalytic, materialist), and with sustained recognition of two Bloomsbury institutions-the short-lived Omega Workshops, and the enduring Hogarth Press. The British Library and the Tate Modern will provide us with intimate access to literary and visual texts, and we will talk with contemporary writers about the cultural legacy of this coterie. (1830-1940, Theory)

Instructor(s): Bill Brown Terms Offered: Autumn

Prerequisite(s): Admittance to the London Study Abroad Program.

ENGL 20668. Approaches to Hamlet. 100 Units.

In this course, we will consider HAMLET alongside different interpretations of and approaches to the play. We will read HAMLET slowly, carefully, patiently - allowing its "wild and whirling words" to settle in our minds and giving ourselves time to confront some of the play's many aspects. Students will be expected to re-read HAMLET each week in addition to and in light of the week's new reading(s).

Instructor(s): Nicholas Bellinson Terms Offered: Spring. Course will be taught Spring 2020

Note(s): Required Texts - William Shakespeare, HAMLET (Arden, 2005)

Equivalent Course(s): SCTH 20668, TAPS 26320, FNDL 20668

ENGL 20669. London Program: Gothic Fiction and Architecture. 100 Units.

Gothic fiction exploits our strange delight in fearful tales of mystery and suspense. In this course, we will study the development of gothic fiction since the eighteenth century, paying particular attention to architectural spaces such as castles, abbeys, churches, and ruins that contribute to the distinctive atmosphere of the gothic. How do authors use these imagined places to provoke terror in readers? Our study of fictional gothic architecture will draw us into the real spaces of London, where we will visit and study renowned Gothic Revival buildings such as the Houses of Parliament and St. Pancras railway

station. Readings may include Horace Walpole, *The Castle of Otranto*; Jane Austen, *Northanger Abbey*; Bram Stoker, *Dracula*; Oscar Wilde, *The Picture of Dorian Gray*; and Henry James, *The Turn of the Screw*. (1650-1830, Fiction)

Instructor(s): Benjamin Morgan Terms Offered: Autumn

Prerequisite(s): Acceptance into the London Study Abroad Program

ENGL 20710. Dramaturgy and Dramatic Criticism. 100 Units.

This course is an orientation and practicum in contemporary dramaturgy. After surveying Enlightenment treatises that occasioned Western dramaturgical practices, students will critically engage present-day writings that consider the objectives and ultimate *raison d'être* for the production dramaturg. Students then undertake dramaturgical research, exploring different methodologies and creative mind-sets for four representative performance genres: period plays; new plays; operas or musicals; and installations or performance art. Special attention will be given to cultivating skills for providing constructive feedback and practicing dramaturgy as an artistic collaborator and fellow creator. The class culminates in the design and compilation of a sourcebook for actors, directors, and designers, followed by a dramaturgical presentation intended for a professional rehearsal room.

Instructor(s): D. Matson Terms Offered: Winter

Note(s): Attendance at first class is mandatory.

Equivalent Course(s): TAPS 20700, TAPS 30710

ENGL 20750. The Adventures of Augie March. 100 Units.

Court Theatre has commissioned Pulitzer Prize and Tony Award-winning playwright David Auburn, AB'91, to write a stage adaptation of Saul Bellow's novel of mid-century Chicago, *The Adventures of Augie March*. Students in this course will assist in the dramaturgical preparations for the Spring 2019 premiere of Auburn's work, and in so doing acquire hands-on experience of the techniques involved in bringing literary works to stage. They will engage in close readings of the novel and its relationship to drafts of the script, examine how Bellow drew from his own coming-of-age experiences as an immigrant in Depression-era Chicago to create the character of Augie March, and seek out primary source materials at libraries and museums throughout the city to help contextualize the work for the director, actors, costume and sound designers. Guest lectures will include David Auburn, Court Theatre Artistic Director Charles Newell, and Dr. Peter Alter, Curator of the Studs Terkel Oral History Center.

