This course fuses urban and educational history into a two-century case study of Chicago. When the Chicago Public Schools closed fifty schoolhouses in 2013, many stressed the links between public education, uneven neighborhood investment, and racial segregation. But this episode was part of a longer regional history of how metropolitan development, labor markets, and anxieties over migration affected educational policy. The course stresses the relationship between educational policy and the politics of urban development, gender, and race. Schools were sites of gendered work, for the women who operated them and for the children who navigated the moral and vocational paths laid for their futures; meanwhile, the rise of racial ghettos had an enduring impact on educational inequity and the shape of African American political life. Over the time span covered by the course, the United States became an indisputably "schooled" society, and Chicago was a leading indicator of national trends. Key historic episodes in American education—the rise of the modern high school, the birth of progressive education, the origins of teachers' unions, the Catholic encounter with race, the fragmentation of suburban school districts, the civil-rights critique of de facto school segregation, the pronounced "failure" of urban education, and the triumph of choice-and-accountability reforms, and the teacher-led resistance that followed—were especially well-illustrated by this course's focus on Chicago.

Instructor(s): N. Kryczka Terms Offered: Winter

Note(s): This course combines lecture with discussions of primary sources and secondary literature each week, beginning with the one-room, log-stable schoolhouses of the antebellum Illinois prairie and ending with the nation's first charter-school teacher strikes in 2018. In addition to composing a research paper on a chosen school or school policy, students will take a field trip to local schoolhouses, reading the city's urban history through its educational architecture.

Equivalent Course(s): EDSO 27307, ARCH 27307, AMER 27307, GNSE 27307, HIST 27307

PBPL 27325. Urban Ecology in the Calumet Region. 100 Units.

This course will give students a strong foundation in the local ecology of the Calumet. Students will use local research and habitats to understand fundamental concepts in ecology and the scientific method. Students will explore some of these habitats during field trips with scientists and practitioners. The course focus will be on urban ecology in the region, whether these fundamental ecological concepts are applicable, what other factors need to be considered in the urban ecosystem, and the role humans have in restoring natural and managing novel ecosystems, among other topics.

Instructor(s): Alison Anastasio Terms Offered: Spring

Note(s): Enrollment is based on acceptance into the Chicago Studies Quarter: Calumet program for Spring 2020.

Equivalent Course(s): GEOG 27325, ENST 27325

PBPL 27330. Spaces of Hope: The City and Its Immigrants. 100 Units.

The city is the site where people of all origins and classes mingle, however reluctantly and agonistically, to produce a common if perpetually changing and transitory life." (David Harvey) This course will use the urban studies lens to explore the complex history of immigration to Chicago, with close attention to communities of East European origin. Drawing on anthropological theory and ethnographic materials, we will study the ways in which the city and its new citizens transform one another.

Instructor(s): Nada Petkovic Terms Offered: Spring. Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Note(s): Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Equivalent Course(s): ENST 27330, REES 21500, HIST 27713

PBPL 27809. Violence in the Early Years. 100 Units.

This course will address issues related to children's exposure to violence. Classes will cover topics including, but not limited to, the history of violence against children (infanticide, etc), children's literature, parental violence towards children, school-related violence, practices such as female genital mutilation, and other policy-relevant issues related to violence in children's lives. We will analyze policies and reforms, review relevant research on each topic, and examine implications of the findings to policy and practice.

Instructor(s): A. Aduka Terms Offered: TBD

PBPL 27900. Global-Local Politics. 100 Units.

Globalizing and local forces are generating a new politics in the United States and around the world. This course explores this new politics by mapping its emerging elements: the rise of social issues, ethno-religious and regional attachments, environmentalism, gender and life-style identity issues, new social movements, transformed political parties and organized groups, and new efforts to mobilize individual citizens.

Instructor(s): T. Clark Terms Offered: Winter

Equivalent Course(s): GEOG 30116, SOCI 20116, LLSO 20116, SOCI 30116, HMRT 20116, GEOG 20116, HMRT 30116

PBPL 27905. Global Health Metrics. 100 Units.

This course provides an overview of the causes of illness and injury in populations across the world and the most important risk factors. We will discuss how population health is measured using summary indicators that combine mortality and non-fatal health outcomes. We will use these indicators to compare and contrast the health of populations across global regions and in time. Sound measurement of the global burden of disease is essential for prioritizing prevention strategies. Therefore, there will be a strong emphasis on understanding how data sources in information-poor settings are used to generate estimates of population health.

Instructor(s): Kavi Bhalla Terms Offered: Spring

Prerequisite(s): N/A

Equivalent Course(s): PBHS 27900, HLTH 27905, PBHS 31900

PBPL 27919. Research in School Improvement. 100 Units.

Research evidence and data play an increasingly important and complex role in efforts to reform underperforming school systems in the United States. Both education policy and practice increasingly rely on sophisticated understandings of a dynamic interplay of complex organizations, systems, and policymaking. This course introduces students to cutting edge models for using research and data public school reform efforts, including examples of randomized control trials, district-based research, research-practice partnerships, and quality improvement strategies. The course includes concrete illustrations of research that reshaped educational practice drawn from the UChicago Consortium on School Research.

Instructor(s): David Johnson Terms Offered: Winter. Offered 2020-21

Equivalent Course(s): EDSO 27919

PBPL 28029. Education Policy. 100 Units.

Which education policies work and which do not? How are these policies evaluated? The main goal of this course is to familiarize students with the methods and research frontier in the economics of education, with an emphasis on policies designed to improve students' outcomes. We will explore and discuss a wide range of educational policy issues, including the returns to schooling, student incentives, teacher labor markets, school choice, accountability, school funding, and higher education. Throughout the course, we will pay close attention to the methods employed to evaluate the effects of education policies.

Instructor(s): Delgado, W Terms Offered: Spring

Note(s): PBPL 26400 recommended

PBPL 28139. Society, Politics and Security in Israel. 100 Units.

This graduate course examines Israel's unique DNA through a thorough examination of its history, society, politics and security challenges. We shall explore these traits as manifested in the defining chapters of Israel's history, since the early stages of the Zionist driven immigration of Jews to the Holy Land, through the establishment of the Jewish State in 1948, until present time. Students will work with primary sources, diverse theoretical perspectives, and rich historiographical material to better understand the Israeli experience, through domestic, regional and international perspectives. Particular attention will be given to the emergence of the Israeli vibrant society and functioning democracy in the background of continuous conflict and wars. The course will explore topics such as: How Israel reconciles between the imperatives and narratives of democracy and Jewishness, between collective ethos and heterogeneous tribalism, and between protracted security challenges and resilience. We will also discuss the multifaceted aspects of the changing Israeli security doctrine and practice, in light of regional threats and international involvement.

Instructor(s): M. Elran Terms Offered: Autumn

Equivalent Course(s): INRE 36001, JWSC 28139

PBPL 28150. U.S. Foreign Policy: Inst & Decision making 21st Century. 100 Units.

This course explores contemporary relations between the United States and the world. The primary goal is to give students conceptual and critical tools to understand and analyze how international relations theory, U.S. foreign policy decision-making processes, and current events fit together, especially in the post 9/11 world. It is designed to develop students' capacity both to explain the foreign policy-making process in the United States, and to better understand the underlying patterns, logic, and implications of American foreign policy in the world at large. The course is divided into three main topics. First, we will discuss International Relations theory that grounds U.S. foreign policy focusing on American international power and the goals for which this power is employed. The second part of the class will examine the institutions and processes that guide foreign policy formation and implementation. Questions will revolve around who are the important people setting the foreign policy agenda and what are the important institutions attempting to implement this agenda. Finally, the last third of the course will review some of the more salient foreign policy challenges facing the U.S. in the 21st century, including particular focus on geographic regions. Some of these issues include how the recent global economic crises may influence foreign policy, how terrorism and democracy promotion continue to shape U.S. foreign policy, and whether U.S. foreign policy towards Africa is undergoing significant change.

Instructor(s): F. Vabulas Terms Offered: TBD

PBPL 28300. Health Economics and Public Policy. 100 Units.

This course analyzes the economics of health and medical care in the United States with particular attention to the role of government. The first part of the course examines the demand for health and medical and the structure and the consequences of public and private insurance. The second part of the course examines the supply of medical care, including professional training, specialization and compensation, hospital competition, and finance and the determinants and consequences of technological change in medicine. The course concludes with an examination of recent proposals and initiatives for health care reform.

Instructor(s): Meltzer, D Terms Offered: Spring

Prerequisite(s): PBPL 20000 or ECON 20000 and one undergraduate course in quantitative research methods (Statistics or Econometrics) or the equivalent or consent of the instructor

Equivalent Course(s): ECON 27700, PPHA 38300, CCTS 38300

PBPL 28335. Health Care Markets and Regulation. 100 Units.

This course analyzes the economics of health care markets and the way regulations impact those markets. We will study the unique institutional arrangements found in the health care sector (primarily, though not exclusively, in the United States) and examine how market forces manifest themselves in this setting. We will consider the behavior of health care providers, insurers' roles both as intermediaries and risk managers, patients' health care demand, and geographic differences

in medicine. The study of government regulations, including their theoretical and empirical impacts on health care markets, will be integrated throughout these topics.

Instructor(s): Gottlieb, J. Terms Offered: Spring

Prerequisite(s): PBPL 20000 or ECON 20000 and one undergraduate course in quantitative research methods (Statistics or Econometrics) or the equivalent, or consent of the instructor

PBPL 28375. Political Economy of Development. 100 Units.

This course explores why some countries are poor and violent, and what (if anything) peaceful and prosperous countries can do to foster stability and development elsewhere in the world. The first half of the class looks at history and theory to understand the roots of violence and how order and development emerged in some places. The second half of the class looks at Western interventions in the last half century (and today), from aid to military intervention to democracy portion, to understand why some efforts succeed and fail.

Instructor(s): C. Blattman Terms Offered: Spring

PBPL 28425. Strategic Behavior and Regulation of Firms. 100 Units.

This course will examine the role of public policy in oligopoly markets, where competition is imperfect. We will examine the strategies that firms use to increase profits, the effects of those strategies on consumers, and the cases for and against regulatory intervention in markets. Topics will include issues such as mergers, predation, price discrimination, collusion, and network economics. Class discussions will frequently focus on the economics of recent business and regulatory case studies, such as the California electricity crisis, Google's use of its search engine, and net neutrality regulation. An important component of the course will be the Competitive Strategy Game, in which students will form firms that compete against one another in several simulated markets, allowing students to gain first-hand experience with some of the strategic decisions firms regularly face.

Instructor(s): R. Kellogg Terms Offered: Spring

Prerequisite(s): PBPL 20000 or ECON 20000

PBPL 28430. International Trade, Banking and Capital Markets. 100 Units.

Over the past 50 years, the markets for goods and services have become dramatically globalized. The internationalization of financial markets and the liberalization of trade have been critical to this growth. In contrast to a few decades ago, today's companies manage global supply chains and investment capital moves quickly from market to market. International Trade, Banking and Capital Markets is an introduction to the drivers of and issues behind these changes. The course assumes only an introductory course in microeconomics. Topics covered include: the economic models presenting the gains from trade and gains and issues created by instruments of trade policy such as tariffs and treaties, as well as international trade bodies including the World Trade Organization. The course will then cover aspects of international capital markets, focusing on floating and fixed foreign exchange regimes. The growth of international banking out of trade finance and the international expansion of domestic businesses will be presented along with the issues these developments created. The parallel deregulation of international financial markets will be discussed and its impact on developed and developing countries. We will discuss the importance of these markets in supporting the underlying growth in trade and services as well as the issues created, e.g., the precipitation of the 1997 East Asian Crisis by developing economies' increased access to capital markets.

Instructor(s): David H. Schabes Terms Offered: Autumn

PBPL 28488. Politics and Public Policy in Latin America. 100 Units.

This course will cover the politics of policy making in Latin America. The first part will focus on understanding the problems of economic development in the region. It will address how and why Latin America is different by looking at its economic outcomes, economic and social policies and political institutions. It will also look at different examples of how political institutions shape policy outcomes. The second part will ground the distinctiveness of Latin America in its history, and show why understanding this is critical for comprehending why it is so different from the United States. It will explore how these historical factors persist, for example, how the legacy of authoritarianism shapes redistributive policies and how these historical foundations have created the weak Latin American states we see today. The third part of the course will look at how groups such as civil society or violent actors can also shape policymaking and welfare in this region. Finally, it will discuss some perspectives on whether some countries in the region have managed to find ways to change their political institutions and subsequently their social and economic policies with the prospect of creating a more prosperous society. The aim of this course is for students to gain empirical knowledge on the region's politics and policies as well as a practical understanding of political factors that shape policy outcomes.

Instructor(s): Maria Bautista Terms Offered: Spring

Prerequisite(s): PBPL 20000 or ECON 20000

Equivalent Course(s): LACS 28488

PBPL 28498. Women, Development and Politics. 100 Units.

This course will explore the dominant and emerging trends and debates in the field of women and international development. The major theoretical perspectives responding to global gender inequities will be explored alongside a wide range of themes impacting majority-world women, such as free market globalization, health and sexuality, race and representation, participatory development, human rights, the environment and participation in politics. Course lectures will integrate policy and practitioner accounts and perspectives to reflect the strong influence development practice has in shaping and informing the field. Course materials will also include anti-racist, postcolonial and post-development interruptions to dominant development discourse, specifically to challenge the underlying biases and assumptions of interventions that are predicated on transforming "them" into "us". The material will also explore the challenges of women participating in politics and what are the consequences when they do or do not.

Instructor(s): Bautista, M. and Chishiti, M. Terms Offered: Autumn

Equivalent Course(s): GNSE 28498, LACS 28498

PBPL 28501. Process and Policy in State and City Government. 100 Units.

This course consists of three interrelated sub-sections: (1) process and policy in city and state government; (2) the role played by influential, key officials in determining policy outcomes; and (3) policymaking during and after a political crisis. Issues covered include isolating the core principles driving policy at city and state levels; understanding how high level elected officials can shape the course of policy; and determining how a political crisis affects policy processes and outcomes. Most of the specific cases are drawn from Chicago and the State of Illinois.

Instructor(s): C. Harris III Terms Offered: Autumn Spring Winter

PBPL 28525. Missing Markets: The Economics of the Environment. 100 Units.

This course presents a broad-based treatment of the theory and application of environmental economics. Topics are introduced in the context of real-world environmental policy questions (with special emphasis on energy policy), then translated into microeconomic theory to highlight the salient constraints and fundamental trade-offs faced by policymakers. Topics include property rights, externalities, Pigouvian taxes, command-and-control regulation, cap-and-trade, valuation of environmental quality, cost-benefit analysis, policymaking under uncertainty, and inter-regional competition.

Instructor(s): Cicala, S. Terms Offered: Spring

Prerequisite(s): PBPL 22200 or ECON 20100

Note(s): PQ: PBPL 22200 or ECON 20100

PBPL 28528. Household Finance: Theory and Applications. 100 Units.

This course will examine the choices households make about important financial decisions and how these individual choices can impact the aggregate economy. Each week, basic predictions from economic theory will be discussed and compared with empirical findings. Topics will include: asset market participation and household portfolio choice; human capital and student loans; housing and mortgages; retirement planning; credit card debt; payday loans; and the gig/sharing economy. Focus will also be placed on government policies affecting these topics, including so-called household financial engineering, the creation of Government Sponsored Enterprises (GSEs) like "Fannie" and "Freddie," and regulatory agencies like the Consumer Financial Protection Bureau (CFPB). The course will provide an introduction to structural modeling for conducting policy counterfactuals. Assessment will be based on problem sets, a midterm and a final. These problem sets will require students to work in R, Stata or other statistical package of the student's choice (with permission of instructor).

Instructor(s): D. Koustas Terms Offered: Spring

Prerequisite(s): PBPL 20000 or ECON 20000 required; PBPL 22200 preferred.

Equivalent Course(s): ECON 13110

PBPL 28538. Political Economy of Natural Resources. 100 Units.

The aim of this course is to provide students with an understanding of the political and economic consequences of natural resource wealth. The course will combine theoretical models and empirical evidence on the relationship between natural resources and outcomes such as low economic growth, authoritarianism, corruption and conflict. We will look at the very different experiences of different resource-rich countries (e.g. Norway versus Venezuela) and will also explore the differences across resources (e.g. oil vs minerals). The course will provide a setting for the discussion of the merits and potential pitfalls of various policies for the management of natural resource wealth.

Instructor(s): Luis Martinez Terms Offered: TBD

Prerequisite(s): PBPL 20000 or ECON 20000 and PBPL 26400

PBPL 28550. Social Experiments: Design and Generalization. 100 Units.

The pressure in many fields (notably medicine, health research, and education) for evidence-based results has increased the importance of the design and analysis of social investigations. This course will address two broad topics: (i) the design of experiments, quasi-experiments, and surveys; and (ii) the use of these social investigations for generalization in policy areas. The course will explore how the relationship between surveys and experiments can inform generalization from experiments. Randomized clinical trials in medicine, field experiments in economics and psychology, and the use of scientific evidence in policy formulation will be among the examples. This course satisfies the Public Policy practicum METHODS requirement.

Instructor(s): C. O'Muircheartaigh Terms Offered: Winter

PBPL 28605. Economic Analysis of Law. 100 Units.

This course involves the application of the choice theory of economics to the opportunities obtainable within different legal environments. The likelihood that a person will choose to return a lost wallet, keep a promise, drive more carefully, or heed the terms in a will is partly a function of the applicable laws and regulations. Alternative rules, under the standard Law and Economics approach, are compared in terms of the economic efficiency of their subsequent outcomes. This efficiency lens of Law and Economics is applied to rules concerning property, torts, contracts, and criminal behavior.

Instructor(s): J. Leitzel Terms Offered: Spring

Prerequisite(s): ECON 20100

Equivalent Course(s): ECON 28600

PBPL 28633. Introduction to Program Evaluation. 100 Units.

This course will teach students how to answer public policy questions using regression analysis. We will discuss applications from the fields of education, health, job training, and others. Students will learn the statistical foundations of regression as well as its practical implementation using the R programming language. They will study the interpretation of regression results including causal inference through experimental as well as quasi-experimental designs. No previous programming experience is assumed. This course satisfies the Public Policy practicum METHODS requirement.

Instructor(s): Potash, E. Terms Offered: Winter

Prerequisite(s): PBPL 26400; third and fourth year standing

PBPL 28640. Mixed Methods Approaches to Policy Research. 100 Units.

This course will introduce students to a diverse range of mixed methods approaches to policy research. Students will learn about multiple disciplinary perspectives and methodological approaches to policy research. The course will expose students to different styles of mixed methods research, including a small project on qualitative data analysis. Students in this course will become critical consumers of both qualitative and quantitative research, specifically, what types of questions best lend themselves to quantitative, qualitative, and mixed methods studies. This course satisfies the Public Policy practicum METHODS requirement.

Instructor(s): A. Claessens Terms Offered: TBD

PBPL 28681. Applied Investments for Public Policy. 100 Units.

Central banks, Treasury departments, the IMF, and sovereign wealth funds use financial data and tools to inform their decisions. This class covers the main concepts of finance theory for stocks, bonds, and investment portfolios and applies them in the public policy context. Topics covered include the following: present value, real and nominal interest rates, optimal portfolio choice, Value-at-Risk and Growth-at-Risk, risk and return, the Capital Asset Pricing Model, performance evaluation, market efficiency, and return predictability.

Instructor(s): Pflueger, Carolin Terms Offered: Autumn

Prerequisite(s): PBPL 20000 or ECON 20000, PBPL 26400, and Statistics 22000 or 23400 or higher

PBPL 28683. Introduction to Corporate Finance. 100 Units.

This course presents an introduction to the principles of corporate finance and its applications. These principles are critical to understanding the nature of how corporations and many government entities present their financial condition, finance themselves and manage their financial risks. We will examine corporate structure, evaluation of new projects, financial planning and governance. Perspectives will include those of the debt shareholders and key management members, including the Chief Executive Officer, Chief Financial Officer and Treasurer. Additional material relating to the public policy issues that certain corporate decisions create will be considered. There will be problem sets, graded and ungraded, to support most areas.

Instructor(s): Schabes, D. Terms Offered: Winter

Prerequisite(s): This course requires no prior finance or business knowledge.

PBPL 28685. Fiscal and Monetary Policy in the 21st Century. 100 Units.

This course discusses public policy from macroeconomic perspective. We will examine how public policy effects the macroeconomy both in theory and in practice. The first part of the course studies household labor, savings, and consumption behavior in the face of various government policies and how these aggregate in the macroeconomy. In particular, we will pay special attention to (1) taxes, (2) transfer programs, and (3) social insurance programs including both their cyclical and long-run effects. We will then turn to the empirical analysis of social safety net programs, paying attention to cross-state and cross-country comparisons. We will conclude this section of the course by discussing the trade offs the government faces in providing social insurance, reducing inequality, and promoting efficiency. The second part of the course will study monetary policy, touching on money and banking. We will study several models of monetary policy and their public policy implications. We will conclude with a discussion of the U.S. Financial Crisis.

Instructor(s): Gallen, T. Terms Offered: Spring

Prerequisite(s): PBPL 20000 or ECON 20000

PBPL 28728. Climate Change and Society: Human Impacts, Adaptation, and Policy Solutions. 100 Units.

Anthropogenic climate change is one of the most difficult challenges faced by modern society. A revolution in socioeconomic and environmental data, along with new and old insights from economics, can inform how we face this global challenge. During the course, our focus will be on the impacts of climate change upon society, and the necessity of solutions that deal with the global scope, local scales, and often unequal nature of the impacts. This interdisciplinary course covers the tools and insights from economic analysis, environmental science, and statistics that inform our understanding of climate change impacts, the design of mitigation and adaptation policies, and the implementation of these policies. Students will develop a mastery of key conceptual ideas from environmental economics relevant for climate change and acquire tools, both theoretical and empirical, for conducting analyses of climate impacts and policies. The latter part of the course will hone students' ability in applying these insights and tools through policy debates and presentations. The goal is to help students become informed and critically-minded practitioners of evidence-based, climate-informed policy making.

Instructor(s): Jina, A. Terms Offered: Winter

Prerequisite(s): PBPL 20000 or ECON 20000 or consent of instructor

Equivalent Course(s): ENST 28728

PBPL 28730. Insurgency in South and Southeast Asia. 100 Units.

This course will trace the emergence, spread, and decline of insurgencies across South and Southeast Asia. We will use cutting-edge theoretical and quantitative research to examine the causes of each conflict--from the Naxal Insurgency in India to the varied separatist movements in Indonesia--and draw on in-depth case studies of various counterinsurgency strategies to assess how these conflicts were or might be resolved through cooperation between local and international actors. Students will engage with ongoing field data collection efforts in Thailand and the Philippines, and will use original microdata as a core feature of their final research paper.

Instructor(s): Wright, A. Terms Offered: TBD

PBPL 28747. The Modern Welfare State. 100 Units.

In 2016, Denmark was the happiest country in the world according to a United Nations happiness report. Denmark, along with Sweden and Finland have shared 20 years of relative prosperity and now are among the wealthiest countries in the

world in terms of GDP per capita. They are also "welfare states" with very high levels of taxation and redistribution--policies at odds with traditional views on the power of incentives to encourage prosperity. The influence of the Nordic Model is evident in policy discussion in the US on issues ranging from educational subsidies to family-friendly workplaces. What can policy makers in other countries learn from the successes and failures of the Nordic Model? This class has three goals: 1. to familiarize you with Nordic taxes and subsidies, 2. to help you understand why these policies are successful (or appear to be successful), and 3. to give you the tools to critically evaluate suggestions for similar policy implementation in the US.

Instructor(s): Yana Gallen Terms Offered: TBD

Prerequisite(s): PBPL 26400 or equivalent

PBPL 28750. Conflict: Root Causes, Consequences, and Solutions for the Future. 100 Units.

This course will focus on understanding the causes and consequences of conflict, drawing on literatures from economics, political science and psychology. We will study why people join armed groups; and examine the role of ethnicity, religion and poverty in terrorism and civil war. We will also study whether conflict has lasting consequences on social cohesion and prospects for economic development. Finally, we will examine how individuals reconcile and rebuild in the aftermath of conflict.

Instructor(s): Dube, O Terms Offered: Winter

PBPL 28760. The Art of Political Persuasion: from Pericles' Funeral Oration to Donald Trump's Tweets. 100 Units.

What are the elements of persuasive political rhetoric in speeches, essays, op-eds, and tweets? This course will examine the theory and practice of effective political communication, beginning with foundational concepts of rhetoric in Aristotle and Cicero. We proceed to a close reading of masterpieces of oratory, including Pericles's Funeral Oration, Plato's Apology, Lincoln's Gettysburg Address, McClung's "Should Men Vote?", Churchill's "Never Surrender," King's "I Have a Dream," Mandela's "I Am Prepared to Die," and Thatcher's "Lady's Not for Turning." Our attention then turns to the written word: Locke's "Letter Concerning Toleration," Zola's "J'Accuse," and Havel's "Power of the Powerless," along with more contemporary writers: Steinem, Hitchens, Noonan and others. Finally, we examine Donald Trump's tweets and impromptu remarks. In addition to the study of the written word, students will be expected to write speeches and op-eds for delivery and publication.

Instructor(s): B. Stephens Terms Offered: Spring

PBPL 28765. The Politics of Authoritarian Regimes. 100 Units.

This course provides an overview of topics related to politics in authoritarian regimes. We begin by introducing the concept of authoritarianism: how it differs from democracy and how authoritarian regimes differ from each other. We then investigate the tools authoritarian rulers employ to maintain power, including institutions, policies, and tactics, and we examine the effects and side effects of these tools. Finally, we study transitions of power and of institutions, both on the way out of authoritarianism (democratization) and on the way in (democratic backsliding). Students who take this course will acquire a broad understanding of authoritarian politics and how it is covered in the literature.

Instructor(s): Scott Gehlbach; Zhaotian Luo Terms Offered: Winter

Prerequisite(s):

Note(s): Prior recommended coursework: one semester in Statistics (Stats 220 or equivalent) and current or prior training in game theory (PBPL 222, Social Science Inquiry core, or equivalent).

Equivalent Course(s): PLSC 28765

PBPL 28775. Poverty and Economic Development. 100 Units.

This course focuses mainly on the microeconomic fundamentals of economic development. We will study causes of poverty and underdevelopment, poverty measurement issues, and policies to improve well-being. We will concentrate on topics such as fertility, nutrition and health, education, labor markets, intra-household allocation of resources and foreign aid. Empirical evidence from developing economies will be used extensively.

Instructor(s): A. Menendez Terms Offered: Autumn

Prerequisite(s): A microeconomics course and a statistics/econometrics course is required. This course is recommended for third and fourth-year students.

PBPL 28776. Political Development and Policy. 100 Units.

The study of the inter-relationship between politics and economics is a lively one. In 1755, when Adam Smith wrote: "Little else is required to carry a state to the highest degree of opulence from the lowest barbarism, but peace, easy taxes, and a tolerable administration of justice, all the rest being brought about the natural course of things." he might not expected even after 400 years we would be in search of such a state. Yet alone, we would still be trying to understand the economic consequences of the political decisions, and the political consequences of the economic decisions. This course provides students with a broad understanding of development economics and political economy. We will explore questions such as but not limited to: What is the effect of state capacity, especially in the areas of fiscal and legal capacity, on development? On the other hand, how socio-political factors such as ethnic fractionalization, polarization, gender discrimination affect economic outcomes? What are economic causes and consequences of political violence? What is development assistance? How should we analyze the effect of development assistance on the developing nations?"

Instructor(s): Emine Deniz Terms Offered: Spring

PBPL 28780. The Art and Science of Negotiations and Persuasion. 100 Units.

The ability to influence other people and convince them to go along with your beliefs about what they should do is perhaps one of the most sought after, but misunderstood, professional skills. Those who appear to be successful at negotiation and persuasion are routinely built up as having unique traits like charisma, excellent leadership skills, and innate talent. However, this course will explain how success in influencing others depends not on innate or unique traits, but rather on knowledge and practice of basic psychological principles that govern interpersonal behavior. This course will increase

your understanding of negotiations and persuasion in several ways. First, you will experience varied negotiation situations firsthand in the classroom on a weekly basis. Second, you will learn how to analyze your work using insights collected from decades of research in social psychology, decision-making, and behavioral science. Third, and unlike most real-life situations, you will be able to receive feedback on your performance. Life, unfortunately, does not often offer the opportunity to compare your outcomes to other people's outcomes. This course does, thereby enabling you to identify what you did right, what you did wrong, and improve your performance by evaluating your work compared to the rest of the class. This course aims to provide you with negotiation experience, tools for persuading others to go along with your beliefs, and general knowledge of human psychology.

Instructor(s): Klein, N. Terms Offered: Spring

PBPL 28791. Behavioral Science and Public Policy. 100 Units.

Many policies are aimed at influencing people's behavior. The most well-intentioned policies can fail, however, if they are not designed to be compatible with the way people actually think and make decisions. This course will draw from the fields of cognitive, social, and environmental psychology to (1) examine the ways in which human behavior deviates from the standard rational actor model typically assumed by economics, and (2) provide strategies for improving the design, implementation, and evaluation of public-facing policies. The basic premise of this course is that a foundational understanding of human behavior can lead not only to more effective policies, but enhanced decision-making and well-being.

Instructor(s): K. Wolske Terms Offered: Spring

Equivalent Course(s): PSYC 28791

PBPL 28805. Behavioral Economics and Policy. 100 Units.

The standard theory of rational choice exhibits explanatory power in a vast range of circumstances, including such disparate decision making environments as whether to commit a crime, have children, or seek to emigrate. Nonetheless, shortfalls from full rationality seem not to be uncommon, and are themselves, to some extent, systematic. Behavioral economics documents and tries to account for these departures from full rationality. This course looks at areas in which some modification of the traditional rational choice apparatus might most be warranted; these include decisions that unfold over time, involve low probability events, or implicate willpower. To what extent should public policy respond to shortfalls from rationality or concern itself with promoting happiness?

Instructor(s): J. Leitzel Terms Offered: Autumn

Equivalent Course(s): ECON 26920

PBPL 28820. Machine Learning and Policy. 100 Units.

The goal of this course is to make students better producers and consumers of machine learning tools designed to help solve public policy problems. One thing this goal requires is some understanding of the basics of machine learning: how it works, what makes it different from the usual sort of statistical and econometric tools that we tend to use in social science studies of public policy problems, and how to implement these prediction models (which we will be doing in R, a free statistical program that now includes many machine learning packages). But this goal also requires some understanding of issues that are outside the usual machine learning toolkit, such as: what sorts of public policy problems are right for these tools, and which are not; how do we know whether a new prediction tool is capable of actually improving policy decisions, not just predicting outcomes accurately within some hold-out set; what additional considerations around fairness and other normative values may arise in using machine learning tools for public policy applications; and what challenges are associated with getting policymakers, front-line practitioners or individual citizens to make use of prediction tools and resulting decision aids.

Instructor(s): J. Ludwig Terms Offered: TBD

Equivalent Course(s): PPHA 38820

PBPL 28829. Artificial Intelligence for Public Policy. 100 Units.

It is hard to name a sector that will not be dramatically affected by artificial intelligence (or machine learning). There are many excellent courses that teach you the mechanics behind these innovations -- helping you develop an engineering skill set. This course takes a different approach. It is aimed at people who want to deploy these tools, either in business or policy, whether through start-ups or within a large organization. While this requires some knowledge of how these tools work, that is only a small part of the equation, just as knowing how an engine works is a small part of understanding how to drive.

What is really needed is an understanding of what these tools do well, and what they do badly. This course focuses on giving you a functional, rather than mechanistic, understanding. By the end, you should be an expert at identifying ideal use-cases and thereby well-placed to create new products, businesses and policies that use artificial intelligence.

Instructor(s): J. Ludwig Terms Offered: Winter

Prerequisite(s): Students should have some Statistics experience.

Equivalent Course(s): PPHA 38829

PBPL 28871. Constitutional Law. 100 Units.

This course is an introduction to American constitutional law. Topics include: the role of the judiciary and other institutions in interpreting and applying the Constitution of the United States; theories of constitutional interpretation; the practice and meaning of judicial review in a political democracy; structural and individual rights approaches to constitutional limitations on government authority; and the public-private distinction in constitutional law.

Instructor(s): D. Spencer Terms Offered: Spring

Prerequisite(s): Third or fourth year standing required

PBPL 28891. The Supreme Court and Public Policy. 100 Units.

Learning how courts interpret policy has become an important component of the policymaker's toolkit. This course aims to introduce students to how Constitutional interpretation touches upon pressing policy questions of today. Students will engage with what courts expect to see from policymakers, while also learning how to read cases from a lawyer's perspective. Topics covered include federalism, LGBT rights, race and ethnicity, criminal justice issues, voting rights, emoluments, and political questions and official immunity.

Instructor(s): D. Spencer Terms Offered: Spring

Prerequisite(s): Third or Fourth year standing required

PBPL 28900. Environmental and Science Policy. 100 Units.

With a strong emphasis on the fundamental physics and chemistry of the environment, this course is aimed at students interested in assessing the scientific repercussions of various policies on the environment. The primary goal of the class is to assess how scientific information, the economics of scientific research, and the politics of science interact with and influence public policy development and implementation.

Instructor(s): D. Coursey Terms Offered: TBD

Equivalent Course(s): ENST 28900

PBPL 28920. Inequality: Origins, Dimensions, and Policy. 100 Units.

For the last four decades, incomes in the United States and across the globe have grown more unequal. That fact has attracted worldwide attention from scholars, governments, religious figures, and public intellectuals. In this interdisciplinary course, participating faculty members drawn from across the University and invited guest speakers will trace and examine the sources and challenges of inequality and mobility in many of its dimensions, from economic, political, legal, biological, philosophical, public policy, and other perspectives. This course is part of the College Course Cluster program: Inequality.

Instructor(s): A. Sanderson and Staff Terms Offered: May be offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Note(s): ECON 24720 or ECON 22410 may be used as an Economics elective, but only one of the two may be used toward Economics major requirements.

Equivalent Course(s): BPRO 28900, ECON 24720

PBPL 28925. Health Impacts of Transportation Policies. 100 Units.

Governments invest in transport infrastructure because it encourages economic growth and mobility of people and goods, which have direct and indirect benefits to health. Yet, an excessive reliance on motorized modes of transport harms population health, the environment, and social well-being. The impact on population health is substantial: Globally, road traffic crashes kill over 1.3 million annually. Air pollution, to which transport is an important contributor, kills another 3.2 million people. Motorized modes of transport are also an important contributor to sedentary lifestyles. Physical inactivity is estimated to cause 3.2 million deaths every year, globally. This course will introduce students to thinking about transportation as a technological system that affects human health and well-being through intended and unintended mechanisms. The course will examine the complex relationship between transportation, land use, urban form, and geography, and explore how decisions in other sectors affect transportation systems, and how these in turn affect human health. Students will learn to recognize how the system level properties of a range of transportation systems (such as limited-access highways, urban mass transit, inter-city rail) affect human health.

Terms Offered: Spring

Equivalent Course(s): ARCH 28925, ENST 28925, HLTH 28925

PBPL 28957. The Social Psychology of Behavior in Organizations. 100 Units.

Understanding others' thoughts and behaviors is essential for professional and personal success. Most of us try to understand others by putting on the cap of an "intuitive scientist," relying on our intuitions to identify others' thoughts and motivations and to predict others' behavior. However, decades of psychological research suggest that our intuitions about other people are often misguided in systematic ways. This course will enable you to have a more accurate understanding of others' motivations, feelings, thoughts, and behaviors by teaching you to think like a "psychological scientist" rather than an intuitive scientist. Relying on research in social psychology, judgment and decision-making, and behavioral science, this course will help you understand when your intuitions are likely to be reliable and when they are unlikely to be so, giving you important knowledge and tools to succeed professionally and interpersonally. Managing other people—be they co-workers, customers, constituents, or competitors—is critical for professional and personal success. At the very start of your professional career, your success will likely depend on having the necessary technical expertise to produce excellent work product for your organization. As you progress in your career, however, success will increasingly require you to manage groups of people, to align their skills, solve interpersonal problems, and create well-functioning teams.

Instructor(s): Klein, N. Terms Offered: Spring

PBPL 29050. Youth Law and Policy: Child Welfare and Juv. Just. in the U.S. 100 Units.

This course explores how legal institutions protect and punish children in the United States. We will spend the first part of the course exploring the child welfare system, which purports to protect children from abuse and neglect through various mechanisms including foster care and the termination of parental rights. We will spend the second part of the course exploring the juvenile justice system, which purports to prosecute and rehabilitate children for their criminal acts in a system separate from the criminal justice system. In the final part of the course, we will consider special topics in this area of law and policy including "cross-over youth" (i.e. children involved in both systems), unaccompanied immigrant children, homeless and runaway youth, and the so-called "school-to-prison-pipeline." This course will place special emphasis on the judges, lawyers, law enforcement officers, and social workers that comprise these legal institutions.

Terms Offered: Not offered in 2020-21

Prerequisite(s): Course limited to 3rd and 4th year students only.

Equivalent Course(s): LLSO 29050, HMRT 29050

PBPL 29070. Nuclear Policy. 100 Units.

While issues arising from technologies that have both military and civilian applications are not new, the nearly incomprehensible destruction from exploding nuclear weapons focuses the mind as few other dual-use technologies can. This course will examine the development of national policies and the international regimes on the uses of nuclear energy. We will review military doctrine and the plans for nuclear war-fighting as well as the effects on societies of developing and using nuclear weapons. We will review the history of international proliferation of nuclear technology and fissile material and examine efforts to curtail the spread of weapons. In the second part of the course, we will focus on the development of civilian nuclear power and on current policy to prevent accidents and dispose of nuclear waste materials. Political leaders often face policy dilemmas because nuclear technology and materials offer great benefit, as well as presenting great danger. We will explore these dilemmas throughout the course.

Instructor(s): Benedict, K Terms Offered: Winter

Equivalent Course(s): PPHA 33510

PBPL 29355. Leading Complex Organizations. 100 Units.

In virtually any field of endeavor, individuals will find themselves operating within organizations - many of them quite complex. By studying leadership of such organizations at the outset of a career, individuals will learn how to better succeed within any organization and will attain a level of preparation for assuming leadership positions if they ultimately become available. The seminar will cover a number of critical subjects: the difference between leadership and management; the development of the organization's sense of mission and the strategy to achieve it; organizational culture; building and leading a team; entrepreneurial leadership; organizational transformation; leading an organization through crisis; how a leader relates to an organization's governing body and external constituencies; how leaders are held accountable.

Instructor(s): Thomas Cole Terms Offered: Spring

Prerequisite(s): Third- or fourth-year standing

PBPL 29507. The Politics of Healthcare Policy in the United States, 1900 - 2020. 100 Units.

In the modern history of United States social politics, there have been few issues as enduring, divisive, and consequential as that of healthcare policy. This seminar examines the political, economic, legal, and social origins of the modern U.S. system of healthcare financing and delivery. Our discussion and analysis will be organized around a series of key turning points in the history of U.S. healthcare politics, from the first push for "workingmen's insurance" in the Progressive Era to the debate over Obamacare and "Medicare for All" since 2008. We will learn to view healthcare policy as contested terrain fought over by labor unions, insurance companies, physicians, think tanks, policymakers, grassroots activists, trade associations, and corporate employers. In the process, we will explore themes such as the rise of the modern corporation, public interest law, welfare capitalism and business conservatism, and the politics of race- and class-based healthcare inequality.

Instructor(s): Ben Zdenecanovic Terms Offered: Spring. Not offered in 2020-21

Prerequisite(s): None

Equivalent Course(s): HIPS 27507, HLTH 29507, LLSO 29507, HIST 25319

PBPL 29600. Internship: Public Policy. 100 Units.

Students write a paper about their experience working for a government agency or nonprofit organization.

Instructor(s): J. Leitzel Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of the Program Director is required. Students must obtain consent before beginning the internship.

Note(s): The College Reading and Research Course Form is required. Must be taken for P/F grading.

PBPL 29700. Reading and Research: Public Policy. 100 Units.

This is a reading and research course for independent study not related to BA research or BA thesis preparation.

Instructor(s): STAFF Terms Offered: Autumn Spring Winter

Prerequisite(s): Open only to Public Policy majors. Must be taken for a letter grade.

Note(s): The College Reading and Research Course Form is required.

PBPL 29701. Readings and Research: Working Group in Environment, Agriculture, and Food (EAF) 100 Units.

This course consists of participation in the Environment, Agriculture, and Food Group in a role assigned by the instructor.

Instructor(s): S. Shaikh Terms Offered: Winter

Prerequisite(s): Registration by instructor consent only

Note(s): Please email Sabina Shaikh at sabina@uchicago.edu.

Equivalent Course(s): ENST 29701

PBPL 29702. Readings and Research: Working Group in Environment, Agriculture, and Food (EAF) II. 100 Units.

PBPL 29800. BA Seminar: Public Policy. 100 Units.

In Autumn Quarter students learn about sources, methods of research, and the treatment of evidence. In Winter Quarter students continue to work with their preceptor and peers in conducting their research and revising their written work in a workshop or writing group format.

Instructor(s): Staff Terms Offered: Autumn Winter

Prerequisite(s): Open only to fourth-year Public Policy majors.

Note(s): PBPL 29800 is offered in both autumn and winter quarters; course sections of PBPL 29800 and PBPL 29801 meet together. Students are required to take one quarter of each course, in any order, to satisfy the Public Policy BA Seminar requirement. Must be taken for a letter grade.

PBPL 29801. BA Seminar: Public Policy II (no credit) 000 Units.

This seminar course focuses on the writing phase of the BA paper.

Instructor(s): STAFF Terms Offered: Autumn Winter

Prerequisite(s): PBPL 29800 or consent.

Note(s): Must be taken for a letter grade.

PBPL 29900. BA Paper Preparation: Public Policy. 100 Units.

This is a reading and research course for independent study related to BA research and BA thesis preparation.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Prerequisite(s): Open only to 4th year Public Policy majors. Must be taken for a letter grade. The College Reading and Research Course Form is required.

Quantitative Social Analysis

Minor Program in Quantitative Social Analysis

The minor in Quantitative Social Analysis explores social statistics and mathematics to describe, understand, and predict the behavior and experiences of individuals, groups, and organizations of groups. These statistical and mathematical methods focus on measurement, analysis, or both, using techniques and strategies that are widely useful, for example, in understanding thoughts and behaviors of individuals, as well as the cultures of societies, fluctuations of markets, actions of governments, spread of disease, dynamics of migration, causes of war, and the diffusion of knowledge. The minor in Quantitative Social Analysis develops strong statistical foundations for the purpose of learning how to draw valid inferences from quantifiable data and critically evaluate empirical evidence in the social and behavioral sciences.

A minor in Quantitative Social Analysis provides an excellent foundation for application to graduate study at all levels and in many disciplines, ranging from economics, psychology, political science, public policy, and sociology, as well as non-social science disciplines such as medical school, public health, education, social services, applied mathematics, and applied computer science. The minor in Quantitative Social Analysis aims to train students in ways that are more immediately attractive to employers in industry, government, the military, environmental studies, journalism, and public interest and advocacy groups, as well as to University of Chicago faculty seeking research assistance.

Program Requirements

Course Work

Students take five (5) courses that cover three levels: Basic Skills (one course), Advanced Skills (two courses), and Quantitative Applications (two courses). **Or**, if the student has already completed a Basic Skills course for the major, then three Advanced Skills courses and two Quantitative Applications courses.

- Students who are taking Basic Skills courses should primarily focus on developing theoretical understanding of statistics and building up quantitative skills (rather than simply utilizing quantitative skills as part of the course).
- Students who are taking Advanced Skills courses will further develop their statistical skills with broad usefulness in social scientific research.
- Students who are prepared with more advanced statistical training are then able to more deeply understand the Quantitative Applications in courses throughout the social sciences and engage in research appropriate to those courses in solo activity or as part of research teams.

In order to ensure that the minor in Quantitative Social Analysis represents the diversity of training across the social sciences, no more than three courses may be taken in any one department, and the Quantitative Applications courses must be drawn from at least two departments. In all cases, students should be aware that some approved courses have explicit prerequisites which may not count toward the Quantitative Social Analysis minor.

Summary of Requirements

One Basic Skills course	100
Two Advanced Skills courses	200
Two Quantitative Applications courses	200
Total Units	500

Approved Courses

The following courses have been approved by the Committee on Quantitative Methods in Social, Behavioral, and Health Sciences as appropriate for the minor in Quantitative Social Analysis and are listed by the three levels stipulated above (Basic Skills, Advanced Skills, and Quantitative Applications).

Basic Skills

One course; may not be satisfied with AP credit.

Students who have already taken SOSOC 13100-13200-13300 Social Science Inquiry I-II-III or previously completed any of the Basic Skills courses as part of their majors may substitute an additional Advanced Skills course in place of the Basic Skills course.

CHDV 20101	Applied Statistics in Human Development Research	100
ECON 21010	Statistical Methods in Economics	100
GEOG 28702	Introduction to GIS and Spatial Analysis	100
PBHS 32100	Introduction to Biostatistics	100
PBPL 26400	Quantitative Methods in Public Policy	100
PSYC 20100	Psychological Statistics	100
PSYC 20200	Psychological Research Methods	100
SOCI 20004	Statistical Methods of Research	100
SOCI 20157	Mathematical Models	100

SOCI 30004	Statistical Methods of Research	100
SOSC 20111	Inferential Statistics	100
SOSC 26006	Foundations of Statistical Theory	100
SOSC 26009	Introductory Statistical Methods	100
STAT 22000	Statistical Methods and Applications	100
STAT 22400	Applied Regression Analysis	100

Advanced Skills

Two courses; or three courses if a Basic Skills course has already been completed for the student's major.

CHDV 30102	Introduction to Causal Inference	100
CHDV 32411	Mediation, Moderation, and Spillover Effects	100
ECON 21020	Econometrics	100
ECON 21030	Econometrics - Honors	100
ECON 21300	Data Construction and Interpretation in Economic Applications	100
ECON 21320	Applications of Econometric and Data Science Methods	100
ECON 21330	Econometrics and Machine Learning	100
ECON 21410	Computational Methods in Economics	100
ECON 21800	Experimental Economics	100
PBHS 32400	Applied Regression Analysis	100
PBHS 32600	Analysis of Categorical Data	100
PBHS 32700	Biostatistical Methods	100
PBHS 33300	Applied Longitudinal Data Analysis	100
PBPL 28550	Social Experiments: Design and Generalization	100
PBPL 28820	Machine Learning and Policy	100
PLSC 30700	Introduction to Linear Models	100
SOCI 20112	Applications of Hierarchical Linear Models	100
SOCI 20253	Introduction to Spatial Data Science	100
SOCI 30005	Statistical Methods of Research-II	100
SOSC 26007	Overview of Quantitative Methods in the Social and Behavioral Sciences	100
SOSC 36008	Principles and Methods of Measurement	100
STAT 22600	Analysis of Categorical Data	100
STAT 24400	Statistical Theory and Methods I	100
STAT 24500	Statistical Theory and Methods II	100
PBHS 33500	Statistical Applications	100

Quantitative Applications

Two courses

ECON 23410	Economic Growth	100
ECON 24000	Labor Economics	100
ECON 24030	Understanding Labor Markets: Theory, Empirics and Policies	100
ECON 24450	Inequality and the Social Safety Net: Theory, Empirics, and Policies	100
ECON 24600	Economics of the Family	100
ECON 24720	Inequality: Origins, Dimensions, and Policy	100
ECON 25000	Introduction To Finance	100
ECON 25100	Financial Economics; Speculative Markets	100
ECON 26010	Public Finance	100
ECON 26020	Public Sector Economics	100
ECON 26500	Environmental Economics	100
ECON 26700	Economics of Education	100
ECON 26730	Global Energy & Climate Challenge: Economics, Science & Policy	100
ECON 26800	Energy and Energy Policy	100
ECON 27000	International Economics	100
ECON 27700	Health Economics and Public Policy	100
ECON 27720	Economics and Regulation of Health Care Markets: Theory and Empirics	100

ECON 28000	Industrial Organization	100
ECON 28020	Industrial Organization and Regulation	100
ECON 28060	The Economics of Organizations: An Experimental Perspective	100
ECON 28100	The Economics of Sports	100
ECON 28700	The Economics of Crime	100
ENST 26530	Environment, Agriculture, and Food: Economic and Policy Analysis	100
ENST 26531	Environment, Agriculture, and Food: Advanced Economic and Policy Analysis	100
PBPL 28350	Education and Development: Policy and Research	100
PBPL 28375	Political Economy of Development	100
PBPL 28425	Strategic Behavior and Regulation of Firms	100
PBPL 28538	Political Economy of Natural Resources	100
PBPL 28750	Conflict: Root Causes, Consequences, and Solutions for the Future	100
PLSC 22400	Public Opinion	100
PLSC 23501	International Political Economy	100
SOCI 20103	Social Stratification	100
SOCI 20122	Introduction to Population	100
SOCI 20192	The Effects of Schooling	100
SOCI 20263	Human Migration	100
SOCI 20264	Wealth	100
SOCI 20275	Sociology of Health and Aging	100

Advising and Grading

Courses in the minor may not be double counted with the student’s major(s), other minors, or general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

College students majoring in any field may complete the minor in Quantitative Social Analysis. Students who elect the minor program in Quantitative Social Analysis must contact the program administrator before the end of Spring Quarter of their third year to declare their intention to complete the minor. The program administrator must submit approval on the form provided by the College for the minor to the student’s College adviser by the Spring Quarter of the student’s third year.

Religious Studies

Department Website: <https://divinity.uchicago.edu/academics/undergraduate-program-religious-studies> (<https://divinity.uchicago.edu/academics/undergraduate-program-religious-studies/>)

Program of Study

The program in Religious Studies introduces students to the academic study of religion. Students in Religious Studies learn how to think, talk, and write about religion in a way that is well-informed, rigorously critical, and responsibly engaged. The study of religion investigates the way human societies construct practices, seek meanings, and pose questions about their world. These investigations may be constructive, cultural, and/or historical. Since it touches all facets of human experience, the study of religion is a crucial conversation partner with other fields of study and draws on the entire range of humanistic and social scientific disciplines. Students in the program are able to explore numerous religious traditions, including Buddhism, Christianity, Hinduism, Islam, and Judaism, and are exposed to the sources, problems, methods, and methodologies of our diverse areas of study, including Biblical and Historical Studies; Ethics, Theology, and the Philosophy of Religions; as well as History of Religions, Anthropology, Sociology, and Religion and Literature. The interests of our students may be descriptive, explanatory, and/or normative.

Program Requirements

Religious Studies majors have the option of pursuing one of two tracks: the Regular Track or the Research Track. Students in the Regular Track must take eleven courses for the major, including at least one introductory-level ('Gateway') course as well as a third-year Theories/Methods seminar. Students in the Research Track will also complete these requirements; in addition, they will complete a BA thesis during two BA seminars: RLST 29800 BA Paper Seminar I and RLST 29900 BA Paper II. Students who wish to pursue the Research Track must officially declare their intention to do so with the Director of Undergraduate Studies by the end of Spring Quarter during their third year. Only students in the Research Track are eligible for departmental honors.

Students with permission to enroll in graduate Divinity courses may count these toward the major. Students who wish to receive credit in the major for non-departmental courses must submit a petition to the Director of Undergraduate Studies. Such requests are decided on a case-by-case basis. NOTE: The Office of the Dean of Students in the College must also approve the transfer of all courses taken at institutions other than those in which students are enrolled as part of a study abroad program that is sponsored by the University of Chicago. For more information, visit Transfer Credit.

Introductory Course Requirement

Students in Religious Studies are required to take an introductory-level ('Gateway') course. It need not precede other course work in the major, but students are advised to have completed it by the end of their second year. Gateway courses include RLST 10100 Introduction to Religious Studies, RLST 10102 Religion, Reason, and the State, RLST 11004 Introduction to the Hebrew Bible, and RLST 12000 Introduction to the New Testament: Texts and Contexts.

Course Distribution

Religion is expressed in many forms throughout the world's cultures, and the academic study of religion therefore requires multiple perspectives on its subject. Students of religion should have some knowledge of the historical development of specific religious traditions, understand and critically engage the ethical and intellectual teachings of various religions, and begin to make some comparative appraisals of the roles that religions play in different cultures and historical periods. To introduce students to these multiple perspectives on religion and to provide a sense of the field as a whole, students are required to take at least one course in two of the following areas. To identify the areas, refer to the RLST number range (see below).

A. Historical Studies in Religious Traditions: courses that explore the development of particular religious traditions, including their social practices, rituals, scriptures, and beliefs in historical context (RLST 11000 through 15000, 20000 through 22900).

B. Constructive Studies in Religion: courses that investigate constructive or normative questions about the nature and conduct of human life that are raised by religious traditions, including work in philosophy of religion, ethics, and theology (RLST 23000 through 25900).

C. Cultural Studies in Religion: courses that introduce issues in the social and cultural contingencies of religious thought and practice by emphasizing sociological, anthropological, and literary-critical perspectives on religion, and by raising comparative questions about differing religious and cultural traditions (RLST 26000 through 28900).

Senior Seminar and BA Paper

The two-quarter senior sequence (RLST 29800 BA Paper Seminar I and RLST 29900 BA Paper II) will assist students in the Research Track with the preparation of the required BA paper. During May of their third year, students will work with the preceptor to choose a faculty adviser and a topic for research, and to plan a course of study for the following year. These must be approved by the Director of Undergraduate Studies. Students will take part in the BA Paper Seminar convened by a preceptor during Autumn and Winter Quarters. This seminar will allow students to prepare their bibliographies, hone their writing, and present their research. Students will register for RLST 29800 BA Paper Seminar I in the Autumn Quarter and for RLST 29900 BA Paper II in the Winter Quarter. The BA paper will be due the second week of Spring Quarter. The length is typically between thirty and forty pages, with the upward limit being firm.

This program may accept a BA paper or project used to satisfy the same requirement in another major if certain conditions are met and with the consent of the other program. Approval from both departments is required. Students should consult with the departments by the earliest BA proposal deadline (or by the end of their third year, if neither program publishes a deadline). A consent form, to be signed by both departments, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Grading

Religious Studies majors must receive quality grades in all courses in the major. With consent of instructor, nonmajors may take Religious Studies courses for P/F grading. Faculty will determine the criteria that constitute a Pass.

Honors

Honors are awarded by the Divinity School's Committee on Undergraduate Studies. Students who write senior papers deemed exceptional by their faculty advisers will be eligible for consideration for graduation with honors. Only students in the Research Track are eligible for honors. To be considered for honors, students in the Research Track must also have a 3.5 GPA or higher in the major and a 3.25 GPA or higher overall.

Summary of Requirements

Regular Track

One Introductory-level ('Gateway') course	100
At least two courses in three major areas (Historical, Constructive, Cultural Studies)	200
Third-year Theories/Methods seminar	100
Seven additional courses in Religious Studies	700
Total Units	1100

Research Track

One Introductory-level ('Gateway') course		100
At least two courses in three major areas (Historical, Constructive, Cultural Studies)		200
Third-year Theories/Methods seminar		100
Seven additional courses in Religious Studies		700
RLST 29800	BA Paper Seminar I	100
RLST 29900	BA Paper II	100
Total Units		1300

Minor Program in Religious Studies

The minor in Religious Studies requires a total of six courses. One introductory-level ('Gateway') course is required of all minors.

The remaining five courses should be chosen to reflect a broad understanding of the academic study of religion. Of these six, students must take at least one course in two of our three areas of study [Historical Studies (A), Constructive Studies (B), and Cultural Studies (C)]. Courses in the minor may not be double-counted with the student's major(s) or with other minors, and may not be counted toward general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

The student must complete a substantial (at least 10–15 pages) paper or project. This work should engage critically with primary source materials and exemplify methodological sophistication in the study of religion, and should earn a grade no lower than B-. It is expected that this paper will normally be written as part of the student's course work for the minor. The Director of Undergraduate Studies will approve the paper for fulfillment of this requirement.

Students who elect the minor program in Religious Studies must meet with the Director of Undergraduate Studies before the end of Spring Quarter of their third year to declare their intention to complete the minor. Consent to Complete a Minor Program forms are available from the student's College adviser or online (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf).

Sample Program

The following group of courses would satisfy a minor in Religious Studies:

RLST 10100	Introduction to Religious Studies	100
RLST 11004	Introduction to the Hebrew Bible	100
RLST 21801	Religion and Society in the Middle Ages	100
RLST 23900	Buddhist Thought in India and Tibet	100
RLST 22505	Histories of Japanese Religion	100

RLST 26800	The Mahabharata in English Translation	100
Total Units		600

Religious Studies Courses

RLST 10100. Introduction to Religious Studies. 100 Units.

What are we talking about when we talk about religion? There are a multitude of answers to that question, and this course provides students with an entry way into a longstanding conversation-involving insiders, outsiders, and those in between-around the meanings of a word that indexes ideas of god and the gods, of origins and ends, and of the proper places of humans (and everything else, including animals) above, in, and below the globe. Talk about religion today is, in fact, cheap: this course will aim to promote a grammatical currency (morphology, vocabulary, syntax) to enhance the value of such talk.

Instructor(s): Ryan Coyne Terms Offered: Winter

Note(s): This course counts as a Gateway course for RLST majors/minors.

RLST 10101. Religion, Reason, and Critique. 100 Units.

This course is part of a two-quarter sequence in Religious Studies (along with 'Religion, Reason, and the State') exploring the work of key theorists and thinkers on the role of religion in the formation of modernity. Central questions in this course include: how do religious belief and practice influence and inform modern accounts of reason? What is critique, and how does religion emerge in modernity as the object of critique par excellence?

Instructor(s): Ryan Coyne Terms Offered: Autumn

Prerequisite(s): No prerequisites.

Note(s): This course counts as a Gateway course for RLST majors/minors. Students may enroll in either one of the courses in this sequence independently of the other course.

RLST 10102. Religion, Reason, and the State. 100 Units.

The second quarter of this sequence explores the work of key theorists on the role of religion in modern society, politics, and the state. Central questions include: How has state power transformed religious institutions, knowledge, and practice? How can we account for the persistence of religious commitments in the face of secularization? What role has religion played in revolutionary movements and in resistance against state power?

Instructor(s): Alireza Doostdar Terms Offered: Winter

Prerequisite(s): No prerequisites.

Note(s): This is the second of a two-quarter sequence. Students may enroll in either one of the courses in this sequence independently of the other course. This course counts as a Gateway course for RLST majors/minors.

RLST 11004. Introduction to the Hebrew Bible. 100 Units.

The course will survey the contents of the Hebrew Bible, and introduce critical questions regarding its figures and ideas, its literary qualities and anomalies, the history of its composition and transmission, its relation to other artifacts from the biblical period, its place in the history and society of ancient Israel and Judea, and its relation to the larger culture of the ancient Near East.

Instructor(s): Simeon Chavel Terms Offered: Autumn

Note(s): This course counts as a Gateway course for RLST majors/minors.

Equivalent Course(s): NEHC 30504, NEHC 20504, HIJD 31004, BIBL 31000, JWSC 20120

RLST 12000. Introduction to the New Testament: Texts and Contexts. 100 Units.

An immersion in the texts of the New Testament with the following goals: 1. through careful reading to come to know well some representative pieces of this literature; 2. to gain useful knowledge of the historical, geographical, social, religious, cultural and political contexts of these texts and the events they relate; 3. to learn the major literary genres represented in the canon ('gospels,' 'acts,' 'letters,' and 'apocalypses') and strategies for reading them; 4. to comprehend the various theological visions and cultural worldviews to which these texts give expression; 5. to situate oneself and one's prevailing questions about this material in the history of research, and to reflect on the goals and methods of interpretation; 6. to raise questions for further study.

Instructor(s): Margaret Mitchell Terms Offered: Winter

Prerequisite(s): Interest in this literature, and willingness to enter into conversation with like-minded and non-like-minded others on the texts and the issues involved in their interpretation.

Note(s): This course counts as a Gateway course for RLST majors/minors.

Equivalent Course(s): FNDL 28202, BIBL 32500, MDVL 12500

RLST 13500. History of Christian Thought V: Modern Religious Thought. 100 Units.

This course will consider key figures in 'modern' religious thought, including Kant, Hegel, Schleiermacher, Feuerbach, Kierkegaard, Troeltsch, and Barth, paying particular attention to two issues: the possibility of freedom in the face of law-like necessities, and the possibility of thinking for oneself.

Instructor(s): Kevin Hector Terms Offered: Autumn

Equivalent Course(s): THEO 30700, HCHR 30900

RLST 15100. Introductory Qur'anic Arabic I. 100 Units.

This course is the first in a 3-quarter sequence 'Introduction to Qur'anic Arabic' (IQA), which aims to provide students with foundational philological and reading skills by covering the essentials of Qur'anic/Classical Arabic grammar. The 3 quarters of IQA are sequential, and students are strongly encouraged to join in the first quarter. Exceptions can be made on a case by case basis.

Instructor(s): TBD Terms Offered: Autumn

Prerequisite(s): Graduate and undergraduate students from any department are welcome to register. The absolute minimum prerequisite for IQA I is knowledge of the Arabic script. Training equivalent to at least a quarter of Modern Standard Arabic (MSA) is highly desirable. The IQA sequence is also open to students who may have had more exposure to Arabic (modern or classical) but wish to acquire a solid foundation in Arabic grammar, and/or students who feel they are not yet ready for third-year Arabic courses.

Equivalent Course(s): NELC 30100, ISLM 30100

RLST 15200. Introductory Qur'anic Arabic II. 100 Units.

This course is the second in a 3-quarter sequence 'Introduction to Qur'anic Arabic' (IQA), which aims to provide students with foundational philological and reading skills by covering the essentials of Qur'anic/Classical Arabic grammar. This course also features readings of select passages from the Qur'an, #ad#th and Tafs#r. The 3 quarters of IQA are sequential, and students are strongly encouraged to join in the first quarter. Exceptions can be made on a case by case basis.

Instructor(s): TBD Terms Offered: Winter

Prerequisite(s): Successful completion of Introductory Qur'anic Arabic I.

Equivalent Course(s): NELC 30200, ISLM 30200

RLST 15300. Introductory Qur'anic Arabic III. 100 Units.

This course is the third in a 3-quarter sequence 'Introduction to Qur'anic Arabic' (IQA), which aims to provide students with foundational philological and reading skills by covering the essentials of Qur'anic/Classical Arabic grammar. This course also features readings of select passages from the Qur'an, #ad#th and Tafs#r. The 3 quarters of IQA are sequential, and students are strongly encouraged to join in the first quarter. Exceptions can be made on a case by case basis.

Instructor(s): TBD Terms Offered: Spring

Prerequisite(s): Graduate and undergraduate students from any department are welcome to register. The minimum prerequisite for IQA III is the successful completion of IQA II or equivalent training. The IQA sequence is also open to students who may have had more exposure to Arabic (modern or classical) but wish to acquire a solid foundation in Arabic grammar, and/or students who feel they are not yet ready for third-year Arabic courses.

Equivalent Course(s): NEHC 30300, ISLM 30300

RLST 16101. Reading Hebrew for Research Purposes. 100 Units.

This course is designed for students who already have a basic knowledge of modern of Biblical Hebrew (at least one first year course). The main objective is to teach students a broad range of skills necessary to read scholarly articles and primary materials in students' fields of study, written in Modern Hebrew. Due to the fact that the background of each student is different as far as his or hers past experience with Hebrew, a grammar survey is going to be the first step. The goal of this course is for the students to achieve high comprehension level. (Please note: This course does not intend to teach official rules and forms of translation). By the end of the course, students should feel confident in their ability to read any given Hebrew text, fiction and non-fiction.

Instructor(s): Staff

Prerequisite(s): Students should have at least two years of Modern Hebrew and/or one year of Biblical Hebrew. Students should be able to read Hebrew texts without vowels as well as cursive Hebrew.

Equivalent Course(s): HEBR 20201

RLST 16102. Reading Hebrew for Research Purposes. 100 Units.

The main objective is to teach students a broad range of skills necessary to read scholarly articles and primary materials in students' fields of study, written in Modern Hebrew. Due to the fact that the background of each student is different as far as his or hers past experience with Hebrew, a grammar survey is going to be the first step. The goal of this course is for the students to achieve high comprehension level. (Please note: This course does not intend to teach official rules and forms of translation). By the end of the course, students should feel confident in their ability to read any given Hebrew text, fiction and non-fiction.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): Students should have at least two years of Modern Hebrew and/or one year of Biblical Hebrew. Students should be able to read Hebrew texts without vowels as well as cursive Hebrew.

Equivalent Course(s): HEBR 20202

RLST 16500. The Radiant Pearl: Introduction to Syriac Literature and its Historical Contexts. 100 Units.

After Greek and Latin, Syriac literature represents the third largest corpus of writings from the formative centuries of Christianity. This course offers students a comprehensive overview of the dominant genres and history of Syriac-speaking Christians from the early centuries through the modern day. Moving beyond traditional historiography that focuses exclusively on early Christianity within the Roman Empire, this class examines Christian traditions that took root in the Persian and later Islamic Empires as well. Through studying the history and literature of Syriac-speaking Christians, the global reach of early Christianity and its diversity comes to the fore. Syriac-speaking Christians preached the Gospel message from the Arabian Peninsula to early modern China and India. Syriac writers also raised female biblical figures and holy women to prominent roles within their works. Students will broaden their understanding of the development of Christian thought as they gain greater familiarity with understudied voices and visions for Christian living found within Syriac literature. Special attention will be paid to biblical translation, asceticism, poetry, differences between ecclesial communities as well as the changing political fortunes of Syriac-speaking populations. No previous knowledge or study expected.

Instructor(s): Erin Galgay Walsh Terms Offered: Autumn

Equivalent Course(s): NEHC 36500, GNSE 26505, BIBL 36500, HCHR 36500, GNSE 36505, NEHC 26500

RLST 20201. Islamicate Civilization I: 600-950. 100 Units.

This course covers the rise and spread of Islam, the Islamic empire under the Umayyad and early Abbasid caliphs, and the emergence of regional Islamic states from Afghanistan and eastern Iran to North Africa and Spain. The main focus will be on political, economic and social history.

Instructor(s): Ahmed El Shamsy Terms Offered: Autumn

Note(s): The Islamicate Civilization sequence does not fulfill the General Ed requirements

Equivalent Course(s): MDVL 20201, HIST 15611, NEHC 30201, ISLM 30201, HIST 35621, NEHC 20201

RLST 20202. Islamicate Civilization II: 950-1750. 100 Units.

This course, a continuation of Islamicate Civilization I, surveys intellectual, cultural, religious and political developments in the Islamic world from Andalusia to the South Asian sub-continent during the periods from ca. 950 to 1750. We trace the arrival and incorporation of the Steppe Peoples (Turks and Mongols) into the central Islamic lands; the splintering of the Abbasid Caliphate and the impact on political theory; the flowering of literature of Arabic, Turkic and Persian expression; the evolution of religious and legal scholarship and devotional life; transformations in the intellectual and philosophical traditions; the emergence of Shi'i states (Buyids and Fatimids); the Crusades and Mongol conquests; the Mamluks and Timurids, and the 'gunpowder empires' of the Ottomans, Safavids, and Moghuls; the dynamics of gender and class relations; etc. This class partially fulfills the requirement for MA students in CMES, as well as for NELC majors and PhD students.

Instructor(s): Franklin Lewis Terms Offered: Winter

Prerequisite(s): Islamicate Civilization I (NEHC 20201) or Islamic Thought & Literature-1 (NEHC 20601), or the equivalent

Note(s): The Islamicate Civilization sequence does not fulfill the General Ed requirements

Equivalent Course(s): HIST 15612, ISLM 30202, MDVL 20202, NEHC 30202, HIST 35622, NEHC 20202

RLST 20203. Islamicate Civilization III: 1750-Present. 100 Units.

This course covers the period from ca. 1750 to the present, focusing on Western military, economic, and ideological encroachment; the impact of such ideas as nationalism and liberalism; efforts at reform in the Islamic states; the emergence of the 'modern' Middle East after World War I; the struggle for liberation from Western colonial and imperial control; the Middle Eastern states in the cold war era; and local and regional conflicts.

Instructor(s): Holly Shissler Terms Offered: Spring

Prerequisite(s): Islamicate Civilization II (NEHC 20202) or Islamic Thought & Literature-2 (NEHC 20602), or the equivalent

Note(s): The Islamicate Civilization sequence does not fulfill the General Ed requirements

Equivalent Course(s): ISLM 30203, HIST 35623, HIST 15613, NEHC 30203, NEHC 20203

RLST 20235. The Hebrew Bible and the Shoah. 100 Units.

This course explores the use of biblical literature in Holocaust and post-Holocaust works. The first part focuses on the work of religious thinkers from across the religious spectrum, from the Warsaw ghetto sermons of the orthodox rabbi Kalonymos Shapira to the unique interpretation of the 'suffering servant' by Reform rabbi Ignaz Maybaum. We will see that the question of God's whereabouts during the massacre produced an explosion of biblically-inspired theologies, stemming from Buber, Heschel, and Berkovits' different conceptions of a 'divine eclipse' (hester panim) to Melissa Raphael's audacious affirmation of the presence of the female divine face in Auschwitz. The traditional approach to the Hebrew Bible itself was radically questioned: Fackenheim argued that biblical exegesis had to be thoroughly revised, and André Neher sketched a hermeneutics of biblical silence. In the second part of the course we turn to the influence the Hebrew Bible had on the works of literarily oriented writers and how they reflected on the Shoah. In genres as distinct as poetry and testimony, in authors as different as Chava Rosenfarb and Primo Levi, one sees biblical characters, stories, motifs, and literary forms given unprecedented ambivalence and poignancy. This is true whether the biblical reference is deployed in ironic denunciations of the divine (Shayevitch, Modolowski), in appeals to a newfound hope (Wiesel, Agnon), or in psalmodic hymns to the senselessness of it all (Sachs, Celan).

Instructor(s): Aslan Mizrahi Cohen Terms Offered: Winter

Equivalent Course(s): JWSC 20235

RLST 20401-20402-20403. Islamic Thought and Literature I-II-III.

This sequence meets the general education requirement in civilization studies. Taking these courses in sequence is recommended but not required.

RLST 20401. Islamic Thought and Literature I. 100 Units.

This sequence explores the thought and literature of the Islamic world from the coming of Islam in the seventh century C.E. through the development and spread of its civilization in the medieval period and into the modern world. Including historical framework to establish chronology and geography, the course focuses on key aspects of Islamic intellectual history: scripture, law, theology, philosophy, literature, mysticism, political thought, historical writing, and archaeology. In addition to lectures and secondary background readings, students read and discuss samples of key primary texts, with a view to exploring Islamic civilization in the direct voices of the people who participated in creating it. All readings are in English translation. No prior background in the subject is required. This course sequence meets the general education requirement in civilization studies.

Instructor(s): Ahmed El Shamsy Terms Offered: Autumn

Equivalent Course(s): SOSC 22000, MDVL 20601, NEHC 20601, HIST 25610

RLST 20402. Islamic Thought and Literature II. 100 Units.

This course covers the period from ca. 950 to 1700, surveying works of literature, theology, philosophy, sufism, politics, history, etc., written in Arabic, Persian and Turkish, as well as the art, architecture and music of the Islamic traditions. Through primary texts, secondary sources and lectures, we will trace the cultural, social, religious, political

and institutional evolution through the period of the Fatimids, the Crusades, the Mongol invasions, and the 'gunpowder empires' (Ottomans, Safavids, Mughals).

Instructor(s): Franklin Lewis Terms Offered: Winter

Note(s): Taking these courses in sequence is recommended but not required. This sequence meets the general education requirement in civilization studies.

Equivalent Course(s): HIST 25615, NEHC 20602, SOSC 22100, MDVL 20602

RLST 20403. Islamic Thought and Literature III. 100 Units.

This course covers the period from ca. 1700 to the present. It explores Muslim intellectuals' engagement with tradition and modernity in the realms of religion, politics, literature, and law. We discuss debates concerning the role of religion in a modern society, perceptions of Europe and European influence, the challenges of maintain religious and cultural authenticity, and Muslim views of nation-states and nationalism in the Middle East. We also give consideration to the modern developments of transnational jihadism and the Arab Spring. This course sequence meets the general education requirement in civilization studies.

Instructor(s): Orit Bashkin Terms Offered: Spring

Equivalent Course(s): HIST 25616, NEHC 20603, SOSC 22200

RLST 20440. Pure Land Buddhism. 100 Units.

This course will explore the motif of the 'Pure Land' in Mahayana Buddhism, and its attendant applications to Buddhist practice, faith, devotional, and doctrine. We will examine the textual sources on the bodhisattva vows and specific entailments of various pure lands in Indic Mahayana scripture, and then the development of Pure Land thought and practice in China and Japan, including its expression in Tiantai and Jodo Shinshu traditions.

Instructor(s): Brook Ziporyn Terms Offered: Autumn

Equivalent Course(s): HREL 40440, DVPR 40440

RLST 21004. The Bible and 21st Century American Politics. 100 Units.

Since the founding of the United States (and even before), the bible has served an unparalleled role as a source of wisdom and authority for American politicians and jurists at all levels of government. In this course, we will examine ways in which contemporary politicians have appealed to the literature of the Hebrew Bible and New Testaments in support of a variety of arguments concerning how the United States should operate. Beginning with a short introduction to the role of the bible as a foundational and authoritative document in America, we will spend subsequent weeks focusing on particular topics relevant to American politics (the environment, immigration, race, abortion, the Second Amendment) and the biblical materials that are frequently mustered in arguments over these issues. We will endeavor to make sense of the relevant passages in their original historical and cultural contexts as well as their use in contemporary political discourses.

Instructor(s): Marshall Cunningham Terms Offered: Autumn

RLST 21010. God and the Good. 100 Units.

Do we need God to know right from wrong? Or should morality shape and limit (or forbid) religious belief? Should we worry more about uncertainty and ignorance or overconfidence and fanaticism? This course focuses on the religious quest for certainty about how we should live. We will explore a variety of perspectives on the possibilities and problems involved in efforts to connect belief in God to moral knowledge and behavior. Readings include the Hebrew and Christian Bibles, the Quran, Plato, Kant, Kierkegaard, and Feuerbach, as well as more recent voices like Martin Luther King and contemporary critics of religion.

Instructor(s): David Barr Terms Offered: Winter

Prerequisite(s): Completion of the HUMA requirement

Equivalent Course(s): JWSC 26010

RLST 21020. Is Humanity Doomed? 100 Units.

This class explores the possibilities and perils of continued human existence on Earth. Taking climate change as a launching point, the class investigates the features of collective human life that make its prolonged existence a perennial challenge. The texts include those on challenges unique to the environment, like Stephen Gardiner's *A Perfect Moral Storm* and Jared Diamond's *Collapse*, as well as philosophical and religious theories of progress and their skeptics, centering class discussions on sources of hope and reasons for doubt about the human future. A central question of the course is whether climate change is unique or whether there are characteristics of human beings and human society (freedom, sin, tragedy) that make threats like it inevitable.

Instructor(s): David Barr Terms Offered: Spring

Equivalent Course(s): ENST 21020

RLST 21107. Readings in Maimonides' Guide of the Perplexed. 100 Units.

A careful study of select passages in Maimonides' *Guide of the Perplexed*, focusing on the method of the work and its major philosophical-theological themes, including: divine attributes, creation vs. eternity, prophecy, the problem of evil and divine providence, law and ethics, the final aim of human existence.

Instructor(s): James Robinson Terms Offered: Autumn

Equivalent Course(s): NEHC 40470, FNDL 24106, ISLM 45400, HREL 45401, RLVC 45400, JWSC 21107, MDVL 25400, HIJD 45400

RLST 21275. Theologies from Africa, Asia, and Latin America. 100 Units.

What are the life factors and specific contexts that amazingly gave rise to religious thinking in the 1960s Third World theologies? And what are the relations among gender, culture, politics, and economics in these global theologies? This class compares and contrasts various systems and methods in contemporary theologies, male and female, in Africa, Asia, and

Latin America. As we engage these systems of thought, we want to examine the logic of their theologies and the sources used to construct knowledge -- particularly the relation between the materiality of context and the imagination of theology.
 Instructor(s): Dwight Hopkins Terms Offered: Winter
 Equivalent Course(s): LACS 21275, CRES 21275

RLST 21330. Despair and Consolation: Emotion and Affect in Late-Medieval and Reformation Christianity. 100 Units.

The course surveys major texts in Christian thought and culture from the fourteenth through the sixteenth centuries, and it focuses on how these authors understood despair—a central theme in the writings of many women and men, secular and religious—and how, if at all, despair may be remedied. We will think alongside these late-medieval and early-modern figures about the phenomenon of emotion, the relations between of feeling and knowing, possible responses to (especially negative) affects, and how religious belief, practice, and experience shape and are shaped by emotional life. Major historical figures to be read include: Catherine of Siena, Jean Gerson, Christine de Pisan, Julian of Norwich, Heinrich Kramer, Martin Luther, John Calvin, Teresa of Ávila, and Michel de Montaigne. We will also read selected contemporary voices in affect theory and disability studies to hone our critical and analytical resources for interpreting the primary texts.

Instructor(s): M. Vanderpoel Terms Offered: Autumn
 Equivalent Course(s): HIST 22121, MDVL 21330, GNSE 21330

RLST 21406. Contemporary Religious Ethics I. 100 Units.

This is the first quarter of a three-quarter sequence surveying the rise and development of contemporary religious ethics. We will examine pioneering work that established a new style of scholarship and ethical argumentation during the 'quiet revolution' when the study of religion gained an institutional footing in many North American colleges and universities in the 1950s and 60s. This quarter's readings developed in the wake of that revolution and address moral controversies that arose within the cultural and intellectual ferment of the 1970s and 80s. The course is reading intensive, and it will focus on attempts to craft a method for doing religious ethics in the 1970s that aimed to situate the study of ethics within the academic study of religion and the humanities more generally. These efforts were soon challenged by theories about the importance of history, interpretation, and power in the humanities and social sciences in the 1980s. Hence the title of this cycle: Method and History (1970-1990). Readings include works by Gene Outka, Sumner Twiss and David Little, John P. Reeder, Jr., Alasdair MacIntyre, Charles Taylor, Michel Foucault, Michael Walzer, and Stephen Toulmin and Albert Jonsen. The course aims to introduce students to styles, genres, and patterns of moral reasoning and to innovative work in religious ethics as a foundation for future scholarship in the field.

Instructor(s): Richard Miller Terms Offered: Autumn
 Note(s): Enrollment in other courses in this sequence is not required to enroll in this course.
 Equivalent Course(s): RETH 30802

RLST 21407. Contemporary Religious Ethics II: Identity and Difference. 100 Units.

This is the second of my three-quarter sequence of courses examining the rise and development of contemporary religious ethics. It will continue examining pioneering work that established a new style of scholarship and ethical argumentation during the 'quiet revolution' when the study of religion gained an institutional footing in North American colleges and universities. Readings will examine theories of subject formation; cultural norms and human agency; relationships between human and non-human animals; religion and global conflict; race, gender, and politics; and challenges and opportunities that encountering the Other poses for ethical responsibility and coexistence in political life. Hence the title of this cycle: Identity and Difference (1990-2010). Authors include William F. May, William LaFleur, Cornel West, Charles Taylor, Judith Butler, Avishai Margalit, Lisa Sideris, Saba Mahmood, Aaron Stalnaker, John Kelsay, and Jeffrey Stout. Over the arc of the quarter we will examine how normative inquiry moves across overlapping domains of religion, culture, politics, and science. This course will be followed by Contemporary Religious Ethics III: Peril and Responsibility (2010-2020), next year.

Instructor(s): Richard Miller Terms Offered: Winter
 Note(s): Enrollment in other courses in this sequence is not required to enroll in this course. Doctoral students in the RETH area are encouraged to enroll in both quarters.
 Equivalent Course(s): RETH 30803

RLST 22010-22011-22012. Jewish Civilization I-II-III.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts—biblical, Talmudic, philosophical, mystical, historical, documentary, and literary—students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The Autumn course will deal with antiquity to the medieval period; the Winter course will begin with the early modern period and continue to the present. The Spring course will vary as to special topic; for the Spring course to count towards the general education requirement in civilization studies, the student must also take the Autumn and Winter courses. Note: Jewish Studies revised its civilization studies courses in academic year 2018–19. Students who began the requirement prior to Autumn Quarter 2018 under the previous course options, may complete it with those courses that remain available, or (with prior approval from the JWSC director of undergraduate studies) they may combine them with the new course options, provided that they fulfill the requirement to take one JWSC course in the ancient or medieval period and one in the modern period. Only students who have taken JWSC courses prior to academic year 2018–19 are eligible to complete the program under the prior system.

RLST 22010. Jewish Civilization I: Ancient Beginnings to Medieval Period. 100 Units.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts—biblical, Talmudic, philosophical, mystical, historical, documentary, and literary—students

will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The autumn course will deal with antiquity through the Middle Ages. Its readings will include material from the Bible and writings from the second temple, Hellenistic, rabbinic, and medieval periods. All sections of this course will share a common core of readings; individual instructors will supplement with other materials. It is recommended, though not required, that students take the three Jewish Civilization courses in sequence. Students who register for the Autumn Quarter course will automatically be pre-registered for the winter segment. In the Spring Quarter students have the option of taking a third unit of Jewish Civilization, a course whose topics will vary (JWSC 1200X).

Instructor(s): James Robinson Other TBA Terms Offered: Autumn

Equivalent Course(s): NEHC 22010, MDVL 12000, JWSC 12000

RLST 22011. Jewish Civilization II: Early Modern Period to 21st Century. 100 Units.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts-biblical, Talmudic, philosophical, mystical, historical, documentary, and literary-students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The Winter course will begin with the early modern period and continue to the present. It will include discussions of mysticism, the works of Spinoza and Mendelssohn, the nineteenth-century reform, the Holocaust and its reflection in writers such as Primo Levi and Paul Celan, and literary pieces from postwar American Jewish and Israeli authors. All sections of this course will share a common core of readings; individual instructors will supplement with other materials. It is recommended, though not required, that students take the three Jewish Civilization courses in sequence. Students who register for the Autumn Quarter course will automatically be pre-registered for the winter segment. In the Spring Quarter students have the option of taking a third unit of Jewish Civilization, a course whose topics will vary (JWSC 1200X).

Instructor(s): S. Hammerschlag J. Kirzane Terms Offered: Winter

Equivalent Course(s): NEHC 22011, JWSC 12001

RLST 22012. Jewish Civilization III - Language, Creation, and Translation in Jewish Thought and Literature. 100 Units.

Jewish Civilization is a three-quarter sequence that explores the development of Jewish culture and tradition from its ancient beginnings through its rabbinic and medieval transformations to its modern manifestations. Through investigation of primary texts-biblical, Talmudic, philosophical, mystical, historical, documentary, and literary-students will acquire a broad overview of Jews, Judaism, and Jewishness while reflecting in greater depth on major themes, ideas, and events in Jewish history. The Spring course in 2021 will start with two stories from Genesis-the creation story and the story of the Tower of Babel in chapter 11-and consider the intertwined dynamics of language, creation, and translation in Jewish thought and literature. In addition to commentaries on both of these key texts, we will read philosophical and literary texts that illuminate the workings of language as a creative force and the dynamics of multilingualism and translation in the creation of Jewish culture. Through this lens, we will consider topics such as gender and sexuality, Jewish national identity, Zionism, the revival of the Hebrew language, Jewish responses to the Holocaust, and contemporary American Jewish culture.

Instructor(s): Na'ama Rokem Terms Offered: Spring

Note(s): Students who wish to take this course for Civilization Studies credit, must also take Jewish Civilization I and II. The course may also be taken as an independent elective.

Equivalent Course(s): CMLT 12003, NEHC 12003, JWSC 12003

RLST 22132. Science/Fiction/Theory. 100 Units.

Science fiction has enjoyed an extraordinary and still growing resurgence in popularity over the last two decades - through literature, film, video games, and even universities, where it is the subject of ever more courses being taught. Why has science fiction become so popular? Does it express the anxieties of a way of life that can't be sustained, is in decline, and might soon end, in the face of intractable war, lurching financial crises, recurrent pandemics and unchecked climate change? Does it speak to the senses of radical hope and irreparable despair about the future that seem to characterize our time? If so, then science fiction today is grappling with traditionally theological themes: fate and finitude, immortality and the nature of divinity, the place of the human within a cosmic scale, and the possibilities for redemption and messianic rupture. This course will explore these themes by pairing sci-fi literature and film with readings in philosophy and social theory. Throughout, we will ask how science fiction's propensity toward the theological allows it to grapple with the unique forms of hope and despair in our time, and in times past.

RLST 22313. The Lord's Business: Evangelical Christianity and Corporate Capitalism in Modern America. 100 Units.

Throughout United States history, Christianity and capitalism have been inseparable forces for the social and cultural development of the American nation, for better or worse. That is not to say, however, that the relationship between 'faith' and 'finance' has been stable over time. As economic and religious practices met in fluid social worlds, Christians often debated the boundaries of moral behavior under disparate capitalist regimes. At the end of the nineteenth century, mainline Protestants struggled to reconcile the patronage of industrialist benefactors with the social ravages of industrial capitalism. As some Protestants moved towards a critique of capitalism under the 'Social Gospel,' others came to embrace new forms of capital and their assumed spiritual effects. This course will investigate the resulting history of fundamentalist and evangelical Protestant support for and appropriation of 'corporate capitalism' across the twentieth century. We will engage a series of

historical inquiries: On what grounds did certain early-century Protestants defend capitalist society? How did these groups engage capitalism, its ideals and its markets? Moreover, how did capitalism and capitalists, religious or otherwise, respond to this support? What influences, if any, has conservative Protestantism had on economic practice itself? Finally, how can the legacy of corporate, evangelical capitalism shape understandings of recent religious, economic and political issues?

Instructor(s): Greg Chatterley Terms Offered: Winter

RLST 22406. A Medieval Menagerie: Animal Spirituality in the Middle Ages. 100 Units.

In contemporary philosophy, ethics, and literature, a subject attracting more and more attention is animals - human animals, non-human animals, and the complex relation between these paradigmatic others. The aim of this course is to consider many of the same problems and questions raised in modern discourse from the perspective of ancient and medieval sources. Drawing from a diverse corpus of texts - Aristotelian, Neoplatonic, Hindu, Jewish, Christian, Muslim - the course will explore the richness of the medieval traditions of animal symbolism, and the complexity of medieval human beings' understanding of themselves in relationship to their familiar and immanently present confreres in the world of nature.

Instructor(s): James Robinson Terms Offered: Winter

Equivalent Course(s): ISLM 41100, HREL 41101, JWSC 26252, RLVC 41100, HIJD 31100, MDVL 21100

RLST 22555. Narration and Law: Levinas's Talmudic Readings and the Imperative of Ethics. 100 Units.

This is a seminar that will closely read the Jewish writings of Emmanuel Levinas, in particular, the talmudic exegesis that he undertook for the French Jewish Community in the 1990s. Levinas explicates his ethical theories via the recovery of a series of texts from the Babylonian Talmud, the classic text of Jewish law, literature, and theo-philosophic interpretation.

Instructor(s): Laurie Zoloth Terms Offered: Winter

Note(s): Course is in English translation

Equivalent Course(s): RETH 52555

RLST 22605. Europe's Intellectual Transformations, Renaissance through Enlightenment. 100 Units.

This course will consider the foundational transformations of Western thought from the end of the Middle Ages to the threshold of modernity. It will provide an overview of the three self-conscious and interlinked intellectual revolutions which reshaped early modern Europe: the Renaissance revival of antiquity, the 'new philosophy' of the seventeenth century, and the light and dark faces of the Enlightenment. It will treat scholasticism, humanism, the scientific revolution, Bacon, Descartes, Hobbes, Locke, Voltaire, Diderot, and Sade.

Instructor(s): A. Palmer Terms Offered: Autumn

Note(s): First-year students and non-History majors welcome.

Equivalent Course(s): SIGN 26036, HIST 29522, FREN 29322, HCHR 39522, HIST 39522, KNOW 29522, FREN 39322, KNOW 39522

RLST 22700. Law in Biblical Literature. 100 Units.

The course will survey topics of biblical law, recover biblical legal reasoning, compare biblical law with comparable ancient Near Eastern records and literature, reconsider the nature of biblical legal composition, interpret biblical legal passages within their larger compositions as pieces of literature, analyze several non-legal biblical texts for the legal interpretation embedded in them, and engage modern scholarship on all these aspects. In addition to preparing to discuss assigned biblical texts, students will also work towards composing an original piece of sustained analysis submitted at quarter's end.

Instructor(s): Simeon Chavel Terms Offered: Winter

Prerequisite(s): 1 year biblical Hebrew + 1 course in Hebrew Bible

Equivalent Course(s): BIBL 32700, JWSC 22702, HIJD 32700, NEHC 32700

RLST 23112. Deconstruction and Religion. 100 Units.

A careful study of the development of deconstruction and the role that religion and religious text play in it. We will pay particular attention to Derrida's writings and lecture courses during the 1970s, from *Margins of Philosophy* and *Glas* to *The Post Card*. We will then use this material to reexamine his later writings on religion.

Instructor(s): Ryan Coyne Terms Offered: Winter

Equivalent Course(s): DVPR 50112, THEO 50112

RLST 23310. Feminism and Islamic Studies. 100 Units.

The goals of this course are three-fold: 1- To examine the (geo)politics of feminism as a Euro-American emancipatory project as it pertains to Muslim-majority societies; 2- to probe the conceptual work made possible by the categories of 'woman' and 'gender' as pioneered by feminist scholars specifically in relation to the history and anthropology of Islam; and 3- to study and evaluate self-consciously reformist projects engaging with the Islamic tradition in the modern period and the complexities of their relationship with Euro-American feminism. Rather than treating these goals in a strictly chronological manner, we will keep them in tension throughout the course.

Instructor(s): Alireza Doostdar Terms Offered: Winter

Prerequisite(s): By permission only. Students should write a one-paragraph statement about why they would like to take this course and what kind of prior preparation they have.

Equivalent Course(s): GNSE 23010, GNSE 43310, AASR 43310, ISLM 43310, ANTH 42450

RLST 23599. Christian and Anti-Christian: Kierkegaard and Nietzsche on Religion and Morality. 100 Units.

This course explores two radically different assessments of religion and morality, one by the Protestant thinker Søren Kierkegaard, and the other by an arch-critic of religion and morality, Friedrich Nietzsche. The course will focus on their assessments of Christian faith and its relation to morality and the human good. Both thinkers wrote in complex and confusing styles: Kierkegaard used pseudonyms; Nietzsche wrote in aphorisms. In order to explore their styles of writing and their critiques of religion and morality we will read Kierkegaard's *Fear and Trembling* as well as Nietzsche's *On the*

Genealogy of Morals. The general aim of the course, then, is to explore two seminal minds in the development of Western thought with the question in mind of their possible contribution to current theological and ethical thinking.

Instructor(s): William Schweiker Terms Offered: Spring

Equivalent Course(s): FNDL 23599, THEO 33599, RETH 33599

RLST 23706. Calvin: Piety, Politics, and the Theater of God's Glory. 100 Units.

This seminar will engage a close reading of John Calvin's *Institutes of the Christian Religion* (1559) in English translation, examining how the masterwork moves and instructs its readers toward correlative knowledge of God and of self. We will attend to Calvin's elaboration of true religion or 'piety'-especially to his picture of the repair and reorientation of the sensing, feeling, willing, and knowing self before God-and to his depiction of rightly ordered individual, corporate, and civic life over against the bondage of the will and tyrannous powers. The course will further a reading of the work as a rhetorical and pedagogical whole.

Instructor(s): Kristine Culp Terms Offered: Spring

Note(s): Open to graduate students by permission of instructor.

Equivalent Course(s): FNDL 23706, THEO 33706

RLST 23750. New Cartesian Questions. 100 Units.

The course shall be divided, in each class, in two moments. First moment: a close reading of Descartes' *Meditations* on first Philosophy to allow students to reach a direct knowledge of cartesian thought, by presenting text explanations. Second, in each class will be addressed one of the most debated issues in the past or today among the allegedly well-known cartesian doctrines. For instance: Was Descartes more a skeptic than a dogmatic philosopher? (b) How far Descartes has followed Montaigne more than he opposed him? (c) Is the ego in the cogito argument really a 'subject' or a 'substance'? (c) Why a finite mind can enjoy an infinite will, and why the successors (even the self-proclaimed followers) of Descartes have given up this claim? (d) Is phenomenology (from Husserl to Levinas) qualified to understand itself as 'cartesian'? (e) Is there or not a cartesian metaphysics, and why the answer remains difficult today? (f) Which role, if any, play sensation and non-conceptual knowledge in Descartes doctrine of morals.

Instructor(s): Jean-Luc Marion Terms Offered: Spring

Equivalent Course(s): DVPR 33750

RLST 23820. Shame. 100 Units.

This course will consider the nature of shame, its potential harms and benefits, and possible of redeeming/being redeemed from it.

Instructor(s): Kevin Hector Terms Offered: Spring

RLST 23906. Ethics, Nature, Dao. 100 Units.

Some worldviews assert that human beings exist somehow apart from the natural world. Humans are to have dominion over it, for example, or to transcend it entirely. In many works of traditional Chinese religion, philosophy, and art, however, we find something quite different, a picture in which the human being is seamlessly of the world. The cosmos is at play within her, Daoist traditions teach; Chinese landscape paintings were at times understood to depict a world in which rivers, trees, and humans alike follow cosmic patterns; the great Song Dynasty poet Su Shi, in a line beloved of later Chan and Zen Buddhist writers, wrote that 'the sounds of valleys are [the Buddha's] long broad tongue.' These worldviews are not ecological, precisely-ecology is a modern science, not a traditional ethos-but works of Chinese philosophy and art that evince them offer profound resources for thinking in the mode known now as the environmental humanities. We will explore our works as resources for thinking in our age of climate crisis-at least in part. We will also read them, and stay true to them, as works of traditional Chinese art and thought.

Instructor(s): P. Copp Terms Offered: Autumn

Equivalent Course(s): EALC 23903

RLST 24103. Bioethics. 100 Units.

This is a lecture and discussion class that will explore how a variety of philosophic and religious thinkers approach the issues and problems of modern dilemmas in medicine and science in a field called bioethics. We will consider a general argument for your consideration: that the arguments and the practices from faith traditions and from philosophy offer significant contributions that underlie policies and practices in bioethics. We will use a case-based method to study how different traditions describe and defend differences in moral choices in contemporary bioethics. This class is based on the understanding that case narratives serve as another core text for the discipline of bioethics and that complex ethical issues are best considered by a careful examination of the competing theories as work themselves out in specific cases. We will examine both classic cases that have shaped our understanding of the field of bioethics and cases that are newly emerging, including the case of research done at our University. Through these cases, we will ask how religious traditions both collide and cohere over such topics as embryo research, health care reform, terminal illness, issues in epidemics and public health, and our central research question, synthetic biology research. This class will also explore how the discipline of bioethics has emerged to reflect upon such dilemmas, with particular attention to the role that theology and philosophy have played in such reflection.

Equivalent Course(s): SIGN 26069, HLTH 24103, RETH 30600, BIOS 29216

RLST 24106. Introduction to Environmental Ethics. 100 Units.

This course will examine answers to four questions that have been foundational to environmental ethics: Are religious traditions responsible for environmental crises? To what degree can religions address environmental crises? Does the natural world have intrinsic value in addition to instrumental value to humans, and does the type of value the world has imply anything about human responsibility? What point of view (anthropocentrism, biocentrism, theocentrism) should ground an

environmental ethic? Since all four of the above questions are highly contested questions, we will examine a constellation of responses to each question. During the quarter we will read texts from a wide variety of religious and philosophical perspectives, though I note that the questions we are studying arose out of the western response to environmental crises and so often use that language. Some emphasis will be given to particularly influential texts, thinkers, and points of view in the scholarship of environmental ethics. As the questions above indicate, the course prioritizes theoretical issues in environmental ethics that can relate to many different applied subjects (e.g. energy, water, animals, climate change) rather than emphasizing these applied issues themselves. Taking this focus will give you the background necessary to work on such issues.

RLST 24110. The Ethics of War: Reading Michael Walzer's Just and Unjust Wars. 100 Units.

Questions about war, the taking of human life, the obligations of citizenship, the role of state power, and international justice are among the most pressing topics in ethics and political life. This class will examine these matters through a close reading of Michael Walzer's *Just and Unjust Wars: A Moral Argument with Historical Illustrations*, first published in 1977 and now in its 5th edition. Widely considered a classic in the ethics of war, JUW develops a theory for evaluating whether to enter war as well as decisions within war—what are known as the *jus ad bellum* and the *jus in bello*. Walzer applies his theory to a number of actual cases, ranging from military interventions to reprisals to terrorism to insurgencies to nuclear policy, all informed by the history of warfare and arguments in the history of Western thought. We will critically examine Walzer's theory, his use of cases, and the conclusions to which his arguments lead. Along the way, we'll examine core ideas in political morality, e.g., human rights; state sovereignty; morality, necessity, and extremity; liability and punishment, nonviolence, and killing and murder.

Instructor(s): Richard B. Miller Terms Offered: Autumn

Equivalent Course(s): FNDL 24500

RLST 24160. Whom am I to Judge? Relativism and Religious Difference. 100 Units.

How do we evaluate people who are different from us? What grounds our evaluation of human behaviors or beliefs? At the end of the 20th century, comparative analyses of religious beliefs and ethics were heavily criticized for their ethnocentric tendencies; researchers were blamed for importing their own values on the 'other'. More recently, however, the pendulum seems to have swung in the other direction. Comparative religious ethicists often adopt a brand of liberal moral relativism. 'To each their own' is their preferred mantra. This dramatic swing within the field of comparative religious ethics opens up questions for future study: Under what conditions can we praise or blame those who are different than us? What virtues of scholarship are necessary for quality comparative work? In this course we will learn about the field of comparative religious ethics and the perils and possibilities that accompany its intellectual projects. In addition to several theoretical texts, we will read two ethnographies (Fernando 2014 and Pandian 2009) that weave in and out of comparative religious ethics. These texts focus on themes of nationalism, post-colonialism, immigration, the production and regulation of religious subjects, and the limits of our judgments on the other.

Instructor(s): Caroline Anglim Terms Offered: Winter

Equivalent Course(s): ANTH 23914

RLST 24200. Philosophy and Literature in India. 100 Units.

Is philosophy literature? Is literature philosophy? What constitutes either of these seemingly disparate enterprises, formally and thematically, and what kinds of conjunctions can we imagine between them (philosophy in/of/as literature)? Can one translate these terms across cultures? Are they the sole prerogative of leisured elites, or can they harbor and cultivate voices of dissent? Above all, what does it mean to reflect on these categories outside the parochial context of the Western world? This course explores these questions by introducing some of the literary cultures, philosophical traditions, religious poetry, and aesthetic theories of the South Asian subcontinent. Students will encounter a variety of genres including scriptural commentary, drama and courtly poetry, and the autobiography. Readings, all in translation, will range from Sanskrit literature to Sufi romances and more.

GLST 24214. Cities in Modern China: History and Historiography. 100 Units.

China's shift from a predominantly rural country to an urban majority is one of the greatest social and demographic transformations in world history. This course begins with the roots of this story in the early modern history of China's cities and traces it through a series of momentous upheavals in the nineteenth and twentieth centuries. We will learn about how global ideas and practices contributed to efforts to make Chinese cities 'modern,' but also how urban experiences have been integral to the meaning of modernity itself. We will discuss urban space, administration, public health, commerce and industry, transportation, foreign relations, and material culture. In addition to tackling these important topics in urban history and tracing the general development of Chinese cities over time, another primary concern of our course will be the place of urban history in English-language scholarship on Chinese history more broadly. We will track this development from Max Weber's observations on Chinese cities through the rise of 'China-centered' scholarship in the 1970s to the 'global turn' of the 2000s. Students will develop the skills necessary for writing an effective historiography paper, i.e., doing background research, writing annotated bibliographies, and using citation-management software. Students will put these skills to work by writing a critical historiographical review of scholarship on a topic of their choice.

Instructor(s): D. Knorr Terms Offered: Spring

Prerequisite(s): Students taking ARCH 24214 should explain the relationship between their final projects and architectural studies.

RLST 24712. Society and the Supernatural in Late Imperial and Modern China. 100 Units.

Introductory studies of Chinese history and culture often ignore religion, treating Confucius's alleged agnosticism as representative of mainstream culture. But ideas about supernatural entities-souls separated from bodies, ancestral spirits, demons, immortals, the vital energies of mountains and rivers, and many more-and practices aimed at managing those spirits were important elements in pre-1949 life. Spirits testified in court cases, cured or caused illnesses, mediated disputes, changed the weather, and made the realm governable or ungovernable. After declining in the 1950s-1970s, various kinds of worship are immensely popular again today, though usually in altered forms. This course traces changes in the intersection of ideas about spirits and daily social practices from late imperial times forward, focusing on attempts to 'standardize the gods,' resistance to such efforts, and the consequences for cohesion, or lack of cohesion, across classes, territory, ethnicity, and other differences.

Equivalent Course(s): EALC 24713, HIST 34712, EALC 34713, HREL 34712, HIST 24712

RLST 24770. Moral Theory and Philosophical Ethics. 100 Units.

This is a lecture course in support of the Religious Ethics Area doctoral examinations. It covers major thinkers and moral theories in the history of Western moral philosophy.

Equivalent Course(s): RETH 37000, THEO 37000

RLST 24788. Guilt, Atonement, and Forgiveness After WWII. 100 Units.

By what parameters should we assess guilt? What is required to atone for wrong done unto another? Under what circumstances should we forgive harm done to us? This course examines both foundational ethical models and arguments that emerged following the end of WWII concerning issues that arose in the war's wake. We begin the course by reading significant theological and philosophical accounts of ethics, including Genesis, Aristotle, Mill and Kant, and consider what constitutes 'guilt' in each. We then draw on these models as we examine significant questions of guilt and atonement that arose in the wake of the Second World War, and explore the particular concerns involved in wrestling with questions of national guilt, collaboration, and assignation of punishment post-war. We will conclude the course by reading arguments that wrestle with the ethics of forgiveness, exploring arguments by a range of theologians, philosophers and other thinkers both for and against forgiving those who have perpetrated harm.

Instructor(s): Bevin Blaber Terms Offered: Autumn

Equivalent Course(s): JWSC 24788

RLST 24800. Foucault and The History of Sexuality. 100 Units.

This course centers on a close reading of the first volume of Michel Foucault's 'The History of Sexuality', with some attention to his writings on the history of ancient conceptualizations of sex. How should a history of sexuality take into account scientific theories, social relations of power, and different experiences of the self? We discuss the contrasting

descriptions and conceptions of sexual behavior before and after the emergence of a science of sexuality. Other writers influenced by and critical of Foucault are also discussed.

Instructor(s): A. Davidson Terms Offered: Autumn

Prerequisite(s): One prior philosophy course is strongly recommended.

Equivalent Course(s): FNDL 22001, GNSE 23100, KNOW 27002, HIPS 24300, CMLT 25001, PHIL 24800

RLST 25110. Maimonides and Hume on Religion. 100 Units.

This course will study in alternation chapters from Maimonides' Guide of the Perplexed and David Hume's Dialogues concerning Natural Religion, two major philosophical works whose literary forms are at least as important as their contents. Topics will include human knowledge of the existence and nature of God, anthropomorphism and idolatry, religious language, and the problem of evil. Time permitting, we shall also read other short works by these two authors on related themes. (B) (III)

Instructor(s): J. Stern Terms Offered: Winter

RLST 25321. Time and its discontents: thinking and experiencing time in South Asia through the ages. 100 Units.

While we usually think of time and its relentless march as an immutable, universal and abstract category, this course will explore competing and contested notions of time and history and their periodization. This interdisciplinary seminar aims to introduce students to the sociocultural worlds of South Asia through the prism of Time. Instead of looking at the cultural, religious and scientific realms of ancient, medieval and colonial South Asia changing through time, we will explore the changes that time itself, as a concept but also as a lived reality has undergone throughout the convoluted history of South Asia. We will revisit key concepts and ideas pertaining to the cosmology of Ancient and Medieval South Asia, such as the eras of the world according to old scientific and religious treatises, and how these ideas shaped the understanding of the place of mankind in history and the world. We will also study the intellectual challenges that these notions of time posed to the first Europeans that encountered them, and how our modern notion of time and its periodization was forged in this encounter. Rather than thinking of Time and temporalities in South Asia as part of an outdated and disproved world-view, this course will strive to present South Asia and the non-European world not only as subjects to Western temporalities, but as important places where theoretical propositions were made about time-space and its divisions.

Instructor(s): E. Acosta Terms Offered: Autumn

Note(s): While the course relies heavily in South Asian world-views, a previous acquaintance with the histories and mythologies stemming from this part of the world is not necessary. This course will be of interest to students of different backgrounds. The approach is interdisciplinary, ranging from history, anthropology, religious studies, etc.

Equivalent Course(s): SALC 25321, HIST 26615

RLST 25323. Tolerance and Intolerance in South Asia. 100 Units.

Few places in the world are as embroiled in the problem of diversity as South Asia, where sectarian violence-fought mainly along religious lines, but also along caste, gender, and linguistic lines-is at the center of political maneuvering. South Asia offers important lessons in how people manage to live together despite histories of mutual strife and conflict about communities and castes. Focusing on the period of British colonial rule, this class explores different instances and ideologies of toleration and conflict. How were South Asian discourses of toleration by such leaders as Gandhi and Nehru different from their European counterparts (e.g., John Locke and John Rawls)? How did their ideologies differ from those articulated by their minority peers such as Ambedkar, Azad, and Madani? We will analyze constitutive precepts, namely secularism, syncretism, toleration. Our attention here will be on the universal connotations of these ideas and their South Asian expression. Fifth week onward, we will turn our attention to select thinkers: Gandhi, Ambedkar, Azad, Madani. Our focus here will be on the ways that each intellectual negotiated the thorny issues of toleration, difference, ethnicity, and belonging. All the thinkers covered in this class had an active presence in nationalist era politics. Finally, we will read historical accounts of some of the most frequent causes of intolerance, namely cow slaughter, music played before the mosque, and desecration of sacred objects.

Instructor(s): T. Reza Terms Offered: Spring

Note(s): All reading materials will be available in English. No prior knowledge of South Asian history or South Asian languages is required.

Equivalent Course(s): CRES 25323, KNOW 25323, SALC 25323, HIST 26812

RLST 25505. Heidegger: Religion, Politics, Writing. 100 Units.

Religion, Politics, Writing: three concepts that are relatively marginal in Martin Heidegger's philosophy, but which converge in strange and unexpected ways to play a central role during the most controversial period of his career, from the early 1930s until the late 1940s. In this course we will explore this convergence in key texts during this period, paying particular attention to the Black Notebooks. We will consider Heidegger's interpretations of figures such as Plato, Nietzsche, and Hölderlin. And while exploring crucial themes during this period - e.g. Being as Event, the critique of technology, the flight of the gods - we will also consider the effect that various writing practices (e.g. notebook entries, esoteric treatises, seminar and lecture protocols, dialogues, published essays, poetry) have on their meaning.

Instructor(s): Ryan Coyne Terms Offered: Autumn

Equivalent Course(s): DVPR 45505, THEO 45505

RLST 25590. Memory, Identity, and Religion. 100 Units.

This course will consider recent scientific and philosophical work on memory and its relation to personal identity, and then use this work to think about religious approaches to memory and identity-construction (and vice-versa).

Instructor(s): Kevin Hector Terms Offered: Autumn

RLST 25704. Environmental Justice in Chicago. 100 Units.

This course will examine the development of environmental justice theory and practice through social scientific and ethical literature about the subject. We will focus on environmental justice issues in Chicago including, but not limited to waste disposal, toxic air and water, the Chicago heat wave, and climate change. Particular attention will be paid to environmental racism and the often understudied role of religion in environmental justice theory and practice.

Instructor(s): Sarah Fredericks Terms Offered: Autumn

RLST 25806. The Political Theologies of Zionism. 100 Units.

The relationship between nationalism and religion has throughout history been a stormy one, often characterized by antagonisms and antipathy. In this course we will examine from various aspects the complex nexus of these two sources of repeated ideological and political dispute within Judaism, and more specifically within Zionism as its political manifestation. Zionism has mostly been considered a secular project, yet recently, Zionist theory is scrutinized to identify and unearth its supposedly hidden theological origins. In nowadays Israel, a rise in religious identification alongside an increasing religionization of the political discourse calls for the consideration of new theopolitical models of Zionism applicable in a post-secular environment. The aim of this course is to explore this intertwining of politics and religion in Israel from both historical and contemporary perspectives. The first part of the course will outline the theoretical foundation of post-secular and political-theological discourses. The second part will address the explicit and implicit political theologies of Zionism. The third part will outline contemporary aspects of political-theological thought in Israel, and their actual appearance in the political sphere.

Instructor(s): David Barak-Gorodetsky Terms Offered: Winter

Equivalent Course(s): JWSC 27940

RLST 26012. Introduction to Islam. 100 Units.

This course will introduce students to major themes and topics in Islam through encounters with textual, media, film, and digital sources from across the Islamic world. We will critically engage with the diverse ways in which Muslims have lived and defined themselves and the tradition from 7th-century Arabia to South Asia to Harlem. We will explore Islamic belief and practice as a lived tradition, one that is constantly interpreted and contested in modes of expression ranging from scripture, song, and scholarship to poetry and politics to tweets and talismans. In so doing, we will examine the processes by which Islamic traditions have transformed in response to historical factors, influences, and cultural exchange, and how these traditions continue to adapt in dialogue with contemporary contexts.

Instructor(s): Francesca Chubb-Confer Terms Offered: Spring

RLST 26013. Drinking with God: An Introduction to Sufism. 100 Units.

Who is the 13th-century Muslim mystic Jalaluddin Rumi - and why is he so popular on Instagram? Can inebriation lead to divine revelation? Who are the friends of God, and how did they develop fantastic superpowers? How have mystical practices sought to both abandon the world and radically transform it? In this class, we will explore these questions through the study of Sufism - a diverse set of Islamic mystical traditions - from its formative period in the early decades of Islam to the present day. Through poetry, philosophy, music, esoteric sciences, politics, and devotional practices, we will analyze Sufism as a global phenomenon that, while demonstrating remarkable adaptation to local cultural contexts, firmly locates itself within the Islamic tradition. This course will also include a visit to a local Sufi center in Chicago.

Instructor(s): Francesca Chubb-Confer Terms Offered: Winter

RLST 26116. Meaning and the Body. 100 Units.

This course examines recent (20th- and 21st-century) retrievals of the body to understand 'meaning.' We will analyze varying construals of nature, materiality, matter, emotion, and thought. Readings will therefore be multidisciplinary, including selections from philosophy, sociolinguistics, anthropology, and religious studies. More specifically, we will examine the relationship between meaning and embodiment by way of the following: modern philosophies of the subject; analytic philosophies of language; deconstruction and the historicization of the body; feminist theories of discourse; new materialist conceptions of matter; new atheist conceptions of the subject.

Instructor(s): Lisa Landoe Hedrick Terms Offered: Winter

Equivalent Course(s): ANTH 24314

RLST 26250. Buddhist Poetry in India. 100 Units.

The substantial Buddhist contribution to Indian poetry is of interest for what it teaches us of both Buddhism and the broad development of Indian literature. The present course will focus upon three phases in this history, with attention to what changes of language and literary genre tell us of the transformations of Indian religious culture from the last centuries B.C.E. to about the year 1000. Readings (all in translation) will include the *Therīgāthā*, a collection of verses written in Pali and the most ancient Indian example of women's literature, selections from the work of the great Sanskrit poets *Aṣvaśāṅka*, *Śaṅkara*, and *Mahāceta*, and the mystical songs, in the *Apabhraṃśa* language, of the Buddhist tantric saints.

Instructor(s): Matthew Kapstein Terms Offered: Spring

Prerequisite(s): General knowledge of Buddhism is desirable.

Equivalent Course(s): RLVC 34300, SALC 34300, MDVL 26250, DVPR 34300, HREL 34300

RLST 26630. Religious Violence. 100 Units.

Are there 'proper' or 'improper' practices of religion? Is it at best a matter of private belief, to be kept separate from or protected by the state? Or is it something that at times requires the state's intervention? Does religion represent the last vestiges of the premodern world, or is it something that is integral to modern life? To answer these questions, we will call on anthropologists and other social scientists and theorists to understand, first, what is 'religion,' and then what is, can be,

or should be its relationship to gender, the nation, and the modern state in various historical and geographical locations, with particular attention to the Middle East and South Asia.

RLST 27020. Christianity and Islam in the Western Mediterranean World during the Late Middle Ages. 100 Units.

El curso analizará los contactos mantenidos entre mundo cristiano y mundo islámico en el Mediterráneo bajomedieval, tomando la Corona de Aragón y sus ricas fuentes documentales como observatorio privilegiado. Las particularidades de la Corona de Aragón se compararán con las de otros estados cristianos del Occidente mediterráneo que mantuvieron relaciones sostenidas con los musulmanes. Tras la definición de la naturaleza y de las especificidades de los contactos político-diplomáticos, mercantiles y pirático-corsarios entre Cristiandad e Islam, las clases se focalizarán en la identificación y caracterización de colectivos y personas que actuaron como mediadores lingüísticos y culturales entre ambas realidades. Se determinarán las circunstancias y motivos que permitieron que agentes diplomáticos, mercaderes, mercenarios, piratas-corsarios o cautivos-esclavos vehicularan los contactos. Y se analizarán y compararán las distintas tipologías documentales que son plasmación de todos esos intercambios y contactos culturales y humanos.

RLST 27250. The Trials of Religion. 100 Units.

The rhetoric and practice of 'trial' -- as testing and as adjudication -- is central to religious thought and religious practice. This course will examine the idea and the act of 'trial' comparatively, via the classics of the religious literatures of Judaism and of Christianity (Genesis 22, Job, the Gospel of Mark, 'The Pilgrim's Progress,' Kafka), and also cinema (Dreyer's 'Joan of Arc,' R. & S. Elkabetz's 'Gott').

Instructor(s): Richard Rosengarten Terms Offered: Winter

Equivalent Course(s): LLSO 27250

RLST 27440. Buddha Then and Now: Transformations from Amaravati to Anuradhapura. 100 Units.

The Buddhist sculptures in Amaravati are arguably the earliest to influence the early Buddhist art of the other parts of the sub-continent as well as south and southeast Asia. The course begins with the discussion of the context in which the Buddha images were made in Amaravati and the factors including Buddhist doctrinal developments that contributed to the spread of these images to various parts of Sri Lanka. Then it traces the course and function of Buddhist iconography in Sri Lanka until into the 21st century to assess the role of geopolitical factors. The positionality and portrayals of the images of Buddha are also considered and analyzed. The course traces the trajectories that transformed the image of the Buddha from a symbol of peace to jingoist assertiveness. Through the study of the images of the Buddha, the aim is to comprehend the ways Buddhism has changed over centuries from an inclusive posture which helped it sustain and spread to different parts of the world only later to become exclusionary.

RLST 27656. Pilgrimage, Voyage, Journey. 100 Units.

Travel is fatal to prejudice, bigotry, and narrow-mindedness.' 'Adventure is worthwhile in itself.' 'To travel is to live.' In 'Pilgrimage, Voyage, Journey,' we interrogate and complicate these kinds of platitudes, examining claims about the nature and possibilities of travel in its many iterations. Throughout the quarter, we ask why people travel, what might be gained or lost by traveling, what is unique to the experience of travel, and, ultimately, whether or not we should travel. We draw from memoir, fiction, film, and contemporary journalism as we consider claims about the effects of travel on travelers, non-travelers, local communities, and the world at large. We think about links between conceptions of travel and broader historical and social structures, considering the histories of class-exclusive travel, ways that colonialism has shaped travel, and the ethics of travel with respect to its impact on both local communities and the environment. Central to our inquiry is an examination of claims about both the religious value or potential of travel - including those found in accounts of pilgrimages and monastic journeys - and the ways that travel can often become linked to ideas of the 'spiritual.'

Instructor(s): Bevin Blaber Terms Offered: Spring

RLST 27712. Contemporary Religion in Israel. 100 Units.

The complex relationship between religion and state is at the core of current social, cultural and political tensions in Israel. In this course we will explore the manifestation of these relations by focusing on selected ethnographies of religious performance and phenomena in modern Israel, including amongst others a 'Women of the Wall' first day of the month prayer, a LGBTQ community's reading of the book of Esther in Tel-Aviv, and a messianic group's attempt to reestablish the Passover sacrifice at the Temple Mount. By exploring these detailed ethnographies against the backdrop of contemporary theory, including secularization and post-secularization, lived religion, fundamentalism and social orthodoxy, this course aims to portray the variety and complexity of religious experience in Israel today.

Instructor(s): David Barak-Gorodetsky Terms Offered: Spring

Equivalent Course(s): JWSC 20907

RLST 27720. Race and Religion in Chicago. 100 Units.

This course is a chronological and thematic overview of a number of key themes and theoretical concerns in the study of race and religion in the U.S. from 1865 to the present. Taking Chicago as a case study, the course will introduce students to key topics in the study of race and religion in the U.S. Most of the course will focus on black-white racialization in Chicago during this period-interrogating the construction of and contestation over whiteness among Catholics, Protestants, Jews, and new religious movements from the late nineteenth century and through much of the twentieth century, as well as tracing the 'spiritual afterlife of slavery' in Chicago's churches, synagogues, mosques, and other places of worship, and also in the everyday lives of Chicago's religious citizens. The readings and class discussions will also open out to consider other religio-racial issues and projects in Chicago (e.g., Latinx, Indian American, and Indigenous religious communities). Topics for class readings and discussions will be ordered by the week and will alternate between broader theoretical and historiographical issues pertaining to race and religion in the U.S. (first meeting of the week) and closer examinations of the same themes/questions in the context of the religious life of Chicago (second meeting of the week). In this way, Chicago provides a 'laboratory' for observing, testing, and refining historical and theoretical claims about race and religion in the United States.

RLST 27802. Technology and the Human. 100 Units.

Technology is ubiquitous in contemporary life. Yet technological developments continue to infatuate and inspire in us feelings of excitement, hope and fear. How are we to understand the uncanny relationship between the human and technology? What does this relationship disclose about human agency and creativity? If human life is unimaginable without tools, artifacts, memory supports, and machines, how might we gain the critical distance necessary to properly assess the human-technical relation? In this course we will open up an inquiry into the question of technology by considering the ways in which technical objects, processes, and systems interrupt, challenge, and constitute human subjectivity. Readings will include texts by Martin Heidegger, Friedrich Kittler, Bernard Stiegler, Gilbert Simondon, Katherine Hayles and others.

Instructor(s): Sara-Jo Swiatek Terms Offered: Autumn

Equivalent Course(s): ANTH 22415

RLST 27803. The Subject and the Social. 100 Units.

What is it to be a subject? What is the boundary between private and public experience? Are social constructions real? Are facts subjective? What does it mean to 'have a belief'? What is an experience? Is all knowledge socially constituted? This course will address these questions with selected readings from contemporary analytic philosophy of language, religious studies, anthropology, and science studies.

Instructor(s): Lisa Landoe Hedrick Terms Offered: Spring

RLST 28204. Dostoevsky. 100 Units.

Dostoevsky was an inveterate risk-taker, not only at the baccarat tables of the Grand Casino in Baden-Baden, but in his personal life, his political activities, and his artistic endeavors. This course is intended to investigate his two greatest wagers: on the presence of the divine in the world and on the power of artistic form to convey and articulate this presence. Dostoevsky's wager on form is evident even in his early, relatively conventional texts, like *The Double*. It intensifies after his decade-long sojourn in Siberia, exploding in works like *The Notes from Underground*, which one-and-a-half centuries later remains an aesthetic and philosophical provocation of immense power. The majority of the course will focus on Dostoevsky's later novels. In *Crime and Punishment* Dostoevsky adapts suspense strategies to create a metaphysical thriller, while in *The Demons* he pairs a study of nihilism with the deformation of the novel as a genre. Through close readings of these works we will trace how Dostoevsky's formal experimentation created new ways of exploring realms of existence that traditionally belonged to philosophy and theology. The results were never comfortable or comforting; we will focus on interpreting Dostoevsky's metaphysical provocations.

RLST 28307. Trans/Formations: Changing Bodies and Gender in Premodern Christianity. 100 Units.

The course surveys ancient and medieval Christian views on the body and gender with a particular interest in ideas of transformation, supplemented by contemporary readings in trans studies. The course focuses on a series of topics: the creation of human bodies, debates about matter, doctrines of the resurrection, eunuchs, possession, gender (non)conformity, and various modes of gender crossing. Thus, it provides both an introduction to major figures in the history of Christianity and a primer in religious-studies and historical methods in light of trans and queer studies. A central question for the course would be how to think about historical distance and anachronism in our use of theoretical lenses with the interpretation of sources. In addition to readings in contemporary feminist, queer, and trans thought, the course primarily treats Christian sources spanning a number of genres such as narrative, theological treatise, allegory, visionary literature, and forensic transcripts.

Equivalent Course(s): EALC 28350

RLST 28446. Apocalypse Now: Scripts of Eschatological Imagination. 100 Units.

Apocalyptic fantasies are alive and well today - in beach reads and blue chip fiction; in comic books and YA novels; in streaming TV shows, Hollywood blockbusters, and ironic arthouse cinema. These apocalyptic fantasies follow well-established scripts that often date back millennia. Apocalypse scripts allow their users to make sense of the current crisis and prepare for an uncertain future. The course will be divided into two parts. The first half will be devoted to texts, art, and movies that dwell on the expectation of the end and narratively measure out the time that remains. We will begin with examining the biblical ur-scripts of an apocalyptic imaginary, the Book of Daniel in the Old and the Book of Revelation in the New Testament, as well as Saint Paul's messianism in the Letter to the Romans; and then move on to medieval apocalyptic fantasies of the Joachim of Fiore and others; and end with the apocalypticism underlying the religious reforms of Girolamo Savonarola and Martin Luther. The second half will focus on life after the apocalypse - the new freedoms, and new forms of political life and sociality that the apocalyptic event affords its survivors. Readings will include the political theory of maronage, capabilities, and neoprimitivism; literary theory of speculative fiction; and post-apocalyptic narratives by Octavia Butler, Jean Hegland, Richard Jefferies, Cormac McCarthy, and Colson Whitehead. Readings and discussions in English.

Instructor(s): Chris Wild Mark Payne Terms Offered: Winter

RLST 28508. Sacred Mushrooms & Spirit Molecules: Uses and Abuses of Religion Under the Influence of Psychedelics. 100 Units.

In 2006, a psychopharmacologist at Johns Hopkins' School of Medicine helped to revitalize the scientific study of psychedelic drugs not by appeal to studied therapeutic application, but rather by quantifying psychedelics' ability to produce 'mystical-type experiences' with 'spiritual significance' in 'healthy normals.' Since 2006, psychedelics have experienced a renaissance, reaching heights of licit and illicit experimentation not seen since the 1950s and -60s. As in earlier decades, public awareness of psychedelic use and research has been advanced in scientific journals and popular media, including Michael Pollan's 2018 work, *How to Change Your Mind*. As Pollan notes, in both historical moments-the present and half a century ago-the use of psychedelics has sparked significant reflection on the meaning of religion and the social or psychological uses of so-called 'religious experience.' In fact, psychedelics have long played a role in human culture, many practices of which we now identify as religion. With Pollan's pop-intellectual reflection as a 'trip' guide, this course will investigate the long history of psychedelics and religion, the popular culture of psychedelic religiosity and the scientific appropriation of religious nomenclature to advance the study and social influence of psychedelics. Key theories of religion, alongside religious studies of mysticism and spiritual experience, will ground course analyses.

Instructor(s): Greg Chatterley Terms Offered: Spring

RLST 28510. Mythologies of America: 19th Century Novels. 100 Units.

Hawthorne, Melville, Stowe, Alcott, and Twain wrote fiction that, in individual novels and also read comparatively, offers a civic template of mythologies of America: its genesis, its composition, its deities, its ritual life. The course considers this writing as both distinctively American, and as engaging central themes of modern novels, e.g. time, history, and memory, the relation of private to civic life, and the shifting role of religious authority.

Instructor(s): Richard Rosengarten Terms Offered: Spring

Equivalent Course(s): ENGL 28510, RLVC 38500, ENGL 38500, RAME 38500

RLST 28511. Star Wars and Religion. 100 Units.

This course puts religious texts into conversation with George Lucas's popular Star Wars film franchise with an eye toward understanding the power of myth in human life. In interviews, Lucas said he took bits and pieces from a variety of religious traditions to create the mythology of Star Wars. Through close readings of the films and primary texts, students will analyze these influences and evaluate how well the films hold these religious elements together. This course is not an in-depth study of any one religious tradition, but draws elements from different traditions to shed light on the portrayal of religion within Star Wars (i.e., the Force) and the metaphysical and moral themes found in the Star Wars films.

Instructor(s): Russell Johnson Terms Offered: Spring

RLST 28705. Christian Iconography. 100 Units.

In Christian culture, visual images have for many centuries played a pivotal role in ritual, devotion, intellectual thought, and religious instruction. The most important aims of this course are that students understand images convey meaning in very unique ways and learn how to decode their visual messages. The study of iconography encompasses a variety of methods used to identify the subject matter of a pictorial image, describe its contents, and analyze its discursive strategies in view of its original cultural context. We will cover some of the most important themes visualized in the arts of Christianity by analyzing imagery spanning different periods, geographical regions, pictorial media, and artistic techniques. While special

emphasis is placed on the intersections of art and literature, we will also examine pictorial themes that are independent of a specific textual basis. Alongside the study of Christian iconography, this course will address broader issues of visual inquiry, such as patronage, viewer response, emotions, and gender roles. In this course, students will acquire a 'visual literacy' that will enable them to explore all kinds of works of art fruitfully as primary sources in their own right.

Instructor(s): Karin Krause Terms Offered: Winter

Prerequisite(s): P/Q: This course is open to all undergraduate students who are interested in the course topic. You certainly do not need to be an adherent of the Christian faith to take this course. However, a basic familiarity with some of the foundational texts of Christianity (esp. the Bible) and its main (Biblical) protagonists is not a disadvantage.

Equivalent Course(s): ARTH 28705, MDVL 28705

RLST 28775. Racial Melancholia. 100 Units.

This course provides students with an opportunity to think race both within a psychoanalytic framework and alongside rituals of loss, grief, and mourning. In particular, we will interrogate how psychoanalytic formulations of mourning and melancholia have shaped theories of racial melancholia that emerged at the turn of the twenty-first century. Turning to Asian American, African American, and Latinx theoretical and literary archives, we will interrogate the intersections of race, gender, and sexuality and ask: How do literatures of loss enable us to understand the relationship between histories of racial trauma, injury, and grief, on the one hand, and the formation of racial identity, on the other? What might it mean to imagine literary histories of race as grounded fundamentally in the experience of loss? What forms of reparations, redress, and resistance are called for by such literatures of racial grief, mourning, and melancholia? And, finally, how, if understood as themselves rituals of grief, might psychoanalysis and the writing of literature assume the role of religious devotion in the face of loss and trauma?

Instructor(s): Kris Trujillo Terms Offered: Autumn

Equivalent Course(s): ENGL 38775, CMLT 38775, ENGL 28775, RLVC 38775, GNSE 28775, GNSE 38775, CRES 22775, CMLT 28775

RLST 28901. Religion, Science, and Naturalism: Is there a Problem? 100 Units.

The idea that 'religion' and 'science' are often fundamentally at odds is familiar, indeed perhaps among the orienting ideas of modernity. Turning to some historically important approaches to the endlessly vexed question of how best to think about religion and science in light of one another, this class will consider such questions as whether the problems seem different if we ask not about religion and _science_, but rather about religion and _nature_.

Instructor(s): Dan Arnold Terms Offered: Spring

Note(s): This course counts as the 3rd year Theories and Methods course for the undergraduate Religious Studies major/minor.

Equivalent Course(s): SIGN 26072

RLST 29001. Painting and Description in the Roman World: Philostratus' Imagines - Religion, Education, Sexuality. 100 Units.

This course explores Roman art, especially painting, through the single most thoughtful, playful and creative text on naturalistic painting written in antiquity. Arguably, it is the most interesting examination of the brilliance and the problems of naturalism ever written in the Western tradition, creating a non-historicist, fictive and rhetorically-inflected model for thinking about art. Philostratus took the rhetorical trope of Ekphrasis to new heights, in an extraordinary intermedial investigation of textuality through the prism of visuality and of visual art through the descriptive prism of fictional prose. The course will involve close readings of Philostratus' descriptions of paintings alongside exploration of the Greek and Roman art of the imperial period from Pompeian paintings via floor Mosaics to sarcophagi. A reading knowledge of Greek could not be described as a disadvantage (!) but is not a requirement. The course will be taught over 5 weeks in the Spring Quarter on an intensive schedule. =Before the course begins, read the Imagines of the Elder Philostratus in the Loeb Classical Library translation (by Arthur Fairbanks, 1931, Harvard U.P., much reprinted). This book is not exorbitantly expensive and is worth buying, as we will all need a copy throughout.

Instructor(s): Ja# Elsner Terms Offered: Spring

Prerequisite(s): Before the course begins, read the Imagines of the Elder Philostratus in the Loeb Classical Library translation (by Arthur Fairbanks, 1931, Harvard U.P., much reprinted).

RLST 29104. Antisemitism and Islamophobia, Historically and Today. 100 Units.

How are antisemitism and Islamophobia linked together? Are they two different modes of oppression and discrimination or are they part of a similar phenomenon? Moreover, are they religious, racial, or ethnic forms of discrimination? Throughout this course, we will complicate the media narrative that sees Jews and Arabs as perpetual enemies through a historical and philosophical exploration into the origins and development of Orientalism, Islamophobia, and antisemitism. Students will think historically about the construction of race, ethnicity, and religion, and the discriminatory modes by which these are employed; and they will use that knowledge to think critically about current depictions of anti-Jewish and anti-Islamic violence. In the first part of the course, we will consider the historical and conceptual underpinnings of antisemitism and Islamophobia. We will look to 14th and 15th century Spain in order to better understand how and where they originated; we will then track their development through modernity, paying close attention to how these discourses changed and evolved over time; finally, we will look at the impact of the Holocaust and the rise of the State of Israel and consider current iterations of Islamophobia and antisemitism in Europe and America today.

Instructor(s): Mendel Kranz Terms Offered: Spring

Equivalent Course(s): MDVL 29104, JWSC 29104

RLST 29300. My Body, My Self: Asceticism and Subjectivity. 100 Units.

In recent decades scholars of the pre-modern period have turned to the body as a site of renewed historical inquiry. Within the study of religion, this shift has reanimated discussions around asceticism as a particularly potent *techné* for self-fashioning. Nevertheless, scholars have struggled to theorize asceticism across religious traditions. This course brings together two scholars of religion working in distinct geographical locations and cultures: Eastern Christianity and medieval Indian religious literature. Together we are interested in bringing critical gender theory to bear on asceticism as a discursive and embodied practice. We envision this course as an opportunity for students to engage asceticism as a series of techniques that envision the sexed and gendered human body as the horizon of corporeal expression and personal imagination. Asceticism serves as a neat conceptual device, allowing us to toggle between the mind and body while tackling questions that fall within the liminal space between them, including debates around gender, sexuality, sovereignty, and biopower. Students along with the instructors will contend with the challenges and opportunities of transnational and transhistorical feminist and queer inquiry as we traverse across the boundaries of tradition, language, and culture. While drawing on rich historical and religious archives, we will anchor our discussions around the interplay of two principal authors: Giorgio Agamben and Michel Foucault.

RLST 29800. BA Paper Seminar I. 100 Units.

This class meets weekly to provide guidance for planning, researching, and writing the BA paper.

Terms Offered: Autumn

Prerequisite(s): Consent of faculty supervisor and Director of Undergraduate Studies.

Note(s): RLST 29800 and 29900 form a two-quarter sequence that is required of fourth-year students who are majoring in Religious Studies. Students are required to submit the College Reading and Research Course Form.

RLST 29900. BA Paper II. 100 Units.

This class meets weekly to assist students in the preparation of drafts of their BA paper, which are formally presented and critiqued.

Terms Offered: Winter

Note(s): RLST 29800 and 29900 form a two-quarter sequence that is required of fourth-year students who are majoring in Religious Studies. Students are required to submit the College Reading and Research Course Form.

Renaissance Studies

Department Website: <https://voices.uchicago.edu/renaissancestudies> (<https://voices.uchicago.edu/renaissancestudies/>)

The minor in Renaissance studies offers students an interdisciplinary examination of the networks of trade, culture, and power that, in the formative centuries between the Black Death and the Enlightenment, profoundly changed the culture and society of Europe and the Mediterranean and brought the region into contact with the broader globe. This era birthed empires, economies, literatures, languages, conflicts, technologies, and ideas whose influence, both within the European continent and well beyond, powerfully shaped the advent and structures of modernity. A list of University of Chicago faculty working in Renaissance studies can be found on the Renaissance Studies website (<https://voices.uchicago.edu/renaissancestudies/facultybydept/>).

The minor unites the humanities and social sciences, teaching students to use the tools of multiple disciplines to examine the society, art, literature, music, and the political, economic, and historical experiences of the Renaissance world. A student might choose to minor in Renaissance studies in order to reach beyond the lens of one discipline to see how major figures (Machiavelli, Luther, Montaigne, Cervantes, Shakespeare) or major events (the Reformation, European contact with the Americas) yield different insights when examined with the diverse methods and tools of inquiry used in different departments.

The minor could represent an interest distinct from the student’s major, or it could complement a major in the social sciences or humanities for a student working on materials from the period. It could equally complement a major in the sciences, for students who want to understand the era (of Galileo and Vesalius) that so powerfully shaped the way their disciplines are understood and studied today.

Minor in Renaissance Studies

Students must complete six courses for the minor. Because of the interdisciplinary nature of the minor, courses eligible for the minor will come from a variety of departments and will be listed on the Renaissance Studies website (<https://voices.uchicago.edu/renaissancestudies/courses/>).

The Renaissance can be approached through many disciplines, including:

Art History, Classics, Comparative Literature, English Language and Literature, Fundamentals: Issues and Texts, Germanic Studies, History, History, Philosophy, and Social Studies of Science and Medicine, Music, Near Eastern Languages and Civilizations, Philosophy, Political Science, Religious Studies, Romance Languages and Literatures (e.g., Catalan, French, Italian), Russian and East European Studies (e.g., Bosnian/Croatian/Serbian, Czech, Polish), and Theater and Performance Studies.

At least three (3) of the above disciplines must be represented among the six (6) approved courses that students take to complete the minor. An updated list of eligible courses with descriptions specifying which discipline each course represents will be maintained on the Renaissance Studies website (<https://voices.uchicago.edu/renaissancestudies/courses/>). Any uncertainty about which courses represent which disciplines can be resolved by consulting the Renaissance Studies website or the faculty director.

Students may petition to count courses not listed on the website if they can demonstrate that the courses have substantial content related to Renaissance questions. A student may also petition to count up to two language courses if the student can demonstrate that the language is being studied for the purpose of pursuing Renaissance studies. A successful petition requires students to obtain approval from the faculty director, who will contact College Advising on the student’s behalf.

Courses in the minor may not be double counted with the student’s major(s) or with other minors.

Summary of Requirements

Three RENS courses representing three distribution areas *	300
Three RENS electives	300
Total Units	600

* Students must take approved RENS courses in at least three distinct disciplines (History, Philosophy, Religious Studies, etc.). Consult the Renaissance Studies website (<http://voices.uchicago.edu/renaissancestudies/courses/>) for lists of courses and the disciplines they represent.

Grading

Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Advising

Prospective minors must meet with the Renaissance Studies faculty director to discuss their interests and course plans and to obtain advice and approval. This meeting could happen whenever the student is ready to declare. Together the student and the faculty director will fill out the Consent to Complete a Minor Program (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf) form listing the proposed

courses, which the faculty director signs. Students should submit completed, signed forms to their College adviser by the end of Spring Quarter of their third year.

Renaissance Studies Courses

Full, updated lists of eligible courses along with the distribution areas they fulfill can be found on the Renaissance Studies website (<https://voices.uchicago.edu/renaissancestudies/courses/>), but contact the faculty director if you have questions about whether a course may be counted toward the Renaissance Studies minor.

Romance Languages and Literatures

Department Website: <http://rl.uchicago.edu>

Programs of Study

The Department of Romance Languages and Literatures (RLLT) offers several programs of study leading to the BA degree in French, Italian, or Spanish literature and culture; or in some combination, which may include Catalan, Portuguese, Basque, or non-Romance languages of the Iberian Peninsula, the Caribbean, and Latin America. The BA programs are designed to give students knowledge of the literature and culture of their area of concentration, as well as to develop their linguistic competence in one or more of the Romance languages.

Students in other fields of study may also complete a minor in RLLT. Information follows the description of the major.

Courses in the major may not be counted toward general education requirements. For courses that are not taken as part of a University of Chicago study abroad program, students must petition for elective credit from the College before requesting departmental credit. Advanced language students should consider taking special topic courses at the 20000 and 30000 levels. Some of these courses may require consent of the instructor.

Degree Program in French and Francophone Literature, Culture, and Society

Program Requirements

Students who elect the major program must meet with the French undergraduate adviser before the end of Spring Quarter of their third year to declare their intention to complete the major and to complete the required paperwork. Students are strongly encouraged to choose their track and build their own program in consultation with the French undergraduate adviser. Students must submit to the departmental office an approval form for the major program signed by the French undergraduate adviser by the end of Spring Quarter of their third year.

The major program in French consists of ten courses beyond FREN 20300 Language, History, and Culture III. One course must be either FREN 20500 *Ecrire en français* or FREN 20503 *Modes De Raisonnement Français* (taught in Paris). The remaining courses should be upper-level courses in or related to French, and determined according to the student's major track.

All students must take at least one departmental course at the introductory level. Introductory-level courses (as designated in the course title or description) are designed as "gateway" courses that provide foundations for the major and are suitable for students who have just completed the advanced language requirement. All students must also take at least three courses that include pre-nineteenth-century material.

Two tracks, with different emphases, are offered as paths to the French major. These areas of special emphasis are broadly defined, and the chosen track need not determine all the courses a student can take within the department. The tracks are intended to give students the flexibility to explore their own interests while developing in-depth knowledge of the language, literature, and culture of the Francophone world.

1. **French and Francophone Language and Literature:** This track focuses on developing advanced proficiency in speaking, reading, and writing French, as well as broad knowledge of the field of French and Francophone literary studies. Through the close study of major works, students learn critical techniques appropriate to their interpretation. Students must complete most of their course work (e.g., readings, writing) in French in order to receive credit. Advanced students may petition to take RLLT 48800 Foreign Language Acquisition, Research and Teaching as one of their courses.
2. **French and Francophone Society and Culture:** This track is intended for students who have a special interest in understanding the historical, social, and cultural complexity of France and the Francophone world, or in the visual arts, cinema, music, or theater. Students must take a majority of their courses in the department, but are also encouraged to explore appropriate course offerings in History, Political Science, Sociology, Art History, Cinema and Media Studies, Music, and Theater and Performance Studies.

Study Abroad

Students are encouraged to participate in the College's study abroad programs in France. Many of these programs confer major or minor credit, including the courses in the summer Advanced French program. The three civilization courses in the French-language European Civilization in Paris program can be used for credit in any track of the French major or minor, assuming a student is not using these courses to fulfill the general education civilization studies requirement. For the French and Francophone Society and Culture major track, the three courses from the Autumn African Civilizations in Paris program or the three courses from the Winter Cinema and Media Studies program in Paris can be used for credit (if they are not being used to meet the general education requirements in civilization studies or the arts). Further information is available from the Study Abroad office or at study-abroad.uchicago.edu (<http://study-abroad.uchicago.edu/>).

Students may also petition for credit for other courses taken at the University of Chicago Center in Paris, depending on the course content, or for courses taken at other institutions (for instance, at French universities as part of the year-long study abroad program), subject to College procedures and departmental approval.

Grading

French majors must receive quality grades in all required courses. Non-majors may take departmental courses for P/F grading with consent of instructor. However, all language courses must be taken for a quality grade.

Honors

To qualify for honors, students must have an overall GPA of 3.25 or higher and an average GPA of 3.5 or higher in the major. They must also submit a completed BA paper to their adviser no later than Friday of fifth week of Spring Quarter of their fourth year. Students with papers judged superior by the BA paper adviser and another faculty reader will be recommended to the Master of the Humanities Collegiate Division for honors. **Only students who wish to be considered for honors are required to write a BA paper.**

Students should select a faculty supervisor for the paper in early Autumn Quarter of their fourth year. During Autumn or Winter Quarter, they may register for FREN 29900 BA Paper Preparation: French. Students seeking honors may count this course towards their course requirements; **it must be taken for a quality grade.** The BA paper typically is a research paper with a minimum of 15–20 pages, as agreed upon with the BA advisor, and a bibliography written in the language of specialization.

Students must seek permission from their BA paper adviser to use a single paper or project to meet both the major requirements of Romance Languages and Literatures and those of another department or program. Students must also obtain the approval of both program chairs on a form available from the College adviser, to be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Summary of Requirements: Track in French and Francophone Language and Literature

One of the following:	100
FREN 20500	Ecrire en français
FREN 20503	Modes De Raisonnement Français
Nine courses in advanced language, literature, or culture (FREN 20601 or above) *	900
BA paper (if the student wishes to qualify for honors) **	
Total units	1000

* This must include at least one introductory-level course and at least three courses which include pre-nineteenth-century material. Courses must include a French language component.

** Students writing a BA honors paper may include FREN 29900 BA Paper Preparation: French as one of their literature and culture courses.

Summary of Requirements: Track in French and Francophone Society and Culture

One of the following:	100
FREN 20500	Ecrire en français
FREN 20503	Modes De Raisonnement Français
Nine courses in advanced French language (FREN 20601 or above), and French and Francophone culture, society, history, or arts. *	900
BA paper (if the student wishes to qualify for honors) **	
Total Units	1000

* This must include at least one introductory-level course and at least three courses which include pre-nineteenth-century material. Up to three courses may be taken outside the department with approval from the French undergraduate adviser.

** Students writing a BA honors paper may include FREN 29900 BA Paper Preparation: French as one of their literature and culture courses.

Sample Program 1: Track in French and Francophone Language and Literature

FREN 20500	Ecrire en français	100
FREN 20601	Expression orale et phonétique	100
FREN 21820	Blinding Enlightenment (introductory-level course)	100
FREN 22203	The Literary Avant-Garde	100
FREN 24410	Montaigne dans l'histoire littéraire: inventions et récupérations	100
FREN 25301	Beautiful Souls, Adventurers, and Rogues. The European 18th Century Novel	100
FREN 27600	Ancien Français/Old French	100
FREN 27701	Baudelaire	100
FREN 27900	Le Livre Antillais: Culture, Écriture, et Politique	100
FREN 29900	BA Paper Preparation: French (if student wishes to qualify for honors)	100

BA Paper (student wishes to qualify for honors)

Total Units	1000
-------------	------

Sample Program 2: Track in French and Francophone Society and Culture (with a focus on the social sciences)

FREN 20503	Modes De Raisonnement Francais	100
FREN 23600	L'écriture de l'histoire à la Renaissance	100
FREN 23610	Litterature et societe: Flaubert et Marx	100
FREN 26700	Jeanne d'Arc: histoire et legende. Cours introductorie	100
FREN 28500	Les Revenants: histoire, fiction et société au 19e siècle	100
FREN 29100	Pascal and Simone Weil	100
PLSC 27101	Liberalism Confronts Democracy: Tocqueville and Mill	100
SOSC 27501	Civilisation Européenne I (if not used to fulfill the general education civilization studies requirement)	100
SOSC 27601	Civilisation Européenne II (if not used to fulfill the general education civilization studies requirement)	100
SOSC 27701	Civilisation Européenne III (if not used to fulfill the general education civilization studies requirement)	100

Total Units	1000
-------------	------

Sample Program 3: Track in French and Francophone Society and Culture (with a focus on theater, cinema, and the arts)

FREN 20500	Ecrire en français	100
FREN 23404	French Cinema of the 1930s	100
FREN 23405	A Topography of Modernity: Cinema in Paris, 1890-1925	100
FREN 23406	Contemporary French Cinema	100
FREN 24610	Introduction au théâtre français	100
FREN 25000	Molière	100
FREN 25910	Racine	100
ARTH 24812	Museums and Art	100
CMLT 24408	Before and After Beckett: Theater and Theory	100
CMST 27220	Classical Film Theory	100

Total Units	1000

Minor Program in French and Francophone Studies

Students who elect the minor program must meet with the French undergraduate adviser before the end of Spring Quarter of their third year to declare their intention to complete the minor. Students are strongly encouraged to build their own program in consultation with the undergraduate adviser. Students must submit to the departmental office an approval form for the minor program signed by the French undergraduate adviser.

Courses in the minor (1) may not be double counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for a quality grade. Students must complete a substantial part of the course work (e.g., readings, writing) in French in order to receive credit.

The minor program in French and Francophone Studies requires a total of six courses beyond the second-year language sequence (20100-20300). One course must be FREN 20500 Ecrire en français or FREN 20503 Modes De Raisonnement Francais. The remaining courses must consist of five courses in advanced language (20601 and above), literature, society, and culture, including at least one introductory-level course in French. At least one of the courses (at any level) must include pre-nineteenth-century material. With approval from the French undergraduate adviser, one course may be taken outside the department.

Summary of Requirements: Minor in French

One of the following:	100
-----------------------	-----

FREN 20500	Ecrire en français	
FREN 20503	Modes De Raisonnement Francais	

Five courses in French language (20601 and above), literature, culture, and society, including at least one introductory-level course in French and at least one including pre-nineteenth-century material. Students may receive credit for one course taken outside the department, in consultation with the undergraduate adviser.	500

Degree Program in Italian Literature Program Requirements

Students who elect the major program must meet with the Italian undergraduate adviser before the end of Spring Quarter of their third year to declare their intention to complete the major and to complete the required paperwork. Students are strongly encouraged to build their own program in consultation with the undergraduate adviser. Students must submit to the departmental office an approval form for the major program signed by the Italian undergraduate adviser by the end of Spring Quarter of their third year.

The program in Italian consists of ten courses beyond ITAL 20300 Language, History, and Culture III, and is aimed at developing a broad knowledge of the field through the close study of major works and the critical techniques appropriate to their interpretation. These courses must include ITAL 20400 Corso di perfezionamento and ITAL 23410 Reading and Practice of the Short Story (or an equivalent introductory gateway course designed to facilitate the transition between language courses and upper-level electives). Students are strongly encouraged to take this gateway course before beginning upper-level course work. The eight remaining courses should be upper-level courses in or related to Italian. Most will be Italian literature and culture courses. Two of these eight courses may be courses in advanced Italian language beyond ITAL 20400 Corso di perfezionamento. Three of these eight courses may be on Italian cultural topics taken outside of the department with approval from the Italian undergraduate adviser.

Study Abroad

Students are encouraged to participate in the College's study abroad program in Italy. Further information is available from the Study Abroad office or at study-abroad.uchicago.edu (<http://study-abroad.uchicago.edu>).

Grading

Italian majors must receive quality grades in all required courses. Non-majors may take departmental courses for P/F grading with consent of instructor. However, all language courses must be taken for a quality grade.

Honors

To qualify for honors, students must have an overall GPA of 3.25 or higher and an average GPA of 3.5 or higher in the major. They must also submit a completed BA paper to their adviser no later than Friday of fifth week of Spring Quarter of their fourth year. Students with papers judged superior by the BA paper adviser and another faculty reader will be recommended to the Master of the Humanities Collegiate Division for honors. **Only students who wish to be considered for honors are required to write a BA paper.**

Students should select a faculty supervisor for the paper in early Autumn Quarter of their fourth year. During Autumn or Winter Quarter, they may register for ITAL 29900 BA Paper Preparation: Italian. Students seeking honors may count this course towards their course requirements; **it must be taken for a quality grade**. The BA paper typically is a research paper with a minimum of 15–20 pages, as agreed upon with the BA adviser, and a bibliography written in the language of specialization.

Students must seek permission from their BA paper adviser to use a single paper or project to meet both the major requirements of Romance Languages and Literatures and those of another department or program. Students must also obtain the approval of both program chairs on a form available from the College adviser, to be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Summary of Requirements: Major in Italian Literature

ITAL 20400	Corso di perfezionamento	100
ITAL 23410	Reading and Practice of the Short Story (or equivalent gateway course)	100
Eight upper-level courses in or related to Italian		800
Note: Up to two of the eight may be courses in advanced Italian language beyond ITAL 20400.		
Note: Up to three of the eight may be courses on Italian cultural topics taken outside of the department with approval from the Italian undergraduate adviser.		
BA paper (if the student wishes to qualify for honors) *		
Total Units		1000

* Students writing a BA honors paper may include ITAL 29900 BA Paper Preparation: Italian as one of their upper-level courses.

Minor Program in Italian

Students who elect the minor program must meet with the Italian undergraduate adviser before the end of Spring Quarter of their third year to declare their intention to complete the minor. Students are strongly encouraged to build their own program in consultation with the Italian undergraduate adviser. Students must submit to the departmental office an approval form for the minor program signed by the Italian undergraduate adviser.

Courses in the minor (1) may not be double counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for a quality grade. Students must complete a substantial part of the course work (e.g., readings, writing) in Italian in order to receive credit.

The minor in Italian requires a total of six courses beyond ITAL 20300 Language, History, and Culture III. One of the six courses must be ITAL 20400 Corso di perfezionamento. Another of the six courses must be ITAL 23410 Reading and Practice of the Short Story or an equivalent introductory gateway course. Students are strongly encouraged to take this gateway course before beginning upper-level course work. The four remaining courses in the minor will be upper-level courses in Italian. Two of these may be courses in advanced Italian language beyond ITAL 20400 Corso di perfezionamento. Another two courses may be on Italian cultural topics taken outside of the department, with approval from the Italian undergraduate adviser.

Summary of Requirements: Minor in Italian

ITAL 20400	Corso di perfezionamento	100
ITAL 23410	Reading and Practice of the Short Story (or equivalent gateway course)	100
Four upper-level Italian courses		400
Note: Up to two of these may be courses in advanced Italian language beyond ITAL 20400.

Total Units		600

Undergraduate Programs in Hispanic and Luso-Brazilian Studies (HLBS)

The major and minor programs in Spanish, Portuguese, and Catalan prepare students to succeed in a multilingual and multicultural world. Students will be provided with the knowledge and critical skills necessary to understand and engage with the vastly diverse societies and cultural histories of Iberia and Latin America, while also learning how to read and analyze texts with rigor and insight, write carefully and with well-supported arguments, and refine their written and oral expression.

Interdisciplinary Study

Students may choose from a wide range of courses in Iberian and Latin American languages, literatures, and cultures—including Basque, Catalan, Portuguese, and Spanish—and courses taught by visiting faculty from abroad. Some of our students concentrate on more than one language, in several adaptable combinations. Our students are often double majors who bring to the classroom a multiplicity of perspectives that enrich our interdisciplinary approach to the study of language, literature, and culture. Moreover, many of our majors and minors take cross-listed courses that focus on cinema and media studies, art history, Latino studies, music, and Latin American history, among others.

Study Abroad

Students are encouraged to participate in the College's study abroad programs in Mexico or Spain. The three civilization courses in the Spanish-language Civilization in the Western Mediterranean program in Barcelona can be used for credit in the Spanish major or minor, if these courses are not used to fulfill the general education civilization studies requirement. Further information is available from the Study Abroad office or at study-abroad.uchicago.edu (<http://study-abroad.uchicago.edu>).

Program Requirements

Students who elect the major program must meet with the HLBS undergraduate adviser before the end of Spring Quarter of their third year to declare their intention to complete the major and to complete the required paperwork. Students are strongly encouraged to choose their track and build their own program in consultation with the HLBS undergraduate adviser. Students must submit to the departmental office an approval form for the major program signed by the HLBS adviser by the end of Spring Quarter of their third year.

Degree Program in Spanish Language, Literature, and Culture

The program in Spanish consists of ten courses beyond SPAN 20300 Language, History, and Culture III, and is aimed at developing an academic command of the language as well as a broad knowledge of the field of Spanish and Spanish-American literatures and cultures through the close study of major works and the critical techniques appropriate to their interpretation. These courses must include one to three advanced language courses. Students must also take at least three survey courses in the history of the literature (SPAN 21703 Introducción a las literaturas hispánicas: textos españoles clásicos, SPAN 21803 Introducción a las literaturas hispánicas: textos españoles contemporáneos, SPAN 21903 Intro. a las lit. hispánicas: textos hispanoamericanos desde la colonia a la independencia, or SPAN 22003 Introducción a las literaturas hispánicas: del modernismo al presente, which may be taken in any order), plus three to six additional courses in literature and culture. In courses not taught in Spanish, students must complete a substantial part of the course work (e.g., readings, writing, LxC sessions) in Spanish in order to receive credit.

Degree Program in Latin American and Iberian Languages, Literatures, and Cultures

The program in Latin American and Iberian Languages, Literatures, and Cultures (i.e., in more than one HLBS literature) consists of twelve courses beyond intermediate-level language, and is aimed at developing an academic command of at least two Iberian and/or Latin American languages as well as a broad knowledge of the field through the close study of major works and the critical techniques appropriate to their interpretation. These courses must include two to four advanced language courses, with at least one in each of the languages selected by the student. Students must also take eight to ten additional courses in the respective Iberian and/or Latin American literatures and cultures (with at least two courses in two

different languages). In courses not taught in the target language, students must complete a substantial part of the course work (e.g., readings, writing, LxC sessions) in that language in order to receive credit.

Grading

HLBS majors must receive quality grades in all required courses. Non-majors may take departmental courses for P/F grading with consent of instructor. However, all language courses must be taken for a quality grade.

Honors

To qualify for honors, students must have an overall GPA of 3.25 or higher and an average GPA of 3.5 or higher in the major. They must also submit a completed BA paper to their adviser no later than Friday of fifth week of Spring Quarter of their fourth year. Students with papers judged superior by the BA paper adviser and another faculty reader will be recommended to the Master of the Humanities Collegiate Division for honors. **Only students who wish to be considered for honors are required to write a BA paper.**

Students should select a faculty supervisor for the paper early in Autumn Quarter of their fourth year. During Autumn or Winter Quarter they may register for CATA 29900 BA Paper Preparation: Catalan, PORT 29900 BA Paper Preparation: Portuguese, or SPAN 29900 BA Paper Preparation: Spanish with the faculty member chosen to direct the writing of the BA paper. Students seeking honors may count this course towards their course requirements; **it must be taken for a quality grade.** The BA paper typically is a research paper with a minimum of twenty pages and a bibliography written in the language of specialization.

Students must seek permission from their BA paper adviser to use a single paper or project to meet both the major requirements of Romance Languages and Literatures and those of another department or program. A significant and logical section of the BA paper must be written in the appropriate Romance language in consultation with the student's BA paper adviser. Students must also obtain the approval of both program chairs on a form available from the College adviser. The form must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Summary of Requirements: Major in Spanish Language, Literature, and Culture

A total of ten courses from the following:	1000
One to three advanced language courses:	
SPAN 20400	Composición y conversación avanzada I
SPAN 20500	Composición y conversación avanzada II
SPAN 20402	Curso de redacción académica para hablantes nativos
SPAN 20602	Discurso académico para hablantes nativos
Three to four survey courses:	
SPAN 21703	Introducción a las literaturas hispánicas: textos españoles clásicos
SPAN 21803	Introducción a las literaturas hispánicas: textos españoles contemporáneos
SPAN 21903	Intro. a las lit. hispánicas: textos hispanoamericanos desde la colonia a la independencia
SPAN 22003	Introducción a las literaturas hispánicas: del modernismo al presente
Three to six additional courses in Spanish literature and culture	
BA paper (if the student wishes to qualify for honors) *	
Total Units	1000

* Students writing a BA honors paper may include SPAN 29900 BA Paper Preparation: Spanish as one of their literature and culture courses.

Summary of Requirements: Major in Latin American and Iberian Languages, Literatures, and Cultures

A total of twelve courses from the following:	1200
Two to four advanced language courses in at least two HLBS languages (Basque, Catalan, Portuguese, or Spanish)	
Eight to ten additional courses in Iberian and/or Latin American literatures and cultures, with at least two courses in two different (HLBS) languages	
BA paper (if the student wishes to qualify for honors) *	
Total Units	1200

* Students writing a BA honors paper may include CATA 29900 BA Paper Preparation: Catalan, PORT 29900 BA Paper Preparation: Portuguese, or SPAN 29900 BA Paper Preparation: Spanish as one of their literature and culture courses.

Requirements for Minor in Catalan, Portuguese, or Spanish

Students who elect the minor program in Catalan, Portuguese, or Spanish must meet with the HLBS undergraduate adviser before the end of Spring Quarter of their third year to declare their intention to complete the minor. Students

are strongly encouraged to build their own program in consultation with the HLBS adviser. Students must submit to the departmental office an approval form for the minor program signed by the appropriate HLBS adviser.

Courses in the minor (1) may not be double counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for a quality grade. Students must complete a substantial part of the course work (e.g., readings, writing, LxC sessions) in the appropriate language in order to receive credit.

Catalan

The minor in Catalan requires a total of six courses beyond second-year language. One or two courses must be advanced language courses (CATA 21100 Llengua, societat i cultura I or CATA 21200 Llengua, societat i cultura II). The balance must consist of four to five literature and culture courses.

Summary of Requirements: Minor in Catalan

A total of six courses from the following:	600
One or two advanced language courses:	
CATA 21100	Llengua, societat i cultura I
CATA 21200	Llengua, societat i cultura II
Four to five additional courses in Catalan literature and culture	
Total Units	600

Portuguese

The minor in Portuguese requires a total of six courses beyond second-year language. One or two courses must be advanced language courses (above 20100). The balance must consist of four to five literature and culture courses.

Summary of Requirements: Minor in Portuguese

A total of six courses from the following:	600
One or two advanced language courses:	
PORT 20500	Cultura do Mundo Lusófono
PORT 20600	Composição e Conversação Avançada
PORT 21500	Curso de Aperfeiçoamento
Four or five additional courses in Luso-Brazilian literature and culture	
Total Units	600

Spanish

The minor in Spanish requires a total of six courses beyond second-year language. One or two courses must be advanced language courses (above 20300). The balance must consist of four to five literature and culture courses, including at least two in the survey sequence.

Summary of Requirements: Minor in Spanish

A total of six courses from the following:	600
One or two advanced language courses:	
SPAN 20400	Composición y conversación avanzada I
SPAN 20402	Curso de redacción académica para hablantes nativos
SPAN 20500	Composición y conversación avanzada II
SPAN 20602	Discurso académico para hablantes nativos
Four to five courses from the following:	
Two or three survey courses:	
SPAN 21703	Introducción a las literaturas hispánicas: textos españoles clásicos
SPAN 21803	Introducción a las literaturas hispánicas: textos españoles contemporáneos
SPAN 21903	Intro. a las lit. hispánicas: textos hispanoamericanos desde la colonia a la independencia
SPAN 22003	Introducción a las literaturas hispánicas: del modernismo al presente
Two or three additional Spanish literature and culture courses	
Total Units	600

Degree Programs in Romance Languages, Literatures, and Cultures

This major is designed to accommodate the needs and interests of students who would like to broaden their linguistic, literary, and cultural experience beyond the scope of monolingual programs. Romance languages have never existed in isolation and, now more than ever, we live in a globalized society that traverses linguistic borders. This major prepares

students to flourish in an increasingly multicultural and multilingual world. In addition, movements of migration and territorial expansion make the domain of Romance languages one of porous borders. The BA program in Romance languages therefore also welcomes students to study additional languages (Basque, Creole, Quechua).

The major program in Romance Languages, Literatures, and Cultures consists of twelve courses beyond the second-year language sequences. Linguistic competence in at least two Romance languages, non-Romance languages of the Iberian Peninsula, or languages of the Caribbean or Latin America, is assumed. There are two options: (1) a major program focused on any two or more Iberian and/or Latin American languages, literatures, or cultures; (2) a major program in any two or more Romance languages, literatures, and cultures.

Students who elect a major program in Romance Languages, Literatures, and Cultures must meet with the undergraduate adviser in each relevant language/literature before the end of Spring Quarter of their third year to declare their intention to complete the major and to complete the required paperwork. Students are strongly encouraged to build their own program in consultation with relevant RLTT undergraduate advisers. Students must submit to the departmental office an approval form for the major program signed by relevant RLTT undergraduate advisers by the end of Spring Quarter of their third year.

Grading

RLTT majors must receive quality grades in all required courses. Non-majors may take departmental courses for P/F grading with consent of instructor. However, all language courses must be taken for a quality grade.

Honors

To qualify for honors, students must have an overall GPA of 3.5 or higher and an average GPA of 3.5 or higher in the major. They must also submit a completed BA paper to their adviser no later than Friday of fifth week of Spring Quarter of their fourth year. Students with papers judged superior by the BA paper adviser and another faculty reader will be recommended to the Master of the Humanities Collegiate Division for honors. **Only RLTT students who wish to be considered for honors are required to write a BA paper.**

Students should select a faculty supervisor for the paper early in Autumn Quarter of their fourth year. During Autumn or Winter Quarter they may register for CATA 29900 BA Paper Preparation: Catalan, ITAL 29900 BA Paper Preparation: Italian, FREN 29900 BA Paper Preparation: French, PORT 29900 BA Paper Preparation: Portuguese, or SPAN 29900 BA Paper Preparation: Spanish with the faculty member chosen to direct the writing of the BA paper. Students seeking honors may count this course towards their course requirements; **it must be taken for a quality grade.** The BA paper typically is a research paper with a minimum of twenty pages and a bibliography written in the language of specialization. It should engage with sources and scholarship from one or multiple fields and literatures.

Students must seek permission from their BA paper adviser to use a single paper or project to meet both the major requirements of Romance Languages and Literatures and those of another department or program. A significant and logical section of the BA paper must be written in the appropriate Romance language in consultation with the student's BA paper adviser. Students must also obtain the approval of both program chairs on a form available from the College adviser. The form must be completed and returned to the College adviser by the end of Autumn Quarter of the student's year of graduation.

Summary of Requirements: Major in Romance Languages, Literatures, and Cultures

A total of twelve courses from the following:	1200
Two or four advanced language courses in at least two Romance languages (Basque*, Catalan, French, Italian, Portuguese, or Spanish)	
Eight to ten additional courses in Romance literatures and cultures, with at least two courses in two different Romance languages	
BA paper (if the student wishes to qualify for honors) **	
Total Units	1200

* BASQ 29700 Readings in Special Topics or other advance language Basque course if available

** Students writing a BA honors paper may include CATA 29900 BA Paper Preparation: Catalan, FREN 29900 BA Paper Preparation: French, ITAL 29900 BA Paper Preparation: Italian, or SPAN 29900 BA Paper Preparation: Spanish as one of their literature courses.

Sample Program for Option 1: Major in Latin American and Iberian Languages, Literatures, and Cultures

Two to four advanced language courses in at least two HLBS languages:	400

Minor Program in Romance Languages, Literatures, and Cultures

This minor is designed to accommodate the needs and interests of students who would like to broaden their linguistic, literary, and cultural experience beyond the scope of monolingual programs. Romance languages have never existed in isolation and, now more than ever, we live in a globalized society that traverses linguistic borders. This minor prepares students to flourish in an increasingly multicultural and multilingual world. In addition, movements of migration and territorial expansion make the domain of Romance languages one of porous borders.

The minor program in Romance Languages, Literatures, and Cultures consists of six courses in beyond the second-year language sequences. It is designed to accommodate the needs and interests of students who would like to broaden their linguistic and literary experience. Linguistic competence in at least two Romance languages is assumed.

Students who elect this minor program must meet with the undergraduate adviser in each relevant language/literature before the end of Spring Quarter of their third year to declare their intention to complete the minor and to complete the required paperwork. Students are strongly encouraged to build their own program in consultation with each relevant RLLT undergraduate adviser. Students must submit to the departmental office an approval form for the minor program signed by all relevant RLLT undergraduate advisers by the end of Spring Quarter of their third year.

Courses in the minor (1) may not be double counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for a quality grade. Students must complete a substantial part of the course work (e.g., readings, writing) in the target language in order to receive credit.

Students must take at least one advanced language course in each relevant language. The rest of the minor is designed in consultation with the undergraduate adviser/s.

Summary of Requirements: Minor in Romance Languages, Literatures, and Cultures

A total of six courses from the following:		600
At least two advanced language courses (one per relevant language):

Basque Courses Language

Must be taken for a quality grade. No auditors are permitted.

BASQ 12000-12100-12200. Elementary Basque I-II-III.

Elementary Basque I-II-III

BASQ 12000. Elementary Basque I. 100 Units.

This course will be an approach to the puzzling language and culture that defines Basque people. A challenge for those who dare to learn a language different from any they have ever heard. A journey to the wonderful land of the Basques, full of enigmas, strong traditions, and peculiar customs that will be discovered through very dynamic activities, such as interactive presentations, brief dialogues, games. The aim of the course is to introduce students to the Basque language through the development of some basic written and conversational skills and through structural analysis. The instructor will propose real communicative situations that will encourage the students to learn the language for the purpose of visiting the Basque Country and being able to communicate in basic ways with Basque speakers. These are usually small classes where it is easy to get a lot of first-hand exposure to the language, and the instructor creates an enriching atmosphere full of entertaining activities and possibilities to hone all skills: speaking, listening, reading, and writing—as well as gaining a good grasp of the structure of the language.

Terms Offered: Autumn

BASQ 12100. Elementary Basque II. 100 Units.

This course will be a continuation of Elementary Basque I, advancing the students' knowledge of grammatical structure and their receptive, expressive, and conversational skills. The module uses a task-based approach to learning Basque. By means of this methodology, the accumulation of task cycles promotes the achievement of communicative goals. We will work on different tasks on each lesson, and the progressive build-up of those tasks will cause the gradual improvement of the students' communicative skills and overall fluency. By the end of the quarter the student should be able to produce grammatically accurate short texts in Basque, interact with speakers of Basque at a basic level while employing a variety of complex cases and tenses, understand a range of basic written and oral texts in Basque, and understand a range of cases and the differences between them. This is achieved by creating a motivating atmosphere where all the students want to take part in the activities, while the teacher guides them during their learning process, providing them with the vocabulary and grammar they need to reach these goals.

Terms Offered: Winter

Prerequisite(s): BASQ 12000 or consent of instructor.

BASQ 12200. Elementary Basque III. 100 Units.

A continuation of Elementary Basque II, with more emphasis in reading/writing and conversation. To consolidate linguistic competence in Basque and expand knowledge of specific areas of grammar. Emphasis will be placed on oral and written competence. Teamwork and personal input will be essential aspects of this module. We will work on practical objectives and will enact real-life situations in groups. Our final aim will be to achieve a relevant and useful command of the Basque language. As in the previous levels, most activities will be very dynamic and interactive.

Terms Offered: Spring

Prerequisite(s): BASQ 12100 or consent of instructor.

Literature and Culture

BASQ 22100. Feminism(s) in the Basque Country: Gender, Language, and National Identities. 100 Units.

Feminist movements are strong and vibrant in the Basque Country. Often presented as an example of a matriarchal culture where women have been able to exercise authority (central to Basque mythology are a number strong female creatures, such as the figure of Mari, a Stone Age goddess), Basque society has in fact been a breeding ground for various forms of women's struggle against patriarchal oppression. In addition, the history of feminism in the Basque Country has been always inflected by the minority status experienced in both linguistic and national terms by the Basque people, and a number of contemporary feminist intellectuals and writers argue that the modes of oppression affecting them because of their gender are similar and indeed connected to those exercised against their language or against claims for national and political sovereignty. To what extent are these struggles for recognition -of gender, language, nation- one and the same fight? This course will provide a survey of contemporary feminist thought and practices, with particular attention paid to the way these movements position themselves in relation to the minority status assigned to language and nation in the Basque country. Some of the course materials will be in Basque or Spanish. Reading proficiency in any of those languages is recommended.

Terms Offered: Spring

Equivalent Course(s): GNSE 22104, SPAN 22100

BASQ 24700. Introduction to Basque Culture. 100 Units.

Straddling the border of southern France and northern Spain, the land of the Basques has long been home to a people who had no country of their own but have always viewed themselves as a nation. No one has ever been able to find their roots, and their peculiar language is not related to any other in the world, but they have managed to keep their mysterious identity alive, even if many other civilizations tried to blot it out. The aim of this course is to create real situations that will enable the students to learn the meaning of Basque culture. It will be a guided tour throughout Basque history and society. Students will learn about the mysterious origins of the language; they will visit the most beautiful places of the Basque country; they will get to know and appreciate Basque traditions, gastronomy, music . . . and most importantly, they will be able to compare and contrast their own cultures and share their ideas during the lessons, creating an enriching atmosphere full of entertaining activities, such as listening to music, reading legends and tales, watching documentaries, and much more.

Terms Offered: Winter

Note(s): This course will be conducted in English. Prior knowledge of Basque language or culture is not required.

Equivalent Course(s): SPAN 24701

Catalan Courses

Language

Must be taken for a quality grade. No auditors are permitted.

CATA 12200-12300. Catalan for Speakers of Romance Languages I-II.

Catalan for Speakers of Romance Languages

CATA 12200. Catalan for Speakers of Romance Languages I. 100 Units.

This course is intended for speakers of other Romance languages to quickly develop competence in spoken and written Catalan. In this introductory course, students learn ways to apply their skills in another Romance language to mastering Catalan by concentrating on the similarities and differences between the two languages.

Terms Offered: Autumn Spring

Prerequisite(s): Familiarity with a Romance language.

CATA 12300. Catalan for Speakers of Romance Languages II. 100 Units.

This course is intended for speakers of other Romance languages to quickly develop competence in spoken and written Catalan. In this intermediate-level course, students learn ways to apply their skills in another Romance language to mastering Catalan by concentrating on the similarities and differences between the two languages. This course offers a rapid review of the basic patterns of the language and expands on the material presented in CATA 12200.

Terms Offered: Winter

Prerequisite(s): CATA 11100, CATA 12200 or consent of instructor.

CATA 21100. Llengua, societat i cultura I. 100 Units.

This advanced-level course will focus on speaking and writing skills through the study of a wide variety of contemporary texts and audiovisual materials. It will provide students with a better understanding of contemporary Catalan society. Students will review problematic grammatical structures, write a number of essays, and participate in multiple class debates.

Terms Offered: Autumn

Prerequisite(s): CATA 11200, CATA 12300 or consent of instructor

CATA 21200. Llengua, societat i cultura II. 100 Units.

This advanced-level course will focus on speaking and writing skills through a wide variety of texts and audiovisual materials. We will study a wide range of Catalan cultural manifestations (e.g., visual arts, music, gastronomy). Students will also review advanced grammatical structures, write a number of essays, and participate in multiple class debates.

Terms Offered: Spring

Prerequisite(s): CATA 21100 or consent of instructor

CATA 23333. Reading Catalan for Research Purposes. 100 Units.

This fast-paced course prepares students to read and do research using texts in Catalan. Students will work on grammar, vocabulary and reading skills, and they will also get introduced to some translation strategies. Part of the texts students will work on will be academic texts in their respective areas of research. This course may fulfill the graduate language requirement in some departments.

Terms Offered: Autumn

Prerequisite(s): Familiarity with a Romance language is highly recommended.

Equivalent Course(s): CATA 33333

Literature and Culture**CATA 21400. Languages in the Iberian Peninsula: Multilingualism and Language Ideologies. 100 Units.**

The course will lead students to explore the situation of the main languages in the Iberian Peninsula from a sociolinguistic perspective (in the wide sense of the word). It will present language diversity in the Iberian Peninsula and lead students to discuss and read about language contact, language planning (including both status and corpus planning), language policy, ideologies and linguistic representations regarding Spanish, Portuguese, Galician, Catalan, Occitan, Basque, Aragonese and Asturian.

Terms Offered: Spring

Note(s): Taught in English.

Equivalent Course(s): SPAN 21401

CATA 21600. Catalan Culture and Society: Art, Music, and Cinema. 100 Units.

This course provides an interdisciplinary survey of contemporary Catalonia. We study a wide range of its cultural manifestations (architecture, paintings, music, arts of the body, literature, cinema, gastronomy). Attention is also paid to some sociolinguistic issues, such as the coexistence of Catalan and Spanish, and the standardization of Catalan.

Terms Offered: Winter

Note(s): The course will be conducted in English.

Equivalent Course(s): SPAN 21610

CATA 22350. Speaking Truth to Power in Medieval Iberia. 100 Units.

In the multilingual and multireligious environment of the Iberian middle ages, poetry can express many things. And while literary history has granted a prestigious space to some of these things, such as love or spirituality, it has consistently neglected others, such as socio-political satire or vulgarity. This class will be paying attention to that other less talked-about poetry that gets into the political struggles of the period, that talks in profanities about profane things. In other words, the poetry that does not speak to the eternity of existence, but that gets its hands dirty with earthly matters. The poetry that savagely mocks and cuts through social conventions in a way that makes seem contemporary Twitter trolls benevolent in comparison. For this class we will be reading authors who wrote in Galician-Portuguese such as Joao Soares de Paiva or King Alfonso X, authors who wrote in Catalan such as Guillem de Bergueda or Ramon Vidal de Besalu, and authors who wrote in Spanish such as Juan Ruiz or Juan de Mena. Translations to Spanish will be provided or worked through class discussion.

Instructor(s): N. Blanco Mourelle Terms Offered: Autumn

Equivalent Course(s): SPAN 32350, PORT 22350, CATA 32350, MDVL 22350, PORT 32350

CATA 25520. Narrativas trans en la cultura catalana del siglo XX. 100 Units.

Este curso ofrece una síntesis crítica de algunas de las representaciones más destacadas de las vidas las personas trans (transformistas, travestidas y transexuales) en la Barcelona del período que transcurre entre 1914 y 1980 a partir de los testimonios literarios disponibles -redactados fundamentalmente en catalán y en español- que reflejaron las voces, los ecos y las distorsiones de la diversidad sexual en las culturas ibéricas del siglo XX. Estas fuentes primarias se interrelacionarán con documentos periodísticos y ensayísticos, con fotografías y cómics, con películas de ficción y documentales que permitirán

profundizar en cuestiones sociales e históricas que incidieron en la plural percepción (auto)biográfica y en los debates sobre la noción de género sexual a lo largo del siglo XX. La ciudad de Barcelona será considerada, por consiguiente, epicentro geográfico real y metáfora de libertades políticas, colectivas e individuales.

Instructor(s): R. Mérida

Note(s): Taught in Spanish.

Equivalent Course(s): CATA 35520, SPAN 35520, SPAN 25520

CATA 27020. Christianity and Islam in the Western Mediterranean World during the Late Middle Ages. 100 Units.

El curso analizará los contactos mantenidos entre mundo cristiano y mundo islámico en el Mediterráneo bajomedieval, tomando la Corona de Aragón y sus ricas fuentes documentales como observatorio privilegiado. Las particularidades de la Corona de Aragón se compararán con las de otros estados cristianos del Occidente mediterráneo que mantuvieron relaciones sostenidas con los musulmanes. Tras la definición de la naturaleza y de las especificidades de los contactos político-diplomáticos, mercantiles y pirático-corsarios entre Cristiandad e Islam, las clases se focalizarán en la identificación y caracterización de colectivos y personas que actuaron como mediadores lingüísticos y culturales entre ambas realidades. Se determinarán las circunstancias y motivos que permitieron que agentes diplomáticos, mercaderes, mercenarios, piratas-corsarios o cautivos-esclavos vehicularan los contactos. Y se analizarán y compararán las distintas tipologías documentales que son plasmación de todos esos intercambios y contactos culturales y humanos.

Instructor(s): R. Salicrú i Lluçh Terms Offered: Spring

Note(s): Taught in Spanish.

Equivalent Course(s): MDVL 27020, RLST 27020, SPAN 37020, SPAN 27020, CATA 37020

CATA 29700. Readings in Special Topics. 100 Units.

This course involves directed readings in special topics not covered by courses offered as part of the program in Catalan. Subjects treated and work to be completed for this course must be chosen in consultation with the instructor no later than the end of the preceding quarter.

Terms Offered: Autumn Spring Winter

Prerequisite(s): CATA 10300 or 20200, depending upon the requirements of the program for which credit is sought

Note(s): Students are required to submit the College Reading and Research Course Form.

CATA 29900. BA Paper Preparation: Catalan. 100 Units.

In consultation with a faculty member, students must devote the equivalent of a one-quarter course to the preparation of a BA project.

Terms Offered: Autumn Winter

Prerequisite(s): Consent of undergraduate adviser

Note(s): Students are required to submit the College Reading and Research Course Form. Students seeking honors may count this course towards their course requirements. Must be taken for a quality grade.

French Courses

Language

Must be taken for a quality grade. No auditors are permitted.

FREN 10100-10200-10300. Beginning Elementary French I-II-III.

This three-quarter sequence is intended for beginning and beginning/intermediate students in French. It provides students with a solid foundation in the basic patterns of spoken and written French (e.g., grammar, vocabulary, phonetics, sociocultural norms) to develop their speaking, listening, writing, and reading skills. Although the three classes constitute a sequence, there is enough review and recycling at every level for students to enter the sequence whenever it is appropriate for them based on placement exam results.

FREN 10100. Beginning Elementary French I. 100 Units.

This course is intended for students who have no previous knowledge of French and for those who need an in-depth review of the very basic patterns of the language.

Terms Offered: Autumn Spring Winter

FREN 10200. Beginning Elementary French II. 100 Units.

This course offers a rapid review of the basic patterns of the language and expands on the material presented in FREN 10100.

Terms Offered: Autumn Spring Winter

Prerequisite(s): FREN 10100 or placement.

FREN 10300. Beginning Elementary French III. 100 Units.

This course expands on the material presented in FREN 10200, reviewing and elaborating the basic patterns of the language.

Terms Offered: Autumn Spring Winter

Prerequisite(s): FREN 10200 or placement.

FREN 12001-12002-12003. Intensive French I-II-III.

This intensive, three-quarter sequence brings students with no prior background in French to advanced-low levels in all four skills—reading, writing, speaking, and listening—thus preparing students to take third-year level courses in French. Learners who are starting French late in their College careers or who wish to move forward swiftly will gain skills corresponding to two full years of study by completing the entire sequence. Although the three courses constitute a sequence, students may enter the sequence whenever it is appropriate for them based on prior courses or placement exam results. Students may also

exit the sequence after any given course and continue in the appropriate course in the Elementary or Intermediate French track. Each course in the sequence is 200 units and corresponds in workload to taking two courses.

FREN 12001. Intensive French I. 200 Units.

Intensive French I, II and III: This intensive, three-quarter sequence brings students with no prior background in French to advanced-low levels in all four skills—reading, writing, speaking, and listening—thus preparing students to take third-year level courses in French. Learners who are starting French late in their College careers or who wish to move forward swiftly will gain skills corresponding to two full years of study by completing the entire sequence. Although the three classes constitute a sequence, students may enter the sequence whenever it is appropriate for them based on prior courses or placement exam results. Students may also exit the sequence after any given class and continue in the appropriate course in the Elementary or Intermediate French track. NOTE: Each course is 200 units and corresponds in workload to taking two courses. FREN 12001, the first course in the sequence, covers the equivalent of FREN 10100 and 10200.

Terms Offered: Autumn

Prerequisite(s): For students with no prior French, or placement in FREN 10100.

Note(s): Course is 200 units and corresponds in workload to taking two courses.

FREN 12002. Intensive French II. 200 Units.

Intensive French I, II and III: This intensive, three-quarter sequence brings students with no prior background in French to advanced-low levels in all four skills—reading, writing, speaking, and listening—thus preparing students to take third-year level courses in French. Learners who are starting French late in their College careers or who wish to move forward swiftly will gain skills corresponding to two full years of study by completing the entire sequence. Although the three classes constitute a sequence, students may enter the sequence whenever it is appropriate for them based on prior courses or placement exam results. Students may also exit the sequence after any given class and continue in the appropriate course in the Elementary or Intermediate French track. NOTE: Each course is 200 units and corresponds in workload to taking two courses. FREN 12002, the second course in the sequence, covers the equivalent of FREN 10300 and 20100.

Terms Offered: Winter

Prerequisite(s): FREN 10200, FREN 12001 or placement in FREN 10300.

Note(s): Course is 200 units and corresponds in workload to taking two courses.

FREN 12003. Intensive French III. 200 Units.

Intensive French I, II and III: This intensive, three-quarter sequence brings students with no prior background in French to advanced-low levels in all four skills—reading, writing, speaking, and listening—thus preparing students to take third-year level courses in French. Learners who are starting French late in their College careers or who wish to move forward swiftly will gain skills corresponding to two full years of study by completing the entire sequence. Although the three classes constitute a sequence, students may enter the sequence whenever it is appropriate for them based on prior courses or placement exam results. Students may also exit the sequence after any given class and continue in the appropriate course in the Elementary or Intermediate French track. NOTE: Each course is 200 units and corresponds in workload to taking two courses. FREN 12003, the third course in the sequence, covers the equivalent of FREN 20200 and 20300.

Terms Offered: Spring

Prerequisite(s): FREN 12002, 14500, 20100, or placement in FREN 20200.

Note(s): Course is 200 units and corresponds in workload to taking two courses.

FREN 14100. French for Romance Language Speakers. 100 Units.

This course helps students quickly gain skills in spoken and written French by building on their prior working knowledge of another Romance language (Catalan, Italian, Portuguese or Spanish). By relying on the many similarities with other Romance languages, students can focus on mastering the different aspects of French. This class covers content from FREN 10100 and 10200.

Terms Offered: Winter

Prerequisite(s): 20100 in another Romance language or consent of instructor

FREN 14500. French for Global Studies and Economics. 100 Units.

Designed as an alternative to FREN 20100 for students in Business Economics, Global Studies and related fields of study, this four-skills course meets the grammatical objectives of FREN 20100 while equipping students with the basic communication skills and cultural awareness necessary in the areas of international exchange and economics. Through exposure to a wide range of material—including essays, newspaper and journal articles, film reviews, professional writing practices—and interactive exercises including discussions, in-class activities, and group projects in simulated professional situations, students will acquire the linguistic skills and sociocultural knowledge required for engagement in international exchange and business economics as well as to participate in larger debates in the Francophone context.

Terms Offered: Spring

Prerequisite(s): FREN 10300 or placement in FREN 20100.

FREN 20100-20200-20300. French Language, History, and Culture I-II-III.

In this intermediate-level sequence, students review and extend their knowledge of all basic patterns (e.g., grammar, vocabulary, phonetics, sociocultural norms) of the language. They develop their oral and written skills by describing, narrating, and presenting arguments. They are exposed to texts and audio-visual materials that provide them with a deeper understanding of French literature, culture, and contemporary society.

FREN 20100. Language, History, and Culture I. 100 Units.

In this intermediate-level sequence, students review and extend their knowledge of all basic patterns (e.g., grammar, vocabulary, phonetics, sociocultural norms) of the language. They develop their oral and written skills by describing, narrating, and presenting arguments. They are exposed to texts and audio-visual materials that provide them with a deeper understanding of French literature, culture, and contemporary society.

Terms Offered: Autumn Spring Winter

Prerequisite(s): FREN 10300 or placement

FREN 20200. Language, History, and Culture II. 100 Units.

This course helps students develop their descriptive and narrative skills through a variety of texts, audio-visual materials, and activities.

Terms Offered: Autumn Spring Winter

Prerequisite(s): FREN 20100 or placement.

FREN 20300. Language, History, and Culture III. 100 Units.

This course helps students develop their skills in understanding and producing written and spoken arguments in French through readings and debates on various issues relevant to contemporary French society.

Terms Offered: Autumn Spring Winter

Prerequisite(s): FREN 20200 or placement

FREN 20500. Ecrire en français. 100 Units.

The main goal of this course is to help students acquire advanced grammatical knowledge of the French language and develop their writing skills. This course is strongly recommended for all students who intend to take courses in which writing essays in French is required: French literature classes on campus, the Autumn Paris Civilization program, or the academic yearlong program in Paris. It is also strongly recommended for students who wish to take the advanced proficiency exam in French.

Terms Offered: Autumn Spring Winter

Prerequisite(s): FREN 20300 or placement

FREN 20601. Expression orale et phonétique. 100 Units.

This course focuses on developing the tools necessary for advanced oral proficiency in an academic context. Through active class participation involving a number of class presentations, students practice a variety of discourse styles (e.g., debates, lectures, seminars, interviews). Special emphasis is placed on correct pronunciation.

Terms Offered: Spring

Prerequisite(s): FREN 20300 or placement

FREN 20602. Expression orale : Décrire l'art moderne et contemporain en français. 100 Units.

This course explores major contemporary French and francophone artists, art forms and art works. Students will acquire basic linguistic and analytical skills to apprehend visual arts, graphic novels, movies and theatrical performance in French. They will work on individual and group art and academic assignments.

Terms Offered: Autumn

Prerequisite(s): FREN 20300 or placement.

Note(s): Taught in French. A screening and a museum field trip are required.

FREN 23333. Reading French for Research Purposes. 100 Units.

This intensive course is designed to take students with a basic knowledge of French to the level of reading proficiency needed for research. To that end, students will work on grammar, vocabulary, and reading strategies. Students will read a range of scholarly texts, a number of which will be directly drawn from their respective areas of research.

Terms Offered: Autumn Spring Winter

Prerequisite(s): FREN 10200 or placement in FREN 10300 for undergraduates. No prerequisite for graduate students, though some prior experience with French is highly recommended.

Equivalent Course(s): FREN 33333

Literature and Culture

All literature classes are conducted in French unless otherwise indicated. Students who are taking a course for credit toward the French major or minor do all work in French. With prior consent of instructor, non-majors may write in English.

FREN 21720. Histoire, superstitions et croyances dans le roman francophone contemporain. 100 Units.

Superstitions and traditional beliefs are an integral part of African and Caribbean cultural identities. Based on myths, legends and proverbs, they were usually passed down orally. This course explores and critically analyzes their literary representations: how do contemporary authors rethink, reframe and rewrite myths and legends that primarily stems from an oral tradition? How are these stories used as a framing device to interrogate contemporary historical events? The course emphasizes cultural and socio-political connections through some close readings and discussions. Readings include texts by Mariama Bâ, René Depestre, Véronique Lordinot, Gisèle Pineau and Véronique Tadjo.

Instructor(s): M. Kenfack Terms Offered: Autumn

Prerequisite(s): FREN 20500 or 20503. This is an introductory-level course.

Note(s): Readings and discussion in French.

Equivalent Course(s): LACS 21720

FREN 22721. Montaigne et la philosophie grecque: cours d'introduction. 100 Units.

This course will examine how Montaigne blends different Hellenistic psychological schools of philosophical thought (Stoicism, Epicureanism, and Skepticism) into a complex philosophy (or anti-philosophy) about how to live a fulfilling and pleasurable life. The course will examine the fundamental questions raised as Montaigne reacts to these philosophical schools: What is the nature of pleasure, and how or why should we pursue it? How are we to regulate and value different emotional states? What is the proper philosophical and emotional response to the inevitability of death? Throughout the course, we will discover how Montaigne constantly posed and tested these questions for himself in his own life and times.

Instructor(s): B. Ransom Terms Offered: Winter

Prerequisite(s): FREN 20500 or 20503. This is an introductory-level course.

Note(s): Taught in French.

FREN 22821. Écritures féminines au XIXe siècle : une introduction. 100 Units.

How do women portray themselves in the literary production of the long 19th century? What are the main features of the emergence of female authorship in France in this historical moment? The course aims to provide answers to these and other questions by looking at both canonical texts and lesser-known works by women writers such as George Sand, Marceline Desbordes-Valmore, Marie Krysinska, Renée Vivien, and Liane de Pougy. Our journey will culminate in the Belle Époque (1890-1914), during which an astonishing increase in publications by women writers occurs. In this context, we will reflect on what a female voice entails and whether its features can be isolated when approaching a literary text. Another source of interest in this period is the rediscovery of the myth of Sappho and the exploration of alternative sexualities as discursive spaces of revindication and cultural debate. Finally, we will analyze the importance of an intertextual reading of 19th-century literary production in order to understand how women writers revisit a male-oriented tradition and try to reshape female social and individual identity. Incursions into other media will also contribute to the understanding of the issues at stake.

Instructor(s): C. Nifosi Terms Offered: Winter

Prerequisite(s): FREN 20500 or 20503.

Note(s): Taught in French. This is an introductory-level course.

Equivalent Course(s): GNSE 22821

FREN 23335. Racial France. 100 Units.

Over the last two decades, questions of race, racial identity, and racial discrimination have come increasingly to the fore in France, despite (or because of) the country's prevailing rhetoric of colorblind indivisibility. These issues are becoming ever more pressing on a background of intensifying racisms and right-wing populisms in Europe. The purpose of this course is to offer analytical perspectives about these critical tensions and their ripples across the landscape of contemporary French politics. Using readings from a wide variety of fields (among others, anthropology, sociology, literature, philosophy, history, political science, and news media), we will unpack the discourses and lived experiences of race that have shaped the politics of national identity and difference in France since the late 18th century. We will see that the question of 'racial France' has been intimately bound up with the country's history of colonialism and decolonization, with its Republican ideology, with matters of law and government, with questions of citizenship, religion and sexuality, with recent debates on multiculturalism, and with white malaise and resentment stirred by the growth of right-wing extremisms. In the course of our examinations, we will also reflect on the specificity of race and racialization in France, and its differences from racecraft in the United States.

Instructor(s): Francois Richard

Note(s): This version of the course is for the Paris Program, Spring 2021. This course qualifies as a Discovering Anthropology selection for Anthropology Majors.

Equivalent Course(s): CRES 23335, ANTH 33335, FREN 33335, ANTH 23335

FREN 23711. Littérature et photographie. 100 Units.

Ce cours se propose d'interroger les interactions entre littérature et photographie aux XIXe et XXe siècles à travers un parcours à la fois chronologique et thématique, en suivant trois pistes principales: l'influence du regard photographique sur l'écriture romanesque et poétique (Zola, Cendrars, Duras); les réflexions d'écrivains sur la photographie (Baudelaire, Barthes, Guibert); et les relations entre texte et image au sein du livre ou dans les œuvres de plasticiens (Rodenbach, Breton, Ernaux, Calle). Nous étudierons notamment: le rapport entre le visible et le lisible; la théorisation de l'image photographique; les fonctions narratives, illustratives et documentaires de l'image photographique dans la fiction et dans l'autobiographie; et l'histoire de la 'photolittérature' comme genre spécifique. Des lectures théoriques et critiques accompagneront l'analyse des textes.

Instructor(s): A. James Terms Offered: Winter

Prerequisite(s): FREN 20500 or 20503, and one other literature course taught in French.

Note(s): Taught in French.

Equivalent Course(s): FREN 33711

FREN 23821. Écritures françaises, autobiographies étrangères: cours d'introduction. 100 Units.

Ce cours propose une analyse de l'autobiographie et de l'autofiction francophones du 20e siècle. Nous aborderons notamment les manières dont l'identité nationale et l'identité culturelle se construisent dans un contexte de guerre et de construction postcoloniale. À travers une liste de textes et d'auteurs variés, y compris des œuvres d'autofiction et des autobiographies, nous traiterons le rapport entre le public et le privé par rapport à la représentation de la femme. Nous considérerons la place unique et les modes de représentation de la femme dans l'histoire coloniale et dans le contexte familial.

Instructor(s): B. Rice Terms Offered: Spring

Prerequisite(s): FREN 20500 or 20503. This is an introductory-level course.

Note(s): Taught in French.

FREN 24821. Krik...Krak! Contemporary Cross-Atlantic Storytelling: Tradition, Resistance and Empowerment. 100 Units.

Africa and Afro-Caribbean people's oral tradition can be traced back to slavery, when Black slaves turned to storytelling as a means of expression and resistance. With the advent of writing, storytelling flourished, and became associated with entertainment, cultural preservation, and education as well as identity and moral values. Through storytelling, history was conveyed, questions were answered, and lifelong lessons were taught and learned. In this seminar we will explore written storytelling traditions from Africa and Caribbean French-speaking countries through the lens of history, with a focus on contemporary writers. How have writers adapted oral stories to new historical contexts? What are the implications of these adaptations? How has storytelling been streamlined to deal with new challenges, especially political and social status quo? How does storytelling contribute to empowerment and agency? Students will engage in close readings and collaborative discussions to analyze and interpret folktales from Ivory Coast, Haiti, French Guiana, among others.

Instructor(s): M. Kenfack Terms Offered: Winter

Prerequisite(s): FREN 20500 or 20503.

Note(s): Readings in French. Class discussions in French and English.

Equivalent Course(s): LACS 24821

FREN 24888. Jeux littéraires, XXe/XXIe siècles. 100 Units.

Ce cours abordera l'histoire littéraire à travers un prisme particulier: la fréquence des pratiques de jeu dans la production littéraire des XXe et XXIe siècles-des 'cadavres exquises' du surréalisme à l'interactivité des littératures numériques, en passant par les contraintes formelles de l'Ouvroir de littérature potentielle (Oulipo). Nous analyserons le rôle de ces pratiques dans l'esthétique et la sociabilité des avant-gardes, tout en tenant compte des théories du jeu les plus pertinentes (Huizinga, Caillois). En plus des travaux d'analyse littéraire, les étudiants participeront à des exercices de création individuels ou collectifs.

Instructor(s): A. James Terms Offered: Winter

Prerequisite(s): FREN 20500 or 20503, and one other literature course taught in French.

Note(s): Taught in French.

Equivalent Course(s): FREN 34888

FREN 25220. Pour une sociologie de Rabelais. 100 Units.

Nous aborderons l'œuvre de Rabelais à partir d'une lecture contextuelle de Gargantua et Pantagruel (les deux romans que nous lirons dans ce cours). Le but de ce cours est de présenter le contexte social, politique, économique et religieux de la première moitié du XVIe siècle en reliant les thèmes choisis (guerre, genre, utopie, éducation, amitié, économie, etc.), à des problèmes plus modernes. Car Rabelais nous permet aussi d'adresser les grands thèmes de la société française et occidentale contemporaine. Nous étudierons ainsi l'écriture du corps, l'organisation sociale de l'Ancien régime, les premières théories économiques, la découverte du Nouveau Monde et l'exploration de l'altérité. Nous lirons deux romans de Rabelais: Gargantua et Pantagruel.

Instructor(s): P. Desan Terms Offered: Spring

Prerequisite(s): FREN 20300

Note(s): Taught in French.

Equivalent Course(s): FREN 35220, FNDL 25220

FREN 25610. Figures de l'immigré dans la littérature maghrébine d'expression française. 100 Units.

La littérature maghrébine d'expression française s'est très tôt intéressée à la question de l'immigration et à la condition de l'immigré maghrébin en France. Associée notamment à la mobilisation des soldats maghrébins lors des deux guerres mondiales, cette immigration commence dès les années 1920 et connaît son apogée pendant les Trente Glorieuses (1946-1975), une période de croissance pendant laquelle l'économie française fait appel à la main d'œuvre maghrébine. L'évolution et les dynamiques du mouvement migratoire maghrébin ont fait l'objet de plusieurs lectures d'ordre historique, politique, économique et socioculturel. Ce cours s'intéresse à l'expérience de l'immigration telle que représentée par les écrivains maghrébins entre le milieu des années 1950 et les années 2000. En étudiant un corpus constitué de romans (Chraïbi, Ben Jelloun, Boudjedra, Mokaddem), de récits (Sebbar, Cherfi) et de théâtre (Kateb), nous nous intéresserons aux figures de l'immigré et à quelques thèmes récurrents tels que l'expérience de l'exil et du déracinement, la misère sociale et psychologique, les questionnements identitaires, les rapports ambivaux aux pays d'origine et d'accueil ainsi que l'expérience des enfants de l'immigration maghrébine. On analysera en particulier les motifs littéraires, les procédés narratifs et les outils esthétiques mis en œuvre par les auteurs maghrébins pour représenter, éclairer ou dénoncer la condition de l'immigré.

Instructor(s): K. Lyamlahy Terms Offered: Spring

Prerequisite(s): FREN 20500 or 20503.

Note(s): Taught in French. This is an introductory-level course.

FREN 25910. Racine. 100 Units.

Racine's tragedies are often considered the culminating achievement of French classicism. Most famous for his powerful reimaginings of Greek myth (Phèdre, Andromaque), his tragic universe nevertheless ranged considerably wider, from ancient Jewish queens to a contemporary Ottoman harem. We will consider the roots (from Euripides to Corneille) of his theatrical practice as well as its immense influence on future writers (from Voltaire to Proust, Beckett, and Genet).

Instructor(s): L. Norman Terms Offered: Autumn

Prerequisite(s): At least one French literature course, 21700 or higher.

Note(s): Course taught in French; all work in French for students seeking FREN credit; written work may be in English for those taking course for TAPS or FNDL credit.

Equivalent Course(s): FNDL 25910, FREN 35910, TAPS 28476, TAPS 35910

FREN 26003. Introduction à l'autobiographie. 100 Units.

This course traces the history of the autobiographical genre in France from the eighteenth century to the present. The study of key texts will be accompanied by an introduction to some critical perspectives. We will give special emphasis to questions of reference and authenticity, identity and subject formation, and gender and the family. Authors include Rousseau, Chateaubriand, Stendhal, Colette, Perec, and Sarraute.

Instructor(s): A. James Terms Offered: Autumn

Prerequisite(s): FREN 20500 or 20503

Note(s): Taught in French. This is an introductory-level course.

Equivalent Course(s): GNSE 26003

FREN 26821. Mind and Memory in Nineteenth-Century France. 100 Units.

How does memory contribute to defining our identity? What is the role of imagination in the reconstruction of the past? What do literary texts bring up that philosophic and scientific essays cannot add to the discourse on memory? The course will focus on the representation of memory in nineteenth-century French literature through the lens of its connections with the philosophical issues of self and identity. Our analysis of different literary renditions of memory, both in prose and in verse, will start from the end of the eighteenth century with Jean-Jacques Rousseau to arrive to the beginning of the twentieth century, and particularly Marcel Proust's theory on time and memory. The course also concentrates on some theoretical approaches to this topic, ranging from philosophy to psychology to sociology. Throughout the nineteenth century, these fields of knowledge are deeply intertwined and have a revolutionary impact on the perception of time and self, thus paving the way to modernist subjectivism.

Instructor(s): C. Nifosi Terms Offered: Spring

Prerequisite(s): FREN 20500 or 20503.

Note(s): Taught in French.

FREN 28410. Ecrire le « Printemps arabe » au Maghreb : témoignages et perspectives littéraires. 100 Units.