Instructor(s): N. Titone Terms Offered: Autumn

Note(s): Attendance at first class is mandatory.

Equivalent Course(s): TAPS 20750

ENGL 20760. London Program: Curiouser and Curiouser: Adaptation and the Lives of Alice. 100 Units.

In Fall 2020, the Victoria & Albert Museum will be hosting a major exhibition on the evolution of Alice in Wonderland from manuscript form to the book's elaboration by figures such as Salvador Dali. We will spend time in "the rabbit hole" of Alice's adventures underground and Through the Looking Glass, studying Carroll's influences, from logic to dream theory; his collaboration with graphic artist John Tenniel as a prime example of the art of the illustrated book; interpretations of Alice by contemporary poets such as Tan Lin; and adaptations from Disney to Czech surrealist filmmaker Jan Švankmajer. Having studied many variations of the text in concert with theories of adaptation, students will be invited to produce their own micro-adaptations of a chosen literary work (by Carroll or another author encountered during the London quarter).

Instructor(s): Jennifer Scappetone Terms Offered: Autumn

ENGL 21112. Nudes, Princesses and Cyborgs : Gender, Violence, and Biblical Fiction. 100 Units.

To many, Bathsheba is simply the nude who seduced David. The connotations of being a Jezebel are strong enough that a popular feminist website re-appropriates the insult. Yet the biblical texts themselves make it difficult to imagine female characters as types, or the violence with which they are often associated as comprehensible. Furthermore, Hebrew Bible figures have often been taken up as sites to explore contemporary questions relating to gender and violence. Did Dinah 'ask for it'? Does Ruth's story celebrate the refugee and mother or justify a colonial politics of assimilation? In this course, students will examine literary works that reuse difficult portions of biblical narrative and challenge readers to reassess biblical violence and its legacies. By engaging with both more popular extended rewritings like *The Red Tent* and world-literary political works like *A Grain of Wheat*, this course will reconsider biblical women and the variety of problematic and productive ways they may be appropriated in fiction and in popular culture.

Instructor(s): Chloe Blackshear Terms Offered: Spring

Equivalent Course(s): GNSE 21112, CMLT 21112

ENGL 21202. The Brontes and the 'Psychological Novel' 100 Units.

This course takes the novels of Emily and Charlotte Bronte as a case study for novel theory and criticism. In particular we will consider what it has meant to claim that the Brontes' novels have a special relationship to or claim on the psychological. What is at stake in the critical interest in subjectivity, interiority and depth in these novels? What might it mean to read these (or any) novels without or against a privileging of the psychological? We will look at significant critical movements in Victorian novel studies (ideology critique; gender theory; historicism; etc.) that have taken the Brontes' novels as their objects while we read *Wuthering Heights*, *Jane Eyre*, *Shirley*, *Villette* and other nineteenth century texts.

Instructor(s): Strang, Hilary

Note(s): Current MAPH students and 3rd and 4th years in the College. All others by instructor consent only.

Equivalent Course(s): ENGL 41202, GNSE 21210, MAPH 41200, GNSE 41200

ENGL 21210. The Enterprise of Middlemarch. 100 Units.

Students will begin by taking up the Norton edition and reading the novel through; discussion will then proceed by re-reading (along with some other materials from that edition) taking up curious topics, e.g. Eliot's self-presentation of her authorial aims, some important fictional choices (e.g. why a provincial town? why set the novel in 1832? etc.). Then we will

consider the complex set of plots and their relation to each other. Other questions: how does the book represent itself as a model for the novel as a genre? Where does it fit in Eliot's career? "There will be unexpected questions. This is the sort of course in which it is important to follow where the class leads."

Equivalent Course(s): FNDL 21210, GNSE 21211

ENGL 21212. Postcolonial Bildungsroman. 100 Units.