Fin 2010, l'immolation de Mohamed Bouazizi, un vendeur ambulant tunisien, déclenche un soulèvement populaire qui s'étend rapidement au reste du monde arabe, entraînant notamment la chute des régimes en Tunisie et en Egypte et une série de reconfigurations d'ordre politique et socio-économique. Si les pays du Maghreb ont vécu ces soulèvements et leurs conséquences de manières différentes, les écrivains maghrébins ont été particulièrement sensibles à l'élan et à la promesse de changement portés par la rue. Ceci étant, et à l'image de l'appellation « Printemps arabe », à la fois utilisée et refusée, les dynamiques et les résultats des protestations ont fait l'objet de nombreux débats. En s'appuyant sur ce contexte historique, ce cours s'intéresse aux différentes modalités d'écriture des soulèvements au Maghreb à travers divers genres littéraires, du témoignage à la fiction, en passant par l'essai, le théâtre ou encore la poésie. En étudiant un corpus de textes francophones issus de la Tunisie (Meddeb, Filali, Bekri), de l'Algérie (Benfodil, Boudjedra, Tamzali, Sebbar) et du Maroc (Ben Jelloun, Elalamy, Terrab), nous nous intéresserons à la représentation de la révolte populaire dans ses dimensions socio-politique et culturelle mais aussi à des questions clés telles que les formes d'engagement des écrivains, leurs approches et choix esthétiques et le rapport entre la dynamique des soulèvements et la construction narrative ou poétique des textes.

Instructor(s): K. Lyamlahy Terms Offered: Autumn

Prerequisite(s): FREN 20500 or 20503

Note(s): Readings and discussions in French.

Equivalent Course(s): FREN 38410

FREN 29100. Pascal and Simone Weil. 100 Units.

Blaise Pascal in the seventeenth century and Simone Weil in the twentieth formulated a compelling vision of the human condition, torn between greatness and misery. They showed how human imperfection coexists with the noblest callings, how attention struggles with distraction and how individuals can be rescued from their usual reliance on public opinion and customary beliefs. Both thinkers point to the religious dimension of human experience and suggest unorthodox ways of approaching it. We will also study an important text by Gabriel Marcel emphasizing human coexistence and cooperation.

Instructor(s): T. Pavel Terms Offered: Spring

Prerequisite(s): Undergraduates must be in their third or fourth year.

Note(s): Taught in English. For French undergraduates and graduates, there will be a bi-weekly one-hour meeting to study the original French texts.

Equivalent Course(s): CMLT 39101, SCTH 38201, FREN 39100, FNDL 21812, RLST 24910, CMLT 29101

FREN 29322. Europe's Intellectual Transformations, Renaissance through Enlightenment. 100 Units.

This course will consider the foundational transformations of Western thought from the end of the Middle Ages to the threshold of modernity. It will provide an overview of the three self-conscious and interlinked intellectual revolutions which reshaped early modern Europe: the Renaissance revival of antiquity, the 'new philosophy' of the seventeenth century, and the light and dark faces of the Enlightenment. It will treat scholasticism, humanism, the scientific revolution, Bacon, Descartes, Hobbes, Locke, Voltaire, Diderot, and Sade.

Instructor(s): A. Palmer Terms Offered: Autumn

Prerequisite(s): Students taking FREN 29322/39322 must read French texts in French.

Note(s): First-year students and non-History majors welcome.

Equivalent Course(s): SIGN 26036, HIST 29522, HCHR 39522, HIST 39522, KNOW 29522, FREN 39322, KNOW 39522, RLST 22605

FREN 29700. Readings in Special Topics. 100 Units.

This course is a study of directed readings in special topics not covered by courses offered as part of the program in French. Subjects treated and work completed for the course must be chosen in consultation with the instructor no later than the end of the preceding quarter.

Terms Offered: Autumn Spring Winter

Prerequisite(s): FREN 10300 or 20300, depending upon the requirements of the program for which credit is sought

Note(s): Students are required to submit the College Reading and Research Course Form.

FREN 29900. BA Paper Preparation: French. 100 Units.

In consultation with a faculty member, students devote the equivalent of a one-quarter course to the preparation of a BA project.

Terms Offered: Autumn Winter

Prerequisite(s): Consent of undergraduate adviser

Note(s): Students are required to submit the College Reading and Research Course Form. Must be taken for a quality grade.

Counts towards course requirements for French majors seeking honors.

Other Courses of Interest**SOSC 27501-27601-27701. Civilisation Européenne I-II-III.**

Enrollment in Paris study abroad program. This sequence meets the general education requirement in civilization studies.

Cette série de cours est un hybride: à la fois une introduction à l'histoire de la civilisation européenne depuis le Moyen Age et une vue d'ensemble de l'histoire de France durant cette période. Notre objectif sera double: d'une part, intégrer étude de textes et découverte de Paris et de sa région; de l'autre, pratiquer le métier d'historiens de la culture. Pour ce faire, nous analyserons de nombreux documents historiques et oeuvres littéraires, philosophiques, artistiques, et musicales. Nous en discuterons lors de nos trois réunions hebdomadaires. De plus, nous étudierons la civilisation française à travers les villages, monastères, et châteaux de la région parisienne et ailleurs. Classes conducted in French. This sequence meets in Paris.

Italian Courses**Language**

Must be taken for a quality grade. No auditors are permitted.

ITAL 10100-10200-10300. Beginning Elementary Italian I-II-III.

This three-quarter sequence is intended for beginning and beginning/intermediate students in Italian. It provides students with a solid foundation in the basic patterns of spoken and written Italian (e.g., grammar, vocabulary, sociocultural norms) to develop their speaking, listening, writing, and reading skills. Although the three classes constitute a sequence, there is enough review and recycling at every level for students to enter the sequence at whatever level is appropriate for them. Cultural awareness is enhanced through the use of authentic audio-visual materials and literary texts.

ITAL 10100. Beginning Elementary Italian I. 100 Units.

This course is intended for students who have no previous knowledge of Italian and for those who need an in-depth review of the basic patterns of the language.

Terms Offered: Autumn

ITAL 10200. Beginning Elementary Italian II. 100 Units.

This course offers a rapid review of the basic patterns of the language and expands on the material presented in ITAL 10100.

Terms Offered: Winter

Prerequisite(s): ITAL 10100 or placement

ITAL 10300. Beginning Elementary Italian III. 100 Units.

This course expands on the material presented in ITAL 10200, reviewing and elaborating the basic patterns of the language. Successful completion of ITAL 10300 meets the language competence requirement.

Terms Offered: Spring

Prerequisite(s): ITAL 10200 or placement

ITAL 12200. Italian for Speakers of Romance Languages. 100 Units.

This course is intended for speakers of other Romance languages to quickly develop competence in spoken and written Italian. Students learn ways to apply their skills in another Romance language to Italian by concentrating on the similarities and differences between languages.

Terms Offered: Spring Winter

Prerequisite(s): 20100 in another Romance language or consent of instructor

ITAL 20100-20200-20300. Italian Language, History, and Culture I-II-III.

In this intermediate-level sequence, students review and extend their knowledge of all basic patterns (e.g., grammar, vocabulary, sociocultural norms) of the language. They develop their oral and written skills in describing, narrating, and presenting arguments. They are exposed to literary and nonliterary texts and audio-visual materials that provide them with a deeper understanding of the Italian-speaking world.

ITAL 20100. Language, History, and Culture I. 100 Units.

This course is a general review and extension of all basic patterns of the language for intermediate students. Students explore the diversity of the Italian-speaking world through the reading of excerpts from contemporary Italian literature.

Terms Offered: Autumn

Prerequisite(s): ITAL 10300 or placement

ITAL 20200. Language, History, and Culture II. 100 Units.

This course develops the use of persuasive and argumentative language. Our focus is on analyzing and debating current issues pertaining to the Italian-speaking world, and articulating sound personal perspectives on these issues. A variety of written, oral, listening, and reading activities allow students to explore different genres, while reviewing grammatical and lexical items. Cultural awareness is enhanced through close study of contemporary Italian film and literature, as well as through in-class discussion.

Terms Offered: Winter

Prerequisite(s): ITAL 20100 or placement

ITAL 20300. Language, History, and Culture III. 100 Units.

This course completes the study of the common grammatical functions and syntactical structures of the oral and written language and introduces students to description and analysis of a variety of texts through written, oral, listening, and reading activities. Students read a contemporary Italian novel and a selection of Italian poetry.

Terms Offered: Spring

Prerequisite(s): ITAL 20200 or placement

ITAL 20400. Corso di perfezionamento. 100 Units.

This course helps students achieve a very high level of composition and style through the acquisition of numerous writing techniques. Using a variety of literary and nonliterary texts as models, students examine the linguistic structure and organization of several types of written Italian discourse. This course is also intended to help students attain high levels in reading, speaking, and listening through readings and debates on various issues of relevance in contemporary Italian society.

Terms Offered: Autumn

Prerequisite(s): ITAL 20300, placement, or consent of instructor

ITAL 20450. L'Italia di oggi: Contemporary Italian Society and Culture. 100 Units.

This course focuses on some of the key issues in modern Italian society and their expression in cultural production in recent decades. Students will engage in discussion on a variety of topics including women's roles in society, socioeconomic changes and challenges faced by young people in Italy today. Through critical reflection on different types of written and audio-visual texts, including films, poems, short stories, interviews and news clip and articles, students will continue to improve their comprehension, speaking and writing skills in Italian while also increasing their knowledge of Italian society.

Terms Offered: Winter

Prerequisite(s): ITAL 20300 or consent of instructor.

ITAL 21100. Le regioni italiane: lingua, dialetti, tradizioni. 100 Units.

This course expands students' awareness of the diversity of the Italian language and culture. It emphasizes the interrelationship between language and culture, as well as social and historical transformations. We also study the Italian phonological system. Students are exposed to a wide variety of texts, both literary and nonliterary, as well as audio-visual materials that enhance their awareness of regional expressions and Italian dialects. Guest lecturers include native speakers from different Italian regions.

Terms Offered: Winter

Prerequisite(s): ITAL 20300 or consent of instructor

Literature and Culture

All literature and culture classes are conducted in Italian unless otherwise indicated. Students who are taking a course for credit toward the Italian major or minor do all work in Italian. With prior consent of instructor, non-majors may write in English.

ITAL 21820. Italo Calvino: the Dark Side. 100 Units.

An intense reading of Italo Calvino's later works: We will contemplate the orbital debris of Cosmicomics and t zero, and we will follow the labyrinthine threads of The Castle of Crossed Destinies and Invisible Cities. After stumbling upon the suspended multiple beginnings of If on a winter's night a traveler, we will probe the possibilities of literature with the essays collected in Una pietra sopra. Finally, we will encounter Mr. Palomar, who will provide us with a set of instructions on

how to neutralize the self and 'learn how to be dead.' The approach will be both philosophical and historical, focusing on Calvino's ambiguous fascination with science, his critique of the aporias of reason and the 'dementia' of the intellectual, and his engagement with the nuclear threat of total annihilation.

Instructor(s): M. Mariani Terms Offered: Winter

Note(s): Taught in Italian.

Equivalent Course(s): ITAL 31820, FNDL 21820

ITAL 21900. Dante's Divine Comedy 1: Inferno. 100 Units.

This is the first part of a sequence focusing on Dante's masterpiece. We examine Dante's *Inferno* in its cultural (i.e., historical, artistic, philosophical, sociopolitical) context. In particular, we study Dante's poem alongside other crucial Latin and vernacular texts of his age. They include selections from the Bible, Virgil's *Aeneid*, Augustine's *Confessions*, Ovid's *Metamorphoses*, and the stilnovist and Sicilian-Tuscan poets. Political turmoil, economic transformation, changing philosophical and theological paradigms, and social and religious conflict all converge in the making of the *Inferno*.

Instructor(s): J. Steinberg Terms Offered: Winter

Note(s): Taught in English.

Equivalent Course(s): FNDL 27200, MDVL 21900, ITAL 31900

ITAL 22101. Dante's Divine Comedy III: Paradiso. 100 Units.

An in-depth study of the third cantica of Dante's masterpiece, considered the most difficult but in many ways also the most innovative. Read alongside his scientific treatise the *Convivio* and his political manifesto the *Monarchia*.

Instructor(s): J. Steinberg Terms Offered: Spring

Prerequisite(s): Completion of the previous courses in the sequence not required, but students should familiarize themselves with the *Inferno* and the *Purgatorio* before the first day of class.

Note(s): Taught in English.

Equivalent Course(s): ITAL 32101, FNDL 21804, MDVL 22101

ITAL 22900. Vico's New Science. 100 Units.

This course offers a close reading of Giambattista Vico's masterpiece, *New Science* (1744)-a work that sets out to refute 'all opinions hitherto held about the principles of humanity.' Vico, who is acknowledged as the most resolute scourge of any form of rationalism, breathed new life into rhetoric, imagination, poetry, metaphor, history, and philology in order to promote in his readers that originary 'wonder' and 'pathos' which sets human beings on the search for truth. However, Vico argues, the truths that are most available and interesting to us are the ones humanity 'authored' by means of its culture and history-creating activities. For this reason the study of myth and folklore as well as archeology, anthropology, and ethnology must all play a role in the rediscovery of man. The *New Science* builds an 'alternative philosophy' for a new age and reads like a 'novel of formation' recounting the (hi)story of the entire human race and our divine ancestors. In Vico, a prophetic spirit, one recognizes the fulfillment of the Renaissance, the spokesperson of a particular Enlightenment, the precursor of the Kantian revolution, and the forefather of the philosophy of history (Herder, Hegel, and Marx). The *New Science* remained a strong source of inspiration in the twentieth century (Cassirer, Gadamer, Berlin, Joyce, Beckett, etc.) and may prove relevant in disclosing our own responsibilities in postmodernity.

ITAL 23020. The Italian Cinematographic Comedy. 100 Units.

An important genre in Italian cinema is represented by the 'commedia,' in particular the declination 'all'italiana.' It is a very original form of representation of the world invented by Italian cinema. The comedy genre has marked many decades of Italian cinematography: from the plot comedies of the Fifties (going back until the Thirties) with films like 'Due soldi di speranza' (1952) by Renato Castellani, to the grotesque comedy of masks of the Sixties, with authors such as Dino Risi ('Il sorpasso,' 1962, 'I mostri,' 1963), Mario Monicelli ('La Grande Guerra,' 1959) and Pietro Germi ('Divorzio all'italiana,' 1961, 'Sedotta e abbandonata,' 1964), up to the dominance of the grotesque representation of the world, with authors such as Elio Petri ('Indagine su un cittadino al di sopra di ogni sospetto,' 1972). The heritage of the commedia all'italiana can be found in contemporary Italian cinema, as for example with Nanni Moretti. Moretti's cinema in fact summarizes the entire inheritance of Italian cinematographic modernity - starting from neorealism and up to comedy and author cinema - in one of the most effective ways. The Italian cinematographic comedy is also rooted in the Italian literary tradition, in the masks of 'commedia dell'arte,' and generally speaking in the different aspects of grotesque tradition (as analyzed by Bakhtin).

Equivalent Course(s): CMST 23030, ITAL 33020, CMST 33030

ITAL 23321. Writing and Reading Space(s) in the Italian Renaissance. 100 Units.

This course offers an introduction to the study of the Renaissance in Italian literature. A defining movement in the history of European culture and civilization, the Renaissance is best known for its rediscovery of classical antiquity, its achievements in the arts, literature, philosophy, exploration etc., as well as for the rise of a modern sense of self. Italy represents the gateway to the study of the Renaissance as it was the birthplace of many of its key protagonists. In this course, students will become familiar with some of the major male and female representatives of the Italian Renaissance. From Petrarch to Alberti, from Lorenzo de' Medici to Ficino, from Machiavelli to Michelangelo, from Vittoria Colonna to Moderata Fonte, we will situate their writings against the discrete geographical, political, and cultural backdrops that engendered them. Thematically, the class will focus on the issue of space and the relationship between authors and the built environment. We will compare/contrast the physical milieu in which texts were produced (city/countryside, courts etc.), as well as look at how real and imaginary spaces were represented in literary form in order to examine how location both informs and affects

the production of literary works. Lastly, we will engage with manuscripts and early printed editions of these texts during our in-and-off campus visits to the Special Collections at The University of Chicago Library and the Newberry Library.

Instructor(s): E. Baldassarre Terms Offered: Winter

Note(s): Taught in Italian.

Equivalent Course(s): ARCH 23321, ARTH 23321, ENST 23321

ITAL 23510. Barocco e Neobarocco. 100 Units.

This course investigates the literary, cultural, and ideological facets of seventeenth-century Italian baroque and their role in twentieth-century Italian literature. We will analyze Marino's ekphrastic poems *La galeria*, *Adone* and the genre of 'visual poetry' (*poesia figurata*) through a close reading of Guido Casoni's *La passione di Cristo*. To enlighten the baroque's emphasis on verbal/visual contamination, we will read passages from Emanuele Tesauro's *Il cannocchiale aristotelico* and Panegirici, particularly those dedicated to the Holy Shroud of Turin, which the baroque saw as an exceptional hybrid (representation made with Christ's blood). We will read the first chapter of Marino's *Dicerie sacre* (*La Pittura*. *Diceria prima sopra la Santa Sindone*), selections from Basile's *Lo cunto de li cunti*, and Torquato Accetto's *Della dissimulazione onesta*. From the modern Neo-baroque, we will read texts that reflect the concepts and rhetorical strategies we found in the seventeenth-century texts. We will analyze crucial novels such as Gadda's *La cognizione del dolore*, Ortese's *Il cardillo addolorato*, Manganelli's *Dall'inferno*, *Discorso dell'ombra e dello stemma*, and *Centuria*. We will focus on Sanguineti's *Laborintus* and Zanzotto's *La beltà*, which is a key text of Italian poetic canon. During the course we will discuss essential secondary literature such as Benjamin's *The Origins of German Tragic Drama*, Calabrese's *Il neobarocco*, and Harrison's *Reflections on Baroque*.

Instructor(s): A. Maggi Terms Offered: Winter

Note(s): Taught in Italian.

Equivalent Course(s): ITAL 33510

ITAL 24920. Primo Levi. 100 Units.

Witness, novelist, essayist, translator, linguist, chemist, and even entomologist. Primo Levi is a polyhedral author, and this course revisits his work in all its facets. We will privilege the most hybrid of his texts: *The Search for Roots*, an anthology that collects the author's favorite readings--a book assembled through the books of the others, but which represents Levi's most authentic portrait. By using this work as an entry point into Levi's universe, we will later explore his other texts, addressing issues such as the unsettling relationship between survival and testimony, the 'sinful' choice of fiction, the oblique path towards autobiography, and the paradoxes of witnessing by proxy.

Instructor(s): M. Mariani Terms Offered: Autumn

Prerequisite(s): Open to advanced undergrads with consent of instructor.

Note(s): Taught in Italian.

Equivalent Course(s): JWSC 24920, ITAL 34920, FNLD 24920

ITAL 25210. Brevitas. 100 Units.

Reflecting on his preference for short literary forms, Italo Calvino identifies *brevitas* as 'the true vocation of Italian literature, which is poor in novelists but rich in poets, who even when they write in prose give their best in texts where the highest degree of invention and thought is contained in a few pages.' Taking as a starting point Calvino's statement, this course explores the short and fragmentary forms of Italian literature. Not only short stories, but also aphorisms, epigrams, lyrical fragments, cases, and apoloques. Some of our guiding questions will be: What are the resources of expressive density? Is a fragment the negation of a superior unity or the compendium of an entire universe? How does silence shape *brevitas*? The moments of close reading and theoretical reflection will be alternated with creative writing activities, in which students will have the opportunity to engage more closely and actively with the encountered texts. This course is especially designed to help students improve their written Italian and literary interpretive skills.

Instructor(s): M. Mariani Terms Offered: Autumn

Note(s): Taught in Italian.

ITAL 26002. Philosophical Petrarchism. 100 Units.

This course is a close reading of Petrarch's Latin corpus. Readings include the Coronation Oration, *The Secret*, and selections from *Remedies for Fortune Fair and Foul*, *On Illustrious Men*, *On Religious Leisure*, and *The Life of Solitude*. Special attention is devoted to Petrarch's letter collections (*Letters on Familiar Matters*, *Letters of Old Age*, *Book without a Name*, etc.) and his invectives. The aim of the course is to familiarize the student with the new and complete Petrarch that emerged in 2004 on the occasion of the 700th anniversary of his birth. Discussion will focus on Petrarch's self-consciousness as the 'father of humanism,' his relationship to Dante, autobiography, dialogical inquiry, anti-scholasticism, patriotism, and Petrarch's 'civic' reception in the Quattrocento as well as on a comparative evaluation of the nineteenth-century Petrarchs of Alfred Mézières, Georg Voigt, and Francesco De Sanctis.

Instructor(s): R. Rubini Terms Offered: Autumn

Note(s): Taught in English.

Equivalent Course(s): ITAL 36002, FNLD 25802, MDVL 26002

ITAL 26210. The World in Ruins. 100 Units.

In this course we will not limit ourselves to the traditional view of 'ruins' as remains of ancient or modern buildings. Our course will involve a variety of different artifacts (literary texts, paintings, films, philosophical tracts, etc.) from different cultural moments, in order to attain a clearer understanding of our notion of ruins, decay, and decadence. We will first examine 'ruins' in classical cultures, focusing on Plutarch's short treatise *On the Obsolescence of Oracles*. We will investigate the 'discovery' of ruins in the Renaissance through Petrarch's *Letters on Familiar Matters*, his *canzoniere*, and his epic poem *Africa*, Francesco Colonna's verbal/visual *Hypnerotomachia Poliphili* (*The Strife of Love in a Dream*), and Joaquim De Bellay's *The Antiquities of Rome*. 17th-century approach to ruins and decay will focus on Benjamin's

texts (Origins of the German Tragic Drama among others), Agamben's response to Benjamin in *Man Without Content*, and European poetry and paintings. After an analysis of Piranesi's famous etchings *Vedute di Roma*, we will approach Romanticism through Leopardi's and Hölderlin's works. There will be a screening of Pasolini's *The Walls of Sana'a* (1970), which will open our discussion of the concepts of decay and annihilation in modern times. We will read Curzio Malaparte's novel *The Skin* and W. G. Sebald's *On the Natural History of Destruction*, César Aira's *Episode in the Life of a Landscape Painter*, and the recent *Anthropocene: The Human Epoch*.

Instructor(s): A. Maggi Terms Offered: Spring

Note(s): Taught in English.

Equivalent Course(s): CMLT 26211, CMLT 42311, ITAL 36210

ITAL 26500. Renaissance Demonology. 100 Units.

In this course we analyze the complex concept of demonology according to early modern European culture from a theological, historical, philosophical, and literary point of view. The term 'demon' in the Renaissance encompasses a vast variety of meanings. Demons are hybrids. They are both the Christian devils, but also synonyms for classical deities, and Neo-platonic spiritual beings. As far as Christian theology is concerned, we read selections from Augustine's and Thomas Aquinas's treatises, some complex exorcisms written in Italy, and a recent translation of the infamous 'Malleus maleficarum,' the most important treatise on witch-hunt. We pay close attention to the historical evolution of the so-called witch-craze in Europe through a selection of the best secondary literature on this subject, with special emphasis on Michel de Certeau's 'The Possession at Loudun.' We also study how major Italian and Spanish women mystics, such as Maria Maddalena de' Pazzi and Teresa of Avila, approach the issue of demonic temptation and possession. As far as Renaissance Neoplatonic philosophy is concerned, we read selections from Marsilio Ficino's 'Platonic Theology' and Girolamo Cardano's mesmerizing autobiography. We also investigate the connection between demonology and melancholy through a close reading of the initial section of Robert Burton's 'Anatomy of Melancholy' and Cervantes's short story 'The Glass Graduate' ('El licenciado Vidriera').

ITAL 27020. Modern Italian Cinema: Ways of Representation and Forms of Life. 100 Units.

The course aims to focus on the bond that exists in the Italian tradition between ways of cinematographic representation and forms of life. Italian cinema, especially from the post-war period on, has in fact constructed a unique link between cinematographic images and the practices, values, customs and lifestyles of an entire country. At a time of profound historical crisis, the Italian post-Second World War cinema succeeded to revive Italy and Italian cinema, also constituting the development of a properly cinematographic 'romanesque form,' which the critic André Bazin thought to have profound analogies with the American modern novel. It is only with cinematographic modernity that cinema reaches the complexity and richness of its forms, through an encounter with a reality that is no longer filtered by the codification of classical generic forms. Authors such as De Sica, Rossellini, Fellini, Pietrangeli, Ferreri, Antonioni and Pasolini will be studied.

Instructor(s): R. De Gaetano Terms Offered: Spring

Note(s): Taught in English.

Equivalent Course(s): CMST 23002

ITAL 27500. Women and the Mafia in Contemporary Italian Cinema. 100 Units.

This course will examine how gender dynamics within mafia contexts have been represented in a selection of Italian films. Students will engage in cinematic analysis by drawing from sociological and psychological studies on female roles in relation to organized crime. Both these fields, sociology and psychology, have underscored the important part that women play in relation to the mafia, notwithstanding the rigid patriarchal structure that allows only male affiliation. Although focusing primarily on Sicilian mafia, this course will include information on other types of Italian mafia, namely Camorra, 'Ndrangheta and Sacra Corona Unita. Vocabulary in Italian to identify formal elements of the films will be provided throughout the course.

Instructor(s): V. Vegna Terms Offered: Spring

Prerequisite(s): ITAL 20300 or consent of instructor.

Note(s): Taught in Italian.

Equivalent Course(s): GNSE 27508

ITAL 28818. Literature and Technology: Machines, Humans, and Posthumans from Frankenstein to the Futurists. 100 Units.

Everywhere we remain unfree and chained to technology, whether we passionately affirm or deny it,' wrote Heidegger. In the year 2020, the year of COVID-19 and mass physical lockdown, this statement is more valid than ever. Keeping current events in mind, in this course we will pose anew the question concerning technology and go back to the First and Second Industrial Revolutions when humans first came into intense contact with machines and restructured life and literature around them. We will trace the ecological, economical, and emotional footprints of various machines and technological devices (automata, trains, phonographs, cameras) in major European literary works from Shelley's *Frankenstein* (1818), Zola's *La bête humaine* (1890) to Luigi Pirandello's *The Notebooks of Serafino Gubbio, Cinematograph Operator* (1925), while inquiring into the nature of technology and what it means to be human through key philosophical texts from Plato to N. Katherine Hayles.

Instructor(s): Ana Ilievska Terms Offered: Autumn

Equivalent Course(s): CMLT 21200, PORT 28818, MAAD 25277, ENGL 21277

ITAL 29700. Readings in Special Topics. 100 Units.

This course provides directed readings in special topics not covered as part of the program in Italian. Subjects treated and work to be completed for the course must be chosen in consultation with the instructor no later than the end of the preceding quarter.

Terms Offered: Autumn Spring Winter

Prerequisite(s): ITAL 10300 or 20300, depending upon the requirements of the program for which credit is sought

Note(s): Students are required to submit the College Reading and Research Course Form.

ITAL 29900. BA Paper Preparation: Italian. 100 Units.

In consultation with a faculty member, students must devote the equivalent of a one-quarter course to the preparation of a BA project.

Terms Offered: Autumn Winter

Prerequisite(s): Consent of undergraduate adviser

Note(s): Students are required to submit the College Reading and Research Course Form. Students seeking honors may count this course towards their course requirements. Must be taken for a quality grade.

Portuguese/Luso-Brazilian Courses**Language**

Must be taken for a quality grade. No auditors are permitted.

PORT 10100-10200-10300. Beginning Elementary Portuguese I-II-III.

This sequence is intended for beginning and beginning/intermediate students in Portuguese. It provides students with a solid foundation in the basic patterns of spoken and written Portuguese (e.g., grammar, vocabulary, phonetics, sociocultural norms) to develop their speaking, listening, writing, and reading skills. Although the three courses constitute a sequence, there is enough review and recycling at every level for students to enter the sequence whenever it is appropriate for them.

PORT 10100. Beginning Elementary Portuguese I. 100 Units.

This sequence is intended for beginning and beginning/intermediate students in Portuguese. It provides students with a solid foundation in the basic patterns of spoken and written Portuguese (e.g., grammar, vocabulary, phonetics, sociocultural norms) to develop their speaking, listening, writing, and reading skills. Although the three courses constitute a sequence, there is enough review and recycling at every level for students to enter the sequence whenever it is appropriate for them. This course is intended for students who have no previous knowledge of Portuguese and for students who need an in-depth review of the basic patterns of the language.

Terms Offered: Autumn

PORT 10200. Beginning Elementary Portuguese II. 100 Units.

This course is a rapid review of the basic patterns of the language and expands on the material presented in PORT 10100.

Terms Offered: Winter

Prerequisite(s): PORT 10100 or placement

PORT 10300. Beginning Elementary Portuguese III. 100 Units.

This course expands on the material presented in PORT 10200, reviewing and elaborating the basic patterns of the language.

Terms Offered: Spring

Prerequisite(s): PORT 10200 or placement

Note(s): Successful completion of PORT 10300 fulfills the competency requirement

PORT 12200. Portuguese For Spanish Speakers. 100 Units.

This course is intended for speakers of Spanish to develop competence quickly in spoken and written Portuguese. In this intermediate-level course, students learn ways to apply their Spanish language skills to mastering Portuguese by concentrating on the similarities and differences between the two languages.

Terms Offered: Autumn Spring

Prerequisite(s): SPAN 10300 or consent of instructor

Equivalent Course(s): LACS 12200

PORT 14100. Portuguese for Speakers of Romance Languages. 100 Units.

This course helps students quickly gain skills in spoken and written Portuguese by building on their prior working knowledge of another Romance language (Spanish, French, Catalan or Italian). By relying on the many similarities with other Romance languages, students can focus on mastering the different aspects of Portuguese, allowing them to develop their abilities for further study. This class covers content from PORT 10100 and 10200.

Terms Offered: Winter

Prerequisite(s): 20100 in another Romance language or consent of instructor.

Equivalent Course(s): LACS 14100

PORT 14500. Portuguese for the Professions: Intensive Business Portuguese. 100 Units.

This is an accelerated language course that covers vocabulary and grammar for students interested in working in a business environment where Portuguese is spoken. The focus of this highly interactive class is to develop basic communication skills and cultural awareness through formal classes, readings, discussions, and writings.

Terms Offered: Spring

Prerequisite(s): PORT 10200, SPAN 20100, or consent of instructor.

PORT 20100-20200. Intermediate Portuguese; Advanced Portuguese.

PORT 20100. Intermediate Portuguese. 100 Units.

This sequence is intended for beginning and beginning/intermediate students in Portuguese. It provides students with a solid foundation in the basic patterns of spoken and written Portuguese (e.g., grammar, vocabulary, phonetics, sociocultural norms) to develop their speaking, listening, writing, and reading skills. Although the three courses constitute a sequence, there is enough review and recycling at every level for students to enter the sequence whenever it is appropriate for them. This course is a general review and extension of all basic patterns of the language for intermediate students. Students explore selected aspects of Luso-Brazilian tradition through a variety of texts.

Terms Offered: Autumn

Prerequisite(s): PORT 10300, 12200 or placement

PORT 20200. Advanced Portuguese. 100 Units.

This course helps students develop their descriptive and narrative skills through exposure to written and oral documents (e.g., literary texts, interviews). Students are taught the grammatical and lexical tools necessary to understand these documents, as well as to produce their own analysis and commentaries.

Prerequisite(s): PORT 20100 or placement

Note(s): Will not be offered in 2019-20

PORT 20500. Cultura do Mundo Lusófono. 100 Units.

In this course students will explore the culture of the Lusophone world through the study of a wide variety of contemporary literary and journalistic texts from Brazil, Portugal, Angola and Mozambique, and unscripted recordings. This advanced language course targets the development of writing skills and oral proficiency in Portuguese. Students will review problematic grammatical structures, write a number of essays, and participate in multiple class debates, using authentic readings and listening segments as linguistic models on which to base their own production.

Terms Offered: Winter

Prerequisite(s): PORT 20100 or consent of the instructor.

Equivalent Course(s): LACS 20500

PORT 20600. Composição e Conversação Avançada. 100 Units.

The objective of this course is to help students acquire advanced grammatical knowledge of the Portuguese language through exposure to cultural and literary content with a focus on Brazil. Students develop skills to continue perfecting their oral and written proficiency and comprehension of authentic literary texts and recordings, while also being exposed to relevant sociocultural and political contemporary topics. Students read, analyze, and discuss authentic texts by established writers from the lusophone world; they watch and discuss videos of interviews with writers and other prominent figures to help them acquire the linguistic skills required in academic discourse. Through exposure to written and spoken authentic materials, students learn the grammatical and lexical tools necessary to understand such materials as well as produce their own written analysis, response, and commentary. In addition, they acquire knowledge on major Brazilian authors and works.

Terms Offered: Winter

Prerequisite(s): PORT 20100 or consent of instructor.

Equivalent Course(s): LACS 20600

PORT 21500. Curso de Aperfeiçoamento. 100 Units.

This course helps students develop their skills in understanding, summarizing, and producing written and spoken arguments in Portuguese through readings and debates on various issues of relevance in contemporary Luso-Brazilian societies.

Special consideration is given to the major differences between continental and Brazilian Portuguese. In addition to reading, analyzing, and commenting on advanced texts (both literary and nonliterary), students practice and extend their writing skills in a series of compositions.

Terms Offered: Spring

Prerequisite(s): PORT 20200, PORT 20600 or consent of instructor

Literature and Culture

PORT 22350. Speaking Truth to Power in Medieval Iberia. 100 Units.

In the multilingual and multireligious environment of the Iberian middle ages, poetry can express many things. And while literary history has granted a prestigious space to some of these things, such as love or spirituality, it has consistently neglected others, such as socio-political satire or vulgarity. This class will be paying attention to that other less talked-about poetry that gets into the political struggles of the period, that talks in profanities about profane things. In other words, the poetry that does not speak to the eternity of existence, but that gets its hands dirty with earthly matters. The poetry that savagely mocks and cuts through social conventions in a way that makes seem contemporary Twitter trolls benevolent in comparison. For this class we will be reading authors who wrote in Galician-Portuguese such as Joao Soares de Paiva or King Alfonso X, authors who wrote in Catalan such as Guillem de Bergueda or Ramon Vidal de Besalu, and authors who wrote in Spanish such as Juan Ruiz or Juan de Mena. Translations to Spanish will be provided or worked through class discussion.

Instructor(s): N. Blanco Mourelle Terms Offered: Autumn

Equivalent Course(s): SPAN 32350, CATA 32350, CATA 22350, SPAN 22350, MDVL 22350, PORT 32350

PORT 26810. From Cannibalism to Tropicalism: Brazilian Avant-Gard. 100 Units.

Avant-garde movements, tendencies, and artists have been present in Brazil throughout the twentieth century. From the paradigmatic Week of Modern Art in 1922 to the Tropicalism of the 1960s and 1970s, this course revisits works of fiction,

poetry, essay, visual arts, film, and music that have shaped the Brazilian avant-gardes. We will focus on the Modernist Movement, Concretism, Neoconcretism, New Cinema, Tropicalism, and regional avant-garde movements produced across the country.

SPAN 10123. Summer Intensive Elementary Spanish. 300 Units.

This is an eight-week course which helps beginning students build a solid foundation in the basic patterns of written and spoken Spanish and their use in everyday communication. It is specifically designed to help students obtain functional competency in speaking, reading, writing and listening in Spanish. The curriculum in Summer Elementary Spanish is the equivalent of SPAN 10100-10200-10300 during the regular academic year, and successful completion of the fulfills the language competency requirement for UChicago students in the College.

Terms Offered: Summer. Summer 2020 dates: June 22 - August 14

Note(s): Successfully completing this course will fulfill the College language competency requirement.

SPAN 10100-10200-10300. Beginning Elementary Spanish I-II-III.

This three-quarter sequence is intended for beginning and beginning/intermediate students in Spanish. It provides students with a solid foundation in the basic patterns of spoken and written Spanish (e.g., grammar, vocabulary, sociocultural norms) to develop their speaking, listening, writing, and reading skills to the level required to demonstrate competency on the Spanish examination. Although the three classes constitute a sequence leading to the Spanish competency examination, there is enough review and recycling at every level for students to enter the sequence whenever it is appropriate for them.

SPAN 10100. Beginning Elementary Spanish I. 100 Units.

SPAN 10100 is the initial segment of the first-year course sequence in Spanish language. It provides students with a solid foundation in the basic patterns of spoken and written Spanish (e.g., grammar, vocabulary, sociolinguistic norms) and emphasizes all four skills: speaking, listening, writing, and reading. This course is intended for students with no previous exposure to Spanish.

Terms Offered: Autumn Winter

SPAN 10200. Beginning Elementary Spanish II. 100 Units.

SPAN 10200 is the second segment of the first-year course sequence in Spanish language. It provides students with a solid foundation in the basic patterns of spoken and written Spanish (e.g., grammar, vocabulary, sociolinguistic norms) and emphasizes all four skills: speaking, listening, writing, and reading.

Terms Offered: Autumn Spring Winter

Prerequisite(s): SPAN 10100 or placement

SPAN 10300. Beginning Elementary Spanish III. 100 Units.

SPAN 10300 is the third and final segment of the first-year course sequence in Spanish language. It provides students with a solid foundation in the basic patterns of spoken and written Spanish (e.g., grammar, vocabulary, sociolinguistic norms) and emphasizes all four skills: speaking, listening, writing, and reading.

Terms Offered: Autumn Spring Winter

Prerequisite(s): SPAN 10200 or placement

SPAN 12001-12002-12003. Intensive Spanish I-II-III.

Intensive Spanish I-II-III

SPAN 12001. Intensive Spanish I. 200 Units.

This intensive, three-quarter sequence brings students with no prior background in Spanish to advanced-low levels in all four skills-reading, writing, speaking, and listening-thus preparing students to take third-year level courses in the language. Learners who are starting Spanish late in their College careers or who wish to move forward swiftly will gain skills corresponding to two full years of study by completing the entire sequence. Although the three classes constitute a sequence, students may enter the sequence whenever it is appropriate for them based on prior courses or placement exam results. Students may also exit the sequence after any given class and continue in the appropriate course in the Elementary or Intermediate Spanish track. NOTE: Each course is 200 units and corresponds in workload to taking two courses. Spanish 12001 is the equivalent of Spanish 101 and Spanish 102.

Terms Offered: Autumn

SPAN 12002. Intensive Spanish II. 200 Units.

This intensive, three-quarter sequence brings students with no prior background in Spanish to advanced-low levels in all four skills-reading, writing, speaking, and listening-thus preparing students to take third-year level courses in the language. Learners who are starting Spanish late in their College careers or who wish to move forward swiftly will gain skills corresponding to two full years of study by completing the entire sequence. Although the three classes constitute a sequence, students may enter the sequence whenever it is appropriate for them based on prior courses or placement exam results. Students may also exit the sequence after any given class and continue in the appropriate course in the Elementary or Intermediate Spanish track. NOTE: Each course is 200 units and corresponds in workload to taking two courses. Spanish 12002 is the equivalent of Spanish 103 and Spanish 201

Terms Offered: Winter

SPAN 12003. Intensive Spanish III. 200 Units.

This intensive, three-quarter sequence brings students with no prior background in Spanish to advanced-low levels in all four skills-reading, writing, speaking, and listening-thus preparing students to take third-year level courses in the language. Learners who are starting Spanish late in their College careers or who wish to move forward swiftly will gain skills corresponding to two full years of study by completing the entire sequence. Although the three classes constitute a sequence, students may enter the sequence whenever it is appropriate for them based on prior courses or placement exam results. Students may also exit the sequence after any given class and continue in the appropriate course in the Elementary or Intermediate Spanish track. NOTE: Each course is 200 units and corresponds in workload to taking two courses. Spanish 12003 is the equivalent of Spanish 20200 and Spanish 20300

Terms Offered: Spring

SPAN 20100-20200-20300. Spanish Language, History, and Culture I-II-III.

In this intermediate-level sequence, students review but most of all extend their knowledge of all basic patterns (e.g., grammar, vocabulary, sociocultural norms) of the language. They develop their oral and written skills in describing, narrating, and presenting arguments. They are exposed to texts and audio-visual materials that provide them with a deeper understanding of the Spanish-speaking world.

SPAN 20100. Language, History, and Culture I. 100 Units.

This course is a general extension of all basic patterns of the language for intermediate students. Students explore the diversity of the Spanish-speaking world through a variety of texts and audio-visual materials.

Terms Offered: Autumn Spring Winter

Prerequisite(s): SPAN 10300 or placement

SPAN 20200. Language, History, and Culture II. 100 Units.

This course focuses on both objective and subjective description of people, places, and life processes. A variety of written, oral, listening, and reading activities allow students to explore different genres while reviewing grammatical and lexical items pertaining to each individual theme in context. Cultural awareness is enhanced through exposure to an array of target-language media, as well as through in-class discussion.

Terms Offered: Autumn Spring Winter

Prerequisite(s): SPAN 20100 or placement

SPAN 20300. Language, History, and Culture III. 100 Units.

This course develops the use of persuasive and argumentative language. Our focus is on analyzing and debating current issues pertaining to the Spanish-speaking world, and articulating sound personal perspectives on these issues. A variety of written, oral, listening, and reading activities allow students to explore an ample selection of topics, while reviewing grammatical and lexical items pertaining to each individual theme in context. Cultural awareness is enhanced through exposure to an array of target-language media as well as through in-class oral presentations and discussions.

Terms Offered: Autumn Spring Winter

Prerequisite(s): SPAN 20200 or placement

SPAN 20102-20302. Language, History, and Culture for Heritage Speakers I-II-III.**SPAN 20102. Language, History, and Culture for Heritage Speakers I. 100 Units.**

The goal of this first course in a two-course intermediate sequence is to help students who are heritage learners of Spanish to improve their oral, writing and reading skills and to formalize their linguistic ability. Basic grammatical patterns (e.g. grammar, vocabulary, socio-cultural norms) and orthographic conventions are reviewed and practiced in a variety of short papers, oral presentations and class discussions. Awareness of contemporary Hispanic societies and their historical roots will be enhanced through exposure to a variety of literary and non-literary texts and authentic audio-visual materials.

Terms Offered: Spring Winter

Prerequisite(s): SPAN 10300 or placement. Open only to heritage speakers or with consent of instructor.

SPAN 20302. Language, History, and Culture for Heritage Speakers II/III. 100 Units.

The goal of this second course in a two-course intermediate sequence is to teach heritage learners of Spanish how to use formal written and spoken language to debate and to formulate cogent arguments. Students are expected to analyze particular topics related to the Spanish-speaking world and to participate within an academic forum. Challenging grammatical structures and orthographic conventions are reviewed and practiced in a variety of writing exercises and through class discussions. Students are exposed to a wide range of literary and non-literary texts and audio-visual materials that exemplify the different cultures and regional varieties within the Spanish-speaking world.

Terms Offered: Autumn Spring

Prerequisite(s): SPAN 20102 or placement. Open only to heritage speakers or with consent of instructor.

SPAN 20304. Spanish for the Professions. 100 Units.

This course is designed as an alternative to SPAN 20300 for students aspiring to use Spanish in a professional context. In order for both courses to serve as equal preparation for the following course in the sequence (SPAN 20400), the textbook used and the grammatical topics covered in SPAN 20300 and 20304 are identical, while some readings, listenings, and vocabulary will differ. Students will expand their lexical and cultural knowledge of their chosen professional area through self-selected readings and a presentation, and will hone linguistic skills relevant to any workplace environment.

Terms Offered: Winter

Prerequisite(s): SPAN 20200 or consent of instructor

SPAN 20305. Legal Spanish: Public interest law in the US. 100 Units.

This course brings students to high-intermediate levels in reading, speaking, and listening for the practice of public interest law in the US. Learners will build proficiency around relevant topic areas so that they can read, listen, explain, present and solicit information related to rights, procedures, legal actions, etc. Pre-requisite: one year of university-level Spanish or equivalent.

Terms Offered: Spring

Prerequisite(s): SPAN 20200

SPAN 20310. Chicago Habla Español. 100 Units.

Chicago is known to have multiple, diverse Spanish-speaking communities. In this course, students will use these communities as their classroom to analyze and debate current issues confronting the LatinX experience in the United States and Midwest. In parallel, class instruction will reinforce and expand students' grammatical and lexical proficiency in a manner that will allow students to engage in real-life activities involving speaking, reading, listening and writing skills. This intermediate-high language course targets the development of writing skills and oral proficiency in Spanish and is designed as an alternative to SPAN 20300. Students will review problematic grammatical structures, write a number of essays, and participate in multiple class conversations using authentic readings and listening segments as linguistic models on which to base their own production. At the end of class, students are expected to produce an individual project.

Terms Offered: Spring

Prerequisite(s): SPAN 20200

Equivalent Course(s): LACS 20310

SPAN 20400-20500. Composición y conversación avanzada I-II.

Third-year language sequence

SPAN 20400. Composición y conversación avanzada I. 100 Units.

This course targets the development of advanced writing skills and oral proficiency in Spanish through the study of a wide variety of contemporary journalistic texts and unscripted recordings. Students will review problematic grammatical structures, write a number of essays, and participate in multiple class debates, using the authentic readings and listening segments as linguistic models on which to base their own production.

Terms Offered: Autumn Spring Winter

Prerequisite(s): SPAN 20300 or consent of instructor

SPAN 20500. Composición y conversación avanzada II. 100 Units.

This course, the second segment of two in the third-year language sequence, continues the development of advanced writing skills and oral proficiency in Spanish through the study of a wide variety of contemporary journalistic texts and unscripted recordings. Students will review problematic grammatical structures, write a number of essays, and participate in multiple class debates, using the authentic readings and listening segments as linguistic models on which to base their own production.

Terms Offered: Spring Winter

Prerequisite(s): SPAN 20400 or consent of instructor

SPAN 20402. Curso de redacción académica para hablantes nativos. 100 Units.

This advanced language course helps students achieve mastery of composition and style through the acquisition of numerous writing techniques. A wide variety of literary and non-literary texts are read. Through writing a number of essays and participating in class discussions, students are guided in the examination of linguistic structures and organization of several types of written Spanish discourse. This course also enhances awareness of the cultural diversity within the contemporary Spanish-speaking world and its historical roots.

Terms Offered: Autumn

Prerequisite(s): SPAN 20302 or placement. Open only to native and heritage speakers with consent of instructor.

SPAN 20602. Discurso académico para hablantes nativos. 100 Units.

This seminar/practicum focuses on developing vocabulary and discourse styles for academic verbal communication. This goal is achieved through exposure to taped formal and informal interviews and public debate in the media. Most important, however, is active class participation. Through a number of class presentations, students put into practice a variety of discourse styles (e.g., debates, lectures, seminars, interviews).

Terms Offered: Spring Winter

Prerequisite(s): SPAN 20302 or placement. Open only to native and heritage speakers with consent of instructor.

SPAN 21008. Introduction to Latinx Literature. 100 Units.

From the activist literature of the Chicano Civil Rights Movement to contemporary fiction and poetry, this course explores the forms, aesthetics, and political engagements of U.S. Latinx literature in the 20th and 21st centuries. Theoretical readings are drawn from Chicanx Studies, Latinx Studies, American Studies, Latin American Studies, Hemispheric Studies, Indigenous Studies, and Postcolonial Studies, as we explore Latinx literature in the context of current debates about globalization, neoliberalism, and U.S. foreign policy; Latinx literature's response to technological and socio-political changes and its engagement with race, gender, sexuality, class, and labor; and its dialogues with indigenous, Latin American, North American, and European literatures. (Poetry, 1830-1940, Theory)

Instructor(s): Rachel Galvin Terms Offered: Winter

Equivalent Course(s): CMLT 11008, LACS 11008, ENGL 11008

SPAN 21150. El español en los Estados Unidos. 100 Units.

This sociolinguistic course expands understanding of both the historical and the contemporary development of Spanish in parts of the United States, and awareness of the great sociocultural diversity within the Spanish-speaking communities in the United States and its impact on the Spanish language. This course emphasizes the interrelationship between language and culture as well as ethno-historical transformations within the different regions of the United States. Special consideration is given to identifying lexical variations and regional expressions exemplifying diverse sociocultural aspects of the Spanish language, and to recognizing phonological differences between dialects. We also examine the impact of English on dialectal aspects. The course includes sociolinguistic texts, audio-visual materials, and visits by native speakers of a variety of Spanish-speaking regions in the United States.

Instructor(s): L. van den Hout Terms Offered: Spring Winter

Prerequisite(s): SPAN 20300

Equivalent Course(s): LACS 21150

SPAN 23333. Reading Spanish for Research Purposes. 100 Units.

This intensive course is designed to take students with a basic knowledge of Spanish to the level of reading proficiency needed for research. To that end, students will work on grammar, vocabulary, and reading strategies. Students will read a range of scholarly texts, a number of which will be directly drawn from their respective areas of research.

Terms Offered: Spring

Prerequisite(s): One quarter of French or equivalent, placement into SPAN 10200, or an intermediate level of another Romance or classical language.

Equivalent Course(s): SPAN 33333

Literature and Culture

All literature and culture classes are conducted in Spanish unless otherwise indicated. Students who are majoring in Spanish do all work in Spanish. With prior consent of instructor, non-majors may write in English.

SPAN 21008. Introduction to Latinx Literature. 100 Units.

From the activist literature of the Chicano Civil Rights Movement to contemporary fiction and poetry, this course explores the forms, aesthetics, and political engagements of U.S. Latinx literature in the 20th and 21st centuries. Theoretical readings are drawn from Chicanx Studies, Latinx Studies, American Studies, Latin American Studies, Hemispheric Studies, Indigenous Studies, and Postcolonial Studies, as we explore Latinx literature in the context of current debates about globalization, neoliberalism, and U.S. foreign policy; Latinx literature's response to technological and socio-political changes and its engagement with race, gender, sexuality, class, and labor; and its dialogues with indigenous, Latin American, North American, and European literatures. (Poetry, 1830-1940, Theory)

Instructor(s): Rachel Galvin Terms Offered: Winter

Equivalent Course(s): CMLT 11008, LACS 11008, ENGL 11008

SPAN 21100. Las regiones del español. 100 Units.

This sociolinguistic course expands understanding of the historical development of Spanish and awareness of the great sociocultural diversity within the Spanish-speaking world and its impact on the Spanish language. We emphasize the interrelationship between language and culture as well as ethno-historical transformations within the different regions of the Hispanic world. Special consideration is given to identifying lexical variations and regional expressions exemplifying diverse sociocultural aspects of the Spanish language, and to recognizing phonological differences between dialects. We also examine the impact of indigenous cultures on dialectal aspects. The course includes literary and nonliterary texts, audio-visual materials, and visits by native speakers of a variety of Spanish-speaking regions.

Terms Offered: Spring Winter

Prerequisite(s): SPAN 20300 or placement

Equivalent Course(s): LACS 21100

SPAN 21401. Languages in the Iberian Peninsula: Multilingualism and Language Ideologies. 100 Units.

The course will lead students to explore the situation of the main languages in the Iberian Peninsula from a sociolinguistic perspective (in the wide sense of the word). It will present language diversity in the Iberian Peninsula and lead students to discuss and read about language contact, language planning (including both status and corpus planning), language policy, ideologies and linguistic representations regarding Spanish, Portuguese, Galician, Catalan, Occitan, Basque, Aragonese and Asturian.

Terms Offered: Spring

Note(s): Taught in English.

Equivalent Course(s): CATA 21400

SPAN 21500. Introducción al análisis literario. 100 Units.

Through a variety of representative works of Hispanic literature, this course focuses on the discussion and practical application of different approaches to the critical reading of literary texts. We also study basic concepts and problems of literary theory, as well as strategies for research and academic writing in Spanish.

Instructor(s): M. Santana Terms Offered: Spring

Prerequisite(s): SPAN 20300 or consent of instructor.

Note(s): Taught in Spanish.

SPAN 21610. Catalan Culture and Society: Art, Music, and Cinema. 100 Units.

This course provides an interdisciplinary survey of contemporary Catalonia. We study a wide range of its cultural manifestations (architecture, paintings, music, arts of the body, literature, cinema, gastronomy). Attention is also paid to some sociolinguistic issues, such as the coexistence of Catalan and Spanish, and the standardization of Catalan.

Terms Offered: Winter

Note(s): The course will be conducted in English.

Equivalent Course(s): CATA 21600

SPAN 21703. Introducción a las literaturas hispánicas: textos españoles clásicos. 100 Units.

This course involves careful reading and discussion of significant works from the Spanish Middle Ages, Renaissance, and the Golden Age, including Juan Manuel's *Conde Lucanor*, Jorge Manrique's *Coplas*, the anonymous *Lazarillo de Tormes*, and the theater of Calderón.

Terms Offered: Autumn Winter

Prerequisite(s): SPAN 20300 or consent of instructor.

Note(s): Taught in Spanish.

Equivalent Course(s): MDVL 21703

SPAN 21803. Introducción a las literaturas hispánicas: textos españoles contemporáneos. 100 Units.

Este curso ofrecerá un amplio panorama de las literaturas españolas de los siglos XIX y XX. Buena parte de la historia cultural de España ha estado marcada por la ansiedad respecto al supuesto atraso cultural, político, social y económico del país. La modernidad se convierte así en objeto de deseo y de disputa cultural para los intelectuales españoles que luchan por definir en qué consiste y cómo alcanzarla. Este es el tema que nos guiará, de manera flexible, por las obras de autores como

Mariano José de Larra, Gustavo Adolfo Bécquer, Rosalía de Castro, Emilia Pardo Bazán, Leopoldo Alas Clarín, Antonio Machado, Federico García Lorca, Ana María Matute, Max Aub y Manuel Rivas, entre otros, complementadas por algunas películas. En relación con este tema principal, se explorarán también el lugar del campo y la ciudad en la imaginación moderna, la cuestión nacional, las luchas por la emancipación de la mujer, las tensión creativa entre tradición y vanguardia artística, o los debates sobre la historia y la memoria del pasado reciente de España.

Instructor(s): I. Fanlo (winter); M. Martínez (spring) Terms Offered: Spring Winter

Prerequisite(s): SPAN 20300 or consent of instructor.

Note(s): Taught in Spanish.

SPAN 21903. Intro. a las lit. hispánicas: textos hispanoamericanos desde la colonia a la independencia. 100 Units.

This course examines an array of representative texts written in Spanish America from the colonial period to the late nineteenth century, underscoring not only their aesthetic qualities but also the historical conditions that made their production possible. Among authors studied are Christopher Columbus, Hernán Cortés, Sor Juana Inés de la Cruz, Simón Bolívar, and José Martí.

Instructor(s): L. Brewer-García Terms Offered: Spring

Prerequisite(s): SPAN 20300 or consent of instructor.

Note(s): Taught in Spanish.

Equivalent Course(s): CRES 21903, LACS 21903

SPAN 22003. Introducción a las literaturas hispánicas: del modernismo al presente. 100 Units.

Students in this course study an array of texts written in Spanish America from the late nineteenth century to the present, including the literature of the Hispanic diasporas. Authors may include José Martí, Rubén Darío, Mariano Azuela, Pablo Neruda, César Vallejo, Teresa de la Parra, Jorge Luis Borges, Octavio Paz, Rosario Castellanos, Mario Vargas Llosa, and Pedro Pietri.

Terms Offered: Autumn Spring

Prerequisite(s): SPAN 20300 or consent of instructor.

Note(s): Taught in Spanish.

Equivalent Course(s): LACS 22003

SPAN 22350. Speaking Truth to Power in Medieval Iberia. 100 Units.

In the multilingual and multireligious environment of the Iberian middle ages, poetry can express many things. And while literary history has granted a prestigious space to some of these things, such as love or spirituality, it has consistently neglected others, such as socio-political satire or vulgarity. This class will be paying attention to that other less talked-about poetry that gets into the political struggles of the period, that talks in profanities about profane things. In other words, the poetry that does not speak to the eternity of existence, but that gets its hands dirty with earthly matters. The poetry that savagely mocks and cuts through social conventions in a way that makes seem contemporary Twitter trolls benevolent in comparison. For this class we will be reading authors who wrote in Galician-Portuguese such as Joao Soares de Paiva or King Alfonso X, authors who wrote in Catalan such as Guillem de Bergueda or Ramon Vidal de Besalu, and authors who wrote in Spanish such as Juan Ruiz or Juan de Mena. Translations to Spanish will be provided or worked through class discussion.

Instructor(s): N. Blanco Mourelle Terms Offered: Autumn

Equivalent Course(s): SPAN 32350, PORT 22350, CATA 32350, CATA 22350, MDVL 22350, PORT 32350

SPAN 22520. Slavery as Metaphor in Latin America. 100 Units.

This course will examine the long-lived trope of slavery as a metaphor-for love, sex, god, and imperial domination-in the Iberian Atlantic from the seventeenth to the late-nineteenth centuries. Focusing on literary, spiritual, and political texts, we will explore the ways in which slavery as a metaphor has informed understandings and conceptions of actual slavery in Ibero-America. What happens when a captive writes a poem about being enslaved to their lover? What does it mean for a slave master to define their relationship to Europe in terms of bondage? How must we read spiritual writings and religious sermons depicting God as a 'true master' in slave-holding territories? In addition to these questions, we will analyze the presence of enslaved people in literary texts written by white Creole authors in order to explore how they shape modern conceptions of freedom and whiteness. Readings will include literary texts by Cuban and Brazilian authors, religious sermons, literature written by slaves and former slaves, as well as independentist letters and pamphlets. In addressing the ubiquity of slavery both as a trope and as a concrete system of labor exploitation and capital accumulation, students will be able to better recognize the material implications of cultural artifacts, and to build connections between the Spanish, Portuguese, and Brazilian empires.

Instructor(s): I. Fraga Terms Offered: Autumn

Note(s): Class will be taught in English, with the possibility of extra sessions in Spanish for HLBS majors and minors.

Equivalent Course(s): LACS 22520, CRES 22520

SPAN 22521. ¿Qué onda, Siri? Ciencia Ficción Latinoamericana. 100 Units.

Intercambio de cartas entre México y la luna, exploradores planetarios argentinos, hackers activistas en Bolivia y viajes en el tiempo para salvar el Caribe. Aunque a lo largo de su historia no haya gozado del mismo prestigio que otros géneros literarios, la ciencia ficción en América Latina tiene ejemplos que datan del siglo XVIII. Sin embargo, no es hasta los 1950s que el género empieza a ganar impulso editorial y, más tarde, académico. Ya en el siglo XXI, autores como Rita Indiana, Pola Oloixarac y Edmundo Paz Soldán han utilizado los variados elementos constitutivos del género y alcanzando incluso reconocimiento internacional. Frente a tal histórico, este curso busca contestar las siguientes preguntas: ¿De qué manera se asemeja y se difiere la ciencia ficción latinoamericana, de país a país, y en comparación al resto del mundo? ¿Cómo se mezclan los elementos tradicionales del género con las culturas nacionales y regionales del subcontinente? ¿Qué particularidades sociales, políticas, económicas, raciales y de género se manifiestan en estos textos que nos ayudan

a pensar la realidad de esta región y que la ficción realista históricamente privilegiada no llega a escenificar? Para ello, nos ocuparemos de novelas, cuentos, poemas, películas, series de televisión y performances de América Latina, desde sus principios decimonónicos hasta el presente, enfocándonos en los elementos característicos del género y las representaciones culturales puestas en escena por estos artistas.

Instructor(s): E. Leao Terms Offered: Winter

Prerequisite(s): SPAN 20300.

Note(s): Taught in Spanish.

Equivalent Course(s): LACS 22521

SPAN 22620. Food, Culture and Writing in the Early Modern Spanish Atlantic. 100 Units.

This class will engage critically with Iberian and Latin American food studies by focusing on iconic everyday food commodities whose history is deeply rooted in colonization, slavery, imperial expansion and evangelization. Students will examine the presence of foods-such as maize, chocolate, sugar, potato and chili- in early modern literature, travel narratives, natural histories and historical documents in order to reflect upon issues like cultural interaction, identity formation and difference in the context of the Spanish Empire. We will read texts such as those by Fernández de Oviedo, Inca Garcilaso de la Vega and Guamán Poma, as well as unpublished recipes and cookbooks. We will also engage with hands-on research and reconstruction of early modern recipes to gain insight into historical techniques and materials. Early modern sources will be put in dialogue with contemporary issues like gastronomic prestige, food justice and sustainability. In doing so, students will be provided with critical tools to analyze the political, economic, gender and racial implications of contemporary discourses of food.

Instructor(s): D. Gutierrez Flores Terms Offered: Autumn

Note(s): Taught in Spanish.

Equivalent Course(s): LACS 22620

SPAN 22821. Women and Horror in Contemporary Latin America. 100 Units.

In this seminar, students will explore questions relevant to both horror studies in general and contemporary Latin American horror specifically from a feminist perspective. What does horror as a genre contribute to the representation and exploration of women's experiences of terrifying events in Latin American history and politics? How can we understand the gendered dynamics of Latin American culture and politics through horror? What do gendered themes in Latin American horror say about societal attitudes, oppression, and struggles for equality? How does the representation of Latin American women in horror texts contribute to or subvert forms of oppression? This interdisciplinary course will transverse the region as well as genres, covering such texts as the short stories of Amparo Dávila (Mexico) and Mariana Enríquez (Argentina); novellas by Carlos Fuentes (Mexico) and Felisberto Hernández (Uruguay); and films such as *As boas maneiras* (Brazil, 2017).

Instructor(s): L. Colaneri Terms Offered: Winter

Note(s): Discussion will be in Spanish, with readings in both English and Spanish.

Equivalent Course(s): GNSE 22822, LACS 22821

SPAN 23025. Vidas Infames: Sujetos heterodoxos en el mundo hispánico (1500-1800) 100 Units.

En este curso leeremos y discutiremos las vidas de varias mujeres y hombres comunes perseguidos por la Inquisición hispánica entre 1500 y 1800, aproximadamente, tanto en Europa y el Mediterráneo como en las Américas. La mayoría de estas vidas fueron dichas por los mismos acusados frente a un tribunal eclesiástico. Estas autobiografías orales, producidas en condiciones de máxima dureza y precariedad, revelan la forma en que la vida cotidiana es moldeada e interrumpida por el poder. Leeremos las historias de hombres transgénero, mujeres criptojudías, campesinos moriscos, renegados, profetas y monjas acusadas de sodomía, entre otras; y discutiremos temas como la relación entre poder y subjetividad, heterodoxia y cultura popular, las formas narrativas del yo o la articulación biográfica de la clase, la raza y el género en la primera modernidad. Estas 'vidas infames', a pesar de su concreta individualidad, permiten ofrecer un amplio panorama de la historia cultural y social de España y América en la era de la Inquisición.

Instructor(s): M. Martínez Terms Offered: Spring

Note(s): Taught in Spanish.

Equivalent Course(s): SPAN 33025, LACS 23025, LACS 33025

SPAN 24701. Introduction to Basque Culture. 100 Units.

Straddling the border of southern France and northern Spain, the land of the Basques has long been home to a people who had no country of their own but have always viewed themselves as a nation. No one has ever been able to find their roots, and their peculiar language is not related to any other in the world, but they have managed to keep their mysterious identity alive, even if many other civilizations tried to blot it out. The aim of this course is to create real situations that will enable the students to learn the meaning of Basque culture. It will be a guided tour throughout Basque history and society. Students will learn about the mysterious origins of the language; they will visit the most beautiful places of the Basque country; they will get to know and appreciate Basque traditions, gastronomy, music . . . and most importantly, they will be able to compare and contrast their own cultures and share their ideas during the lessons, creating an enriching atmosphere full of entertaining activities, such as listening to music, reading legends and tales, watching documentaries, and much more.

Terms Offered: Winter

Note(s): This course will be conducted in English. Prior knowledge of Basque language or culture is not required.

Equivalent Course(s): BASQ 24700

SPAN 27020. Christianity and Islam in the Western Mediterranean World during the Late Middle Ages. 100 Units.

El curso analizará los contactos mantenidos entre mundo cristiano y mundo islámico en el Mediterráneo bajomedieval, tomando la Corona de Aragón y sus ricas fuentes documentales como observatorio privilegiado. Las particularidades de la Corona de Aragón se compararán con las de otros estados cristianos del Occidente mediterráneo que mantuvieron relaciones sostenidas con los musulmanes. Tras la definición de la naturaleza y de las especificidades de los contactos

político-diplomáticos, mercantiles y pirático-corsarios entre Cristiandad e Islam, las clases se focalizarán en la identificación y caracterización de colectivos y personas que actuaron como mediadores lingüísticos y culturales entre ambas realidades. Se determinarán las circunstancias y motivos que permitieron que agentes diplomáticos, mercaderes, mercenarios, piratas-corsarios o cautivos-esclavos vehicularan los contactos. Y se analizarán y compararán las distintas tipologías documentales que son plasmación de todos esos intercambios y contactos culturales y humanos.

Instructor(s): R. Salicrú i Lluç Terms Offered: Spring

Note(s): Taught in Spanish.

Equivalent Course(s): MDVL 27020, CATA 27020, RLST 27020, SPAN 37020, CATA 37020

SPAN 27720. Races, Castes, and Their Relationships in Latin American Colonial Music. 100 Units.

The course will undertake a critical survey of repertoires, institutions, and social practices related to musical practices in Spain and Portugal's American territories between 1558 and ca. 1800. The missions of the Jesuits and other orders, the constitution of the musical chapels of the cathedrals, the 'villancico de negros,' and the emergence of local popular music will be some of the topics examined, with a critical assessment of recent views of the role of Colonial music in current musical life.

Instructor(s): Leonardo Waisman Terms Offered: Winter

Equivalent Course(s): LACS 27720, LACS 37720, PORT 27720, MUSI 27720

SPAN 29117. Theater and Performance in Latin America. 100 Units.

What is performance? How has it been used in Latin America and the Caribbean? This course is an introduction to theatre and performance in Latin America and the Caribbean that will examine the intersection of performance and social life.

While we will place particular emphasis on performance art, we will examine some theatrical works. We ask: how have embodied practice, theatre and visual art been used to negotiate ideologies of race, gender and sexuality? What is the role of performance in relation to systems of power? How has it negotiated dictatorship, military rule, and social memory?

Ultimately, the aim of this course is to give students an overview of Latin American performance including blackface performance, indigenous performance, as well as performance and activism.

Instructor(s): D. Roper Terms Offered: Autumn

Prerequisite(s): Undergraduates must be in their third or fourth year

Note(s): Taught in English.

Equivalent Course(s): LACS 39117, LACS 29117, GNSE 29117, TAPS 28479, CRES 39117, CRES 29117, TAPS 38479, SPAN 39117, GNSE 39117

SPAN 29700. Readings in Special Topics. 100 Units.

This course involves directed readings on special topics not covered by courses offered as part of the program in Spanish. Subjects treated and work to be completed for the course must be chosen in consultation with the instructor no later than the end of the preceding quarter.

Terms Offered: Autumn Spring Winter

Prerequisite(s): SPAN 10300 or 20300, depending on the requirements of the program for which credit is sought

Note(s): Students are required to submit the College Reading and Research Course Form.

SPAN 29900. BA Paper Preparation: Spanish. 100 Units.

In consultation with a faculty member, students must devote the equivalent of a one-quarter course to the preparation of a BA project.

Terms Offered: Autumn Winter

Prerequisite(s): Consent of undergraduate adviser

Note(s): Students are required to submit the College Reading and Research Course Form. Students seeking honors may count this course towards their course requirements. Must be taken for a quality grade.

Russian and East European Studies

Department Website: <http://slavic.uchicago.edu>

Program of Study

The Department of Slavic Languages and Literatures offers courses in the Bosnian/Croatian/Serbian, Czech, Polish, and Russian languages and literatures, and other Slavic and East European cultures, leading to a BA in Russian and East European Studies. The BA degree program is designed to provide students with skills and facility in the languages and cultures of the region. It is intended for students preparing for graduate work, those planning a career in government or industry, and those whose primary aim is to master Russian and East European cultures in the original languages. Students interested in the program are encouraged to consult with the director of undergraduate studies. The contact information for the current director of undergraduate studies may be obtained by consulting the departmental website at slavic.uchicago.edu (<http://slavic.uchicago.edu>).

Students who are majoring in other fields of study may also complete a minor in Russian and East European Studies.

General Education

Depending on the language(s) of concentration, it is recommended that students majoring in REES satisfy the general education requirement in civilization studies with SOSC 24000-24100 (<http://collegecatalog.uchicago.edu/search/?P=SOSC%2024000-24100>) Introduction to Russian Civilization I-II or HIST 13100-13200-13300 (<http://collegecatalog.uchicago.edu/search/?P=HIST%2013100-13200-13300>) History of Western Civilization I-II-III.

Grading

Students who are majoring or minoring in Russian and East European Studies must receive a quality grade in all courses taken to meet requirements in the major or minor. Nonmajors and nonminors have the option of taking courses on a P/F basis at the discretion of the instructor (except for language courses, which must be taken for quality grades). For the major a minimum of seven courses must bear University of Chicago course numbers and be completed for quality grades.

Honors

To be eligible for honors in Russian and East European Studies, students must maintain an overall College GPA of 3.25 or higher and of 3.5 or higher in the major. Students must indicate their intention to pursue honors to the director of undergraduate studies no later than the end of the first week of the first quarter of their fourth year.

In addition, students pursuing honors must write an acceptable BA paper in their final year under the supervision of a faculty member in the Department of Slavic Languages and Literatures. Students must submit the BA paper to the BA supervisor no later than Friday of fifth week in Spring Quarter of their fourth year.

At the latest by the Autumn Quarter of their fourth year, students should begin the BA process by consulting with the director of undergraduate studies. Students may register for the BA Paper seminar (REES 29900 BA Paper Workshop) with approval of the BA supervisor. This course will confer general College elective credit, but it will not count toward the major. If the completed bachelor's paper is judged by the supervisor and a second faculty member to be a distinguished example of original research or criticism, the student is recommended to the College for graduation with honors in Russian and East European Studies. The final decision regarding the granting of any degree with honors rests with the Collegiate divisional master.

Advising

Students wishing to declare the major should meet with the director of undergraduate studies. Further information on the undergraduate program is available in the departmental office (Foster 406, 773.702.8033). Questions about placement, competency, and proficiency examinations in Russian should be directed to the coordinator of Russian language courses.

Study Abroad

Several study abroad opportunities are offered in subjects and geographic areas of interest to students who are majoring in Russian and East European Studies, including those described below. For more information, students should consult with the study abroad advisers or visit study-abroad.uchicago.edu (<http://study-abroad.uchicago.edu>).

1. **Smolny College:** The University of Chicago sponsors summer, semester-long, and year-long programs at Smolny College, a joint Russian-American college in St. Petersburg. College-level courses are taught in Russian and English on a broad range of subjects, as well as language courses.
2. **Russian Civilization in Paris:** A three-part sequence of courses is taught by University of Chicago faculty at the Center in Paris. The program includes an extended excursion to a Russian city. This program satisfies the general education requirement in civilization studies.
3. **FLAG study:** Students who wish to do a summer study abroad program can apply for a Foreign Language Acquisition Grant (FLAG) that is administered by the College and provides support for a minimum of eight weeks of study at a recognized summer program abroad. Students must have completed RUSS 10303 First-Year Russian-3 or its equivalent to be eligible for FLAG support for the study of Russian. For more information, visit study-abroad.uchicago.edu/programs/byType/summer-grants (<https://study-abroad.uchicago.edu/programs/byType/summer-grants/>).

Program Requirements

Major in **Russian and East European Studies (REES)**. The BA in REES requires twelve courses, which fall into two categories: courses in the major language of study and elective courses. In this way students have the flexibility to construct a course of study that accords with their interests.

Major in Russian and East European Studies

1. Six language courses at the 20000 level or beyond. In exceptional circumstances students may petition to substitute three courses in a concentrated area of study for three quarters of study in the major language.

This requirement may be satisfied in whole or in part by examination credit based on a University placement exam. Students who fulfill the language requirement with fewer than three quarters of study must substitute elective courses offered in the Department of Slavic Languages and Literatures.

2. Six elective courses in REES or in languages offered by Slavic Languages and Literatures.

This requirement is designed to allow students to tailor their program to their intended goals and career track. A maximum of one Reading and Research course (REES 29700 (<http://collegecatalog.uchicago.edu/search/?P=REES%2029700>) Reading/Research: Russian and Eastern European Studies) may be counted as an elective course.

Courses in the major may not be double-counted with general education requirements. A minimum of seven courses in the major must be completed for quality grades at the University of Chicago.

NOTE: Students who entered the University prior to Autumn 2015 may choose to fulfill the requirements here or those that were in place when they entered the University. For questions about course eligibility, contact the director of undergraduate studies.

Summary of Requirements for the Major in Russian and East European Studies

Six courses in Russian or an East European language at the 20000 level or above *	600
Six elective courses	600
Total Units	1200

* Credit may be granted by examination. Up to three quarters worth of placement credit can be counted toward the major. When more than half of the language requirement (the equivalent of four to six quarters of study) is met by examination, electives in the Department of Slavic Languages and Literatures must be substituted for the additional quarters of language credit granted (*i.e., if a student places out of four quarters of language study, one elective course must be substituted into the major. If five quarters of credit are granted, two electives must be substituted, etc.*). Introductory courses in another Slavic or East European language can be used as electives.

Minor Program in Russian and East European Studies

The minor in Russian and East European Studies requires seven courses, including at least three language courses at the 20000 level or higher and at least two REES courses.

Courses in the minor (1) may not be double counted with the student's major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Summary of Requirements for the Minor in Russian and East European Studies

Three second-year courses in a Russian or East European language *	300
Four elective courses (including at least two REES courses)	400
Total Units	700

*Credit may be granted by examination.

Bosnian, Croatian, and Serbian Courses

BCSN 10103-10203-10303. First-Year Bosnian/Croatian/Serbian I-II-III.

The major objective of the sequence is to build a solid foundation in the basic grammatical patterns of written and spoken Bosnian/Croatian/Serbian, while simultaneously introducing both the Cyrillic and Latin alphabets. This sequence is complemented with cultural and historical media from the Balkans and is designed for students with a wide range of interests. Screenings of movies and other audio-visual materials are held in addition to scheduled class time. Knowledge of a Slavic language and background in linguistics not required.

BCSN 10103. First-Year Bosnian/Croatian/Serbian I. 100 Units.

This three-quarter sequence course in Bosnian/Croatian/Serbian languages introduces students to the basics of four basic skills: reading, listening, speaking and writing. It maintains a good balance of the three languages, their respective grammatical and lexical differences, and the Cyrillic and Latin alphabets. Students are encouraged to concentrate on the language and culture of their interest and choice. The course objective is to build a solid foundation in the grammatical patterns of the spoken and written languages, while simultaneously working on basic interpretive, interpersonal, presentational and intercultural communication. This is achieved through a communicative situation-based approach, dialogues and texts and, reinforced by the students and instructor, screenings of short announcements, commercials,

documentaries, interviews, and the like. Once a week, one-on-one 15-minute conversation sessions with the instructor offer students the opportunity to review and practice the materials presented in class. The course is supplemented with cultural events, guest speakers and selected media. Together with the conversation sessions, these supplements improve the students' ability to interact effectively and appropriately with people from other linguistic and cultural backgrounds-essential for establishing successful, positive relationships across cultural boundaries.

Instructor(s): Nada Petkovic Terms Offered: Autumn

BCSN 10203. First-Year Bosnian/Croatian/Serbian II. 100 Units.

BCSN 20103-20203-20303. Second-Year Bosnian/Croatian/Serbian I-II-III.

The second-year sequence in Bosnian/Croatian/Serbian languages and cultures is a continuation of first-year BCS and therefore assumes one year of formal study of the target language(s) or equivalent course work elsewhere. The sequence is focused on spoken and written modern BCS, emphasizing communicative practice in authentic cultural contexts. The language(s) are introduced through a series of dialogues gathered from a variety of textbooks published in Serbia, Croatia, and Bosnia, as well as newspaper articles, short biographies, poems, and song lyrics in both the Latin and Cyrillic alphabets. A vast archive of audiovisual materials, representing both high and popular culture, constitutes an integral part of every unit. Simultaneously, aural comprehension, speaking, grammar, and vocabulary are reinforced and further developed throughout the year. Mandatory drill sessions are held twice a week, offering students ample opportunity to review and practice materials presented in class.

BCSN 20103. Second-Year Bosnian/Croatian/Serbian I. 100 Units.

The Second-Year Bosnian/Croatian/Serbian languages and cultures course is designed for both students who have completed the first-year sequence and heritage learners. Its main objective is to develop further communicative skills-interpretive, interpersonal, presentational and intercultural-using authentic materials representing the contemporary spoken and written language in authentic cultural contexts. Students are presented with a series of texts, such as newspaper articles, interviews with writers, actors, athletes, short biographies, book and film reviews, university websites, travel blogs, etc. Audiovisual materials, representing both high and popular culture, constitute an integral part of every unit. Grammar and vocabulary are reinforced and developed throughout the quarter. Textual and audiovisual materials are selected to best exemplify the outlined themes while maintaining a good balance of the three languages and their respective grammatical and lexical differences in order to assess students' progress in all four skills. Each of the 12 units is accompanied with a unit test, all of which, including the final exam at the end of the term, mirror the tasks in the practical proficiency assessment test that students can take at the end of the spring quarter. The course is complemented with cultural and historical media from the Balkans, guest speakers and cultural events. The prerequisite is BCSN 10303 or the equivalent.

Instructor(s): Nada Petkovic Terms Offered: Autumn

Prerequisite(s): BCSN 10303 or consent of instructor

BCSN 20203. Second-Year Bosnian/Croatian/Serbian II. 100 Units.

The Second-Year Bosnian/Croatian/Serbian languages and cultures course is designed for both students who have completed the first-year sequence and heritage learners. Its main objective is to develop further communicative skills-interpretive, interpersonal, presentational and intercultural-using authentic materials representing the contemporary spoken and written language in authentic cultural contexts. Students are presented with a series of texts, such as

newspaper articles, interviews with writers, actors, athletes, short biographies, book and film reviews, university websites, travel blogs, etc. Audiovisual materials, representing both high and popular culture, constitute an integral part of every unit. Instructor(s): Nada Petkovic Terms Offered: Spring

BCSN 21101. Advanced Bosnian/Croatian/Serbian: Language through Fiction. 100 Units.

This one quarter course is designed to help students over one of the most difficult hurdles in language training- the transition from working through lessons in a textbook to reading unedited literary texts. The selected pieces of fiction and the exercises drawn from them engage the language's structure on every page. Immersed in a complete language experience, students learn how to engage the natural, organic language of literary texts across a variety of styles and themes enabling them to work with ever more challenging material. The course objective is to hone students' abilities to analyze increasingly complex unreviewed texts, identify various styles and registers of the language, and handle linguistically unfamiliar situations in both spoken and written format. Attention is given to improving students' abilities to paraphrase, narrate, describe, support opinions, hypothesize and discuss abstract topics. Building vocabulary is stressed as a key to making progress, while issues of language structure and grammar are reinforced throughout the course. Classes are conducted in the target language and may be taken for pass/fail. The prerequisite is two years of formal study of the target language or the equivalent.

Instructor(s): Nada Petkovic Terms Offered: Autumn

Equivalent Course(s): REES 31104, BCSN 31104, REES 21101

BCSN 21200. Advanced Bosnian/Croatian/Serbian: Language Through Film. 100 Units.

Advanced BCS courses encompass both the 3rd and 4th years of language study, with the focus changed from language structure and grammar to issues in interdisciplinary content. The courses are not in sequence. This course addresses the theme of Yugoslav and Post-Yugoslav identity through discussion and interpretation based on selected films, documentaries, images, and related texts- historical and literary, popular press, advertisements, screenplays, and literature e on film. Emphasis is on interpersonal communication as well as the interpretation and production of language in written and oral forms. The course engages in systematic grammar review, along with introduction of some new linguistic topics, with constant practice in writing and vocabulary enrichment. The syllabus includes the screening of six films, each from a different director, region, and period, starting with *Cinema Komunisto* (2012), a documentary by Mila Turajlic. This film will be crucial for understanding how Yugoslav cinema was born and how, in its origins, it belongs to what a later cinephile, Fredric Jameson, has called a "geopolitical aesthetic." We shall investigate the complex relationship between aesthetics and ideology in the Yugoslav and Post-Yugoslav cinema, and pay close attention to aesthetic conceptions and concrete formal properties, and more importantly, to language, narrative logic, and style.

Instructor(s): Nada Petkovic Terms Offered: Winter

Equivalent Course(s): REES 31203, BCSN 31203, REES 21200

BCSN 21300. (Re)Branding the Balkan City: Contemp. Belgrade/Sarajevo/Zagreb. 100 Units.

The course uses an urban studies lens to explore the complex history, infrastructure and transformations of cities, mainly the capitals of today's Serbia, Bosnia and Hercegovina, and Croatia. There is a particular need to survey this region and feed the newfound interest in it, mainly because Yugoslav architecture embodied one of the great political experiments of the modern era. Drawing on anthropological theory and ethnography of the city, we consider processes of urban destruction and renewal, practices of branding spaces and identities, urban life as praxis, art and design movements, film, music, food, architectural histories and styles, metropolitan citizenship, and the broader politics of space. The course is complemented by cultural and historical media, guest speakers, and virtual tours. One of them is a tour through the 2018 show at MoMA "Toward a Concrete Utopia: Architecture in Yugoslavia 1948-1980" a project curated with the goal to find a place for Yugoslav Modernism in the architectural canon. Classes are held in English. No knowledge of South Slavic languages is required.

Instructor(s): Nada Petkovic Terms Offered: Spring

Equivalent Course(s): REES 21300, BCSN 31303, REES 31303, ARCH 21300

BCSN 21400. Advanced BCS: Language through Art and Architecture. 100 Units.

This course foregrounds different periods in Yugoslav and post-Yugoslav art and architecture. Situated between the capitalist West and the socialist East, Yugoslavia's architects responded to contradictory demands and influences, developing a postwar architecture both in line with and distinct from the design approaches seen elsewhere in Europe and beyond. Drawing on the country's own idiosyncrasies, diverse heritage and influences, the course surveys examples of architectural styles from classical to Baroque, through Art Nouveau and Modernism, all the way to full-blown Brutalism with its left and material honesty. Given that Yugoslav architecture also expressed one of the great political experiments of the modern era, the course entertains many questions on related topics. While exploring major cities, their infrastructure, houses, buildings, monuments, churches and more, the course delves into advanced grammatical topics with the goal of increasing proficiency in both aural and reading comprehension, in addition to honing writing and speaking styles. Classes are conducted in the target language and may be taken for pass/fail. The prerequisite is two years of formal study of the target language or the equivalent.

Instructor(s): Nada Petkovic Terms Offered: Spring

Prerequisite(s): The course prerequisite is two years of formal study of the target language(s) or the consent of the instructor.

Equivalent Course(s): BCSN 31403, REES 21400, REES 31403

BCSN 29700. Reading and Research Course. 100 Units.

No description available.

Instructor(s): Nada Petkovic Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of instructor and Departmental Adviser

Note(s): Students are required to submit the College Reading and Research Course Form.

BCSN 29910. Special Topics in Bosnian/Croatian/Serbian I. 100 Units.

The course is designed to meet the specific needs of advanced learners of Bosnian/Croatian/Serbian, including heritage and native speakers, and to foster cross-cultural experiences through interdisciplinary content. The curriculum covers a wide range of topics relative to the students' field of study, research and personal interests. Although grounded in the field of philology, it expands students' knowledge in other disciplines of social and behavioral sciences such as history, anthropology, global studies, economics, political science, sociology, and the like. Attention is given to the ability to paraphrase scholarly arguments, formulate research hypotheses, and present research in the target language. The course delves into advanced grammatical topics with the goal of increasing proficiency in both aural and reading comprehension, in addition to honing writing and speaking styles. Classes are conducted in BCS. The prerequisite is three years of formal study of the target language or the equivalent.

Instructor(s): Nada Petkovic Terms Offered: Autumn

Equivalent Course(s): REES 39913, REES 29913, BCSN 39910

Czech Courses**CZEC 10103-10203-10303. First-Year Czech I-II-III.****First-Year Czech****CZEC 10103. First-Year Czech I. 100 Units.**

This course introduces the Czech language to those students who would like to speak Czech or use the language for reading and research purposes. All four major communicative skills (i.e. reading, writing, listening, speaking) are stressed. Students will also learn about Czech culture through readings, films and class activities. This three-quarter

sequence prepares students for the second-year Czech course and to study or travel abroad in the Czech Republic. Conversation practice is held weekly.

Instructor(s): Irena Cajkova Terms Offered: Autumn

CZEC 10203. First-Year Czech II. 100 Units.

This course is an introduction to the basic grammar of Czech with attention given to all four skills of speaking, listening, reading, and writing, as well as exposure to Czech culture. Winter and Spring Quarters include work with Czech film and literature. Students gain some familiarity with the major differences between literary and spoken Czech as they learn to use the language both as a means of communication and as a tool for reading and research.

Instructor(s): Irena Cajkova Terms Offered: Winter

CZEC 10303. First-Year Czech III. 100 Units.

This course is an introduction to the basic grammar of Czech with attention given to all four skills of speaking, listening, reading, and writing, as well as exposure to Czech culture. Winter and Spring Quarters include work with Czech film and literature. Students gain some familiarity with the major differences between literary and spoken Czech as they learn to use the language both as a means of communication and as a tool for reading and research.

Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of instructor and Departmental Adviser

Note(s): Students are required to submit the College Reading and Research Course Form.

CZEC 29900. BA Paper. 100 Units.

No description available.

Terms Offered: Autumn Spring Winter

Prerequisite(s): Open to fourth-year students who are majoring in Slavic Languages and Literatures with consent of instructor and Departmental Adviser

Note(s): Students are required to submit the College Reading and Research Course Form. This course must be taken for a quality grade.

Polish Courses

POLI 10103-10203-10303. First-Year Polish I-II-III.

This sequence teaches students to speak, read, and write in Polish, as well as familiarizes them with Polish culture. It employs the most up-to-date techniques of language teaching (e.g., communicative and accelerated learning, and learning based on students' native language skills), as well as multileveled target-language exposure.

POLI 10103. First-Year Polish I. 100 Units.

This course teaches students to speak, read, and write in Polish, as well as familiarizes them with Polish culture. It employs the most up-to-date techniques of language teaching (e.g., communicative and accelerated learning, and learning based on students' native language skills), as well as multileveled target-language exposure.

Instructor(s): Sasha Lindskog Terms Offered: Autumn

POLI 10203. First-Year Polish II. 100 Units.

This course includes instruction in grammar, writing, and translation, as well as watching selected Polish movies.

Selected readings are drawn from the course textbook, and students also read Polish short stories and press articles. In addition, the independent reading of students is emphasized and reinforced by class discussions. Work is adjusted to each student's level of preparation. Drill sessions to be arranged.

Instructor(s): Sasha Lindskog Terms Offered: Winter

POLI 10303. First-Year Polish III. 100 Units.

This course teaches students to speak, read, and write in Polish, as well as familiarizes them with Polish culture. It employs the most up-to-date techniques of language teaching (e.g., communicative and accelerated learning, and learning based on students' native language skills), as well as multileveled target-language exposure.

Instructor(s): Sasha Lindskog Terms Offered: Spring

Prerequisite(s): Poli 10203 or consent of instructor.

POLI 20103-20203-20303. Second-Year Polish I-II-III.

This sequence includes instruction in grammar, writing, and translation, as well as watching selected Polish movies. Selected readings are drawn from the course textbook, and students also read Polish short stories and press articles. In addition, the independent reading of students is emphasized and reinforced by class discussions. Work is adjusted to each student's level of preparation.

POLI 20103. Second-Year Polish I. 100 Units.

This course includes instruction in grammar, writing, and translation, as well as watching selected Polish movies.

Selected readings are drawn from the course textbook, and students also read Polish short stories and press articles. In addition, the independent reading of students is emphasized and reinforced by class discussions. Work is adjusted to each student's level of preparation.

Instructor(s): Sasha Lindskog Terms Offered: Autumn

Prerequisite(s): POLI 10300 or equivalent

POLI 20203. Second-Year Polish II. 100 Units.

This course includes instruction in grammar, writing, and translation, as well as watching selected Polish movies.

Selected readings are drawn from the course textbook, and students also read Polish short stories and press articles. In addition, the independent reading of students is emphasized and reinforced by class discussions. Work is adjusted to each student's level of preparation.

Instructor(s): Sasha Lindskog Terms Offered: Winter

POLI 20303. Second-Year Polish III. 100 Units.

The primary goal of second year Polish is to expand the student's speaking, reading and writing skills by building on grammar and vocabulary learned during the first year of study. As a complement to the linguistic side of the course, the student will gain a greater familiarity with Polish history and culture through varied means including readings of literary works, articles from contemporary Polish newspapers and movies.

Instructor(s): Sasha Lindskog Terms Offered: Spring

Prerequisite(s): Fall Quarter of Second Year Polish or instructor consent

POLI 29700. Reading and Research Course. 100 Units.

No description available.

Instructor(s): Dag Lindskog Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of instructor and Departmental Adviser

Note(s): Students are required to submit the College Reading and Research Course Form.

Russian Courses**RUSS 10103-10203-10303. First-Year Russian I-II-III.**

First-Year Russian

RUSS 10103. First-Year Russian I. 100 Units.

This course introduces modern Russian to students who would like to speak Russian or to use the language for reading and research. All four major communicative skills (i.e., reading, writing, listening comprehension, speaking) are stressed. Students are also introduced to Russian culture through readings, videos, and class discussions. This year-long course prepares students for the College Language Competency Exam, for continued study of Russian in second-year courses, and for study or travel abroad in Russian-speaking countries. Conversation practice is held twice a week.

Instructor(s): Erik Houle, Maria Iakubovich Terms Offered: Autumn

RUSS 10203. First-Year Russian-2. 100 Units.

This course introduces modern Russian to students who would like to speak Russian or to use the language for reading and research. All five major communicative skills (i.e., reading, writing, listening, comprehension, and speaking) are stressed. Students are also introduced to Russian culture through readings, videos, and class discussions. This year-long course prepares students for the College Language Competency Exam, for continued study of Russian in second-year courses, and for study or travel abroad in Russian-speaking countries. Conversation practice is held twice a week.

Instructor(s): Erik Houle, Maria Iakubovich Terms Offered: Winter

RUSS 10303. First-Year Russian-3. 100 Units.

This course introduces modern Russian to students who would like to speak Russian or to use the language for reading and research. All four major communicative skills (i.e., reading, writing, listening comprehension, speaking) are stressed. Students are also introduced to Russian culture through readings, videos, and class discussions. This year-long course prepares students for the College Language Competency Exam, for continued study of Russian in second-year courses, and for study or travel abroad in Russian-speaking countries. Conversation practice is held twice a week.

Instructor(s): Erik Houle, Maria Iakubovich Terms Offered: Spring

RUSS 10400-10500-10600. Russian through Pushkin I-II-III.

This literary and linguistic approach to Russian allows students to learn the language by engaging classic Russian poetic texts (e.g., Pushkin's *The Bronze Horseman*), as well as excerpts from *Eugene Onegin* and selections from Pushkin's shorter poems and prose works. Although the focus is on reading Russian, all four major communicative skills (i.e., reading, writing, listening comprehension, speaking) are stressed, preparing students for the College Language Competency Exam and for continued study of Russian in second-year courses. Conversation practice is held twice a week.

RUSS 10400. Russian Through Pushkin I. 100 Units.

This literary and linguistic approach to Russian allows students to learn the language by engaging classic Russian poetic texts (e.g., Pushkin's *The Bronze Horseman*), as well as excerpts from *Eugene Onegin* and selections from Pushkin's shorter poems and prose works. Although the focus is on reading Russian, all four major communicative skills (i.e., reading, writing, listening comprehension, speaking) are stressed, preparing students for the College Language Competency Exam and for continued study of Russian in second-year courses. Conversation practice is held twice a week.

Instructor(s): Mark Baugher Terms Offered: Autumn

Note(s): Not open to students who have taken RUSS 10100-10200-10300.

RUSS 10500. Russian through Pushkin II. 100 Units.

This literary and linguistic approach to Russian allows students to learn the language by engaging classic Russian poetic texts (e.g., Pushkin's *The Bronze Horseman*), as well as excerpts from *Eugene Onegin* and selections from Pushkin's shorter poems and prose works. Although the focus is on reading Russian, all four major communicative skills (i.e., reading, writing, listening comprehension, speaking) are stressed, preparing students for the College Language

Competency Exam and for continued study of Russian in second-year courses. Conversation practice is held twice a week.

RUSS 20702-20802-20902. Third-Year Russian through Culture I-II-III.

This course, which is intended for third-year students of Russian, covers various aspects of Russian grammar in context and emphasizes the four communicative skills (i.e., reading, writing, listening comprehension, speaking) in a culturally authentic context. Excerpts from popular Soviet/Russian films and clips from Russian television news reports are shown and discussed in class. Classes conducted in Russian; some aspects of grammar explained in English. Drill practice is held twice a week.

RUSS 20702. Third-Year Russian through Culture I. 100 Units.

This course, which is intended for third-year students of Russian, covers various aspects of Russian grammar in context and emphasizes the four communicative skills (i.e., reading, writing, listening comprehension, speaking) in a culturally authentic context. Excerpts from popular Soviet/Russian films and clips from Russian television news reports are shown and discussed in class. Classes conducted in Russian; some aspects of grammar explained in English. Drill practice is held twice a week.

Instructor(s): V. Pichugin Terms Offered: Autumn

Prerequisite(s): RUSS 20300 (two years of Russian) or equivalent

RUSS 20802. Third-Year Russian through Culture II. 100 Units.

This course, which is intended for third-year students of Russian, covers various aspects of Russian grammar in context and emphasizes the four communicative skills (i.e., reading, writing, listening comprehension, speaking) in a culturally authentic context. Excerpts from popular Soviet/Russian films and clips from Russian television news reports are shown and discussed in class. Classes conducted in Russian; some aspects of grammar explained in English. RUSS 21302-21402-21502. Advanced Russian through Media I-II-III.

This is a three-quarter sequence designed for fourth- and fifth-year students of Russian. It is also suitable for native speakers of Russian. This sequence covers various aspects of advanced Russian stylistics and discourse grammar in context. This sequence emphasizes the four communicative skills of listening, reading, speaking, and writing in a culturally authentic context. It builds transcultural competence by expanding students' knowledge of the language, culture, history, and daily lives of the Russian-speaking people. Vocabulary building is strongly emphasized. We add to the existing skills and develop our abilities to analyze increasingly complex texts for their meaning: to identify various styles and registers of the Russian language and to provide their neutral equivalents in standard Russian. We also work on developing our abilities to paraphrase, narrate, describe, support opinions, hypothesize, discuss abstract topics, and handle linguistically unfamiliar situations (in spoken and written format). Classes conducted in Russian. Course-specific grammar issues are covered during drill sessions (weekly) and office hours (by appointment). Oral Proficiency Interviews are conducted in the beginning and the end of the course (Autumn and Spring Quarters).

RUSS 23333. Reading Russian for Research Purposes. 100 Units.

This course prepares students to read and do research in Russian. Students will gain a fundamental knowledge of Russian grammar and a basic vocabulary while learning to work intensively with primary and secondary texts in their area of academic interest. Reading Russian for Research Purposes has a limited number of spots available for participation via electronic course sharing, intended for students who are unable to be in Chicago physically for the course.

Instructor(s): Staff Terms Offered: TBD

Equivalent Course(s): RUSS 33333

RUSS 25502. The Russian Novel. 100 Units.

The course will focus on three of the greatest philosophical crime novels in modern literature: Gogol's *Dead Souls*, Dostoevsky's *Crime and Punishment*, and Bely's *Peterburg*. Together they chart the course of development of the Russian

novel, engaging literature's essential questions, but also its "accursed" ones, as the Russians say-the ones that can never be answered, but provoke the most worthy of sort of debate.

Instructor(s): William Nickell Terms Offered: Winter

Equivalent Course(s): FNDL 25334, RUSS 35502

RUSS 29910. Special Topics in Advanced Russian. 100 Units.

Must complete Advanced Russian through Media or equivalent, or obtain consent of instructor. Class meets for 2 hours each week. We'll work with several topics, all of them are relevant to the general theme of "Geography and Worldview: Russian Perspective". There will be maps, reading materials, several documentaries, clips from TV programs and other media, and feature films. Class meetings will be a combination of group discussions, short presentations, and lectures. Final - one term paper at the end (in English) based on Russian materials.

Instructor(s): Valentina Pichugin Terms Offered: Autumn

Russian and East European Studies Courses

REES 13802. The Russian Empire. 100 Units.

Empire is back in contemporary Russia. Old imperial insignia have replaced hammers and sickles on government buildings, the bodies of the last tsar and his family have been exhumed and venerated, and Putin's foreign policy stakes imperial claims on the nations on Russia's border. This course examines what the Russian empire was, how it worked, and the legacies that it left behind. Themes to be considered include the culture of the autocracy and the tradition of reform from above; imperial expansion and multiethnic society; the construction of class, ethnic, and estate identities; and the causes and consequences of the Old Regime's collapse. Mondays and Wednesdays are reserved for lectures, Fridays for discussion. Note(s): First-year students warmly welcomed; no prior Russian history, culture, or language assumed. Equivalent Course(s): REES 13802

Instructor(s): F. Hillis Terms Offered: Autumn

Note(s): First-year students warmly welcomed; no prior Russian history, culture, or language assumed.

Equivalent Course(s): HIST 13802

REES 20000. Tolstoy's Late Works. 100 Units.

This course examines the works written by Tolstoy after Anna Karenina, when he abandoned the novel as a form and gave up his copyright. Readings include his influential writings on non-violence and vegetarianism, his challenges to church and state authority, as well as later literary works, which some believe surpass the famous novels he had renounced. We will also explore the particularities of Tolstoy's charisma in these years, when he came to be viewed as a second Tsar in Russia and as a moral authority throughout the world.

Instructor(s): William Nickell Terms Offered: Spring

Equivalent Course(s): RLST 28501, REES 30000, FNDL 22850, RLIT 32900

REES 20001. War and Peace. 100 Units.

Tolstoy's novel is at once a national epic, a treatise on history, a spiritual meditation, and a masterpiece of realism. This course presents a close reading of one of the world's great novels, and of the criticism that has been devoted to it, including landmark works by Victor Shklovsky, Boris Eikhenbaum, Isaiah Berlin, and George Steiner. (B, G)

Instructor(s): William Nickell Terms Offered: TBD

Equivalent Course(s): CMLT 32301, ENGL 28912, ENGL 32302, HIST 23704, CMLT 22301, FNDL 27103, REES 30001

REES 20004. Nabokov: Lolita. 100 Units.

Lolita, light of my life, fire of my loins. My sin, my soul, Lolita: the tip of the tongue taking a trip of three steps down the palate, to tap at three on the teeth." Popular as Nabokov's "all-American" novel is, it is rarely discussed beyond its psychosexual profile. This intensive text-centered and discussion-based course attempts to supersede the univocal obsession with the novel's pedophilic plot as such by concerning itself above all with the novel's language: language as failure, as mania, and as conjuration.

Instructor(s): M. Sternstein Terms Offered: Autumn

Equivalent Course(s): SIGN 26027, ENGL 28916, FNDL 25300, GNSE 24900

REES 20013. Dostoevsky. 100 Units.

Dostoevsky was an inveterate risk-taker, not only at the baccarat tables of the Grand Casino in Baden-Baden, but in his personal life, his political activities, and his artistic endeavors. This course is intended to investigate his two greatest wagers: on the presence of the divine in the world and on the power of artistic form to convey and articulate this presence. Dostoevsky's wager on form is evident even in his early, relatively conventional texts, like *The Double*. It intensifies after his decade-long sojourn in Siberia, exploding in works like *The Notes from Underground*, which one-and-a-half centuries later remains an aesthetic and philosophical provocation of immense power. The majority of the course will focus on Dostoevsky's later novels. In *Crime and Punishment* Dostoevsky adapts suspense strategies to create a metaphysical thriller, while in *The Demons* he pairs a study of nihilism with the deformation of the novel as a genre. Through close readings of these works we will trace how Dostoevsky's formal experimentation created new ways of exploring realms of existence that traditionally belonged to philosophy and theology. The results were never comfortable or comforting; we will focus on interpreting Dostoevsky's metaphysical provocations.

Instructor(s): R. Bird Terms Offered: Spring

Equivalent Course(s): HUMA 24800, FNLD 24612, RLST 28204, RLIT 39501, REES 30013

REES 20020. Pale Fire. 100 Units.

This course is an intensive reading of *Pale Fire* by Nabokov.

Equivalent Course(s): REES 30020, FNLD 25311, GNSE 29610, GNSE 39610, ENGL 22817

REES 20200. Dostoevsky's Brothers Karamazov. 100 Units.

We will read and interpret *The Brothers Karamazov* by Dostoevsky. Among major themes are the relation to God and religion to the larger society and state; the problem of evil; and the nature of sin and how it enters into religious beliefs; human "freedom," and what the word might have meant to Dostoevsky; and love.

Instructor(s): S. Meredith Terms Offered: Autumn

Prerequisite(s): Required of new Fundamentals majors; open to others with consent of instructor.

Note(s): Fundamentals majors get first priority

Equivalent Course(s): FNLD 20200, RLST 28206

REES 20675. St. Petersburg: Text and City. 100 Units.

St. Petersburg, Petersburg, Petrograd, Leningrad, Piter. Russia's "Window to Europe" has as many faces as it has names: eastern and western; imperial and revolutionary; physical and mythical. This course explores the relationship between geographical space and cultural imaginary by examining what Vladimir Toporov has called the "Petersburg Text of Russian Literature," a mythology of Russia's European capital that has arisen from and through a unique constellation of literary classics. Readings include a close analysis of Andrei Bely's modernist masterpiece *PETERSBURG*, as well as works by Pushkin, Gogol, Dostoevsky, Blok, Akhmatova and Kharmis.

Instructor(s): David Molina Terms Offered: Course to be taught spring 2021

Note(s): Obs: All readings in English translation.

Equivalent Course(s): CMLT 20675, SETH 20675

REES 20902. Third-Year Russian through Culture III. 100 Units.

This course, which is intended for third-year students of Russian, covers various aspects of Russian grammar in context and emphasizes the four communicative skills (i.e., reading, writing, listening comprehension, speaking) in a culturally authentic context. Excerpts from popular Soviet/Russian films and clips from Russian television news reports are shown and discussed in class. Classes conducted in Russian; some aspects of grammar explained in English. Drill practice is held twice a week.

Instructor(s): V. Pichugin Terms Offered: Spring

Note(s): Drill sessions to be arranged.

Equivalent Course(s): RUSS 20902, RUSS 30902, REES 30902

REES 20905. Walter Benjamin: 1935-1938. 100 Units.

[Volume 3 of] Harvard's majestic annotated edition of the essays and fragments includes reflections on Brecht, Kafka and the collector Eduard Fuchs, an early version of the famous analysis of art in the age of mechanical reproduction (here more accurately translated as 'technological reproducibility') and the equally exhilarating inquiry into the nature of narrative, 'The Storyteller.' You feel smarter just holding this book in your hand." -Michael Dirda, *The Washington Post*. In this course, we hold the book in our hands for extended periods of time to read it and discuss its contents. Extracurricular carriage of the book is encouraged.

Instructor(s): Malyne Sternstein Terms Offered: Spring

Prerequisite(s): Open to Fundamentals students and upperclass students in other majors.

Equivalent Course(s): FNLD 20905

REES 21000. Gombrowicz: The Writer as Philosopher. 100 Units.

In this course, we dwell on Witold Gombrowicz the philosopher, exploring the components of his authorial style and concepts that substantiate his claim to both the literary and the philosophical spheres. Entangled in an ongoing battle with basic philosophical tenets and, indeed, with existence itself, this erudite Polish author is a prime example of a 20th century modernist whose philosophical novels explode with uncanny laughter. In contrast to many of his contemporaries, who established their reputations as writers/philosophers, Gombrowicz applied distinctly literary models to the same questions that they explored. We investigate these models in depth, as we focus on Gombrowicz's novels, philosophical lectures, and some of his autobiographical writings. With an insight from recent criticism of these primary texts, we seek answers to the more general question: What makes this author a philosopher?

Instructor(s): Bozena Shallcross Terms Offered: TBD

Note(s): All readings in English.

Equivalent Course(s): REES 31000, FNDL 26903, ISHU 29405

REES 21101. Advanced Bosnian/Croatian/Serbian: Language through Fiction. 100 Units.

This one quarter course is designed to help students over one of the most difficult hurdles in language training—the transition from working through lessons in a textbook to reading unedited literary texts. The selected pieces of fiction and the exercises drawn from them engage the language's structure on every page. Immersed in a complete language experience, students learn how to engage the natural, organic language of literary texts across a variety of styles and themes enabling them to work with ever more challenging material. The course objective is to hone students' abilities to analyze increasingly complex unrevised texts, identify various styles and registers of the language, and handle linguistically unfamiliar situations in both spoken and written format. Attention is given to improving students' abilities to paraphrase, narrate, describe, support opinions, hypothesize and discuss abstract topics. Building vocabulary is stressed as a key to making progress, while issues of language structure and grammar are reinforced throughout the course. Classes are conducted in the target language and may be taken for pass/fail. The prerequisite is two years of formal study of the target language or the equivalent.

Instructor(s): Nada Petkovic Terms Offered: Autumn

Equivalent Course(s): BCSN 21101, REES 31104, BCSN 31104

REES 21200. Advanced Bosnian/Croatian/Serbian: Language Through Film. 100 Units.

Advanced BCS courses encompass both the 3rd and 4th years of language study, with the focus changed from language structure and grammar to issues in interdisciplinary content. The courses are not in sequence. This course addresses the theme of Yugoslav and Post-Yugoslav identity through discussion and interpretation based on selected films, documentaries, images, and related texts—historical and literary, popular press, advertisements, screenplays, and literature e on film. Emphasis is on interpersonal communication as well as the interpretation and production of language in written and oral forms. The course engages in systematic grammar review, along with introduction of some new linguistic topics, with constant practice in writing and vocabulary enrichment. The syllabus includes the screening of six films, each from a different director, region, and period, starting with *Cinema Komunisto* (2012), a documentary by Mila Turajlic. This film will be crucial for understanding how Yugoslav cinema was born and how, in its origins, it belongs to what a later cinephile, Fredric Jameson, has called a "geopolitical aesthetic." We shall investigate the complex relationship between aesthetics and ideology in the Yugoslav and Post-Yugoslav cinema, and pay close attention to aesthetic conceptions and concrete formal properties, and more importantly, to language, narrative logic, and style.

Instructor(s): Nada Petkovic Terms Offered: Winter

Equivalent Course(s): REES 31203, BCSN 21200, BCSN 31203

REES 21300. (Re)Branding the Balkan City: Comtemp. Belgrade/Sarajevo/Zagreb. 100 Units.

The course uses an urban studies lens to explore the complex history, infrastructure and transformations of cities, mainly the capitals of today's Serbia, Bosnia and Hercegovina, and Croatia. There is a particular need to survey this region and feed the newfound interest in it, mainly because Yugoslav architecture embodied one of the great political experiments of the modern era. Drawing on anthropological theory and ethnography of the city, we consider processes of urban destruction and renewal, practices of branding spaces and identities, urban life as praxis, art and design movements, film, music, food, architectural histories and styles, metropolitan citizenship, and the broader politics of space. The course is complemented by cultural and historical media, guest speakers, and virtual tours. One of them is a tour through the 2018 show at MoMA "Toward a Concrete Utopia: Architecture in Yugoslavia 1948-1980" a project curated with the goal to find a place for Yugoslav Modernism in the architectural canon. Classes are held in English. No knowledge of South Slavic languages is required.

Instructor(s): Nada Petkovic Terms Offered: Spring

Equivalent Course(s): BCSN 21300, BCSN 31303, REES 31303, ARCH 21300

REES 21302. Advanced Russian through Media I. 100 Units.

This is a three-quarter sequence designed for fourth- and fifth-year students of Russian. It is also suitable for native speakers of Russian. This sequence covers various aspects of advanced Russian stylistics and discourse grammar in context. This sequence emphasizes the four communicative skills of listening, reading, speaking, and writing in a culturally authentic context. It builds transcultural competence by expanding students' knowledge of the language, culture, history, and daily lives of the Russian-speaking people. Vocabulary building is strongly emphasized. We add to the existing skills and develop our abilities to analyze increasingly complex texts for their meaning: to identify various styles and registers of the Russian language and to provide their neutral equivalents in standard Russian. We also work on developing our abilities to paraphrase, narrate, describe, support opinions, hypothesize, discuss abstract topics, and handle linguistically unfamiliar situations (in spoken and written format). Classes conducted in Russian. Course-specific grammar issues are covered during drill sessions (weekly) and office hours (by appointment). Oral Proficiency Interviews are conducted in the beginning and the end of the course (Autumn and Spring Quarters). Prerequisite(s): Four years of Russian, or equivalent, or consent of instructor.

Instructor(s): Valentina Pichugin Terms Offered: Autumn

Prerequisite(s): Four years of Russian, or equivalent, or consent of instructor.

Equivalent Course(s): RUSS 21302, REES 30102, RUSS 30102

REES 21400. Advanced BCS: Language through Art and Architecture. 100 Units.

This course foregrounds different periods in Yugoslav and post-Yugoslav art and architecture. Situated between the capitalist West and the socialist East, Yugoslavia's architects responded to contradictory demands and influences, developing a postwar architecture both in line with and distinct from the design approaches seen elsewhere in Europe and beyond. Drawing on the country's own idiosyncrasies, diverse heritage and influences, the course surveys examples of architectural styles from classical to Baroque, through Art Nouveau and Modernism, all the way to full-blown Brutalism with its heft and material honesty. Given that Yugoslav architecture also expressed one of the great political experiments of the modern era,

the course entertains many questions on related topics. While exploring major cities, their infrastructure, houses, buildings, monuments, churches and more, the course delves into advanced grammatical topics with the goal of increasing proficiency in both aural and reading comprehension, in addition to honing writing and speaking styles. Classes are conducted in the target language and may be taken for pass/fail. The prerequisite is two years of formal study of the target language or the equivalent.

Instructor(s): Nada Petkovic Terms Offered: Spring

Prerequisite(s): The course prerequisite is two years of formal study of the target language(s) or the consent of the instructor.

Equivalent Course(s): BCSN 31403, BCSN 21400, REES 31403

REES 21500. Spaces of Hope: The City and Its Immigrants. 100 Units.

The city is the site where people of all origins and classes mingle, however reluctantly and agonistically, to produce a common if perpetually changing and transitory life." (David Harvey) This course will use the urban studies lens to explore the complex history of immigration to Chicago, with close attention to communities of East European origin. Drawing on anthropological theory and ethnographic materials, we will study the ways in which the city and its new citizens transform one another.

Instructor(s): Nada Petkovic Terms Offered: Spring. Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Note(s): Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Equivalent Course(s): ENST 27330, PBPL 27330, HIST 27713

REES 21502. Adv Russian Through Media-III. 100 Units.

This course, which is designed for fifth-year students of Russian, covers various aspects of Russian stylistics and discourse grammar in context. It emphasizes the four communicative skills (i.e., reading, writing, listening comprehension, speaking) in culturally authentic context. Clips from Russian/Soviet films and television news reports are shown and discussed in class. Classes conducted in Russian. Conversation practice is held twice a week.

Instructor(s): Valentina Pichugin Terms Offered: Spring

Equivalent Course(s): REES 30302, RUSS 30302, RUSS 21502

REES 22009. Kafka's The Trial. 100 Units.

This very close reading of Kafka's arguably most well known unfinished novel means to move away from megalithic glosses of Kafka as a writer of allegory-of bureaucratic oppression, social alienation, and a world abandoned by God, etc.-instead to look deeply at Kafka's precision, and strategic imprecision, of language, language as trauma, wound, and axe. Knowledge of German is not necessary.

Instructor(s): M. Sternstein Terms Offered: Autumn

Equivalent Course(s): FNDL 21650

REES 22010. The Cinema of Miloš Forman. 100 Units.

The films of Miloš Forman (1932-2018) reflect the turbulence of the 1960s, '70s, '80s and '90s, and 2000s by focusing on the underdog, the pariah, the eccentric. The subject matter to which Forman was drawn translated into his cinema with a signature bittersweet tone, emphatic narrative cogency, and lush spontaneity. This course is an intensive study of Forman's work from his "New Wave" work in Czechoslovakia (Loves of a Blonde, The Fireman's Ball) to his U.S. studio successes (One Flew Over the Cuckoo's Nest, Amadeus), to his idiosyncratic and parabolic last films (Man on the Moon, Goya's Ghosts). Among other topics, the course contemplates the value of a dark sense of humor, cinematic gorgeousness, and artistic dissidence.

REES 23115. Old Church Slavonic. 100 Units.

This course is an introduction to the language of the oldest Slavic texts. It begins with a brief historical overview of the relationship of Old Church Slavonic to Common Slavic and the other Slavic languages. This is followed by a short outline of Old Church Slavonic inflectional morphology. The remainder of the course is spent in the reading and grammatical analysis of original texts in Cyrillic or Cyrillic transcription of the original Glagolitic.

Equivalent Course(s): LING 35100, LING 23115, MDVL 25100, REES 33115

REES 23154. XCAP: The Commune: The Making and Breaking of Intentional Communities. 100 Units.

Any class is an intentional community of sorts: people gathered together with a sense of collective purpose. But often the hopes of students are not met by the content or the methods in the classroom. Can we do better by making the process more intentional-clarifying and developing a collective sense of purpose at the outset? We will start by forming a collective plan on topics to be explored-anything from iconic American communities and Russian communes to memoir studies and economics. Possible projects include creating an intentional community in an off-campus location, designing a communal space, rewriting manifestos, or creating a new communal charter. We can cover anything from economics, space, and gender to the problem of leadership and secular belief systems. We may also want to utilize alternative modes of learning,

besides reading and discussing texts, such as roleplaying. A few students in the class have some experience in intentional communities, and we will welcome their input and suggestions

Instructor(s): William Nickell Terms Offered: Winter

Equivalent Course(s): REES 33154, KNOW 29975

REES 23706. The Soviet Union. 100 Units.

This lecture course surveys the making and unmaking of the Soviet Union as a society, culture, economy, superpower, and empire from 1917 to 1991. The Soviet Union began as an unprecedented radical experiment in remaking society and economy, ethnic and gender relations, personal identities, even human nature, but in the course of its history, it came to resemble other (capitalist) societies, sharing, in turn, their violence, welfare provisions, and consumerism. The story of this transformation—from being unique and exhilarating to being much like everyone else, only poorer and more drab—will be at the center of our exploration. The main themes of the course include social and cultural revolutions; ideology and the role of Marxism; political violence from the birth of the socialist state to the end of the Stalin terror; origins, practices, aesthetics, legacies, and critiques of Stalinism; law, dissent, and human rights; nationality policies and the role of ethnic minorities; the economy of shortages and the material culture it created; institutions of daily life (communal apartments, courtyards, peasant markets, dachas, and boiler rooms); socialist realism and the Soviet dreamworld.

Instructor(s): E. Gilburd Terms Offered: Spring

Note(s): History Gateways are introductory courses meant to appeal to 1st- through 3rd-yr students who may not have done previous course work on the topic of the course; topics cover the globe and span the ages.

Equivalent Course(s): HIST 23706

REES 23708. Soviet History through Literature. 100 Units.

This course considers the main themes of Soviet history through canonical works of fiction, with an occasional addition of excerpts from autobiographies, memories, and police files.

Instructor(s): E. Gilburd Terms Offered: Winter

Equivalent Course(s): HIST 23708

REES 23812. Russia and the West, 18th-21st Centuries. 100 Units.

There are few problems as enduring and central to Russian history as the question of the West—Russia's most passionate romance and most bitter letdown. In this course we will read and think about Russia from the eighteenth to the twenty-first centuries through the lens of this obsession. We will study the products of Russian interactions with the West: constitutional projects, paintings, scientific and economic thought, the Westernizer-Slavophile controversy, and revolutions. We will consider the presence of European communities in Russia: German and British migrants who filled important niches in state service, trade, and scholarship; Italian sculptors and architects who designed some of Russia's most famous monuments; French expatriates in the wake of the French Revolution; Communist workers and intellectuals, refugees from Nazi Germany; and Western journalists who, in the late Soviet decades, trafficked illicit ideas, texts, and artworks. In the end, we will follow émigré Russians to Europe and the United States and return to present-day Russia to examine the anti-Western turn in its political and cultural discourse.

Instructor(s): E. Gilburd Terms Offered: Autumn

Equivalent Course(s): HIST 33812, HIST 23812, REES 33812

REES 24110. The Soviet Empire. 100 Units.

What kind of empire was the Soviet Union? Focusing on the central idea of Eurasia, we will explore how discourses of gender, sexuality and ethnicity operated under the multinational empire. How did communism shape the state's regulation of the bodies of its citizens? How did genres from the realist novel to experimental film challenge a cohesive patriarchal, Russophone vision of Soviet Eurasia? We will examine how writers and filmmakers in the Caucasus and Central Asia answered Soviet Orientalist imaginaries, working through an interdisciplinary archive drawing literature and film from the Soviet colonial 'periphery' in the Caucasus and Central Asia as well as writings about the hybrid conception of Eurasia across linguistics, anthropology, and geography.

Instructor(s): Leah Feldman Terms Offered: Autumn

Equivalent Course(s): REES 34110, CRES 24111, CMLT 24111, CMLT 34111, CRES 34111, NEHC 24110, NEHC 34110

REES 24411. The Interrupted Word: Photographs in Contemporary Central Europe. 100 Units.

Literature from East-Central Europe in the past 20 years has been largely populated by the genre of "witness literature," or fictional narratives about factual historical traumas. Given the global popularity of memoirs, why would an author choose to write a fictional account of historical trauma as a way to bear witness? Even more curiously, these novels frequently embed photographs—pictures of real people and places—within their fictional narrative. How do these mixings of media—and of reality and fiction—affect the ways these novels bear witness? In this course, we will focus on the literary legacy of three historical moments of witness—Germany after WWII, Yugoslav Successor States after the Yugoslav Wars of the 1990s, and Post-Soviet Poland—to ground a theoretical analysis of the function of photographs in texts. As the four novels (by W.G. Sebald, Dubravka Ugrešić, Aleksandar Hemon, and Paveš Huelle) that serve as touchstones for our inquiry were all composed at both a temporal and spatial remove from their historical referents, we will also engage the discourses of post-memory and exilic literature. Throughout the course, our main goal will be to determine the function of photographs embedded in literary narratives: what kind of truths do they represent? How does a photographic truth interact with a narrative one? How can diverse media theory help us understand the relationships between photography, narrative, literature and history?

Instructor(s): Kaitlyn Tucker Sorenson Terms Offered: Spring

Equivalent Course(s): PBPL 27210, ENST 27210, HIST 27712

REES 24423. Russian Encounters with Blackness: History, Literature, Politics. 100 Units.

This course provides a historical, literary, and political survey of Russia's encounters with black peoples, from the reign of Peter the Great to the administration of Vladimir Putin. Drawing on a variety of sources, including novels, autobiographies, film, media reports, and contemporary scholarly research, the course explores the concepts of race, belonging, and otherness/duality as they evolved in the varying historical contexts of Russia's encounters with "blackness." Particular attention is paid to comparisons of racialization and racial injustice in America and in Russia, as gleaned from the biographies of black "Russophiles" such as Frederick Bruce Thomas and Paul Robeson, as well as from the memoirs and writings of figures such as Alexander Pushkin, Langston Hughes, and Yelena Khanga. From classic Russian literature, to Soviet propaganda, to contemporary geopolitics, the course asks: How has "blackness" been historically understood and/or used by Russians, and what cultural and political legacies has that left in Russia's post-imperial and post-Soviet space?

Instructor(s): C. Monet Terms Offered: Autumn

REES 25001. Introduction to the Musical Folklore of Central Asia. 100 Units.

This course explores the musical traditions of the peoples of Central Asia, both in terms of historical development and cultural significance. Topics include the music of the epic tradition, the use of music for healing, instrumental genres, and Central Asian folk and classical traditions. Basic field methods for ethnomusicology are also covered. Extensive use is made of recordings of musical performances and of live performances in the area.

REES 25603. Media and Power in the Age of Putin and Trump. 100 Units.

Over the past 200 years, various political and cultural regimes of Russia have systematically exploited the gap between experience and representation to create their own mediated worlds—from the tight censorship of the imperial and Soviet periods to the propaganda of the Soviet period and the recent use of media simulacra for strategic geopolitical advantage. During this same period state control of media has been used to seclude Russia from the advancement of liberalism, market economics, individual rights, modernist art, Freud, Existentialism, and, more recently, Western discourses of inclusion, sustainability, and identity. Examining this history, it is sometimes difficult to discern whether the architects of Russian culture have been hopelessly backward or shrewd phenomenologists, keenly aware of the relativity of experience and of their ability to shape it. This course will explore the worlds that these practices produce, with an emphasis on Russia's recent confrontations with Western culture and power, and including various practices of subversion of media control, such as illegal printing and circulation. Texts for the course will draw from print, sound, and visual media, and fields of analysis will include aesthetics, cultural history, and media theory.

REES 26011-26012-26015. Introduction to Russian Civilization I-II-III.

This three-quarter sequence, which meets the general education requirement in civilization studies, provides an interdisciplinary introduction to Russian civilization. The first quarter covers the ninth century to the 1870s; the second quarter continues on through the post-Soviet period. Working closely with a variety of primary sources—from oral legends to film and music, from political treatises to literary masterpieces—we will track the evolution of Russian civilization over the centuries and through radically different political regimes. Topics to be discussed include the influence of Byzantine, Mongol-Tataric, and Western culture in Russian civilization; forces of change and continuity in political, intellectual and

cultural life; the relationship between center and periphery; systems of social and political legitimization; and symbols and practices of collective identity.

REES 26011. Introduction to Russian Civilization I. 100 Units.

The first quarter covers the ninth century to the 1870s; the second quarter continues on through the post-Soviet period. Working closely with a variety of primary sources—from oral legends to film and music, from political treatises to literary masterpieces—we will track the evolution of Russian civilization over the centuries and through radically different political regimes. Topics to be discussed include the influence of Byzantine, Mongol-Tataric, and Western culture in Russian civilization; forces of change and continuity in political, intellectual and cultural life; the relationship between center and periphery; systems of social and political legitimization; and symbols and practices of collective identity.

REES 26015. Introduction to Russian Civilization III. 100 Units.

The third quarter of Russian Civilization is a new (2020) addition to the curriculum. When taken following Introduction to Russian Civilization I and II, Introduction to Russian Civilization III meets the general education requirement in Humanities, Civilization Studies, and the Arts. The course is thematic and will vary from year to year. In spring 2021 this course will explore the nature of state socialism, or "communism"—the political and economic system that governed much of the world's population during the twentieth century—and the transition from that system to alternative modes of governance. Course material will emphasize the experience of the (former) Soviet Union and Eastern Europe, where communism as a system has disappeared most completely, but many of the lessons of transition apply also to China, Vietnam, North Korea, and Cuba. A nontrivial portion of the course covers the nature of communism, as both the tasks and obstacles of transition are determined in part by the character of the previous system. However, the bulk of the material addresses postcommunist policies, institutions, and outcomes.

Instructor(s): S. Gehlbach Terms Offered: Spring

Note(s): Students who wish to take this course for Civilization Studies Core credit must also take Russ Civ I and II.

Equivalent Course(s): SOSC 24200, HIST 14100

REES 26019. Symbolism and Cinema. 100 Units.

In his 1896 essay on cinema, Russian writer Maxim Gorky described the new medium to "madness or symbolism." The connection between cinema and symbolism was not surprising insofar as symbolism was a dominant aesthetic paradigm throughout Europe at the time. However it does suggest (perhaps surprisingly) that from the very beginning cinema was seen as a means of visualizing the non-rational, uncanny and even invisible. This course examines the relationship between symbolism and cinema with particular attention to French and Russian writings and films. Examining how symbolist aesthetics became applied to the cinematic medium, we will pay particular attention to the resources it provided for conceptualizing the uncanny and the mystical. We will question whether there exists a distinct symbolist tradition in film history and how it relates to notions of poetic or experimental cinema. Films will represent a broad cross-section of European (and some American) cinema, from Jean Epstein to Sergei Eisenstein and Alexander Dovzhenko, and from Stan Brakhage to Andrei Tarkovsky.

Equivalent Course(s): CMST 35514, CMST 25514, REES 36019

REES 26024. Trans-bodies in Horror Cinema. 100 Units.

Films presenting trans bodies or "psyches" have historically often othered these as "monstrous," and compelled a sense of the inevitable tragedy of living in sexual fluidity. To fully contemplate such expressions of horror, tragedy, or pity, the course will screen and discuss films such as *Psycho* (Alfred Hitchcock, 1960), *Dressed to Kill* (Brian DePalma, 1980), *Sleepaway Camp* (Robert Hiltzick, 1983), *Silence of the Lambs* (Jonathan Demme, 1991), *The Skin I Live In* (Pedro Almadovar, 2011), *Predestination* (Michael and Peter Spierig, 2014) but also considers films of the trans body made ostensibly more calculable, at least in terms of moral and ethical stability, such as *Robocop*, the *Alien* films of Ridley Scott, *Ghost in the Shell* (Sanders, 2017), and the online choice map game *Detroit Become Human*. The course is dedicated foremost to rupturing binary thinking (as a form of nonage) and the critical theory that will ballast our readings includes selections from Haraway, Halberstam, Garber, Benschoff, Reese's *The Fourth Age*, Schelde's *Androids*, *Humanoids*, and *Other Science Fiction Monsters*, and Foucault's *Abnormal*.

Instructor(s): Malynne Sternstein Terms Offered: Spring

Note(s): This course counts as a 'Problems' course for GNSE majors.

Equivalent Course(s): CMST 20703, GNSE 20103

REES 26064. Revolution. 100 Units.

Revolution primarily denotes radical political change, but this definition is both too narrow and too broad. Too broad, because since the late eighteenth century revolution has been associated specifically with an emancipatory politics, from American democracy to Soviet communism. Too narrow, because revolutionary political change is always accompanied by change in other spheres, from philosophy to everyday life. We investigate the history of revolution from 1776 to the present, with a particular focus on the Bolshevik revolution of 1917, in order to ascertain how social revolutions have been constituted, conducted, and enshrined in political and cultural institutions. We also ask what the conditions and prospects of revolution are today. Readings will be drawn from a variety of fields, from philosophy to social history. Most readings will be primary documents, from Rousseau and Marx to Bill Ayers, but will also include major statements in the historiography of revolution.

Instructor(s): Robert Bird Terms Offered: TBD

Equivalent Course(s): REES 36070, HIST 23707, HIST 33707

REES 26068. The Underground: Alienation, Mobilization, Resistance. 100 Units.

The ancient and multivalent image of the underground has crystallized over the last two centuries to denote sites of disaffection from-and strategies of resistance to-dominant social, political and cultural systems. We will trace the development of this metaphor from the Underground Railroad in the mid-1800s and the French Resistance during World War II to the Weather Underground in the 1960s-1970s, while also considering it as a literary and artistic concept, from Fyodor Dostoevsky's *Notes from the Underground* and Ellison's *Invisible Man* to Chris Marker's film *La Jetée* and Andrei Tarkovsky's *Stalker*. Alongside with such literary and cinematic tales, drawing theoretical guidance from refuseniks from Henry David Thoreau to Guy Debord, this course investigates how countercultural spaces become-or fail to become-sites of political resistance, and also how dissenting ideologies give rise to countercultural spaces. We ask about the relation between social deviance (the failure to meet social norms, whether willingly or unwittingly) and political resistance, especially in the conditions of late capitalism and neo-colonialism, when countercultural literature, film and music (rock, punk, hip-hop, DIY aesthetics etc.) get absorbed into-and coopted by-the hegemonic socio-economic system. In closing we will also consider contemporary forms of dissidence-from Pussy Riot to Black Lives Matter-that rely both on the vulnerability of individual bodies and global communication networks.

Instructor(s): R. Bird Terms Offered: Spring

Equivalent Course(s): CMST 34568, REES 36068, CMST 24568, SIGN 26012

REES 26077. Russian Modernist Theater. 100 Units.

Russian Modernist Theater explores the theory and practice of the new stage forms developed in Russia from 1900 to 1940. The course begins with the Stanislavsky school, and then delves deeply into the more experimental work of Meyerhold and his generation and the first attempts to create a revolutionary Soviet theater in the 1920s. The course will include a production, which will be scaled to the number and ambitions of the enrolled students. Course requirements can be met through the writing of a conventional paper, or through the production, via set or costume design, dramaturgy, performance, or staging. Each of these production assignments will require a write-up relating the work to the course materials and discussions.

Instructor(s): William Nickell Terms Offered: TBD

Equivalent Course(s): REES 36077

REES 26080. Lost Histories of the Left. 100 Units.

When most Americans think about "the left," Marxism, Soviet state socialism, or European social democracy spring to mind. This class will explore alternative-but now largely forgotten-blueprints for revolutionizing the political and social order that emerged in the nineteenth century. We will pay special attention to utopian socialism, early anticolonial movements, the Jewish Labor Bund, and anarchism. Examining the intellectual underpinnings of these movements, their influence on the modern world, and the factors that led to their demise, we will also consider what lessons they can teach to those committed to realizing a better future today.

Instructor(s): F. Hillis Terms Offered: Winter

Equivalent Course(s): JWSC 29626, HIST 29426, HIST 39426, REES 36080

REES 26660. The Rise of the Global New Right. 100 Units.

This course traces the intellectual genealogies of the rise of a Global New Right in relation to the contexts of late capitalist neoliberalism, the fall of the Soviet Union, as well as the rise of social media. The course will explore the intertwining political and intellectual histories of the Russian Eurasianist movement, Hungarian Jobbik, the American Traditional Workers Party, the French GRECE, Greek Golden Dawn, and others through their published essays, blogs, vlogs and social media. Perhaps most importantly, the course asks: can we use f-word (fascism) to describe this problem? In order to pose this question we will explore the aesthetic concerns of the New Right in relation to postmodern theory, and the affective politics of nationalism. This course thus frames the rise of a global new right interdisciplinary and comparatively as a historical, geopolitical and aesthetic problem.

Instructor(s): Leah Feldman Terms Offered: Autumn

Equivalent Course(s): ENGL 26660, REES 36661, CRES 36660, CRES 26660, SIGN 26050, ENGL 36661, CMLT 26660, CMLT 36660

REES 27019. Holocaust Object. 100 Units.

In this course, we explore various ontological and representational modes of the Holocaust material object world as it was represented during World War II. Then, we interrogate the post-Holocaust artifacts and material remnants, as they are displayed, curated, controlled, and narrated in the memorial sites and museums of former ghettos and extermination and concentration camps. These sites which-once the locations of genocide-are now places of remembrance, the (post)human, and material remnants also serve educational purposes. Therefore, we study the ways in which this material world, ranging

from infrastructure to detritus, has been subjected to two, often conflicting, tasks of representation and preservation, which we view through a prism of authenticity. In order to study representation, we critically engage a textual and visual reading of museum narrations and fiction writings; to tackle the demands of preservation, we apply a neo-materialist approach. Of special interest are survivors' testimonies as appended to the artifacts they donated. The course will also equip you with salient critical tools for future creative research in Holocaust studies.

REES 27021. The Rise and Demise of Polish Chicago: Reading Polonia's Material Culture. 100 Units.

Chicago claims to have the largest Polish and Polish-American population in the US and yet the city's distinctly Polish neighborhoods are now only history as their population has dispersed or moved to the suburbs. This course explores the diminishing presence of Poles against the lasting input of the material culture which they introduced to the urban spaces of Chicago. The course is framed by the fundamentals of thing discourse and employs the mediums of sculpture, fashion, photography, architecture and topography of the Polish community in Chicago through several field trips. The course's main goal is to map the evolution of the former Polish neighborhoods which often concluded with the erasure of their distinct ethno-space. In order to grasp the status of such changes, students take several field trips to the former Polish neighborhoods and visit their existing architectural landmarks and cultural institutions. Towards the end of the course, students conduct several interviews with Polish Chicagoans from the postwar and Solidarity immigrations. The course concludes with a capstone project for which students will make a virtual collection of artifacts designed as a curio cabinet filled with objects they found, created, and purchased during their research and field trips.

Instructor(s): Bozena Shallcross Terms Offered: Winter

Prerequisite(s): Students must attend several panels of their choice during the conference entitled, "What They Brought / What They Changed: Material Culture and Polish Chicago," on December 2-4, 2020.

Equivalent Course(s): REES 37021, ARCH 27021

REES 27026. Kieslowski: The Decalogue. 100 Units.

In this class, we study the monumental series "The Decalogue" by one of the most influential filmmakers from Poland, Krzysztof Kieślowski. Without mechanically relating the films to the Ten Commandments, Kieślowski explores the relevance of the biblical moral rules to the state of modern man forced to make ethical choices. Each part of the series contests the absolutism of moral axioms through narrative twists and reversals in a wide, universalized sphere. An analysis of the films will be accompanied by readings from Kieślowski's own writings and interviews, including criticism by Žižek, Insdorf, and others.

Instructor(s): Bozena Shallcross Terms Offered: Autumn

Equivalent Course(s): CMST 26705, REES 37026, FNDL 24003, CMST 36705

REES 29009. Balkan Folklore. 100 Units.

Vampires, fire-breathing dragons, vengeful mountain nymphs. 7/8 and other uneven dance beats, heart-rending laments, and a living epic tradition. This course is an overview of Balkan folklore from historical, political, and anthropological perspectives. We seek to understand folk tradition as a dynamic process and consider the function of different folklore genres in the imagining and maintenance of community and the socialization of the individual. We also experience this living tradition firsthand through visits of a Chicago-based folk dance ensemble, "Balkan Dance."

Instructor(s): A. Ilieva Terms Offered: Winter

Equivalent Course(s): REES 39009, ANTH 25908, CMLT 23301, NEHC 30568, NEHC 20568, ANTH 35908, CMLT 33301

REES 29010. Strangers to Ourselves: Emigre Literature and Film from Russia and Southeast Europe. 100 Units.

Being alienated from myself, as painful as that may be, provides me with that exquisite distance within which perverse pleasure begins, as well as the possibility of my imagining and thinking," writes Julia Kristeva in "Strangers to Ourselves," the book from which this course takes its title. The authors whose works we are going to examine often alternate between nostalgia and the exhilaration of being set free into the breathless possibilities of new lives. Leaving home does not simply mean movement in space. Separated from the sensory boundaries that defined their old selves, immigrants inhabit a warped, fragmentary, disjointed time. Immigrant writers struggle for breath-speech, language, voice, the very stuff of their craft resounds somewhere else. Join us as we explore the pain, the struggle, the failure, and the triumph of emigration and exile. Vladimir Nabokov, Joseph Brodsky, Marina Tsvetaeva, Nina Berberova, Julia Kristeva, Alexander Hemon, Dubravka Ugrešić, Norman Manea, Miroslav Penkov, Ilija Trojanow, Tea Obreht.

Instructor(s): A. Ilieva Terms Offered: Spring

Equivalent Course(s): CMLT 36912, REES 39010, CMLT 26912

REES 29013. The Burden of History: The Nation and Its Lost Paradise. 100 Units.

What makes it possible for the imagined communities called nations to command the emotional attachments that they do? This course considers some possible answers to Benedict Anderson's question on the basis of material from the Balkans. We will examine the transformation of the scenario of paradise, loss, and redemption into a template for a national identity narrative through which South East European nations retell their Ottoman past. With the help of Žižek's theory of the subject as constituted by trauma and Kant's notion of the sublime, we will contemplate the national fixation on the trauma of loss and the dynamic between victimhood and sublimity.

Instructor(s): A. Ilieva Terms Offered: Autumn

Equivalent Course(s): NEHC 30573, HIST 24005, CMLT 23401, REES 39013, CMLT 33401, HIST 34005, NEHC 20573

REES 29018. Imaginary Worlds: The Fantastic and Magic Realism in Russia and Southeastern Europe. 100 Units.

In this course, we will ask what constitutes the fantastic and magic realism as literary genres while reading some of the most interesting writings to have come out of Russia and Southeastern Europe. While considering the stylistic and narrative specificities of this narrative mode, we also think about its political functions -from subversive to escapist, to supportive of a nationalist imaginary-in different contexts and at different historic moments in the two regions.

Instructor(s): Angelina Ilieva Terms Offered: Spring

Equivalent Course(s): CMLT 37701, REES 39018, CMLT 27701

REES 29021. The Shadows of Living Things: The Writings of Mikhail Bulgakov. 100 Units.

What would your good do if evil did not exist, and what would the earth look like if all the shadows disappeared? After all, shadows are cast by things and people.... Do you want to strip the earth of all the trees and living things just because of your fantasy of enjoying naked light?" asks the Devil. Mikhail Bulgakov worked on his novel *The Master and Margarita* throughout most of his writing career, in Stalin's Moscow. Bulgakov destroyed his manuscript, re-created it from memory, and reworked it feverishly even as his body was failing him in his battle with death. The result is an intense contemplation on the nature of good and evil, on the role of art and the ethical duty of the artist, but also a dazzling world of magic, witches, and romantic love, and an irresistible seduction into the comedic. Laughter, as shadow and light, as the subversive weapon but also as power's whip, grounds human relation to both good and evil. Brief excursions to other texts that help us better understand *Master and Margarita*.

Instructor(s): A. Ilieva Terms Offered: Spring

Equivalent Course(s): REES 39021, FNDL 29020

REES 29023. Returning the Gaze: The West and the Rest. 100 Units.

Aware of being observed. And judged. Inferior... Abject... Angry... Proud... This course provides insight into identity dynamics between the "West," as the center of economic power and self-proclaimed normative humanity, and the "Rest," as the poor, backward, volatile periphery. We investigate the relationship between South East European self-representations and the imagined Western gaze. Inherent in the act of looking at oneself through the eyes of another is the privileging of that other's standard. We will contemplate the responses to this existential position of identifying symbolically with a normative site outside of oneself-self-consciousness, defiance, arrogance, self-exoticization-and consider how these responses have been incorporated in the texture of the national, gender, and social identities in the region. Orhan Pamuk, Ivo Andrić, Nikos Kazantzakis, Aleko Konstantinov, Emir Kusturica, Milcho Manchevski.

Instructor(s): Angelina Ilieva Terms Offered: Winter

Equivalent Course(s): HIST 23609, NEHC 39023, REES 39023, NEHC 29023, HIST 33609, CMLT 39023, CMLT 29023

REES 29024. States of Surveillance. 100 Units.

What does it feel to be watched and listened to all the time? Literary and cinematic works give us a glimpse into the experience of living under surveillance and explore the human effects of surveillance - the fraying of intimacy, fracturing sense of self, testing the limits of what it means to be human. Works from the former Soviet Union (Solzhenitsyn, Abram Tertz, Mungiu), Bulgaria (Valeri Petrov), and Albania (Ismail Kadare).

Instructor(s): Angelina Ilieva Terms Offered: Spring

Equivalent Course(s): CMLT 29024, CMLT 39024, REES 39024

REES 29025. Voices of Alterity and the Languages of Immigration. 100 Units.

This course investigates the individual experience of immigration: how do immigrants recreate themselves in this alien world in which they seem to lose part of themselves? How do they find their voice and make a place for themselves in their adoptive homes? If in the new world the immigrant becomes a new person, what meanings are still carried in traditional values and culture? How do they remember their origins and record new experiences?

Instructor(s): Angelina Ilieva Terms Offered: Spring. Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Note(s): Enrollment is based on acceptance into the Chicago Studies Quarter Program.

Equivalent Course(s): PBPL 27125, ENGL 27125, ENST 27125, HIST 27710, CMLT 27125

REES 29700. Reading/Research: Russian and Eastern European Studies. 100 Units.

This is an independent study course which is arranged, planned, and managed by a supervising professor in conjunction with the goals that are proposed by the student, and then refined and approved by the supervising professor. This course involves more student self-discipline and a greater sense of direction than do most courses - the student must be willing to plan and execute his/her activities with much less monitoring and without prompting by fellow classmates. The student and the professor discuss and propose goals, topics, and projects.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of instructor and Departmental Adviser

Note(s): Students are required to submit the College Reading and Research Course Form.

REES 29701. Reading/Research: Russian and Eastern European Studies II. 100 Units.

This is the second part of an independent study course which is arranged, planned, and managed by a supervising professor in conjunction with the goals that are proposed by the student, and then refined and approved by the supervising professor.

This course involves more student self-discipline and a greater sense of direction than do most courses--the student must be willing to plan and execute his/her activities with much less monitoring and without prompting by fellow classmates. The student and the professor discuss and propose goals, topics, and projects.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

REES 29702. Reading/Research: Russian and Eastern European Studies III. 100 Units.

This is the third part of an independent study course which is arranged, planned, and managed by a supervising professor in conjunction with the goals that are proposed by the student, and then refined and approved by the supervising professor. This course involves more student self-discipline and a greater sense of direction than do most courses - the student must be willing to plan and execute his/her activities with much less monitoring and without prompting by fellow classmates. The student and the professor discuss and propose goals, topics, and projects.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of instructor.

REES 29801. Intercultural Adaptation: Kurosawa and His Russian Sources. 100 Units.

Equivalent Course(s): CMLT 21704

REES 29815. Russian Anarchists, Revolutionary Samurai: Introduction to Russian-Japanese Intellectual Relations. 100 Units.

This course introduces a current of Russian-Japanese exchange and cross-fertilization of ideas running from the late nineteenth century to now. Our focus will be on the historical role that Russia came to play in anarchist movement in Japan. We will read such revolutionary intellectuals as Lev Mechnikov, Peter Kropotkin, and Lev Tolstoy; compare the visions of civilizational progress of the state modernizer Fukuzawa Yukichi and Japanese anarchists K#toku Sh#sui and #sugi Sakae; and study the post-WW II continuation of the anarchist tradition in the films of Kurosawa Akira, music of Takemitsu Toru, and writings of #e Kenzabur#.

Instructor(s): Olga Solovieva Terms Offered: Spring

Equivalent Course(s): EALC 29710, EALC 39710, CMLT 39710, CMLT 29710, REES 39815

REES 29900. BA Paper Workshop. 100 Units.

Students pursuing honors must write an acceptable BA paper in their final year under the supervision of a faculty member in the Department of Slavic Languages and Literatures. At the latest by the Autumn Quarter, students should begin the BA process by consulting with the director of undergraduate studies. Students may register for the BA Paper seminar (REES 29900 BA Paper Workshop) with the approval of the BA supervisor. This course will confer general College elective credit, but it will not count toward the major. If the completed bachelor's paper is judged by the supervisor and a second faculty member to be a distinguished example of original research or criticism, the student is recommended to the College for graduation with honors in Russian and East European Studies. The final decision regarding the granting of any degree with honors rests with the Collegiate divisional master.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

REES 29912. Special Topics in Advanced Russian. 100 Units.

Must complete Advanced Russian through Media or equivalent, or obtain consent of instructor. Class meets for 2 hours each week. We'll work with several topics, all of them are relevant to the general theme of "Geography and Worldview: Russian Perspective". There will be maps, reading materials, several documentaries, clips from TV programs and other media, and feature films. Class meetings will be a combination of group discussions, short presentations, and lectures. Final - one term paper at the end (in English) based on Russian materials.

Instructor(s): Valentina Pichugin Terms Offered: Spring

Equivalent Course(s): RUSS 29912, REES 39912, RUSS 39912

REES 29913. Special Topics in Bosnian/Croatian/Serbian I. 100 Units.

The course is designed to meet the specific needs of advanced learners of Bosnian/Croatian/Serbian, including heritage and native speakers, and to foster cross-cultural experiences through interdisciplinary content. The curriculum covers a wide range of topics relative to the students' field of study, research and personal interests. Although grounded in the field of philology, it expands students' knowledge in other disciplines of social and behavioral sciences such as history, anthropology, global studies, economics, political science, sociology, and the like. Attention is given to the ability to paraphrase scholarly arguments, formulate research hypotheses, and present research in the target language. The course delves into advanced grammatical topics with the goal of increasing proficiency in both aural and reading comprehension, in addition to honing writing and speaking styles. Classes are conducted in BCS. The prerequisite is three years of formal study of the target language or the equivalent.

Instructor(s): Nada Petkovic Terms Offered: Autumn

Equivalent Course(s): REES 39913, BCSN 39910, BCSN 29910

REES 29914. Special Topics in Bosnian/Croatian/Serbian II. 100 Units.

The course is designed to meet the specific needs of advanced learners of B/C/S, including heritage and native speakers, and to foster cross-cultural experiences through its interdisciplinary content. The curriculum covers a wide range of topics relative to the students' field of study, research and personal interests. Although grounded in the field of philology, it expands students' knowledge in other disciplines of social and behavioral sciences such as history, anthropology, global studies, economics, political science, sociology, and the like. Attention is given to the ability to paraphrase scholarly arguments, formulate research hypotheses, and present one's research in the target language. The course delves into advanced grammatical topics with the goal of increasing proficiency in both aural and reading comprehension, in addition to honing writing and speaking styles. Classes are conducted in B/C/S; the prerequisite is three years of formal study of the target language or the equivalent.

Instructor(s): Nada Petkovic Terms Offered: Winter

Equivalent Course(s): BCSN 39911, BCSN 29911, REES 39914

REES 29915. Special Topics in Bosnian/Croatian/Serbian III. 100 Units.

The course is designed to meet the specific needs of advanced learners of B/C/S, including heritage and native speakers, and to foster cross-cultural experiences through its interdisciplinary content. The curriculum covers a wide range of topics relative to the students' field of study, research and personal interests. Although grounded in the field of philology, it expands students' knowledge in other disciplines of social and behavioral sciences such as history, anthropology, global studies, economics, political science, sociology, and the like. Attention is given to the ability to paraphrase scholarly arguments, formulate research hypotheses, and present one's research in the target language. The course delves into advanced grammatical topics with the goal of increasing proficiency in both aural and reading comprehension, in addition to honing writing and speaking styles. Classes are conducted in B/C/S; the prerequisite is three years of formal study of the target language or the equivalent.

Instructor(s): Nada Petkovic Terms Offered: Spring

Equivalent Course(s): BCSN 39912, BCSN 29912, REES 39915

Sociology

Department Website: <http://sociology.uchicago.edu>

Program of Study

The discipline of sociology explores the nature, structure, and dynamics of social life, and also its causes and consequences for the world. With this broad mandate, sociology encompasses a diversity of substantive interests, methodological approaches, and theoretical orientations. Sociologists study diverse social phenomena ranging from online conversations, friendship, and families to neighborhoods, governments, and global markets. They study cities and communities, inequality, social mobility and social class, patterns of population change and migration, social identities such as race, class, and gender, ethnic relations and social conflict, social media and digital interaction, and social dimensions of sex, health, business, education, law, politics, religion, and science. Sociologists study the emergence, stabilization, disintegration, and wide-ranging implications of these social institutions, behaviors, and meanings. Methodologies of the field range from ethnography, interviews, and historical research to surveys, computational modeling, and big data analysis.

The University of Chicago's sociology department was the first in the United States, and it stewards the *American Journal of Sociology*, the discipline's longest running sociology journal. Chicago sociology builds on these legacies by continuing to sponsor pathbreaking research. Chicago training in sociology confers deep understanding of social organization and human relations, along with skill in drawing inferences from data, which has made it attractive for students considering careers in business, social media, data science, education, law, marketing, medicine, journalism, social work, politics, public administration, and urban planning. Chicago's sociology education forms an excellent basis for specialized graduate work and affords entry to careers in federal, state, and local agencies, as well as into business enterprises, private foundations, and research institutes. Chicago's sociology program provides a preeminent foundation for students considering careers in advanced research and university teaching. The program is designed to meet the needs of diverse students, and students declare a student-designed specialty that reflects their course work and BA thesis research, such as *social policy* or *social analytics*.

Program Requirements

Students pursuing a BA degree in sociology are expected to complete the following requirements. All required sociology courses are offered annually, and students should inquire directly of the director of undergraduate studies if they need to know when a course will be offered in the next academic year.

A. Social Theory

Two required courses acquaint students with some of the fundamental problems and analytic perspectives of the field of sociology.

SOCI 20002 Social Structure and Change. The central objective of this course is to introduce students to the sociological study of individuals in society—how individual actions are shaped by their position in society, while contributing to its structure and change. We focus on sociological approaches to American society, its position in the international system, and principal dimensions including race and ethnicity, age, gender, and social class.

SOCI 20005 Sociological Theory. Drawing on the classics as well as on contemporary works in sociological theory, this course raises questions about the nature of sociological theory and its relation to both empirical research and sociological inquiry. Authors include Weber, Durkheim, Simmel, Dewey, Parsons, and Merton.

With the approval of the undergraduate program director, students may use other courses toward this requirement.

B. Methodology

Students are required to take at least one of the following methodology courses.

SOCI 20001 Sociological Methods. This course introduces the philosophy and practice of social research. It explores questions of causality in social research and the limits of knowledge. It then covers the basic practices that are components of all methods of social research through an in-depth examination of interviews, ethnography, surveys, and archival, online, and computational research. Students spend the quarter working on a series of assignments that culminate in a research proposal for the BA thesis.

SOCI 20140 Qualitative Field Methods. This course introduces techniques and approaches to ethnographic field research. Emphasis is placed on quality of attention and awareness of perspective as foundational aspects of the craft. Students conduct research at a site, compose and share field notes, and produce a final paper distilling sociological insight from fieldwork.

C. Statistics

Students must take the following statistics requirement.

SOCI 20004 Statistical Methods of Research. This required course provides a comprehensive introduction to widely used quantitative methods in sociology and related social sciences. Topics include analysis of variance and multiple regression, tools used often by practicing social scientists. Substitutes for this course are STAT 20000 Elementary Statistics or higher. Students with AP examination credit for Statistics may count it toward this requirement, although we encourage such students to take an additional social science statistics course.

D. Additional Courses

Students must take seven additional courses in sociology or related fields, and at least four of these must be in sociology. They may be drawn from any of the 20000-level courses in sociology and, after the student completes SOCI 20002 Social Structure and Change, from any 30000-level courses in sociology that have not been cross listed with undergraduate course numbers. Students may also count graduate courses (e.g., 40000-level or higher) in which they may enroll with permission of course instructors toward this requirement.

Courses outside of sociology must be approved by the undergraduate program director. Students must submit the College's General Petition Form (<https://college.uchicago.edu/advising/forms-and-petitions/>) for review. With a few exceptions, courses offered in the Division of the Social Sciences are accepted. Other courses with significant social science content or special relevance to a student's BA thesis may also be accepted.

Area of Specialization. At least three of the additional courses in sociology or related fields, outlined above, must comprise a self-defined area of specialization. Students will declare a specialization which reflects an emphasis of their course work and BA thesis research. Students in the Class of 2019 and beyond are required to develop a specialization; students in the Classes of 2017 and 2018 may elect to do so.

Students are encouraged to consider their specialization from the time that they enter the program in order to guide their selection of courses and prepare them for the substantial research project of the BA thesis. Students formally propose their specialization at the start of their penultimate quarter of residence (ordinarily, this will be due in January of the student's fourth year). The proposal should include a theme with three (or more) courses in sociology or related fields that students have completed or are completing within that domain. These proposals are to be submitted on the College's General Petition Form (<https://college.uchicago.edu/advising/forms-and-petitions/>) and must be approved by the undergraduate program director. Some examples of specializations might be:

- **Urban Studies** (e.g., SOCI 20215 Urban Health, SOCI 20219 Urban Ethnography, SOCI 20221 Crime and the City)
- **Social Policy** (e.g., SOCI 20192 The Effects of Schooling, PBPL 22300 Policy Implementation)
- **Gender and Sexuality** (e.g., SOCI 20107 Sociology of Human Sexuality, SOCI 20175 The Sociology of Deviant Behavior, GNSE 10310 Theories of Gender and Sexuality)
- **Organizations** (e.g., SOCI 20101 Organizational Analysis, PLSC 27500 Organizational Decision Making, ECON 28000 Industrial Organization)
- **Social Analytics** (e.g., SOCI 20157 Mathematical Models, SOCI 20209 Culture and Social Networks, STAT 22600 Analysis of Categorical Data)
- **Demography** (e.g., SOCI 28062 American Families: Inequality and Change, SOCI 20103 Social Stratification)

E. BA Thesis

During their fourth year, students majoring in sociology are expected to complete an original project of sociological inquiry on a topic of their choice, culminating in a final paper from twenty to forty pages in length. The project is an independent research project in which questions are formulated and data are collected and analyzed by the student. Recent projects have included studies of emerging forms of social interaction on the Internet, conflict and safety in urban Chicago neighborhoods, immigration and national identity in Germany and Guatemala, processes of gendering in the workplace, homosexuality and AIDS in South Africa, church leadership transition among Korean immigrants, the power of public rhetoric in public housing, role models among Mexican American youth, gender roles in families of graduate students, peer pressure and teenage pregnancy, and attitudes toward immigration.

The senior project is written under the guidance of an assigned preceptor from the department and a faculty member that students select during Spring Quarter of SOCI 29998 Sociology BA Thesis Seminar. After a faculty member agrees to advise a student's thesis, the student will have the faculty member sign a hard copy of the *BA Thesis Faculty Advisor Consent Form* available for printing at sociology.uchicago.edu/sites/sociology.uchicago.edu/files/AdvisorConsentForm_0.pdf (https://sociology.uchicago.edu/sites/sociology.uchicago.edu/files/AdvisorConsentForm_0.pdf), which is to be turned in to the Department of Sociology office. Students may register for additional reading courses (SOCI 29997 Readings in Sociology); however, only two sociology reading/research courses can be counted toward courses required for the sociology major.

BA Seminar. The senior project is researched, discussed, and written in the context of SOCI 29998 Sociology BA Thesis Seminar, which is a required yearlong course. *Students are required to attend this senior seminar in Spring Quarter of their third year and in the Autumn and Winter Quarters of their fourth year, but they must register for the seminar in only one of the three terms.* Students who plan to study abroad during any of these quarters must still participate in the seminar by completing required assignments and submitting them online and on time. The completed thesis is submitted during Spring Quarter of their fourth year. Students graduating in a quarter other than Spring Quarter must turn in their theses by Friday of seventh week of their final quarter. When circumstances justify it, the department may set individual deadlines and procedures.

Summary of Requirements

Two of the following:

SOCI 20002	Social Structure and Change
------------	-----------------------------

SOCI 20005	Sociological Theory	
or approved substitute		
One of the following:		100
SOCI 20001	Sociological Methods	
SOCI 20140	Qualitative Field Methods	
SOCI 20004	Statistical Methods of Research **	100
Three approved courses in an area of specialization *		300
Four additional courses in sociology or related fields *		400
SOCI 29998	Sociology BA Thesis Seminar	100
Total Units		1200

* No more than three courses from outside sociology and no more than two reading and research courses may be used toward the major. Students must submit the College's General Petition Form (<https://college.uchicago.edu/advising/forms-and-petitions/>) for approval of courses outside sociology. See 'Additional Courses' section for details.

** May substitute STAT 20000 or higher

Grading

All courses required for completion of the sociology program must be taken for quality grades (e.g., not P/F).

Honors

If the student's cumulative GPA is at or above 3.25 and the student's GPA in the major is at or above 3.5, the student may be nominated for graduation with honors on the basis of the excellence of the thesis. The thesis must be based on *substantial individual research* conducted under the guidance of a faculty member, and it must be evaluated both by the student's adviser and by the program chair at A- or A.

Entering the Major

No special application is required for admission to the sociology program, but students should discuss their plans with their College adviser prior to declaring the major. They must then declare their intention to major at my.uchicago.edu (<http://my.uchicago.edu>) and inform the Department of Sociology at sociology.uchicago.edu/content/majoring-sociology-intake-form (<https://sociology.uchicago.edu/content/majoring-sociology-intake-form/>), which includes a short entry survey. Students may enter the program at any time upon completion of any social sciences general education sequence, but no later than the beginning of Spring Quarter in their third year.

Students are encouraged to complete the required introductory sociology courses (SOCI 20002 Social Structure and Change and SOCI 20005 Sociological Theory) as early as possible, and to enroll in a required methodology course by Spring Quarter of their third year, the quarter in which students begin SOCI 29998 Sociology BA Thesis Seminar.

Advising

Students should address technical questions regarding the program (e.g., required courses, petitions) to the undergraduate program director. During Spring Quarter of the third year, students will also select a faculty member to serve as adviser. Students may wish to contact their faculty adviser to address general questions regarding the discipline of sociology and to receive guidance in designing an individualized program of study and selecting a specialization.

Handbook

Students interested in pursuing the BA degree in sociology are encouraged to read the brochure *Undergraduate Program in Sociology*, which is available in the Office of the Department of Sociology (SS 307).

Sociology Courses

SOCI 20000. Invitation to Sociology. 100 Units.

What do sociologists do all day? This course introduces students to the vast terrain of contemporary sociology, including: culture, deviance, economic life, education, family, health and the body, politics, population, professions, race, science and knowledge, and sex/gender, employing institutionalization as a basic lens that leads sociology to have a somewhat different approach from other social sciences. Why an invitation? Unlike introductory courses that cover 10 topics in 10 weeks with an emphasis on foundational texts, students will get to know sociology by reading and analyzing a rotating selection of books and articles that exemplify the field today. Students will complete exercises and write-ups that link claims about the social world to evidence. Throughout the quarter, class format takes a variety of forms, including lectures, informal presentations, student-led discussions, debates, and guest speakers.
Instructor(s): J. Martin and J. Trinitapoli Terms Offered: Spring. Not offered in 2020/2021

SOCI 20001. Sociological Methods. 100 Units.

This course introduces the philosophy and practice of social research. Working from the idea that the research process is fundamentally a critical dialogue, we begin by exploring questions of causality and the epistemology of social research. Then we turn to examine the basic practices that are a component of all methods of social research through an in-depth examination of interviews, ethnography, surveys, and archival research. Assignments culminate in a research proposal for the BA thesis.
Instructor(s): D. Zhao Terms Offered: Winter

Note(s): Required of students who are majoring in Sociology

SOCI 2002. Social Structure and Change. 100 Units.

This course introduces students to the main principles of sociological thought and research through an exploration of social action, social structures, social reproduction, and social transformation. These themes are explored through a range of sociological works addressing diverse substantive issues including but not restricted to social class, racialization, the construction of gender and sexuality, globalization and global capitalism.

Instructor(s): J. Go Terms Offered: Winter

Note(s): Required of students who are majoring in Sociology

SOCI 2004. Statistical Methods of Research. 100 Units.

This course provides a comprehensive introduction to widely used quantitative methods in sociology and related social sciences. Topics include analysis of variance and multiple regression, considered as they are used by practicing social scientists.

Instructor(s): S. Raudenbush Terms Offered: Winter

Prerequisite(s): Priority registration for Ugrad Sociology majors and Sociology PhD students. No prior instruction in statistical analysis is required. Others by consent of instructor.

Note(s): Students are expected to attend two lectures and one lab per week. Required of students who are majoring in Sociology

Equivalent Course(s): SOCI 30004

SOCI 2005. Sociological Theory. 100 Units.

The course provides a basic introduction to modern sociological theory. Readings focus on classical texts by Marx, Weber, Durkheim, Simmel, Polanyi, Foucault, Bourdieu, Goffman ending with an individually chosen (by each student) text by a theoretical writer from outside Europe or North America. Lectures provide a background history of modern social thought.

Instructor(s): A. Gleaser Terms Offered: Spring

Note(s): Required of students who are majoring in Sociology.

SOCI 20103. Social Stratification. 100 Units.

Social stratification is the unequal distribution of the goods that members of a society value - earnings, income, authority, political power, status, prestige etc. This course introduces various sociological perspectives about stratification. We look at major patterns of inequality throughout human history, how they vary across countries, how they are formed and maintained, how they come to be seen as legitimate and desirable, and how they affect the lives of individuals within a society. The readings incorporate classical theoretical statements, contemporary debates, and recent empirical evidence. The information and ideas discussed in this course are critical for students who will go on in sociology and extremely useful for students who want to be informed about current social, economic, and political issues.

Instructor(s): R. Stolzenberg Terms Offered: Winter

Equivalent Course(s): SOCI 30103

SOCI 20104. Urban Structure and Process. 100 Units.

This course reviews competing theories of urban development, especially their ability to explain the changing nature of cities under the impact of advanced industrialism. Analysis includes a consideration of emerging metropolitan regions, the microstructure of local neighborhoods, and the limitations of the past American experience as a way of developing urban policy both in this country and elsewhere.

Instructor(s): M. Garrido Terms Offered: Spring

Equivalent Course(s): GEOG 22700, GEOG 32700, ARCH 20104, SOSC 25100, CRES 20104, SOCI 30104, ENST 20104

SOCI 20106. Political Sociology. 100 Units.

This course provides analytical perspectives on citizen preference theory, public choice, group theory, bureaucrats and state-centered theory, coalition theory, elite theories, and political culture. These competing analytical perspectives are assessed in considering middle-range theories and empirical studies on central themes of political sociology. Local, national, and cross-national analyses are explored. The course covers readings for the Sociology Ph.D. Prelim exam in political sociology.

Instructor(s): T. Clark Terms Offered: Spring

Prerequisite(s): Completion of the general education requirement in the social sciences

Equivalent Course(s): ENST 23500, SOCI 30106, PBPL 23600

SOCI 20112. Applications of Hierarchical Linear Models. 100 Units.

A meta of diverse methodological problems such as correlates of change, analysis of multi-level data, and certain aspects of meta-analysis share a common feature—a hierarchical structure. The hierarchical linear model offers a promising approach to analyzing data in these situations. This course will survey the methodological literature in this area, and demonstrate how the hierarchical linear model can be applied to a range of problems.

Instructor(s): S. Raudenbush Terms Offered: Spring

Prerequisite(s): Applied statistics at a level of multiple regression

Equivalent Course(s): SOCI 30112, PPHA 44650, EDSO 30112

SOCI 20116. Global-Local Politics. 100 Units.

Globalizing and local forces are generating a new politics in the United States and around the world. This course explores this new politics by mapping its emerging elements: the rise of social issues, ethno-religious and regional attachments, environmentalism, gender and life-style identity issues, new social movements, transformed political parties and organized groups, and new efforts to mobilize individual citizens.

Instructor(s): T. Clark Terms Offered: Winter

Equivalent Course(s): PBPL 27900, GEOG 30116, LLSO 20116, SOCI 30116, HMRT 20116, GEOG 20116, HMRT 30116

SOCI 20120. Urban Policy Analysis. 100 Units.

This course addresses the explanations available for varying patterns of policies that cities provide in terms of expenditures and service delivery. Topics include theoretical approaches and policy options, migration as a policy option, group theory, citizen preference theory, incrementalism, economic base influences, and an integrated model. Also examined are the New York fiscal crisis and taxpayer revolts, measuring citizen preferences, service delivery, and productivity.

Instructor(s): T. Clark Terms Offered: Autumn

Equivalent Course(s): SOCI 30120, GEOG 20120, PBPL 24800, GEOG 30120

SOCI 20125. Rational Foundations of Social Theory. 100 Units.

This course introduces conceptual and analytical tools for the micro foundations of macro and intermediate-level social theories, taking as a basis the assumption of rational action. Those tools are then used to construct theories of power, social exchange, collective behavior, socialization, trust, norm, social decision making and justice, business organization, and family organization.

Instructor(s): K. Yamaguchi Terms Offered: Spring

Equivalent Course(s): SOCI 30125

SOCI 20140. Qualitative Field Methods. 100 Units.

This course introduces techniques of, and approaches to, ethnographic field research. We emphasize quality of attention and awareness of perspective as foundational aspects of the craft. Students conduct research at a site, compose and share field notes, and produce a final paper distilling sociological insight from the fieldwork.

Instructor(s): O. McRoberts Terms Offered: Spring

Equivalent Course(s): CHDV 20140, CRES 20140

SOCI 20179. Labor Force and Employment. 100 Units.

This course introduces key concepts, methods, and sources of information for understanding the structure of work and the organization of workers in the United States and other industrialized nations. We survey social science approaches to answering key questions about work and employment, including: What is the labor force? What determines the supply of workers? How is work organized into jobs, occupations, careers, and industries? What, if anything, happened to unions? How much money do workers earn and why? What is the effect of work on health? How do workers and employers find each other? Who is unemployed? What are the employment effects of race, gender, ethnicity, and religion?

Instructor(s): R. Stolzenberg Terms Offered: Spring

Equivalent Course(s): SOCI 30179

SOCI 20192. The Effects of Schooling. 100 Units.

From at least the Renaissance until some time around the middle of the twentieth century, social class was the pre-eminent, generalized determinant of life chances in European and, eventually, American societies. Social class had great effect on one's social standing; economic well-being; political power; access to knowledge; and even longevity, health, and height. In that time, there was hardly an aspect of life that was not profoundly influenced by social class. In the ensuing period, the effects of social class have receded greatly, and perhaps have even vanished. In their place formal schooling has become the great generalized influence over who gets access to the desiderata of social life, including food, shelter, political power, and medical care. So it is that schooling is sociologically interesting for reasons that go well beyond education. The purpose of this course is to review what is known about the long-term effects of schooling.

Instructor(s): R. Stolzenberg Terms Offered: Spring

Equivalent Course(s): EDSO 20192, SOCI 30192, EDSO 30192

SOCI 20233. Race in Contemporary American Society. 100 Units.

This survey course in the sociology of race offers a socio-historical investigation of race in American society. We will examine issues of race, ethnic and immigrant settlement in the United States. Also, we shall explore the classic and contemporary literature on race and inter-group dynamics. Our investigative tools will include an analysis of primary and secondary sources, multimedia materials, photographic images, and journaling. While our survey will be broad, we will treat Chicago and its environs as a case study to comprehend the racial, ethnic, and political challenges in the growth and development of a city.

Instructor(s): S. Hicks-Bartlett Terms Offered: Autumn Spring. Autumn quarter offered at the Undergraduate level only and Spring offered at the Graduate level only

Equivalent Course(s): SOCI 30233, CRES 20233, MAPS 30233

SOCI 20251. Trade, Development and Poverty in Mexico. 100 Units.

With a focus on the past two decades, this interdisciplinary course explores the impact of economic integration, urbanization, and migration on Mexico and, to a lesser extent, on the United States—in particular, working class communities of the Midwestern Rust Belt. The course will examine work and life in the borderland production centers; agriculture, poverty, and indigenous populations in rural Mexico; evolving trade and transnational ties (especially in people, food products and labor, and drugs) between the U.S. and Mexico; and trade, trade adjustment, and immigration policy.

Instructor(s): C. Broughton Terms Offered: Winter

Note(s): This course is offered in alternate years.

Equivalent Course(s): PBPL 24901, LACS 24901

SOCI 20253. Introduction to Spatial Data Science. 100 Units.

Spatial data science consists of a collection of concepts and methods drawn from both statistics and computer science that deal with accessing, manipulating, visualizing, exploring and reasoning about geographical data. The course introduces

the types of spatial data relevant in social science inquiry and reviews a range of methods to explore these data. Topics covered include formal spatial data structures, geovisualization and visual analytics, rate smoothing, spatial autocorrelation, cluster detection and spatial data mining. An important aspect of the course is to learn and apply open source software tools, including R and GeoDa.

Instructor(s): L. Anselin and M. Kolak Terms Offered: Autumn

Prerequisite(s): STAT 22000 (or equivalent), familiarity with GIS is helpful, but not necessary

Equivalent Course(s): SOCI 30253, MACS 54000, GEOG 20500, ENST 20510, GEOG 30500

SOCI 20264. Wealth. 100 Units.

Wealth is the value of a person's accumulated possessions and financial assets. Wealth is more difficult for social researchers to measure than earnings and income, and wealthy people are notoriously uncooperative with efforts to study them and their assets. Further, wealth data conveys less information than income data about the lives of the middle- and lower-classes -- who tend to have little or no wealth at all. However, information about wealth gives fundamentally important insight into the values, attitudes, behavior, consumption patterns, social standing, political power, health, happiness and yet more characteristics of individuals and population subgroups. This course considers the causes and consequences of wealth accumulation for individuals, the social groups to which they belong, and the societies in which they dwell.

Instructor(s): R. Stolzenberg Terms Offered: Winter

Equivalent Course(s): SOCI 30264

SOCI 20283. Introduction to GIS and Spatial Analysis. 100 Units.

This course provides an introduction and overview of how spatial thinking is translated into specific methods to handle geographic information and the statistical analysis of such information. This is not a course to learn a specific GIS software program, but the goal is to learn how to think about spatial aspects of research questions, as they pertain to how the data are collected, organized and transformed, and how these spatial aspects affect statistical methods. The focus is on research questions relevant in the social sciences, which inspires the selection of the particular methods that are covered. Examples include spatial data integration (spatial join), transformations between different spatial scales (overlay), the computation of 'spatial' variables (distance, buffer, shortest path), geovisualization, visual analytics, and the assessment of spatial autocorrelation (the lack of independence among spatial variables). The methods will be illustrated by means of open source software such as QGIS and R.

Instructor(s): M. Kolak Terms Offered: Spring. Offered 2020-21

Equivalent Course(s): SOCI 30283, ENST 28702, GEOG 28702, ARCH 28702, GEOG 38702

SOCI 20292. The Social Psychology of Inequality. 100 Units.

Social inequalities hinge to a significant degree on perceptions and beliefs, fears and desires, and antipathies and affections. This course explores questions related to social inequality that lie at the intersection of sociology and psychology. How and why do individuals identify themselves with different social groups? How do beliefs, values, and norms shape social interactions? How do intergroup stereotypes, prejudice, and discrimination develop and evolve? What engenders social conflict and aggression? In this course, we will explore how social psychological theory and research might help to explain a range of different social inequalities.

Instructor(s): G. Wodtke Terms Offered: Spring

SOCI 20502. B(l)ack to the Future: Racial Visions of Tomorrow. 100 Units.

Scholars, novelists, filmmakers and social movements alike often construct visions of the future through claims about what will happen, what could happen, or what should happen. Using a diverse array of sources, this course will look specifically at the kinds of racial futures that are anticipated, feared and hoped for. We will read sociological texts, examine the use of allegory and parables by historians and social scientists, look at the visions set forth by social movements, and dissect future-oriented films, visual art, poetry and fiction all toward understanding the sociology of race in the U.S.

Instructor(s): J. Bell Terms Offered: Winter

SOCI 20503. Sociology of Race and Racism. 100 Units.

This course is designed to help students begin to develop their own informed perspectives on American racial 'problems' by introducing them to the ways that sociologists deal with race and racism in the US. We will begin by talking generally about the basic structure of racial formations in the contemporary US, the mechanisms by which they are reproduced, and possibilities for resistance and change. In the second part of the course, we will turn to the issue of popular representations of people of color in the US. We will look specifically at how African American, Asian American Latino and Native American women and men are portrayed in popular culture.

Instructor(s): J. Bell Terms Offered: Winter

SOCI 20504. Professions, Organizations, and Machines: Expertise and Power. 100 Units.

Expertise is rapidly moving from professionals to organizations and machines/artifacts. This process is fed by changes in technology as well as by economic pressures and educational trends. It has consequences for employment patterns, for expertise institutions like universities and consulting firms, for old and new professions, and for the future structure and content of knowledge itself. This lecture course will provide an overview of all aspects of this social transformation, tracing developments through the twentieth and twenty-first centuries.

Instructor(s): A. Abbott Terms Offered: Winter. Not being offered 2020/2021

Equivalent Course(s): SOCI 30504

SOCI 20505. Medical Sociology. 100 Units.

What should the social scientific study of medicine look like? What purpose should it serve? And for whom? This course focuses on these questions and encourages students to formulate their own answers to them by providing a historical overview of the development and evolution of Medical Sociology. In many ways, Medical Sociology grapples with this

tension of wanting to be relevant to the fields of mainstream medicine while staying true to sociology's focus on institutions. The course readings chronologically follow some of the major developments in the field. Along the way, students will be introduced to a variety of medical sociology research topics such as illness, social control, health care, race, and gender while learning the ethnographic, statistical, and historical methodologies deployed to investigate them.

Instructor(s): W. Lu Terms Offered: Winter

SOCI 20506. Cities, Space, Power: Introduction to urban social science. 100 Units.

This lecture course provides a broad, multidisciplinary introduction to the study of urbanization in the social sciences. The course surveys a broad range of research traditions from across the social sciences, as well as the work of urban planners, architects, and environmental scientists. Topics include: theoretical conceptualizations of the city and urbanization; methods of urban studies; the politics of urban knowledges; the historical geographies of capitalist urbanization; political strategies to shape and reshape the built and unbuilt environment; cities and planetary ecological transformation; post-1970s patterns and pathways of urban restructuring; and struggles for the right to the city.

Instructor(s): N. Brenner Terms Offered: Winter

Equivalent Course(s): ARCH 20506

SOCI 20510. Dilemmas of Development, Or Introduction to Sociology of Development. 100 Units.

This course is designed to introduce students to thinking through the historical specificity of the ubiquitous and deceptively simple term 'development'. First, we will examine the geopolitical context out of which ideas of development and underdevelopment emerged, and how that shaped the way social change and modernization was constructed. Second, drawing on a range of foundational writing, we will consider the various debates over development from post-WWII to the present, how the global economy and relationships between and within nations have changed during this period, and also the rise of the discipline of 'development studies'. Third, using sociological and anthropological work, we will critically examine the actors, policies, and socio-economic and environmental implications involved in shaping the nature of this change in Asia and Africa.

Instructor(s): S. Annavarapu Terms Offered: Winter

SOCI 20511. Ethnic Conflict in Comparative Perspective. 100 Units.

This course introduces students to contemporary debates on the significance and implications of group identification within the context of ethnic conflict. Specifically, students will come away from the course with a deep understanding of theories of group identity and will be able to use these theories to examine and compare contemporary cases of group-based violence. We will use these theories to ask questions like: are diverse societies more prone to group violence? what is the relationship between the economy and group conflict? and, what causes neighbors to turn on each other? Throughout the course students will be exposed to research from around the globe, encouraging a deeply local but constantly comparative approach to social science. Note that we will grapple with difficult issues in this course such as lynching, ethnic riots, and genocide.

Instructor(s): N. Gonzalez Terms Offered: Winter

SOCI 20512. Constructing a Global Civil Society. 100 Units.

The concepts of democracy, civil society, and human rights have become a part of our shared 'world culture' with implications for how citizens interact with governments around the world. While these ideals are ubiquitous, however, they are mobilized in very different ways at the local level. This course challenges students to think about implications of applying the international culture of human rights and civil society to non-Western countries. The course will explore the development of civil society of democratizing and semi-authoritarian regimes, and the international pressures that shape its structure and influence at the local level. Students will develop a foundational understanding of theories of civil society and their relationship to social change, while recognizing both the benefits and countries derive from international narratives and the complexity that comes with such applications.

Instructor(s): N. Gonzalez Terms Offered: Spring

SOCI 20513. Beyond Hashtags: Social Movements in Digital Society. 100 Units.

In today's global network society, the Internet permeates our lives, whether it be our jobs, politics, or relationships. You're probably reading this course description online, and perhaps next you'll check your email or social media accounts. Social movements, powerful drivers of social change, are no exception. Digital activism has transformed political and social protest over the past two decades, changing how events, protests, and movements are organized and generating alternative ways to build social movements. Students will receive an introduction to sociological perspectives on social movements and the Internet, and consider the influence of networked communication technologies on the mobilization of social movements throughout the globe, with particular emphasis on feminist, queer/trans, human rights, and racial equity movements.

Instructor(s): L. Janson Terms Offered: Spring

Equivalent Course(s): CRES 20513, GNSE 20513

SOCI 20514. The Sociology of Higher Education. 100 Units.

Why do consistent, differential education and economic outcomes exist in American society, and what role does higher education play as a change agent, equalizer, and/or reproducer of society's inequalities? In this introductory course to key issues and debates in the sociology of education, students will explore theoretical and practical perspectives on social, scientific, economic, and political forces that shape approaches to higher education and its reform. Though the course focuses primarily on higher education in the US, we will also cover topics in elementary and secondary education in the US, as well as from an international comparative perspective. Students will conduct sociological inquiry-based projects, exploring questions related to these key topics, such as the 'achievement gaps' in American higher education.

Instructor(s): L. Janson Terms Offered: Autumn

Equivalent Course(s): GNSE 20514, CRES 20514

SOCI 20515. Virtual Ethnographic Field Research Methods. 100 Units.

'Virtual worlds are places of imagination that encompass practices of play, performance, creativity and ritual.' - Tom Boellstorff, from *Ethnography and Virtual Worlds: A Handbook of Method* This course is designed to provide students in the social sciences with a review of ethnographic research methods, exposure to major debates on ethnographic research, opportunities to try their hand at practicing fieldwork virtually, and feedback on a proposed study that employs ethnographic methods. By way of analyzing and problematizing enduring oppositions associated with ethnographic fieldwork - field/home, insider/outsider, researcher/research subject, expert/novice, 'being there'/removal - this seminar is a practicum in theoretically grounded and critically reflexive qualitative methods of research. By introducing students to participant observation and interviews in virtual worlds, ethics, data analysis and writing up, the course offers an opportunity to make sense of the current pandemic we're all experiencing in real time. An emphasis will be placed on multimedia, digital, and virtual ethnography.'

Terms Offered: Summer

Equivalent Course(s): ENST 20224, SOSC 30224, ANTH 31432, ANTH 21432, SOSC 20224, GLST 26220

SOCI 20516. Digital Lives, Virtual Societies: rethinking qualitative methodology. 100 Units.

This course seeks to explore the relationship between self and society by thinking about one central question: how can we rethink qualitative methodology in a digital age? In other words, is a social scientific qualitative study of the internet possible? Drawing on a host of sociological and anthropological texts, this course provokes students into exploring virtuality as not just a part of our daily experiences but also as a very important resource for doing social scientific research. Collectively, we will learn how to rethink the use of traditional qualitative methodology - surveys, interviews, focus groups, and participant observation - in the virtual world. By the end of the course, students will have produced a short research paper that draws on qualitative methods to interrogate the virtual social.

Instructor(s): S. Annavarapu Terms Offered: Winter

SOCI 20517. Feminist Perspectives on Science. 100 Units.

Feminist perspectives on science come from anthropology, sociology, history, and philosophy. What they have in common is a determination to uproot the deepest and least visible forms of oppression in our society: those pertaining to facts and methods we unquestioningly take to be true, known, and valid. We will first acquaint ourselves with the value-free ideal of science as an objective, rational process of discovery, and the ways this ideal has been wielded as an instrument of domination. We will spend the rest of the quarter challenging this dogma by (1) historically demonstrating science's symbiotic alliances with political ideologies of gender and race, (2) ethnographically examining structural and interactive practicalities of knowledge-construction and -circulation that reproduce social oppression, and (3) epistemologically deconstructing the very notions of objectivity and rationality that are used to insulate science from feminist critique. Works include but are not limited to authors Londa Schiebinger, Evelyn Hammonds, Emily Martin, Sharon Trawick, Susan Leigh Star, Joan Fujimura, Helen Longino, Heather Douglas, Donna Haraway, Elizabeth Anderson, Sandra Harding, and Susan Haack.

Instructor(s): P. Mostajir Terms Offered: Autumn. Autumn 2020

Equivalent Course(s): HIPS 25202, ANTH 22124, GNSE 25222

SOCI 20806. Defining the Feminist 'Fourth Wave' 100 Units.

Intersectionality, Breaking the Binary, Hashtag Feminism, TERFs, SWERFs, Whimpsters, Woke Misogynists, Commodity Feminists, & Femocracies, Oh My! If contemporary feminism is characterized by its diversity of purpose, then what defines the current, so-called 'fourth wave' of feminism? Students in this course will explore precisely that question and - in keeping with one characteristic of contemporary feminists, namely their resurged interest in learning about past feminist efforts - will examine the history of feminist movements in the US. As an intellectual community, we will work together to consider and analyze contemporary writings about fourth wave feminist movements and build our own timeline and analytical and conceptual terminology for studying defining features of 'the fourth wave.'

Instructor(s): Lara Janson Terms Offered: Autumn

Note(s): This course counts as a Foundations course for GNSE majors.

Equivalent Course(s): GNSE 12102

SOCI 20807. Foundations in Masculinity Studies. 100 Units.

In recent years, the term 'toxic masculinity' has been used in contexts from the #MeToo movement to the rise of Donald Trump, from Gillette advertisements to the behavior of men on the reality show *The Bachelor*. Why is the conversation around 'toxic masculinity' taking place in the United States at this moment? In this course, we will go beyond banal statements like 'toxic masculinity' and 'men are trash' to critically ask, What role does masculinity play in social life? How is masculinity produced, and are there different ways to be masculine? This course provides students with an intensive introduction to the foundational theory and research in the field of masculinities studies. We will use an intersectional lens to study the ways in which the concept and lived experience of masculinity are shaped by economic, social, cultural, and political forces. We will examine how the gendered social order influences the way people of all genders perform masculinity as well as the ways men perceive themselves and other men, women, and social situations. Verbally and in writing, students will develop an argument about the way contemporary masculinity is constructed and performed.

Instructor(s): Rebecca Ewert Terms Offered: Spring

Note(s): This class counts as a Foundations course for GNSE majors.

Equivalent Course(s): GNSE 12104

SOCI 20808. Sex and Gender in The City. 100 Units.

This course is designed to introduce students to some of the key concerns at the intersection of gender studies and urban studies. In this course, we will take gender relations and sexuality as our primary concern and as a constitutive aspect of social relations that vitally shape cities and urban life. We will examine how gender is inscribed in city landscapes, how

it is lived and embodied in relation to race, class, and sexuality, and how it is (re)produced through violence, inequality, and resistance. Over the course of the quarter, we will draw on an interdisciplinary scholarship that approaches the central question of how and why thinking about urban life in relation to gender and sex matters.

Instructor(s): Sneha Annavarapu Terms Offered: Spring

Note(s): This course counts as a Foundations course for GNSE majors

Equivalent Course(s): ARCH 22105, ENST 12105, GLST 22105, GNSE 12105

SOCI 28089, Sociology of Work-Life. 100 Units.

Time seems scarce in wealthy societies. As possibilities for how to spend our time proliferate, many of us struggle to manage the time demands of multiple roles. This course examines why, how, and for whom worklife conflict is a problem, drawing on various theories and studies in the sociology of time.

Instructor(s): P. Fugiel Terms Offered: Spring

SOCI 28090, Gender and Consumption. 100 Units.

The course looks at the intricate relationship between consumption and gender and sexuality. Drawing on the sociology and history of consumer capitalism, it examines how consumer culture has been predicated on patriarchal and hierarchical notions of gender and sexuality, and how it also provided opportunities to challenge them. The course will ask and answer questions such as: What are the social and political meanings of consumption and how it has been gendered? How did consumer society and consumer culture develop in light of gendered ideologies and practices? And what are the models to challenge and change these institutions and their gendered reality? How has consumerism been related to the development of feminism? And how has feminist thought contributed to the critique of consumer capitalism? The course will examine the relationship of gender and sexuality to consumption through major sociological terms and concepts: How consumption, and gender, are practiced and experienced through space; how does consumption perpetuate and facilitate notions of class and class-distinction; how do consumption practices construct identities and gender-identities in particular; how have citizens, and especially women, used their status as consumers to promote political and feminist goals; and what are the relationships between consumption and the body? The course is recommended to students who are interested in the study of gender and sexuality, sociology, history, and anthropology.

Instructor(s): Yaniv Ron-El Terms Offered: Spring

Note(s): This course counts as a Concepts Course for GNSE majors

Equivalent Course(s): GNSE 23129

SOCI 28091, Introduction to the Sociology of Culture. 100 Units.

This course introduces advanced undergraduate students to the sociology of culture. Over the course of 10 weeks, we consider major contemporary sociological treatments of culture. We explore, problematize, and attempt to synthesize various approaches, all the while asking: 'What do we mean when we talk about culture, and how (and why) does culture matter to social processes?' The focus of the course is on reading and on in-class discussion; although not required, some prior experience with sociology's 'greatest hits' may be helpful.

Instructor(s): A. Lembo Terms Offered: Spring

SOCI 28092, Nations and Nationalism. 100 Units.

What is a Nation? How do nations come into being? What does it mean to be a part of a national group? These questions will be explored over the quarter through close readings and discussions of both classical theories of nationalism as well as the critiques that have been leveled against them. Studying both classical and contemporary approaches to nationalism, the class will consider how scholars have grappled with the from whence and how a nationalism over time. Over the course of the quarter we will critique ideas of nationalism; consider the efficacy of nation and nationalism as categories of analysis; and will use cases from post-Soviet and post-socialist spaces to ground our discussions in the later part of the quarter, exploring narrative, performative, and material aspects of nationalism in the contemporary period.

Instructor(s): M. O'Shea Terms Offered: Spring

Equivalent Course(s): GLST 28092

SOCI 29997, Readings in Sociology. 100 Units.

Students are required to submit the College Reading and Research Course Form. With consent of instructor, students may take this course for P/F grading if it is not being used to meet program requirements.

Terms Offered: Summer, Autumn, Winter, Spring

Prerequisite(s): Consent of instructor and program chair.

SOCI 29998, Sociology BA Thesis Seminar. 100 Units.

This required yearlong course is a forum for students who are majoring in sociology to present their BA papers. Students attend the seminar in Spring Quarter of their third year and in Autumn and Winter Quarters of their fourth year. They may enroll during any one of these quarters, but must attend all three. They submit a completed thesis during Spring Quarter of their fourth year. Students who are not graduating in June should participate in three quarters of the senior seminar in the twelve months before graduation. Students who plan to study abroad during Spring Quarter of their third year should consult with the Undergraduate Program Chair well in advance of their trip. For a general statement about the BA paper, students should obtain the brochure Undergraduate Program in Sociology in the departmental office.

Terms Offered: Autumn, Winter, Spring

Prerequisite(s): Open only to students who are majoring in sociology.

Note(s): Must be taken for a quality grade.

South Asian Languages and Civilizations

Department Website: <http://salc.uchicago.edu>

Program of Study

The Department of South Asian Languages and Civilizations (SALC) offers an undergraduate major leading to a BA in the Humanities Collegiate Division. The social sciences are integrated into our program through the civilization sequence, and courses in the social sciences and religious studies are usually included in a student's program of study. Students majoring in SALC will gain a broad knowledge of the literature and history of the South Asian subcontinent (i.e., Bangladesh, India, Nepal, Pakistan, Sri Lanka), and proficiency in at least one South Asian language that is equivalent to one year of study or more. Students currently can study Bangla (Bengali), Hindi, Marathi, Sanskrit, Tamil, Tibetan, or Urdu. As part of their course of study, students are encouraged to participate in a study abroad program in South Asia, such as the South Asian Civilizations in India sequence (Pune program). The SALC curriculum will develop the student's skills in formulating analyses of various types of texts (i.e., historical, literary, filmic), and students will also engage with social scientific approaches to South Asian cultures. The thorough area knowledge of South Asian arts, culture, history, and politics, and the critical and linguistic skills developed through the SALC degree may prepare a student for any number of careers.

Students in other fields of study may also complete a minor in SALC. Information on the minor follows the description of the major below.

Forms

Students who intend to join the SALC undergraduate program should fill out the appropriate form below and schedule a meeting with the SALC Director of Undergraduate Studies. Additional information about the timeline for completing these forms can be found in the corresponding section below.

Find links to the Major Form, Honors Form, and Minor Form at salc.uchicago.edu/undergraduate/program (<https://salc.uchicago.edu/undergraduate/program/>).

Grading

Students pursuing a major or minor in South Asian Languages and Civilizations must take a quality grade in all courses used to meet department requirements. More than half of the requirements must be met by courses bearing University of Chicago course numbers.

Timeline

First and Second Year

- Contact SALC Director of Undergraduate Studies and collect the form for intended minor/major.
- Start taking language, South Asia civilization, and other introductory classes.

Third Year

- Winter Quarter: If pursuing honors in SALC, find SALC faculty member who will act as your BA adviser to begin discussion of a research topic and schedule reading courses to be taken in the Autumn–Winter Quarters of the fourth year (SALC 29800 BA Paper I and SALC 29801 BA Paper II).

Fourth Year

- Autumn Quarter: Update form for departmental records. Submit a copy of the finalized form to your College adviser.
- Autumn–Winter Quarters: Take reading courses with SALC BA adviser.
- Spring Quarter: First week, submission of the BA thesis.

Program Requirements

Ideally, students will begin their study with the two-quarter sequence SALC 20100-20200 Introduction to the Civilizations of South Asia I-II. All SALC majors must take this sequence or the equivalent program taught in Pune, SOSC 23004-23005-23006 South Asian Civilizations in India I-II-III. If this sequence is not used to satisfy the civilization studies general education requirement, then it will count toward the major.

The major requires three courses in a South Asian language at the second-year level or above. These courses must be taken at the University of Chicago, and credit cannot be granted by examination. Students with prior knowledge of one or the languages offered by SALC may take a placement test in order to determine the right level for them to enroll. The College's language competency requirement may be satisfied by demonstrated proficiency equivalent to one year of study of a South Asian language offered through SALC.

Students are also required to take six courses related to South Asia. In addition to SALC offerings, courses with significant South Asian content that originate in other departments may be eligible, subject to the approval of the SALC Director of Undergraduate Studies. Three of these six courses may be language courses, either further courses in the same

language or courses in another South Asian language. Students should choose courses in consultation with the SALC Director of Undergraduate Studies and fill out a form indicating what they intend to list for their major requirements.

Summary of Requirements

One of the following two-quarter sequences: *	200
SALC 20100-20200 Introduction to the Civilizations of South Asia I-II	
SOSC 23004 South Asian Civilizations in India I	
& SOSC 23005 and South Asian Civilizations in India II	
Three courses in a South Asian language at second-year level or above **	300
Six courses related to South Asia ***	600
Total Units	1100

* All SALC majors must take one of these two sequences. If the sequence is being used to satisfy the general education requirement in civilization studies, two additional courses related to South Asia must be substituted into the major.

** Credit may not be granted by examination. Courses must be taken at the University of Chicago.

*** May include SALC 29801 BA Paper II, SOSC 23006 South Asian Civilizations in India III, and up to three additional language courses (either further study in the same language or courses in another South Asian language). Courses from other departments with significant South Asian content require approval of the Director of Undergraduate Studies.

Sample Major Programs

The following groups of courses would comprise a major.

I. Emphasis on language(s)

SALC 20100-20200	Introduction to the Civilizations of South Asia I-II	200
TBTN 20100-20200-20300	Second-Year Tibetan I-II-III	300
ANTH 25500	Cultural Politics of Contemporary India	100
SALC 20800	Music of South Asia	100
SALC 28700	The State In India	100
URDU 10100-10200-10300	First-Year Urdu I-II-III	300
Total Units		1100

II. Emphasis on civilization

SALC 20100-20200	Introduction to the Civilizations of South Asia I-II	200
BANG 30100-30200-30300	Third-Year Bangla (Bengali) I-II-III	300
ANTH 21401	Logic/Practice Of Archaeology	100
SALC 20400	The Mahabharata in English Translation	100
SALC 20901 & SALC 20902	Indian Philosophy I: Origins and Orientations and Indian Philosophy II: The Classical Traditions	200
SALC 20511	Screening India: Bollywood and Beyond	100
SALC 23104	Problems in the Study of Gender: Gender, Citizenship, Violence	100
Total Units		1100

Honors

To be eligible for honors, students must:

1. maintain an overall GPA of 3.0 or higher
2. maintain a GPA of 3.3 or higher in courses satisfying major requirements
3. complete a BA thesis of superior quality

In order to be eligible to write a BA thesis in SALC, students must meet the civilization studies sequence and language requirements by the end of their third year. By then, they must also have completed the honors form and returned it to the SALC Director of Undergraduate Studies. In Winter Quarter of their third year, the student will arrange to work with a SALC faculty member for the Autumn and Winter Quarters of the following year. It is the student's responsibility to find and make an arrangement with an appropriate faculty member who will be in residence during the student's fourth year. In consultation with the BA thesis adviser, the student must also suggest the name of a faculty member who will act as a second reader.

Students will research, discuss, and write the BA thesis in the context of SALC 29800 BA Paper I and SALC 29801 BA Paper II, for which they will register in the Autumn and Winter Quarters of their fourth year. **Students may use SALC 29801 as one of their six content courses in the major.** SALC 29800 will be for general elective credit only.

Two hard copies of the thesis must be submitted to the SALC departmental office, and a PDF version must be sent electronically to the Director of Undergraduate Studies. The deadline for the submission of the thesis is Friday at 5 p.m. in the first week of Spring Quarter.

Minor Program in South Asian Languages and Civilizations

The minor program in South Asian Languages and Civilizations requires a total of seven or six courses, broken down into three categories.

Civilization Studies

All students in the minor are required to take two quarters of SALC 20100-20200 Introduction to the Civilizations of South Asia I-II or SOSC 23004-23005-23006 South Asian Civilizations in India I-II-III (taught in Pune). These two quarters will count toward either the general education requirement in civilization studies or the minor itself. If SALC 20100-20200 Introduction to the Civilizations of South Asia I-II or SOSC 23004-23005-23006 South Asian Civilizations in India I-II-III are *not* used to meet the general education requirement, both courses in the sequence must be included in the minor, for a total of seven courses. If they are counting toward the general education requirement instead, students must seek approval from the SALC Director of Undergraduate Studies to fulfill the requirement in the minor with one additional course related to South Asian civilizations, for a total of six courses.

Language

Three courses in a South Asian language at any level. Credit may not be granted by examination.

Electives

Two additional courses that may either be (a) listed as SALC courses or as one of the SALC languages (e.g., Bangla, Hindi, etc.), or (b) courses focused on South Asia that originate in other departments (subject to the approval of the SALC Director of Undergraduate Studies).

Students choose courses in consultation with the SALC Director of Undergraduate Studies.

Summary of Requirements for the Minor in South Asian Languages and Civilizations

One of the following two-quarter sequences: *		200
SALC 20100-20200	Introduction to the Civilizations of South Asia I-II	
SOSC 23004 & SOSC 23005	South Asian Civilizations in India I and South Asian Civilizations in India II	
Three courses in a South Asian language at any level **		300
Two courses related to South Asia ***		200
Total Units		700

- * All students in the minor are required to take one of these two-quarter sequences. Students using one of the sequences to satisfy the general education requirement in civilization studies may not also use it toward the minor. In that case, students must seek approval from the SALC Director of Undergraduate Studies to fulfill the requirement in the minor with one additional course related to South Asian civilizations, for a total of six courses.
- ** Credit may not be granted by examination. Courses must be taken at the University of Chicago.
- *** Two additional courses that may either be (a) listed as SALC courses or as one of the SALC languages (e.g., Bangla, Hindi, etc.), or (b) courses focused on South Asia that originate in other departments (subject to the approval of the SALC Director of Undergraduate Studies).

Students must receive the approval of the SALC Director of Undergraduate Studies on a form obtained from their College adviser and return it by the Spring Quarter of their third year. Students must also indicate their intent to minor in SALC with a form obtained from the SALC Director of Undergraduate Studies.

Courses in the minor (1) may not be counted double with the student's major(s) or with other minors and (2) may not be counted double toward general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

SALC Sample Minors

The following groups of courses would comprise a minor.

I. Seven-Course SALC Sample Minor

SALC 20100-20200	Introduction to the Civilizations of South Asia I-II	200
TAML 20100-20200-20300	Second-Year Tamil I-II-III	300
SALC 27701	Mughal India: Tradition & Transition	100

SALC 23000	From Gender Critique to Gay Marriage in India	100
Total Units		700

II. Six-Course SALC Sample Minor

SALC 20700	Critics Of Colonialism: Gandhi and Fanon	100
BANG 10100-10200-10300	First-Year Bangla (Bengali) I-II-III	300
SALC 20701	Postcolonial Theory	100
SALC 23900	Philosophical Education in Indo-Tibetan Buddhism	100
Total Units		600

Pune Program: SOSC 23004-23005-23006 South Asian Civilizations in India I-II-III

One of the College's study abroad programs that meet the general education requirement in civilization studies, the Autumn Quarter program in Pune (Poona) is devoted to the study of South Asian history and culture. It is built upon a three-course civilizations sequence examining the history, culture, and society of the South Asian subcontinent through course work, field studies, and direct experience. During the first seven weeks of the quarter, the program will be based in the city of Pune, where students will complete two courses and participate in expeditions to nearby cultural and historical sites.

Students participating in the Pune Program receive three credits for the civilizations sequence, which meets the general education requirement in civilization studies. Students who have already met the civilization studies requirement may use these SALC credits as electives. Two South Asian civilizations courses are required for students in the major or minor, as described above. The additional civilizations course, SOSC 23006 South Asian Civilizations in India III, can be used toward other SALC requirements. Course titles, units of credit, and grades will be placed on the Chicago transcript.

In addition to the civilizations sequence, students take a fourth course in Hindi during the first seven weeks of the quarter. For students with no prior experience in South Asian languages, this course is designed to facilitate their access to local culture and to provide a basis for further study. Advanced sections will be held for those students with prior course work or experience in Hindi.

Pune is a city of some four million inhabitants, situated on the eastern foothills of the Indian western coastal mountains, or ghats, about 100 miles southeast of Mumbai. Labeled famously by India's first prime minister, Jawaharlal Nehru, as 'the Oxford and Cambridge of India,' it is a major center for Indian art, religion, and higher education, and an ideal site for cultural immersion.

For further details, consult the Study Abroad website (study-abroad.uchicago.edu/programs/pune-south-asian-civilization-india (<http://study-abroad.uchicago.edu/programs/pune-south-asian-civilization-india/>)). For more information about this and other study abroad programs, contact Lauren Schneider, Pune Project Coordinator, at lschneider12@uchicago.edu. For information on other study abroad programs in South Asia, contact the SALC undergraduate adviser.

SALC Language Courses

SALC language courses at all levels are open to undergraduates. Additional advanced courses in all SALC languages are also offered, either on a regular basis or by arrangement with the instructors.

Graduate-Level Language Courses

Graduate-level language courses that may be open to qualified undergraduates can be found in the Graduate Announcements (<http://graduateannouncements.uchicago.edu/graduate/departmentofsouthasianlanguagesandcivilizations/>).

Bangla Courses

BANG 10100-10200-10300. First-Year Bangla (Bengali) I-II-III.

This sequence concentrates on developing skills in speaking, listening, reading and writing Bangla at the novice and intermediate low levels. It is designed both for scholars who want to do research on Bengal and for those who want to gain proficiency in elementary Bangla for communication purposes. Evaluation will be based on classroom performance, attendance, homework assignments, projects, quizzes and final examination.

BANG 10100. First-Year Bangla (Bengali) I. 100 Units.

This sequence concentrates on developing skills in speaking, listening, reading and writing Bangla at the novice and intermediate low levels. It is designed both for scholars who want to do research on Bengal and for those who want to gain proficiency in elementary Bangla for communication purposes. Evaluation will be based on classroom performance, attendance, homework assignments, projects, quizzes and final examination.

Instructor(s): M. Bhaduri Terms Offered: Autumn

BANG 10200. First-Year Bangla (Bengali) II. 100 Units.