In this course, we consider the novel of subject formation in the twentieth-century, with a particular emphasis on postcolonial adaptations of this form. We examine how different instances of the genre play across tropes of aesthetic education, self-making, and nation-building. Readings will likely include Conrad's *Lord Jim*, E.M. Forster's *A Passage to India*, Olive Schreiner's *Story of an African Farm*, and Tsitsi Dangarembga's *Nervous Conditions*, as well as key critical pieces by Mikhail Bakhtin, Marc Redfield, and Jed Esty, among others.

Instructor(s): Darrel Chia Terms Offered: Spring

Equivalent Course(s): ENGL 40202, MAPH 40202

ENGL 21215. Hamlet: Adventures of a Text. 100 Units.

After a lifetime with Hamlet, I've become increasingly interested by the fluidity of the text: not only is there much too much of it, but there are also significant differences between the 2nd Quarto and the Folio-to say nothing of the 1st quarto. Nevertheless, there is (in my mind at least) no question that we have Hamlet! I intend with this class to explore the play in quest (as it were) of the essential Hamlet, reflecting on its contradictions, shifting perspectives, puzzles. For instance: why doesn't Hamlet go back to Wittenburg-is it his ambition, his mother, his sense that he has to deal with his uncle, or is it something else? Is Hamlet mad or feigning or something in between? Is he changed by his adventure with the pirates? Etc. We will use both volumes of the Arden 3rd edition. First, we'll spend some weeks going through the Folio text scene by scene, then we'll tackle the 1st Quarto, inquiring into Shakespeare's creative process and his relation to actual production. Some attention will be given also to the history of the reception of Hamlet. Instruction by discussion; final paper preceded by required submission of a project and opportunity to submit a draft for comments.

Instructor(s): J. Redfield Terms Offered: Spring

Prerequisite(s): Graduate Students by Consent Only

Equivalent Course(s): FNDL 21215

ENGL 21223. Black Speculative Fiction. 100 Units.

This course familiarizes students with Black literary speculative fiction, sci-fi, and fantasy. The objective of this course is to read Black speculative fiction alongside the historical contexts the assigned works speak to, as well as orient students to the radical re/imaginings of Black pasts, presents, and futures in the novels and short films at the center of the course. This class will pay particular attention to Black diasporic/international contributions to the genre. (Fiction, Theory)

Instructor(s): Sophia Azeb Terms Offered: Winter

Equivalent Course(s): CMLT 21233, CRES 21233

ENGL 21224. Against Interpretation: Philology at the Crossroads. 100 Units.

Susan Sontag closed her essay "Against Interpretation" calling for "an erotics of art." Such an "erotics" would avoid doing anything to tame the work of art-allowing its hold on the imagination to grow, without trimming down its excrescences. Eros here stands for the irreducibility of the presence of art-the finite or even infinitesimal presence that imposes itself as irrepressibly fractal in its growth. Sontag was challenging us to make a certain kind of intellectual and affective space available-and this challenge has been reprised in recent scholarship that attempts to trace the state of the Humanities and some of its more eminent toolkits. Both philology and close-reading have been exposed as disciplinarian "disciplines" of the Humanities-long having abandoned the "erotic" power reading as a strategy of unfolding in favor of what might be termed strategies of containment. But this was not always the case. This course seeks to recover what then remains, peeking into the backgrounds of these disciplines as they stand at the crossroads of relevance and retreat-hovering just short of the intimate space of textual experience described by Sontag.

Instructor(s): Claudio Sansone Terms Offered: Winter

Equivalent Course(s): KNOW 21224, CMLT 21224, SALC 21224

ENGL 21277. Literature and Technology: Machines, Humans, and Posthumans from Frankenstein to the Futurists. 100 Units.

Everywhere we remain unfree and chained to technology, whether we passionately affirm or deny it," wrote Heidegger. In the year 2020, the year of COVID-19 and mass physical lockdown, this statement is more valid than ever. Keeping current events in mind, in this course we will pose anew the question concerning technology and go back to the First and Second Industrial Revolutions when humans first came into intense contact with machines and restructured life and literature around them. We will trace the ecological, economical, and emotional footprints of various machines and technological devices (automata, trains, phonographs, cameras) in major European literary works from Shelley's *Frankenstein* (1818), Zola's *La bête humaine* (1890) to Luigi Pirandello's *The Notebooks of Serafino Gubbio*, Cinematograph Operator (1925), while inquiring into the nature of technology and what it means to be human through key philosophical texts from Plato to N. Katherine Hayles.

Instructor(s): Ana Ilievska Terms Offered: Autumn

Equivalent Course(s): CMLT 21200, ITAL 28818, PORT 28818, MAAD 25277

ENGL 21310. Our biopolitics, ourselves: feminist science fiction. 100 Units.

1970s feminist theory made a significant conceptual move in provisionally bracketing off biological sex from the historical/cultural work of gender. Feminist science fiction (in contrast), in its brief flourishing in the 70s and early 80s, finds its utopian moments in the biological, in genetic manipulation, reproductive technology, ecological forms of being and new bodies of a variety of kinds. This class will read science fiction, feminist theory and current critical work that concerns

itself with biopolitics in order to ask questions about the divide between nature and culture, what's entailed in imagining the future, what gender and genre might have to do with each other, and just what science fiction is and does anyway. Authors include: Le Guin, Russ, Butler, Piercy, Haraway, Rubin, Firestone.

Instructor(s): Hilary Strang Terms Offered: Winter

Equivalent Course(s): GNSE 21310, ENGL 41310, MAPH 41300, GNSE 41300

ENGL 21350. Early Modern Women Writing Trauma. 100 Units.

This course examines 16th and 17th century women's writing alongside the scholarship of trauma studies, with attention to themes of childhood suffering, loss, and geographical displacement. How did early modern authors employ a vocabulary for individual and collective encounters with death, illness, violence, and emotional disturbance prior to the modern conceptualization of trauma in the 20th century? What displaced histories are we able to access by bringing sustained focus to women's writing? We will explore how early modern women articulate questions around suffering, personhood, and macro categories of identity (such as race, gender, class, and disability) as well as how their writing might reframe and/or disrupt the category of trauma in contemporary theory. Early modern authors of focus will include, among others, Aphra Behn, Elizabeth Carey, Margaret Cavendish, and Katherine Philips; we will also read widely across genres and time periods, with a syllabus that incorporates materials ranging from early modern midwifery treatises to contemporary drama. (Pre-1650, 1650-1830, Theory)

Instructor(s): Beatrice Bradley Terms Offered: Autumn

Equivalent Course(s): GNSE 21350

ENGL 21360. Gender, Capital, and Desire: Jane Austen and Critical Interpretation. 100 Units.

Today, Jane Austen is one of the most famous (perhaps the most famous), most widely read, and most beloved of eighteenth- and nineteenth-century British novelists. In the two hundred years since her authorial career, her novels have spawned countless imitations, homages, parodies, films, and miniseries - not to mention a thriving "Janeite" fan culture. For just as long, her novels have been the objects of sustained attention by literary critics, theorists, and historians. This course will offer an in-depth examination of Austen, her literary corpus, and her cultural reception as well as a graduate-level introduction to several important schools of critical and theoretical methodology. We will read all six of Austen's completed novels in addition to criticism spanning feminism, historicism, Marxism, queer studies, postcolonialism, and psychoanalysis. Readings may include Shoshana Felman, Frances Ferguson, William Galperin, Deidre Lynch, D.A. Miller, Edward Said, Eve Sedgwick, and Raymond Williams.

Instructor(s): Tristan Schweiger Terms Offered: Autumn

Equivalent Course(s): MAPH 40130, GNSE 41303, ENGL 41360, GNSE 21303

ENGL 21401. Advanced Theories of Gender and Sexuality. 100 Units.