This sequence concentrates on developing skills in speaking, listening, reading and writing Bangla at the novice and intermediate low levels. It is designed both for scholars who want to do research on Bengal and for those who want to gain proficiency in elementary Bangla for communication purposes. Evaluation will be based on classroom performance, attendance, homework assignments, projects, quizzes and final examination.

Instructor(s): M. Bhaduri Terms Offered: Winter

Prerequisite(s): BANG 10100 or consent of instructor

BANG 10300. First-Year Bangla (Bengali) III. 100 Units.

This sequence concentrates on developing skills in speaking, listening, reading and writing Bangla at the novice and intermediate low levels. It is designed both for scholars who want to do research on Bengal and for those who want to gain proficiency in elementary Bangla for communication purposes. Evaluation will be based on classroom performance, attendance, homework assignments, projects, quizzes and final examination.

Instructor(s): M. Bhaduri Terms Offered: Spring

Prerequisite(s): BANG 10200 or consent of instructor

BANG 20100-20200-20300. Second-Year Bangla (Bengali) I-II-III.

This sequence is a continuation of First-Year Bangla and aims at gaining intermediate high proficiency in the language. Students who have prior knowledge of elementary Bengali can join the course. The course concentrates equally on speaking, listening, reading and writing skills. At the end of the course the learner is supposed to have a command of Bengali language and culture that allows him/her to communicate with native speakers with ease. He/she will have sufficient reading abilities to comprehend non-technical modern texts. Evaluation will be based on classroom performance, homework assignments, projects, tests, and final examination.

BANG 20100. Second-Year Bangla (Bengali) I. 100 Units.

This sequence is a continuation of First-Year Bangla and aims at gaining intermediate high proficiency in the language.

Students who have prior knowledge of elementary Bengali can join the course. The course concentrates equally on speaking, listening, reading and writing skills. At the end of the course the learner is supposed to have a command of Bengali language and culture that allows him/her to communicate with native speakers with ease. He/she will have sufficient reading abilities to comprehend non-technical modern texts. Evaluation will be based on classroom performance, homework assignments, projects, tests, and final examination.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): BANG 10300 or consent of instructor

BANG 20200. Second-Year Bangla (Bengali) II. 100 Units.

This sequence is a continuation of First-Year Bangla and aims at gaining intermediate high proficiency in the language.

Students who have prior knowledge of elementary Bengali can join the course. The course concentrates equally on speaking, listening, reading and writing skills. At the end of the course the learner is supposed to have a command of Bengali language and culture that allows him/her to communicate with native speakers with ease. He/she will have sufficient reading abilities to comprehend non-technical modern texts. Evaluation will be based on classroom performance, homework assignments, projects, tests, and final examination.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): BANG 20100 or consent of instructor

BANG 20300. Second-Year Bangla (Bengali) III. 100 Units.

This sequence is a continuation of First-Year Bangla and aims at gaining intermediate high proficiency in the language.

Students who have prior knowledge of elementary Bengali can join the course. The course concentrates equally on speaking, listening, reading and writing skills. At the end of the course the learner is supposed to have a command of Bengali language and culture that allows him/her to communicate with native speakers with ease. He/she will have sufficient reading abilities to comprehend non-technical modern texts. Evaluation will be based on classroom performance, homework assignments, projects, tests, and final examination.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): BANG 20200 or consent of instructor

Hindi Courses

HIND 10100-10200-10300. First-Year Hindi I-II-III.

This five-day-a-week sequence presents an introduction to the world's second most spoken language through reading, writing, listening, memorizing, and speaking. We begin with the Devanagari script, and we then introduce the Urdu script in Winter Quarter.

HIND 10100. First-Year Hindi I. 100 Units.

This five-day-a-week introductory sequence presents a dynamic, fun, and lively introduction to the world's second most spoken language through intensive conversation, reading, writing, and listening. No prior Hindi knowledge necessary.

Instructor(s): J. Grunebaum Terms Offered: Autumn

HIND 10200. First-Year Hindi II. 100 Units.

This five-day-a-week sequence presents an introduction to the world's second most spoken language through reading, writing, listening, memorizing, and speaking. We begin with the Devanagari script, and we then introduce the Urdu script in Winter Quarter.

Instructor(s): J. Grunebaum Terms Offered: Winter

Prerequisite(s): HIND 10100 or consent of instructor

HIND 10300. First-Year Hindi III. 100 Units.

This five-day-a-week sequence presents an introduction to the world's second most spoken language through reading, writing, listening, memorizing, and speaking. We begin with the Devanagari script, and we then introduce the Urdu script in Winter Quarter.

Instructor(s): J. Grunebaum Terms Offered: Spring

Prerequisite(s): HIND 10200 or consent of instructor

HIND 15001. Elementary Hindi in India. 100 Units.

HIND 15002. Elementary Hindi in India. 100 Units.

HIND 15003. Intermediate Hindi in India. 100 Units.

HIND 15004. Intermediate Hindi in India. 100 Units.

HIND 15005. Advanced Hindi in India. 100 Units.

HIND 15006. Advanced Hindi in India. 100 Units.

HIND 20100-20200-20300. Second-Year Hindi I-II-III.

This intermediate Hindi sequence presupposes knowledge of the basic grammar of Hindi and requires substantial reading and translating of Hindi prose, alongside exposure to advanced Hindi grammar topics. Regular attention is given to conversation and composition. Texts in Hindi.

HIND 20100. Second-Year Hindi I. 100 Units.

This intermediate Hindi sequence presupposes knowledge of the basic grammar of Hindi and requires substantial reading and translating of Hindi prose, alongside exposure to advanced Hindi grammar topics. Regular attention is given to conversation and composition. Texts in Hindi. Prerequisite(s): HIND 10300 or consent of instructor

Instructor(s): J. Grunebaum Terms Offered: Autumn

Prerequisite(s): HIND 10300 or consent of instructor

HIND 20200. Second-Year Hindi II. 100 Units.

This intermediate Hindi sequence presupposes knowledge of the basic grammar of Hindi and requires substantial reading and translating of Hindi prose, alongside exposure to advanced Hindi grammar topics. Regular attention is given to conversation and composition. Texts in Hindi.

Instructor(s): J. Grunebaum Terms Offered: Winter

Prerequisite(s): HIND 20100 or consent of instructor

HIND 20300. Second-Year Hindi III. 100 Units.

This intermediate Hindi sequence presupposes knowledge of the basic grammar of Hindi and requires substantial reading and translating of Hindi prose, alongside exposure to advanced Hindi grammar topics. Regular attention is given to conversation and composition. Texts in Hindi.

Instructor(s): J. Grunebaum Terms Offered: Spring

Prerequisite(s): HIND 20200 or consent of instructor

Marathi Courses

MARA 10100-10200-10300. First-Year Marathi I-II-III.

This sequence follows the textbook Marathi in Context (with its online supplement Marathi Online) in its focus on developing the basic skills—comprehension, speaking, reading, and writing—of Marathi language use. It covers all the fundamentals of Marathi grammar, but only as they are encountered in context, within a wide array of social and conversational “situations.”

MARA 10100. First-Year Marathi I. 100 Units.

This sequence follows the textbook Marathi in Context (with its online supplement Marathi Online) in its focus on developing the basic skills—comprehension, speaking, reading, and writing—of Marathi language use. It covers all the fundamentals of Marathi grammar, but only as they are encountered in context, within a wide array of social and conversational “situations.”

Instructor(s): S. Mahajan Terms Offered: Autumn

MARA 10200. First-Year Marathi II. 100 Units.

This sequence follows the textbook Marathi in Context (with its online supplement Marathi Online) in its focus on developing the basic skills—comprehension, speaking, reading, and writing—of Marathi language use. It covers all the fundamentals of Marathi grammar, but only as they are encountered in context, within a wide array of social and conversational “situations.”

Instructor(s): S. Mahajan Terms Offered: Winter

Prerequisite(s): MARA 10100 or consent of instructor

MARA 10300. First-Year Marathi III. 100 Units.

This sequence follows the textbook Marathi in Context (with its online supplement Marathi Online) in its focus on developing the basic skills—comprehension, speaking, reading, and writing—of Marathi language use. It covers all the fundamentals of Marathi grammar, but only as they are encountered in context, within a wide array of social and conversational “situations.”

Instructor(s): S. Mahajan Terms Offered: Spring

Prerequisite(s): MARA 10200 or consent of instructor

MARA 15001. Elementary Marathi in India. 100 Units.

MARA 15002. Elementary Marathi in India. 100 Units.

MARA 15003. Intermediate Marathi in India. 100 Units.

MARA 15004. Intermediate Marathi in India. 100 Units.

MARA 15005. Advanced Marathi in India. 100 Units.

MARA 15006. Advanced Marathi in India. 100 Units.

MARA 20100-20200-20300. Second-Year Marathi I-II-III.

This sequence significantly extends both the breadth and the depth of the social and conversational situations introduced in the first year and includes numerous readings, largely from An Intermediate Marathi Reader. It covers all the grammar required for reading most kinds of modern Marathi prose texts.

MARA 20100. Second-Year Marathi I. 100 Units.

This sequence significantly extends both the breadth and the depth of the social and conversational situations introduced in the first year and includes numerous readings, largely from An Intermediate Marathi Reader. It covers all the grammar required for reading most kinds of modern Marathi prose texts. Prerequisite(s): MARA 10300 or consent of instructor

Instructor(s): S. Mahajan Terms Offered: Autumn

Prerequisite(s): MARA 10300 or consent of instructor

MARA 20200. Second-Year Marathi II. 100 Units.

This sequence significantly extends both the breadth and the depth of the social and conversational situations introduced in the first year and includes numerous readings, largely from An Intermediate Marathi Reader. It covers all the grammar required for reading most kinds of modern Marathi prose texts.

Instructor(s): S. Mahajan Terms Offered: Winter

Instructor(s): S. Mahajan Terms Offered: Spring

Prerequisite(s): MARA 20200 or consent of instructor

Courses

Sanskrit Courses

SANS 10100-10200-10300. First-Year Sanskrit I-II-III.

The first half (about fifteen weeks) of this sequence is spent mastering the reading and writing of the Devanagari script and studying the grammar of the classical Sanskrit language. The remainder of the sequence is devoted to close analytical reading of simple Sanskrit texts, which are used to reinforce the grammatical study done in the first half of this course. The aim is to bring students to the point where they are comfortably able, with the help of a dictionary, to read simple, narrative Sanskrit. Texts in Sanskrit.

SANS 10100. First-Year Sanskrit I. 100 Units.

The first half (about fifteen weeks) of this sequence is spent mastering the reading and writing of the Devanagari script and studying the grammar of the classical Sanskrit language. The remainder of the sequence is devoted to close analytical reading of simple Sanskrit texts, which are used to reinforce the grammatical study done in the first half of this course. The aim is to bring students to the point where they are comfortably able, with the help of a dictionary, to read simple, narrative Sanskrit. Texts in Sanskrit.

Instructor(s): A. Ollett Terms Offered: Autumn

SANS 10200. First-Year Sanskrit II. 100 Units.

The first half (about fifteen weeks) of this sequence is spent mastering the reading and writing of the Devanagari script and studying the grammar of the classical Sanskrit language. The remainder of the sequence is devoted to close analytical reading of simple Sanskrit texts, which are used to reinforce the grammatical study done in the first half of this course. The aim is to bring students to the point where they are comfortably able, with the help of a dictionary, to read simple, narrative Sanskrit. Texts in Sanskrit

Instructor(s): A. Ollett Terms Offered: Winter

Prerequisite(s): SANS 10100 or consent of instructor

SANS 10300. First-Year Sanskrit III. 100 Units.

The first half (about fifteen weeks) of this sequence is spent mastering the reading and writing of the Devanagari script and studying the grammar of the classical Sanskrit language. The remainder of the sequence is devoted to close analytical reading of simple Sanskrit texts, which are used to reinforce the grammatical study done in the first half of this course. The aim is to bring students to the point where they are comfortably able, with the help of a dictionary, to read simple, narrative Sanskrit. Texts in Sanskrit

Instructor(s): A. Ravishankar Terms Offered: Spring

Prerequisite(s): SANS 10200 or consent of instructor

SANS 20100-20200-20300. Second-Year Sanskrit I-II-III.

This sequence begins with a rapid review of grammar learned in the introductory course, followed by readings from a variety of Sanskrit texts. The goals are to consolidate grammatical knowledge, expand vocabulary, and gain confidence in reading different styles of Sanskrit independently.

SANS 20100. Second-Year Sanskrit I. 100 Units.

The intermediate-level Sanskrit sequence will equip students to apply the core grammar concepts that they learned in the introductory course to selected narrative, poetic, dramatic, philosophical, and scholastic texts in Sanskrit. In-class activities and selected assignments that develop skills in writing, speaking, listening, and vocabulary retention will support students' success in reading the text(s) at hand. Students will expand their abilities to apply grammar concepts by bringing increased attention to syntax and morphology. Students will be able to identify major poetic meters. Students will begin to build the skills that they will need to make use of Sanskrit commentarial works. As a whole, the sequence in Intermediate Sanskrit will prepare students to read and analyze Sanskrit texts in a range of literary styles at the advanced level, and to do so with confidence.

Instructor(s): A. Ollett Terms Offered: Autumn

Prerequisite(s): SANS 10300 or consent of instructor

SANS 20200. Second-Year Sanskrit II. 100 Units.

This sequence begins with a rapid review of grammar learned in the introductory course, followed by readings from a variety of Sanskrit texts. The goals are to consolidate grammatical knowledge, expand vocabulary, and gain confidence in reading different styles of Sanskrit independently. The winter quarter will be a reading of the Mahabharata.

Instructor(s): W. Doniger Terms Offered: Winter

Prerequisite(s): SANS 20100 or consent of instructor

Equivalent Course(s): SALC 48400, HREL 36000

SANS 20300. Second-Year Sanskrit III. 100 Units.

This sequence begins with a rapid review of grammar learned in the introductory course, followed by readings from a variety of Sanskrit texts. The goals are to consolidate grammatical knowledge, expand vocabulary, and gain confidence in reading different styles of Sanskrit independently. The winter quarter will be a reading of the Mahabharata.

Instructor(s): A. Venkatkrishnan Terms Offered: Spring

Prerequisite(s): SANS 20200 or consent of instructor

South Asian Languages and Civilizations Courses

SALC 20100-20200. Introduction to the Civilizations of South Asia I-II.

This sequence introduces core themes in the formation of culture and society in South Asia from the early modern period until the present. This sequence meets the general education requirement in civilization studies. These courses must be taken in sequence.

SALC 20100. Introduction to the Civilizations of South Asia I. 100 Units.

The first quarter focuses on Islam in South Asia, Hindu-Muslim interaction, Mughal political and literary traditions, and South Asia's early encounters with Europe.

Instructor(s): M. Alam Terms Offered: Winter

Equivalent Course(s): ANTH 24101, MDVL 20100, SALC 30100, HIST 10800, SOSC 23000

SALC 20200. Introduction to the Civilizations of South Asia II. 100 Units.

The second quarter analyzes the colonial period (i.e., reform movements, the rise of nationalism, communalism, caste, and other identity movements) up to the independence and partition of India.

Instructor(s): Dipesh Chakrabarty Terms Offered: Spring

Prerequisite(s): SALC 20100, ANTH 24101, HIST 10800, SASC 20000, SOSC 23000

Equivalent Course(s): ANTH 24102, SOSC 23100, HIST 10900

SALC 20113. Inequalities. 100 Units.

This course analyzes inequality and the overt and covert violence that results from it. These inequalities are often grounded in gender and sex but also result from a complex intersection of sex gender systems with other historical factors such as city life, environment, media and so on. Inequality is what produces the experience of differential citizenship, a topic that exercises scholars the world over. In particular, those interested in issues of feminism, community, and ethnicity have studied why women (some women more than others) or particular social groups such as gay or trans groups, experience disenfranchisement more than their counterparts, even when, officially, many cultures/ nation states grant their members/ citizens formal legal equality. Many of the examples around which this course is framed emerge out of South Asia, but our analyses will be structured through an engagement with theoretical texts that address issues of gendered oppression and discrimination in other parts of the world. Readings will include historical, anthropological, literary texts.

Instructor(s): Rochona Majumdar Terms Offered: Autumn

Prerequisite(s): Students who have previously completed "Problems in the Study of Gender and Sexuality: Inequality" are not eligible to receive credit for this class.

Note(s): This course counts as a Problems course for GNSE majors.

Equivalent Course(s): SALC 30011, GNSE 20113, GNSE 30111

SALC 20513. Theater of Premodern South Asia. 100 Units.

This course will cover the history and poetics of the stage play in premodern South Asia, which was, according to the eighth-century theorist V#mana, "the best among the types of literature." The play, according to many premodern critics, was uniquely capable of bringing about a profound aesthetic experience because of its integration of diverse forms of art - plot-driven narrative, poetry, acting, and music. We will read a variety of plays in translation, including works by Bh#sa, K#lid#sa, Bhavabh#ii, and Mur#ri, as well as selections from technical literature such as the Treatise on Theater (N##ya##stram). We will also watch a number of modern performances. Besides discussing individual plays, we will cover the following topics in detail: the different genres of the stage play; the theory of plot construction; the theory of aesthetic experience (rasa); the languages of the theater; the role of music, dance, and gesture; theater and ritual; and the performance tradition of K##iy##am.

Instructor(s): Andrew Ollett Terms Offered: Winter

Prerequisite(s): No prior knowledge of South Asian languages is required. Students who can read Sanskrit, however, are strongly encouraged to take an accompanying reading course.

Equivalent Course(s): SALC 30513, TAPS 30513, TAPS 20513

SALC 20702. Colonizations III. 100 Units.

The third quarter considers the processes and consequences of decolonization both in the newly independent nations and the former colonial powers.

Terms Offered: Spring

Note(s): This sequence meets the general education requirement in civilization studies. These courses can be taken in any sequence.

Equivalent Course(s): ANTH 24003, SOSOC 24003, HIST 18303, CRES 24003

SALC 20800. Music of South Asia. 100 Units.

The course explores some of the music traditions that hail from South Asia—a region defined by the countries of India, Pakistan, Sri Lanka, Nepal, Bhutan, Afghanistan, Maldives, and their diasporas. The course will study music and some of its inextricably linked forms of dance and theatre through the lens of ethnomusicology, where music is considered in its social and cultural contexts. Students will develop tools to listen, analyze, watch, and participate in South Asian forms of music-making, using case-study based inquiries as guides along the way.

Instructor(s): Ameera Nimjee Terms Offered: Spring

Equivalent Course(s): MUSI 33706, RLST 27700, MUSI 23706, SALC 30800

SALC 20901. Indian Philosophy I: Origins and Orientations. 100 Units.

This course introduces some of the early themes and textual traditions that set much of the agenda for the later development of Indian philosophy. Particular attention will be paid to the rivalry that was perhaps most generative throughout the history of Indian philosophy: that between the Hindu schools of thought rooted in the Vedas, and the Buddhists who so powerfully challenged them.

Instructor(s): Dan Arnold Terms Offered: Winter

Equivalent Course(s): SALC 30901, DVPR 30201, HREL 30200, RLST 24201

SALC 20902. Indian Philosophy II: The Classical Traditions. 100 Units.

This course follows the first module on Indian philosophy by exploring the debates between several classical "schools" or "viewpoints" (dar#anas) of Indian philosophy. In addition to expanding upon the methods of systematized reasoning inaugurated by the Ny#ya and Buddhist epistemological traditions, particular attention will be given to systems of scriptural hermeneutics -- M#m##s# and Ved#nta -- and their consequences for the philosophy of language, theories of cognitive error, and even poetics.

Instructor(s): Anand Venkatkrishnan, Andrew Ollett Terms Offered: Spring

Equivalent Course(s): HREL 30300, RLST 24202, MDVL 24202, SALC 30902, DVPR 30302

SALC 20903. Philosophy and Literature in India. 100 Units.

Is philosophy literature? Is literature philosophy? What constitutes either of these seemingly disparate enterprises, formally and thematically, and what kinds of conjunctions can we imagine between them (philosophy in/of/as literature)? Can one translate these terms across cultures? Are they the sole prerogative of leisured elites, or can they harbor and cultivate voices of dissent? Above all, what does it mean to reflect on these categories outside the parochial context of the Western world?

This course explores these questions by introducing some of the literary cultures, philosophical traditions, religious poetry, and aesthetic theories of the South Asian subcontinent. Students will encounter a variety of genres including scriptural commentary, drama and courtly poetry, and the autobiography. Readings, all in translation, will range from Sanskrit literature to Sufi romances and more.

Instructor(s): Anand Venkatkrishnan Terms Offered: Winter

Equivalent Course(s): CMLT 24202, SIGN 26073, RLST 24200

SALC 21224. Against Interpretation: Philology at the Crossroads. 100 Units.

Susan Sontag closed her essay "Against Interpretation" calling for "an erotics of art." Such an "erotics" would avoid doing anything to tame the work of art—allowing its hold on the imagination to grow, without trimming down its excrescences. Eros here stands for the irreducibility of the presence of art—the finite or even infinitesimal presence that imposes itself as irrepressibly fractal in its growth. Sontag was challenging us to make a certain kind of intellectual and affective space available—and this challenge has been reprised in recent scholarship that attempts to trace the state of the Humanities and some of its more eminent toolkits. Both philology and close-reading have been exposed as disciplinarian "disciplines" of the Humanities—long having abandoned the "erotic" power reading as a strategy of unfolding in favor of what might be termed strategies of containment. But this was not always the case. This course seeks to recover what then remains, peeking into the

backgrounds of these disciplines as they stand at the crossroads of relevance and retreat-hovering just short of the intimate space of textual experience described by Sontag.

Instructor(s): Claudio Sansone Terms Offered: Winter

Equivalent Course(s): ENGL 21224, KNOW 21224, CMLT 21224

SALC 21405. Inventing Race in the British Empire. 100 Units.

This course reveals how the British encounter with racial difference in the Caribbean, Australasia, and India could both validate and subvert the project of empire- building. We will begin by examining the ways in which ethnographical and anthropological societies in the metropole clashed over the question of racial differentiation in the nineteenth century. We will then determine how these "scientific" theories of race were deployed in colonial settings; did they inform relations between colonized and settler populations, or did the local states innovate novel race-based policies to undergird their rule? By investigating how an array of actors instrumentally invoked race to accomplish specific objectives, we will further deconstruct the narrative of a unitary, overarching "civilizing mission." A host of primary sources, including anthropological treatises, missionary accounts, public speeches, and fictional works, will aid us in this pursuit.

Instructor(s): Z. Leonard Terms Offered: Spring

Equivalent Course(s): CRES 21405, HIST 21405, GLST 21405

SALC 22202. Anthropology of Caste in Asia. 100 Units.

This seminar course explores anthropological approaches to caste. We will survey colonial ethnological accounts to structuralist, transactionalist, historical anthropological, and contemporary ethnographic accounts of forms of caste difference, identity, and violence in South and East Asia, with an eye to comparison to other forms of invidious social difference in other times and cultures.

Instructor(s): Constantine Nakassis Terms Offered: Winter. Winter 2021

Prerequisite(s): This course qualifies as a Discovering Anthropology selection for Anthropology Majors.

Equivalent Course(s): ANTH 32202, ANTH 22202, SALC 32202

SALC 22330. Flooding the World: Creation and Restoration in the Levant, Mesopotamia, and India. 100 Units.

From Genesis to the Epic of Gilgamesh and the Rig Veda to modern novels like Geraldine McCaughrean's *Not the End of the World* (2004) and Jeanette Winterson's *Boating for Beginners* (1997), humans have repeatedly accounted for, imagined, and ironized civilizational collapse and restoration through stories of catastrophic floods. These texts, modern and ancient, are fraught with political, religious, and historical background. In this course, we will compare these texts, focusing on literary issues like narrative plot, the construction of characters, the literary devices used, and the role of the narrator in telling the story of the flood. We will attempt to ascertain why imaginings of a deluge are generative, while being attuned to the complex differences between the ancient narratives and their significantly different afterlives. Through sustained inquiry, we will both challenge notion of sacred exceptionalism even while confronting the enduring presence of this trope in the post-modern novel.

Instructor(s): Cathleen Chopra-McGowan Terms Offered: Winter

Equivalent Course(s): JWSC 26030, RLST 22330, ENST 22330

SALC 22604. A Poem in Every House': Persian, Arabic, and Vernacular Poetry in North India and the Deccan. 100 Units.

gehe gehe kalau k#vya# ... In the Kali age, there is a poem in every house ... Vidy#pati (ca. 1370-1460, Mithila), K#rtita# The Indian subcontinent is home to some of the most vibrant literary traditions in world history. The aim of this course is to introduce students to the main trends in the premodern (/pre-nineteenth century) literature of South Asia through a selection of poetic and theoretical texts translated from a variety of languages (Arabic, Bengali, Dakani, Hindi, Maithili, Marathi, Persian, Panjabi, Sanskrit, Urdu, etc.). We will discuss issues of literary historiography, the relations between orality and writing, and the shared aesthetic world of poetry, music, and visual arts. We will review the basic principles of Perso-Arabic and vernacular poetics through a selection of representative theoretical treatises and poems. We will also explore the linguistic ecology of the Subcontinent, the formation of vernacular literary traditions, multilingual literacy, and the role of literature in social interactions and community building in premodern South Asia. Every week the first half of the class will be devoted to the historical context and conceptual background of the texts we will read in the second half. Attention will be given to the original languages in which those texts were composed as well as the modes of performance of the poems and songs we will read together.

Instructor(s): T. D'Hubert Terms Offered: Autumn

Note(s): No prior knowledge of South Asian languages is required. The course is the perfect complement to the Introduction to South Asian Civilizations sequence (SALC 20100-20200). Beyond its focus on South Asia, students interested in classics, poetics, rhetoric, musicology, theater studies, and comparative literature will find plenty of food for thought in the readings, lectures, and class discussions. For students interested in languages, it is an ideal way to have a lively introduction to the linguistic variety of South Asia.

Equivalent Course(s): MDVL 22604, SALC 32605

SALC 22605. Classical Literature of South Asia: Part One. 100 Units.

This is a broadly chronological survey of South Asia's literary traditions. In the first part of this two-part sequence, our focus will be on the first millennium CE, and we will read a wide variety of literary works in translation: lyric poetry, stage plays, courtly epics, romances and satires. We will read these texts as representing both evolving traditions of literary art and a diverse constellation of social imaginaries. Our conversations will thus range over: questions of language, genre, form and style; subcontinental traditions of poetics, which elaborated the themes and techniques of literary art; issues of sexuality and gender; the intellectual and religious traditions with which works of literature were in conversation; contexts of performance; and issues of literary history. We will sometimes read short texts in the original languages (Prakrit, Tamil and Sanskrit) to gain a better understanding of their texture and technique, but no prior knowledge of South Asian languages is required. The

second part of this two-part sequence will cover South Asian literature from about 1000 to 1750. The courses may be taken in any order.

Instructor(s): Andrew Ollett Terms Offered: Autumn

Equivalent Course(s): SALC 32606

SALC 23104. Problems in the Study of Gender: Gender, Citizenship, Violence. 100 Units.

Equivalent Course(s): HIST 11002, GNSE 10102

SALC 25025. Environmental Histories of the Global South. 100 Units.

Drawing on cases from Africa, Latin America, and especially Asia, this course explores key themes in the modern environmental history of the world beyond the rich industrialized North. Our investigations will focus on the ecological impacts of colonialism, war, and development, and how environmental management has helped to construct modern states and capitalist practices in turn. Ranging from the malarial plantations of the Caribbean to the forests of southeast Asia, we will analyze not-so-natural disasters like floods and chemical spills as well as the slow violence of deforestation and droughts. Combining primary sources with classic scholarship, we will encounter pioneering green activists like the original "tree huggers" of the Himalayas and environmental advocates for brutal population control. The course will conclude by examining the emergence of a newly assertive Global South in international climate negotiations, and its implications for the environmental history of our planet at large. The course is open to all, but may be of particular interest to students who have taken "Introduction to Environmental History."

Instructor(s): L. Chatterjee Terms Offered: Spring

Equivalent Course(s): HIPS 25525, HIST 25025, HIST 35024, CHSS 35525, SALC 35025

SALC 25302. Slavery in South Asia. 100 Units.

This course offers an introduction to historic and contemporary forms of unfree labor in South Asia. We will explore ideas of freedom and slavery in the work of seminal modern thinkers, read about slavery in ancient and medieval South Asia and discuss the convergent histories of slavery in the Americas and caste in British and princely India. How do race, gender, caste, and class shape this history? Does this history inform contemporary texts or social practices in South Asia? Students will gain knowledge of the little-known history and practice of slavery in pre-modern to contemporary South Asia through close reading of primary sources and historical scholarship. At the end of the course, students will be better able to identify silences and dominant voices within primary sources, interpret texts in their social and political contexts and evaluate the differences between various historiographical approaches. This course will also encourage students to trace the historic roots of contemporary practices and to find ways to share knowledge acquired in class with the campus or wider community. It will improve and build upon the skills of interpreting and identifying intellectual problems in texts that are acquired through courses fulfilling the general education requirements in the College. It complements the Introduction to the Civilizations of South Asia sequence by providing an introduction to unfree labor across time in South Asia.

Equivalent Course(s): CRES 25302, HIST 26604

SALC 25310. Extinction, Disaster, Dystopia: Environment and Ecology in the Indian Subcontinent. 100 Units.

This course aims to provide students an overview of key environmental and ecological issues in the Indian subcontinent. How have the unique precolonial, colonial, regional and national histories of this region shaped the peculiar nature of environmental issues? We will consider three major concepts—"extinction", "disaster" and "dystopia" to see how they can be used to frame issues of environmental and ecological concern. Each concept will act as a framing device for issues such as conservation and preservation of wildlife, erasure of adivasi (first dwellers) ways of life, environmental justice, water scarcity and climate change. The course will aim to develop students' ability to assess the specificity of these concepts in different disciplines. For example: What methods and sources will an environmental historian use to write about wildlife? How does this differ from the approach an ecologist or literary writer might take? Students will analyze various media: both literary and visual, such as autobiographies of shikaris (hunters), graphic novels, photographs, documentary films, ethnographic accounts and environmental history.

Instructor(s): Joya John Terms Offered: Spring

Equivalent Course(s): ENGL 22434, GLST 25310, CRES 25310, HIST 26806

SALC 25316. Making a Home in the Colonial City: Insights from Literature, Films, and History. 100 Units.

The proposed course is an invitation to students to imagine the life-worlds, experiences, and spaces of the colonized populations of South Asia, particularly, from the perspective of city-dwellers. The objective of the course is three-fold: thematic, methodological, and epistemological. First, to introduce students to debates in colonial modernity using the narrative of the rise of modern cities in colonial India. Second, to equip students to handle different kinds of primary material in order to understand the interconnections between colonialism, urban space, and indigenous responses. Finally, to open up the exciting field of colonial and postcolonial studies to anyone interested in South Asia, its literature, its films, its history, and its people.

Instructor(s): Sanjukta Poddar Terms Offered: Autumn

Equivalent Course(s): GNSE 25316, GLST 25316

SALC 25317. Traditions of Islamicate Learning In Mughal India. 100 Units.

An introduction to the contexts, methods, and aims of Islamic education in late-Mughal South Asia in the decades immediately prior to European colonisation. Our central focus is an 18th century 'curriculum': a list of books that were read by a student of a famous madrasa in late-Mughal Delhi. Although madrasas are now widely considered to be places of strictly 'religious' education, our curriculum reveals the wide range of disciplines a student was expected to know. As well as subjects like Qur'anic commentary and Islamic jurisprudence, students learned Arabic and Persian grammar, ethical texts, Sufism, Hellenistic philosophy, logic, medicine, martial arts, mathematics and geometry, poetry, accounting and secretarial skills, astronomy, as well as alchemical and occult sciences. We will learn with our Mughal-era student, moving through the

disciplines that he studied - progressing from the introductory aspects of his education to more advanced subjects. As we go, we will read a wide range of Arabic and Persian primary sources in translation. We will consider what it meant to learn, the contexts in which learning took place, as well as the modes of ethical comportment that education entailed. We will also consider the changing nature of the madrasa curriculum against the background of the volatile political and social climate of 18th century Mughal South Asia. We will also examine the reformist ideas that were challenging classical educational paradigms in this period.

Instructor(s): Daniel Morgan Terms Offered: Autumn

SALC 25318. Literary Radicalism and the Global South: Perspectives from South Asia. 100 Units.

What does it mean to speak of literary radicalism? What are the hallmarks of a radical literature? And how does any such body of radical literature relate to the crucial question of empire, while also seeking to not be limited by that address? This course will explore the theme of literary radicalism through perspectives arising from South Asia. Over the twentieth century the subcontinent has been shaped through a wide variety of social and political movements: from anticolonial struggles to communist organising, feminist struggles, anti-caste mobilisation, indigenous protest and more, with their histories intertwining in different ways. We will start with a consideration of some texts on literary radicalism from other parts of the global South by authors such as Julia de Burgos and Ngugi Wa Thiong'o, and then move through a detailed discussion of South Asian texts every week to examine particular aspects of literary style and history. We will study texts from a variety of subcontinental languages (in translation, unless originally in English), and across different forms - poetry, short fiction, children's literature, novels, a memoir, a graphic novel and a documentary film on a poet.

Instructor(s): Abhishek Bhattacharyya Terms Offered: Spring

Note(s): No prior training in South Asia or literature courses is a requirement.

Equivalent Course(s): ENGL 25318

SALC 25319. Reading Indian Pasts: Early Texts and Modern Readers in South Asia. 100 Units.

How do different readers read the same text differently? How have intellectuals in South Asia interpreted, and continue to interpret, their textual pasts? This course will explore questions related to the receptions of premodern South Asian texts, engaging students in debates in intellectual history and histories of reception, with a focus on questions of periodization, social categories, and constructions of identity in premodern South Asia. How, for example, have modern readers interpreted questions of caste and gender in early South Asian texts? How did premodern readers interpret their own textual pasts, and what are the tools by which we, as modern readers, may understand these negotiations? What are the stakes in and consequences of reading these debates in our own times? We will explore these and other questions through both primary and secondary materials. The course will enable students to explore broad conceptual questions related to histories of reading and debates in South Asian reception and intellectual history. Additionally, students will read sections of premodern texts, in translation, which have enjoyed significant lives outside their own times and contexts, alongside different interpretations of these texts. Students will work towards gaining conceptual tools to examine both premodern and modern texts as well as the many frameworks of interpretation that emerged out of them. No prior knowledge of South Asian topics is required.

Instructor(s): A.Ravishankar Terms Offered: TBD

Equivalent Course(s): RLST 25319

SALC 25320. Debate, Dissent, Deviate: Literary Modernities in South Asia. 100 Units.

This class introduces students to the modernist movement in post-independence South Asia. Modernism will be understood here as a radical experimental movement in literature, film, photography and other arts, primarily aimed at critiquing mainstream narratives of history and culture. Given its wide scope, we will analyze a variety of texts over the ten-week duration of the class. These include novels, short stories, manifestos, essays, photographs, and films. The chronological span of the class is from the 1930s to the 1970s. Our aim will be to understand the diverse meanings of modernism as we go through our weekly readings. Was it a global phenomenon that was adopted blindly by postcolonial artists? Or were there specifically South Asian innovations that enable us to think about the local story as formative of global modernism? What bearings do such speculations have on genre, gender, and medium, as well as on politics? I will help situate the readings of each week in their specific literary and political contexts. Students will be able to evaluate, experiment with, and analyze various forms of modernist literary expressions emerging out of South Asia. This class will provide them with critical tools to interpret, assess, compare, and contrast cultural histories of non-Western locations and peoples, with an eye for literary radicalism. No prior knowledge of any South Asian language is necessary.

Instructor(s): S. Dasgupta Terms Offered: Autumn

Equivalent Course(s): KNOW 25320, CRES 25320, GLST 25132, ENGL 25320, GNSE 25320

SALC 25321. Time and its discontents: thinking and experiencing time in South Asia through the ages. 100 Units.

While we usually think of time and its relentless march as an immutable, universal and abstract category, this course will explore competing and contested notions of time and history and their periodization. This interdisciplinary seminar aims to introduce students to the sociocultural worlds of South Asia through the prism of Time. Instead of looking at the cultural, religious and scientific realms of ancient, medieval and colonial South Asia changing through time, we will explore the changes that time itself, as a concept but also as a lived reality has undergone throughout the convoluted history of South Asia. We will revisit key concepts and ideas pertaining to the cosmology of Ancient and Medieval South Asia, such as the eras of the world according to old scientific and religious treatises, and how these ideas shaped the understanding of the place of mankind in history and the world. We will also study the intellectual challenges that these notions of time posed to the first Europeans that encountered them, and how our modern notion of time and its periodization was forged in this encounter. Rather than thinking of Time and temporalities in South Asia as part of an outdated and disproved world-view, this course will strive to present South Asia and the non-European world not only as subjects to Western temporalities, but as important places where theoretical propositions were made about time-space and its divisions.

Instructor(s): E. Acosta Terms Offered: Autumn

Note(s): While the course relies heavily in South Asian world-views, a previous acquaintance with the histories and mythologies stemming from this part of the world is not necessary. This course will be of interest to students of different backgrounds. The approach is interdisciplinary, ranging from history, anthropology, religious studies, etc.

Equivalent Course(s): RLST 25321, HIST 26615

SALC 25322. Enlightenment Modernity and Colonial South Asia. 100 Units.

In Kant's words, the work of public reasoning was the condition for "man's exit from self-imposed immaturity." In the colony, however, the critique of existing society as insufficiently reasonable came to be caught up in the justification of Britain's "liberal" colonial project, and the obligation to Reason autonomously was embroiled in the case for empire. The Indian pursuit of enlightened reason was deeply aware of its uncomfortable proximity to empire, yet intellectuals of a variety of stripes advanced claims of "enlightenment. Would the appeal to Reason bring about a new moral world or a derivatively imitative landscape? Could the Enlightenment be so truly universal that the colonized could claim it without disowning their past? What relationship would the moral resources of India's past share with the task social critique for a new generation of radical intellectuals? In order to address the promise and perils of colonial Enlightenment and its most controversial debates, this course will focus on a variety of primary and secondary sources. We will look at arguments penned by a range of Indian and British thinkers and at how the rich historiography of India's 19th century may be placed in productive dialogue with the normative theory produced by Europe's "Enlightenment." Turning to the history of 19th century India will help us complicate the history of the Enlightenment as a whole, and contribute to help draft a new and broader answer: what is "Enlightenment?"

Instructor(s): T. Newbold Terms Offered: Spring

Equivalent Course(s): HIST 26811, KNOW 25322

SALC 25323. Tolerance and Intolerance in South Asia. 100 Units.

Few places in the world are as embroiled in the problem of diversity as South Asia, where sectarian violence-fought mainly along religious lines, but also along caste, gender, and linguistic lines-is at the center of political maneuvering. South Asia offers important lessons in how people manage to live together despite histories of mutual strife and conflict about communities and castes. Focusing on the period of British colonial rule, this class explores different instances and ideologies of toleration and conflict. How were South Asian discourses of toleration by such leaders as Gandhi and Nehru different from their European counterparts (e.g., John Locke and John Rawls)? How did their ideologies differ from those articulated by their minority peers such as Ambedkar, Azad, and Madani? We will analyze constitutive precepts, namely secularism, syncretism, toleration. Our attention here will be on the universal connotations of these ideas and their South Asian expression. Fifth week onward, we will turn our attention to select thinkers: Gandhi, Ambedkar, Azad, Madani. Our focus here will be on the ways that each intellectual negotiated the thorny issues of toleration, difference, ethnicity, and belonging. All the thinkers covered in this class had an active presence in nationalist era politics. Finally, we will read historical accounts of some of the most frequent causes of intolerance, namely cow slaughter, music played before the mosque, and desecration of sacred objects.

Instructor(s): T. Reza Terms Offered: Spring

Note(s): All reading materials will be available in English. No prior knowledge of South Asian history or South Asian languages is required.

Equivalent Course(s): CRES 25323, KNOW 25323, HIST 26812, RLST 25323

SALC 25601. The Bhagavad Gita: Contested Readings of a World Classic. 100 Units.

Few religious classics have been as variously interpreted as the Bhagavad Gita, which is surely among the most often-translated works in the world. A text of long-standing importance in Hindu traditions, the Bhagavad Gita has had an especially interesting career in modernity, having been of great significance not only for M. K. Gandhi, but also for the likes of Thoreau and Eliot, not to mention the many less widely appreciated interpreters for whom the text's martial setting has been of central significance. After taking some steps to situate this great Sanskrit text in the context of its early Indian history, this course will explore a representative range of its available interpretations. Along the way, it is hoped that we will learn something not only about the Bhagavad Gita, but also about the very ideas of interpretation and understanding.

Instructor(s): Dan Arnold Terms Offered: Spring

Equivalent Course(s): RLST 24251

SALC 25706. Problems in the Study of Gender and Sexuality: Inequality. 100 Units.

This course analyzes inequality and the overt and covert violence that results from it. These inequalities are often grounded in gender and sex but also result from a complex intersection of gender, sex, and other identities. Inequality is what produces the experience of differential citizenship, a topic that exercises scholars the world over. In particular, those interested in issues of feminism, community, and ethnicity have studied why women (some women more than others) or particular social groups such as gay or trans groups, experience disenfranchisement more than their counterparts, even when, officially, many cultures/ nation states grant their members/citizens formal legal equality. Many of the examples around which this course is framed emerge out of South Asia, but our analyses will be structured through an engagement with theoretical texts that address issues of gendered oppression and discrimination in other parts of the world. Readings will include historical, anthropological, literary texts. Key themes of the course include: debates on parity in France and differential citizenship for religious minorities in India; caste based violence in India studied comparatively with debates on violence against aboriginal in Australia and Canada; rape and human rights; the politics of homosexuality; violence around popular and high culture; the panic around "family values". This course is part of the College Course Cluster program, Inequality.

Instructor(s): Rochona Majumdar Terms Offered: Autumn

Equivalent Course(s): GNSE 11006, GNSE 31106

SALC 26102. Buddhism. 100 Units.

This course will survey central features of the Buddhist traditions in South, Central, and East Asia, over its roughly 2500 year history. Attention will be paid to the variety of disciplinary orientations (historical, philological, anthropological, sociological, economic, archaeological, philosophical) that may be taken to illuminate various aspects of the traditions. Consideration will also be given to the concurrent rise of distinctive Buddhist responses to modernity and the modern/academic study of Buddhism.

Instructor(s): Christian Wedemeyer Terms Offered: Winter

Equivalent Course(s): EALC 26101, RLST 26101

SALC 26111. Queer Asia(s) 100 Units.

This course explores representations of queerness, same-sex love and sexualities and debates around them by introducing students to a variety of literary texts translated from Asian languages as well as Asian films, geographically ranging from India, Pakistan and Sri Lanka to China, Japan, Thailand, Indonesia, Korea and Singapore. We will also read scholarship that will help us place the production and reception of these primary sources in historical, political, cultural and religious contexts. In particular, we will examine questions of history and continuity (recurrent themes and images); form and genre (differences of representation in mythological narratives, poetry, biography, fiction, erotic/legal/medical treatises); the relationship of gender to sexuality (differences and similarities between representations of male-male and female-female relations); queerness as a site for exploring other differences, such as caste or religious difference; and questions of cross-cultural and transnational dialogue and cultural specificity. This course is part one of a two-quarter sequence, with the second part offered in Winter Quarter 2021. Each quarter can also be taken separately. Students need to be available for 2 synchronous online meetings per week.

Instructor(s): Nisha Kommattam Terms Offered: Autumn

Equivalent Course(s): CMLT 26111, GNSE 26111, HMRT 26111

SALC 26170. Why Do Animals Talk? Beastly Worlds in South Asian Literature. 100 Units.

Comprised of a diverse set of languages covering a disparate set of regions, South Asian literatures share a deep investment in the figure of the animal. Whether imagined through the genre of political advice, in narrative tellings of the past lives of the Buddha, or simply as characters in an expanded continuum of life, animals serve as important literary devices to reflect on human beings as well as autonomous subjects bound up with humans with their own distinct emotional and spiritual lives. Drawing particularly from the Sanskrit tradition among others, this course will introduce students to a broad survey of animal literature in South Asia alongside more recent scholarship in Animal Studies. By the end of the course, students can expect to have a myriad of answers to the question: why do animals talk?

Equivalent Course(s): RLST 26170, ENST 26170

SALC 26260. Buddhism in Early Theravada Literature. 100 Units.

A critical examination of important canonical (Buddhavaṇṇa--attributed to the Buddha) and non-canonical Pali literature central to the religious "imaginaire" of Theravada Buddhists in Sri Lanka and Southeast Asia. Literary texts include Vinayapitaka (Book of Monastic Discipline), Dhammapada (didactic verses attributed to the Buddha), Mahāparinibbāna Sutta (sermon recounting the final 3 months of the Buddha's career), Vessantara Jātaka (epic narrative of the Buddha's next-to-last rebirth as a king), the Edicts of Asoka (proclamations of the 3rd c. BCE Indian emperor), Anagatavamsa Desana (prophecy of the future Buddha Metteyya), Mahāvamsa (the monastic "Great Chronicle" recounting the history of Buddhism) and royal inscriptions and paintings from the late-medieval period.

Equivalent Course(s): HIST 16600

SALC 26611. Empires, Imperialism, and Islam. 100 Units.

This seminar course will survey interactions between empires and Islam from the early nineteenth century to the early twenty-first century. It will consider the varied responses of Islamic polities to the expansion of European empires, their role in proliferating networks of travel and communication, as well as the place of religion in anti-imperial and anticolonial movements. Geographically we will cover Asia very broadly defined: from the Ottoman Empire in the west, through the Middle East and Central and South Asia, to Indonesia and Malaysia to the east. Individual classes will focus, for instance, on imperial connections, the emergence of pan-Islamism, Sufi networks, oceanic travel, subaltern social and political movements, and Cold War-era Muslim ideologues. The course will conclude with a look at the rise of more militant Islamic ideologies in recent years. Investigating this two-century long history will help students understand the complex role that Islam has played in the making of the modern world. Course readings will be on the whole recent scholarship on these subjects, with key primary texts introduced in class.

Equivalent Course(s): HIST 36611, SALC 36611, HIST 26611

SALC 26612. The British Empire on Trial: Corruption, Scandal, Dissent. 100 Units.

Throughout the long nineteenth century, British empire building remained a contentious pursuit. It threatened to shatter Britons' moral compasses, destabilize social hierarchies, squander tax revenue, and inflict untold miseries upon foreign populations. To legitimize their expansionism, colonial policy makers claimed that they were introducing benighted regions to the benefits of a universal rule of law. This course will examine how this legalistic form of governing actually functioned by probing the trials of three classes of offenders: "insurgent" and nationalist agitators, reformist critics of colonial misrule, and despotic officials themselves. Focusing on cases in England, the Caribbean, India, and Egypt, readings will reveal the

shortcomings of the British judicial apparatus and identify the loopholes that enabled a proudly "free" nation to subjugate and silence dissidents with near impunity. By participating in mock trials, students will gain familiarity with historical legal processes and the rhetorical tactics that actors employed both in the courtroom and in the public sphere.

Instructor(s): Z. Leonard Terms Offered: Winter

Equivalent Course(s): HIST 21403, LLSO 21403

SALC 26614. Making the Monsoon: The Ancient Indian Ocean. 100 Units.

The course will explore the human adaptation to a climatic phenomenon and its transformative impacts on the littoral societies of the Indian Ocean, circa 1000 BCE-1000 CE. Monsoon means season, a time and space in which favorable winds made possible the efficient, rapid crossing of thousands of miles of ocean. Its discovery—at different times in different places—resulted in communication and commerce across vast distances at speeds more commonly associated with the industrial than the preindustrial era, as merchants, sailors, religious specialists, and scholars made monsoon crossings. The course will consider the participation of Mediterranean, Middle Eastern, South Asian, and East African actors in the making of monsoon worlds and their relations to the Indian Ocean societies they encountered; the course is based on literary and archaeological sources, with attention to recent comparative historiography on oceanic, climatic, and global histories.

SALC 26702. Why comment? Early modern commentarial literature. 100 Units.

What is the purpose of a commentary? What do commentaries in different languages, and on different types of texts, 'do'? This course will take the example of commentarial literature from early modern South Asia—primarily but not exclusively northern India—to explore the different contexts, projects, and intellectual milieus in which commentaries were composed, circulated, and performed. Primary readings will be in English, Sanskrit, and Hindi, and include commentaries (and their accompanying root texts); we will also read a selection of modern scholarly writings on commentarial literature to survey different approaches to working with commentarial works.

Equivalent Course(s): HIST 26609, HIST 36609

SALC 26711. South Asia after Independence. 100 Units.

In 1947-48, the world's greatest experiments in postcolonial democracy and state-building began. This course surveys the histories of India, Pakistan, Bangladesh, and Sri Lanka from independence to the present, with a particular focus on India due to its huge size and historiography. How did politicians and bureaucrats succeed in entrenching democracy in India, while military dictators took control in Pakistan? Why did Bangladesh secede from Pakistan, Indira Gandhi suspend India's democracy, and Sri Lanka descend into a quarter-century-long civil war? To what extent have religious and caste-based movements succeeded in reshaping South Asia today? In parallel, we will examine the transformations in political economy that have shaped these developments, from economic planning to the rise of billionaires and NGOs. By combining secondary literature with public speeches, visual sources, fictional works and more, we will arrive at a rich picture of how the histories of democratization and development in South Asia challenge conventional wisdom in the West. No prior knowledge of South Asian history or South Asian languages is required.

Instructor(s): E. Chatterjee Terms Offered: Spring

Equivalent Course(s): HIST 26711

SALC 26804. Frontiers and Borders in South Asia. 100 Units.

Sometimes the frontline of empires and nation-states, sometimes neglected or inaccessible, peripheral spaces are often of core concern to the central state. The aim of this upper-level undergraduate seminar is to examine the history of borders, borderlands, and frontiers as political and social concepts and as produced spaces. We will examine an array of case studies in addition to more theoretical scholarship that spans the disciplines of history, environmental studies, political science, anthropology, and geography. While using South Asia (itself a rather recently invented "area") as the primary geographic and historical focus this course will not be bound exclusively to it. The first goal of the course is to explore the evolution of key concepts such as space, territory, frontier, and borders/borderlands. The second goal is to develop methods for analyzing subjects that are simultaneously physical spaces and political, social, and historical ideas. Finally, it seeks to introduce students to areas that often fall beyond the penumbra of historical surveys centered on the nation-state. No prior knowledge of South Asian history is assumed. Weekly readings will average 150 pages. Note: No prior knowledge of South Asian history is assumed.

Equivalent Course(s): GEOG 26400, GLST 26804, HIST 26804

SALC 26810. A Global History of South Asia: Migration in the Age of Empire. 100 Units.

Departing from narratives that privilege the rise of a static, territorially bounded, Indian nation-state, this course will examine modern South Asian history (roughly 1600 to present) through the lens of migration and trans-regional encounters. Analyzing shifting perceptions of "the global" as a spatial concept, we will study labor flows in the Indian Ocean, the colonial state's myriad efforts to circumscribe the movement of its subjects, and population transfers between various colonial sites. Entering the later nineteenth century, we will chart the influence of migration, both historical and contemporary, on nationalist thought; we will also discuss the issues posed by the international circulation of political dissenters. Finally, we will engage with fictional representations of the Partition of India and accounts of the social tensions stemming from South Asian immigration into Britain proper. Featuring moral reform literature, petitions, family

histories, and anti-colonial tracts, this course will equip students with the skills to interrogate a range of primary sources and familiarize them with recent trends in global and colonial history.

Buddhism has been an important presence in South Asian religion and culture since its origins in northern India some 2500 years ago. In this course, we will survey the history of ideas and practices in Indian and Tibetan Buddhism from its earliest traces to the present. (C)

Instructor(s): C. Wedemeyer Terms Offered: Winter

Equivalent Course(s): RLST 27302

SALC 27440. Buddha Then and Now: Transformations from Amaravati to Anuradhapura. 100 Units.

The Buddhist sculptures in Amaravati are arguably the earliest to influence the early Buddhist art of the other parts of the sub-continent as well as south and southeast Asia. The course begins with the discussion of the context in which the Buddha images were made in Amaravati and the factors including Buddhist doctrinal developments that contributed to the spread of these images to various parts of Sri Lanka. Then it traces the course and function of Buddhist iconography in Sri Lanka until into the 21st century to assess the role of geopolitical factors. The positionality and portrayals of the images of Buddha are also considered and analyzed. The course traces the trajectories that transformed the image of the Buddha from a symbol of peace to jingoist assertiveness. Through the study of the images of the Buddha, the aim is to comprehend the ways Buddhism has changed over centuries from an inclusive posture which helped it sustain and spread to different parts of the world only later to become exclusionary.

SALC 27904. Wives, Widows, and Prostitutes: Indian Literature and the 'Women's Question' 100 Units.

From the early 19th century onward, the debate on the status of Indian women was an integral part of the discourse on the state of civilization, Hindu tradition, and social reform in colonial India. This course will explore how Indian authors of the late 19th and early 20th centuries engaged with the so-called "women's question." Caught between middle-class conservatism and the urge for social reform, Hindi and Urdu writers addressed controversial issues such as female education, child marriage, widow remarriage, and prostitution in their fictional and discursive writings. We will explore the tensions of a literary and social agenda that advocated the 'uplift' of women as a necessary precondition for the progress of the nation, while also expressing patriarchal fears about women's rights and freedom. The course is open to both undergraduate and graduate students. Basic knowledge of Hindi and/or Urdu is preferable, but not required. We will read works by Nazir Ahmad, Premchand, Jainendra Kumar, Mirza Hadi Ruswa, and Mahadevi Varma in English translation, and also look at texts used in Indian female education at the time.

Instructor(s): U. Stark Terms Offered: Spring

Equivalent Course(s): GNSE 27902, SALC 43800, GNSE 47900

SALC 28002. Can Women Think? The Female Intellectual in South Asia. 100 Units.

How have South Asian women crafted lives for themselves as intellectuals, regardless of their social worlds? This introductory class will examine the figure of the woman-scholar in South Asia from antiquity to the twentieth century. How have South Asian women been seen, or have seen themselves, as intellectuals? We will study how women have provided critical reflections on society, identified normative problems, and argued for their rightful place in public life. This course will think of the specificity of South Asia and the global South in order to understand the relationship between women, authority and authorship, gender and cultural production, the problems of historical memory, and will challenge the notion

of a unified collective of women intellectuals by considering caste, class and religious differences. We will study more than just feminist thought and scholarship. By reflecting on the active process and performance of thinking, we will question the historical and cultural conditions in South Asia which make thinking possible for women.

Instructor(s): Ahona Panda Terms Offered: Spring

Equivalent Course(s): SALC 38002, GNSE 38003, GNSE 28003

SALC 29002. Tibet: Culture, Art, and History. 100 Units.

This class will introduce students to Tibetan civilization from pre-modernity to the present with an emphasis on literature, society, visual arts, and history. Attention will be paid to Tibet's relations with neighboring polities in South, East, and Central Asia, as well as distinctive indigenous practices. The course will cover a range of Tibetan cultural forms, highlighting pre-modern sciences of medicine, logic, and meditation, as well as contemporary developments in Tibetan modernity and the diaspora communities. Course materials will include primary sources in translation (e.g. Dunhuang manuscripts and other literature), contemporary scholarship, as well as audio-visual materials. In addition to informed participation in course meetings/discussions, including regular, timely completion of reading assignments, students are expected to write two short (5-7pg) papers. Students will have the opportunity to work on any topics of Tibetan culture, art and history of their choosing for the final assignment.

Instructor(s): K. Ngodup Terms Offered: Autumn

Note(s): All course readings will be available on electronic reserve via Canvas.

Equivalent Course(s): SALC 39002

SALC 29701. Buddhism and Modernity: East and West. 100 Units.

In the height of nineteenth-century triumph of progress, rationalism, and disenchantment with religion, many European and American intellectuals found inspiration in Buddhism as a spirituality fit for modern times, and expressed it in philosophy, literature, and even opera. On the other side, in Asian societies struggling with colonization, many intellectuals condemned Buddhism as a remnant of premodern superstition, while others hailed it as an essential element for the construction of modern identity and of the superiority of the "spiritual East" against the "materialist West." These debates and images still determine the way in which Buddhism is globally represented today. In this course, we will discuss Buddhism and modernity using examples from various geographical and historical contexts, ranging from Nietzsche, to the American Beat generation, and to contemporary issues of nationalism and violence in South Asia. We will place the careful examination of these topics within the discussion of broader issues, such as the place of religion in modernity, cultural difference and appropriation, and the intersection of religion, gender, and race.

Urdu Courses

URDU 10100-10200-10300. First-Year Urdu I-II-III.

These courses must be taken in sequence. This three-quarter sequence covers basic grammar and vocabulary. Spoken by thirty-five million people in South Asia, Urdu is the national language of Pakistan and one of the official languages of India. Our text is C. M. Naim's *Introductory Urdu, Volumes I and II*. Students learn to read and write the Urdu script, as well as to compose/write in Urdu. We also emphasize aural and oral skills (i.e., listening, pronunciation, speaking). These courses must be taken in sequence. Prospective students should contact the instructor, Elena Bashir (<http://salc.uchicago.edu/faculty/bashir/>).

URDU 10100. First-Year Urdu I. 100 Units.

Spoken by over thirty-five million people in South Asia, Urdu is the national language of Pakistan and one of the official languages of India. It is written in the Perso-Arabic script, which facilitates learning to read and write several other South Asian languages. This three-quarter sequence covers basic grammar and vocabulary. Our text is C. M.

Naim's Introductory Urdu, Volumes I and II. Students learn to read and write the Urdu script, as well as to compose/write in Urdu. By the end of three quarters students have covered all the major grammatical structures of the language. We also emphasize aural and oral skills (i.e., listening, pronunciation, speaking). These courses must be taken in sequence, since the script is introduced in the Autumn quarter. Students should also be aware that they need to contact the instructor ahead of time to discuss scheduling if they are planning to take this course.

Instructor(s): T. Masud Terms Offered: Autumn

Note(s): Interested students should contact Timsal Masud for a placement exam.

Our text is C. M. Naim's Introductory Urdu, Volumes I and II. Students learn to read and write the Urdu script, as well as to compose/write in Urdu. By the end of three quarters students have covered all the major grammatical structures of the language. We also emphasize aural and oral skills (i.e., listening, pronunciation, speaking). These courses must be taken in sequence, since the script is introduced in the Autumn quarter. Students should also be aware that they need to contact the instructor ahead of time to discuss scheduling if they are planning to take this course. Elena Bashir, Autumn-Winter-Spring. Prospective students should contact instructor: ebashir@uchicago.edu.

Instructor(s): T. Masud Terms Offered: Spring

Prerequisite(s): URDU 10200 or consent of instructor.

URDU 20100-20200-20300. Second-Year Urdu I-II-III.

This sequence is a continuation of URDU 10100-10200-10300. There is increased emphasis on vocabulary building. Depending on ability levels and interests of the students, readings can include selections from various original sources. Prospective students should contact the instructor, Elena Bashir (<http://salc.uchicago.edu/faculty/bashir/>).

URDU 20100. Second-Year Urdu I. 100 Units.

First year Urdu or comparable level of language skills. This sequence is a continuation of URDU 10100-10200-10300. There is increased emphasis on vocabulary building and reading progressively complex texts. Depending on ability levels and interests of the students, readings can include selections from various original sources.

Instructor(s): T. Masud Terms Offered: Autumn

Prerequisite(s): URDU 10300 or consent of instructor

Note(s): Interested students should contact Timsal Masud for a placement exam.

URDU 20200. Second-Year Urdu II. 100 Units.

First year Urdu or comparable level of language skills. This sequence is a continuation of URDU 10100-10200-10300. There is increased emphasis on vocabulary building and reading progressively complex texts. Depending on ability levels and interests of the students, readings can include selections from various original sources. Elena Bashir, Autumn-Winter-Spring. Prospective students should contact instructor: ebashir@uchicago.edu.

Instructor(s): T. Masud Terms Offered: Winter

Prerequisite(s): URDU 20100 or consent of instructor

URDU 20300. Second-Year Urdu III. 100 Units.

This sequence is a continuation of URDU 10100-10200-10300. There is increased emphasis on vocabulary building and reading progressively more complex texts. Depending on ability levels and interests of the students, readings can include selections from various original sources. Prospective students should contact instructor: ebashir@uchicago.edu.

Instructor(s): T. Masud Terms Offered: Spring

Prerequisite(s): URDU 20200 or consent of instructor.

Statistics

Department Website: <https://stat.uchicago.edu>

Program of Study

The modern science of statistics involves the development of principles and methods for modeling uncertainty, for designing experiments, surveys, and observational programs, and for analyzing and interpreting empirical data. Mathematics plays a major role in all areas of statistics, from probability theory to data analysis. Statistics is an appropriate field for students with strong mathematical and computational skills and an interest in applying these skills to problems in the natural and social sciences. A program leading to the bachelor's degree in Statistics offers coverage of the principles and methods of statistics in combination with solid training in mathematics and some additional training in computation. The major can provide appropriate preparation for graduate study in statistics or in other subjects with strong quantitative components. Students considering graduate study in statistics or related fields are encouraged to discuss their programs with the Departmental Adviser for Majors at an early stage, whether or not they plan to receive an undergraduate degree in Statistics.

Students who are majoring in other fields of study may also complete a minor in Statistics and are encouraged to discuss their course choices with the Departmental Adviser for Minors. Information on the minor follows the description of the major.

General Course Information

Courses at the 10000 or 20000 level are designed to provide instruction in statistics, probability, and statistical computation for students from all parts of the University. These courses differ in emphasis on theory or methods, in mathematical level, and in the direction of applications.

Introductory Courses and Sequences

To begin their studies in statistics, students can choose from several courses. Students and College advisers are encouraged to contact the Departmental Adviser for Introductory Courses for advice on choosing an appropriate first course.

Students with little or no math background who do not intend to continue on to more advanced statistics courses may take *either* STAT 20000 Elementary Statistics or STAT 20010 Elementary Statistics Through Case Study; enrolling in both is not permitted. Either course satisfies the general education requirement in the mathematical sciences. These courses are two variants of an introductory course that emphasizes concepts rather than statistical techniques. Neither STAT 20000 Elementary Statistics nor STAT 20010 Elementary Statistics Through Case Study may be taken by students with credit for STAT 22000 Statistical Methods and Applications, STAT 23400 Statistical Models and Methods, or more advanced courses in the Department of Statistics. Neither STAT 20000 Elementary Statistics nor STAT 20010 Elementary Statistics Through Case Study counts toward the major or minor in Statistics.

The sequence STAT 11800-11900 Introduction to Data Science I-II provides a computational introduction to statistical concepts, techniques, and applications to data analysis. STAT 11800-11900 Introduction to Data Science I-II has considerable overlap with STAT 22000 Statistical Methods and Applications, but has a more computational and less mathematical emphasis than STAT 22000 Statistical Methods and Applications. Neither STAT 11800 Introduction to Data Science I nor STAT 11900 Introduction to Data Science II can count toward the major in Statistics. STAT 11900 Introduction to Data Science II, but not STAT 11800 Introduction to Data Science I, can be used as an elective in the minor in Statistics.

Students with at least MATH 13100 Elem Functions and Calculus I or placement into MATH 15100 Calculus I are encouraged to take STAT 22000 Statistical Methods and Applications instead of either STAT 20000 Elementary Statistics or STAT 20010 Elementary Statistics Through Case Study. Students with three quarters of calculus may choose either STAT 22000 Statistical Methods and Applications or STAT 23400 Statistical Models and Methods. Students may count either STAT 22000 Statistical Methods and Applications or STAT 23400 Statistical Models and Methods, but not both, toward the forty-two credits required for graduation.

STAT 22000 Statistical Methods and Applications is a general introduction to statistical concepts, techniques, and applications to data analysis and to problems in the design, analysis, and interpretation of experiments and observational programs. A score of 5 on the AP Statistics exam yields credit for STAT 22000 Statistical Methods and Applications, although this credit will not count toward the requirements for a major or minor in Statistics. STAT 22000 Statistical Methods and Applications can count toward the minor in Statistics, but for students matriculating in Autumn Quarter 2016 and after, cannot count toward the major in Statistics.

STAT 23400 Statistical Models and Methods covers much of the same material as STAT 22000 Statistical Methods and Applications, but at a somewhat higher mathematical level. The course is a one-quarter introduction to statistics that is appropriate for any student with a good command of univariate calculus including sequences and series. STAT 23400 Statistical Models and Methods can count toward the minor in Statistics, but for students matriculating in Autumn Quarter 2016 and after, cannot count toward the major in Statistics.

Students cannot hold credit for both STAT 22000 Statistical Methods and Applications and STAT 23400 Statistical Models and Methods. Students completing either STAT 22000 Statistical Methods and Applications or STAT 23400 Statistical Models and Methods forego their AP Statistics credit for STAT 22000 Statistical Methods and Applications.

STAT 24400-24500 Statistical Theory and Methods I-II is recommended for students who wish to have a thorough introduction to statistical theory and methodology. STAT 24400-24500 Statistical Theory and Methods I-II is more mathematically demanding than either STAT 22000 Statistical Methods and Applications or STAT 23400 Statistical Models and Methods. STAT 24400 Statistical Theory and Methods I assumes some familiarity with multivariate calculus, and STAT 24500 Statistical Theory and Methods II assumes some familiarity with linear algebra.

STAT 24410-24510 Statistical Theory and Methods Ia-IIa is an alternative version of STAT 24400-24500 Statistical Theory and Methods I-II that requires STAT 25100 Introduction to Mathematical Probability (or STAT 25150 Introduction to Mathematical Probability-A) as a prerequisite and that replaces some probability topics with additional statistical topics not normally covered in STAT 24400-24500 Statistical Theory and Methods I-II. STAT 24410-24510 Statistical Theory and Methods Ia-IIa is particularly well-suited for students with a strong mathematical background who are interested in more extensive coverage of probability and statistics. Students may count either STAT 24400 Statistical Theory and Methods I or STAT 24410 Statistical Theory and Methods Ia, but not both, toward the 4200 units of credit required for graduation. Similarly, students may count either STAT 24500 Statistical Theory and Methods II or STAT 24510 Statistical Theory and Methods IIa, but not both, and they may count STAT 25100 Introduction to Mathematical Probability or STAT 25150 Introduction to Mathematical Probability-A, but not both, toward the 4200 units of credits required for graduation.

Students considering a major in Statistics are encouraged to begin with either STAT 24400-24500 Statistical Theory and Methods I-II or with the alternative sequence consisting of STAT 25100 Introduction to Mathematical Probability (or STAT 25150 Introduction to Mathematical Probability-A) followed by STAT 24410-24510 Statistical Theory and Methods Ia-IIa, rather than with STAT 23400 Statistical Models and Methods. Although students with a strong mathematical background can and do take either STAT 24400-24500 Statistical Theory and Methods I-II or the alternative sequence (STAT 25100 Introduction to Mathematical Probability and STAT 24410-24510 Statistical Theory and Methods Ia-IIa) without prior course work in statistics or probability, some students find it helpful to take either STAT 22000 Statistical Methods and Applications or STAT 23400 Statistical Models and Methods as preparation.

The core of the Statistics major consists of three courses: STAT 25100 Introduction to Mathematical Probability (or STAT 25150 Introduction to Mathematical Probability-A) and either STAT 24400-24500 Statistical Theory and Methods I-II or STAT 24410-24510 Statistical Theory and Methods Ia-IIa. Either of these is recommended as a three-quarter cognate sequence for students in the quantitative sciences and mathematics. Note that STAT 25100 Introduction to Mathematical Probability may be taken before, after, or concurrently with STAT 24400-24500 Statistical Theory and Methods I-II, though it is a prerequisite for STAT 24410-24510 Statistical Theory and Methods Ia-IIa.

Additional Courses in Statistical Theory, Methods, and Applications

For students interested in continuing their study of statistics beyond the introductory level, STAT 22200 Linear Models and Experimental Design, STAT 22400 Applied Regression Analysis, STAT 22600 Analysis of Categorical Data, and STAT 22700 Biostatistical Methods are recommended. Note that because there is some overlap between STAT 22600 Analysis of Categorical Data and STAT 22700 Biostatistical Methods, only one of these two courses, not both, may be counted toward a major or minor in Statistics. The courses STAT 22200 Linear Models and Experimental Design, STAT 22400 Applied Regression Analysis, and STAT 22600 Analysis of Categorical Data may be taken in any order. Each presumes two quarters of calculus and a previous course in statistics (STAT 22000 Statistical Methods and Applications or higher). STAT 22700 Biostatistical Methods has STAT 22400 Applied Regression Analysis as a prerequisite.

For students who have completed STAT 24400-24500 Statistical Theory and Methods I-II and are interested in more advanced statistical methodology courses, STAT 24620 Multivariate Statistical Analysis: Applications and Techniques, STAT 26100 Time Dependent Data, STAT 26300 Introduction to Statistical Genetics, STAT 27400 Nonparametric Inference, STAT 27850 Multiple Testing, Modern Inference, and Replicability, and STAT 34300 Applied Linear Stat Methods are recommended. Many other graduate courses in Statistics offer opportunities for further study of statistical theory, methods, and applications. For details, consult the instructor or the Departmental Adviser for Majors, or visit the Graduate Announcements (<http://graduateannouncements.uchicago.edu/departments/statistics/>).

Courses in Probability

Students interested in probability can begin with STAT 25100 Introduction to Mathematical Probability or STAT 25150 Introduction to Mathematical Probability-A, which can be taken separately from any Statistics courses and can be supplemented with more advanced probability courses, such as STAT 25300 Introduction to Probability Models or MATH 23500 Markov Chains, Martingales, and Brownian Motion. Students with a strong mathematical background can take STAT 31200 Introduction to Stochastic Processes I, STAT 38100 Measure-Theoretic Probability I, and STAT 38300 Measure-Theoretic Probability III. Note that because there is some overlap between MATH 23500 Markov Chains, Martingales, and Brownian Motion and STAT 31200 Introduction to Stochastic Processes I, only one of these two courses, not both, may be counted toward a major in Statistics.

Courses in Machine Learning

A student with a strong computer science background and some knowledge of elementary statistics could take STAT 27725 Machine Learning. Other courses in the category of machine learning include the advanced statistical methodology courses STAT 24620 Multivariate Statistical Analysis: Applications and Techniques and STAT 27400 Nonparametric Inference. Graduate course offerings in machine learning include STAT 37601 Machine Learning and Large-Scale Data Analysis and STAT 37710 Machine Learning.

Courses in Optimization

A student with a strong mathematical background could take STAT 28000 Optimization. Graduate course offerings in optimization include STAT 31015 Mathematical Computation IIA: Convex Optimization and STAT 31020 Mathematical Computation IIB: Nonlinear Optimization.

Grading

Students who are majoring or minoring in Statistics must receive a quality grade of at least C in all of the courses counted toward their major or minor program in Statistics. In addition, students who are majoring in Statistics must receive quality grades of at least C+ in both STAT 24400 Statistical Theory and Methods I and STAT 24500 Statistical Theory and Methods II (or at least C in both STAT 24410 Statistical Theory and Methods Ia and STAT 24510 Statistical Theory and Methods Ila). Subject to College and divisional regulations, and with the consent of the instructor, students may register for either quality grades or for P/F grading in any 20000-level Statistics course, other than STAT 29700 Undergraduate Research or STAT 29900 Bachelor's Paper, that is not counted toward a major or minor in Statistics. A grade of P is given only for work of C– quality or higher.

The following policy applies to students who wish to receive a mark of I for a Statistics course. In addition to submitting the official Incomplete Form required by the College, students must have completed at least half of the total required course work with a grade of C– or better, and they must be unable to complete the remaining course work by the end of the quarter due to an emergency. Students requesting a mark of I for STAT 20000 Elementary Statistics, STAT 20010 Elementary Statistics Through Case Study, STAT 22000 Statistical Methods and Applications, or STAT 23400 Statistical Models and Methods must obtain approval from both the current instructor and the Departmental Adviser for Introductory Courses.

Program Requirements for Majors

The requirements for the BA and BS in Statistics were updated in 2017. Students who matriculated prior to Autumn 2017 may choose to follow these updated requirements; otherwise, they should consult the archived catalog from their year of matriculation (or, at their option, any later year) for the degree requirements in Statistics. All students who matriculated in Autumn 2017 or later should follow the updated requirements described below.

Every candidate must obtain approval of his or her course program from the Departmental Adviser for Majors. Students majoring in Statistics should meet the general education requirement in mathematical sciences with courses in calculus. The major program includes four additional prescribed mathematics courses, four prescribed statistics courses, and two prescribed computer science courses. Students are advised to complete the four mathematics courses by the end of their third year. Additional requirements include four approved elective courses in Statistics. The BS also requires an additional prescribed mathematics course and an approved, coherent, three-quarter sequence at the 20000 level in a field to which statistics can be applied. Students who are majoring in Statistics must receive quality grades of at least C+ in both STAT 24400 Statistical Theory and Methods I and STAT 24500 Statistical Theory and Methods II (or at least C in both STAT 24410 Statistical Theory and Methods Ia and STAT 24510 Statistical Theory and Methods Ila), and at least C in all other courses counted toward the Statistics major. A grade of P is not acceptable for any of these courses.

Prescribed Mathematics Courses

The prescribed mathematics courses include a Calculus III requirement (MATH 13300 Elementary Functions and Calculus III or MATH 15300 Calculus III or MATH 16300 Honors Calculus III) and a Linear Algebra requirement (STAT 24300 Numerical Linear Algebra or MATH 20250 Abstract Linear Algebra or MATH 20700 Honors Analysis in Rn I). Note that MATH 19620 Linear Algebra may not be used to meet the Linear Algebra requirement.

For the BA, one of the following pairs of courses is required: MATH 20000-20100 Mathematical Methods for Physical Sciences I-II or MATH 20400 Analysis in Rn II-MATH 20500 Analysis in Rn III or MATH 20800 Honors Analysis in Rn II-MATH 20900 Honors Analysis in Rn III or the pair consisting of MATH 20000 Mathematical Methods for Physical Sciences I and STAT 28200 Dynamical Systems with Applications.

For the BS, students must take one of the following three courses: MATH 20000 Mathematical Methods for Physical Sciences I or MATH 20500 Analysis in Rn III or MATH 20900 Honors Analysis in Rn III; and, in addition, one of the following three courses: MATH 20100 Mathematical Methods for Physical Sciences II, MATH 27300 Basic Theory of Ordinary Differential Equations, or STAT 28200 Dynamical Systems with Applications; and, in addition, one of the following two courses: STAT 28000 Optimization or MATH 21100 Basic Numerical Analysis.

Students who are completing majors in both Statistics and Economics should follow the same mathematics requirements as Statistics majors. Students who have already taken MATH 19520 Mathematical Methods for Social Sciences and MATH 19620 Linear Algebra should discuss with the Departmental Adviser for Majors how best to meet the mathematics requirements for the Statistics major. For example, such students can petition to meet the requirements for the BA in Statistics by taking all three of MATH 20100 Mathematical Methods for Physical Sciences II, STAT 24300 Numerical Linear Algebra, and STAT 28200 Dynamical Systems with Applications.

Prescribed Statistics Courses

The four prescribed Statistics courses are STAT 25100 Introduction to Mathematical Probability (or STAT 25150 Introduction to Mathematical Probability-A or MATH 23500 Markov Chains, Martingales, and Brownian Motion), STAT 24400-24500 Statistical Theory and Methods I-II (or STAT 24410-24510 Statistical Theory and Methods Ia-IIa), and either STAT 22400 Applied Regression Analysis or STAT 34300 Applied Linear Stat Methods.

It is recommended that students who have had some multivariable calculus begin the major by taking either STAT 25100 Introduction to Mathematical Probability or STAT 24400 Statistical Theory and Methods I as their first course in probability and statistics. An alternative route to beginning the major would be to first take either STAT 22000 Statistical Methods and Applications or STAT 23400 Statistical Models and Methods, neither of which count toward the major, but which could serve as a prerequisite for courses such as STAT 22400 Applied Regression Analysis, STAT 22200 Linear Models and Experimental Design, and STAT 22600 Analysis of Categorical Data, which do count toward the major. This second path is recommended for students who need additional time to complete multivariable calculus and linear algebra prerequisites and who want to get started on the major in the meantime.

Electives

Candidates for the BA are required to take four electives, at least two of which must be on List B below. The remaining two electives may be from either List B or C. Students may count either STAT 22600 Analysis of Categorical Data or STAT 22700 Biostatistical Methods, but not both, toward the BA. Similarly, students may count either MATH 23500 Markov Chains, Martingales, and Brownian Motion or STAT 31200 Introduction to Stochastic Processes I, but not both, toward the BA. If MATH 23500 Markov Chains, Martingales, and Brownian Motion is counted in place of STAT 25100 Introduction to Mathematical Probability in the Statistics BA, then MATH 23500 Markov Chains, Martingales, and Brownian Motion cannot also be counted as an elective in the Statistics BA.

Candidates for the BS are required to take four electives. A candidate for the BS who has *not* taken STAT 34300 Applied Linear Stat Methods as one of the four prescribed statistics courses must take at least one elective from List A below, a second elective from List B, and the remaining two electives may be from either List B or C. A candidate for the BS who *has* taken STAT 34300 Applied Linear Stat Methods as one of the four prescribed statistics courses must take at least two electives from List B and the remaining two electives may be from either List B or C. For the BS in Statistics, STAT 28000 Optimization counts as a List C elective only if MATH 21100 Basic Numerical Analysis is also included in the program. In other words, students cannot double-count STAT 28000 Optimization toward both the four-elective requirement and the requirement to take one of STAT 28000 Optimization and MATH 21100 Basic Numerical Analysis. Students may count either STAT 22600 Analysis of Categorical Data or STAT 22700 Biostatistical Methods, but not both, toward the BS. Similarly, students may count either MATH 23500 Markov Chains, Martingales, and Brownian Motion or STAT 31200 Introduction to Stochastic Processes I, but not both, toward the BS. If MATH 23500 Markov Chains, Martingales, and Brownian Motion is counted in place of STAT 25100 Introduction to Mathematical Probability in the Statistics BS, then MATH 23500 Markov Chains, Martingales, and Brownian Motion cannot also be counted as an elective in the Statistics BS.

Note: The following lists may change from time to time as courses change and new courses are added. Please consult the Departmental Adviser for Majors for approval of your electives.

LIST A: Advanced Statistical Methodology

STAT 24620	Multivariate Statistical Analysis: Applications and Techniques
STAT 26100	Time Dependent Data
STAT 26300	Introduction to Statistical Genetics
STAT 27400	Nonparametric Inference
STAT 27850	Multiple Testing, Modern Inference, and Replicability
Some additional graduate courses in Statistics (must be approved by Departmental Adviser for Majors)	

LIST B: Statistical Methodology

STAT 22200	Linear Models and Experimental Design
STAT 22600	Analysis of Categorical Data *
STAT 22700	Biostatistical Methods *
STAT 24620	Multivariate Statistical Analysis: Applications and Techniques
STAT 26100	Time Dependent Data
STAT 26300	Introduction to Statistical Genetics
STAT 26700	History of Statistics
STAT 27400	Nonparametric Inference
STAT 27850	Multiple Testing, Modern Inference, and Replicability
STAT 35800	Statistical Applications
STAT 37601	Machine Learning and Large-Scale Data Analysis
Some additional graduate courses in Statistics (must be approved by Departmental Adviser for Majors)	

* Students may count either STAT 22600 Analysis of Categorical Data or STAT 22700 Biostatistical Methods, but not both, toward the major.

LIST C: Other Upper Level/Graduate Courses

MATH 23500	Markov Chains, Martingales, and Brownian Motion *
STAT 25300	Introduction to Probability Models

STAT 27725	Machine Learning
STAT 28000	Optimization **
STAT 30900	Mathematical Computation I: Matrix Computation Course
STAT 31015	Mathematical Computation IIA: Convex Optimization
STAT 31020	Mathematical Computation IIB: Nonlinear Optimization
STAT 31060	Further Mathematical Computation: Matrix Computation and Optimization
STAT 31200	Introduction to Stochastic Processes I *
STAT 37710	Machine Learning
STAT 38100	Measure-Theoretic Probability I
STAT 38300	Measure-Theoretic Probability III
Some additional graduate courses in Statistics (must be approved by Departmental Adviser for Majors)	

- * Students may count either MATH 23500 Markov Chains, Martingales, and Brownian Motion or STAT 31200 Introduction to Stochastic Processes I, but not both, toward the major. If either of them is counted in place of STAT 25100 Introduction to Mathematical Probability, then it cannot also count as an elective.
- ** For the BA in Statistics, STAT 28000 Optimization counts as a List C elective. For the BS in Statistics, STAT 28000 Optimization counts as a List C elective only if MATH 21100 Basic Numerical Analysis is also included in the program. In other words, for the BS, students cannot double-count STAT 28000 Optimization toward both the four-elective requirement and the requirement to take at least one of STAT 28000 Optimization and MATH 21100 Basic Numerical Analysis.

Computer Science Requirement

Candidates for either the BA or the BS are required to take one of the following sequences: CMSC 12100-12200 Computer Science with Applications I-II or CMSC 15100-15200 Introduction to Computer Science I-II or CMSC 16100-16200 Honors Introduction to Computer Science I-II.

BS Requirement of Three-Quarter Sequence in a Field to Which Statistics Can Be Applied

Candidates for the BS (but not the BA) are required to take an approved, coherent, three-quarter sequence at the 20000 level in a field to which statistics can be applied. Generally this sequence should be in the natural or social sciences, but a sequence in another discipline may be acceptable. Courses in MATH or CMSC may not be used for this requirement. Sequences in which earlier courses are prerequisites for later ones are preferred. Example sequences include BIOS 20198 Biodiversity-BIOS 20196 Ecology and Conservation-BIOS 23406 Biogeography; CHEM 22000-22100-22200 Organic Chemistry I-II-III; CHEM 26100-26200-26300 Quantum Mechanics; Thermodynamics; Chemical Kinetics and Dynamics; ECON 20000-20100-20200 The Elements of Economic Analysis I-II-III; GEOS 21000 Mineralogy-GEOS 21100 Introduction to Petrology-GEOS 21200 Physics of the Earth; and PHYS 23410 Quantum Mechanics I-PHYS 23510 and PHYS 24310 Advanced Quantum Mechanics. All sequences must be approved by the Departmental Adviser for Majors.

Summary of Requirements for the BA in Statistics

GENERAL EDUCATION		
One of the following sequences: *		200
MATH 13100-13200	Elementary Functions and Calculus I-II	
MATH 15100-15200	Calculus I-II	
MATH 16100-16200	Honors Calculus I-II	
MATH 16110 & MATH 16210	Honors Calculus I (IBL) and Honors Calculus II (IBL)	
Total Units		200
MAJOR		
One of the following: *		100
MATH 13300	Elementary Functions and Calculus III	
MATH 15300	Calculus III	
MATH 16300	Honors Calculus III	
MATH 16310	Honors Calculus III (IBL)	
One of the following course pairs:		200
MATH 20000	Mathematical Methods for Physical Sciences I	
AND		
STAT 28200	Dynamical Systems with Applications	
MATH 20000-20100	Mathematical Methods for Physical Sciences I-II	
MATH 20400-20500	Analysis in Rn II-III	

MATH 20410 & MATH 20510	Analysis in Rn II (accelerated) and Analysis in Rn III (accelerated)	
MATH 20800-20900	Honors Analysis in Rn II-III	
One of the following:		100
STAT 24300	Numerical Linear Algebra	
MATH 20250	Abstract Linear Algebra	
MATH 20700	Honors Analysis in Rn I	
One of the following sequences:		200
STAT 24400-24500	Statistical Theory and Methods I-II	
STAT 24410-24510	Statistical Theory and Methods Ia-IIa	
One of the following:		100
STAT 25100	Introduction to Mathematical Probability	
STAT 25150	Introduction to Mathematical Probability-A	
MATH 23500	Markov Chains, Martingales, and Brownian Motion	
One of the following:		100
STAT 22400	Applied Regression Analysis	
STAT 34300	Applied Linear Stat Methods	
One of the following sequences:		200
CMSC 12100-12200	Computer Science with Applications I-II	
CMSC 15100-15200	Introduction to Computer Science I-II	
CMSC 16100-16200	Honors Introduction to Computer Science I-II	
Four approved elective courses in Statistics **		400
Total Units		1400

* Credit may be granted by examination.

** At least two of the electives must be on List B. The remaining two electives may be from either List B or C. Students may count either STAT 22600 Analysis of Categorical Data or STAT 22700 Biostatistical Methods, but not both, toward the BA. Students may count either MATH 23500 Markov Chains, Martingales, and Brownian Motion or STAT 31200 Introduction to Stochastic Processes I, but not both, toward the BA. If MATH 23500 Markov Chains, Martingales, and Brownian Motion is counted in place of STAT 25100 Introduction to Mathematical Probability, then it cannot also count as an elective.

Summary of Requirements for the BS in Statistics

GENERAL EDUCATION

One of the following sequences: *		200
MATH 13100-13200	Elementary Functions and Calculus I-II	
MATH 15100-15200	Calculus I-II	
MATH 16100-16200	Honors Calculus I-II	
MATH 16110 & MATH 16210	Honors Calculus I (IBL) and Honors Calculus II (IBL)	
Total Units		200

MAJOR

One of the following: *		100
MATH 13300	Elementary Functions and Calculus III	
MATH 15300	Calculus III	
MATH 16300	Honors Calculus III	
MATH 16310	Honors Calculus III (IBL)	
One of the following:		100
MATH 20000	Mathematical Methods for Physical Sciences I	
MATH 20500	Analysis in Rn III	
MATH 20510	Analysis in Rn III (accelerated)	
MATH 20900	Honors Analysis in Rn III	
One of the following:		100
MATH 20100	Mathematical Methods for Physical Sciences II	
MATH 27300	Basic Theory of Ordinary Differential Equations	

STAT 28200	Dynamical Systems with Applications	
One of the following:		100
STAT 24300	Numerical Linear Algebra	
MATH 20250	Abstract Linear Algebra	
MATH 20700	Honors Analysis in Rn I	
One of the following:		100
STAT 28000	Optimization	
MATH 21100	Basic Numerical Analysis	
One of the following sequences:		200
STAT 24400-24500	Statistical Theory and Methods I-II	
STAT 24410-24510	Statistical Theory and Methods Ia-IIa	
One of the following:		100
STAT 25100	Introduction to Mathematical Probability	
STAT 25150	Introduction to Mathematical Probability-A	
MATH 23500	Markov Chains, Martingales, and Brownian Motion	
One of the following:		100
STAT 22400	Applied Regression Analysis

CMSC 15100-15200	Introduction to Computer Science I-II	
CMSC 16100-16200	Honors Introduction to Computer Science I-II	
Four approved elective courses in Statistics **		400
A coherent three-quarter sequence at the 20000 level in a field to which statistics can be applied ***		300
Total Units		1800

* Credit may be granted by examination.

** A candidate for the BS who has *not* taken STAT 34300 Applied Linear Stat Methods as one of the four prescribed statistics courses must take at least one elective from List A, a second elective from List B, and the remaining two electives may be from either List B or C. A candidate for the BS who *has* taken STAT 34300 Applied Linear Stat Methods as one of the four prescribed statistics courses must take at least two electives from List B and the remaining two electives may be from either List B or C. For the BS in Statistics, STAT 28000 Optimization counts as a List C elective only if MATH 21100 Basic Numerical Analysis is also included in the program. In other words, students cannot double-count STAT 28000 Optimization toward both the four-elective requirement and the requirement to take at least one of STAT 28000 Optimization and MATH 21100 Basic Numerical Analysis. Students may count either STAT 22600 Analysis of Categorical Data or STAT 22700 Biostatistical Methods, but not both, toward the BS. Students may count either MATH 23500 Markov Chains, Martingales, and Brownian Motion or STAT 31200 Introduction to Stochastic Processes I, but not both, toward the BS. If MATH 23500 Markov Chains, Martingales, and Brownian Motion is counted in place of STAT 25100 Introduction to Mathematical Probability, then it cannot also count as an elective.

*** Generally, this sequence should be in the natural or social sciences, but a sequence in another discipline may be acceptable. Courses in MATH or CMSC may not be used for this requirement. Sequences in which earlier courses are prerequisites for later ones are preferred. Example sequences include BIOS 20198 Biodiversity-BIOS 20196 Ecology and Conservation-BIOS 23406 Biogeography; CHEM 22000-22100-22200 Organic Chemistry I-II-III; CHEM 26100-26200-26300 Quantum Mechanics; Thermodynamics; Chemical Kinetics and Dynamics; ECON 20000-20100-20200 The Elements of Economic Analysis I-II-III; ECON 20010-20110-20210 The Elements of Economic Analysis: Honors I-II-III; GEOS 21000 Mineralogy-GEOS 21100 Introduction to Petrology-GEOS 21200 Physics of the Earth; and PHYS 23410 Quantum Mechanics I-PHYS 23510 and PHYS 24310 Advanced Quantum Mechanics. All sequences must be approved by the Departmental Adviser for Majors.

Honors

The BA or BS with honors is awarded to students with Statistics as their primary major who have a GPA of 3.0 or higher overall and 3.25 or higher in the courses in the major and also complete an approved honors paper (STAT 29900 Bachelor's Paper). This paper is typically based on a structured research program that the student undertakes, with faculty supervision, in the first quarter of his or her fourth year. Eligible students who wish to be considered for honors should consult the Departmental Adviser for Majors before the end of their third year. The research paper or project used to meet this requirement may not be used to meet the bachelor's paper or project requirement in another major or course. NOTE: Credit for STAT 29900 Bachelor's Paper will not count towards the courses required for a major in Statistics.

Joint BA/MS or BS/MS in Statistics

This program enables unusually well-qualified undergraduate students to complete an MS in Statistics along with a BA or BS during their four years at the College. Although a student may receive a BA or BS in any field, a program of study other than Statistics is recommended.

Only a small number of students will be selected for the program through a competitive admissions process. Participants must apply to the MS program in Statistics by June 1 of their third year for admission to candidacy for an MS in Statistics during their fourth year. To be considered, students should have completed almost all of their undergraduate requirements, including all of their general education and language competence requirements, by the end of their third year. They should also have completed, at a minimum, STAT 24400-24500 Statistical Theory and Methods I-II (or STAT 24410-24510 Statistical Theory and Methods Ia-IIa) with A or A- grades and all the mathematics requirements for the Statistics major with very high grades. While these are the minimum criteria, admission is competitive, and additional qualifications may be needed. Interested students are strongly encouraged to consult both the Departmental Adviser for Majors and their College adviser early in their third year.

Participants in the joint BA/MS or BS/MS program must meet the same requirements as students in the MS program in Statistics. Of the nine courses that are required at the appropriate level, up to three may also meet the requirements of an undergraduate program. For example, STAT 24410-24510 Statistical Theory and Methods Ia-IIa and STAT 34300 Applied Linear Stat Methods, which satisfy requirements for the MS in Statistics, could also be used to satisfy requirements of a BA or BS program in Statistics.

Other requirements include a master's paper and participation in the Consulting Program of the Department of Statistics. For details on requirements, visit <https://stat.uchicago.edu/academics/graduate-programs/graduate-student-resources/academic-life/requirements-and-regulations-for-m.s.-candidates>. (<https://stat.uchicago.edu/academics/graduate-programs/graduate-student-resources/academic-life/requirements-and-regulations-for-m.s.-candidates/>)

Minor Program in Statistics

The Statistics minor focuses on statistical methodology, in contrast to the Statistics major, which has a substantial theoretical component. The minor in Statistics requires five courses, some prescribed and some elective, chosen in consultation with the Departmental Adviser for Minors. Not every combination of elective courses is allowed. Generally, no more than two electives may be satisfied by courses offered by departments other than the Department of Statistics. Students are encouraged to obtain course advising early from the Departmental Adviser for Minors. By the end of Spring Quarter of the student's third year, a student who wishes to complete the Statistics minor must complete the Consent to Complete a Minor Form (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf) to obtain formal approval of their degree program from the Departmental Adviser for Minors.

The core of the Statistics minor consists of STAT 22400 Applied Regression Analysis and either STAT 22200 Linear Models and Experimental Design or STAT 22600 Analysis of Categorical Data (or both). These three courses may be taken in any order after meeting the prerequisite of at least two quarters calculus and introductory statistics: STAT 22000 Statistical Methods and Applications, STAT 23400 Statistical Models and Methods, STAT 24500 Statistical Theory and Methods II, STAT 24510 Statistical Theory and Methods Ia, or AP credit for STAT 22000 Statistical Methods and Applications. STAT 11900 Introduction to Data Science II is also allowed to fulfill the introductory statistics prerequisite requirement.

An approved substitute for STAT 22600 Analysis of Categorical Data is PBHS 32700 Biostatistical Methods (also designated as STAT 22700 Biostatistical Methods), which requires STAT 22400 Applied Regression Analysis as prerequisite and is offered by the Department of Public Health Sciences. Students may count either STAT 22600 Analysis of Categorical Data or STAT 22700 Biostatistical Methods, but not both, toward the Statistics minor. STAT 22700 Biostatistical Methods does not count against the limit of no more than two electives from outside the Department of Statistics.

To complete the five-course minor, students must choose from among the approved electives listed below. Generally, no more than two electives may be satisfied by courses offered by departments other than the Department of Statistics. Students may petition the Department Adviser for Minors to include more than two electives from outside the Department of Statistics. Regardless, at most one elective can be satisfied by a course offered by the Booth School of Business. Further, due to the course grading policies of the Booth School of Business, their 40000-level courses cannot be counted toward the Statistics minor if taken during the quarter in which the student will graduate from the College.

STAT 11900 Introduction to Data Science II and either STAT 22000 Statistical Methods and Applications or STAT 23400 Statistical Models and Methods, but not both, may be used as electives in the Statistics minor if taken prior to any other courses for which at least STAT 22000 Statistical Methods and Applications or STAT 23400 Statistical Models and Methods is prerequisite and before either of STAT 24500 Statistical Theory and Methods II or STAT 24510 Statistical Theory and Methods Ia. STAT 11900 Introduction to Data Science II can only be used as an elective in the Statistics minor if the student also completes STAT 11800 Introduction to Data Science I (which cannot be included in a Statistics minor).

Students should note that STAT 11900 Introduction to Data Science II is a requirement for the Data Science minor and no course may be counted toward multiple minors. Likewise, if either STAT 22000 Statistical Methods and Applications or STAT 23400 Statistical Models and Methods is used to fulfill a requirement for any major(s), other minors, or general

education requirements, then neither course may be used to fulfill a requirement in the Statistics minor. Students may not use AP credit for STAT 22000 Statistical Methods and Applications to fulfill a requirement for the Statistics minor.

The list of courses approved for the minor may change from time to time as courses change and new courses are added. Please consult the Departmental Adviser for Minors for approval of your minor program plan. Students may petition the Departmental Adviser for Minors for approval of another course. Such courses must have a minimum statistics prerequisite of introductory statistics (STAT 22000 Statistical Methods and Applications, STAT 23400 Statistical Models and Methods, STAT 24500 Statistical Theory and Methods II, or STAT 24510 Statistical Theory and Methods IIa), incorporate a considerable amount of data analysis, and cannot substantially overlap with the topics covered in departmental courses or other courses in the student's minor program.

No courses in the Statistics minor can be double counted with the student's major(s), other minors, or general education requirements. An approved elective must replace any course required for the Statistics minor that is used to meet the requirements for any major(s), other minors, or general education requirements.

The following courses offered by the Department of Statistics cannot be included in a Statistics minor: STAT 11800 Introduction to Data Science I, STAT 20000 Elementary Statistics, STAT 20010 Elementary Statistics Through Case Study, STAT 24300 Numerical Linear Algebra, STAT 24400 Statistical Theory and Methods I, STAT 24410 Statistical Theory and Methods Ia, STAT 25100 Introduction to Mathematical Probability, STAT 25150 Introduction to Mathematical Probability-A, STAT 25300 Introduction to Probability Models, STAT 27400 Nonparametric Inference, STAT 27850 Multiple Testing, Modern Inference, and Replicability, STAT 28000 Optimization, STAT 28200 Dynamical Systems with Applications, STAT 29700 Undergraduate Research, or any graduate courses in probability. In addition, CMSC 25400 Machine Learning (also designated as STAT 27725 Machine Learning) cannot be included in the Statistics minor.

Students who are minoring in Statistics must receive a quality grade of at least C in all of the courses counted toward the minor. A grade of P is not acceptable for any of these courses. More than half of the courses counted toward the Statistics minor must be met by registering for courses bearing University of Chicago course numbers.

Summary of Requirements for the Minor in Statistics

The following course: *	100
STAT 22400 Applied Regression Analysis *	
One of the following: **	100
STAT 22200 Linear Models and Experimental Design *	
STAT 22600 Analysis of Categorical Data *,***	
Three approved electives ****	300
Total Units	500

- * STAT 22200 Linear Models and Experimental Design, STAT 22400 Applied Regression Analysis, and STAT 22600 Analysis of Categorical Data may be taken in any order after meeting the prerequisite of at least two quarters calculus and introductory statistics: STAT 22000 Statistical Methods and Applications, STAT 23400 Statistical Models and Methods, STAT 24500 Statistical Theory and Methods II, STAT 24510 Statistical Theory and Methods IIa, or AP credit for STAT 22000 Statistical Methods and Applications. STAT 11900 Introduction to Data Science II is also allowed to fulfill the introductory statistics prerequisite requirement.
- ** If STAT 22200 Linear Models and Experimental Design is used to fulfill a requirement of the Statistics minor, then STAT 22600 Analysis of Categorical Data may be used as an elective in the minor. Similarly, If STAT 22600 Analysis of Categorical Data is used to fulfill a requirement of the Statistics minor, then STAT 22200 Linear Models and Experimental Design may be used as an elective in the minor.
- *** An approved substitute for STAT 22600 Analysis of Categorical Data is STAT 22700 Biostatistical Methods, which requires STAT 22400 Applied Regression Analysis as prerequisite and is offered by the Department of Public Health Sciences. Students may count either STAT 22600 Analysis of Categorical Data or STAT 22700 Biostatistical Methods, but not both, toward the Statistics minor. STAT 22700 Biostatistical Methods does not count against the limit of no more than two electives from outside the Department of Statistics.
- **** Not every combination of elective courses is allowed. Generally, no more than two electives may be satisfied by courses offered by departments other than the Department of Statistics. Students may petition the Departmental Adviser for Minors to include more than two electives from outside the Department of Statistics. Regardless, at most one elective can be satisfied by a course offered by the Booth School of Business. Further, due to the course grading policies of the Booth School of Business, their 40000-level courses cannot be counted toward the Statistics minor if taken during the quarter in which the student will graduate from the College.

Departmental Electives Approved for the Minor in Statistics

STAT 11900	Introduction to Data Science II ¹	100
STAT 22000	Statistical Methods and Applications ^{1,2}	100
STAT 22200	Linear Models and Experimental Design ³	100
STAT 22600	Analysis of Categorical Data ^{3, 4}	100
STAT 23400	Statistical Models and Methods ¹	100

STAT 24500	Statistical Theory and Methods II ⁵	100
STAT 24510	Statistical Theory and Methods IIa ⁵	100
STAT 26100	Time Dependent Data	100
STAT 26300	Introduction to Statistical Genetics	100
STAT 26700	History of Statistics	100

¹ STAT 11900 Introduction to Data Science II and either STAT 22000 Statistical Methods and Applications or STAT 23400 Statistical Models and Methods, but not both, may be used as electives if taken prior to any other courses for which at least STAT 22000 Statistical Methods and Applications or STAT 23400 Statistical Models and Methods is prerequisite. If either STAT 22000 Statistical Methods and Applications or STAT 23400 Statistical Models and Methods is used to fulfill a requirement for any major(s), other minors, or general education requirements, then neither course may be used to fulfill a requirement in the Statistics minor. STAT 11900 Introduction to Data Science II can only be used as an elective in the Statistics minor if the student also completes STAT 11800 Introduction to Data Science I (which cannot be included in a Statistics minor).

² Students may not use AP credit for STAT 22000 Statistical Methods and Applications to meet a requirement for the Statistics minor.

³ If STAT 22200 Linear Models and Experimental Design is used to fulfill a requirement of the Statistics minor, then STAT 22600 Analysis of Categorical Data may be used as an elective in the minor. Similarly, if STAT 22600 Analysis of Categorical Data is used to fulfill a requirement of the Statistics minor, then STAT 22200 Linear Models and Experimental Design may be used as an elective in the minor.

⁴ An approved substitute for STAT 22600 Analysis of Categorical Data is PBHS 32700 Biostatistical Methods (also designated as STAT 22700 Biostatistical Methods), which requires STAT 22400 Applied Regression Analysis as prerequisite and is offered by the Department of Public Health Sciences. Students may count either STAT 22600 Analysis of Categorical Data or STAT 22700 Biostatistical Methods, but not both, toward the Statistics minor. STAT 22700 Biostatistical Methods does not count against the limit of no more than two electives from outside the Department of Statistics.

⁵ If either STAT 24500 Statistical Theory and Methods II or STAT 24510 Statistical Theory and Methods IIa is used as an elective in the Statistics minor, then the prerequisite STAT 24400 Statistical Theory and Methods I or STAT 24410 Statistical Theory and Methods Ia may not be counted toward the minor, but may be counted toward any major(s) or other minors.

Non-Departmental Electives Approved for the Minor in Statistics

Because of the interdisciplinary nature of the field of statistics, other departments and committees offer courses approved for use as electives for the Statistics minor. Generally, no more than two electives may be satisfied by courses offered by departments other than the Department of Statistics. Students may petition the Departmental Adviser for Minors to include more than two electives from outside the Department of Statistics. Regardless, at most one elective can be satisfied by a course offered by the Booth School of Business. Further, due to the course grading policies of the Booth School of Business, their 40000-level courses cannot be counted toward the Statistics minor if taken during the quarter in which the student will graduate from the College.

Offering departments include Public Health Sciences, Computer Science, Comparative Human Development, Human Genetics, Public Policy, Sociology, and the Booth School of Business.

BIOS 21216	Intro Statistical Genetics	100
BUSN 41201	Big Data ¹	100
BUSN 41204	Machine Learning ¹	100
CHDV 30102	Introduction to Causal Inference	100
CHDV 32411	Mediation, Moderation, and Spillover Effects	100
PBHS 30910	Epidemiology and Population Health	100
PBHS 31001	Epidemiologic Methods	100
PBHS 32700	Biostatistical Methods ²	100
PBHS 33200	Statistical Analysis with Missing Data	100
PBHS 33300	Applied Longitudinal Data Analysis	100
PBHS 33400	Multilevel Modeling	100
PBHS 33500	Statistical Applications	100
PBPL 28820	Machine Learning and Policy	100
SOCI 20112	Applications of Hierarchical Linear Models	100
SOCI 20253	Introduction to Spatial Data Science	100

¹ At most one elective can be satisfied by a course offered by the Booth School of Business. Due to the course grading policies of the Booth School of Business, their 40000-level courses cannot be counted toward the Statistics minor if taken during the quarter in which the student will graduate from the College.

2

An approved substitute for STAT 22600 Analysis of Categorical Data is PBHS 32700 Biostatistical Methods (also designated as STAT 22700 Biostatistical Methods), which requires STAT 22400 Applied Regression Analysis as prerequisite and is offered by the Department of Public Health Sciences. Students may count either STAT 22600 Analysis of Categorical Data or STAT 22700 Biostatistical Methods, but not both, toward the Statistics minor. STAT 22700 Biostatistical Methods does not count against the limit of no more than two electives from outside the Department of Statistics.

Some of the approved electives offered by other departments also bear a Statistics course number and some do not. Students should enroll in the relevant Department of Statistics course number when available. Examples include STAT 22700 Biostatistical Methods, STAT 22810 Epidemiology and Population Health, STAT 31900 Introduction to Causal Inference, STAT 33211 Mediation, Moderation, and Spillover Effects, STAT 35700 Epidemiologic Methods, STAT 35800 Statistical Applications, and STAT 36900 Applied Longitudinal Data Analysis.

Undergraduate registration in 30000-level and 40000-level courses is by instructor consent only. Undergraduates cannot pre-register for 30000-level or 40000-level courses. Instead, students should contact the instructor well in advance.

Statistics Courses

STAT 10001. Collaborative Learning in Statistics 20000. 000 Units.

This is an optional, limited enrollment workshop for students concurrently enrolled in STAT 2000 Elementary Statistics. Undergraduate Team Leaders guide small groups of students in weekly workshops. The workshops focus on the analysis of problem sets designed to augment and complement the Elementary Statistics material. Instead of tutoring or lecturing, Team Leaders coach students as they work collaboratively in small groups on the assigned problems by referencing class lectures and assigned reading materials. The workshops do not repeat but extend the substantive discussions and lectures of the Elementary Statistics course. Additionally, these workshops aim to develop communication skills, cooperative attitudes, and promote a teamwork environment. Because the benefits of collaborative learning can only be gained through consistent effort and attendance, this zero-credit course is graded P/F based on the student's level of participation and attendance.

Instructor(s): K. Burbank Terms Offered: Autumn Spring

Prerequisite(s): Corequisite: Concurrent enrollment in STAT 20000

STAT 10118. Pathways in Data Science. 100 Units.

Learn how to glean insights and meaning from complex sets of data in this overview of a field with growing importance in business, government, and scientific research. Students will learn to use the transformational tools of data science and see how researchers are applying them in the service of social good. Working with faculty from the Department of Statistics, students will study how data is collected and stored and then how it is explored, visualized, and communicated. Using Python, students will learn techniques for classification, prediction, inference, and regression. Then, together with researchers from the University of Chicago Urban Labs, students will explore how these tools and methods can be used to inform social policy in multiple domains, including poverty, health, and social mobility. Throughout the course, visiting guest lecturers will broaden students' perspectives by sharing how data science is used in their diverse fields, ranging from business applications to biology.

Terms Offered: Summer

STAT 11800-11900. Introduction to Data Science I-II.

Data science provides tools for gaining insight into specific problems using data, through computation, statistics, and visualization. These courses introduce students to all aspects of a data analysis process, from posing questions, designing data collection strategies, management+storing and processing of data, exploratory tools and visualization, statistical inference, prediction, interpretation, and communication of results. Simple techniques for data analysis are used to illustrate both effective and fallacious uses of data science tools.

STAT 11800. Introduction to Data Science I. 100 Units.

Data science provides tools for gaining insight into specific problems using data, through computation, statistics and visualization. This course introduces students to all aspects of a data analysis process, from posing questions, designing data collection strategies, management+storing and processing of data, exploratory tools and visualization, statistical inference, prediction, interpretation and communication of results. Simple techniques for data analysis are used to illustrate both effective and fallacious uses of data science tools. Although this course is designed to be at the level of mathematical sciences courses in the Core, with little background required, we expect the students to develop computational skills that will allow them to analyze data. Computation will be done using Python and Jupyter Notebook.

Instructor(s): Michael J. Franklin, Dan Nicolae Terms Offered: Autumn

Prerequisite(s): None

Equivalent Course(s): CMSC 11800

STAT 11900. Introduction to Data Science II. 100 Units.

This course is the second quarter of a two-quarter systematic introduction to the foundations of data science, as well as to practical considerations in data analysis. A broad background on probability and statistical methodology as well as a basic proficiency in RStudio will be provided. More advanced topics on data privacy and ethics, reproducibility in science, data encryption, and basic machine learning will be introduced. We will explore these concepts with real-world problems from different domains.

Instructor(s): Michael J. Franklin, Dan Nicolae Terms Offered: Winter

Prerequisite(s): STAT 11800/CMSC 11800 or consent of instructor.

Equivalent Course(s): CMSC 11900

STAT 20000. Elementary Statistics. 100 Units.

This course introduces statistical concepts and methods for the collection, presentation, analysis, and interpretation of data. Elements of sampling, simple techniques for analysis of means, proportions, and linear association are used to illustrate both effective and fallacious uses of statistics.

Instructor(s): Staff Terms Offered: Spring

Note(s): For students with little or no math background. Not recommended for students planning to take STAT 22000 or STAT 23400 or more advanced courses in Statistics. Students with credit for STAT 20010, STAT 22000, STAT 23400, or more advanced courses in Statistics not admitted. This course may not be used in the Statistics major or minor. This course meets one of the general education requirements in the mathematical sciences. Only one of STAT 20000, STAT 20010, or STAT 22000, can count toward the general education requirement in the mathematical sciences.

STAT 20010. Elementary Statistics Through Case Study. 100 Units.

This course uses a single real-world case study to introduce statistical concepts throughout the quarter. Topics include methods for the collection, presentation, analysis, and interpretation of data, including elements of sampling, simple techniques for analysis of means, proportions, and linear association, and an introduction to the statistical programming language R. The case study examines the development of the water contamination crisis in Flint, Michigan, from its beginnings in 2014 to present day conditions. Students will use statistical techniques learned in the course to probe critical facets of the story, including: the demographics and history of Flint; the evidence for (and uncertainty about) the existence of contamination; statistical mistakes that allowed officials to initially deny the problem; and predictions for future health effects due to the contamination. Throughout the course, students will practice critically examining claims made in the media and in scientific publications. At the end of the quarter, students are asked to use their statistical skills to propose and defend a set of interventions to benefit the children of Flint.

Instructor(s): K. Burbank Terms Offered: Winter

Note(s): For students with little or no math background. Not recommended for students planning to take STAT 22000 or STAT 23400 or more advanced courses in Statistics. Students with credit for STAT 20000, STAT 22000, STAT 23400, or more advanced courses in Statistics not admitted. This course may not be used in the Statistics major or minor. This course meets one of the general education requirements in the mathematical sciences. Only one of STAT 20000, STAT 20010, or STAT 22000, can count toward the general education requirement in the mathematical sciences.

STAT 22000. Statistical Methods and Applications. 100 Units.

This course introduces statistical techniques and methods of data analysis, including the use of statistical software. Examples are drawn from the biological, physical, and social sciences. Students are required to apply the techniques discussed to data drawn from actual research. Topics include data description, graphical techniques, exploratory data analyses, random variation and sampling, basic probability, random variables and expected values, confidence intervals and significance tests for one- and two-sample problems for means and proportions, chi-square tests, linear regression, and, if time permits, analysis of variance.

Terms Offered: Autumn Spring Winter

Prerequisite(s): MATH 13100 or 15100 or 15200 or 15300 or 16100 or 16110 or 15910 or 19520 or 19620 or 20250 or 20300 or 20310.

Note(s): Students may count either STAT 22000 or STAT 23400, but not both, toward the forty-two credits required for graduation. Students with credit for STAT 23400 not admitted. This course meets one of the general education requirements in the mathematical sciences. Only one of STAT 20000, STAT 20010, or STAT 22000, can count toward the general education requirement in the mathematical sciences.

STAT 22200. Linear Models and Experimental Design. 100 Units.

This course covers principles and techniques for the analysis of experimental data and the planning of the statistical aspects of experiments. Topics include linear models; analysis of variance; randomization, blocking, and factorial designs; confounding; and incorporation of covariate information.

Instructor(s): Staff Terms Offered: Spring

Prerequisite(s): STAT 22000 or 23400 with a grade of at least C+, or STAT 22400 or 22600 or 24500 or 24510 or PBHS 32100, or AP Statistics credit for STAT 22000. Also two quarters of calculus (MATH 13200 or 15200 or 15300 or 16200 or 16210 or 15910 or 19520 or 19620 or 20250 or 20300 or 20310).

STAT 22400. Applied Regression Analysis. 100 Units.

This course introduces the methods and applications of fitting and interpreting multiple regression models. The primary emphasis is on the method of least squares and its many varieties. Topics include the examination of residuals, the transformation of data, strategies and criteria for the selection of a regression equation, the use of dummy variables, tests of fit, nonlinear models, biases due to excluded variables and measurement error, and the use and interpretation of computer package regression programs. The techniques discussed are illustrated by many real examples involving data from both the natural and social sciences. Matrix notation is introduced as needed. Prerequisite: PBHS 32100. Equivalent Course(s): PBHS 32400

Terms Offered: Autumn Spring

Prerequisite(s): STAT 22000 or 23400 with a grade of at least C+, or STAT 22200 or 22600 or 24500 or 24510 or PBHS 32100, or AP Statistics credit for STAT 22000. Also two quarters of calculus (MATH 13200 or 15200 or 15300 or 16200 or 16210 or 15910 or 19520 or 19620 or 20250 or 20300 or 20310).

Equivalent Course(s): PBHS 32400

STAT 22600. Analysis of Categorical Data. 100 Units.

This course covers statistical methods for the analysis of qualitative and counted data. Topics include description and inference for binomial and multinomial data using proportions and odds ratios; multi-way contingency tables; generalized linear models for discrete data; logistic regression for binary responses; multi-category logit models for nominal and ordinal responses; loglinear models for counted data; and inference for matched-pairs and correlated data. Applications and interpretations of statistical models are emphasized.

Terms Offered: Winter

Prerequisite(s): STAT 22000 or 23400 with a grade of at least C+, or STAT 22200 or 22400 or 24500 or 24510 or PBHS 32100, or AP Statistics credit for STAT 22000. Also two quarters of calculus (MATH 13200 or 15200 or 15300 or 16200 or 16210 or 15910 or 19520 or 19620 or 20250 or 20300 or 20310).

Equivalent Course(s): PBHS 32600

STAT 22700. Biostatistical Methods. 100 Units.

This course is designed to provide students with tools for analyzing categorical, count, and time-to-event data frequently encountered in medicine, public health, and related biological and social sciences. This course emphasizes application of the methodology rather than statistical theory (e.g., recognition of the appropriate methods; interpretation and presentation of results). Methods covered include contingency table analysis, Kaplan-Meier survival analysis, Cox proportional-hazards survival analysis, logistic regression, and Poisson regression.

Instructor(s): J. Dignam Terms Offered: Winter

Prerequisite(s): PBHS 32400, STAT 22400 or STAT 24500 or equivalent or consent of instructor.

Equivalent Course(s): PBHS 32700

STAT 22810. Epidemiology and Population Health. 100 Units.

This course does not meet requirements for the biological sciences major. Epidemiology is the study of the distribution and determinants of health and disease in human populations. This course introduces the basic principles of epidemiologic study design, analysis, and interpretation through lectures, assignments, and critical appraisal of both classic and contemporary research articles.

Instructor(s): D. Lauderdale Terms Offered: Autumn

Prerequisite(s): STAT 22000 or other introductory statistics highly desirable. For BIOS students-completion of the first three quarters of a Biological Sciences Fundamentals sequence.

Equivalent Course(s): PPHA 36410, PBHS 30910, ENST 27400, HLTH 20910

STAT 23400. Statistical Models and Methods. 100 Units.

This course is recommended for students throughout the natural and social sciences who want a broad background in statistical methodology and exposure to probability models and the statistical concepts underlying the methodology. Probability is developed for the purpose of modeling outcomes of random phenomena. Random variables and their expectations are studied; including means and variances of linear combinations and an introduction to conditional expectation. Binomial, Poisson, normal and other standard probability distributions are considered. Some probability models are studied mathematically, and others are studied via computer simulation. Sampling distributions and related statistical methods are explored mathematically, studied via simulation, and illustrated on data. Methods include, but are not limited to, inference for means and proportions for one- and two-sample problems, two-way tables, correlation, and simple linear regression. Graphical and numerical data description are used for exploration, communication of results, and comparing mathematical consequences of probability models and data. Mathematics employed is to the level of single-variable differential and integral calculus and sequences and series.

Terms Offered: Autumn Spring Winter

Prerequisite(s): MATH 13300 or 15300 or 16200 or 16210 or 15910 or 19520 or 19620 or 20250 or 20300 or 20310.

Note(s): Students may count either STAT 22000 or STAT 23400, but not both, toward the forty-two credits required for graduation. Students with AP Statistics credit for STAT 22000 will forego that credit by completing STAT 23400.

STAT 24300. Numerical Linear Algebra. 100 Units.

This course is devoted to the basic theory of linear algebra and its significant applications in scientific computing. The objective is to provide a working knowledge and hands-on experience of the subject suitable for graduate level work in statistics, econometrics, quantum mechanics, and numerical methods in scientific computing. Topics include Gaussian elimination, vector spaces, linear transformations and associated fundamental subspaces, orthogonality and projections, eigenvectors and eigenvalues, diagonalization of real symmetric and complex Hermitian matrices, the spectral theorem, and matrix decompositions (QR, Cholesky and Singular Value Decompositions). Systematic methods applicable in high dimensions and techniques commonly used in scientific computing are emphasized. Students enrolled in the graduate level STAT 30750 will have additional work in assignments, exams, and projects including applications of matrix algebra in statistics and numerical computations implemented in Matlab or R. Some programming exercises will appear as optional work for students enrolled in the undergraduate level STAT 24300.

Terms Offered: Autumn

Prerequisite(s): Multivariate calculus (MATH 15910 or MATH 16300 or MATH 16310 or MATH 19520 or MATH 20000 or MATH 20500 or MATH 20510 or MATH 20900 or PHYS 22100 or equivalent). Previous exposure to linear algebra is helpful.

Equivalent Course(s): STAT 30750

STAT 24400-24500. Statistical Theory and Methods I-II.

This sequence is a systematic introduction to the principles and techniques of statistics, as well as to practical considerations in the analysis of data, with emphasis on the analysis of experimental data.

STAT 24400. Statistical Theory and Methods I. 100 Units.

This course is the first quarter of a two-quarter systematic introduction to the principles and techniques of statistics, as well as to practical considerations in the analysis of data, with emphasis on the analysis of experimental data. This course covers tools from probability and the elements of statistical theory. Topics include the definitions of probability and random variables, binomial and other discrete probability distributions, normal and other continuous probability distributions, joint probability distributions and the transformation of random variables, principles of inference (including Bayesian inference), maximum likelihood estimation, hypothesis testing and confidence intervals, likelihood ratio tests, multinomial distributions, and chi-square tests. Examples are drawn from the social, physical, and biological sciences. The coverage of topics in probability is limited and brief, so students who have taken a course in probability find reinforcement rather than redundancy. Students who have already taken STAT 25100 have the option to take STAT 24410 (if offered) instead of STAT 24400.

Instructor(s): Staff Terms Offered: Autumn Winter

Prerequisite(s): (MATH 19520 or MATH 20000 with a grade of B or better), or MATH 16300 or 16310 or 20250 or 20300 or 20310 or 20700 or STAT 24300 or PHYS 22100.

Note(s): Some previous experience with statistics and/or probability helpful but not required. Concurrent or prior linear algebra (MATH 19620 or 20250 or STAT 24300 or equivalent) is recommended for students continuing to STAT 24500. Students may count either STAT 24400 or STAT 24410, but not both, toward the forty-two credits required for graduation.

STAT 24500. Statistical Theory and Methods II. 100 Units.

This course is the second quarter of a two-quarter systematic introduction to the principles and techniques of statistics, as well as to practical considerations in the analysis of data, with emphasis on the analysis of experimental data. This course continues from either STAT 24400 or STAT 24410 and covers statistical methodology, including the analysis of variance, regression, correlation, and some multivariate analysis. Some principles of data analysis are introduced, and an attempt is made to present the analysis of variance and regression in a unified framework. Statistical software is used.

Instructor(s): Staff Terms Offered: Spring Winter

Prerequisite(s): Linear algebra (MATH 19620 or 20250 or STAT 24300 or PHYS 22100 or equivalent) and (STAT 24400 or STAT 24410).

Note(s): Students may count either STAT 24500 or STAT 24510, but not both, toward the forty-two credits required for graduation.

STAT 24410-24510. Statistical Theory and Methods Ia-IIa.

This sequence provides a sophisticated introduction to statistical principles and methods and their application to the analysis of data. In addition to serving undergraduates with a strong interest in Statistics, it is the recommended sequence in theoretical statistics for MS students in Statistics.

STAT 24410. Statistical Theory and Methods Ia. 100 Units.

This course is the first quarter of a two-quarter sequence providing a principled development of statistical methods, including practical considerations in applying these methods to the analysis of data. The course begins with a brief review of probability and some elementary stochastic processes, such as Poisson processes, that are relevant to statistical applications. The bulk of the quarter covers principles of statistical inference from both frequentist and Bayesian points of view. Specific topics include maximum likelihood estimation, posterior distributions, confidence and credible intervals, principles of hypothesis testing, likelihood ratio tests, multinomial distributions, and chi-square tests. Additional topics may include diagnostic plots, bootstrapping, a critical comparison of Bayesian and frequentist inference, and the role of conditioning in statistical inference. Examples are drawn from the social, physical, and biological sciences. The statistical software package R will be used to analyze datasets from these fields and instruction in the use of R is part of the course.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): STAT 25100 or STAT 25150 or MATH 23500. This course is only open to graduate students in Statistics, Applied Mathematics, and Financial Mathematics, and to undergraduate Statistics majors, or by consent of instructor.

Note(s): Some previous experience with statistics helpful but not required. Concurrent or prior linear algebra (MATH 19620 or 20250 or STAT 24300 or equivalent) is recommended for students continuing to STAT 24510. Students may count either STAT 24400 or STAT 24410, but not both, toward the forty-two credits required for graduation.

Equivalent Course(s): STAT 30030

STAT 24510. Statistical Theory and Methods IIa. 100 Units.

This course is a continuation of STAT 24410. The focus is on theory and practice of linear models, including the analysis of variance, regression, correlation, and some multivariate analysis. Additional topics may include bootstrapping for regression models, nonparametric regression, and regression models with correlated errors.

Terms Offered: May be offered in Winter.

Prerequisite(s): STAT 24410 and linear algebra (MATH 19620 or MATH 20250 or STAT 24300 or PHYS 22100 or equivalent). This course is only open to graduate students in Statistics, Applied Mathematics, and Financial Mathematics, and to undergraduate Statistics majors, or by consent of instructor.

Note(s): Students may count either STAT 24500 or STAT 24510, but not both, toward the forty-two credits required for graduation.

Equivalent Course(s): STAT 30040

STAT 24620. Multivariate Statistical Analysis: Applications and Techniques. 100 Units.

This course focuses on applications and techniques for analysis of multivariate and high dimensional data. Beginning subjects cover common multivariate techniques and dimension reduction, including principal component analysis, factor model, canonical correlation, multi-dimensional scaling, discriminant analysis, clustering, and correspondence analysis (if time permits). Further topics on statistical learning for high dimensional data and complex structures include penalized regression models (LASSO, ridge, elastic net), sparse PCA, independent component analysis, Gaussian mixture model, Expectation-Maximization methods, and random forest. Theoretical derivations will be presented with emphasis on motivations, applications, and hands-on data analysis.

Instructor(s): M. Wang Terms Offered: Spring

Prerequisite(s): (STAT 24300 or MATH 20250) and (STAT 24500 or STAT 24510). Graduate students in Statistics or Financial Mathematics can enroll without prerequisites.

Note(s): Linear algebra at the level of STAT 24300. Knowledge of probability and statistical estimation techniques (e.g. maximum likelihood and linear regression) at the level of STAT 24400-24500.

Equivalent Course(s): STAT 32950

STAT 25100. Introduction to Mathematical Probability. 100 Units.

This course covers fundamentals and axioms; combinatorial probability; conditional probability and independence; binomial, Poisson, and normal distributions; the law of large numbers and the central limit theorem; and random variables and generating functions.

Instructor(s): Staff Terms Offered: Autumn Spring

Prerequisite(s): ((MATH 16300 or MATH 16310 or MATH 20500 or MATH 20510 or MATH 20900), with no grade requirement), or ((MATH 19520 or MATH 20000) with (either a minimum grade of B-, or STAT major, or currently enrolled in prerequisite course)). Or instructor consent.

Note(s): Students may count either STAT 25100 or STAT 25150, but not both, toward the forty-two credits required for graduation.

STAT 25150. Introduction to Mathematical Probability-A. 100 Units.

This course covers fundamentals and axioms; combinatorial probability; conditional probability and independence; binomial, Poisson, and normal distributions; the law of large numbers and the central limit theorem; and random variables and generating functions.

Instructor(s): Robert Fefferman Terms Offered: To be determined

Prerequisite(s): (MATH 16300 or MATH 16310 or MATH 20500 or MATH 20510, with a minimum grade of A-), or (MATH 20900 with no grade requirement), or consent of instructor.

Note(s): Students may count either STAT 25100 or STAT 25150, but not both, toward the forty-two credits required for graduation.

Equivalent Course(s): MATH 25150

STAT 25211. Introduction to Random Matrices. 100 Units.

The course is an introduction to the random matrix theory. We will study the asymptotic properties of various random matrix models (Wigner matrices, Gaussian ensembles, etc.). We will also discuss some applications to statistics and neural networks.

Terms Offered: Winter

Prerequisite(s): (STAT 25100 or STAT 25150 or MATH 23500) and (MATH 19620 or STAT 24300 or MATH 20250 or MATH 20700), or consent of instructor.

STAT 25300. Introduction to Probability Models. 100 Units.

This course introduces stochastic processes as models for a variety of phenomena in the physical and biological sciences. Following a brief review of basic concepts in probability, we introduce stochastic processes that are popular in applications in sciences (e.g., discrete time Markov chain, the Poisson process, continuous time Markov process, renewal process and Brownian motion).

Instructor(s): Staff Terms Offered: To be determined

Prerequisite(s): STAT 24400 or STAT 24410 or STAT 25100 or STAT 25150

Equivalent Course(s): STAT 31700

STAT 26100. Time Dependent Data. 100 Units.

This course considers the modeling and analysis of data that are ordered in time. The main focus is on quantitative observations taken at evenly spaced intervals and includes both time-domain and spectral approaches.

Instructor(s): W. Wu

Prerequisite(s): STAT 24500 w/B- or better or STAT 24510 w/C+ or better is required; alternatively STAT 22400 w/B- or better and exposure to multivariate calculus (MATH 16300 or MATH 16310 or MATH 19520 or MATH 20000 or MATH 20500 or MATH 20510 or MATH 20800). Graduate students in Statistics or Financial Mathematics can enroll without prerequisites. Some previous exposure to Fourier series is helpful but not required.

Equivalent Course(s): STAT 33600

STAT 26300. Introduction to Statistical Genetics. 100 Units.

As a result of technological advances over the past few decades, there is a tremendous wealth of genetic data currently being collected. These data have the potential to shed light on the genetic factors influencing traits and diseases, as well as on questions of ancestry and population history. The aim of this course is to develop a thorough understanding of probabilistic models and statistical theory and methods underlying analysis of genetic data, focusing on problems in complex trait mapping, with some coverage of population genetics. Although the case studies are all in the area of statistical genetics, the

statistical inference topics, which will include likelihood-based inference, linear mixed models, and restricted maximum likelihood, among others, are widely applicable to other areas. No biological background is needed, but a strong foundation in linear algebra, as well as probability and statistics at the level of STAT 24400-STAT 24500 or higher is assumed.

Instructor(s): M. McPeck Terms Offered: Autumn

Prerequisite(s): STAT 24500 or STAT 24510

Note(s): STAT 26300 can count as either a List A or List B elective in the Statistics major.

Equivalent Course(s): STAT 35490

STAT 26700. History of Statistics. 100 Units.

This course covers topics in the history of statistics, from the eleventh century to the middle of the twentieth century. We focus on the period from 1650 to 1950, with an emphasis on the mathematical developments in the theory of probability and how they came to be used in the sciences. Our goals are both to quantify uncertainty in observational data and to develop a conceptual framework for scientific theories. This course includes broad views of the development of the subject and closer looks at specific people and investigations, including reanalyses of historical data.

Instructor(s): S. Stigler Terms Offered: Spring

Prerequisite(s): Prior statistics course

Equivalent Course(s): HIPS 25600, CHSS 32900, STAT 36700

STAT 27400. Nonparametric Inference. 100 Units.

Nonparametric inference is about developing statistical methods and models that make weak assumptions. A typical nonparametric approach estimates a nonlinear function from an infinite dimensional space rather than a linear model from a finite dimensional space. This course gives an introduction to nonparametric inference, with a focus on density estimation, regression, confidence sets, orthogonal functions, random processes, and kernels. The course treats nonparametric methodology and its use, together with theory that explains the statistical properties of the methods.

Instructor(s): Staff Terms Offered: Autumn

Prerequisite(s): STAT 24400 or STAT 24410 w/B- or better is required; alternatively STAT 22400 w/B+ or better and exposure to multivariate calculus (MATH 16300 or MATH 16310 or MATH 19520 or MATH 20000 or MATH 20500 or MATH 20510 or MATH 20800) and linear algebra (MATH 19620 or MATH 20250 or STAT 24300 or equivalent). Master's students in Statistics can enroll without prerequisites.

Equivalent Course(s): STAT 37400

STAT 27410. Introduction to Bayesian Data Analysis. 100 Units.

In recent years, Bayes and empirical Bayes (EB) methods have continued to increase in popularity and impact. These methods combine information from similar and independent experiments and yield improved estimation of both individual and shared model characteristics. In this course, we introduce Bayes and EB methods, as well as the necessary tools needed to evaluate their performances relative to traditional, frequentist methods. We shall focus on more practical, data analytic and computing issues. Various computing methods will be discussed, in order to find the posterior distributions, including Markov chain Monte Carlo methods such as the Gibbs sampler. We will use R to implement these methods to solve real world problems. The methods will be illustrated from applications in various areas, such as biological science, biomedical science, public health, epidemiology, education, social science, economics, psychology, agriculture and engineering. Recent developments of Bayesian methods on nonlinear models, longitudinal data analysis, hierarchical models, time series, survival analysis, spatial statistics will also be explored.

Terms Offered: Spring

Prerequisite(s): [STAT 22000 or STAT 23400 or STAT 22400 or STAT 22600 or STAT 24500 or STAT 24510] AND [(MATH 13200 or MATH 15200 or MATH 15300 or MATH 16200 or MATH 16210 or MATH 15910 or MATH 19520 or MATH 19620 or MATH 20250 or MATH 20300 or MATH 20310) with a grade of C+ or higher]

Note(s): Students should be comfortable with coding in R software.

STAT 27700. Mathematical Foundations of Machine Learning. 100 Units.

This course is an introduction to the mathematical foundations of machine learning that focuses on matrix methods and features real-world applications ranging from classification and clustering to denoising and data analysis. Mathematical topics covered include linear equations, regression, regularization, the singular value decomposition, and iterative algorithms. Machine learning topics include the lasso, support vector machines, kernel methods, clustering, dictionary learning, neural networks, and deep learning. Students are expected to have taken calculus and have exposure to numerical computing (e.g. Matlab, Python, Julia, R).

Instructor(s): Rebecca Willett Terms Offered: Autumn

Prerequisite(s): CMSC 12200 or CMSC 15200 or CMSC 16200, and the equivalent of two quarters of calculus (MATH 13200 or higher).

Equivalent Course(s): CMSC 25300

STAT 27725. Machine Learning. 100 Units.

This course offers a practical, problem-centered introduction to machine learning. Topics covered include the Perceptron and other online algorithms; boosting; graphical models and message passing; dimensionality reduction and manifold learning; SVMs and other kernel methods; artificial neural networks; and a short introduction to statistical learning theory. Weekly programming assignments give students the opportunity to try out each learning algorithm on real world datasets.

Instructor(s): R. Kondor Terms Offered: Winter

Prerequisite(s): CMSC 15400 or CMSC 12300. STAT 22000 or STAT 23400 strongly recommended.

Equivalent Course(s): CMSC 25400

STAT 27850. Multiple Testing, Modern Inference, and Replicability. 100 Units.

This course examines the problems of multiple testing and statistical inference from a modern point of view. High-dimensional data is now common in many applications across the biological, physical, and social sciences. With this increased capacity to generate and analyze data, classical statistical methods may no longer ensure the reliability or replicability of scientific discoveries. We will examine a range of modern methods that provide statistical inference tools in the context of modern large-scale data analysis. The course will have weekly assignments as well as a final project, both of which will include both theoretical and computational components.

Terms Offered: To be determined

Prerequisite(s): STAT 24400 or STAT 24410. Familiarity with regression and with coding in R are recommended.

Equivalent Course(s): STAT 30850

STAT 28000. Optimization. 100 Units.

This is an introductory course on optimization that will cover the rudiments of unconstrained and constrained optimization of a real-valued multivariate function. The focus is on the settings where this function is, respectively, linear, quadratic, convex, or differentiable. Time permitting, topics such as nonsmooth, integer, vector, and dynamic optimization may be briefly addressed. Materials will include basic duality theory, optimality conditions, and intractability results, as well as algorithms and applications.

Instructor(s): L. Lim Terms Offered: Winter

Prerequisite(s): (MATH 20500 or 20510 or 20800) and (STAT 24300 or MATH 20250 or MATH 25500 or MATH 25800)

Equivalent Course(s): CAAM 28000

STAT 28200. Dynamical Systems with Applications. 100 Units.

This course is concerned with the analysis of nonlinear dynamical systems arising in the context of mathematical modeling. The focus is on qualitative analysis of solutions as trajectories in phase space, including the role of invariant manifolds as organizers of behavior. Local and global bifurcations, which occur as system parameters change, will be highlighted, along with other dimension reduction methods that arise when there is a natural time-scale separation. Concepts of bi-stability, spontaneous oscillations, and chaotic dynamics will be explored through investigation of conceptual mathematical models arising in the physical and biological sciences.

Instructor(s): Mary Silber Terms Offered: Winter

Prerequisite(s): MATH 27300 or (Multivariable calculus (MATH 19520 or 20000 or 20400 or 20410 or PHYS 22100 or equivalent), AND linear algebra, including eigenvalues & eigenvectors (MATH 19620 or STAT 24300 or MATH 20250)).

Previous knowledge of elementary differential equations is helpful but not required.

Equivalent Course(s): CAAM 28200

STAT 29700. Undergraduate Research. 100 Units.

This course consists of reading and research in an area of statistics or probability under the guidance of a faculty member. A written report must be submitted at the end of the quarter.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of faculty adviser and Departmental Adviser for Majors

Note(s): Students are required to submit the College Reading and Research Course Form. Open to all students, including non-majors. Ordinarily taken for P/F grading, but under certain circumstances may be taken for a quality grade by petition.

STAT 29900. Bachelor's Paper. 100 Units.

This course consists of reading and research in an area of statistics or probability under the guidance of a faculty member, leading to a bachelor's paper. The paper must be submitted at the end of the quarter.

Terms Offered: Autumn Spring Winter

Prerequisite(s): Consent of faculty adviser and Departmental Adviser for Majors

Note(s): Students are required to submit the College Reading and Research Course Form. Open only to students who are majoring in Statistics. Grading is P/F only.

Theater and Performance Studies

Department Website: <http://taps.uchicago.edu>

Undergraduate Program of Study

Theater and Performance Studies (TAPS) seeks to animate the intersection of practice and theory in the arts. TAPS offers studio classes, seminars, and studio-seminars, which combine academic and practice-based inquiry. TAPS courses are taught by distinguished faculty as well as professional artists from Chicago's vibrant theater community.

Students work closely with the Director of Undergraduate Studies and faculty advisors to shape an individual course of study that reflects the student's interests while fulfilling the program's requirements. Each student's coursework may be organized around one or more clusters, including, for example, acting, dance, devising and writing (across media), design, directing, dramaturgy, media arts, performance studies, theater history, or some combination of the above.

Students majoring in other fields of study may double major or complete a minor in TAPS.

Requirements for the Major

The major requires a total of 13 courses, comprising 11 elective courses and a capstone BA project. At least seven of the elective courses counted toward the major must have a TAPS course number. Course selection is subject to the approval of the Director of Undergraduate Studies. It is generally expected that courses in the major will be at the 20000-level or higher; 10000-level courses will be approved sparingly. Coursework includes:

1. TAPS 22900 Introduction to Theater & Performance Studies, designed to introduce students to foundational ideas and critical skills relevant to the study of theater and performance.
2. Four elective courses in theater and/or performance theory, considered broadly to include history, theory, aesthetics, or analysis. Theory courses may be selected from the TAPS course offerings below or from related course offerings in the College. At least two of these courses will have a TAPS course number.
3. Four elective courses in artistic practice. Artistic practice courses may be selected from the TAPS course offerings below or from related course offerings in the College, including Cinema and Media Studies, Creative Writing, Media Arts and Design, Music, or Visual Arts. At least two of these courses will have a TAPS course number.
4. Three other elective courses selected from the TAPS course offerings listed below or from related course offerings in the College.
5. TAPS 29800 Theater and Performance Studies BA Colloquium, to be taken in the student's fourth year, is devoted to the preparation of the BA project. Although TAPS 29800 extends over two quarters, students register for the course in only Autumn *or* Winter Quarter, receiving 100 units of credit and one grade for the course.

BA Project

The TAPS BA project marks the culmination of a student's studies in TAPS and is typically presented during Spring Quarter of the student's fourth year. There are two project formats from which to choose: (1) an original artistic work (e.g., staged reading, site-specific installation, solo performance, choreography) with an accompanying critical piece of writing, OR (2) a written academic thesis with an accompanying presentation (in the form of a talk or performative component).

With the support of the Director of Undergraduate Studies and other TAPS faculty, students will select a faculty advisor for their BA project, develop the project proposal, and submit a BA Project Statement during Spring Quarter of the third year. Proposals are subject to the approval of the Chair of Theater and Performance Studies.

In the fourth year, students will enroll in TAPS 29800 Theater and Performance Studies BA Colloquium, which offers a weekly forum in Autumn and Winter Quarters to develop the BA project in collaboration with peers and in accordance with a carefully designed set of deadlines. During Spring Quarter of the fourth year, students will present their artistic work(s) and submit their final complete project by Friday of fifth week for honors consideration, or by Friday of the eighth week for the completion of the major. Students graduating in any quarter other than Spring should consult with the Director of Undergraduate Studies about an appropriate timeline.

Honors

Eligibility for honors requires an overall cumulative GPA of 3.25 or higher, a GPA of 3.5 or higher in the TAPS major, and a BA project that is judged by the designated advisors to display exceptional intellectual and creative merit. If the faculty advisors recommend the project for honors, the Chair of TAPS in consultation with the TAPS faculty will issue a recommendation to the Associate Dean and Master of the Humanities Collegiate Division, who makes the ultimate decision.

Summary of Requirements for the Major

TAPS 22900	Introduction to Theater & Performance Studies	100
Four (4) theory and analysis courses		400
Four (4) artistic practice courses		400
Three (3) elective courses		300
TAPS 29800	Theater and Performance Studies BA Colloquium	100

Completion of the TAPS BA project for majors	
Total Units	1300

Application to the Major

Students interested in joining the program are encouraged to consult with the Director of Undergraduate Studies in Spring Quarter of their first year or as soon as possible thereafter. Students who have decided to join the program should file an Application to the Major form with the Director of Undergraduate Studies by the beginning of Spring Quarter of their second year or no later than the end of Autumn Quarter of their third year.

Students must formalize their declaration on my.uchicago.edu (<http://my.uchicago.edu/>) and regularly provide documentation to their College adviser of any approvals for the major.

Grading

All courses in the major or minor must be taken for a quality grade.

Minor Program in Theater and Performance Studies

Students interested in joining the minor program are encouraged to consult with the Director of Undergraduate Studies in Spring Quarter of their second year or as soon as possible thereafter. Students who have decided to join the program should file an Application to the Minor form with the Director of Undergraduate Studies by the beginning of Spring Quarter in their third year. The signed form must be submitted to the student's College adviser.

The TAPS minor requires a total of six courses plus an original artistic work (e.g., staged reading, site-specific installation, solo performance piece, choreography). Required courses include: TAPS 22900 Introduction to Theater & Performance Studies, two (2) TAPS courses and two (2) arts elective courses. Course selection is subject to the approval of the Director of Undergraduate Studies. It is generally expected that courses in the minor will be at the 20000-level; 10000-level courses will be approved sparingly. Many of these courses will be found in the course offerings listed below, as well as the course offerings in Cinema and Media Studies, Creative Writing, Media Arts and Design, Visual Arts, and Music.

In addition, all those minoring in TAPS must register for TAPS 29800 Theater and Performance Studies BA Colloquium. The focus of this course will be the development of the student's artistic project, as described above, to be presented in Spring Quarter of the fourth year. Each student must also submit a brief critical reflection on the project by eighth week of the graduating quarter.

Courses counted toward the minor may not also be counted toward the student's major(s), toward other minors, or toward general education requirements. Courses in the minor must be taken for a quality grade, and more than half of the courses for the minor must bear University of Chicago course numbers.

Summary of Requirements for the Minor

TAPS 22900	Introduction to Theater & Performance Studies	100
Two TAPS courses		200
Two arts electives		200
TAPS 29800	Theater and Performance Studies BA Colloquium	100
Completion of the TAPS BA project for minors		
Total Units		600

Theater and Performance Studies Courses

TAPS 10100. Drama: Embodiment and Transformation. 100 Units.

This course introduces students to a range of theatrical concepts and techniques, including script analysis and its application to staging, design and acting. Throughout, we investigate how theater - as a collaborative art form - tells stories. Students will act, direct, and design. In doing so, they will gain an understanding of a variety of processes by which scripts are realized in the theater, with an emphasis on the text's role in production rather than as literature.

Instructor(s): D. New, P. Pascoe, S. Bockley, L. Danzig, D. De Mayo, Terms Offered: Autumn Spring Summer Winter
 Note(s): Attendance at first class meeting is mandatory. This course meets the general education requirement in the arts.

TAPS 10200. Acting Fundamentals. 100 Units.

This course introduces fundamental concepts of performance in the theater with emphasis on the development of creative faculties and techniques of observation, as well as vocal and physical interpretation. Concepts are introduced through directed reading, improvisation, and scene study.

Instructor(s): P. Pascoe, L. Danzig, T. Pasculli, S. Murray, D. DeMayo, H. Crawford, H. Coleman Terms Offered: Autumn Spring Winter

Note(s): Attendance at first class meeting is mandatory; prior theater or acting training not required. This course meets the general education requirement in the arts.

TAPS 10300 through 10699. Text and Performance. *Experience in dramatic analysis or performance not required. Attendance at first class meeting is mandatory. Each of these courses meets the general education requirement in the arts.* Workshops in dramatic technique and attendance at performances at Chicago theaters, in addition to class time, are required.

TAPS 10300	Text and Performance	100
TAPS 10500	Staging Terror	100
TAPS 10600	Staging Desire	100

TAPS 10300. Text and Performance. 100 Units.

This course offers an introduction to a number of significant dramatic works and seminal figures in the theorization of theater and performance. But the course's aspirations go much further: we will be concentrating upon the intersection of interpretation and enactment, asking how these pieces appear on stage and why. This will not be merely descriptive work, but crucially it will be interpretive and physical work. Students will prepare and present applied interpretations—that is, interpretations that enable conceptual insights to take artistic form. Throughout, we will be searching for that elusive combination of philological rigor, theoretical sophistication, and creative inspiration—probing the theoretical stakes of creativity and testing the creative implications of analytic insights.

Instructor(s): T. Post, S. Murray, J. Muse, H. Crawford, H. Coleman Terms Offered: Autumn Spring Winter

Note(s): Attendance at first class meeting is mandatory. Experience in dramatic analysis or performance not required. This course meets the general education requirement in the arts.

TAPS 10500. Staging Terror. 100 Units.

This course creates the first stage in a site-specific devised work process by engaging with a topic and texts and using the ensemble itself to generate work that is then considered critically. As a theme for the quarter, we will explore the interplay between horror, terror, and pleasure through in-class discussions of theoretical works and the possibilities of practical creative application. The paradox of the attraction to repulsion will be considered as well as the values of shock, suspense, and subtlety. Texts will include classic and contemporary drama, cult fiction, ghost stories, games, films, and theoretic source material. As a part of this foundation, we will question the intricacies of staging through in-class discussions of theoretical works (Aristotle, Brecht, Artaud, Stanislavski, and Bogart) and the possibilities of practical creative application. Working 4-dimensionally in outdoor on-campus locations, we will examine how theorized stagings can evoke suspense. This course will constantly question how analysis itself can be a performative practice and how performance can serve as a critical endeavor.

Instructor(s): H. Coleman Terms Offered: Autumn

Note(s): Attendance at first class is mandatory. This course is offered in alternate years. This course meets the general education requirement in the arts.

TAPS 10600. Staging Desire. 100 Units.

This course explores the interplays between romance, attractions, and distractions through in-class discussions of theoretical works and the possibilities of practical creative application. The paradox of instant gratification and prolonged desire will be considered as well as the values of shock, suspense, and subtlety. Texts will include classic and contemporary drama, vampire cult fiction, fairy tales, films, and theoretic source material. Working 4-dimensionally, we will examine how theorized stagings can evoke and undermine sentimentality. This course will constantly question how analysis itself can be a performative practice and how performance can serve as a critical endeavor. The course will culminate in a series of original scenes to be shown at the end of the quarter. Experience in dramatic analysis or performance not required.

Instructor(s): H. Coleman Terms Offered: Spring

Note(s): Attendance at first class meeting is mandatory. Course offered in alternate years. This course meets the general education requirement in the arts.

TAPS 10700. Introduction to Stage Design. 100 Units.

Approaching theatrical design as a visual art, we will achieve a basic understanding of the theory, methodology and artistic expression fundamental to each area of design for the stage—scenic, costume, lighting and sound. We will learn how each discipline approaches and executes visual (aural in the case of sound) communication involved in the design process. Students will learn the professional design process, from contracting through production. Projects for this course will be completed using a combination of mediums and materials. If students are away from campus, there will be discussions of what materials may suit each student best based on available resources. Creativity in execution of visual communication will be of great importance. Students will learn to show collaborators ideas instead of talking about them.

Instructor(s): K. Boetcher Terms Offered: Autumn

Note(s): Attendance at first class meeting is mandatory. This course meets the general education requirement in the arts.

TAPS 10800. Contemporary Dance Practices. 100 Units.

This studio-based course with a seminar component offers an overview of the formal practices and contemporary trends that shape dance as an art form. The class is designed for students who seek to gain a working knowledge of dance and deepen their physical skills. A range of contemporary dance forms and practices will be covered. Topics may include modern dance, hip hop, partnering techniques, social dance forms, improvisation, somatic practices, dance composition, and more. Lectures, viewings, and discussion will support experiential practice components. No previous experience with dance or performance is required. This course meets the general education requirement in the arts.

Instructor(s): J. Rhoads, staff Terms Offered: Autumn Spring Winter

Note(s): Attendance at first class meeting is mandatory. This course meets the general education requirement in the arts.

TAPS 15500. Beginning Screenwriting. 100 Units.

This course introduces the basic elements of a literate screenplay, including format, exposition, characterization, dialog, voice-over, adaptation, and the vagaries of the three-act structure. Weekly meetings include a brief lecture period, screenings of scenes from selected films, extended discussion, and assorted readings of class assignments. Because this is primarily

a writing class, students write a four- to five-page weekly assignment related to the script topic of the week. Equivalent Course(s): CRWR 27102

Instructor(s): T. Brown Terms Offered: Autumn

Equivalent Course(s): MAAD 25500

TAPS 16003. Ventriloquism in Literature and Culture. 100 Units.

In this class we will collectively identify the conventions that have come to define theatrical tradition known as ventriloquism. While this course will be rooted in the study of performance, we will also look at instances when ventriloquism appears in literature and film as a metaphor and as a trope. By looking at ventriloquism both in its technique and its thematics we will investigate the extent to which the ventriloquist and the dummy are sexed and racialized categories. Our texts will span from the recorded performances of famous ventriloquists such as Edgar Bergen and Charlie McCarthy, episodes of *The Twilight Zone*, horror films like *Dead of Night* and popular fiction. We will also consult several theoretical texts such as Freud on the uncanny and Winnicott on transitional objects. (Fiction, Drama, Theory)

Instructor(s): Marissa Fenley Terms Offered: Spring

Equivalent Course(s): ENGL 16003

TAPS 16606. Genre Fundamentals: Drama. 100 Units.

This course explores the unique challenges of experiencing performance through the page. Students will read plays and performances closely, taking into account not only form, character, plot, and genre, but also theatrical considerations like staging, acting, spectatorship, and historical conventions. We will also consider how various agents—playwrights, readers, directors, actors, and audiences—generate plays and give them meaning. While the course is not intended as a survey of dramatic literature or theater history, students will be introduced to a variety of plays from across the dramatic tradition. (Genre Fundamentals, Drama)

Instructor(s): Tina Post Terms Offered: Winter

Equivalent Course(s): ENGL 10606

TAPS 18500. Theater Production. 100 Units.

This class is a practical immersion into the major elements involved with mounting a theatrical production. Students will learn the process of theater-making from the TAPS professional production staff. Topics include production personnel roles and responsibilities, production organization, management and procedures. Practical experience will include hands-on training with the tools and technology associated with each specialized field of production. Class sessions will be held in various spaces in the Logan Center including the Costume, Scene and Prop shops and in Theaters East and West. Students will be assigned a role on a production outside of class hours. The course will serve both students experienced in and new to theater production.

Instructor(s): staff Terms Offered: Autumn

Note(s): Attendance at first class is mandatory.

TAPS 20040. Black Shakespeare. 100 Units.

This course explores the role played by the Shakespearean canon in the shaping of Western ideas about blackness, in processes of racial formation, and racial struggle from the early modern period to the present. Students will read Shakespearean plays portraying black characters (*Othello*, *Titus Andronicus*, *The Tempest*, *Antony and Cleopatra*) in conversation with African-American and post-colonial rewritings of those plays (by Toni Morrison, Amiri Baraka, Keith Hamilton Cobb, and Aimé Césaire, among others). (Drama, Pre-1650 / Med/Ren)

Instructor(s): Noémie Ndiaye Terms Offered: Spring

Equivalent Course(s): TAPS 30040, ENGL 18860, ENGL 38860, CRES 18860

TAPS 20060. The World's a Stage: Performance in Politics, Culture, and Everyday Life. 100 Units.

This course traces the history of the double-edged notion that the world might resemble a stage from its ancient roots to its current relevance in politics, social media, and gender expression, among other areas. We will explore these questions by reading performance texts and performance theory from classical to contemporary, by attending plays and watching films, and by visiting non-theatrical events in order to consider them as occasions for performance. (Drama, Theory)

Instructor(s): John Muse Terms Offered: Autumn

Equivalent Course(s): ENGL 18660, SIGN 26049

TAPS 20120. 21st Century American Drama. 100 Units.

This hybrid seminar focuses on American contemporary playwrights who have made a significant and commercial impact with regard to dramatic form in the past 20 years. Playwrights will include, Tracy Letts, Annie Baker, Lynn Nottage, Quiara Alegria Hudes, Ayad Akhtar, and Amy Herzog. Textual analysis is consistently oriented towards staging, design, and cultural relevancies. Work for the course will include research papers, presentations, and scene work.

Instructor(s): H. Coleman Terms Offered: Autumn

Note(s): Attendance at the first class session is mandatory. Questions: contact vwalden@uchicago.edu.

Equivalent Course(s): ENGL 27583

TAPS 20220. The Promise of Nightlife: Queer Desires & the Marketing of the Erotic. 100 Units.

In brief, this course will survey various forms of nightlife performance across the 20th and 21st century (drag, stripping, burlesque, variety shows & showgirl performance) alongside popular portrayals of nightlife industries. The course asks what it means (for performers and for pop culture more broadly) that nightlife is thought of as an escape from ordinary life and ordinary or conventional forms of work. The focus of this course will track nightlife performance and industries from the material perspective of the performers, organizers, and collectives that form to address economic, racial, and sexual constraints, in addition to thinking about the figure and function of nightlife in U.S. pop culture's imagination (through, for example, films like *Hustlers*, *Showgirls*, etc.). From both questions, we will think through different conceptions and

geographies of spectacle, performance, and the erotic that undergird the world of nightlife entertainment. We will also hear from local nightlife performers/artists in Chicago with the option to attend a local nightlife outing as well. We will examine how nightlife has been approached through various disciplines from ethnomusicology, anthropology, performance studies, literary and cultural studies and read works by selected scholars and performers including Esther Newton, Tim Lawrence, Luis-Manuel Garcia, Kia LaBeija, and madison moore.

Instructor(s): E. Pensis Terms Offered: Winter

Equivalent Course(s): GNSE 22220

TAPS 20360. Shrews! Unladylike Conduct on Stage and Page in Early Modern England. 100 Units.

This course will move between three sites of inquiry to investigate the social and material history of an evergreen trope: the domestication of a refractory servant or wife. From rare book libraries and museum collections, we will track the common features of popular entertainments that traffic in this scenario. We will then bring our findings to bear in a theatre lab environment, where we will assay scenes from *The Taming of the Shrew*, *The Tamer Tamed*, and *the City Madam*. (Drama, Pre-1650)

Instructor(s): Ellen MacKay Terms Offered: Spring

Equivalent Course(s): ENGL 20360

TAPS 20507. Mindfulness: Experience and Media. 100 Units.

How do we experience media (of all kinds) with (or without) awareness? Methods of mindfulness offer principles and practices of awareness focusing on mind, body, and embodied mind. Mindfulness (a flexible, moment-to-moment, non-judging awareness) is an individual experience and at the same time, practices of mindfulness can be a mode of public health intervention. Mindfulness involves social epistemologies of how we know (or don't know) collectively, as we interact with immediate sensory experience as well as with mediated communication technologies generating various sorts of virtual realities (from books to VR). In addition to readings and discussions, this course teaches embodied practices of attention and awareness through the curriculum of Mindfulness-Based Stress Reduction.

Instructor(s): M. Browning Terms Offered: Winter

Equivalent Course(s): HIPS 25207, HLTH 25207, HUMA 25207

TAPS 20600. Adapting the Unadaptable. 100 Units.

Fiction has always provided rich source material for drama. But much 20th and 21st century fiction can seem unadaptable—it is often sprawling, poetic, interior, fragmentary, or cerebral (or all of the above!). This hands-on course will challenge students to approach modern and contemporary literature with unconventional tools of staging, editing, and design. Students will also be introduced to the work of contemporary theater companies and productions that have taken on seemingly impossible adaptation projects, and closely study adaptations of Jorge Luis Borges, Franz Kafka, Virginia Woolf and others.

Instructor(s): S. Bockley Terms Offered: Winter

Note(s): Attendance at first class is mandatory.

Equivalent Course(s): ENGL 20603

TAPS 20700. Dramaturgy and Dramatic Criticism. 100 Units.

This course is an orientation and practicum in contemporary dramaturgy. After surveying Enlightenment treatises that occasioned Western dramaturgical practices, students will critically engage present-day writings that consider the objectives and ultimate *raison d'être* for the production dramaturg. Students then undertake dramaturgical research, exploring different methodologies and creative mind-sets for four representative performance genres: period plays; new plays; operas or musicals; and installations or performance art. Special attention will be given to cultivating skills for providing constructive feedback and practicing dramaturgy as an artistic collaborator and fellow creator. The class culminates in the design and compilation of a sourcebook for actors, directors, and designers, followed by a dramaturgical presentation intended for a professional rehearsal room.

Instructor(s): D. Matson Terms Offered: Winter

Note(s): Attendance at first class is mandatory.

Equivalent Course(s): TAPS 30710, ENGL 20710

TAPS 21600. Acting Workshop. 100 Units.

This course will develop acting skills required for the professional world. The classes are based in text analysis, physical practices, action work, and scene study with one or many partners. This class will prepare you for various audition scenarios as well as adding to rehearsal room tools and techniques. Previous experience is encouraged.

Instructor(s): M. Lyons Terms Offered: Autumn

Note(s): Attendance at first class meeting is mandatory.

Equivalent Course(s): TAPS 31600

TAPS 21667. Poetics of Space in Travel: Performance and Place in Japan and Beyond. 100 Units.

How is space imagined and evoked across different media? How might attention to this question lead us to rethink the way that space mediates our experiences of our surroundings? In examining how spatial imaginings travel across time and medium, we will explore questions of space as they are bound up with problems of gender, exile, aesthetics, and performativity. While Japan will be our primary geographic topos, we will interrogate an understanding of these spatialities as 'Japanese' by surveying the role they come to play in discourses of both 'Japanese-ness' and Western modernism. We will pay special attention to performance (namely, *noh* drama); however, we will also take up short stories, novels, film and more. Centering our investigations on modern and contemporary cultural production, we will also deal with premodern texts to trace the multiple axes along which our diverse array of objects circulate. Figures considered include: Murata Sayaka, Hori Tatsuo, Miyazawa Kenji, Mishima Yukio, Ôe Kenzaburô, Virginia Woolf, and Zeami. No prior background required.

Instructor(s): Anthony Stott Terms Offered: Spring

Equivalent Course(s): EALC 21667, CMLT 21667

TAPS 21700. An Actor Observes. 100 Units.

This course addresses techniques and modes of observation and their application to scene study. Observation study is used to strengthen acting choices, build the physical world of the play, and create original, vital characterizations. It also serves to deepen awareness of group dynamics, integrate symbolic, psychological and physical meaning in a character's behavior, and guide the process of breaking down a scene. Students will perform observation exercises and apply their discoveries to scene work.

Instructor(s): P. Pascoe Terms Offered: Spring

Note(s): Attendance at first class meeting is mandatory.

TAPS 21730. Movement for Actors. 100 Units.

This course will explore how an actor uses movement as a tool to communicate character, psychological perspective and style. The foundation of our movement work will center on the skills of balance, coordination, strength, flexibility, breath control and focus. Building on the skills of the actor both in terms of naturalistic character work and stylized theatrical text. Students will put the work into practice utilizing scene work and abstract gesture sequences through studying the techniques of Michael Chekov, Vsevolod Meyerhold, Anne Bogart, Complicite and Frantic Assembly.

Instructor(s): D. de Mayo Terms Offered: Winter

Note(s): Attendance at first class session is mandatory.

Equivalent Course(s): TAPS 31730

TAPS 21850. Storytelling in Musical Theater: The Art of the Libretto. 100 Units.

This course introduces students to the art of book writing for musical theater both on stage and in the current, digital landscape of live performance. Students will examine dramatic structure across a variety of genres and musicals, and will apply its lessons to their own original outlines and scenes to be workshopped and performed online. They will learn about adaptation by finding the story, character, and song moments in source materials ranging from poems and movies to historical and current events, and they will study character development by examining iconic musical theater roles and generating character descriptions and arcs of their own. Students will also practice working with existing music by writing from found albums or bodies of songs, and each will use the online spaces and tools of the professional theater world to present the rough draft of an original ten-minute libretto as well as a treatment and excerpt of a new, full-length work of musical theater.

Instructor(s): S. Elmegreen Terms Offered: Autumn

Note(s): Attendance at first class is mandatory.

TAPS 21860. Songwriting for Musical Theater. 100 Units.

This course is a practical introduction to the art and craft of songwriting for musical theater. Students will analyze and practice song form, storytelling through music, and the writing of lyrics and melody for character and tone. In addition to presenting and workshopping new song material weekly, students will learn about orchestration, arrangement, and the structure of the theatrical score by discussing standout examples of the genre. As individuals or in teams of two, students will develop a catalog of character- and story-driven songs to be performed in cabaret at the end of the quarter. A basic ability to read music is expected; experience in songwriting is not required.

Instructor(s): S. Elmegreen Terms Offered: Winter

TAPS 22300. Performance Art Installation: The Dreamer and the Dream. 100 Units.

In this course we will explore the relations between dreaming and waking life using a broad interdisciplinary approach. Our point of departure will be psychological, cultural, and religious understandings of dreams. On the basis of the readings and the skills and backgrounds of participants, the class will develop a 'performance installation' around the liminal spaces of dream and wakefulness. Readings will include literary texts by Apuleius, Calderon, Shakespeare, Schnitzler, and Neil Gaiman, and theoretical texts by Freud, Jung, Klein, and Winnicott.

Instructor(s): P. Pascoe Terms Offered: Spring

Note(s): Attendance at first class meeting is mandatory.

Equivalent Course(s): TAPS 32300

TAPS 22700. Devising Fundamentals. 100 Units.

Devised theater is created from a multitude of sources but, importantly, not a preexisting script. Rather the 'script' (whether or not it eventually takes written form) is developed in rehearsal. This studio course engages students in methods of generating and crafting devised material, including but not limited to physical action, moment work, and verbatim text. Additionally we will focus on the generative power of 'problems' as a motor of creation, which draws from core principles of clowning. Through solo and collaborative projects, students will explore how devised theater wrestles with conventionally discrete roles in theater-making (writer, director, performer, dramaturg, and designer). Other considerations will include strategies for making disparate material cohere and more broadly, what constitutes a story. Select readings and case studies of artists working in devised theater will supplement the practice-based focus of the course.

Instructor(s): L. Danzig Terms Offered: Autumn

Equivalent Course(s): TAPS 32700

TAPS 22900. Introduction to Theater & Performance Studies. 100 Units.

This course is designed to introduce students to foundational concepts and critical skills relevant to the study of theater and performance. In addition to wide-ranging readings and discussions, students will attend a variety of performances and screenings representing a cross-section of genres, interpretive styles, and institutional settings. Although the course will be directed by Prof. Trent, it will be divided into discrete units, each led by a different instructor from the TAPS teaching staff.

Thus, students will gain exposure to a variety of teaching styles, areas of expertise, and approaches to the field. The course is open to all undergraduate students as an elective; it also serves as a required course for all TAPS majors and minors.

Instructor(s): T. Trent Terms Offered: Autumn

Note(s): Attendance at first class session is mandatory.

TAPS 23000. Introduction to Directing. 100 Units.

This course employs a practice in the fundamental theory of play direction and the role of the director in collaboration with the development of textual analysis. By examining five diversely different texts using three different approaches to play analysis (Aristotle, Stanislavski, Ball) students begin developing a method of directing for the stage in support of the written text. In alternating weeks, students implement textual analysis in building an understanding of directorial concept, theme, imagery and staging through rehearsal and in-class presentations of three-minute excerpts from the play analysis the previous week. The culmination is a final five-minute scene combining the tools of direction with a method of analysis devised over the entire course.

Instructor(s): S. Murray Terms Offered: Autumn

Note(s): Attendance at first class meeting is mandatory.

TAPS 23105. Directing: Rehearsal Fundamentals. 100 Units.

This course introduces key concepts, strategies and tools for effective rehearsal preparation at every stage of rehearsing a production. Topics include but are not limited to text analysis in preparation for work with actors, approaches to initial rehearsals that create shared vocabulary (table-work and movement-based alternatives), preparation for staging on a variety of ground plans, how to run rehearsals, and effective methods of collaboration with actors, designers and the management team. Recommended for the beginning through advanced director.

Instructor(s): K. Walsh Terms Offered: Winter

TAPS 23150. Theater-Making Lab. 100 Units.

This course replaces Directing Study with an expanded quarterly lab for students working on theater and performance projects. Each quarter, the lab will be customized to serve directors, designers and dramaturgs who are working on current productions, preparing proposals for future productions, and/or in some way engaged in project development. The cohort will meet weekly to develop project ideas, build skills, experiment with methods of collaboration, receive and give feedback to each other, and receive individual mentorship from the course instructor. Instructor consent required. Interested students should complete the online application for the course (<https://forms.gle/FWzL6FRjUNFmc6j77>) and are encouraged to reach out the instructor with questions and ideas. Priority will be given to TAPS majors and minors.

Instructor(s): L. Danzig, T. Trent, D. de Mayo Terms Offered: Autumn Spring Winter

Note(s): Attendance at first class session is mandatory.

TAPS 23410. Camp and Theatre of the Ridiculous. 100 Units.

Looking at the writings of Charles Ludlum and his Ridiculous Manifesto, we will explore the role of camp, homage, collage and The Ridiculous. Students will stage existing works and be asked to create their own original scenes that use camp, collage and the ridiculous to explore current politics and ideas.

Instructor(s): S. Murray Terms Offered: Spring

Note(s): Attendance at first class session is mandatory.

TAPS 23600. Improv and Sketch. 100 Units.

This course adapts curriculum originally designed for the various schools of modern improvisation (including the iO, the Annoyance and The Second City) and brings it into today's Zoom world. Listening skills, the ability to work well with others as a team, and building scene work organically are highlighted. You will leave this class a better communicator, with interpersonal tools that support other facets of your life.

Instructor(s): S. Messing Terms Offered: Autumn

Note(s): Attendance at first class meeting is mandatory.

TAPS 23800. Playwriting: Writing Utilizing Improvisation. 100 Units.

This course incorporates the spontaneity and freedom allowed by improvisation into the writing process. In addition to focusing on the natural rhythms and nuances of modern communication, the class will also learn to write for individual performers and ensembles. Through these improvisations, the students focus on developing unique voices for each character. Students read scenes from contemporary plays which emphasize spontaneous and realistic dialogue. Students have weekly assignments that further explore the characters they are writing. Each class includes an active roundtable discussion of the weekly assignments as well as collaborative exercises that further explores the voices of their characters. In addition to the weekly assignments, students write three complete scenes that will receive readings by their classmates.

Instructor(s): E. Linder Terms Offered: Spring

Note(s): Attendance at first class meeting is mandatory

TAPS 23905. New Play Development Workshop. 100 Units.

The New Play Development Workshop is designed to be a brave space for writers with varying experience and perspectives. By the end of this course, each student will have created a new, full-length play through the workshop process. In addition to generating new material on a weekly basis, students will be expected to attend one Chicago-based production and write one 500-word critical response.

Instructor(s): E. Edele (Calamity West) Terms Offered: Winter

TAPS 23930. Fundamentals of Playwriting. 100 Units.

This workshop will explore the underlying mechanics that have made plays tick for the last 2,500 odd years, from Euripedes to Shakespeare to Büchner to Caryl Churchill, Susan Lori-Parks, and Annie Baker, etc. Students will be asked to

shamelessly steal those playwrights' tricks and techniques (if they're found useful), and employ them in the creation of their own piece. Designed for playwrights at any level (beginning or advanced), the workshop's primary goals will be to develop a personal sense of what 'works' on stage within the context of what's worked in the past, and to generate a one act play, start to finish.

Instructor(s): M. Maher Terms Offered: Autumn

Note(s): ATTENDANCE AT FIRST CLASS IS MANDATORY.

Equivalent Course(s): TAPS 33930

TAPS 23980. Writing the Short, Short Play: Investigations in Micro-Drama. 100 Units.

Never in the history of western theater has brevity gotten so much attention. Festivals around the world are devoted to plays five minutes in length or less; perhaps the most revered playwright of the 20th century, Samuel Beckett, guided his career towards the writing of smaller and smaller works; Chicago's Neofuturists have profitably run their show of 'thirty plays in sixty minutes' for over thirty years; Twitter accounts disseminate multiple two to three line scripts daily; and sketch comedy continues to evolve and thrive. This course will give an overview of the development of the very short play over the last one hundred and twenty years, but will primarily focus on the writing and development of same, asking students to complete - through workshop prompts - 20 to 30 scripts by end of quarter. A particular effort will be made to bring 'traditional' elements of standard-length plays - character, arc, anagnorisis, pathos, backstory, etc - to these miniatures, to test and expand their assumed limitations.

Instructor(s): M. Maher Terms Offered: Spring

Note(s): Attendance at first class is mandatory.

Equivalent Course(s): TAPS 33980

TAPS 24410. Transmedia Puzzle Design & Performance. 100 Units.

This course will introduce students to the burgeoning field of immersive puzzle design. Students will develop, implement and playtest puzzles that are suited for a range of experiences: from the tabletop to the immersive, from online puzzle hunts to broad-scoped alternate reality games (ARG). Students in this course will work directly with master puzzler, Sandor Wiesz, the commissioner of The Mystery League.

Terms Offered: Autumn

Equivalent Course(s): MAAD 24410, TAPS 34410

TAPS 24420. Games and Performance: Live Action Role Playing Games. 100 Units.

This experimental course builds on the emerging genres of 'immersive performance,' 'alternate reality,' and 'Live Action Role Playing (LARP)' to investigate the dynamics of role-playing games through case studies, gameplay, and original student design. Our focus will include the 1913 Gettysburg reunion, parlor games including Parker Brother's 1937 Jury Box, Society for Creative Anachronism in 1966, Dungeons and Dragons (both its inception in 1974 and current resurgence), Brian Wiese's Hobbitt War in 1977, Mind's Eye Theater's development of World of Darkness, and Ground Zero, which began the Nordic Larp movement in 1998. We will explore role of the game master, emergent narratives, improvised community formation as well as 'bleed.' Previous course work in Games and Performance encouraged but not required.

Instructor(s): H. Coleman Terms Offered: Spring

Equivalent Course(s): TAPS 34420, MAAD 24420

TAPS 24500. Chicago Theater: Budgets and Buildings. 100 Units.

This course examines the current state of Chicago theater, focusing on the relationships between facilities, budgets, and missions. Field trips required to venues including Side Project, Timeline, Raven, Steppenwolf, Theater Building, and Greenhouse. Attendance at first class meeting is mandatory.

Instructor(s): H. Coleman Terms Offered: TBD

Note(s): Attendance at first class meeting is mandatory. This course is offered in alternate years.

TAPS 24550. Evolution of Improvisation in Chicago. 100 Units.

This course traces the history of improvisation for performance, beginning with the 'High Priestess' Viola Spolin's work exploring the educational and social benefits of play at Hull House through Paul Sill's development of The Compass Players in Hyde Park to include current companies including Second City, The Neo Futurists, The Annoyance, and IO. The course will include attendance at performances, student presentations, and practice-based workshops.

Instructor(s): H. Coleman Terms Offered: Spring

Equivalent Course(s): TAPS 34550, MAAD 24550

TAPS 25200. Neo-Futurists Performance Workshop. 100 Units.

This course is a hands-on introduction to Neo-Futurism: a method of transforming your own thoughts, feelings, and experiences into creative, task-oriented, audience-participatory, non-illusory, unique theatrical events. Students are encouraged to find their own voice as fully rounded theater artists by writing, directing, and performing their own short performances using their own lives as source material. By pursuing the goal of absolute truth on stage, we focus on an alternative to narrative Realism by embracing such elements as deconstruction, found-text, collage, abstraction, synthesis, and chaos. Classes consist of original group exercises as well as presentations of weekly performance assignments.

Instructor(s): G. Allen Terms Offered: Spring

Note(s): Attendance at first class meeting is mandatory.

TAPS 25505. Adaptation for the Screen. 100 Units.

This course introduces students to the rewards and difficulties of adapting literary material to the big screen. In addition to reading short stories and viewing the films that were made from these stories, all students will be given the same short story to adapt into a 50-60 minute film. Progress on these scripts will be addressed through in-class readings, leading to final

meetings with the instructor about your completed first drafts. Screenwriting experience is helpful, but not essential. Class size is limited to 10 students.

Instructor(s): J. Petrakis Terms Offered: Spring

Note(s): Attendance at first class is mandatory.

TAPS 25910. Short Form Digital Storytelling: Creating a Web Series. 100 Units.

This course examines the short form storytelling of the digital web series. Through lectures, viewings and discussions in weekly meetings students will determine what makes a strong web series and apply the findings to writing and polishing the pilot episode of their own web series. Students will write weekly 4-5 page assignments building toward the creation of a 5-6 episode series.

Instructor(s): T. Brown Terms Offered: Spring

Note(s): Attendance at first class session is mandatory.

Equivalent Course(s): MAAD 24910

TAPS 26100. Dance Composition. 100 Units.

When does movement become text? How do bodies combine with time, space, and energy to communicate ideas? In this workshop-formatted course, we explore these questions as we study and create dance. Students develop improvisational skills by exploring the dance principles of space, time, dynamics, and the process of abstraction. Through physical exercises, discussions, and readings, students learn how to initiate and develop movement ideas. Major dance works from many styles (e.g., ballet, modern, avant-garde) are viewed and analyzed, as students develop an understanding of choreographic forms. Students also develop a proficiency in the areas of observation and constructive criticism. The course culminates with a choreographic project.

Instructor(s): J. Rhoads Terms Offered: Autumn

Note(s): Attendance at first class meeting is mandatory.

Equivalent Course(s): TAPS 36100

TAPS 26150. Dance Lab. 100 Units.

Dance Lab provides students with the dedicated space, time, and support structures to make dance and movement-based theater. The development of each student's work is complemented by discussions with student peers and guest artists, and regular meetings with a faculty advisor. The course culminates in an informal public performance.

Instructor(s): J. Rhoads Terms Offered: Winter

Equivalent Course(s): TAPS 36150

TAPS 27080. Spectacle in Miniature. 100 Units.

This course explores how the grand theatrical event can be 'miniaturized'. Students will investigate forms of spectacle and contemporary puppetry, toy theater, performance installation, and designed environments, along with artists who work in intimate and miniature scale. Students will create works experimenting with how large dramatic stories can be told with detailed and intimate sets, puppets, transforming objects, mechanical contraptions, and text. Sources for narrative will include but not be limited to dream and myth.

Instructor(s): F. Maugeri Terms Offered: Winter

Equivalent Course(s): ARTV 20216

TAPS 27100. Scene Painting. 100 Units.

This course is designed to introduce students to the theatrical art of scenic painting for the stage and film. A scenic artist is the hand of the theatrical designer, translating the small scale of the designer's rendering into full size theatrical environments. In this course, students will explore the unique tools and techniques used by scenic artists to create scenery. The end result of this class will be a basic mastery of painting 'faux' surfaces and an understanding of how a scenic artist transforms the designer's ideas into realized pieces of theatrical art.

Instructor(s): K. Boetcher Terms Offered: Winter

Note(s): Attendance for first class meeting is mandatory. This course is offered in alternate years. Please note a \$30 fee for supplies and materials applies to this course.

TAPS 27550. Costume Design and Technology for the Stage. 100 Units.

In this course, students will learn the basics of designing costumes for theatrical productions, encompassing the skills of theatrical rendering and sketching, as well as the implementation of the design and basic sewing techniques. Students will learn to adopt a vocabulary using the elements and principles of design, understand and experience the process intrinsic to producing costumes for the theater, analyze the production needs related to costumes, and prepare a finalized costume design for a theatrical production.

Instructor(s): N. Rohrer Terms Offered: Winter

Note(s): Attendance at the first class meeting is mandatory.

Equivalent Course(s): ARTV 24554

TAPS 28000. Scenic Design. 100 Units.

This course is an exploration of various forms and processes of designing sets for theatrical performance. We pay particular attention to a cohesive reading of a text, contextual and historical exploration, and visual and thematic research, as well as the documentation needed to complete a show (e.g., model, drafting, paint elevations). We also explore, nominally, the history of stage design and look at major trends in modern stage design.

Instructor(s): K. Boetcher Terms Offered: Autumn

Note(s): Attendance at first class meeting is mandatory.

TAPS 28100. Lighting Design for the Stage. 100 Units.

This course places equal emphasis on the theory and practice of modern stage lighting. Students learn the mechanical properties of lighting equipment; how to create, read, and execute a lighting plot; the functions of lighting in a theatrical context; color and design theory; and how to read a text as a lighting designer.

Instructor(s): M. Durst Terms Offered: Spring

Note(s): Attendance at first class meeting is mandatory.

TAPS 28320. The Mind as Stage: Podcasting. 100 Units.

Audio storytelling insinuates itself into the day-to-day unlike other narrative forms. People listen to podcasts while they do the dishes, drive to work, or walk the dog. In this hands-on course, we will learn to produce a podcast from idea to final sound mix, and explore the unique opportunities that the podcast form affords the storyteller. Students will complete several short audio exercises, and one larger podcast project. The class will be held remotely, with an emphasis on remote recording techniques and what it means to document this moment using tools of non-fiction, fiction, and oral history.

Instructor(s): S. Geis Terms Offered: Autumn

Note(s): Attendance at first class session is mandatory.

Equivalent Course(s): TAPS 38320, MAAD 23820

TAPS 28330. Oral History & Podcasting. 100 Units.

This class explores the potential of the podcast as a form of ethical artistic and social practice. Through the lens of oral history and its associated values - including prioritizing voices that are not often heard, reciprocity, complicating narratives, and the archive- we will explore ways to tell stories of people and communities in sound. Students will develop a grounding in oral history practices and ethics, as well as the skills to produce compelling oral narratives, including audio editing, recording scenes and ambient sound, and using music. During the quarter, students will have several opportunities to practice interviewing and will design their own oral history project. This class is appropriate for students with no audio experience, as well as students who have taken TAPS 28320 The Mind as Stage: Podcasting.

Instructor(s): S. Geis Terms Offered: Winter

Equivalent Course(s): MAAD 23833, TAPS 38330

TAPS 28350. Dance & Theater in Real-Time: Performing Presence and Liveness. 100 Units.

Presence is a fundamental yet highly debated subject within numerous fields of study, complicated by questions about authenticity, identity, authority, and self-awareness. In the context of live performance, presence implies relationship to others, location, space, and time, among others. In this course, students will engage in both seminar and studio-based work to consider the phenomenology of presence within the fields of dance, theater, and performance. Coursework considers the relationship between presence and liveness, how presence is impacted by theatrical containers such as choreography, script, or structured improvisation, and the relationship of 'co-presence' between audience and performer, among other topics.

Attendance at first class is mandatory.

Instructor(s): J. Rhoads Terms Offered: TBD

Equivalent Course(s): TAPS 38350

TAPS 28360. Screendance: Movement and New Media. 100 Units.

This course will explore the evolving relationship between moving bodies and video technologies. From early filmmakers using dancers as test subjects, to movie musicals and contemporary dance for the camera festivals, mediatization of the body continues to challenge the ephemerality of live dance performance. This course focuses on the growing field of screendance, videodance, or dance-on-camera, working to define this hybrid genre and to understand the collaborative roles of choreographer, director, dancer, cameraman, and video editor. This course is both a practical and scholarly approach to the genre of screendance, each component essential to a full understanding and mastery of the other. Course work will be divided between the studio and the classroom. For the studio component, students will learn basic video editing and filming techniques. For the classroom component, students will be asked to watch screendance and read a cross-section of criticism. Assignments will be both technological and choreographic (making screendance) and scholarly (written reflections and a seminar paper).

Instructor(s): L. Leopold Terms Offered: TBD

Note(s): Attendance at first class is mandatory.

Equivalent Course(s): MAAD 23860, TAPS 38360, CMST 28360

TAPS 28421. Theater for Social Change. 100 Units.

Augusto Boal argues that theatre is 'rehearsal for the revolution.' Boal's Theatre of the Oppressed provides key strategies for collaboratively crafting dramatic narrative. These strategies challenge the conventional Aristotelian structure that privileges a single protagonist and subordinates other stories. Instead, Boal structures a poetics in which the 'spect-actor' contributes their voice. Students will engage in devising and embodiment exercises in Image Theatre, Newspaper Theatre, Forum Theatre, and more, by interpreting texts, (e.g., religious texts, constitutional documents, or political manifestos), interrogating current events, exploring public narratives, and valuing diverse learning styles. Students will contextualize destinations for the course material according to the aesthetic and academic questions that they bring into the classroom. To consider ethical concerns surrounding participatory theatre, we will examine arts groups past and present that employ the techniques of the Theatre of the Oppressed. Readings include Boal, Freire, Jan Cohen-Cruz, Michael Rohd, bell hooks, and Knight and Schwarzman.

Instructor(s): T. Trent Terms Offered: Spring

Note(s): Attendance at first class is mandatory

Equivalent Course(s): TAPS 38421, CRES 28421

TAPS 29800. Theater and Performance Studies BA Colloquium. 100 Units.

This two-quarter sequence is open only to fourth-year students who are majoring and/or minoring in theater and performance studies.

Terms Offered: Autumn Winter

Prerequisite(s): Consent of Director of Undergraduate Studies.

Note(s): 100 units credit is granted only after successful completion of the Winter term.

TAPS 29900. Reading and Research. 100 Units.

This is a reading and research course for independent study.

Equivalent Course(s): TAPS 49900

Visual Arts

Department Website: <http://dova.uchicago.edu>

Program of Study

The Department of Visual Arts (DoVA) is concerned with art making as a vehicle for exploring creativity, expression, perception, and the constructed world. Whether students take courses listed under ARTV to meet a general education requirement or as part of a major in visual arts, the goal is that they will develop communicative, analytical, and expressive skills through the process of artistic production. The following three courses meet the general education requirement in the arts: ARTV 10100 Visual Language: On Images, ARTV 10200 Visual Language: On Objects, and ARTV 10300 Visual Language: On Time and Space. Most advanced courses require one of these as a prerequisite. (See individual course listings for specific prerequisites.)

Range of Course Offerings

The following courses introduce visual communication through the manipulation of various traditional and nonart materials, engaging principles of visual language while stressing the relationship between form and meaning. Readings and visits to local museums and galleries are required.

ARTV 10100	Visual Language: On Images	100
ARTV 10200	Visual Language: On Objects	100
ARTV 10300	Visual Language: On Time and Space	100

ARTV courses numbered 21000 to 29700 include media specific courses that teach technical skills and provide a conceptual framework for working in these media (e.g., painting, photography, sculpture, video). Also included are more advanced studio courses designed to investigate the vast array of objects, spaces, and ideas embedded in the contemporary artistic landscape. ARTV courses numbered 20000 to 20999 are not studio-based and may not be counted toward studio requirements for the major or minor. ARTV courses in the 20000 to 20999 range may be counted toward the two electives relevant to the major. (See Program Requirements for more information.)

Students in other fields of study may also complete a minor in visual arts. Information follows the description of the major.

Program Requirements

The BA program in the Department of Visual Arts is intended for students interested in the practice and study of art. DoVA's faculty consists of a core of artists and other humanists interested in making and thinking about art. Students who major in visual arts take an individually arranged program of studio, lecture, and seminar courses that may include some courses outside the Humanities Collegiate Division. The program seeks to foster understanding of art from several perspectives: the practice and intention of the creator, the visual conventions employed, and the perception and critical reception of the audience. In addition to work in the studio, these aims may require study of many other subjects, including but not limited to art history, intellectual history, criticism, and aesthetics.

All students take ARTV 10100 Visual Language: On Images, ARTV 10200 Visual Language: On Objects, or ARTV 10300 Visual Language: On Time and Space in the first two years of their studies. After completing one of these general education courses but no later than Winter Quarter of their third year, students meet with the Director of Undergraduate Studies to plan the rest of their program. At least six of the courses beyond the general education requirement in the arts must be drawn from the second level of studio-based offerings (studio art courses numbered 21000 and above). Please note that only courses that are primarily focused on art making can be applied toward this requirement. Students may take up to two studio-based independent study courses (ARTV 29700 Independent Study in Visual Arts) toward their six studio requirements. Two of the remaining three electives may include any intellectually consistent combination of visual arts studio courses, visual arts critical and theory courses, and any other relevant offerings in the College. One elective must be a 20000-level (not meeting the general education requirement in the arts) course in Art History (ARTH).

Students take ARTV 29600 Junior Seminar in their third year. At the end of the Junior Seminar, students may choose to apply for the visual arts studio track. Places in the studio track are limited. Applicants will be reviewed by a faculty committee at the end of their third year, and studio track decisions will be announced before the start of the Autumn Quarter of fourth year. Students in the studio track present their work in a thesis exhibition and may be eligible to receive shared studio space in their senior year. (See "Studio Track" section below for more details.)

Students who wish to study abroad in their third year should contact the department as soon as possible to discuss options for taking the Junior Seminar, which is generally only offered one quarter per year, in the Spring Quarter. Junior Seminar can sometimes be taken in the second year with permission from the Director of Undergraduate Studies.

All visual arts majors must take ARTV 29850 Senior Seminar in the Autumn Quarter of their fourth year. Students in the studio track are required to take an additional course, ARTV 29900 Senior Project, which serves as a critical forum to prepare for the thesis exhibition in the spring. (See "Studio Track" section below for more details.)

Summary of Requirements for Majors

MAJOR

One of the following:*		100
ARTV 10100	Visual Language: On Images	
ARTV 10200	Visual Language: On Objects	
ARTV 10300	Visual Language: On Time and Space	
ARTV 29600	Junior Seminar	100
ARTV 29850	Senior Seminar	100
Six studio art courses numbered 21000 and above**		600
Two electives relevant to the major		200
One 20000-level course in Art History ‡		100
Total Units		1200

* Visual arts majors must take ARTV 10100, ARTV 10200, or ARTV 10300 as a prerequisite to more advanced studio courses, but they may elect to count the course toward the general education requirement in the arts rather than the major. Students who count ARTV 10100, ARTV 10200, or ARTV 10300 toward the general education requirement may replace it in the major with another section of ARTV 10100, ARTV 10200, or 10300, or with a studio art course numbered ARTV 21000 and above.

** ARTV courses numbered 20000 to 20999 cannot be used toward this requirement.

‡ ARTH courses that satisfy the general education requirement in the arts are not eligible.

Studio Track

Visual arts majors may apply for the studio track at the end of their third year. Places in the studio track are limited. Applicants will be reviewed by a faculty committee at the end of the third year, and studio track decisions will be announced before the start of the Autumn Quarter of fourth year. Studio track students work in consultation with the Director of Undergraduate Studies and the visual arts faculty to mount a thesis exhibition at the beginning of the Spring Quarter of their senior year. Studio track students may also be awarded shared studio space during the senior year, based on merit and need, and contingent upon space being available.

Additionally, studio track students must take ARTV 29900 Senior Project in the Winter Quarter of their final year, in preparation for their thesis exhibition.

Summary of Requirements for Studio Track Majors

MAJOR

One of the following:*		100
ARTV 10100	Visual Language: On Images	
ARTV 10200	Visual Language: On Objects	
ARTV 10300	Visual Language: On Time and Space	
ARTV 29600	Junior Seminar	100
ARTV 29850	Senior Seminar	100
ARTV 29900	Senior Project	100
Six studio art courses numbered 21000 and above**		600
Two electives relevant to the major		200
One 20000-level course in Art History ‡		100
Total Units		1300

* Visual arts majors must take ARTV 10100, ARTV 10200, or ARTV 10300 as a prerequisite to more advanced studio courses, but they may elect to count the course toward the general education requirement in the arts rather than the major. Students who count ARTV 10100, ARTV 10200, or ARTV 10300 toward the general education requirement may replace it in the major with another section of ARTV 10100, ARTV 10200, or ARTV 10300, or with a studio art course numbered ARTV 21000 and above.

** ARTV courses numbered 20000 to 20999 cannot be used toward this requirement.

‡ ARTH courses that satisfy the general education requirement in the arts are not eligible.

Honors

Students must have a portfolio of exceptional quality to be recommended to graduate with honors in visual arts. Visual arts faculty make final honors decisions at the end of the student's fourth year, based on performance in visual arts courses, the quality of participation in critiques, and the thesis exhibition.

Grading

Students majoring in visual arts must receive quality grades for the 12 or 13 courses that constitute the major. With consent of their College adviser and the instructor, nonmajors may take visual arts courses for P/F grades if the courses are not used to meet a general education requirement.

Minor Program in the Department of Visual Arts

The minor in visual arts requires six courses: one is from the 10000-level sequence (ARTV 10100 Visual Language: On Images, ARTV 10200 Visual Language: On Objects, or ARTV 10300 Visual Language: On Time and Space), and five are drawn from visual arts studio courses numbered 21000 to 29700, chosen in consultation with the Director of Undergraduate Studies. ARTV courses numbered 20000 to 20999 are not studio-based and may not be counted toward studio requirements for the minor.

Students must meet with the Director of Undergraduate Studies before the end of Spring Quarter of their third year to declare their intention to complete the minor. Students choose courses in consultation with the Director of Undergraduate Studies. The Director's approval for the minor program should be submitted to a student's College adviser by the deadline above on a form obtained from the adviser.

Courses in the minor (1) may not be double counted with the student's major(s) or with other minors; and (2) may not be counted toward general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Summary of Requirements for the Minor in Visual Arts

MINOR

One of the following:*		100
ARTV 10100	Visual Language: On Images	
ARTV 10200	Visual Language: On Objects	
ARTV 10300	Visual Language: On Time and Space	
Five studio art courses numbered 21000 and above**		500
Total Units		600

* Visual arts minors must take ARTV 10100, ARTV 10200, or ARTV 10300 as a prerequisite to more advanced studio courses, but they may elect to count the course toward the general education requirement in the arts rather than the minor. Students who count ARTV 10100, ARTV 10200, or ARTV 10300 toward the general education requirement may replace it in the minor with another section of ARTV 10100, ARTV 10200, or ARTV 10300, or with a studio art course numbered ARTV 21000 and above.

** ARTV courses numbered 20000 to 20999 cannot be used toward this requirement.

Course Attendance

Students must attend the first and second classes to confirm enrollment. No exceptions will be made unless the student notifies the instructor before the first class.

Visual Arts Courses

ARTV 10033. Experimental Animation: Handmade Motion. 000 Units.

Experimental Animation: Handmade Motion will introduce fundamental concepts and techniques of animation through a series of exercises and assignments which touch on the history, theory and practice of this dynamic medium. Utilizing a responsive, interactive web-based platform to facilitate lectures, screenings, technical demonstrations, collaborative production processes and direct feedback, students will develop independent and group animations. This online course will provide a unique opportunity to collaborate remotely on MAPs (multi animator projects), produce short individual works, and participate in critical discussions about their creative work and the work of others. A spectrum of methods from flip-books to computer-generated effects will be explored in this multifaceted online course. Techniques such as hand-drawn and collage-based animation, stop-motion, claymation and puppetry will be introduced, providing extensive opportunities for experimentation and the generation of unique footage. The class will culminate with a streaming animation festival to showcase student projects.

Terms Offered: Summer

ARTV 10100. Visual Language: On Images. 100 Units.

Through studio work and critical discussions on 2D form, this course is designed to reveal the conventions of images and image-making. Basic formal elements and principles of art are presented, but they are also put into practice to reveal perennial issues in a visual field. Form is studied as a means to communicate content. Topics as varied as, but not limited to, illusion, analogy, metaphor, time and memory, nature and culture, abstraction, the role of the author, and universal systems can be illuminated through these primary investigations. Visits to museums and other fieldwork required, as is participation in studio exercises and group critiques. Students must attend the first two class sessions to confirm enrollment. Wait list requests are due several weeks before the quarter begins. Sign up for the wait list at <https://dova.uchicago.edu/waitlist>
Terms Offered: Autumn Spring Winter
Note(s): ARTV 10100, 10200, and 10300 may be taken in sequence or individually. This course meets the general education requirement in the arts. Previous experience in media-based studio courses not accepted as a substitute for this course.

Students must attend the first two class sessions to confirm enrollment. Wait list requests are due several weeks before the quarter begins. Sign up for the wait list at <https://dova.uchicago.edu/waitlist>

ARTV 10200. Visual Language: On Objects. 100 Units.

Through studio work and critical discussions on 3D form, this course is intended to reveal the conventions of sculpture while investigating its modes of production. Basic formal elements and principles of art are presented, but also put into practice to reveal perennial issues in a visual field. Form is studied as a means to communicate content. Topics as varied as, but not limited to, platonic form, analogy, metaphor, verisimilitude, abstraction, nature and culture, and the body politic can be illuminated through these primary investigations. Visits to museums and other fieldwork required, as is participation in studio exercises and group critiques. ARTV 10100, 10200, and 10300 may be taken in sequence or individually. This course meets the general education requirement in the arts. Previous experience in media-based studio courses not accepted as a substitute for this course. Students must attend the first two class sessions to confirm enrollment. Wait list requests are due several weeks before the quarter begins. Sign up for the wait list at <https://dova.uchicago.edu/waitlist>

Terms Offered: Autumn Spring Winter

Note(s): ARTV 10100, 10200, and 10300 may be taken in sequence or individually. This course meets the general education requirement in the arts. Previous experience in media-based studio courses not accepted as a substitute for this course.

Students must attend the first two class sessions to confirm enrollment. Wait list requests are due several weeks before the quarter begins. Sign up for the wait list at <https://dova.uchicago.edu/waitlist>

ARTV 10300. Visual Language: On Time and Space. 100 Units.

Through studio work and critical discussion on four-dimensional form, this course is designed to reveal the conventions of the moving image, performance, and/or the production of digital-based media. Basic formal elements and principles of art are presented, but also put into practice to reveal perennial issues in a visual field. Form is studied as a means to communicate content. Topics as varied as but not limited to narrative, mechanical reproduction, verisimilitude, historical tableaux, time and memory, the body politic, and the role of the author can be illuminated through these primary investigations. Some sections focus solely on performance; others incorporate moving image technology. Please check Class Search at registrar.uchicago.edu/classes for details. Visits to museums and other fieldwork required, as is participation in studio exercises and group critiques. ARTV 10100, 10200, and 10300 may be taken in sequence or individually. This course meets the general education requirement in the arts. Previous experience in media-based studio courses not accepted as a substitute for this course. Students must attend the first two class sessions to confirm enrollment. Wait list requests are due several weeks before the quarter begins. Sign up for the wait list at <https://dova.uchicago.edu/waitlist>

Terms Offered: Autumn Spring Winter

Note(s): ARTV 10100, 10200, and 10300 may be taken in sequence or individually. This course meets the general education requirement in the arts. Previous experience in media-based studio courses not accepted as a substitute for this course.

Students must attend the first two class sessions to confirm enrollment. Wait list requests are due several weeks before the quarter begins. Sign up for the wait list at <https://dova.uchicago.edu/waitlist>

ARTV 16210. Media Art and Design Practice. 100 Units.

This studio-based course explores the practice, conventions, and boundaries of contemporary media art and design. This can encompass areas as diverse as interactive installation, app design, and the Internet meme. Through projects and critical discussion, students engage with the problems and opportunities of digitally driven content creation. Fundamental elements of digital production are introduced, including basic properties of image, video, and the global network. Further topics as varied as--though not limited to--web production, digital fabrication, interfaces, the glitch, and gaming may be considered. Sections will vary based on the instructor's fields of expertise.

Instructor(s): J. Satrom Terms Offered: Spring

Prerequisite(s): HUMA 16000 and HUMA 16100 or instructor consent

Note(s): This course meets the general education requirement in the arts. This course may not double count for general education requirements and the Media Arts and Design minor.

Equivalent Course(s): MAAD 26210

ARTV 17704. Art Meets Philosophy. 100 Units.

The great German Romantic poet and critic Friedrich Schlegel once famously noted that 'one of two things is usually lacking in the so-called Philosophy of Art: either philosophy or art.' In this course, we are looking to prove Schlegel wrong by mapping out the very fruitful history of the relationship between ('western') art and ('western') philosophy instead, beginning in the poet's own early 19th-century Germany and concluding in the contemporary debates surrounding the rising influence of artificial intelligence on the making and exhibiting of art. We will be looking at artists and artworks--and not only in the classroom, but also in museums and artist's studios--in the framework of, and illuminating, contemporaneous philosophical discourse, and reading a variety of texts that help to shed light on the circumstances of certain artistic developments' conception in turn. Think Hegel and Caspar David Friedrich; Nietzsche and Ferdinand Hodler; Heidegger and Van Gogh or Paul Klee; Derrida and Daniel Buren's 'institutional critique'; Agamben and Steve McQueen. (The historical emphasis will rest on post-war art and philosophy.) Our bibliography will focus primarily on the continental tradition in philosophy; writing assignments will depart from a direct experience of seeing and handling art. A final project will propose a physical synthesis of the rivaling siblings of art and philosophy.

Instructor(s): D. Roelstraete Terms Offered: Winter

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): ARTH 17704

ARTV 20002-20003. History of International Cinema I: Silent Era; History of International Cinema II: Sound Era to 1960.

This sequence is required of students majoring in Cinema and Media Studies. Taking these courses in sequence is strongly recommended but not required.

ARTV 20002. History of International Cinema I: Silent Era. 100 Units.

This course provides a survey of the history of cinema from its emergence in the mid-1890s to the transition to sound in the late 1920s. We will examine the cinema as a set of aesthetic, social, technological, national, cultural, and industrial practices as they were exercised and developed during this 30-year span. Especially important for our examination will be the exchange of film techniques, practices, and cultures in an international context. We will also pursue questions related to the historiography of the cinema, and examine early attempts to theorize and account for the cinema as an artistic and social phenomenon.

Instructor(s): A. Field Terms Offered: Autumn

Prerequisite(s): Prior or concurrent registration in CMST 10100 required. Required of students majoring or minoring in Cinema and Media Studies.

Note(s): For students majoring in Cinema and Media Studies, the entire History of International Cinema three-course sequence must be taken.

Equivalent Course(s): ENGL 29300, CMLT 22400, CMST 28500, CMLT 32400, MAPH 33600, ARTH 38500, ENGL 48700, CMST 48500, MAAD 18500, ARTH 28500

ARTV 20003. History of International Cinema II: Sound Era to 1960. 100 Units.

The center of this course is film style, from the classical scene breakdown to the introduction of deep focus, stylistic experimentation, and technical innovation (sound, wide screen, location shooting). The development of a film culture is also discussed. Texts include Thompson and Bordwell's *Film History: An Introduction*; and works by Bazin, Belton, Sitney, and Godard. Screenings include films by Hitchcock, Welles, Rossellini, Bresson, Ozu, Antonioni, and Renoir.

Instructor(s): Staff Terms Offered: Winter

Prerequisite(s): Prior or concurrent registration in CMST 10100 required. Required of students majoring or minoring in Cinema and Media Studies.

Note(s): CMST 28500/48500 strongly recommended

Equivalent Course(s): REES 45005, REES 25005, ENGL 29600, CMST 28600, ENGL 48900, CMST 48600, MAAD 18600, ARTH 28600, MAPH 33700, ARTH 38600, CMLT 22500, CMLT 32500

ARTV 20006. Contemporary Art. 100 Units.

This course will consider the practice and theory of visual art in the late twentieth and early twenty-first centuries. Among the subjects that will drive our narrative will be the rise of postmodernism, pop art, the aesthetics of the social movements of the 1960s, institutional critique, the relationship between reproductive media and Feminism, the concept of spectacle, conceptual art, the appearance of a global art industry after 1989, the connections between art school and art-making, 'relational aesthetics,' the fate of art in the age of the Internet, the art of the post-studio moment, and what happens to art when it engages with *everything*.

Instructor(s): M. Jackson Terms Offered: Spring

Note(s): Students must attend first class to confirm enrollment. This course meets the general education requirement in the arts.

Equivalent Course(s): ARTH 15800, MAAD 10006

ARTV 20008. Ways of Curating and Collecting. 100 Units.

This seminar takes stock of contemporary currents in curating and collecting practices at a time when we are experiencing rapid expansion of the museum sector internationally, and witnessing the growing ubiquity of 'curation' within the spheres of leisure, culture, entertainment and tourism. Using institutions across campus, the city of Chicago and beyond as our primary locus, we will explore curatorial and collecting strategies employed by a variety of visual arts institutions and platforms from the scale of the single-room/single curator gallery, to the museum and the international biennial. We will consider how curatorial and exhibition-making practices have evolved from the latter half of the 20th century to the present day. We will consider the socio-cultural and political implications of curatorial work, and reflect on the shifting status of the art object within collecting and non-collecting institutions. Together we will explore significant curatorial projects at a local, national and international level; we will undertake site visits as well as play host to visiting curators, artists and thinkers. Course readings will feature the writings of seminal international curators as well as selections from historians and theorists in the field of curatorial studies. Students will work through a series of independent and collaborative assignments as well as a final project that integrates curatorial theory and practice.

Instructor(s): Y. Umlu Terms Offered: Winter

Equivalent Course(s): ARTH 26110, ARTH 36110, ARTV 30008

ARTV 20010. Contemporary Art in Paris. 100 Units.

In this course, we will explore important institutions and contexts for exhibiting contemporary international art in the city of Paris. Our approach will be ethnographic as well as aesthetic and take place at various scales: from national museums to arts foundations, galleries, artist studios, and alternative spaces and artists' 'squats.' Of special interest will be how different architectures and spaces of installation affect our reception and understanding of art. Video and moving image installation will be a special emphasis where possible. Course work will include presentations and weekly contributions to a public blog. Possible field trips could include the Musée d'art moderne de la ville de Paris, la Cinémaèque Française, Fondation Cartier pour l'art contemporain, Galerie Marion Goodman, Les Frigos, and the Paris Art Fair at the Grand Palais.

ARTV 20017. Art and the Archive in Greater Latin America. 100 Units.

How and why do artists engage records of the past in their work? What are the politics of both creating archives and culling from them to visually render or represent the past? Focusing on artists, art-making, and archives in Greater Latin America (including the United States), this course will consider the process of collecting and creating in artistic production from the perspectives of both theory and practice. Students in the course will work directly with archival materials in Chicago and collaborate on contemporary artistic projects that consider issues of relevance to people and places of the Western Hemisphere.

Instructor(s): Diana Schwartz-Francisco Terms Offered: Spring

Equivalent Course(s): LACS 26384, ARTH 26384, HIST 26319

ARTV 20018. Death Panels: Exploring dying and death through comics. 100 Units.

What do comics add to the discourse on dying and death? What insights do comics provide about the experience of dying, death, caregiving, grieving, and memorialization? Can comics help us better understand our own wishes about the end of life? This is an interactive course designed to introduce students to the field of graphic medicine and explore how comics can be used as a mode of scholarly investigation into issues related to dying, death, and the end of life. The framework for this course intends to balance readings and discussion with creative drawing and comics-making assignments. The work will provoke personal inquiry and self-reflection and promote understanding of a range of topics relating to the end of life, including examining how we die, defining death, euthanasia, rituals around dying and death, and grieving. The readings will primarily be drawn from a wide variety of graphic memoirs and comics, but will be supplemented with materials from a variety of multimedia sources including the biomedical literature, philosophy, cinema, podcasts, and the visual arts. Guest participants in the course may include a funeral director, chaplain, hospice and palliative care specialists, cartoonists, and authors. The course will be taught by a nurse cartoonist and a physician, both of whom are active in the graphic medicine community and scholars of the health humanities.

Instructor(s): Brian Callendar Terms Offered: Spring

Equivalent Course(s): KNOW 36230, HIPS 26230, KNOW 26230

ARTV 20019. Topics in Painting. 100 Units.

Discussion based seminar on issues in contemporary and historical painting. Seminar format open to DoVA majors and minors, DoVA MFAs, and MA students in MAPH. This class can be counted as a studio class toward the DoVA major or minor with consent of instructor.

Instructor(s): D. Schutter Terms Offered: Autumn

Equivalent Course(s): ARTV 30019

ARTV 20206. Second Nature: New Models for the Chicago Park District. 100 Units.

The Chicago Park District seems to preserve 'first nature' within the metropolitan field. But the motive for establishing this sovereign territory was hardly natural. Today, cultural change raises questions about the significance and operation of this immense network of civic spaces. What opportunities emerge as we rethink them? While this design studio focuses on the development of new model parks for Chicago, it can support students coming from a broad range of disciplines. Texts, seminar discussions, and field trips will complement and nourish the development of architectural proposals.

Instructor(s): A. Schachman Terms Offered: Spring

Equivalent Course(s): ENST 24196, GEOG 24196, ARTH 24196, ARCH 24196

ARTV 20210. Imagining Chicago's Common Buildings. 100 Units.

This course is an architectural studio based in the common residential buildings of Chicago and the city's built environment. While design projects and architectural skills will be the focus of the course, it will also incorporate readings, a small amount of writing, some social and geographical history, and several explorations around Chicago. The studio will: (1) give students interested in pursuing architecture or the study of cities experience with a studio course and some skills related to architectural thinking, (2) acquaint students intimately with Chicago's common residential buildings and built fabric, and (3) situate all this within a context of social thought about residential architecture, common buildings, housing, and the city. This course is part of the College Course Cluster program: Urban Design.

Instructor(s): L. Joyner Terms Offered: Autumn

Note(s): Consent is required to enroll in this course. Interested students should email the instructor (Luke Joyner, lukejoy@uchicago.edu) to briefly explain their interest and any previous experience with the course topics. Students must attend first class to confirm enrollment.

Equivalent Course(s): ARTH 24190, ENST 24190, GEOG 24190, AMER 24190, ARCH 24190

ARTV 20215. Adaptation: Text and Image. 100 Units.

A course concerned with the marriage of image and text that explores films, illuminated manuscripts, comic books/graphic novels, children's picture books and present day (perhaps local) theater productions that deal at their core with the balance and dance between story and picture. Examples of work studied would be Chris Marker's *La jetée*, Alice in Wonderland and its many adaptations, the comics of Winsor McCay, Seth, Chris Ware, etc, and William Blake's engraved poems and images. The theatrical collaborations between the instructors themselves ('The Cabinet' and 'Cape and Squiggle,' both produced by Chicago's Redmoon Theatre) will be discussed as well.

Instructor(s): M. Maher, F. Maugeri Terms Offered: Spring

Equivalent Course(s): MAAD 14865, TAPS 28465

ARTV 20216. Spectacle in Miniature. 100 Units.

This course explores how the grand theatrical event can be 'miniaturized'. Students will investigate forms of spectacle and contemporary puppetry, toy theater, performance installation, and designed environments, along with artists who work in intimate and miniature scale. Students will create works experimenting with how large dramatic stories can be told with

detailed and intimate sets, puppets, transforming objects, mechanical contraptions, and text. Sources for narrative will include but not be limited to dream and myth.

Instructor(s): F. Maugeri Terms Offered: Winter

Equivalent Course(s): TAPS 27080

ARTV 20300. Introduction to Film Analysis. 100 Units.

This course introduces basic concepts of film analysis, which are discussed through examples from different national cinemas, genres, and directorial oeuvres. Along with questions of film technique and style, we consider the notion of the cinema as an institution that comprises an industrial system of production, social and aesthetic norms and codes, and particular modes of reception. Films discussed include works by Capra, Dash, Deren, Keaton, Hitchcock, Kubrick, Riggs and Sirk.

Instructor(s): Staff Terms Offered: Autumn Spring Winter

Note(s): Required of students taking a major or minor in Cinema and Media Studies.

Equivalent Course(s): ENGL 10800, CMST 10100

ARTV 20540. Fact and Fiction. 100 Units.

Since Grierson's definition of the documentary as 'creative treatment of actuality,' critics have been struggling to establish distinctions between documentary and fiction. Furthermore, the critical discourse has been constantly challenged by new artistic meditations of reality and its representation, and works blurring the border between the logic of facts and the logic of fiction. Additionally, this dualism is complicated by the difficult question of truth telling. Cinema has a long and winding history of non-fiction: from staged or dramatized actualities at its beginning, via docudrama, fake documentaries and mockumentary, to trends in recent documentaries that incorporate reenactment and animation. Since the mid-1990s the 'documentary turn in contemporary art' has seen more and more artists experimenting with documentary modes through which they are questioning the mediations by which facts/documents acquire their facticity. The aim of this seminar will be to examine films and works in contemporary art that address these difficult questions of fact and fiction. Readings will include work from film and art criticism and theory, as well as critical literature addressing questions of fact and fiction in historiography, narratology, and philosophy. Films may include works by Edison, Robert Flaherty, Ari Folman, Abbas Kiarostami, Chris Marker, George Méliès, Avi Mograbi, Rithy Panh, Peter Watkins. Works by contemporary artists may include Kutlug Ataman, The Atlas Group/

Equivalent Course(s): CMST 25540, ARTH 35540, ARTH 25540, CMST 45540, ARTV 45540, MAPH 45540

ARTV 20663. Urban Studies: Placemaking. 100 Units.

This course considers the values that drive neighborhood transformation, how policy is shaped and implemented, and the role that arts and culture can play in mindful city-building. Classroom hours will be spent with Theaster Gates, professor, Department of Visual Art, in addition to other UChicago faculty, discussing key principles in guiding city redevelopment in mindful and equitable ways. Students will gain field experience working with Place Lab, Gates's multidisciplinary team that documents and demonstrates urban ethical redevelopment strategies initiated through arts and culture. Working across a variety of projects, students will be exposed to programming, data collection, development, community building, strategy, and documentation. Weekly site visits will give students the opportunity to see analogous projects and meet practitioners throughout Chicago.

Equivalent Course(s): PBPL 25663

ARTV 20805. Framing, Re-framing, and Un-framing Cinema. 100 Units.

By cinema, we mean the art of the moving image, which is not limited to the material support of a flexible band called film. This art reaches back to early devices to trick the eye into seeing motion and looks forward to new media and new modes of presentation. With the technological possibility of breaking images into tiny pixels and reassembling them and of viewing them in new way that this computerized image allows, we now face the most radical transformation of the moving image since the very beginnings of cinema. A collaboration between the OpenEndedGroup (Marc Downie and Paul Kaiser), artists who have created new modes of the moving image for more than decade, and film scholar Tom Gunning, this course will use this moment of new technologies to explore and expand the moving image before it becomes too rigidly determined by the powerful industrial forces now propelling it forward. This course will be intensely experimental as we see how we might use new computer algorithms to take apart and re-experience classic films of the past. By using new tools, developed for and during this class, students will make new experiences inside virtual reality environments for watching, analyzing, and recombining films and that are unlike any other. These tools will enable students, regardless of previous programming experience, to participate in this crucial technological and cultural juncture.

Equivalent Course(s): CMST 37805, CMST 27805, ARTV 30805

ARTV 21002. Life Drawing. 100 Units.

This course is designed to introduce the student to observational drawing of the human figure. The subject of the course will be the live nude model. The object of the course is to see through proportions and the anatomy of the human body and draw out a likeness, rendering present the body as seen in its materiality, its structure, its finitude. Lectures on anatomy and the history of drawing will be ongoing and stitched into this studio course, as will the critique of drawings generated in class.

Instructor(s): D. Schutter Terms Offered: Winter

Prerequisite(s): ARTV 10100, 10200 or 10300

Equivalent Course(s): ARTV 31002

ARTV 21007. Drawing the Anthropocene. 100 Units.

The anthropocene is linked to the concept of acceleration through human intervention that alters our systems on a planetary scale. Acceleration accurately connotes the pace of radical behavioral and political shifts we are experiencing from Covid-19 and our current political uprising. Looking at these instances of quick change allows us to examine anthropogenic shifts as

right here in our everyday lives. This course takes walking as a measure of inquiry into anthropogenic change as intimate, experienced through the body and space, not way-out-there, but all around us, and uses art as a measure that releases us from the strictly empirical to include the somatic, emotional, philosophical, lyrical, and the humorous. Drawing is a haptic practice, through the hand, that can represent people and things, real and imagined, as well as a method to create a plan or sketch. Taking walking as a point of departure, and using the GPS in our phones, we will begin to draw lines of connection between what is beneath our feet, around us, and above, to make connections between the abstraction of the anthropocene and our lived lives. While drawing is a component of this course, drawing is also engaged as a metaphor, to draw up, to draw out, to illustrate, demonstrate and give form. This class with work towards three artworks/propositions loosely categorized as, the biological, the political and the geological.

Instructor(s): A. Ginsburg Terms Offered: Autumn

Prerequisite(s): ARTV 10100, 10200 or 10300

Equivalent Course(s): ARTV 31007

ARTV 21008. Outside: An Archival Impulse. 100 Units.

In 'An Archival Impulse,' Hal Foster describes the archive as 'found yet constructed, factual yet fictive, public yet private.' Foster's set of tangled binaries provides a foundation on which to build a formal and critical inquiry into the impulses of archiving and the production of archive-driven artwork. What is preserved and what is not is inherently political. Taking to the streets, we will look closely at the flora and fauna and what we term physical and cultural as sites of collection to then sort, instrumentalizing the impulse to preserve as a tool to frame what we have termed outside. Classes will be divided between mapped walks, site visits, dérivés (drifts) and online discussions of readings, artist presentations, and technical instruction that supports projects. All projects will be presented digitally or out of doors. During this three week intensive course, we will produce three artworks/propositions. Taking up an archival strategy, we will produce a project. Thereafter, the subsequent projects will pivot, take a new form and new content based on an adaptation from the ideas in the readings. The suite of three works will not necessarily form a whole, rather a prism from which to unpack and explore the world around us.

Instructor(s): A. Ginsburg Terms Offered: Autumn

Prerequisite(s): ARTV 10100, 10200 or 10300

Equivalent Course(s): ARTV 31008

ARTV 21501. Introduction to Printmaking. 100 Units.

An introduction to basic printmaking techniques, including monoprint, intaglio (drypoint), planographic, and relief printing. Printmaking will be explored as a 'bridge medium': a conduit between drawing, painting, and sculpture. Emphasis will be placed upon investigating visual structures through 'calculated spontaneity' and 'controlled accidents,' as well as on the serial potential inherent in printmaking, as opposed to the strictly technical aspects of this medium.

Instructor(s): K. Desjardins Terms Offered: Spring

Prerequisite(s): ARTV 10100, 10200, or 10300

Equivalent Course(s): ARTV 31501

ARTV 21502. Advanced Printmaking. 100 Units.

ARTV 21501 is required as a prerequisite. Course description coming soon.

Instructor(s): K. Desjardins Terms Offered: Spring

Prerequisite(s): ARTV 10100, 10200 or 10300 and ARTV 21501

Equivalent Course(s): ARTV 31502

ARTV 21702. Drawing Concepts. 100 Units.

This course will focus on expanding the definition and practice of drawing. Studio work will engage traditional, spatial and process-oriented mark making in order to materialize thematically driven projects. Emphasis will be placed equally on the formal concerns of subject, material, and technique as well as the ability to effectively convey one's concept. Projects will include weekly and longer-term assignments, in addition to critique. Participation in field trips is required.

Instructor(s): B. Collins Terms Offered: Winter

Prerequisite(s): ARTV 10100, 10200 or 10300

Equivalent Course(s): ARTV 31702

ARTV 21800. Studio Practice. 100 Units.

This course considers a variety of methods, processes and media to explore conceptual issues pertinent to a contemporary art practice. Through research, material investigation, experimentation and revision, students will develop their own approach to a daily self-directed practice. Projects will include weekly and longer-term assignments, individual and collaborative work. We will also look at the practices of established artists for possible models. Participation in several field trips is required.

Instructor(s): B. Collins Terms Offered: Autumn

Prerequisite(s): ARTV 10100, 10200 or 10300

Equivalent Course(s): ARTV 31800

ARTV 21902. Color: Theory and Experience. 100 Units.

This studio course proposes a hands-on investigation into the way we experience color in the world and in our own work. We will study a range of approaches to color, including: 'haptic' color perception, Symbolic/Spiritual color theories, as well as more widely known theories of 'optical color.' In the studio, you will be introduced to a unique series of exercises that elucidate the expressive, symbolic, scientific, and cultural aspects of color perception using both acrylic pigment and light. Lectures, field trips, and guest speakers will broaden our discussion of color. A final project in a medium of your choice will serve as a culminating experience for the course.

Instructor(s): K. Desjardins Terms Offered: Winter

Prerequisite(s): ARTV 10100, 10200 or 10300

Equivalent Course(s): ARTV 31902

ARTV 22000-22002. Introduction to Painting I-II.

This studio course introduces students to the fundamental elements of painting (its language and methodologies) as they learn how to initiate and develop an individualized investigation into subject matter and meaning. This course emphasizes group critiques and discussion. Courses taught concurrently.

ARTV 22000. Introduction to Painting I. 100 Units.

This studio course introduces students to the fundamental elements of painting (its language and methodologies) as they learn how to initiate and develop an individualized investigation into subject matter and meaning. This course emphasizes group critiques and discussion.

Terms Offered: Winter

Equivalent Course(s): ARTV 32200

ARTV 22002. Introduction to Painting II. 100 Units.

No description available

Terms Offered: Winter

Equivalent Course(s): ARTV 32202

ARTV 22200. Introduction to Sculpture. 100 Units.

This course introduces the technical fundamentals of sculptural practice. Using basic introductions to welding, basic woodworking and metal fabrication students will undertake assignments designed to deploy these new skills conceptually in their projects. Lectures and reading introduce the technical focus of the class in various historical, social and economic contexts. Discussions and gallery visits help engender an understanding of sculpture within a larger societal and historical context.

Instructor(s): C. Bradley Terms Offered: Winter

Prerequisite(s): ARTV 10100, 10200, or 10300.

Equivalent Course(s): ARTV 32000

ARTV 22304. Ceramics: Image and Form. 100 Units.

Ceramics and painting have a long connected history. In *Natural History* (77-79 AD), Pliny the Elder attempts to trace the history of portraiture. Butades the potter, brokenhearted at the departure of his soon-to-be-married daughter, catches a glimpse of her profile on the wall from the reflection cast by a candle and traces the outline with some clay. In the retelling of this narrative, this act of doubling is attributed, variously, to the origin of portrait painting and to the origin of the portrait modeling, depending on the focus of the outline as an act done by a brush or the plastic actions of filling in the trace. While historically apocryphal, this account captures the historical dance between ceramics as a surface for painting and material to form shape. In this course, you will bring surface and form together to create a space and site of content. While using the inherently plastic nature of clay to create shape, the workshop format of this course will instrumentalize the surface to test and play with color and line. Thinking of ceramics as a flexible surface for archival paint, also known as glaze, this studio course will test glazes, oxides, decals, and multi-fired surfaces. Assignments will be geared towards experimental results that allow students to further their own interests and practices.

Instructor(s): A. Ginsburg Terms Offered: Spring

Prerequisite(s): ARTV 10100, 10200, or 10300

Equivalent Course(s): ARTV 32304

ARTV 22305. Performing Tableware. 100 Units.

Performing Tableware takes the actions and objects of the table as a site of research. Through demonstrations, readings and production, tableware will be considered in the context of contemporary practices in design, sculpture, installation and performance. Materially rooted in ceramics, this course gives students the opportunity to highlight, interrupt or subvert the patterns associated with sitting around table. Developing projects through a process of questioning behavior and the intimate functions of objects of the table, students will extend and challenge their material knowledge and engage in a range of ceramic processes including using raw clay, slip casting, hand building, slab building and multi-fire glaze processes.

Instructor(s): A. Ginsburg Terms Offered: Winter

Prerequisite(s): ARTV 10100, 10200, or 10300

Equivalent Course(s): ARTV 32305

ARTV 22312. Material as Performance. 100 Units.

This course delves into the use and practices around a broad range of materials and focuses on the intersection between culture, habit and performance. By examining the histories of specific materials in our present moment, during a time when we know that materials and resources are finite, we will think through our patterns and speculate on interactions with materials in the future. Materials offer us the opportunity to examine history through the lens of performance, questioning who and what is included in these histories, all the while interrogating the inherent humanic lens. This studio course will be iterative, working towards large scale final projects.

Instructor(s): A. Ginsburg Terms Offered: Winter

Prerequisite(s): ARTV 10100, 10200 or 10300

Equivalent Course(s): ARTV 32312

ARTV 22317. Intuitive Form. 100 Units.

Taking the Rorschach Test as a point of departure, students will learn how to associate based on the 'intuitive forms' they create serving as the 'ambiguous stimulus'. Learning perspective is to produce quickly and intuitively in two 'immediate'

materials: unfired clay and drawing. The making will take place in class as exercises, and most materials will be recycled to underline the focus on process instead of product. There will be short lectures throughout the quarter to discuss methods of association and interpretation, and to give an introduction to the Rorschach Test as a method of Psychoanalytic 'Free Association'. There will be written assignments and I am planning to invite a guest visitor from the Psychoanalytic Institute of Chicago.

Instructor(s): J. Phillips Terms Offered: Spring

Prerequisite(s): ARTV 10100, 10200 or 10300

Equivalent Course(s): ARTV 32317

ARTV 22500. Computational Imaging. 100 Units.

This studio course introduces fundamental tools and concepts used in the production of computer-mediated artwork.

Instruction includes a survey of standard digital imaging software and hardware (i.e., Photoshop, scanners, storage, printing, etc.), as well as exposure to more sophisticated methods. We also view and discuss the historical precedents and current practice of media art. Using input and output hardware, students complete conceptually driven projects emphasizing personal direction while gaining core digital knowledge.

Instructor(s): J. Salavon Terms Offered: Winter

Prerequisite(s): ARTV 10100, 10200, or 10300

Equivalent Course(s): MAAD 22500, CMST 28800, ARTV 32500

ARTV 22501. Art & Machine Intelligence. 100 Units.

Artists have long used autonomous processes to aid in the creation of their work. From 18th century parlor games to contemporary visual culture, creators have applied stochastic methods, automation, and simulation to generate music, text, and imagery. In the last five years, as machine learning has matured into broadly applicable artificial intelligence, artists have turned towards neural networks as a new frontier for creative practice. This studio course will explore the history and uses of autonomous creative tools and focus, more specifically, on leading edge artistic applications of AI. Students will receive exposure to a breadth of methods in this domain and produce multiple projects engaged with these topics. Software development experience is not required, though it may be useful.

Instructor(s): J. Salavon Terms Offered: Spring

Prerequisite(s): ARTV 10100, 10200 or 10300

Equivalent Course(s): ARTV 32501, MAAD 25201

ARTV 23801. Video. 100 Units.

This is a production course geared towards short experimental works and video within a studio art context.

Instructor(s): S. Wolniak Terms Offered: Autumn

Prerequisite(s): ARTV 10100, 10200 or 10300

Equivalent Course(s): ARTV 33801, MAAD 23801

ARTV 23804. Experimental Animation: Exploring Manual Techniques. 100 Units.

Individually directed video shorts will be produced in this intensive studio course. Experimental and improvised approaches to animation and motion picture art will focus on analog and material techniques, with basic digital post-production also being introduced. Early and experimental cinema, puppetry and contemporary low-tech animation will be presented as formal and technical examples.

Instructor(s): S. Wolniak Terms Offered: Spring

Prerequisite(s): ARTV 10100, 10200, or 10300

Equivalent Course(s): ARTV 33804, MAAD 23804

ARTV 23813. Experimental Animation: Handmade Motion. 100 Units.

Experimental Animation: Handmade Motion will introduce fundamental concepts and techniques of animation through a series of exercises and assignments which touch on the history, theory and practice of this dynamic medium. Utilizing a responsive, interactive web-based platform to facilitate lectures, screenings, technical demonstrations, collaborative production processes and direct feedback, students will develop independent and group animations. This online course will provide a unique opportunity to collaborate remotely on MAPs (multi animator projects), produce short individual works, and participate in critical discussions about their creative work and the work of others. A spectrum of methods from flip-books to computer-generated effects will be explored in this multifaceted online course. Techniques such as hand-drawn and collage-based animation, stop-motion, claymation and puppetry will be introduced, providing extensive opportunities for experimentation and the generation of unique footage. The class will culminate with a streaming animation festival to showcase student projects.

Terms Offered: Summer

ARTV 23900. Drawing. 100 Units.

This intensive multilevel studio course is dedicated to investigations of genre, technique, and format in relation to subject matter and individual expression. Guided and self-directed experiments are used to develop visual work within conceptual and thematic frameworks. Art historical examples and contemporary strategies in two-dimensional art are presented as models. Students are expected to produce a body of work consisting of studies, sketches, and finished projects in a range of scales and materials. Classes are dedicated to studio work, lectures, critiques, and field trips.

Instructor(s): B. Collins Terms Offered: Autumn

Prerequisite(s): ARTV 10100, 10200, or 10300

Equivalent Course(s): ARTV 33900

ARTV 23920. Drawing II: Exploded Drawing. 100 Units.

This intensive studio course will explore wide-ranging strategies in drawing and two-dimensional composition. Interrogating conventions of representation and pictorial space, students will develop new formal and conceptual possibilities that relate to the complexities and changing perspectives of contemporary life. Drawing will be addressed as an expansive, open-ended outlet for thought and action. Emphasis will be on innovation within the fundamental structures of the medium, including its history, materials, and techniques.

Instructor(s): S. Wolniak Terms Offered: Winter

Prerequisite(s): ARTV 10100, 10200, or 10300

Equivalent Course(s): ARTV 33920

ARTV 23930. Documentary Production I. 100 Units.

Documentary Video Production focuses on the making of independent documentary video. Examples of various modes of documentary production will be screened and discussed. Issues embedded in the genre, such as the ethics, the politics of representation, and the shifting lines between 'the real' and 'fiction' will be explored. Story development, pre-production strategies, and production techniques will be our focus, in particular-research, relationships, the camera, interviews and sound recording, shooting in available light, working in crews, and post-production editing. Students will work in crews and be expected to purchase a portable hard drive. A five-minute string-out/rough-cut will be screened at the end of the quarter. Students are strongly encouraged to take Doc Production 2 to complete their work.

Instructor(s): J. Hoffman Terms Offered: Autumn

Note(s): Prior or concurrent enrollment in CMST 10100 recommended for undergraduate students.

Equivalent Course(s): HMRT 25106, CMST 33930, HMRT 35106, MAAD 23930, CMST 23930, ARTV 33930

ARTV 23931. Documentary Production II. 100 Units.

Documentary Video Production II focuses on the shaping and crafting of a non-Fiction video. Enrollment will be limited to those students who have taken Documentary Production I. The class will discuss issues of ethics, power, and representation in this most philosophical and problematic of genres. Students will be expected to write a treatment outline detailing their project and learn about granting agencies and budgeting. Production techniques will concentrate on the language of handheld camera versus tripod, interview methodologies, microphone placement including working with wireless systems and mixers, and lighting for the interview. Post-production will cover editing techniques including color correction and audio sweetening, how to prepare for exhibition, and distribution strategies.

Instructor(s): J. Hoffman Terms Offered: Winter

Prerequisite(s): CMST 23930, HMRT 25106, or ARTV 23930

Equivalent Course(s): HMRT 25107, MAAD 23931, ARTV 33931, CMST 33931, HMRT 35107, CMST 23931

ARTV 24000. Introduction to Black and White Film Photography. 100 Units.

Photography is a familiar medium due to its ubiquitous presence in our visual world, including popular culture and personal usage. In this course, students learn technical procedures and basic skills related to the 35mm camera, black and white film, and print development. They also begin to establish criteria for artistic expression. We investigate photography in relation to its historical and social context in order to more consciously engage the photograph's communicative and expressive possibilities. Course work culminates in a portfolio of works exemplary of the student's understanding of the medium. Field trips required.

Instructor(s): E. Hogeman Terms Offered: Autumn Spring

Prerequisite(s): ARTV 10100, 10200 or 10300.

Note(s): Students need their own 35mm film camera. Some film and paper are provided, but students need to purchase additional supplies. More details will be provided on the first day of class and on Canvas.

Equivalent Course(s): ARTV 34000

ARTV 24004. Introduction to Color Photography. 100 Units.

Photography is a familiar medium due to its ubiquitous presence in our visual world, including popular culture and personal usage. We all have photographic habits and ample experience taking and consuming images. In this course, we will use photography as a means toward developing an aesthetic and theoretical language for creating art. Through readings, slideshows, and discussions, we will investigate color photography in relation to its historical and social context in order to more consciously engage the contemporary photograph's communicative and expressive possibilities. Students will be given constraint-driven assignments to help them unpack their habits and develop an understanding of the principles of photography and color editing workflows. Students are recommended to have their own DSLR camera with manual settings, but all camera formats are welcome.

Instructor(s): E. Hogeman Terms Offered: Autumn

Prerequisite(s): ARTV 10100, 10200 or 10300

Equivalent Course(s): ARTV 34004

ARTV 24112. Advanced Problems in Sculpture. 100 Units.

This course is open to all manifestations of sculptural practice broadly defined, including performance and film/video. A particular focus of the course will be considering issues of presence/the index, material histories, economic determination, and societal legibility. Readings on sculptural history from the 19th through the 21st century will be used to illuminate contemporary concerns and issues.

Instructor(s): G. Oppenheimer Terms Offered: Winter

Prerequisite(s): ARTV 10100, 10200 or 10300 and ARTV 22200 or consent of instructor.

Equivalent Course(s): ARTV 34112

ARTV 24122. Diasporic Practices in Contemporary Art. 100 Units.

The class will examine various phenomena of 'Diasporic Practices in Contemporary Art', such as fragmented histories, the question of origin(ality), the limits of translation, social belonging and 'the chosen family', and (over-)representation of origin. In class we will discuss readings by (a.o.) Grada Kilomba, Adrian Piper, Édouard Glissant, Langston Hughes, Trinh T. Minh-ha, and Hito Steyerl. Students will be asked to present on contemporary artists highlighting their diasporic strategies, while also producing creative works through assignments that employ diasporic strategies and that will be discussed in class.

Instructor(s): J. Phillips Terms Offered: Autumn

Prerequisite(s): ARTV 10100, 10200 or 10300

Note(s): Please email Julia Phillips juliaphillips@uchicago.edu with a brief description of how your work relates to a diasporic experience and/or your personal investment in the subject (150-300 words).

Equivalent Course(s): ARTH 24122, GNSE 38122, ARTV 34122, CRES 24122, GNSE 28122

ARTV 24201. Collage. 100 Units.

This studio course explores collage as a means for developing content and examining complex cultural and material relationships. Projects and assigned texts outline the history of collage as a dynamic art form with a strong political dimension, as well as critically addressing how it is being used today.

Instructor(s): S. Wolniak Terms Offered: Autumn

Prerequisite(s): ARTV 10100, 10200, or 10300

Equivalent Course(s): ARTV 34201

ARTV 24265. Best in Show: Art History as Exhibition History. 100 Units.

In this course, I propose a reading of post-war art history as seen, in part, through the periodical prism of one of the field's most important, signature events - the five-yearly Documenta exhibition in Kassel, Germany. Starting with the founding 1955 edition organized by Arnold Bode and ending with the 2017 edition which I worked on as a curator, we will discuss one chapter of Documenta's history per class alongside related events like the Venice and Sao Paulo biennials and Skulptur Projekte Münster, touching upon such key issues of contemporary art practice and theory as the dynamics of globalization, identity politics, the vagaries of market influence, history and memory and the pressures of the social realm on aesthetic experience. As a history of exhibition making and curatorial practice, the course will also draw on recent developments in museum culture and the everyday politics of the art world's various institutions, and will be recounted in part from the perspective of exhibition-making experience. The class will consist of hands-on curatorial exercises, as well as writing and reading assignments that mirror and follow the 64-year arc of our historical periodization.

Instructor(s): D. Roelstraete Terms Offered: Spring

Note(s): Students must attend first section to confirm enrollment.

Equivalent Course(s): ARTV 34265, ARTH 36791, ARTH 26791

ARTV 24301. Writing for Performance. 100 Units.

This course is an exploration of select texts for performance written by performance artists primarily but not entirely operating within the context of art. Via historical context and literary technique, students read, discuss, and analyze texts by various authors spanning the history of performance art: Hugo Ball, John Cage, Richard Foreman, Carolee Schneeman, Joseph Beuys, Karen Finley, Nature Theater of Oklahoma, John Leguizamo, and create and perform their own writing. Field trips and attendance at first class are required.

Instructor(s): Pope.L Terms Offered: Autumn

Prerequisite(s): ARTV 10100, 10200, or 10300

Equivalent Course(s): TAPS 28414, ARTV 34301

ARTV 24403. Advanced Photography. 100 Units.

The goal of this course is to develop students' investigations and explorations in photography, building on beginning level experience and basic facility with this medium. Students pursue a line of artistic inquiry by participating in a process that involves experimentation, reading, gallery visits, critiques, and discussions, but mostly by producing images. Primary emphasis is placed upon the visual articulation of the ideas of students through their work, as well as the verbal expression of their ideas in class discussions, critiques, and artist's statements. As a vital component of articulating ideas and inquiry, students will refine their skills, e.g., black and white or color printing, medium or large format camera usage, or experimenting with light-sensitive materials.

Instructor(s): E. Hogeman Terms Offered: Spring

Prerequisite(s): ARTV 10100, 10200, or 10300; and 24000.

Note(s): Camera and light meter required.

Equivalent Course(s): ARTV 34403

ARTV 24550. Shopcraft: Methods and Materials. 100 Units.

Designed as a complementary course to the DOVA sculpture sequence, Shopcraft explores the tools and techniques available to students in the wood shop. Topics covered include shop safety; the properties of woods; the planning and material selection process for sculpture, furniture, and other woodworking applications; the care and use of hand tools; and interpreting and creating scale drawings and conceptual plans. A series of small projects designed to challenge and expand students' design, drafting, and woodworking skills are assigned. In addition, students are invited to incorporate projects from sculpture classes or their individual studio practice into the course.

Instructor(s): D. Wolf Terms Offered: Autumn

Prerequisite(s): ARTV 10100, 10200, or 10300

Equivalent Course(s): ARTV 34550

ARTV 24554. Costume Design and Technology for the Stage. 100 Units.

In this course, students will learn the basics of designing costumes for theatrical productions, encompassing the skills of theatrical rendering and sketching, as well as the implementation of the design and basic sewing techniques. Students will learn to adopt a vocabulary using the elements and principles of design, understand and experience the process intrinsic to producing costumes for the theater, analyze the production needs related to costumes, and prepare a finalized costume design for a theatrical production.

Instructor(s): N. Rohrer Terms Offered: Winter

Note(s): Attendance at the first class meeting is mandatory.

Equivalent Course(s): TAPS 27550

ARTV 24703. Mixed-Media Drawing: From Object to Concept. 100 Units.

An object of your choice will serve as a departure point for this process-oriented studio course that takes you through a sequenced exploration of a variety of mixed media drawing materials, methods, and approaches: from observation to abstraction to the purely conceptual. Readings, critical writing, and discussion are intended to reinforce fluidity between theory, your ideas, and your art practice. This course is augmented by an image bank and gallery visits. Prerequisite(s):

ARTV 10100, 10200, or 10300 Note(s): Open to all levels of experience.

Instructor(s): K. Desjardins Terms Offered: Autumn

Prerequisite(s): ARTV 10100, 10200, or 10300

Note(s): Open to all levels of experience.

Equivalent Course(s): ARTV 34703

ARTV 24707. Landscape Record. 100 Units.

Course description coming soon.

Instructor(s): S. Wolniak Terms Offered: Winter

Prerequisite(s): ARTV 10100, 10200, or 10300

Equivalent Course(s): ARTV 34707

ARTV 25402. Metamedia. 100 Units.

Computers dynamically simulate the details of any other medium. This course looks past traditional media to engage with the computer as a 'metamedium'; an environment with infinite degrees of representation. Relationships between form and content will be explored and exploited through deconstructing, augmenting, and experimenting with the data that makes up digital media. Studio time will be spent digitally improvising with expanded approaches to creating new media art. Topics surveyed will include: algorithms as art, metadata as content, and our digital shadows. In addition to making new media art, we will consider our relationship to contemporary media and the politics of digital agency in our connected world.

Instructor(s): J. Satrom

Equivalent Course(s): MAAD 21500

ARTV 25403. ARTGAMES. 100 Units.

This studio course playfully explores the methods, tools, and poetics of video games as art. Develop interactive new media art, machinima, and experimental 3D environments by using (and misusing) contemporary game engines. Projects will include hypertext adventures, walking simulators, abstract platformers, and metagames. By hacking, modding, and recontextualizing existing game assets, we will challenge the rules, mechanics, and interfaces of video games.

Instructor(s): J. Satrom Terms Offered: Winter

Equivalent Course(s): MAAD 20500

ARTV 26206. Revised Ecologies for the Black Image. 100 Units.

A team-taught course with artist, Theaster Gates and art historian, Romi Crawford, 'Valuations, Economies, and Revised Ecologies for the Black Image,' is an investigation and inquiry into the challenges around black photographic image production. The course will require students to both examine and produce (on their own and with the faculty) strategies for making and interpreting contemporary art-- based on the urgent economic and affective needs (often obfuscated) of black photographic archives. Organized around practicums of research and making, students will be required to conduct interviews with artists and/or produce art works in collaboration with living artists and photographers. The course will allow students to work with faculty on producing outcomes in areas such as intergenerational collaboration, archival based art making, and 'service oriented' art history; or one that pays attention to the affective realm of (often) very basic needs and desires of the black and minoritized artist. With students we will develop a process and method for locating and responding to these needs as an actionable part of art historical research and scholarship.

Instructor(s): R. Crawford, T. Gates Terms Offered: Autumn

Note(s): Students who wish to join Revised Ecologies for the Black Image should send a paragraph describing their interest in the topic to felicial@uchicago.edu. Graduate students and fourth-year undergraduates are especially encouraged to apply.

Equivalent Course(s): PPHA 36206, ARTV 36206, CRES 26210

ARTV 26210. XCAP: Food for Thought. 100 Units.

If anthropology and contemporary art have one thing in common, it is the aim to de-familiarize taken-for-granted ways of being in the world by means of ethnographic comparison or aesthetic provocation so as to open up new perspectives on the complexities of human social life. Co-taught by an artist and an anthropologist, this course considers what's at stake when contemporary artists build on this longstanding practice to explore the complexities of current societal, political, and cultural contexts.

Instructor(s): Laura Letinsky & Stephan Palmié Terms Offered: Autumn

Note(s): for 3rd and 4th year students only

Equivalent Course(s): ARTV 36210, CMST 36210, ANTH 25315, ANTH 35315, ARTH 29942, CMST 26210, KNOW 29942

ARTV 26219. Art and the Active Instrument. 100 Units.

Course description coming soon.

Instructor(s): G. Oppenheimer Terms Offered: Winter

Prerequisite(s): ARTV 10100, 10200 or 10300

Equivalent Course(s): ARTV 36219

ARTV 27200. Painting. 100 Units.

Presuming fundamental considerations, this studio course emphasizes the purposeful and sustained development of a student's visual investigation through painting, accentuating both invention and clarity of image. Requirements include group critiques and discussion.

Instructor(s): S. Wolniak Terms Offered: Spring

Prerequisite(s): ARTV 10100, 10200, or 10300; and 22000 or 22002

Equivalent Course(s): ARTV 37200

ARTV 27204. Painting Matters: En Plein Air. 100 Units.

Some prior painting experience is required. This studio aims to support the development of a student's personal visual investigation through painting, while also challenging habits of thought and making. We will ask questions about form, content, and context with words and with paint. Participation in group critiques, discussion, and one or two field trips will be required.

Instructor(s): J. Stockholder Terms Offered: Autumn

Prerequisite(s): PQ: ARTV 10100, 10200 or 10300 and some prior experience in painting. Basic supplies for the class will be provided, but students may wish to purchase additional supplies. More information will be provided on the first day of class.

Equivalent Course(s): ARTV 37204

ARTV 27700. Introduction to Puppetry. 100 Units.

Introduction to Puppetry invites students to explore the vast and dynamic world of the history of Puppet Theater and expertly trains students in multiple forms of the medium. From Bun Ra Ku to hand puppetry, Mask Performance to Shadow Puppetry, Toy Theater to banners and costasorias, students will be exposed to the form through real examples of sophisticated objects and expert direction. Students will be immersed in the history, literature, and philosophy of the ritual and performance of the puppet, and will be provided the opportunity to build their own draft of a short production.

Instructor(s): F. Mauerer Terms Offered: Winter

Note(s): Attendance at first class meeting is mandatory.

Equivalent Course(s): TAPS 27700

ARTV 27920. Virtual Reality Production. 100 Units.

Focusing on experimental moving-image approaches at a crucial moment in the emerging medium of virtual reality, this class will explore and interrogate each stage of production for VR. By hacking their way around the barriers and conventions of current software and hardware to create new optical experiences, students will design, construct and deploy new ways of capturing the world with cameras and develop new strategies and interactive logics for placing images into virtual spaces. Underpinning these explorations will be a careful discussion, dissection and reconstruction of techniques found in the emerging VR 'canon' that spans new modes of journalism and documentary, computer games, and narrative 'VR cinema.' Film production and computer programming experience is welcome but not a prerequisite for the course. Students will be expected to complete short 'sketches' of approaches in VR towards a final short VR experience.

Instructor(s): M. Downie Terms Offered: Spring

Note(s): Film production and computer programming experience is welcome but not a prerequisite for the course. Students will be expected to complete short 'sketches' of approaches in VR towards a final short VR experience.

Equivalent Course(s): CMST 27920, MAAD 24920, CMST 37920, ARTV 37920

ARTV 27921. Augmented Reality Production. 100 Units.

Focusing on experimental moving-image approaches at a crucial moment in the emerging medium of augmented reality, this class will explore and interrogate each stage of production of AR works. Students in this production-based class will examine the techniques and opportunities of this new kind of moving image. During this class we'll study the construction of examples across a gamut from locative media, journalism, and gameplay-based works to museum installations. Students will complete a series of critical essays and sketches towards a final augmented reality project using a custom set of software tools developed in and for the class.

Instructor(s): M. Downie Terms Offered: Winter

Equivalent Course(s): MAAD 22911, CMST 37911, CMST 27911, ARTV 37921

ARTV 27923. Experimental Captures. 100 Units.

This production-based class will explore the possibilities and limits of capturing the world with imaging approaches that go beyond the conventional camera. What new and experimental image-based artworks can be created with technologies such as laser scanning, structured light projection, time of flight cameras, photogrammetry, stereography, motion capture, sensor augmented cameras or light field photography? This hands-on course welcomes students with production experience while being designed to keep established tools and commercial practices off-kilter and constantly in question.

Instructor(s): M. Downie Terms Offered: Autumn

Equivalent Course(s): MAAD 21011, CMST 37011, ARTV 37923, CMST 27011

ARTV 29600. Junior Seminar. 100 Units.

Students in the Junior Seminar engage in two main activities: (1) a series of studio projects challenging the imagination and enlarging formal skills; and (2) an introduction to the contemporary art world through selected readings, lectures, careful analysis of art objects/events, and critical writing. Studio skills are developed while contending with the central task of articulating ideas through a resistant medium. Toward the end of the quarter, students who wish to apply for the Honors Track may submit their applications to the Department. Visits to museums, galleries, and other cultural and commercial sites required, as is attendance at designated events.

Instructor(s): G. Oppenheimer, A. Ginsburg Terms Offered: Spring

Prerequisite(s): For Visual Arts majors only

Note(s): Students who are majoring in visual arts should enroll in this required course in Spring Quarter of their third year.

Students who plan to study abroad in Spring Quarter of their third year should contact the Department of Visual Arts and register for Junior Seminar in their second year. Toward the end of the quarter, students who wish to apply for the Honors Track may submit their applications to the Department of Visual Arts. Visits to museums, galleries, and other cultural and commercial sites are required, as is attendance at designated events.

ARTV 29700. Independent Study in Visual Arts. 100 Units.

Students in this reading course should have already done fundamental course work and be ready to explore a particular area of interest much more closely.

Terms Offered: Autumn Spring Winter

Prerequisite(s): ARTV 10100, 10200, or 10300 and consent of instructor

Note(s): Students are required to submit the College Reading and Research Course Form.

ARTV 29850. Senior Seminar. 100 Units.

This is a critique-based course utilizing group discussion and individual guidance in the service of advancing the art practice of students who are majoring in visual arts. Emphasis is placed on the continued development of student's artistic production that began in the preceding Junior Seminar. Readings and written responses required. In addition to studio work, visits to museums and galleries required.

Instructor(s): K. Desjardins, Pope.L Terms Offered: Autumn

Note(s): Required of students who are majoring in Visual Arts. Students must take this class in the Autumn Quarter of their fourth year, after having completed Junior Seminar.

ARTV 29900. Senior Project. 100 Units.

Required of Visual Arts majors in the Studio Track. This course provides an opportunity for students to engage in a sustained and intense development of their art practice in weekly critiques throughout the Winter Quarter.

Instructor(s): J. Stockholder Terms Offered: Winter

Prerequisite(s): Only students who are in the Studio Track may register for this class.

Minors

The College offers a wide spectrum of minors across a number of subjects and divisions. These range from intensive explorations of a single field to highly interdisciplinary examinations of more broadly defined concepts. Students are not required to complete a minor. Minors are a way of focusing a student's general electives, demonstrating fluency in areas not reflected in a major, complementing a major, or simply allowing students the opportunity to widen the scope of their education in the College. Minors typically consist of five to seven courses. Not every major offers a minor; some minors are unaffiliated with any major. Just as with majors, a minor will be noted on students' transcripts.

Policies and Regulations

Minors are subject to several regulations. If any are not met or followed properly, it could result in the loss of the formal minor.

- Before declaring a minor, a student must meet with the undergraduate program adviser in the relevant subject and fill out a Consent to Complete a Minor Program (http://collegecatalog.uchicago.edu/thecollege/minors/Consent_Minor_Program.pdf) form, which determines the specific courses that will make up the minor. This form should be returned to the student's College adviser. Once the form is completed, the minor may be declared in the student portal (<https://my.uchicago.edu>).
- If the student takes courses for the minor that do not match the courses on the Consent form, either a new form must be submitted to the College adviser or written approval must be sent by the department acknowledging the deviation.
- No course may be counted toward a major and a minor, nor may a course be used toward general education requirements and a minor.
- More than half of the courses in the minor must be completed through University of Chicago course registrations (as opposed to test or examination credit).
- Minors should be declared by third year. A minor can be discontinued at any time.

Academic Regulations and Procedures

Because students are held responsible for this information, they are encouraged to discuss any questions they have with their College advisers. For a general overview, students are urged to review the Policies and Regulations (<http://registrar.uchicago.edu/policies-regulations/>) page published by the University Registrar. The following pages describe some of the College's regulations and procedures in greater detail.

- Academic and Enrollment Statutes
- Course, Grade, and Honors Policies
- Registration
- Academic Advising
- Academic Integrity

Academic and Enrollment Statuses

Academic Probation and Suspension

In each quarter of registration, students must complete, by the end of the quarter, 300 units of course credit with passing grades and with a minimum GPA of 2.0. Incompletes are not considered sufficient for course completion.

A student who fails to meet this minimum requirement will ordinarily be placed on academic probation for the following quarter. Academic probation is a formal sanction but is not permanently notated on the official transcript.

Students on academic probation are expected to complete, by the end of the quarter, 300 units of course credit with passing grades in the next quarter of registration and with a minimum GPA of 2.0. Please note that Incompletes are not sufficient for course completion. Students on academic probation who meet those minimum expectations will be returned to good standing at the end of the quarter. Any student who fails to meet the minimum requirements while on probation will ordinarily be asked to leave the College for a period of time, usually at least one year. Students are not permitted to transfer in course work from another institution taken during the period of suspension.

If any student fails to complete, by the end of a quarter, a minimum of 300 units of course work **and** also fails to attain a GPA minimum of 2.0 in the same quarter, the student may be immediately suspended regardless of whether the preceding quarter was satisfactory.

NOTE: Students on financial aid who fail to meet the completion rate (70 percent of registered courses) and GPA requirements and/or fail to complete their degree within 150% of the program timeframe may jeopardize their financial aid packages.

For the purpose of determining eligibility to participate in varsity sports, all students eligible to register are considered to be in good standing.

Progress Toward the Degree

Ordinarily students are expected to successfully complete 1800 units of course work, or the equivalent, by the end of their second year in the College; and to complete 3000 units of course work, or the equivalent, by the end of their third year in the College.

Students who fail to do so are considered behind rate and will ordinarily be placed on academic probation for the following quarter. Students on academic probation for being behind rate are expected to complete four courses in each subsequent quarter to be relieved from probation.

Any student who fails to meet the minimum rate of completion while on probation, or falls below satisfactory completion rate a second time during the course of their studies, will ordinarily be asked to leave the College for a period of time, usually at least one quarter. During this period of separation, students are expected to complete pre-approved transfer courses or complete courses in the Summer Session so that they may return to satisfactory completion to resume their studies as soon as possible. Students may resume studies once they are at satisfactory completion rate.

Extended Enrollment Status

Students who (1) have satisfied their course requirements for graduation and (2) are within their 12 quarters of enrollment but (3) still have outstanding work to complete, namely BA theses or Incompletes, may request to spend their final quarter of enrollment in 'Extended' status. Students must make the request with their College adviser prior to the end of the first week of the quarter during which the student intends to be on Extended Enrollment Status. Students in Extended Enrollment Status do not register for courses but retain many privileges afforded to students. Students should ask their College adviser about administrative fees associated with this status.

Students in Extended Enrollment Status will be expected to graduate at the end of the Extended quarter. If a student does not graduate at the end of the Extended quarter, the student will be placed in the status of No Further Enrollments Required, if applicable.

No Further Enrollments Required

Students who have either (a) exceeded their 12 quarters of enrollment but still have work to complete or (b) exceeded their one quarter of Extended Enrollment Status will be placed in a status called No Further Enrollments Required. Students on this status will not pay any fees and will retain access to the Library and University email. Students may remain in this status until they have reached the maximum of eight quarters of leave, cumulative or consecutive, after which they will be administratively withdrawn from the College. However, petitions may be granted to extend a leave for up to 12 cumulative quarters for students as a reasonable accommodation for a disability or otherwise as required by law. Students seeking an exception to the eight-quarter maximum must petition the College Dean of Students no later than the end of the eighth quarter of leave.

Reduced Course Load

In order to make satisfactory progress toward the degree, in 12 quarters students must complete the required 4200 units by taking six quarters at a three-course load and six quarters at a four-course load. Accreditation, AP, and IB exams, as well as transfer credits or credits earned during the summer session, may affect these numbers.

In certain limited circumstances, students who need an additional quarter of enrollment in order to complete their primary major may submit a petition to the Dean of Students. Petitions will be evaluated on a case-by-case basis. Ordinarily, petitions for an additional quarter of enrollment will not be considered to complete a secondary major or a minor. Note: summer quarters do not count toward the twelve quarters of enrollment policy. Students ordinarily do not need to request permission for an additional summer quarter of enrollment.

Students who have been provided with a written accommodation by the University's Student Disability Services Office, allowing for enrollment in three courses per quarter for more than six quarters, may also be eligible for additional quarters in which to complete their 4200 units. In such cases students must petition the Dean of Students Office and receive approval in advance (ordinarily during the spring quarter of the student's second year).

Leaves of Absence

Students planning a leave should consult with their College adviser and also arrange for an interview with one of the deans in the Office of the Dean of Students. For full tuition refund, a leave of absence must be arranged either at the end of the quarter prior to the leave or by Friday of first week of the quarter that a student is going to be on leave. For the refund schedule, visit bursar.uchicago.edu (<https://bursar.uchicago.edu>).

In connection with certain leaves (e.g., some medical leaves or leaves taken because of behavioral issues), the dean of students may require, among other things, information from a physician or therapist as a condition for resumption of studies. All conditions are determined on a case-by-case basis.

Ordinarily, students who take a leave of absence after the end of fifth week are not eligible to return for a minimum of one full quarter.

Withdrawing from the College

Students who decide not to return to the College must formally withdraw their registration. To do so, students should contact the Office of the Dean of Students in the College. At the time of withdrawal, students are advised of the conditions under which they may resume their studies in the College. For a complete overview of College policies regarding leaves of absence and withdrawals, visit <https://college.uchicago.edu/advising/leave-absence-withdrawal> (<https://college.uchicago.edu/advising/leave-absence-withdrawal>).

Applying to Graduate with Non-active Enrollment Statuses

Students in Extended Enrollment Status or in the status of No Further Enrollments Required, or withdrawn as described above, can apply to graduate provided they have:

1. met all of their remaining graduation requirements and have cleared all restrictions;
2. informed their College advisers; and
3. submitted a College Degree Application Form by the Friday of the first week of the quarter. The College adviser can provide this form.

Twelfth Grade Certificates

Students who entered the College before graduation from high school and who expect to qualify for a Twelfth Grade Certificate in the Spring Quarter should file an application with the registrar before the first week of Spring Quarter of their first year. In order to be eligible for the certificate, they must have completed during their first academic year a minimum of nine courses with an overall GPA of 1.75 or higher. Certificates are mailed following the end of Spring Quarter. No certificate is awarded without an application.

Course, Grade, and Honors Policies

Grading Scale

The following grades are awarded in undergraduate courses:

Letter Grade	Grade Point Average
A	4.0
A–	3.7
B+	3.3
B	3.0
B–	2.7
C+	2.3
C	2.0
C–	1.7
D+	1.3
D	1.0
F	0.0
P	N/A (See below)
W	N/A (See below)
NGR	N/A (See below)
I	N/A (See below)

The grades A through F are known as **quality grades** and carry a specific weight in calculating official grade point averages (GPA). The mark F indicates unsatisfactory work and does not confer credit. A grade of F may not be subsequently changed, except when entered in error by the instructor or the registrar. Be aware that while a D is considered passing, some programs require a higher grade minimum for any course counting in the major or minor.

These averages are regularly calculated to determine Dean's List, academic probation, and general honors. They may influence awards like Phi Beta Kappa and departmental honors. Note that College students who take a course at the University of Chicago Booth School of Business may receive an A+ grade according to the Chicago Booth grade system, but will receive 4.0 grade points in the College grade system for that Chicago Booth course. For College students, other Chicago Booth grades convert to grade points according to the College scale above.

NOTE: Only grades for University of Chicago courses are calculated into a student's GPA. Grades from courses taken at other institutions do not contribute to the GPA. Grades from off-campus study abroad or domestic programs do not contribute to the GPA *unless the courses are listed on the transcript with University of Chicago course numbers*.

Pass/Fail Grading

Students who wish to receive a passing grade rather than a quality grade have one option open to them: Pass/Fail (P/F). Students considering P/F grading should consult with their College adviser early in the quarter because this option is subject to conditions and restrictions. Whether a course with a grade of P can be counted toward a student's degree depends on how it is to be used in the student's program. All general education courses must be taken for quality grades, and most courses satisfying requirements in the major must be taken for quality grades. However, some majors permit a limited number of P marks. For P/F grading, the student and instructor reach an informal agreement, at the discretion of the instructor and according to departmental policy, before the instructor submits a grade for the course; no action is required by the student's adviser.

The P grade indicates that the student has submitted sufficient evidence to receive a passing grade. As some departments give credit only for a grade of C– or higher, students should establish with the instructor what constitutes passing work. A mark of P may not later be changed to a quality grade, and a quality grade may not be changed to a P. Although the P confers course credit, it is not calculated in the GPA. Students who do not pass a P/F course receive an F, which counts as a zero in the calculation of the GPA. A grade of F may not be subsequently changed, except when entered in error by the instructor or the registrar.

Course Withdrawals

The “W” (Withdrawn) grade means that the student has decided after week 3 of the quarter not to complete the work of the course. Students who wish to exercise this option must request a W from their adviser by the Friday of 10th week or the day before the final project/exam is due, whichever is earlier. When made before the deadline, a request for a withdrawal cannot be denied except in cases of academic dishonesty. A withdrawal may not be granted after completion of the course.

Once a student requests a W, it may not subsequently be changed to any other mark. W grades do not confer grade or impact GPA; however, they will count against the completion rate needed to maintain good academic standing.

Students who register for graduate-level courses are subject to the policies governing graduate grading. Students should discuss the implications of these policies with their advisers before registering for courses numbered 30000 and above. NOTE: Grades earned in graduate-level courses contribute to a student's GPA as indicated earlier in this section.

Incompletes

The mark "I" (Incomplete) is intended for a student who has not completed the requirements of a course before the end of the quarter but who has

1. participated actively in the course,
2. completed the majority of the requirements of the course with work that is of a passing quality, and
3. made satisfactory arrangements with the instructor to complete the remaining work.

The student must submit the request for an Incomplete to the instructor before the end of the course. Approval to complete work late is at the discretion of the instructor and/or according to departmental policy.

The student is also responsible for completing and submitting an official Incomplete Form, which must be obtained from the student's College adviser and turned into the registrar's office by Friday of the first week of the following quarter. After this point, students who are otherwise qualified for an 'I' may petition the Dean of Students in the College for approval to arrange the Incomplete. If the required form has not been submitted by the deadline, a grade of 'W' will be entered for the course.

Incompletes must be finished within a period of time agreed upon between student and instructor. In the absence of a specified due date, the work must be completed within one year. In the interim, an 'I' will appear in place of a grade.

If the course work has not been completed within the specified time period and an extension has not been granted, the student will receive a W unless the instructor indicates a specific grade on the Incomplete Form.

NGR (No Grade)

The mark "NGR" (No Grade) is entered on the student's grade report by the registrar's office when the instructor has failed to submit a final grade for a student. The NGR may be resolved by submission of a final grade or a formal Incomplete Form. If neither has been submitted by Friday of the first week of the following quarter, the NGR will be converted into a W. After this point, students who are otherwise qualified for an Incomplete may petition the Dean of Students in the College for approval to arrange the Incomplete.

When a final grade is submitted to replace an NGR, that grade will be entered on the academic record with an 'I' notation, indicating that the work was completed outside the course's standard timeframe. That 'I' may be removed only if the instructor states that the student's work was completed before the end of the quarter or if the student successfully petitions the Dean of Students in the College.

The intermediary NGR should not be interpreted as an informal Incomplete or as a way to avoid an 'I' on the transcript. Rather, students are strongly urged to protect themselves against misunderstandings and missed deadlines by arranging for an official Incomplete if one proves necessary.

Academic Probation

In each quarter of registration, students must complete, by the end of the quarter, 300 units of course credit with passing grades and with a minimum GPA of 2.0. Incompletes are not considered sufficient for course completion. A student who fails to meet this minimum requirement will ordinarily be placed on academic probation for the following quarter. For details and information about implications, please see the 'Academic Probation and Suspension' section on the Academic and Enrollment Statuses page.

Honors

Dean's List

Each year, approximately 20 percent of degree-seeking students whose grade point averages are the highest for that academic year and who have completed a minimum of nine courses with at least seven quality grades, are placed on the Dean's List for that year. Students are only considered for Dean's List once all of their grades for the academic year have been recorded. A determination is made each year on the basis of grades available in the registrar's office after July 1. For course work that does not contribute to the GPA, see Grading Scale. Transcripts are marked accordingly for all students who qualify for the Dean's List.

Honors by Major

For#honors within a major,#students should refer to that department#program description#for the eligibility requirements.

College Honors

Grade point averages are calculated on a cumulative annual basis. At the end of their second year, students in the top 10 percent of their class will be designated Robert Maynard Hutchins Scholars, based on the grade point average for their first and second years. This award is designed to honor students who have performed exceptionally in their general education courses and introductory courses for their major.

In their third and fourth years, students whose cumulative GPA places them in the top 5 percent of their major compared to a five-year average will be eligible for an award by division. The name of the award is selected by each division.

Latin Honors

In addition to departmental honors, students whose cumulative GPA places them in the top 25 percent of students by major over the past five years will be eligible to receive Latin honors. All students in the top 25 percent will be eligible for recommendation to receive their degrees cum laude. Students whose GPA places them in the top 15 percent will be eligible to be recommended to the College for magna cum laude. Students whose GPA places them in the top 8 percent will be eligible to be recommended to receive their degrees summa cum laude.

For honors beyond cum laude, a College committee will review each student's record to gauge broad engagement with the curriculum by, for example, promoting students who have taken graduate courses, taken multiple majors, attempted courses across divisional boundaries, taken extra courses, and completed minors. For the honor summa cum laude in particular, the committee will consider the breadth and depth of the student's engagement with the curriculum outside of the primary major.

Exceptions to these minima may be granted by the College in response to department petition.

The Harper Awards for Exceptional Performance in a Course

To recognize exceptional achievement in an undergraduate course beyond general education, departments are invited to nominate students for a Harper Award. The Harper Award is designed to decorate the deeply engaged, stellar student, independent of the grade the student receives in the course. Departments may nominate up to one Harper Award from each course with more than 10 students and up to two Harper Awards from each course with more than 70 students. Departments can pool courses with enrollments smaller than 10 students and allow faculty to jointly recommend a Harper Award from that group of courses.

Reading courses, independent research courses, and thesis writing courses, are not eligible for a nomination.

The awards will be announced each year near the conclusion of the Spring Quarter.

Class Attendance

It is the expectation of the College that students will attend all classes for which they have registered. Nevertheless, it is up to the individual department, faculty member, or instructor to set the attendance policy for their individual courses. Students should keep in mind that attendance at the first class is required in many courses to confirm enrollment. Many courses will automatically drop students who do not attend the first class meeting or even the entire first week of class meetings. The academic calendar can be found at academic-calendar.uchicago.edu (<http://academic-calendar.uchicago.edu/>).

Course Load

A full-time course load is three or four courses per quarter; the tuition is the same in either case. Over the typical four-year program (i.e., 12 quarters), a student who registers for six four-course quarters and six three-course quarters will successfully reach the 4200 units of credit required to graduate.

Students are not allowed to take 500 units except in very limited situations during their final year of registration. To do so, students should discuss this with their adviser and petition the Dean of Students in the College if applicable.

Although students may progress at varying rates toward the degree, no student may register for more than 12 quarters without the permission of the Dean of Students in the College. No student may register for more than 13 quarters.

Repetition of Courses

When a student repeats a course, both courses appear on the student's transcript and both grades are averaged into the student's GPA. However, only one registration for the course counts toward the total number of credits required for graduation.

In the quarter that a course is repeated, students on financial aid must register for 300 units in addition to the repeated course unless (1) a failing grade was received in a course that a student needs to meet general education requirements or requirements in their major, or (2) the student's major mandates a higher grade than was previously received.

Reading Period

Two days of every academic quarter (Thursday and Friday of tenth week) are designated 'College Reading and Review Period.' Instructors and/or teaching assistants may hold review sessions on these days. However, no new material may be introduced, assignments may not be due, and final examinations may not be given (except as necessary for graduating students) during the reading period. The Reading and Review Period may not be dispensed with by classroom vote.

Examination Schedule

Students should verify that travel arrangements do not conflict with their final examinations. For the College examination schedule, visit registrar.uchicago.edu/calendars/final-exams (<http://registrar.uchicago.edu/calendars/final-exams/>).

Registration

Pre-Registration

At the end of each quarter, students in residence pre-register for the following quarter. Prior to Autumn Quarter, each student must confirm that he or she will be a registered student in Autumn Quarter. To confirm, please click here (<https://registrar.uchicago.edu/records/student-profile-information/annual-confirmation/>). (<https://confirm.uchicago.edu>)

Registration Changes

Course registration may be changed during the first three weeks of each quarter. A change of registration is any course 'drop,' any course 'add,' or any substitution of one course for another. No changes in registration are permitted after Friday of third week without a petition to a dean in the Office of the Dean of Students. For details, visit college.uchicago.edu/advising/registration (<https://college.uchicago.edu/advising/registration/>).

Registration for Professional School Courses

If certain requirements are met, advanced undergraduates may register for up to six courses in professional schools at the University of Chicago. These include the University of Chicago Booth School of Business, the Law School, the School of Social Service Administration, the Irving B. Harris Graduate School of Public Policy Studies, and the Toyota Technological Institute at Chicago. With the exception of Chicago Booth courses, interested students must petition (<https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Professional%20School%20Petition%20Form.pdf>) the Office of the Dean of Students in the College for approval to register for a professional school course. Students interested in professional school courses should follow the guidelines for registration at college.uchicago.edu/academics/graduate-and-professional-school-courses/ (<https://college.uchicago.edu/academics/graduate-and-professional-school-courses/>). For more information about requirements and registration procedures, students should consult their College advisers.

NOTE: Professional school courses generally do not substitute for courses in the major; and no more than four can count toward the forty-two courses (4200 units) required in an undergraduate degree program. Undergraduate-only (20000-level) courses taught at professional schools do not count toward this limit.

Restrictions

The privilege of registration (as well as the use of University services and facilities) will be denied students who have been placed on restriction. Restriction may result from a student's failure to fulfill financial obligations to the University or to comply with University rules and regulations. Whenever possible, students are warned of an impending restriction and are notified when one has been imposed. Students must clear the restriction with the administrative or academic office which imposed it before they can register for subsequent quarters. For more information, visit registrar.uchicago.edu/records/holds/ (<https://registrar.uchicago.edu/records/holds/>). Restrictions are also listed in the student's account on my.uchicago.edu (<https://my.uchicago.edu>).

Academic Advising

College Academic Advising Office

Upon matriculation, every student is assigned to a professional academic adviser on the staff of the dean of students. The primary responsibility of advisers is to support students as they address the range of decisions they will make during college. Advisers help students discover how to pursue their interests within the curricular requirements of the College and plan an appropriate program of study leading to a degree in their selected major. Students should direct questions about courses and programs of study and about University rules and regulations to their College advisers. Advisers are also a good first source of assistance with personal problems. Every effort is made to keep students with the same adviser throughout their time in the College, although for various reasons students are sometimes reassigned to a different adviser within the office.

College advisers can provide students with information about the full range of educational opportunities available in the University community and can assist students in preparing for careers and graduate study.

Students can view a list of the staff members (<https://college.uchicago.edu/about/college-staff-directory/?office=College%20Academic%20Advising%20Office>) of the College Academic Advising Office, and the office can be reached by writing collegeadvising@uchicago.edu.

The Collegiate Divisions

The masters of the Collegiate Divisions (Biological Sciences, Humanities, New Collegiate Division, Physical Sciences, Social Sciences) have curricular and staffing responsibilities for their divisions. The senior advisers of the divisions, assisted by faculty committees, rule on interpretations of the general education requirements in response to questions from advisers or students. Lists of the masters and divisional administrators or administrative assistants for all of the Collegiate Divisions are available at college.uchicago.edu/academics/collegiate-divisions (<https://college.uchicago.edu/academics/collegiate-divisions/>).

Major Programs

Students typically select a major no later than the end of their second year, often sooner. This decision should be discussed with the student's College adviser. After students choose a major, they should have regular contact with the appropriate director of undergraduate studies and other counselors in their department. Among the topics that students discuss with counselors are questions about requirements, study and research opportunities, graduate school and career planning, and departmental events, both social and academic. Some programs of study admit students on the basis of an application procedure. Before officially declaring an intent to pursue such a major, a student must receive consent from the department. Contact information is available at the beginning and end of each program of study description in this catalog.

Minor Programs

Students who elect to pursue a minor program should meet with the appropriate director of undergraduate studies to declare their intention. Before the end of Spring Quarter of their third year, students must submit to their College adviser the director's approval for the minor on a form obtained from the adviser. Students choose courses to meet the requirements of the minor in consultation with the director of undergraduate studies.

Academic Integrity

As students and faculty of the University of Chicago, we all belong to an academic community with high scholarly standards of which we are justly proud. Our community also holds certain fundamental ethical principles to which we are equally deeply committed. We believe it is contrary to justice, to academic integrity, and to the spirit of intellectual inquiry to submit the statements or ideas or work of others as one's own. To do so is plagiarism or cheating, offenses punishable under the University's disciplinary system. Because these offenses undercut the distinctive moral and intellectual character of the University, we take them very seriously; punishments for committing them may range up to permanent expulsion from the University of Chicago. The College, therefore, expects that you will properly acknowledge your use of another's ideas, whether that use is by direct quotation or by paraphrase, however loose. In particular, if you consult any written source and either directly or indirectly use what you find in that source in your own work, you must identify the author, title, and page number. If you have any doubts about what constitutes 'use,' consult your instructor and visit college.uchicago.edu/advising/academic-integrity-student-conduct (<https://college.uchicago.edu/advising/academic-integrity-student-conduct/>).

Examination Credit

In order to earn a degree from the College of the University of Chicago, a student must obtain credit for at least forty-two quarter courses (4200 units), distributed among general education requirements, major program requirements, and electives, as described in the section on the curriculum at the front of this publication. For students matriculating in Autumn 2017 or later, of the 4200 units, 3800 units of credit must be earned by course enrollment, i.e., not credit by examination.

All students receive credit toward their degrees by taking courses in the College. In addition, students may receive credit and/or satisfy College requirements in the following ways: by placement test; by Advanced Placement (AP) examinations; by accreditation examination; by International Baccalaureate (IB) Programme; and by credit transferred from another institution. The limits and conditions placed on credit earned in these various ways are explained in the following section and on the Transfer Credit page. A student must be in residence at the University of Chicago for at least six quarters and must successfully complete a minimum of eighteen courses (1800 units) while in residence. More than half of the requirements for a major or minor must be met by registering for courses bearing University of Chicago course numbers.

Placement Tests

Placement tests serve to adapt the needs and backgrounds of individual students to the College curriculum. They place entering students at the proper level of study in a given subject. On the one hand, placement tests minimize the repetition of subjects already mastered and, on the other, they reduce the possibility that students might begin their programs with courses for which they are inadequately prepared. Placement tests measure skill in problem solving as well as general knowledge in a subject field. Students who have some background in the areas being tested are urged to review it, but incoming students without such knowledge are not expected to acquire it over the summer preceding entrance.

Placement tests may be taken only at the time of matriculation and each test may be taken only once. Information that describes these tests is sent to incoming first-year and transfer students.

Chemistry Placement Test

Students who wish to enroll in chemistry must take the online chemistry placement test along with the Mathematics Placement Test (or they must have earned a score of 5 on the AP Chemistry exam).

Economics Placement Test

Students who wish to begin their economics major with ECON 20000 The Elements of Economic Analysis I in their first year must pass the economics placement test or complete ECON 10000 Principles of Microeconomics. No standardized external exams (IB, AP, A-Levels) will substitute. The placement test will be offered Monday evening of the first week of Autumn Quarter.

Language Placement Tests

Language placement tests are required of students who plan to continue in languages studied prior to entrance in the College. Language placement tests determine where a student begins language study; results do not confer credit or satisfy the language competency requirement.

Online placement tests in some languages may be taken the summer before arrival on campus. Students will be given instructions in early July on how to access more information. For placement in languages without an online exam, students meet with a coordinator in the language during Orientation Week.

International students are not permitted to take language placement exams in their native language. Students interested in further study in their native language should consult with the appropriate language coordinator for course recommendations.

Placement tests are not available in languages not taught at the University of Chicago. For additional information, visit humanities.uchicago.edu/about/languages-uchicago (<http://humanities.uchicago.edu/about/languages-uchicago/>).

Mathematics Placement Test

Every entering student must take the Mathematics Placement Test. This online test must be taken during the summer before arrival on campus. Scores on the Mathematics Placement Test, combined with a student's high school record, determine the appropriate beginning mathematics course for each student:

- MATH 11200 Studies In Mathematics I
- MATH 13100 Elem Functions and Calculus I
- MATH 15100 Calculus I
- MATH 15200 Calculus II
- MATH 15300 Calculus III

For physical sciences students interested in the MATH 18300-18400-18500-18600 Mathematical Methods in the Physical Sciences I-II-III-IV sequence of courses, success on the online Mathematics Placement Test can also earn an invitation to begin MATH 18300 Mathematical Methods in the Physical Sciences I. Specifically, all students who have

placement into MATH 15300 Calculus III and some students with placement into MATH 15200 Calculus II will earn this invitation.

Students who receive a sufficiently high score on the Mathematics Placement Test may also receive an invitation to enroll in MATH 16100 Honors Calculus I/MATH 16110 Honors Calculus I (IBL). On the basis of placement test results, students may also be invited to sit the on-campus Higher-Level Mathematics Exam prior to the start of Autumn Quarter, which would allow placement into courses at a higher level than MATH 15300 (see below).

Scores on the Mathematics Placement Test are used to determine placement into PHYS 13100 Mechanics or PHYS 14100 Honors Mechanics.

Accreditation Examinations

Credit is available by accreditation examinations, which are optional, to those students who have already studied certain subjects at the college level. See the information below under each subject heading for when these exams are offered. In the case of a course where both experimental and theoretical skills are involved, students may be required to fulfill the laboratory portion along with the rest of the class.

College credit achieved by accreditation examination is entered as units of credit on the student's official academic record. Letter grades are not assigned. An accreditation examination may be taken only once.

Higher-Level Mathematics Exam

Students who have scored at a high level on the online Mathematics Placement Test (described above) will receive an invitation to take the Higher-Level Mathematics Exam, which will be offered prior to the Autumn Quarter. Students planning to continue with higher level mathematics or other disciplines requiring advanced mathematics are urged to take this College-administered accreditation exam. On the basis of this exam, a student may receive placement into:

- MATH 15910 Introduction to Proofs in Analysis
- MATH 19520 Mathematical Methods for Social Sciences
- MATH 19620 Linear Algebra

Students may also be invited to begin MATH 16100 Honors Calculus I/MATH 16110 Honors Calculus I (IBL) or MATH 20700 Honors Analysis in Rn I. Students who are invited to begin Honors Calculus are encouraged to forgo credit in MATH 15100 Calculus I and/or MATH 15200 Calculus II in order to take the full Honors Calculus sequence, MATH 16100-16200-16300 Honors Calculus I-II-III or MATH 16110-16210-16310 Honors Calculus I (IBL); Honors Calculus II (IBL); Honors Calculus III (IBL).

Mathematics Credit

Students who place into MATH 15200 Calculus II will earn examination credit for MATH 15100 Calculus I upon completion of MATH 15200. Students who place into MATH 15300 Calculus III will receive examination credit for MATH 15100 and MATH 15200 by completing MATH 15300. Additionally, students who have placement into MATH 15300 but do not intend to take any further calculus courses (e.g., humanities majors, pre-health students) may earn examination credit for MATH 15100 and MATH 15200 by receiving a sufficiently high score on the Higher-Level Mathematics Exam.

Students who opt to take MATH 18300-18400 instead of MATH 15300 will receive examination credit for MATH 15100 by completing MATH 18300 and for MATH 15200 by completing MATH 18400.

Chemistry Accreditation Examinations

Students who are exceptionally well prepared in chemistry may earn credit for one or more quarters of chemistry on the basis of AP scores or accreditation examinations. Students who have taken the Advanced Placement (AP) test in chemistry and received a grade of 5 will be given credit for CHEM 11100 Comprehensive General Chemistry I. The Department of Chemistry also administers an accreditation examination in CHEM 11100-11200-11300 Comprehensive General Chemistry I-II-III. Students may receive credit for chemistry on the basis of their performance on these examinations. The examination in general chemistry is offered *only* during Orientation, or at the start of Autumn Quarter by arrangement with Dr. Vera Dragisch, Department of Chemistry, 702.3071. Only incoming students (i.e., first-year and transfer students) are eligible to take these examinations.

Physics Accreditation Examinations

Accreditation examinations are administered for the content of PHYS 12100-12200-12300 General Physics I-II-III and PHYS 14100-14200-14300 Honors Mechanics; Honors Electricity and Magnetism; Honors Waves, Optics, and Heat. The first examination may be taken by incoming students only at the time of matriculation in the College. Students who pass the first examination (for PHYS 12100 General Physics I or PHYS 14100 Honors Mechanics) will receive credit for the lecture part of the course only and will then be invited to try the next examination of the series. Entering students who have taken AP physics in high school but who do not receive AP credit from the College (and who do not plan to major in physics) may take the PHYS 12100 General Physics I accreditation examination. Students who receive AP credit for PHYS 12100-12200 General Physics I-II but whose planned major requires PHYS 13100-13200 Mechanics; Electricity and Magnetism or PHYS 14100-14200-14300 Honors Mechanics; Honors Electricity and Magnetism; Honors Waves, Optics, and Heat are eligible to take the PHYS 14100 Honors Mechanics examination. Entering transfer students who choose a major requiring physics but who are not granted transfer credit for a completed calculus-based introductory physics sequence may take one of the accreditation examinations.

NOTE: Accreditation examinations in physics confer credit only for the lecture portion of the courses; additional laboratory work may be required.

Advanced Placement Credit

Students who request college credit or fulfillment of College requirements for Advanced Placement (AP) examinations taken in high school (i.e., before a student matriculates in the College) are asked to submit an official report of their scores on the AP tests given by the College Entrance Examination Board. The decision to grant credit is reported at the end of the first year in residence and units of credit awarded appear on the student's official academic record.

While AP scores alone are sometimes used to establish placement or to confer credit, satisfactory performance on the College's own placement tests may supplement AP scores and lead to additional credit.

The following chart shows how AP credit is automatically awarded. For further information on how credit may be used toward individual degree programs, a student should consult his or her College adviser. For more information on how AP credit may be used to meet major requirements, refer to the major requirements listed under "Programs of Study" in this catalog.

NOTE: For students matriculating in Autumn 2017 or later, at least 3800 units of credit must be earned by course enrollment, i.e., not credit by examination. For students matriculating in Autumn 2018 or later, only scores of 5 on approved tests will confer language competency.

Students who matriculated prior to 2017 should refer to the Advanced Placement credit table in the catalog of their year of matriculation for earlier guidelines regarding AP credit. Archived catalogs can be found [here](#).

AP Exam	Score	Credit Awarded
Art History	5	100 units general elective credit
Biology	4	100 units general education (BIOS 10130)
Biology	5	100 units general education (BIOS 10130)+
Calculus AB	5	MATH 15100 placement
Calculus BC	4	MATH 15200 placement
Calculus BC	5	MATH 15200 placement †

Physics C: Mechanics only	5	PHYS 12100 ‡
Physics C: E&M only	5	PHYS 12200 ‡
Statistics	5	STAT 22000++
Studio Art (2-D Design, 3-D Design, or Drawing)	5	100 units general elective credit
Chinese Language and Culture; French Language and Culture; German Language and Culture; Italian Language and Culture; Japanese Language and Culture; Latin (Literature or Vergil); Spanish Language and Culture; Spanish Literature and Culture	5	Satisfies the Language Competency Requirement

Students may earn any amount of credit from AP exams, placement, accreditation, IB, or other examinations. However, for students matriculating in Autumn 2017 or later, at least 3800 units must be earned through course enrollment. Students who enrolled prior to Autumn 2017 should consult the catalog of their year of entry for policies regarding the use of AP and examination credit, or speak to their College adviser.

AP Physics or Calculus: Students who register for physics or calculus forgo AP credit for the courses they complete.

- † A student who submits a score of 5 on the Calculus BC exam will also receive invitations to register for MATH 16100 Honors Calculus I or MATH 18300 Mathematical Methods in the Physical Sciences I.
- ‡ Students wishing to apply AP credits for 'Physics C: Mechanics only' or 'Physics C: E&M only' toward the physical sciences general education requirement should plan to complete the requirement with an appropriate course from PHYS 12100-12200 General Physics I-II.
- + A Biological Sciences major requires a "Fundamentals" sequence in general education or an "Advanced Biology Fundamentals" sequence in the major. Students with an AP 4 or 5 who complete three quarters of an "Advanced Biology Fundamentals" sequence are awarded a second AP credit to meet the general education requirement.
- * AP Chemistry: Students with a score of 5 may accept credit for CHEM 11100 Comprehensive General Chemistry I, or they can register for CHEM 12100 Honors General Chemistry I or CHEM 12200 Honors General Chemistry II. Students who complete CHEM 11100 Comprehensive General Chemistry I or CHEM 12100 Honors General Chemistry I on campus will forfeit the AP credit.
- ++ AP Statistics: Will count for general education mathematics credit. May not be used to meet requirements for the statistics major or minor. Students who register and obtain credit for STAT 20000 Elementary Statistics, STAT 22000 Statistical Methods and Applications, or STAT 23400 Statistical Models and Methods forgo AP credit for STAT 22000 Statistical Methods and Applications.

International Baccalaureate Programme

Credit earned for courses in the International Baccalaureate (IB) Programme may be applied to certain general education requirements or to electives as described below. Credit will not be granted for other exams. Course credit is only granted for grades of 7 on Higher-Level IB Examinations (HL). The Language Competency Requirement may be satisfied with grades of 5, 6, or 7 on Standard-Level or Higher-Level IB Examinations in languages other than English. Students who receive a 7 on the Higher-Level Calculus exam receive placement into MATH 15200 and an invitation to MATH 16100.

IB Examination	Score	Credit Awarded
Biology	7 Higher Level	100 units general education (BIOS 10130)
English	7 Higher Level	100 units general elective credit
Languages other than English	5, 6, or 7 Standard Level or Higher Level	Satisfies the Language Competency Requirement

British A-Levels and Other Examinations

Students with A-level work in calculus, physics, and chemistry are encouraged to take the College's placement and/or accreditation examinations prior to matriculation. Credit for A-level work in biology may be awarded by petition to the Senior Adviser in the Biological Sciences Collegiate Division; credit for A-levels in other fields except language may be awarded by petition to the Dean of Students in the College. No credit is given for general education requirements in humanities or social science. Elective credit may be given only for grades of A in the Advanced Test in liberal arts subjects.

Transfer Credit

Under some circumstances, students are able to obtain transfer credit for course work taken at other institutions. The following pages detail the differing guidelines and processes for (a) current students who take courses elsewhere while in the College, and (b) students who transfer to the College from another institution.

- Current Students
- Transfer Students

Current Students

Transfer Credit for Courses Taken Elsewhere by Current College Students

The information below is for current College students who wish to take courses elsewhere and transfer the credit back to their University of Chicago degree program. Information for students wanting to transfer from another college or university to the University of Chicago can be found [here](#).

Transfer credit for courses taken at another institution by current College students must be evaluated and approved by the Office of the Dean of Students in the College. If approved, transfer credit is listed on the student's University of Chicago transcript only as the number of credits approved to transfer. Transfer credit does not count toward the University of Chicago GPA, nor do the grades appear on the University of Chicago transcript. Students participating in University of Chicago-sponsored direct enrollment programs will have their credits vetted by the Study Abroad (<https://study-abroad.uchicago.edu/>) office instead of the Office of the Dean of Students in the College.

On this page, you will find guidelines for what credit may and may not be accepted by the College, as well as additional restrictions on course work in certain fields. You will also find directions for submitting transfer course work for approval and additional restrictions on course work taken prior to matriculation. Course credit approved to transfer will count toward the 3800-unit credit minimum students are required to earn via course enrollment.

Residency Requirements and Enrollment Limits

A student must be in residence as a degree-seeking student in the College for at least six quarters (excluding summer quarters and University of Chicago-sponsored summer abroad programs) and successfully complete a minimum of 18 courses (1800 units) while in residence. More than half of the requirements for a major and/or minor must be met by registering for courses bearing University of Chicago course numbers. Course credit approved to transfer will count toward the 3800-unit credit minimum students are required to earn via course enrollment. Faculty-led study abroad programs sponsored by the College may be used to meet both the residency and course requirements.

The Dean of Students in the College expects all students to complete their degrees in a timely fashion, ordinarily within 12 quarters. Students may not register beyond 12 quarters without the permission of the Dean of Students in the College.

Minimum Requirements for Transfer Eligibility

- Courses taken prior to matriculation, including courses taught at the University of Chicago, are not eligible for College credit. Students should contact College Admissions (collegeadmissions@uchicago.edu) for clarification of their entry status.

Note: During the 2020 Summer Session only, incoming students are permitted to take University of Chicago courses. These will confer College credit. Interested students should see Summer Session (<https://college.uchicago.edu/academics/summer-session/>) for more information.

- Beginning in Autumn Quarter 2020, courses taken at U.S. institutions, if they are similar to courses offered at the University of Chicago, are ordinarily not eligible for transfer credit. To be eligible, the course should offer a special opportunity that cannot be pursued at the University of Chicago. Such courses must follow the eligibility guidelines listed below, as applicable. A "special opportunity" is an exceptional circumstance; accordingly, only a small number of such petitions will be approved.
- Courses taken at non-U.S. institutions that are otherwise similar to courses offered at the University of Chicago are eligible for transfer credit and will follow the eligibility guidelines for such courses listed below.
- Courses taken in a language not offered at the University of Chicago must follow the guidelines for language courses listed below.

To be eligible for transfer, courses MUST:

- Be taken at an accredited institution that grants bachelor's degrees, subject to review by the Office of the Dean of Students in the College.
- Confer at least three semester hours or four quarter hours of credit. For institutions without standard credit hours, contact hours (normally a minimum of 30) may be used.
- Be completed with a grade of C or above (not C- or P). Students in science majors must earn at least a B in science courses.
- Not duplicate credit that students will earn or have already earned for college-level course work. (For instance, a student could not take PLSC 28701 Introduction to Political Theory and also transfer credit for an Introduction to Political Theory course taken at an international institution.)

Science course work must follow these additional guidelines:

- Students in any science major must earn at least a B in science courses.
- Courses must have a lab to be considered for the physical sciences general education requirement. At least one course in the biological sciences general education requirement must have a lab component.
- Chemistry course work must be taken at an institution accredited by the American Chemical Society.

- Incoming students may seek to earn credit for organic chemistry via an accreditation exam offered in the Autumn Quarter.
- Depending on the student's major and on the level of work to be evaluated, credit for some courses in other sciences may also be subject to examination.

Courses petitioned to count for general education credit in the civilization studies requirement must follow this additional guideline:

- For the civilization studies requirement, area studies courses in history with an emphasis on primary sources will be favored over courses that focus on political science, anthropology, sociology, etc.

Language course work must follow these additional guidelines:

- Only language courses taken in languages that are not available at the University of Chicago, or language courses taken at a non-U.S. institution that are otherwise similar to courses offered at the University of Chicago, are eligible for transfer credit.
- For courses taken at U.S. institutions that are eligible to transfer, only courses taken in Autumn Quarter 2017 or later are considered. Courses completed earlier (including Summer Quarter 2017) do **not** qualify.
- Completion of an approved intermediate- or advanced-level course with a grade of B or above satisfies the language competency requirement.
- Satisfactory completion (grade of C or above) of approved courses equivalent to one year of introductory language study qualifies the student for the on-campus language competency examination offered in Winter Quarter.
- Students planning or considering additional language study on campus should take the language placement test to confirm placement.
- Courses are subject to all other restrictions and guidelines on this page.

Courses in the following categories are **NOT** eligible for transfer credit:

- Courses taken at a U.S. institution that are equivalent to courses taught at the University of Chicago. Students are expected to complete course work in residence unless there are special circumstances, or unique or extraordinary opportunities to study at another U.S. institution, and the course is not ordinarily available at the College.
- Course work taken during a period of suspension from the University of Chicago.
- Credit for calculus and pre-calculus is not accepted. Credit for calculus will be granted only by College accreditation or AP exam, or on the basis of completion of a higher-level course.
- Any kind of online/distance, tutorial, or independent study course work, including internship credit or prior learning experiences (including work experience, trainings, certifications, etc.).
- Professional or technical courses. This includes such areas as: law, civil/mechanical engineering, speech, education, leadership, and first-year writing. A course in media production will transfer if there is no equivalent course in the College, as verified by the relevant department.
- Undergraduate business courses will be reviewed for transfer credit by the faculty of the University of Chicago Booth School of Business. Chicago Booth actively discourages students from taking non–University of Chicago courses.
- Foreign language courses taken before Autumn Quarter 2017. Advanced literature or topics courses taught in a foreign language that are not available in the College may qualify.

Process for Petitioning for Transfer Credit

Students who wish to take courses at other institutions after they enter the College should carefully read the regulations for transfer credit listed above and discuss their plans in advance with their College adviser. To have non–University of Chicago courses considered for transfer credit, students must follow these steps:

1. Submit a petition (<http://petition.uchicago.edu/>) to the Office of the Dean of Students in the College, including course descriptions and/or syllabi, units of credit, and the name of the institution where courses will be taken. This information should be submitted online well in advance of taking the course. (Students with inactive logins should contact College Advising (collegeadvising@uchicago.edu) for a PDF version of the petition form.)
2. If approved by the College, the student may seek additional approval for use of that pre-evaluated credit toward major/minor/general education requirements. Instructions will be provided if/when the initial petition is approved. Note that approval is not guaranteed and should be sought as early as possible.
3. Have an official transcript sent to their College adviser upon completion of the course work.

Note: Students should petition for approval well in advance of the start date of the desired courses. Students submitting petitions without a sufficient window should not expect to receive a final decision before the courses begin, especially if they hope to use the courses toward a particular requirement.

For students participating in a University of Chicago–sponsored direct enrollment program:

These students do not need to petition the Office of the Dean of Students in the College and should instead speak to their program director in Study Abroad (<https://study-abroad.uchicago.edu>) about the appropriate next steps.

Transfer Students

Transfer Credit for Students Who Transfer to the College from Another Institution

After admitted transfer students have committed to attending the University of Chicago, College Admissions provides information about how to submit the materials necessary for an evaluation of their previous college course work. Students must also have their previous institution send a final, official transcript to College Admissions. These materials should be submitted no later than June 15. *Transfer evaluations cannot be completed before a student has accepted an offer of admission.* Note that transfer credit does not count toward the University of Chicago GPA, nor do the grades appear on the University of Chicago transcript. Students may not receive more than 1200 units of transfer credit for one academic year of work, nor may they receive more than 400 units of credit for one summer of study.

Transfer credit must be evaluated and approved by the Office of the Dean of Students in the College. If approved, transfer credit is listed on the student's University of Chicago transcript only as the number of credits approved to transfer. Students participating in University of Chicago–sponsored direct enrollment programs will have their credits vetted by the Study Abroad (<https://study-abroad.uchicago.edu/>) office instead of the College Dean of Students office.

Residency Requirements and Enrollment Limits for Transfer Students

A transfer student must be in residence as a degree-seeking student in the College for at least six quarters (excluding summer quarters and University of Chicago–sponsored summer abroad programs) and successfully complete a minimum of 18 courses (1800 units) while in residence. More than half of the requirements for a major and/or minor must be met by registering for courses bearing University of Chicago course numbers. Course credit approved to transfer will count toward the 3800-unit credit minimum students are required to earn via course enrollment.

The Dean of Students in the College expects all students to complete their degrees in a timely fashion, ordinarily within 12 quarters. This expectation will be tailored for transfer students who enter the College with a substantial number of credits. Based on the transfer evaluation, transfer students will be assigned a time frame in which they are expected to complete their requirements—typically six or nine quarters. Transfer students may petition the Dean of Students in the College for one additional quarter of study if academically necessary for the undergraduate degree. Transfer students may not register beyond their allotted quarters without the permission of the Dean of Students in the College.

After acceptance to the College, transfer students may not earn additional credits from schools other than the University of Chicago. Faculty-led study abroad programs sponsored by the College may be used to meet both the residency and course requirements. Transfer students will be allowed to participate in direct enrollment study abroad programs affiliated with the College, but these courses cannot be used to satisfy the residency requirement.

On this page, you will find guidelines for what credit may and may not be accepted by the College, as well as additional restrictions on course work in certain fields.

Minimum Requirements for Transfer Eligibility

Courses taken at U.S. or non-U.S. institutions that are similar to courses offered at the University of Chicago are eligible for transfer credit and will follow the eligibility guidelines for such courses listed below.

Courses MUST:

- Be taken at an accredited institution that grants bachelor's degrees, subject to review by the Office of the Dean of Students in the College.
- Confer at least three semester hours or four quarter hours of credit. For institutions without standard credit hours, contact hours (normally a minimum of 30) may be used.
- Be completed with a grade of C or above (not C- or P). Students in science majors must earn at least a B in science courses.
- Not duplicate credit that students will earn or have already earned for college-level course work. (For instance, a student could not take PLSC 28701 Introduction to Political Theory and also transfer credit for an Introduction to Political Theory course taken elsewhere.)
- Be in liberal arts subjects similar to those offered in the College at the University of Chicago.

Science course work must follow these additional guidelines:

- Students in any science major must earn at least a B in science courses.
- Courses must have a lab to be considered for the physical sciences general education requirement. At least one course in the biological sciences general education requirement must have a lab component.
- Chemistry course work must be taken at an institution accredited by the American Chemical Society.
- Chemistry majors may only transfer credit for general chemistry. Incoming transfer students may seek to earn credit for organic chemistry via an accreditation exam offered in Autumn Quarter.
- Physics courses must be calculus-based and include a lab component to be considered as a substitute for General Physics (e.g., PHYS 12100-12200-12300 General Physics I-II-III, PHYS 13100-13200-13300 Mechanics; Electricity and Magnetism; Waves, Optics, and Heat).

Courses petitioned to count for general education credit in the civilization studies requirement must follow these additional guidelines:

- For the civilization studies requirement, area studies courses in history with an emphasis on primary sources will be favored over courses that focus on political science, anthropology, sociology, etc.

Language course work must follow these additional guidelines:

- Only courses taken in Autumn Quarter 2017 or later are eligible. Courses completed earlier (including Summer Quarter 2017) do **not** qualify.
- Completion of an approved intermediate- or advanced-level course with a B or above satisfies the language competency requirement.
- Satisfactory completion (grade of C or above) of approved courses equivalent to one year of introductory language study qualifies the student for the on-campus language competency examination offered in Winter Quarter.
- Students planning or considering additional language study on campus should take the language placement test to confirm placement.
- Students may not duplicate credit, so completing the equivalent of, e.g., SPAN 10300 Beginning Elementary Spanish III at another institution and taking SPAN 10300 Beginning Elementary Spanish III at the University of Chicago (or vice versa) results in forfeiture of the transfer credit.
- Courses are subject to all other restrictions and guidelines on this page.

Courses in the following categories are NOT eligible for transfer credit:

- Courses taken during high school, or that were used toward an awarded associate's degree, are not eligible for transfer credit. Courses taken after acceptance to the College are not eligible.
- Credit for calculus and pre-calculus is not accepted. Credit for calculus will be granted only by College accreditation or AP exam, or on the basis of completion of a higher-level course.
- Any kind of online/distance, tutorial, or independent study course work, including internship credit or prior learning experiences (including work experience, trainings, certifications, etc.).
- Professional or technical courses. This includes such areas as: law, civil/mechanical engineering, speech, education, leadership, and first-year writing. A course in media production will transfer if there is an equivalent course in the College, as verified by the relevant department.
- Undergraduate business courses will be reviewed for transfer credit by the faculty of the University of Chicago Booth School of Business.
- Foreign language courses taken before Autumn Quarter 2017. Advanced literature or topics courses taught in a foreign language may qualify. Placement level is determined by exam.
- Completion of an approved beginning-level language sequence at a different institution does not satisfy the language competency requirement; ordinarily, it will qualify the student to take an on-campus competency exam.
- Depending on the student's major and on the level of work to be evaluated, credit for some courses in some sciences may also be subject to examination.

Interdisciplinary Opportunities

These pages identify interdisciplinary areas and courses in those areas. Some students may explore these areas through one of the formal programs of study. Students should discuss these options with their College advisers.

- Big Problems
- Chicago Studies
- Clinical and Translational Science
- Course Clusters
- Parrhesia Program for Public Discourse
- Signature Courses in the College
- Stevanovich Institute on the Formation of Knowledge

Big Problems

Department Website: <http://bigproblems.uchicago.edu>

The Big Problems courses that follow are among a growing number of capstone experiences offered as electives to third- and fourth-year students in the College.

'Big problems' are characteristically matters of global or universal concern that intersect with several disciplines and affect a variety of interest groups. They are problems for which solutions are crucially important but not obviously available.

Big Problems courses emphasize process as well as content: learning how to creatively confront difficult intellectual and pragmatic problems wider than one's area or expertise and to consider how to deal with the uncertainty that results. This often points to the importance of working in groups. If the core curriculum provides a basis for learning and the majors develop more specialized knowledge, the Big Problems experience leads to the development of skills for thinking about and dealing with the important but unyielding issues of our time.

Big Problems courses use interdisciplinary team teaching, seeking to cross disciplines and divisions and to transcend familiar models of content, organization, and instruction.

Big Problems Courses Offered in 2020–21

BPRO 22612. Topics in Medical Ethics. 100 Units.

Decisions about medical treatment, medical research and medical policy often have profound moral implications. Taught by a philosopher, three physicians, and a medical lawyer, this course will examine such issues as paternalism, autonomy, assisted suicide, abortion, organ markets, research ethics, and distributive justice in health care. (A)

Instructor(s): D. Brudney; Staff Terms Offered: Autumn

Prerequisite(s): Third- or fourth-year standing. This course does not meet requirements for the Biological Sciences major.

Note(s): Philosophy majors: this course fulfills the practical philosophy (A) requirement.

Equivalent Course(s): HLTH 21609, PHIL 21609, BIOS 29314, HIPS 21609

BPRO 24050. Understanding Practical Wisdom. 100 Units.

Thinking about the nature of wisdom goes back to the Greek philosophers and the classical religious sages, but the concept of wisdom has changed in many ways over the history of thought. While wisdom has received less scholarly attention in modern times, it has recently re-emerged in popular discourse with a growing recognition of its potential importance for addressing complex issues in many domains. But what is wisdom? It's often used with a meaning more akin to 'smart' or 'clever.' Is it just vast knowledge? This course will examine the nature of wisdom-how it has been defined in philosophy and psychological science, how its meaning has changed, and what its essential components might be. We will discuss how current philosophical and psychological theories conceptualize wisdom and consider whether, and how, wisdom can be studied scientifically; that is, can wisdom be measured and experimentally manipulated to illuminate its underlying mechanisms and understand its functions? Finally, we will explore how concepts of wisdom can be applied in business, education, medicine, the law, and in the course of our everyday lives. Readings will be drawn from a wide array of disciplines including philosophy, classics, history, psychology, behavioral economics, medicine, and public policy. The course will include lectures by philosophers and psychologists. This course is offered in association with the Chicago Moral Philosophy Project and the Good Life program (the Hyde Park Institute).

Instructor(s): H. Nusbaum, A. Henly Terms Offered: Spring

Prerequisite(s): PQ: Third- or fourth-year standing

Equivalent Course(s): CHDV 24050, PSYC 24060, PSYC 34060, RLST 24055

BPRO 25600. How Does It Feel to Be an Outlier? Narratives of Medical 'Otherness'. 100 Units.

Ideas of what is 'normal' and what is 'different' are fundamental organizing concepts in scientific and humanistic thinking. Writers in both the sciences and the humanities use these concepts particularly when constructing narratives about how individuals experience selfhood and the world. This course examines a body of writings that depict the lives of those who identify, or are identified, as outliers. Students will approach this topic through medical case studies; through autobiographies and biographies about the experience of being physical or mental exceptions; and through writings by and about doctors, patients, medical researchers, and people who are the subjects of medical research. How do scientists, biographers, journalists, and others capture the experience of being different? What are the aims of outlier narratives? What ethical questions surround these writings? How do such narratives underscore or undercut concepts of what is 'normal' and what is 'different'? In addition to surveying the landscape of outlier literature, students will research and write an outlier narrative in the form of a medical case study, biography, journalistic profile, or memoir.

Instructor(s): P. Mason, N. Titone Terms Offered: Winter

Prerequisite(s): Third or fourth-year standing. Interested students are asked to send one page on why they want to take this course to pmason@uchicago.edu and ntone@uchicago.edu

Equivalent Course(s): ENGL 25613, ENGL 45613

BPRO 26800. How Literature Thinks: Contemporary Writers on Big Problems. 100 Units.

Big Problems' have affective dimensions that not only complicate our thinking about issues like climate change or income inequality but pose 'big problems' of their own: apathy, depression, boredom, paranoia. Literature invites us to reflect on these affective states and their social repercussions while also expanding the forms of feeling and knowing available to us. How do novels, poems, and memoirs explore the connections between emotion, understanding, and individual and collective action? Can criticism help us to see those connections? In this course, we will read the work of contemporary writers who explore a variety of pressing questions. Authors will include celebrated novelists and poets visiting the University,

University of Chicago faculty in Creative Writing, and award-winning local authors. These writers will visit our class to share their views on how literature 'thinks' in generative ways. Readings of contemporary novels, poetry, and nonfiction will be supplemented by theoretical texts that illuminate the affective, epistemological, and political dimensions of artistic responses to social crises. Assignments will include both creative and critical writing exercises, attendance at literary events, and a final (creative, critical, or creative/critical hybrid) project. No prior creative writing experience is required.

Instructor(s): S. Reddy, S. Ngai Terms Offered: Spring

Prerequisite(s): PQ: Third- or fourth-year standing

Equivalent Course(s): ENGL 38660, ENGL 28660

BPRO 27155. Urban Design with Nature. 100 Units.

This course will use the Chicago region as the setting to evaluate the social, environmental, and economic effects of alternative forms of human settlement. Students will examine the history, theory and practice of designing cities in sustainable ways - i.e., human settlements that are socially just, economically viable, and environmentally sound. Students will explore the literature on sustainable urban design from a variety of perspectives, and then focus on how sustainability theories play out in the Chicago region. How can Chicago's neighborhoods be designed to promote environmental, social, and economic sustainability goals? This course is part of the College Course Cluster program: Urban Design.

Instructor(s): Sabina Shaikh and Emily Talen Terms Offered: Autumn

Prerequisite(s): Third or fourth-year standing

Note(s): Students who have taken ENST 27150: Urban Design with Nature: Assessing Social and Natural Realms in the Calumet Region in the Spring of 2018 may not enroll in this course.

Equivalent Course(s): GEOG 27155, PBPL 27156, ENST 27155

BPRO 28400. Thinking Psychoanalytically: From the Sciences to the Arts. 100 Units.

Since Freud's seminal investigation into the nature of the mind, psychoanalytic thinking has offered a unique approach to unconscious, relational, and meaningful dimensions of human experience. Despite assaults on the field from numerous quarters, psychoanalytic thinking remains central to the work of practitioners across an array of disciplines. After an introduction to key psychoanalytic concepts including the unconscious, repression, and transference, we will investigate some of the ways in which these ideas are mobilized within clinical practice, neuroscience, anthropology, education, philosophy, literary studies, and the visual arts through a series of lectures presented by specialists from these fields. Along the way, we will gain an appreciation for some of the ways in which psychoanalytic perspectives continue to inspire a variety of current scientific and humanistic projects.

Instructor(s): A. Beal; Staff Terms Offered: Spring

Prerequisite(s): Third or fourth-year standing

Equivalent Course(s): ANTH 24316

BPRO 28800. From Fossils to Fermi's Paradox: Origin and Evolution of Intelligent Life. 100 Units.

The course approaches Fermi's question, 'Are we alone in the universe?,' in the light of recent evidence primarily from three fields: the history and evolution of life on Earth (paleontology), the meaning and evolution of complex signaling and intelligence (cognitive science), and the distribution, composition and conditions on planets and exoplanets (astronomy). We also review the history and parameters governing extrasolar detection and signaling. The aim of the course is to assess the interplay between convergence and contingency in evolution, the selective advantage of intelligence, and the existence and nature of life elsewhere in the universe - in order to better understand the meaning of human existence.

Instructor(s): P. Sereno; L. Rogers; S. London Terms Offered: Winter

Prerequisite(s): Third or fourth-year standing

Equivalent Course(s): ASTR 18700, BIOS 29142, PSYC 28810

BPRO 28900. Inequality: Origins, Dimensions, and Policy. 100 Units.

For the last four decades, incomes in the United States and across the globe have grown more unequal. That fact has attracted worldwide attention from scholars, governments, religious figures, and public intellectuals. In this interdisciplinary course, participating faculty members drawn from across the University and invited guest speakers will trace and examine the sources and challenges of inequality and mobility in many of its dimensions, from economic, political, legal, biological, philosophical, public policy, and other perspectives. This course is part of the College Course Cluster program: Inequality.

Instructor(s): A. Sanderson and Staff Terms Offered: May be offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Note(s): ECON 24720 or ECON 22410 may be used as an Economics elective, but only one of the two may be used toward Economics major requirements.

Equivalent Course(s): ECON 24720, PBPL 28920

Big Problems Courses Offered in Previous Years

Any of these courses may be offered in the future.

BPRO 21500. What is Civic Knowledge? 100 Units.

What is civic knowledge? Although civic rights and duties are supposedly universal to all citizens in a 'democratic' nation, their implementation often depends on the strength of community connections and the circulation of knowledge across racial, class, and social boundaries. Focusing on the city of Chicago, we ask how citizens (in their roles as citizens) forge communities, make urban plans, and participate in civic affairs. How does the city construct the public spheres of its residents? Are the social practices of Chicagoans truly 'democratic'? Could they be? What does 'Chicago' stand for, as a political and cultural symbol? For both Chicagoans and their representatives, the circulation of knowledge depends not only on conventional media but also on how the city is constructed and managed through digital media.

Instructor(s): R. Schultz, M. Browning. Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): HUMA 24906, LLSO 24906, PBPL 21500, PHIL 21006

BPRO 22200. Boundaries, Modules, and Levels. 100 Units.

This course investigates conceptual problems arising in the attempt to analyze the structure of complex systems in a variety of biological, psychological, social, and technological contexts, and how the answers may vary with how the boundaries are drawn. We confront descriptive, critical, and normative puzzles arising from questions such as the following: Is a society just a collection of people, an organized collection of people, or something more? Can a corporation have rights and responsibilities? Can groups have identities? Why are minds in the head, or are they? And are genes the bearers of heredity?

Instructor(s): W. Wimsatt, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): PHIL 22210, HIPS 20601

BPRO 22300. Empire. 100 Units.

Students in this course read a variety of texts (e.g., writings of Thucydides, Vergil, and Forster; documents from the caliphate of Andalusia; current articles). By viewing their own experiences in the light of Arab, British, Greek, and Roman empires, students reflect on America's role in the cultures and countries of the twenty-first century. Economics, language, culture, ecology, and social ethics may provide the lenses through which students view and review their experiences.

Instructor(s): Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing. Completion of the general education requirement in civilization studies through a College-sponsored study abroad program.

Equivalent Course(s): CLCV 28707, HUMA 22303

BPRO 22400. The Ugly American Comes Home. 100 Units.

The aims of this course are to interrogate not only the experience of studying abroad, but also the condition of coming 'home' and facing a range of needs to assimilate and articulate your experience. We address being abroad and afterward through a range of reading materials, including travel writings, philosophies of education, and considerations of narrative and perception. Writing assignments will explicitly address the challenge of integrating study abroad with other forms of knowledge and experience that characterize collegiate education.

Instructor(s): J. Ketelaar, M. Merritt Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing; completion of a study abroad program (University of Chicago program, other institution's program, or self-structured program).

Equivalent Course(s): INST 22400

BPRO 22500. Medicine and Society: Things, Bodies, Persons. 100 Units.

Course description isn't available.

Terms Offered: Not offered in 2020-2021

Equivalent Course(s): BIOS 29310, HIPS 22501, PHIL 22501

BPRO 22600. Autonomy & Medical Paternalism. 100 Units.

Course description isn't available.

Terms Offered: Not offered in 2020-2021

Equivalent Course(s): PHIL 22601, HIPS 21901, BIOS 29311

BPRO 22800. Drinking Alcohol: Social Problem or Normal Cultural Practice? 100 Units.

Alcohol is the most widely used psychoactive agent in the world, and, as archaeologists have recently demonstrated, it has a very long history dating back at least 9,000 years. This course will explore the issue of alcohol and drinking from a trans-disciplinary perspective. It will be co-taught by an anthropologist/archaeologist with experience in alcohol research and a neurobiologist who has experience with addiction research. Students will be confronted with literature on alcohol research from anthropology, sociology, history, biology, medicine, psychology, and public health and asked to think through the conflicts and contradictions. Selected case studies will be used to focus the discussion of broader theoretical concepts and competing perspectives introduced in the first part of the course. Topics for lectures and discussion include: What is alcohol? The early history of alcohol; Histories of drinking in ancient, medieval, and modern times; Alcohol and the political economy; Alcohol as a cultural artifact; Styles of drinking and intoxication; Alcohol, addiction, and social problems; Alcohol and religion; Alcohol and health benefits; Comparative case studies of drinking.

Instructor(s): M. Dietler, W. Green Terms Offered: Not offered in 2020-2021; May be offered in 2021-2022

Prerequisite(s): Third or fourth-year standing.

Note(s): This course does not meet requirements for the biological sciences major.

Equivalent Course(s): HLTH 25310, BIOS 02280, ANTH 25310

BPRO 23000. Cosmos and Conscience: Looking for Ourselves Elsewhere. 100 Units.

Science and religion are two ways, among many others, that people can seek to know about reality: how do we construct ordered pictures of the whole-cosmos or civilization-and how do we relate to them in terms of action? How do we know what we do not know, and what does that kind of 'knowledge' mean for the orientation and direction of human existence? How would cultural biases be affected by knowing that there are others 'out there' in the universe, should we discover them? From various perspectives, this course addresses these questions of the origins, structures, and ends of reality as we look for ourselves-seek understanding of the human condition-in the cosmos but also in complex religious and cultural traditions. Whereas in our popular culture, science is often identified with the realm of knowledge and religion is simply 'belief' or 'practice,' the course also seeks to trace the rational limits of science and the rational force of religion with respect to the ethical problem of the right and good conduct of human life.

Instructor(s): W. Schweiker, D. York Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing.

Equivalent Course(s): ASTR 23000, RLST 23603

BPRO 23400. Is Development Sustainable? 100 Units.

This course examines alternative concepts and theoretical grounds for notions of sustainable development. We analyze core issues underlying population growth, resource extraction, 'sustainable consumption,' environmental change, and social transformation through a consideration of economic, political, scientific, and cultural institutions and processes. The course, based on orienting lectures and intensive class discussion of core texts, focuses on the sustainability problems of both highly industrialized countries as well as of developing nations. Previous exposure to environmental or development issues, although useful, is not required.

Instructor(s): A. Kolata Terms Offered: Not offered in 2020-2021

Note(s): This course qualifies as a 'Discovering Anthropology' selection for Anthropology Majors.

Equivalent Course(s): PBPL 24400, HIPS 23400, ENST 24400, ANTH 22015

BPRO 23500. The Organization of Knowledge. 100 Units.

This course explores several structures of knowledge that students may have encountered in their core and specialized education, with the goal of enabling students to identify and explore the implications of these different structures. We ask whether all knowledge is relative, and if so, to what? When things are structured differently, does that mean that knowledge is lost? Or are there several diverse ways of structuring knowledge, each of which may be viable? We read a wide range of classical and modern thinkers in various disciplines.

Instructor(s): W. Sterner, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): HUMA 23502, HIPS 23000

BPRO 23600. Social Context, Biology, and Health. 100 Units.

We take for granted our relationships with other people as fundamental. Yet when these connections are absent or disrupted, our minds and biology are likewise disrupted. Epidemiological studies have now clearly established a relationship between social isolation and both mental and physical health. This course adopts an integrative interdisciplinary approach that spans the biological to sociological levels of analysis to explore the interactions involved and possible mechanisms by which the social world gets under the skin to affect the mind, brain, biology, and health.

Instructor(s): J. Cacioppo, M. McClintock, L. Waite Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): PSYC 25300

BPRO 23760. The Social Brain: Social Isolation and Loneliness. 100 Units.

The past two decades have witnessed a remarkable rise in the number of investigations published on the social brain. The discoveries conveyed by the titles of many of these reports (e.g., the neural basis of love, altruism, morality, generosity, trust) have piqued the interest of young investigators, funding agencies, the media, and laypeople alike. Such attention is a double-edged sword, however, as errors are exaggerated in importance, and oversimplifications create false expectations and, ultimately, disillusionment in what the field can contribute. It is, of course, one thing to assume that neural processes underlie all psychological phenomenon, it is another to claim that a given brain region is the biological instantiation of complex psychological functions like the self, empathy or loneliness. The purpose of this course is to examine opportunities and challenges in this field primarily through research on two of the most important topics in the field: social isolation and empathy.

Instructor(s): J. Cacioppo, L. Hawkley Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing. This course does not meet requirements for the biological sciences major.

Equivalent Course(s): PSYC 23760, BIOS 29324

BPRO 23800. The Affect System. 100 Units.

The term 'affect' typically refers to feelings beyond those of the traditional senses, with an emphasis on the experience of emotions and variations in hedonic tone. The structure and processes underlying mental contents are not readily apparent, however, and most cognitive processes occur unconsciously with only selected outcomes reaching awareness. Over millions of years of evolution, efficient and manifold mechanisms have evolved for differentiating hostile from hospitable stimuli and for organizing adaptive responses to these stimuli. These are critically important functions for the evolution of mammals, and the integrated set of mechanisms that serve these functions can be thought of as an 'affect system.' It is this affect system-its architecture and operating characteristics, as viewed from neural, psychological, social, and political perspectives-that is the focus of the course.

Instructor(s): J. Cacioppo, E. Oliver, S. Cacioppo Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): PSYC 23880, PLSC 23810

BPRO 23900. Biological and Cultural Evolution. 100 Units.

This course draws on readings in and case studies of language evolution, biological evolution, cognitive development and scaffolding, processes of socialization and formation of groups and institutions, and the history and philosophy of science and technology. We seek primarily to elaborate theory to understand and model processes of cultural evolution, while exploring analogies, differences, and relations to biological evolution. This has been a highly contentious area, and we examine why. We seek to evaluate what such a theory could reasonably cover and what it cannot.

Instructor(s): W. Wimsatt, S. Mufwene Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing or consent of instructor required; core background in evolution and genetics strongly recommended.

Note(s): This course does not meet requirements for the biological sciences major.

Equivalent Course(s): CHSS 37900, CHDV 23930, NCDV 27400, HIPS 23900, ANTH 38615, LING 39286, CHDV 33930, BIOS 29286, ANTH 28615, LING 11100, PHIL 32500, PHIL 22500

BPRO 24000. Understanding Wisdom. 100 Units.

Thinking about the nature of wisdom goes back to the Greek philosophers and the classical religious sages, but the concept of wisdom has changed in many ways over the history of thought. While wisdom has received less scholarly attention in modern times, it has recently re-emerged in popular discourse with a growing recognition of its potential importance for addressing complex issues in many domains. But what is wisdom? It's often used with a meaning more akin to 'smart' or 'clever.' Is it just vast knowledge? This course will examine the nature of wisdom-how it has been defined, how its meaning has changed, and what its essential components might be. We will examine how current psychological theories conceptualize wisdom and consider whether, and how, wisdom can be studied scientifically; that is, can wisdom be measured and experimentally manipulated to illuminate its underlying mechanisms and understand its functions? Finally, we will explore how concepts of wisdom can be applied in business, education, medicine, the law, and in the course of our everyday lives. Readings will be drawn from a wide array of disciplines including philosophy, classics, history, psychology, behavioral economics, medicine, and public policy.

Instructor(s): A. Henly, H. Nusbaum Terms Offered: Not offered in 2020-2021

Note(s): See PSYC 24055 The Psychological Foundations of Wisdom.

Equivalent Course(s): HUMA 24005, PSYC 24050, RLST 24050

BPRO 24100. Science and Religion. 100 Units.

In this course, we explore some aspects of the relations between science and religion in Western culture (e.g., Christian, Jewish, Islamic). Questions include: What are science and religion? Are they competing intellectual systems for making sense of the world? What are social institutions? Can they be in conflict with one another? Can they support one another? Each of the instructors treats these questions by examining certain historical episodes and texts to add different perspectives to the material.

Instructor(s): Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

BPRO 24150. Romantic Love: Cultural, Philosophical, and Psychological Aspects. 100 Units.

This double-credit course combines humanistic and social scientific disciplines to examine the phenomenon of romantic love-a 'big problem' in practical, theoretical, and cultural senses. The course starts by comparing representations of romantic love experiences in visual, musical and literary arts and myths. After exploring what may be specific to this form of love, we address two further issues: the role and sources of non-rational experience in romantic love, and the role of romantic love in modern marriage. Illumination of these topics is sought through the discussion of humanistic and social scientific texts and cinematic presentations.

Instructor(s): D. Orlinsky, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Note(s): The class meets for six hours a week.

Equivalent Course(s): CHDV 24150, HUMA 24150, GNSE 24150

BPRO 24160. Love and Tragedy in Tolstoy's Anna Karenina. 100 Units.

Tolstoy's great novel Anna Karenina may be the finest and most compelling depiction in literature of the diverse aspects and outcomes of romantic love. Combining humanistic and social scientific perspectives, this course undertakes an intensive study of the novel to examine the joys and sorrows of romantic love, and the successes and tragedies that follow from it, as well as the aesthetic achievement of the novel as a major work of art. Resources for understanding the development of the novel's characters and the fate of their relationships are drawn from Freud's Introductory Lectures on Psychoanalysis and other works. Bases for a critical appreciation of the novel are drawn from Aristotle's Poetics and Nietzsche's The Birth of Tragedy.

Instructor(s): D. Orlinsky, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): GNSE 24160, HUMA 24160, CHDV 24160

BPRO 24200. Psychoneuroimmunology. 100 Units.

This course covers all aspects of neuroimmunoendocrinology at the molecular, cellular, and organismal and social levels.

Instructor(s): M. McClintock, J. Quintans Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third or fourth-year standing

Note(s): This course does not meet requirements for the biological sciences major.

Equivalent Course(s): PSYC 34100, BIOS 02370, BPRO 44140, PSYC 24150

BPRO 24300. Globalization and Neo-Liberalism. 100 Units.

Developments over the past decade have led a number of former leading enthusiasts of globalization to raise basic criticisms of the neo-liberal paradigm. In doing this, they have echoed and drawn attention to the results of economists and historians whose work undercuts the basic premises of neo-liberalism. This course explicates a varied collection of this work, viewed as a critique and alternative to neo-liberalism, by economic historians (e.g., Hobsbawm, Williams, Arrighi, Polanyi) and economists (e.g., Palley, Taylor, Stretton, Marglin, Eatwell, MacEwan, Blecker, Brenner).

Instructor(s): M. Rothenberg, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): INST 24300

BPRO 24400. Concepts of the Self from Antiquity to the Present. 100 Units.

This seminar explores the evolution of ideas about the nature and formation of selfhood from classical antiquity to the present. Along the way, we look at Greek tragedy, Stoic philosophy, early Christian texts, and the conceptual models of selfhood and self-understanding behind Descartes, Kant, Freud, Foucault, and others. Students should be prepared to deal extensively with scholarship on self, ethics, and community across the fields of philosophy, anthropology, psychology, and social history.

Instructor(s): S. Bartsch, J. Goldstein Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): HIST 20400, CLCV 28100

BPRO 24500. Language and Globalization. 100 Units.

Globalization has been a buzz word in our lives over the past few decades. It is also one of those terms whose varying meanings have become more and more challenging to characterize in a uniform way. The phenomena it names have been associated with important transformations in our cultures, including the languages we speak. Distinguishing myths from facts, this course articulates the different meanings of globalization, anchors them in a long history of socioeconomic colonization, and highlights the specific ways in which the phenomena it names have affected the structures and vitalities of languages around the world. We learn about the dynamics of population contact in class and their impact on the evolution of languages.

Instructor(s): S. Mufwene Terms Offered: Not offered in 2020-2021

Note(s): Not offered in 2018-2019

Equivalent Course(s): ANTH 47905, LING 37500, CRES 37500, ANTH 27705, CRES 27500, LING 27500

BPRO 24600. Moments in Atheism. 100 Units.

Atheism is as old as religion. As religion and its place in society have evolved throughout history, so has the standing and philosophical justification for non-belief. This course examines the intellectual and cultural history of atheism in Western thought from antiquity to the present. We are concerned with the evolution of arguments for a non-religious worldview, as well as with the attitude of society toward atheism and atheists.

Instructor(s): S. Bartsch, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Note(s): Not offered in 2018-2019

Equivalent Course(s): CLCV 22400, HIST 29402, RLST 25200

BPRO 24700. From Neo-Liberalism to Neo-Imperialism. 100 Units.

This course examines the thesis advanced by a number of recent thinkers on the organic ties between neo-liberal doctrine and the rise of a new imperialism. In *False Dawn*, noted conservative political theorist John Gray gives a critique of the global free market. In *Capital Resurgent: Roots of the Neoliberal Revolution*, two important left critics, economists Gerard Dumenil and Dominique Levy, investigate the economic roots of neo-liberalism. Finally, in reading two recent works by the economic geographer David Harvey (*A Brief History of Neo-Liberalism* and *The New Imperialism*) we consider in depth the link between neo-liberalism and imperialism.

Instructor(s): M. Rothenberg, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): INST 24700

BPRO 24800. Complex Problem: World Hunger. 100 Units.

Few of our policymakers are experts in economics, agronomy, food science, and molecular biology, yet all of these disciplines are essential for developing strategies to end world hunger. Choosing one country as a test case, we look at the history, politics, governmental structure, population demographics, and agricultural challenges. We then study the theory of world markets, global trade, and microeconomics of developing nations, as well as the promise and limitation of traditional breeding and biotechnology.

Instructor(s): J. Malamy, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third or fourth-year standing

Equivalent Course(s): SOSC 26900, BIOS 02810, ENST 24800

BPRO 24900. Biology and Sociology of AIDS. 100 Units.

This interdisciplinary course deals with current issues of the AIDS epidemic.

Instructor(s): H. Pollack, J. Schneider Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Note(s): This course does not meet requirements for the biological sciences major.

Equivalent Course(s): SSAD 65100, BIOS 02490

BPRO 25000. Images of Time: Japanese History Through Film. 100 Units.

Focusing attention on the emerging nexus between audio-visual media and historical studies, this course deals with theories of time, history, and representation while making those ideas and problems concrete through a study of the way in which history in Japan has been mediated by the cinema. A close reading of a wide range of films produced in and about Japan in tandem with primary and secondary materials on theories of time, images, and national history highlights the historicity and history of both film and Japan. All work in English.

Instructor(s): J. Ketelaar, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing required; knowledge of Japanese not required.

Equivalent Course(s): EALC 24601, CMST 24906, HIST 24603

BPRO 25100. Evolutionary Theory and Its Role in the Human Sciences. 100 Units.

The course's aim is two-fold: (1) an examination of the origins and development of Darwin's theory from the early nineteenth century to the present; and (2) a selective investigation of the ways various disciplines of the human sciences (i.e., sociology, psychology, anthropology, ethics, politics, economics) have used evolutionary ideas.

Instructor(s): R. Richards, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): HIST 25004, HIPS 25801, PHIL 25123

BPRO 25200. Body and Soul: Approaches to Prayer. 100 Units.

Why do we pray? Why do we experience prayer practice as reaching out towards an intentional being whom we cannot (except in representation) touch, see, or hear? This course approaches an answer to that question by looking at the way we pray, particularly in a Christian context. What kinds of bodily engagement do we find in prayer; what impact might prayer practice have upon our bodies; what bodily features of prayer might help to explain why its practice has been so compelling to so many for so many years?

Instructor(s): Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): RLST 28800

BPRO 25400. Jews and Christians in the Middle East. 100 Units.

Minorities around the world today invite questions about the prospects of pluralism and tolerance in modern societies. This course will explore these long-studied questions by examining the case of Jews and Christians in the Middle East, as well as its tangled histories with Muslims and Jews in Mediterranean Europe. Co-taught by a historian of Jews in Iraq and an anthropologist of Copts in Egypt, we will explore histories and ethnographies to consider the political, social, and religious dimensions of minority communities. Our syllabus also blends various literary genres and forms of media with academic scholarship to explore various voices in the conversation about Jews and Christians in the Middle East—from novels, films, and poetry to theological tracts and political treatises. We raise the following questions throughout our course: What terms for coexistence have governed Jews, Christians, and Muslims in the Mediterranean? How are religious practices and traditions linked to histories of rule? How do ideologies (e.g., nationalism, secularism, communism) shape the way minorities understand themselves and how society understands them?

Instructor(s): O. Bashkin, A. Heo Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): RLST 20231, JWSC 26215, NEHC 20585

BPRO 25500. Art and Human Rights. 100 Units.

This seminar-style course will explore historical and contemporary interventions in visual and performative artistic practices with human rights. Co-taught by a historian and theater-maker, the course will consider various paradigms for looking at how artists work on human rights. Course work will include critical readings, viewings of artistic work, and direct conversations with artists. Students will also participate in a multi-day summit on campus (April 29-May 2) that will bring distinguished artists from throughout the world to address the question 'What is an artistic practice of human rights, conceptually, aesthetically and pragmatically?' Students will be given the option to produce either an academic or artistic final project.

Instructor(s): M. Bradley, L. Buxbaum Danzig Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third or fourth-year standing

Equivalent Course(s): ARTV 20009, HIST 29906, HMRT 25502, TAPS 25510

BPRO 26030. The Nuclear Age. 100 Units.

Seventy-five years ago a group of scientists launched the first sustained nuclear chain reaction, commonly known as CP-1, at the University of Chicago under Stagg Field. This course will be part of the commemoration and reflection taking place across the University this fall. Its goal will be to explore the ensuing Nuclear Age from different disciplinary perspectives by organizing a ring-lecture. Each week's lecture, delivered by faculty from fields across the university (for instance, Physics, Biomedicine, Anthropology, and English), will be followed by a discussion section to synthesize and integrate not only the material from the weekly lectures, but the many events happening at the University this fall. CP-1 was not only a scientific achievement of the highest magnitude, but also a civilization-changing event that remains at the boundary of the thinkable.

Instructor(s): D. L. Nelson Terms Offered: Not offered in 2020-2021

Prerequisite(s): Second, third, or fourth-year standing.

Equivalent Course(s): HIST 25424, SIGN 26031, ENGL 26030

BPRO 26050. Memory, Commemoration & Mourning. 100 Units.

This course focuses on the manner in which we make use of the past, the personal past, the collective past, and the place of social and historical change in retelling and rewriting life-history and history. The course begins with a discussion of memory, conceptions of the personal and historic past, and such related issues as nostalgia, mourning, and the significance of commemoration in monument and ritual. These issues are explored in a number of topics such as twentieth-century war memorials, high school and college reunions, and the Holocaust and its representation in contemporary European society.

Instructor(s): Staff Terms Offered: Not offered in 2020-2021

Equivalent Course(s): FNLD 23312, AASR 30001, PSYC 25450, CHDV 27102, RLST 28102

BPRO 26102. War. 100 Units.

In this course, we ask such questions as: Why do humans go to war? What is the experience of war like? How does war affect the individual and his society? What is a just war? An unjust war? Can we conceive of a world without war? We read and discuss texts such as Homer's *The Iliad*, Thucydides' *History of the Peloponnesian War*, Tolstoy's *War and Peace*,

Jonathan Shay's *Achilles in Vietnam*, and Glen Gray's *The Warriors*. The readings serve primarily as a starting point for the discussion of the above questions and any other issues raised by the class that are related to war.

Instructor(s): Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): HUMA 26300

BPRO 26300. Globalization: History and Theory. 100 Units.

This course makes sense of globalization as a historical phenomenon focusing primarily on the long twentieth century, but with a look back into the 'deep history' of the making of the contemporary world. While the course has a theoretical bent, it should be taken as an introduction into modern history. It has three goals in particular: (1) It introduces the main concepts and theories of globalization. (2) It explores key moments, processes, and events in the annals of globalization. (3) It highlights the nature of contentions over the terms of global order.

Instructor(s): M. Geyer, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): HIST 29901

BPRO 26400. Movies and Madness. 100 Units.

We propose to investigate representations of madness in fictional, documentary, and experimental film. We divide the topic this way to emphasize the different dimensions of cinematic address to questions of mental illness, and the ways that film genres imply distinct formal and epistemological conventions for the representation of insanity. Documentary ranges from instructional and neutral reportage, to polemical, essayistic interventions in the politics of psychiatry and the asylum, the actual conditions of mental illness in real historical moments. Documentary also includes the tendency in new media for 'the mad' to represent themselves in a variety of media. With experimental film, our aim will be to explore the ways that the cinematic medium can simulate experiences of mania, delirium, hallucination, obsession, depression, etc., inserting the spectator into the subject position of madness. We will explore the ways that film techniques such as shot-matching, voice-over, montage, and special effects of audio-visual manipulation function to convey dream sequences, altered states of consciousness, ideational or perceptual paradoxes, and extreme emotional states. Finally, narrative film we think of as potentially synthesizing these two strands of cinematic practice, weaving representations of actual, possible, or probable situations with the special effects of mad subjectivity. Our emphasis with narrative film will be to focus-not simply on the mentally ill subject as hero.

Instructor(s): W. J. T. Mitchell, J. Hoffman Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): ENGL 38703, ARTV 26411, CMST 35550, ARTV 36411, ARTH 36905, CMST 25550, ARTH 26905, ENGL 28703

BPRO 26500. Picturing Words/Writing Images (Studio) 100 Units.

What is the relationship between reading and looking? Images in mind and images on paper-words in mind and on the page-we will explore the intersection of these different ways to think, read, and look, as we make poems, drawings, paintings, etc., in class. We will investigate the problem of representing language as it is expressed in the work produced in class. Studying works by contemporary visual artists like Jenny Holzer and Ann Hamilton, and practicing poets such as Susan Howe and Tom Phillips will inform our investigation. The course will feature visits to our studio by contemporary poets and visual artists, who will provide critiques of student work and discussion of their own ongoing projects. These visitors will help to frame our artistic and literary practice within the ongoing conversation between word and image in modern culture. We will ask, what are the cognitive, phenomenological, social, and aesthetic consequences of foregrounding the pictorial/visual aspect of alphabetical characters? (C, H)

Instructor(s): J. Stockholder, S. Reddy Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing. Previous experience in an arts studio or creative writing course recommended, but not required.

Equivalent Course(s): CRWR 26341, ENGL 34319, ARTV 26901, ARTV 36901, ENGL 24319, CRWR 46341

BPRO 26600. Antonioni's Films: Reality and Ambiguity. 100 Units.

In this in-depth study of several Antonioni films, our eye is on understanding his view of reality and the elements of ambiguity that pervade all of his films. Together, as a film scholar and physicist, we bring out these aspects of his work together with his unique cinematic contributions. This course introduces students to this poet of the cinema and the relevance of Antonioni's themes to their own studies and their own lives.

Instructor(s): Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third or fourth-year standing

Equivalent Course(s): ARTH 28904, HUMA 26600, CMST 26801

BPRO 26700. Mythical History, Paradigmatic Figures: Caesar, Augustus, Charlemagne, Napoleon. 100 Units.

What is the process by which some historical figures take on mythical proportions? This course examines four case studies of conquerors who attained sovereign power in times of war (conquest, civil war, revolution), who had a foundational role in empire-building, and who consciously strove to link themselves to the divine and transcendent. Their immense but ambiguous legacies persist to this day. Although each is distinct as a historical individual, taken together they merge to form a paradigm of the exceptional leader of epic proportions. Each models himself on exemplary predecessors: each invokes and reinvents myths of origin and projects himself as a model for the future. Basic themes entail mythic history, empire, the exceptional figure, modernity's fascination with antiquity, and the paradox of the imitability of the inimitable.

Instructor(s): M. Lowrie, R. Morrissey Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): FREN 36701, CLAS 36713, SCTH 30411, FNDL 22912, FREN 26701, CLCV 26713

BPRO 26750. Anxiety. 100 Units.

The phenomenon of anxiety emerged as one of the leading psychological disorders of the 20th and 21st centuries. Worrying ourselves into the realm of the pathological, we now have a requisite measure of anxiety for every prescribed stage of life. But why are we so anxious? Considering its prevalence in everyday life, the concept and theories of anxiety have been employed surprisingly seldom as a way into film, fiction, and art. In this course we examine the modern origin of contemporary discourses specific to anxiety and their unique manifestation in cultural artifacts. To understand the complex of anxiety in the so-called Western world, we rely on the theories of Søren Kierkegaard, Martin Heidegger, Sigmund Freud, Jacques Lacan, and Alenka Zupančič; fiction by Stoker, Schnitzler, Kafka, and Sebald; and film by Haneke, Kubrick, Ophüls, and Hitchcock. We will also have guest speakers from the fields of clinical psychiatry, geriatric medicine, philosophy, and comparative anthropology.

Instructor(s): M. Sternstein, A. Flannery Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Note(s): English majors: This course fulfills the Theory (H) distribution requirement.

Equivalent Course(s): GRMN 26715, ENGL 24260, MAPH 36750

BPRO 27000. Perspectives on Imaging. 100 Units.

Taught by an imaging scientist and an art historian, this course explores scientific, artistic, and cultural aspects of imaging from the earliest attempts to enhance and capture visual stimuli through the emergence of virtual reality systems in the late twentieth century. Topics include the development of early optical instruments (e.g., microscopes, telescopes), the invention of linear perspective, the discovery of means to visualize the invisible within the body, and the recent emergence of new media. We also consider the problem of instrumentally mediated seeing in the arts and sciences and its social implications for our image-saturated contemporary world.

Instructor(s): P. La Riviere, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third or fourth-year standing

Note(s): This course does not meet requirements for the biological sciences major.

Equivalent Course(s): CMST 27300, ARTH 26900, ARTH 36900, BIOS 02927, HIPS 24801, CMST 37300

BPRO 27600. Creation and Creativity. 100 Units.

This seminar explores several creation stories from anthropological, literary, philosophical, and psychological perspectives. We compare the accounts of the beginning in Genesis, Hesiod's Theogony, Ovid's Metamorphoses, Bhagavad Gita, the Maya's Popol Vuh, and other sources, including Native American ones. We explore the ways cosmic creation has been imagined in world culture. We also delineate human literary creativity and ask about the relationship between individual creativity and the cultural myths of creation. We consider at least one modern theory of the beginning of the universe.

Instructor(s): Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third or fourth-year standing

Equivalent Course(s): ANTH 27610

BPRO 27800. Science and Christianity. 100 Units.

Both Christianity and science have had a critical impact on the development of Western society. Can they continue to flourish, enriching each other, or are they fundamentally at odds and in competition? This seminar will examine the major points of potential tension and synergy between science and Christianity, with the goal of open discussion and an eye on helping students develop their own ideas. We will consider themes such as evolution, extraterrestrial intelligence, consciousness, and particulars of the Christian faith.

Instructor(s): D. Abbot, D. Fabrycky, L. Schweitz. Terms Offered: Not offered in 2020-2021; May be offered in 2021-2022

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): RLST 27801

BPRO 27900. Climate Change in Media and Design. 100 Units.

If meteorological data and models show us that climate change is real, art and literature explore what it means for our collective human life. This is the premise of many recent films, novels, and artworks that ask how a changing climate will affect human society. In this course, we will examine the aesthetics of climate change across media, in order to understand how narrative, image, and even sound help us witness a planetary disaster that is often imperceptible. Rather than merely analyzing or theorizing various futures, this course will prepare students in hands-on methods of 'speculative design' and 'critical making.' Each Tuesday, we will study how art and literature draw on the specific capacities of written and visual media to represent climate impacts, and how new humanities research is addressing climate change. Each Thursday, we will participate in short artistic exercises that explore futures of each area. These exercises include future object design, bodymapping and story circles, tabletop gameplay, and serious game design. Throughout the quarter, guest speakers from across the humanities, sciences, and social sciences will visit the class to speak about how their disciplines are working to understand and mitigate climate impacts. The most substantial work of the quarter will be an ambitious multimedia or transmedia project about one of the core course topics to be completed in a team.

Instructor(s): P. Jagoda, B. Morgan Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): MAAD 21900, ENGL 27904, ENST 27900, CMST 27814

BPRO 28000. Terror, Religion, and Aesthetics. 100 Units.

Through our contemporary experiences of terrorist acts, we apprehend the no-citizens' land of life without a social contract, of the violent 'state of nature' among people. In varied genres (e.g., poems, plays, novels, memoirs, essays), we engage with the transformative powers of diverse aesthetics (e.g., catharsis, the sublime, theatre of cruelty, realism, fable, satire) and of

religious faiths (e.g., deism, Hinduism, Judaism, Islam, Sufism, Buddhism) to counteract terror and redeploy our civil status in society.

Instructor(s): M. Browning, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): HMRT 28801, RLST 23401

BPRO 28100. What is Enlightenment? 100 Units.

What is enlightenment? How does one become enlightened, and who is enlightened? In Euro-American civilization, the eighteenth-century Age of Enlightenment championed the powers of human reason against religion and superstition to achieve scientific progress. Buddhism in the nineteenth century was represented by the heirs of Enlightenment as a religion for the Enlightenment to the point of not being a religion at all. Both traditions offer pathways to freedom (or liberation?) that draw on our rational capabilities, and both sponsor the production of knowledge that re-vision our place in the world. But they seem to be opposed: how could reason reject 'religious' beliefs but also take part in 'religious' traditions that aim to bring certain kinds of persons into being? We compare the mental models, discourses, methods of analysis, world-images, and practices of these traditions of enlightenment to assess the kinds of disciplines that their theoreticians and practitioners acquire and use.

Instructor(s): M. Browning, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): SALC 27601, HUMA 28109, RLST 23403

BPRO 28200. Narrating Migration. 100 Units.

Human migration is one of the most pressing global problems of our time, though it is not a new phenomenon. It has shaped societies throughout time, and the degree to which it is perceived as a 'problem' or an 'opportunity' changes radically according to circumstances and ideologies. In this course, we will analyze the different ways in which migration has been perceived, understood, and experienced. We will focus on two intense episodes in the global history of migration: migration from early nineteenth-century Britain; and migration to late 20th and 21st-century America. Our emphasis throughout will be on the ways in which migration is narrated: the stories that societies tell about the migration of themselves and others. We will cover a wide range of migration narratives, including those of creative writers and artists, and will consider them through the lenses of literary criticism, history, theory, and also artistic practice itself.

Instructor(s): J. McDonagh, V. Tran Terms Offered: Not offered in 2020-2021; May be offered in 2021-22

Prerequisite(s): Third or fourth-year standing

Equivalent Course(s): ENGL 28200

BPRO 28300. Disability and Design. 100 Units.

Disability is often an afterthought, an unexpected tragedy to be mitigated, accommodated, or overcome. In cultural, political, and educational spheres, disabilities are non-normative, marginal, even invisible. This runs counter to many of our lived experiences of difference where, in fact, disabilities of all kinds are the 'new normal.' In this interdisciplinary course, we center both the category and experience of disability. Moreover, we consider the stakes of explicitly designing for different kinds of bodies and minds. Rather than approaching disability as a problem to be accommodated, we consider the affordances that disability offers for design. This course begins by situating us in the growing discipline of Disability Studies and the activist (and intersectional) Disability Justice movement. We then move to four two-week units in specific areas where disability meets design: architecture, infrastructure, and public space; education and the classroom; economics, employment, and public policy; and aesthetics. Traversing from architecture to art, and from education to economic policy, this course asks how we can design for access.

Instructor(s): M. Friedner, J. Iverson Terms Offered: Not offered in 2020-2021; May be offered in 2021-2022

Prerequisite(s): Third or fourth-year standing

Equivalent Course(s): CHDV 28301, MUSI 25719, HLTH 28301, MAAD 28300

BPRO 28500. Sex and Ethics. 100 Units.

Sex is a big problem. How do we think about sex in proximity to considering the ethics of risk, harm, and the potential for good? Developing an account specifically of an ethics of sex requires thinking about the place of sex and sexual vulnerability in social life with an eye toward understanding what's good and what might count as abuses, violations, disruptions, or deprivations of specifically good things about sex. In popular discussion, for example, 'consent' often demarcates ethically good sex from bad sex. This course inquires whether consent is an adequate metric for sexual ethics; if it is necessary or sufficient; if certain factors (e.g., age, gender, violence) vitiate its normative force; and whether its legal definition conflicts, coheres with, or contributes to its general cultural reception. These issues require us to think about the ways people do, do not, and cannot know what they're doing in sex, and complicate the aspiration to have an ethics in proximity to sex. This year's version of the course focuses on political theory/policy/popular scandal in relation to aesthetics and sex theory archives. We talk about sex in proximity to modes of comportment in love, scandal, prostitution, stranger intimacy, political freedom and discipline, impersonality, and experimentality.

Instructor(s): L. Berlant, Staff Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing

Equivalent Course(s): GNSE 28502, ENGL 28500, PLSC 21901

BPRO 28600. Health Care and the Limits of State Action. 100 Units.

In a time of great human mobility and weakening state frontiers, epidemic disease is able to travel fast and far, mutate in response to treatment, and defy the institutions invented to keep it under control: quarantine, the cordon sanitaire, immunization, and the management of populations. Public health services in many countries find themselves at a loss in dealing with these outbreaks of disease, a deficiency to which NGOs emerge as a response (an imperfect one to be sure).

Through a series of readings in anthropology, sociology, ethics, medicine, and political science, we will attempt to reach an understanding of this crisis of both epidemiological technique and state legitimacy, and to sketch out options.

Instructor(s): H. Saussy, M. Schwartz Terms Offered: Not offered in 2020-2021

Prerequisite(s): Third- or fourth-year standing. This course does not meet requirements for the biological sciences major.

Equivalent Course(s): HMRT 28602, CMLT 28900, BIOS 29323

BPRO 28700. Alternate Reality Games: Theory and Production. 100 Units.

Games are one of the most prominent and influential media of our time. This experimental course explores the emerging genre of 'alternate reality' or 'transmedia' gaming. Throughout the quarter, we will approach new media theory through the history, aesthetics, and design of transmedia games. These games build on the narrative strategies of novels, the performative role-playing of theater, the branching techniques of electronic literature, the procedural qualities of video games, and the team dynamics of sports. Beyond the subject matter, students will design modules of an Alternate Reality Game in small groups. Students need not have a background in media or technology, but a wide-ranging imagination, interest in new media culture, or arts practice will make for a more exciting quarter.

Instructor(s): Patrick Jagoda, Heidi Coleman Terms Offered: Not offered in 2020-2021; May be offered in 2021-22

Prerequisite(s): Third- or fourth-year standing. Instructor consent required. To apply, submit writing through online form at <http://bigproblems.uchicago.edu>; see course description. Once given consent, attendance on the first day is mandatory.

Questions: mb31@uchicago.edu.

Note(s): Note(s): English majors: this course fulfills the Theory (H) distribution requirement.

Equivalent Course(s): ENGL 32314, ARTV 20700, TAPS 28466, ENGL 25970, MAAD 20700, CMST 25954, CMST 35954, ARTV 30700

BPRO 29000. Energy and Energy Policy. 100 Units.

This course shows how scientific constraints affect economic and other policy decisions regarding energy, what energy-based issues confront our society, how we may address them through both policy and scientific study, and how the policy and scientific aspects can and should interact. We address specific technologies, both those now in use and those under development, and the policy questions associated with each, as well as with more overarching aspects of energy policy that may affect several, perhaps many, technologies.

Instructor(s): S. Berry, G. Tolley Terms Offered: TBD. Not offered in 2020-2021

Prerequisite(s): PQ: Third- or fourth-year standing. For ECON majors who want ECON credit for this course (ECON 26800): PQ is ECON 20100.

Equivalent Course(s): ENST 29000, PPHA 39201, PSMS 39000, ECON 26800, PBPL 29000, CHSS 37502

BPRO 29100. What Genomes Teach About Evolution. 100 Units.

This course does not meet requirements for the biological sciences major. The twenty-first century opened with publication of the draft human genome sequence, and there are currently over 3,000 species whose genomes have been sequenced. This rapidly growing database constitutes a test of nineteenth- and twentieth-century theories about evolution and a source of insights for new theories. We discuss what genome sequences have to teach us about the relatedness of living organisms, the diversity of cellular life, mechanisms of genome change over evolutionary time, and the nature of key events in the history of life on earth. The scientific issues are related to the history of evolutionary thought and current public controversies about evolution.

Instructor(s): J. A. Shapiro, M. Long Terms Offered: Not offered in 2020-2021

Prerequisite(s): Consent of instructor. This course does not meet requirements for the biological sciences major.

Equivalent Course(s): BIOS 29319

BPRO 29200. Global Energy & Climate Challenge: Economics, Science & Policy. 100 Units.

The global energy and climate challenge is one of the most important and urgent problems society faces. Progress requires identifying approaches to ensure people have access to the inexpensive and reliable energy critical for human development, without causing disruptive climate change or unduly compromising health and the environment. The course pairs technical and economic analysis to develop an understanding of policy challenges in this area. Lecture topics will include the past, present, and future of energy supply and demand, global climate change, air pollution and its health consequences, selected energy technologies such as solar photovoltaics, nuclear power, unconventional oil and gas, and an analysis of theoretical and practical policy solutions in developed and emerging economies.

Instructor(s): M. Greenstone, J. Deutch Terms Offered: Not offered in 2020-2021

Prerequisite(s): PQ: Third- or fourth-year standing in the College.

Equivalent Course(s): ENST 28220, ECON 26730, PPHA 39905, PBPL 29200

BPRO 29660. Colloquium: Digital Humanities/Digital History. 100 Units.

This course will be an interdisciplinary introduction to digital humanities broadly writ with an emphasis on literary and historical developments over long periods of time (*longue durée*), and across large textual, cultural, and archival databases. Questions we will address include how do we constitute and navigate these collections? How do we conceive of digital tools in ways that speak to humanists and humanistic social scientists? How do we incorporate these tools and approaches into discursive argumentation and other traditional humanistic and historical modes of inquiry. No technical background is required, but basic computer skills and reading knowledge of French would be welcome. History concentrators may direct their coursework in this class toward the completion of a pre-BA essay for the major using primary sources.

Instructor(s): C. Gladstone, R. Morrissey, J. Sparrow Terms Offered: Not offered in 2020-2021

Prerequisite(s): History majors must take a History colloquium in their third year.

Equivalent Course(s): FREN 39661, HIST 29661, HIST 39661, FREN 29661

Chicago Studies

Department Website: <http://chicagostudies.uchicago.edu>

Chicago Studies (<http://chicagostudies.uchicago.edu/>) offers curricular and co-curricular opportunities to discover, study, engage with, and positively impact the diverse communities of our world-class city. Working with campus- and city-wide partners, it supports the College community in encountering and learning with Chicagoans from all walks of life. In so doing, it facilitates the development of reciprocal, respectful collaborations between campus and city that empower students in the College to deeper critical inquiry in ways that enrich and build upon their fields of study. Its offerings are designed to create flows of scholarly and civic inspiration between the life of the city and all disciplines represented in the College, and to develop the practice of local citizenship among students and instructors alike. Chicago Studies develops intensive, place-based academic encounters, research experiences, and opportunities for direct engagement that help students think critically and substantively about urban issues more broadly.

Chicago Studies partners with the Program on the Global Environment, Office of Civic Engagement, UChicago Arts, the Mansueto Institute for Urban Innovation, and the Institute of Politics to curate co-curricular experiences that introduce students and faculty to events, resources, and organizations throughout the Chicago region. Students in the College can also obtain advising and resources to connect their programs of study with partners and communities across the city. Chicago Studies also works closely with Career Advancement, the Institute of Politics, the Pozen Family Center for Human Rights, and Office of Civic Engagement—sponsored programs such as the University Community Service Center and the Neighborhood Schools Program to connect students with substantive internship and research fellowship opportunities with organizations and institutions that shape the life of the city.

Programmatically, Chicago Studies offers 'Design Your Chicago (<http://chicagostudies.uchicago.edu/design/>),' a series of workshops that teaches students to use design thinking to develop personal strategies for engaging and impacting the city; sponsors regular Research Roundtables on Chicago-relevant issues to introduce College students to potential mentors, methodologies for urban research, and Chicago research topics; co-sponsors (with the University of Chicago Library) a data portal (<http://chicagostudies.uchicago.edu/research/>) to collect and promote Chicago-focused datasets and research, including student research, to further promote the study of the city; offers an annual Undergraduate Research Prize and colloquium to highlight the best scholarship produced by University of Chicago undergraduates on the history, politics, and cultural life of Chicago; and publishes the *Chicago Studies* annual, a professionally edited and designed journal of exemplary student research and writing on the city. A subcommittee of the Chicago Studies Faculty Advisory Board considers submissions, which may be from any discipline, for both the Prize and the Annual each spring.

Chicago Studies Courses

Chicago Studies supports students and course instructors in studying Chicago both in and beyond the classroom by supporting instructors in developing and offering Chicago-focused courses across the College, and sponsoring special curricular opportunities such as the Chicago Studies Quarter (see below). Some of these are offered by Teaching Scholars, practitioners hired by Chicago Studies from organizations and cultural institutions around the city to offer unique courses in their areas of expertise. Chicago Studies supports Chicago-based teaching with course/instructional design consultation, micro-grants, and logistical support for experiential learning, and course development grants for University of Chicago faculty and course instructors.

Chicago Studies designates courses that explore all aspects of Chicago's ecology, culture, politics, history, social structure, and economic life. Many of these courses are cross-listed between departments, meaning many of them may fulfill requirements in multiple academic programs; most are integrated into the Environmental and Urban Studies major. Some of them may also contribute to students' completion of the academic requirements of the College's interdisciplinary Certificate in Chicago Studies (<http://chicagostudies.uchicago.edu/certificate/>) (see below). Chicago Studies publishes thematic listings of such courses each term prior to pre-registration on the Chicago Studies website (<http://chicagostudies.uchicago.edu/classes/>).

Chicago Studies Quarters

The Chicago Studies Quarters offer a cohesive set of courses that join classroom instruction with experiential learning opportunities, using the city and the region as a site of inspiration and instruction.

The Chicago Studies Quarter (CSQ) (<http://chicagostudies.uchicago.edu/quarter/>) is a selective, quarter-long academic program that allows a small cohort of students to devote an entire term to the intensive study and exploration of the distinctive folkways and civic codes that distinguish Chicago as a world city. Admitted students enroll in three interrelated courses with a common theme, taught by distinguished scholars in various disciplines. Like Study Abroad courses, CSQ courses utilize excursions within the city, guest speakers, and engagement with civic groups and leaders to enrich class readings and assignments. Participants in the CSQ are required to take all three course offerings, but may register for a fourth course of their choosing provided it does not conflict with the required classes or the mandatory excursions held on Fridays.

Chicago Studies Quarter: Calumet focuses on topics of human land use in the Calumet Region just south and east of the city. It is a full-time, one-quarter experience intended to help students bridge theory and practice in environmental studies. The program features four integrated courses, projects, field trips, guest lectures, and presentations, and is offered every other year in the spring term (even years only).

The Chicago Studies Quarters are designed for undergraduates in good academic standing who have completed at least two quarters of study in the College. While the program stipulates no minimum grade-point average, an applicant's transcript should demonstrate that the applicant is a serious student who will make the most of this opportunity. The Chicago Studies Quarters are open to University of Chicago undergraduate students only; applications from outside the University are not accepted. For more information, please contact Christopher Skrable (cskrable@uchicago.edu), Director of Chicago Studies & Experiential Learning in the College.

Interdisciplinary Certificate in Chicago Studies

The College's interdisciplinary Certificate in Chicago Studies (<http://chicagostudies.uchicago.edu/certificate/>) recognizes the meaningful integration of academic inquiry with positive, impactful engagement in Chicago. The certificate is available to students in any field of study; the specific fulfillment of its requirements (below) is up to the individual student, with close advising and support from Chicago Studies' team. Students may choose to focus their certificate on discipline-based, academic study of the city; pre-professional experience with Chicago institutions; deep engagement with a particular community; or social change.

Students may begin pursuing the Chicago Studies Certificate at any time during their College careers. This will require an initial (and highly preliminary) proposal for how one hopes to fulfill the requirements and an advising session to discuss the plan and resources available to support it. That mandatory advising is provided by the Chicago Studies staff, with a second required meeting before proposal of the capstone project.

Students who complete the certificate will have that designated on their transcript. The transcript designation and the certificate itself are standalone recognitions, conferred by the College and its partners without reference to students' formal degree programs. However, completion of the Chicago Studies Certificate does fulfill the internship/field study requirement of the Environmental and Urban Studies major.

The Chicago Studies Certificate Program includes the following components:

1. Introductory/Preparatory Experiences ('Modules,' at least 3)
2. Chicago-Focused Courses (at least 3)
3. Direct Community Engagement (at least 200 hours)
4. Capstone Project

1. Introductory/Preparatory Experiences ('Modules,' at least 3)

These not-for-credit, non-curricular introductory experiences—which may be on- or off-campus—should expose students to local civic actors, leadership and research skills, and Chicago social issues. As a first stage of the certificate, students must identify and participate in three such 'experiments in Chicago-ing' to help them frame, focus, and reflect on the kind of impact they hope to have as engaged scholars.

A list of possible/previously pursued experiences may be found on the Chicago Studies website (<https://chicagostudies.uchicago.edu>). Existing programs sponsored by Chicago Studies partners (both internal and external to the University) may fulfill one or more of these requirements; students should discuss this during their initial advising appointment.

2. Chicago-Focused Courses (at least 3)

The certificate requires completion of three Chicago-focused courses with a C– or above. Successful completion of any of the Chicago Studies Quarters will satisfy this requirement, as will completion of an approved sequence of courses drawn from the list of Chicago Studies courses. In some cases, special permission may be granted for inclusion of one or more courses outside the cluster. Students not completing a formal Chicago Studies Quarter will need to propose and receive faculty approval for their chosen theme and receive subsequent approvals for each course chosen along the way.

Petitions should be made in advance of enrollment and will be evaluated on a case-by-case basis, in relation to the petitioner's stated rationale for including specific courses in their program of study and engagement. The General Petition Form (<https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/GeneralPetition.pdf>) is available on the College website and should be directed to Sabina Shaikh (sabina@uchicago.edu) (Sabina@uchicago.edu), faculty director for Chicago Studies. Advising on this academic component and selection of appropriate courses is available; visit the Chicago Studies website (<http://chicagostudies.uchicago.edu/classes/>) for current listings of Chicago-focused courses.

3. Direct Community Engagement

Certificate recipients must demonstrate a sustained, impactful engagement with Chicago's diverse communities in the following ways:

- complete at least 200 hours of community-benefiting engagement in Chicago; AND
- receive a positive recommendation from a community-based supervisor of or partner in their engagement; AND
- articulate both academic learning and skills development from this experience and its relevance to the student's capstone project in a significant way.

Advising on the selection of appropriate engagement opportunities is available from the Chicago Studies team (<http://chicagostudies.uchicago.edu/people/>). Some examples of existing opportunities that could fulfill this program requirement include:

- 200+ hours of documented volunteer engagement on a single community issue through leadership in a community service recognized student organization
- 200+ hours of student employment with a single community organization or on a single issue through community-based Federal Work-Study
- completion of the University Community Service Center's Summer Links internship and social justice education program
- completion of the Institute of Politics Summer Political Internship (in Chicago)
- completion of a Pozen Family Center Human Rights Internship (in Chicago)

4. Capstone Project

A Capstone Project is a high-impact learning practice that requires students to integrate, apply, and articulate their learning across a sequence of experiences. Many capstones will be completed during the fourth year of study, but it is possible to complete a capstone earlier.

To receive the Chicago Studies Certificate and transcript designation, program participants must successfully produce a major paper, project, or product (e.g., a discipline-based research project, investigative journalism series, creative production, action research product, etc.) that:

- integrates aspects of the student's academic and community-based learning throughout the student's fulfillment of previous certificate components; AND
- takes Chicago either as its focus OR uses it as a significant example (for works focused on broader urban themes); AND
- responds to a community-defined priority or question, including being presented as such to one or more relevant publics.

Advising on and approval of capstone project proposals is run by the Chicago Studies team, which can assist students in identifying appropriate community partners, issues, and audiences. In the case of capstone projects based on or closely related to a student's formal academic work (e.g., a BA thesis), capstone adjudication will assess only the capstone's successful integration of the student's academic and community-based learning, as required for the certificate. Such evaluations should not be taken as direction of the student's formal discipline-based academic research.

In addition to on-campus presentation opportunities provided through Chicago Studies, students should also, whenever possible, directly present their capstones to relevant publics in the broader community as an expression of reciprocal benefit to those whose community-based knowledge has helped to inform their completion.

Questions about the Chicago Studies Certificate Program may be directed to Christopher Skrable (cskrable@uchicago.edu), Director of Chicago Studies & Experiential Learning in the College. Additional information is also available on the Chicago Studies website (<http://chicagostudies.uchicago.edu/certificate/>).

Clinical and Translational Science

Department Website: <https://chess.uchicago.edu/training-and-education/academic-courses> (<https://chess.uchicago.edu/training-and-education/academic-courses/>)

The Committee on Clinical and Translational Science (CCTS) is a freestanding academic unit housed within the Biological Sciences Division. Our mission is to enhance multidisciplinary training in clinical and translational science at the University of Chicago. We seek to offer high-quality curriculum and mentorship to a new generation of researchers who will synthesize social and biological science to significantly advance medical science and practice.

With joint input from the Center for Health and the Social Sciences (<http://chess.bsd.uchicago.edu>) (CHeSS) and the Institute for Translational Medicine (<http://itm.uchicago.edu>), the CCTS mobilizes faculty from across the University to enhance course offerings in clinical and translational science. While most courses offered in CCTS are designed for graduate-level trainees, postdoctoral fellows, and junior faculty, there are also specific courses designed for undergraduate students interested in health and social sciences. For more information contact Kelsey Bogue, Committee Administrator, at kbogue@bsd.uchicago.edu.

Current areas of concentration include:

- Comparative Effectiveness Research
- Translational Informatics
- Health Services Research
- Quality and Safety
- Clinical Research
- Community-Based Research
- Global Health
- Pharmacogenomics

Below is a list of undergraduate courses that have been offered in the past. Refer to the CCTS section of the CHeSS website at chess.uchicago.edu/training-and-education/academic-courses (<https://chess.uchicago.edu/training-and-education/academic-courses/>) for current course offerings and prerequisites for each course.

Examples of Previously Offered Co-Undergraduate/Graduate Courses

CCTS 20400. Health Disparities in Breast Cancer. 100 Units.

Across the globe, breast cancer is the most common women's cancer. In the last two decades, there have been significant advances in breast cancer detection and treatment that have resulted in improved survival rates. Yet, not all populations have benefited equally from these improvements, and there continues to be a disproportionate burden of breast cancer felt by different populations. In the U.S., for example, white women have the highest incidence of breast cancer but African-American women have the highest breast cancer mortality overall. The socioeconomic, environmental, biological, and cultural factors that collectively contribute to these disparities are being identified with a growing emphasis on health disparities research efforts. In this 10-week discussion-based course students will meet twice weekly and cover major aspects of breast cancer disparities.

Instructor(s): E. Dolan, S. Conzen Terms Offered: Winter

Prerequisite(s): BIOS 25108

Equivalent Course(s): GNSE 30408, HLTH 20400, GNSE 20408, CCTS 40400, BIOS 25327

CCTS 20500. Machine Learning & Advanced Analytics for Biomedicine. 100 Units.

The age of ubiquitous data is rapidly transforming scientific research, and advanced analytics powered by sophisticated learning algorithms is uncovering new insights in complex open problems in biology and biomedicine. The goal of this course is to provide an introductory overview of the key concepts in machine learning, outlining the potential applications in biomedicine. Beginning from basic statistical concepts, we will discuss concepts and implementations of standard and state of the art classification and prediction algorithms, and go on to discuss more advanced topics in unsupervised learning, deep learning architectures, and stochastic time series analysis. We will also cover emerging ideas in data-driven causal inference, and demonstrate applications in uncovering etiological insights from large scale clinical databases of electronic health records, and publicly available sequence and omics datasets. The acquisition of hands-on skills will be emphasized over machine learning theory. On successfully completing the course, students will have acquired enough knowledge of the underlying machinery to intuit and implement solutions to non-trivial data science problems arising in biology and medicine.

Instructor(s): Ishanu Chattopadhyay Terms Offered: Winter. Not offered every year

Prerequisite(s): Rudimentary knowledge of probability theory, and basic exposure to scripting languages such as python/R is required. This course does not qualify in the Biological Sciences major.

Equivalent Course(s): BIOS 29208, CCTS 40500

CCTS 21005. The Making of the 'Good Physician': Virtue Ethics and the Development of Moral Character in Medicine. 100.00 Units.

This multi-disciplinary course draws insights from medicine, sociology, moral psychology, philosophy, ethics and theology to explore answers to the unique challenges that medicine faces in the context of late modernity: How does one become a 'good physician' in an era of growing moral pluralism and health care complexity? Students will engage relevant literature from across these disciplines to address issues regarding the legitimate goals of medicine, medical professionalism, the

doctor-patient relationship, vocation and calling, the role of religion in medicine, and character development in medical education. The course will first introduce the challenges that moral pluralism in contemporary society presents to the profession of medicine along with the subsequent calls for a renewed pursuit of clinical excellence in today's complex health care system. It will then survey the resurgence of a philosophical discipline (virtue ethics) that has begun to shape contemporary debate regarding what types of 'excellences' are needed for a good medical practice dominated by medical science and technology.

Instructor(s): John Yoon Terms Offered: Autumn Spring Winter

Note(s): This course is limited to those who have been accepted into the Emerging Scholars Cohort in Bioethics (Hyde Park Institute, <https://hydeparkinstitute.org/esc>). Depending on space availability, other students interested in enrolling will need prior approval from Course instructor(s). This course is a yearlong course with several 2-hour lecture discussions throughout the year, 2 all-day Saturday sessions (Fall/Spring), and an off-site practicum. Registration in Autumn, Winter, and Spring Courses is required. The spring quarter course will be worth 50 units.

Equivalent Course(s): MEDC 31005, CCTS 41005

CCTS 21007. Clinical and Health Services Research: Methods and Applications. 100 Units.

This course will introduce the interdisciplinary field of clinically-oriented health services research with a focus on policy-related implications. Through exposure to theoretical foundations, methodologies, and applications, students without significant investigative experience will learn about the design and conduct of research studies. We will cover the integration of research within the stages of translational medicine, and how science conducted across the translational medicine spectrum informs policy through purveyors of clinical services (e.g. physicians, hospitals), government, insurers, and professional societies. We will use the examples of postmenopausal hormone replacement therapy and autologous bone marrow transplantation to illustrate pitfalls in the progression from basic science research to clinical trials leading to diffusion in clinical medicine that can complicate the creation of logical, evidence-based practice guidelines, reimbursement, and clinical practice.

Instructor(s): Greg Ruhnke Terms Offered: Spring

Equivalent Course(s): BIOS 29329, HLTH 21007, PBPL 23007, CCTS 43007

CCTS 21008. Health Systems in Low- and Middle-Income Countries. 100 Units.

Strengthening health systems is imperative to achieving lasting improvements in health. This course provides students with a comprehensive overview of health systems in low- and middle-income countries. We will learn key frameworks and tools to analyze, assess and influence health systems in these contexts. The course is organized around core components of health systems, including service delivery, human resources for health, health financing, supply chain systems, governance, community engagement and information systems. Each class draws upon contemporary case studies from a variety of low- and middle-income countries to illustrate challenges, controversies and opportunities in these contexts. We will examine historical, social and political contexts, and key international, national and local stakeholders that influence health systems presently. We will consider the impact of external shocks, such as conflict, natural disasters, and economic and political crises, on the structure and functioning of health systems. Finally, recognizing the convergence between global and local, we will situate current challenges in the U.S. health system in a global context.

Instructor(s): Veena Sriram Terms Offered: Autumn. Not offered every year.

Prerequisite(s): Open to graduate students and third- and fourth-year undergraduate students. First- and second-year undergraduates interested in taking the course may write to the course instructor for permission.

Equivalent Course(s): CCTS 41008, HLTH 21008

CCTS 33000. Scientists Advancing the Forefront. 000 Units.

In this survey course, leading basic and translational biomedical scientists will review cutting-edge themes that constitute the forefront of medical research. Learners will emerge with a broad understanding of: •

Instructor(s): Erika Claud, Ronald Cohen Terms Offered: Spring Winter. Students who register in fall and spring will earn 50 credit units in spring.

Prerequisite(s): Course open to MS1 students

Note(s): Students should email Kelsey Bogue at kbogue@bsd.uchicago.edu to request permission to enroll.

Equivalent Course(s): MEDC 33000, MOLM 33000

CCTS 40006. Pharmacogenomics: Discovery and Implementation. 100 Units.

Pharmacogenomics is aimed at advancing our knowledge of the genetic basis for variable drug response. Advances in genetic knowledge gained through sequencing have been applied to drug response, and identifying heritable genetic variants that predict response and toxicity is an area of great interest to researchers. The ultimate goal is to identify clinically significant variations to predict the right choice and dose of medications for individuals- 'personalizing medicine.' The study of pharmacogenomics is complicated by the fact that response and toxicity are multigenic traits and are often confounded by nongenetic factors (e.g., age, co-morbidities, drug-drug interactions, environment, diet). Using knowledge of an individual's DNA sequence as an integral determinant of drug therapy has not yet become standard clinical practice; however, several genetics-guided recommendations for physicians have been developed and are highlighted. The ethics and economics of pharmacogenomics are also discussed.

Instructor(s): R. S. Huang, B. Stranger Terms Offered: Spring

Prerequisite(s): Undergraduates (third- and fourth-years only) must have taken BIOS 20187 and are required to email instructors for approval (bstranger@medicine.bsd.uchicago.edu and rhuang@medicine.bsd.uchicago.edu) prior to registering.

Equivalent Course(s): CABI 47510

CCTS 43100. Topics in Global Health. 100 Units.

This course is a continuation of Introduction to Global Health (CCTS 43000). It is designed to address specific medical issues of global significance including maternal and child health, communicable and non-communicable diseases, and emerging diseases; the course will also address the impact of population growth, migration, environmental decay, and humanitarian disasters on health. Finally, the course will discuss research and career opportunities within the field of global health.

Instructor(s): C. S. Olopade Terms Offered: Winter

Prerequisite(s): This course does not meet the requirements for the Biological Sciences major.

Equivalent Course(s): BIOS 29279

Course Clusters

The Course Cluster Program (<https://college.uchicago.edu/academics/college-course-clusters/>) is designed to continue the thematic focus and multidisciplinary perspective of the general education curriculum; to expose students to ideas from the vantage point of different disciplines across the humanities and the social, physical, and biological sciences; to stimulate and cultivate the student's intellectual curiosity and sense of academic adventure; and to help students structure their electives without imposing programmatic strictures and limiting the freedom of intellectual exploration.

Course clusters consist of three or more courses on a common topic or issue that are offered over a span of two to three years. Course clusters can be made up of existing courses or encourage the creation of new courses. Courses within a cluster can have different formats. They can be smaller seminars or larger lecture courses. The only prerequisite is that they have no prerequisites and not be designed primarily for minors/majors (even though they can count towards major requirements).

Please review the College Course Clusters page (<https://college.uchicago.edu/academics/college-course-clusters/>) for updated information regarding the Course Cluster Initiative, including courses belonging to each cluster.

The following are examples of course clusters currently offered:

Climate Change, Culture, and Society

The planetary scale of anthropogenic climate change challenges us to reassess many central questions in the humanities and social sciences from justice and power to truth and art. This course cluster encourages students to explore the problem of climate change from a variety of disciplinary perspectives. Courses in history, political science, classics, English, philosophy, and other disciplines from the social sciences and the humanities complement courses in the physical and biological sciences. In addition to learning about the science of climate change in the latter, the former will ask a host of questions: What were the historical roots of fossil fuel use? What can the human past teach us about our ability to cope with climate change? How will we ensure justice and human rights in the face of a threat that affects poor people and future generations disproportionately? In what ways might literature and art help understand and communicate climate change, and shape our sense of agency and hope in facing an uncertain future?

Economic History, from Sumer to the Global World

The course cluster 'Economic History, from Sumer to the Global World' will propose every year up to three courses in economic history. We wish to cover a broad time span and a wide range of cultures. The courses will put a special emphasis on the methodology of economic history. The students will thus also be able to acquire a deep knowledge of the questions that are currently debated in this field.

History of the Law

The development of law and legal systems is one of the defining hallmarks of societies from antiquity to the present. Abundant written evidence survives from the societies of the ancient Mediterranean, the Near East, South Asia, and East Asia. This cluster of courses will include deep dives into individual legal systems known from ancient societies in Greece, Rome, Babylonia, Assyria, Israel, Egypt, China, and India, as well as comparative investigations informed by historical and anthropological literatures.

Inequality

The problem of inequality has been an abiding concern in the social sciences and humanities. In recent years it has attracted heightened attention and inspired scholarly innovation, fostering real ferment among those seeking to understand the mainsprings of the modern world. To understand such an abiding aspect of social and cultural organization requires a broad set of analytical resources and intellectual perspectives. Drawing on a range of methodologies, students will trace and examine the sources and challenges of inequality and mobility in many of their dimensions, selecting from courses in economics, history, political science, gender and sexuality studies, public policy, and other disciplines across the divisions. The broad, considered lens offered by this approach will allow students in the cluster to understand more fully the dynamics and consequences of inequality in modern culture and society, and its roots in persistent patterns of distribution of wealth, income, education, and social and other kinds of capital.

Urban Design

Urban design concerns the proactive effort to create human settlements of a particular character and quality. The study of urban design is an opportunity to evaluate the difference between ideal and actuality, gaining an understanding of what urban designers are trying to do and why and evaluating the reasons behind apparent successes and failures. Students will explore the history, theory, and practice of urban design from multiple perspectives, from historical surveys to more contemporary investigations of urban interventions and their effect on social change, in courses offered through art history, geographical studies, history, anthropology, sociology, comparative human development, and other disciplines from the social sciences and humanities. Whether urban design is capable of balancing social equity, aesthetic achievement, economic growth, and environmental stewardship is of key interest within the field, practice, and study of urban design. How do we

leverage meaningful public engagement in the urban design process? How do we balance individual expression and a sense of the collective? Students will engage with these fundamental problems in diverse contexts across the cluster.

Parrhesia Program for Public Discourse

Parrhesia Program for Public Discourse Mission

Rooted in the University of Chicago's principles of freedom of expression and academic inquiry, the Parrhesia Program for Public Discourse offers an innovative curriculum in the theory and practice of public discourse and deliberation. It strives to foster open and inclusive public discourse by developing students' abilities to articulate and communicate their ideas effectively, thereby allowing them to engage productively in civic deliberation and dialogue. Theory-driven as well as practice-oriented, the Parrhesia Program for Public Discourse offers courses at multiple levels of instruction, such as courses on the history and theory of free discourse and rhetoric as well as on the principles and practices of public speaking, deliberation, and dialogue. The curriculum aims to develop communicative competence within a wide variety of communities, including academic, professional, and civic. The Parrhesia Program for Public Discourse will be integrated into the College's distinctive undergraduate curriculum and reflects the conviction that open discourse can advance probing and challenging critical thought.

Parrhesia Program for Public Discourse Courses

PARR 13000. Public Speaking: Theory and Practice. 100 Units.

Public Speaking: Theory and Practice emphasizes clear, direct, and concise presentation of complex, specialized, or controversial ideas. Through the study of rhetorical theory and examination of speeches and other public discourse, the course prepares students to communicate in a variety of academic, professional, and civic contexts. Course assignments and exercises actively engage students in the rhetorical process of research, evidence evaluation, argument construction, audience analysis, and presentation preparation and delivery. The course includes three outside of class speaking sessions to be arranged in consultation with students.

Instructor(s): L. Brammer, Ryan Solomon Terms Offered: Autumn Spring Winter

Signature Courses in the College

Signature Courses are intended to introduce College students to exciting themes, ideas, and materials in the humanities and social sciences. They afford unique and memorable learning experiences, exemplary of humanistic inquiry.

They are designed as gateway courses that open up fields and disciplines for further exploration. Thus, Signature Courses have no prerequisites and are open to all College students. While they are conceived as general elective courses, they may count towards departmental major and minor requirements.

Please refer to the **College Signature Courses page** on the College website for the most up-to-date information about Signature Courses being offered.

Stevanovich Institute on the Formation of Knowledge

Department Website: <https://sifk.uchicago.edu/courses> (<https://sifk.uchicago.edu/courses/>)

Stevanovich Institute on the Formation of Knowledge

The Stevanovich Institute on the Formation of Knowledge (SIFK) opened in the fall of 2015 at the University of Chicago as a focal point for scholars to ask, What do we know?

In the current era, this question is more confusing than ever, and answers are hard to come by. We face unreliable news, non-replicable scientific experiments, masses of data, groupthink, cultural relativism, confusion about values, entrenched beliefs, and more.

In such an environment, we seek new methods for asking about the world. At the Stevanovich Institute on the Formation of Knowledge, we aim to understand how factors like history, politics, culture, and religion can shape knowledge—year in and year out, over decades, over centuries. We believe that to understand a phenomenon, one must approach from a number of different fields, and with sensitivity to context. As no area of knowledge arises in a vacuum, we underplay the division of knowledge into departments within the university, offering KNOW courses that bring together perspectives from a number of fields.

About SIFK Courses

Join us for a KNOW course as we try to find new answers to some of the largest and most perennial questions, all bearing on what it means to be human in the 21st century. We offer undergraduates and graduate students team-taught courses that challenge conventional wisdom across the board.

KNOW courses are cross-listed with a variety of departments, so students can enroll in them as a major course with their department's course number or as an elective with the KNOW course number. We also offer an innovative Experimental Capstone series of courses (XCAP), that brings practice together with theory, inside and outside the classroom—yet another way of broadening academic knowledge and bringing a new dimension to the undergraduate experience.

For up-to-date KNOW course listings, visit sifk.uchicago.edu (<https://sifk.uchicago.edu/courses>) (<https://sifk.uchicago.edu/courses/>).

XCAP: The Experimental Capstone

In addition to its KNOW courses, the Stevanovich Institute on the Formation of Knowledge offers XCAP: The Experimental Capstone. Designed for upper-level undergraduate students, and team taught by faculty from different divisions or schools, the program offers three courses a year, one per quarter. These courses are designed to encourage students not only to theorize but to put theory into practice as a way of approaching problems. Students are challenged to build upon their University of Chicago educational experience by adding practice, impact, and influence as important dimensions for undergraduate education.

XCAP courses incorporate a variety of topics and frameworks, but inherent in each of these courses are the following three elements:

- an element of practice, a result in a product, or a measurable impact;
- an appeal to students from all the collegiate divisions for maximal interaction of different points of view; and
- a part of the College experience with particular relevance to post-College life.

The XCAP courses may be taken Pass/Fail or for a quality grade, and students may take one, two, or all three quarters of XCAP, as the courses are not part of a sequence. Each course is taught by a different team of faculty and will provide a distinct perspective on the three core elements above.

To see the full listing of 2020–21 XCAP courses, visit sifk.uchicago.edu/courses/xcap. (<https://sifk.uchicago.edu/courses/xcap/>)

Joint Degree Programs

The University offers a number of joint degrees to students in the College. Joint BA-MA/MS programs permit qualified students to enter upon a course of graduate study while also completing their work in the College. Applicants must have completed a significant portion of their undergraduate program before they can apply to master's level programs. Generally this means that students are admitted to candidacy for the master's degree during their fourth year in the College. During this year of graduate work, students will be billed for tuition at the graduate rate.

Interested students should discuss their plans with their College adviser and aim to complete all of their general education requirements by the end of their second year. All applicants to joint degree programs must meet with their College adviser in the Autumn Quarter of their third year.

Any department may initiate a joint program by submitting a program proposal to the College Curriculum Committee.

Five-Year Joint Bachelor's/Master's Programs

Five-year joint bachelor's/master's programs permit undergraduate students to begin a master's degree program during their fourth year in the College. Successful students earn a bachelor's degree at the end of their fourth year and a master's degree at the end of their fifth year.

Students begin the application process in the Autumn Quarter of their third year by meeting with their College adviser. By the end of the third year, all joint degree candidates will need to complete at least 39 of the required 42 credits for the undergraduate degree, including all general education requirements (students should consult the individual five-year programs to determine the exact number of credits that need to be completed).*

Students pursuing joint degrees should be aware that they will be charged at the graduate tuition rate in their fourth year of study. College aid can be applied toward tuition charges in the fourth year of study but will not extend into the fifth year. Students should check with individual graduate programs to pursue the possibility of supplemental aid.

- Joint BA/MA in Computational Social Science
- Joint BA/MAT in Education and Teaching Certification
- Joint BA/MA in the Humanities (Two-Year Language Option)
- Joint BA/MA in Middle Eastern Studies
- Joint BA/MPP in Public Policy Studies (Harris)
- Joint BA/MS in Computational Analysis and Public Policy (Harris)
- Joint BA/MA in Social Service Administration
- Professional Option: Medicine

Four-Year Joint Bachelor's/Master's Programs

Four-year joint bachelor's/master's programs permit successful undergraduate students to complete a master's degree program over their fourth year in the College. Though their admissions criteria vary, they are all highly selective programs. Interested students should discuss their plans with their College adviser and aim to complete all of their general education requirements by the end of their second year. Students planning to pursue a joint degree in the physical sciences should consult closely with their individual departments regarding course selection in their major.

Students apply to four-year joint bachelor's/master's programs during their third year in the College. They begin the process before the end of the Autumn Quarter by meeting with both their College Adviser and the joint degree program coordinator in their department of interest. They are also required to meet with the dean of students in their prospective graduate division. By the end of the third year, all joint degree candidates will need to complete at least 39 of the required 42 credits for the undergraduate degree; this should include all general education requirements.

Students pursuing joint degrees typically register for nine courses in their fourth and final year of study.[†] In the humanities and social sciences programs, all course work will be graduate level. In the physical sciences, students will work with program advisers to develop an individualized program of course work. All students will be allowed to use up to three credits from their graduate course work to fulfill the remaining credits for the undergraduate degree.* (Candidates may petition the director of undergraduate studies to apply the three graduate courses toward their major, otherwise the courses will be applied toward general electives).

Students should be aware that they will be charged at the graduate tuition rate in their fourth year of study. College aid can be applied toward tuition charges in the fourth year of study but will not cover the additional expenses associated with graduate tuition rates and fees. Students should check with individual graduate programs to pursue the possibility of supplemental aid.

- Joint BS/MS in Biological Chemistry
- Joint BS/MS in Chemistry
- Joint BA/MS or BS/MS in Computer Science

- Joint BA/MA in Digital Studies of Language, Culture, and History
- Joint BA/MA in the Humanities
- Joint BA/MA in International Relations
- Joint BA/MS or BS/MS in Mathematics
- Joint BA/MA in the Social Sciences
- Joint BA/MS or BS/MS in Statistics

Notes

- * Courses in a minor cannot be double-counted anywhere in a student's program, including in the graduate portion of the degree.
- † Students pursuing a BA project are typically expected to register for one or two BA workshops in their fourth year. These workshops count as courses in the undergraduate program and are in addition to the nine graduate courses associated with most joint degree fourth-year curricula. Joint degree candidates should be aware that registration for a fourth course in any term may result in higher tuition. Students are encouraged to complete their BA project before beginning their graduate course work.

Joint BS/MS in Biological Chemistry

A four-year joint degree program leading to a concurrent award of the BS in Biological Chemistry and the MS in Chemistry is available for a select group of students who have achieved advanced standing through their performance on placement or on accreditation examinations. Special programs are developed for such students. For more information, consult John Anderson at jsanderson@uchicago.edu and Vera Dragisich at vdragisi@uchicago.edu in the Chemistry Department.

Joint BS/MS in Chemistry

Students who achieve advanced standing through their performance on placement examinations or accreditation examinations may consider the formulation of a four-year degree program that leads to the concurrent award of the BS and MS degrees in chemistry. For more information, consult John Anderson at jsanderson@uchicago.edu and Vera Dragisich at vdragisi@uchicago.edu in the Department of Chemistry.

Joint BA/MA in Computational Social Science

Department Website: <http://macss.uchicago.edu>

General Information

The Master of Arts in Computational Social Science (<http://macss.uchicago.edu>) is a two-year program of graduate study. It has a structured curriculum, with a total of 18 required and elective courses tailored to the disciplinary track a student follows. Students submit an article-length MA thesis in their second year, after completing a three-quarter research commitment working directly with a member of our executive or affiliated faculty (<http://macss.uchicago.edu/directories/full/all/>).

The program aims to produce leading social scientists in each of our core social science fields—economics, sociology, political science, psychology, history, and anthropology—producing competitive PhD applicants, well-trained in computational approaches, who have mastered the research and analytical skills necessary to make important contributions. Students receive close mentorship from the program's faculty director, academic staff, and members of our executive and affiliated faculty.

They receive full professional support from our director of career services, with biweekly workshops, career planning, and employer recruitment.

Finally, all MA students may participate in an optional summer practicum between their first and second years, with internships drawn from academic and professional organizations. International students have three years of STEM work eligibility after they graduate.

Program Requirements and Course Work

Courses are selected with the advice of our academic staff and follow different disciplinary tracks, tailored to the research commitments of each student.

In their first year, all students take a three-course core: Perspectives on Computational Analysis, Perspectives on Computational Modeling, and Perspectives on Computational Research.

Most take a three-course sequence on Computer Science with Applications (with more advanced courses for students with prior exposure).

The remaining three courses vary and depend on the student's prior training and disciplinary path. Priority will go to any needed courses in statistics, linear algebra, or advanced math in particular disciplines (e.g., real analysis in economics). If those requirements are met, the student will take up to three social science electives in their area of research.

In their second year, all students submit an article-length MA thesis, take three advanced courses in computational methods, three social science electives, and three additional graduate courses from any University of Chicago department or professional school where the student meets the minimum prerequisites.

Should they choose, students may take the MA Research Commitment, a three-course sequence producing an MA thesis modeled on a professional journal article, in place of the three additional graduate courses.

Outside of their course work, all MA students are expected to attend our weekly Computation Workshop, where advanced scholars and invited guests present drafts of their research for critique and discussion.

Admission

Students who wish to pursue a joint BA/MA degree should consult first with their College adviser and then with the associate dean of students (Kelly Pollock, kplock@uchicago.edu) in the Autumn Quarter of their third year.

Please see this page (<https://macss.uchicago.edu/content/bama-degree-requirements/>) to review our eligibility requirements for the BA/MA.

Any questions about the MA in Computational Social Science can be directed to our managing director (Chad Cyrenne, c-cyrenne@uchicago.edu).

Application Requirements

- Applicants are expected to have a GPA of 3.55 or higher.
- Applications are due by February 1.
- The application (<https://apply-ssd.uchicago.edu/apply/>) is submitted online to the dean of students of the Division of the Social Sciences. (See apply-ssd.uchicago.edu/apply (<https://apply-ssd.uchicago.edu/apply/>)).
- BA/MA applicants should not pay the application fee. Email admissions@ssd.uchicago.edu (admissions@ssd.uchicago.edu?subject=Fee%20Waiver%20BA%20FMA%20Dual%20Degree%20Program) to ask how to receive the fee waiver.
- GRE scores are not required.
- Prospective BA/MA students are expected to complete all of their general education requirements and all but three of their BA requirements before they begin the BA/MA program in the Autumn Quarter of their fourth year.
- Up to three graduate courses can be used as electives in the undergraduate program or can be applied to the undergraduate major, by petition to the director of undergraduate studies.

- Students in the BA/MA program are charged tuition at graduate rates in their fourth year. They retain whatever aid has been provided in the College. In their fifth year, students are eligible for an award of one-half tuition if they achieve a 3.4 GPA over their first nine courses.
- Students may walk and receive the BA in June of their fourth year if they wish to graduate with other members of their College class.
- All other requirements for the MA degree are identical.

How to Apply

The Application for Admission and Financial Aid, with instructions and deadlines, is available online at: apply-ssd.uchicago.edu/apply (<https://apply-ssd.uchicago.edu/apply/>).

For additional information about our program, please contact Vanessa Carey, our student affairs administrator, at 773.702.8301 or carey1@uchicago.edu.

Please also visit our website: macss.uchicago.edu. (<https://macss.uchicago.edu/>)

Joint BA/MS or BS/MS in Computer Science

Outstanding undergraduates may apply to complete an MS in computer science along with a BA or BS (generalized to 'Bx') during their four years at the College. Students must be admitted to the joint MS program. There are three different paths to a Bx/MS: a research-oriented program for computer science majors (Option 1 below), a professionally oriented program for computer science majors (Option 2), and a professionally oriented program for non-majors (Option 3).

Participants in the Bx/MS program must meet the requirements for the BA or BS, complete nine courses for the MS, and, if applicable, a master's project. Students must earn a C+ or higher in any course counted toward an MS requirement. Students may double-count up to two courses toward both their Bx and MS degrees. By the conclusion of their third year, students must have completed 3900 of the 4200 units of credit required by the College, including all general education requirements.

To be considered for the program, students need to have earned a 3.5 GPA and have completed one of the following:

- one of CMSC 12100, CMSC 15100, or CMSC 16100 and one of CMSC 12200, CMSC 15200, or CMSC 16200 with at least a B+ average in the two, or
- one of CMSC 12100, CMSC 15100, or CMSC 16100 and one of CMSC 27100, CMSC 27130, or CMSC 37110 with at least a B+ average in the two.

The detailed requirements of the three program options follow.

Bx/MS Option 1: Research-Oriented Computer Science Majors

Option 1 is designed for computer science majors who are interested in research. Students pursuing a Bx with a computer science major currently have to take at least fourteen courses chosen from an approved program, while obtaining an MS requires nine courses. The research-oriented option requires students to take a total of twenty-one courses: twelve that count only toward the Bx degree, seven that count only toward the MS, and two that count toward both the Bx and MS degrees.

The nine courses required for the MS degree under Option 1 are as follows: Discrete Mathematics (CMSC 27100, CMSC 27130, or CMSC 37115); Algorithms (CMSC 27200, CMSC 27230, or CMSC 37000); one Core Systems course (see *Allowed Courses* below); Machine Learning (CMSC 25300, CMSC 35300, CMSC 25400, CMSC 35400, or TTIC 31020); two Reading and Research courses (no more than one per quarter); and three electives.

At most two courses can be drawn from the CMSC 20000-level course list, and at most two courses can be counted towards a student's computer science major and MS degree. Option 1 students are expected to take their electives from the Computer Science Department's CMSC 30000-level offerings and selected TTIC (Toyota Technological Institute at Chicago) offerings.

Students in this option are required to complete a master's project, write a report describing the project, and give a public presentation. Master's projects are overseen by a faculty member and evaluated by a committee of three faculty members, including the student's project adviser. The two required Reading and Research courses are intended to help students get started on their projects early in their fourth year and to complete their projects in a timely fashion.

Bx/MS Option 2: Professionally Oriented Computer Science Majors

Option 2 is designed for computer science majors who are seeking the opportunity to build upon their foundational skills and take some industry-oriented electives. As with Option 1, computer science majors who are pursuing a joint Bx/MS are required to take a total of twenty-one courses: twelve that count only toward the Bx degree, seven that count only toward the MS, and two that count toward both the Bx and MS degrees.

The nine courses required for the MS degree under Option 2 are as follows: Discrete Mathematics (CMSC 27100, CMSC 27130, or CMSC 37115); Algorithms (CMSC 27200, CMSC 27230, or CMSC 37000); two Core Systems courses (see *Allowed Courses* below); and five electives.

At most two courses can be drawn from the CMSC 20000-level offerings, and at most two courses can be counted toward both a student's computer science major and MS degree. Option 2 allows students to take electives from the Computer Science Department's CMSC 30000-level and MPCS 50000-level offerings and selected TTIC offerings.

Bx/MS Option 3: Professionally Oriented Non-Computer Science Majors

Option 3 is designed for students who are not computer science majors and wish to combine a professionally oriented MS in computer science with their undergraduate major. Students in this option are expected to complete nine courses, two of which can be also counted as electives toward a student's BA or BS.

The nine courses required for the MS degree under Option 3 are as follows: Discrete Mathematics (CMSC 27100, CMSC 27130, CMSC 37115, or MPCS 50103) or Core Programming (see *Allowed Courses* below); Algorithms (CMSC 27200, CMSC 27230, CMSC 37000, or MPCS 55001); three Core Systems courses (see *Allowed Courses* below); and four electives.

Students in the option are allowed to take electives from the department's CMSC 20000-level, CMSC 30000-level, and MPCS 50000-level offerings or selected TTIC offerings (see *Allowed Courses* below for more details). At most two

courses can be drawn from the department's CMSC 20000-level offerings. At most two courses can be counted toward both a student's Bx and MS degrees, with the following constraints:

- A CMSC/MPCS/TTIC course that counts toward the MS degree can always be double-counted as a College elective.
- A CMSC/MPCS/TTIC course that counts toward the MS degree may be double-counted toward the student's major, as long as it is a course that is already routinely counted toward that major. If not, the adviser for the major would have to approve this course.

Allowed Courses

The following guidelines are used when deciding whether a course can be counted toward the Bx/MS requirements:

- In general, only courses with CMSC/MPCS/TTIC codes can be counted toward the MS requirements. Students may count, with prior approval, one course from a non-CS program as long as it is a computationally oriented class. For Option 3, the non-CS course can be a quantitatively oriented class (not necessarily computationally oriented) only if it is being double-counted toward the student's major.
- Students can only take exactly three courses per quarter. Exceptions are only made, with prior approval, if the student needs to take an additional course to meet a graduation requirement.
- In all options, courses that can be counted as Core Systems courses in the computer science major or the PhD program (<https://www.cs.uchicago.edu/graduate/phd-programs/cs-course-requirements/>) can be counted as Core Systems courses in the Bx/MS program.
- In Options 1 and 2, MPCS courses cannot be double-counted toward a computer science major requirement.
- In Option 3, any MPCS Core Programming course can be counted as a Core Programming course, unless the student has already taken an introductory CMSC 100-level course in the same language as the Core Programming course the student wishes to take. Students who have completed an introductory sequence in Computer Science (one of CMSC 12100, CMSC 15100, or CMSC 16100 and one of CMSC 12200, CMSC 15200, or CMSC 16200) are considered to have fulfilled the Core Programming requirement for the purposes of MPCS course prerequisites.
- In Option 3, any MPCS Core Systems course can be counted as a Core Systems course in the Bx/MS program.
- In all options, CMSC 20000-level, CMSC 30000-level, and TTIC courses can generally be counted as electives.
- In Options 2 and 3, MPCS courses can generally be counted as electives.
- In all options, students may not count two courses with different course codes that have significant overlap (e.g., CMSC 23300 Networks and Distributed Systems and MPCS 54001 Networks).
- Bx/MS students may not enroll in the MPCS Practicum program. In Options 2 and 3, students may not count a Reading and Research course toward their MS requirements.

Joint BA/MA in Digital Studies of Language, Culture, and History

Department Website: <https://digitalstudies.uchicago.edu/bama> (<https://digitalstudies.uchicago.edu/bama/>)

About

The Digital Studies of Language, Culture, and History curriculum is designed to develop not only technical programming skills, but a deeper understanding of the complexities and cultural implications of technology across a broad range of academic disciplines. Students in the Digital Studies program will discover how to use a wide variety of powerful software tools while learning how to think about computing from a humanistic perspective.

The Master of Arts Program in Digital Studies of Language, Culture, and History allows students in the College to combine a BA program in an undergraduate major with an interdisciplinary MA program in Digital Studies. The MA program allows students flexibility to explore interests in a number of areas, including textual analysis, computational linguistics, historical or cultural studies, and digital arts and media.

Where to Begin

Qualified students in the College who wish to pursue a joint BA/MA degree in Digital Studies should consult with their College adviser followed by conversations with the Digital Studies academic director and the Dean of Students Office in the Division of the Humanities. Interested students are advised to begin these discussions by the end of their second year in the College.

Potential applicants should meet with their College adviser during the Autumn Quarter of their third year to confirm that they are far enough along in their College program to complete the course requirements for both degrees within four years.

Eligibility

Permission to receive concurrent BA/MA degrees in Digital Studies is a privilege extended only to those undergraduate students who have demonstrated a record of uncommon excellence and who are sufficiently advanced in the fulfillment of the undergraduate degree requirements. The academic demands on these students are significant, and applicants are carefully reviewed in the context of both their undergraduate major and the Digital Studies degree requirements.

- Applicants should have a GPA of 3.55 or higher for their undergraduate work and are expected to have entered their major.
- Applicants are expected to have completed 39 of the 42 courses required for graduation, including all general education requirements (exceptions must be approved by the Digital Studies academic director), before entering concurrent residence status for the three quarters preceding the anticipated quarter of graduation.

How to Apply

Interested students should apply through the Humanities online graduate application at <https://humanities.uchicago.edu/students/admissions/apply-now> (<https://humanities.uchicago.edu/students/admissions/apply-now/>). The application should be completed by February 1.

Applicants must submit the following items:

- MA application
- Statement of academic purpose
- Three letters of recommendation
- Official transcript(s)

Applicants are not required to pay the application fee nor are they required to sit for the Graduate Record Examination (GRE).

Applicants will be interviewed by the Digital Studies academic director. These conversations will focus on the program's requirements and the applicant's qualifications and objectives.

The application is evaluated by the admissions committee of the MA program on the basis of the student's academic record, letters of recommendation, and personal statement of intellectual and academic goals. Admission to the MA program is highly competitive and subject to approval by the College.

Program Requirements

Course Requirements

- 9 courses over 4 academic quarters.
- 7 required courses, 1 elective course, and 1 capstone project course.
- The elective course(s) must have a digital component and are subject to approval by the Digital Studies academic director. A list of approved electives can be found on the Digital Studies (<https://digitalstudies.uchicago.edu>) website. Courses taken prior to entry into the MA program may be counted as electives to fulfill this requirement.

- Digital Studies BA/MA students must complete an introductory programming course prior to entering their fourth year. DIGS 20001 Introduction to Computer Programming is offered every Spring Quarter and is recommended as it is tailored for Digital Studies students, but students are also welcome to take an equivalent Computer Science course such as CMSC 12100 Computer Science with Applications I, CMSC 15100 Introduction to Computer Science I, or CMSC 16100 Honors Introduction to Computer Science I to fulfill this requirement.
- DIGS 20002 Data Analysis for the Humanities I (currently offered in the Autumn Quarter) or STAT 22000 Statistical Methods and Applications (currently available every quarter) may also be taken as an undergraduate prior to the student's fourth year, or DIGS 30002 must be taken in the Autumn Quarter of the student's fourth year. An introduction to statistics is a prerequisite for subsequent courses in the program.
- Students who have taken CMSC 12100, CMSC 15100, CMSC 16100, and/or STAT 22000 as part of their major requirements may substitute additional electives for these courses as approved by the academic director.

Course Sequence

The elective course may be taken in any quarter, subject to its own prerequisites.

Spring Quarter (or previously)

- DIGS 20001 Introduction to Computer Programming (or equivalent Computer Science introductory course); an introduction to programming is a prerequisite for subsequent courses in the program.

Autumn Quarter

- DIGS 30002 Data Analysis for the Humanities I; required only if the student has not previously completed STAT 22000 or DIGS 20002
- DIGS 30003 Data Management for the Humanities
- DIGS 30007 Introduction to Digital Humanities

Winter Quarter

- DIGS 30004 Data Analysis for the Humanities II
- DIGS 30005 Data Publication for the Humanities

Spring Quarter

- DIGS 30006 Natural Language Processing
- DIGS 30008 Thesis Preparation

Capstone Project

Students prepare their capstone projects under the supervision of a faculty member and a lecturer in Digital Studies. During the Winter and Spring Quarters, students consult with their faculty adviser as well as the academic director in Digital Studies as they develop and write their theses. The academic director will schedule biweekly individual and group meetings.

Students in a major in which a BA paper is required may (subject to the approval of their BA paper adviser, MA project adviser, College adviser, and the director of the MA program, and with the understanding that the paper is based on substantial additional research and analysis) submit an MA paper proposal related to their BA essay.

General Guidelines

- Students who begin work towards the MA degree in Digital Studies and then leave the University without completing the program will not be allowed to complete the MA in Digital Studies at a later date.
- Once a student has begun to pursue both the BA degree and the MA degree in Digital Studies, a leave of absence is not normally possible. Students who find that they must take a leave of absence for a medical or family emergency during this period must obtain the approval of the dean of students in the Humanities as well as the dean of students in the College.
- Admissions decisions are usually not released before College preregistration for the following year takes place. Admissions committees often wish to see Winter Quarter grades before making decisions. Thus, applicants should preregister for the coming academic year as usual.

Joint BA/MAT in Education and Teaching Certification

Program Website: <https://utep.uchicago.edu>

The University of Chicago Urban Teacher Education Program (UChicago UTEP) is a two-year master's degree program with post-graduation supports. Through UChicago UTEP, candidates receive a master of arts in teaching (MAT) degree and Illinois teaching certification. There are two certification pathways, Elementary (grades 1–6) and Middle Grades (5–8).

The two pathways meet Illinois's new licensure structure and standards for teaching: (1) all core subjects in self-contained elementary grades 1–6; and (2) specific core subjects in departmentalized middle grades 5–8.

UChicago UTEP offers a joint BA/MAT program for qualified fourth-year College students. All BA/MAT students participate in all aspects of UChicago UTEP alongside MAT students throughout the two years of the program. Through the BA/MAT program, fourth-year undergraduate students complete their BA while also completing the first year (Foundations Year) of the MAT program. Upon completion of the BA degree and the first year of the MAT program (Foundations Year), students enter the Residency Year of the program as full MAT students.

For more information about the two-year course sequence and practicum-related experiences, please visit the UChicago UTEP (<https://utep.uchicago.edu/>) website.

Where to Begin

Undergraduate students interested in the BA/MAT program should begin by discussing this option with their College adviser as well as speaking with Diane Wright, UChicago UTEP student services administrator and recruiter/admissions coordinator. The purposes of these discussions are to ensure that interested students are far enough along in their undergraduate program to complete the major requirements for the BA (with the exception of a BA thesis, if required) by the end of the third year in the College and to ensure that core course requirements for UTEP have also been met.

Interested students are advised to begin these discussions with their College adviser in the Spring Quarter of their second year in the College to determine feasibility of the program before applying to the joint program in the Autumn Quarter of the third year. Prior to application, students must meet with the College adviser again to fill out the eligibility worksheet provided by the College as part of the application process.

Eligibility and Program Requirements

- UChicago UTEP is open to all College majors.
- Students should have a 3.0 GPA or higher in their undergraduate major at time of application to UTEP.
- By the end of the third year in the College, students are expected to have completed 36 of the required 42 courses to matriculate into the BA/MAT program, including all general education requirements before entering the BA/MAT program as a fourth-year dual degree student. Up to six courses can be double counted between the BA and MAT programs.
- For Illinois teaching certification, the following general education requirements must be met prior to entering the BA/MAT program. These requirements can be met through the general education requirements for all College students.
 - One science course (in any of the following areas: life, physical/chemistry, earth science, space science)
 - Two social science courses (in any of the following areas: history, geography, civics and government, economics, anthropology)
- BA Thesis Requirements
 - As a part of fitting the required components of the College and the UChicago UTEP program into the fourth year, UTEP will provide the equivalent of the BA Seminar to College students who complete the BA/MAT program. This will be offered to BA/MAT participants who do **not** enroll in the BA Seminar in the Spring Quarter of their third year. As such, UTEP BA/MAT program enrollees in majors such as sociology and comparative human development will continue to register for the BA Seminar within their department. For UTEP BA/MAT program enrollees who are in majors such as public policy studies, which have the BA Seminar in the Autumn Quarter of the fourth year, UTEP will offer a replacement BA Seminar. Students must seek and receive approval from their major departments for this exception.
 - The UTEP BA Seminar will mirror the approach and content that is included in the BA Seminar in other departments, including instruction and advising in identifying a thesis topic, data collection, research methods, constructing a literature review, and creating a final thesis.
 - For UTEP BA/MAT students, a BA focused on an approved education-related topic will fulfill the final paper requirements for the Autumn and Winter Quarter Foundations of Education courses.
- Students enter joint residency status during the three quarters prior to the anticipated date of College graduation, during which time they will be charged tuition at the UTEP master's rates. Students will carry over their undergraduate financial aid for the joint fourth year. Students may qualify for graduate-level financial assistance during the fifth (full year) of UTEP.

Application Process

Application for admission to UChicago UTEP should be completed during Autumn Quarter of the student's third year in the College.

Applicants must submit the following items:

- Online application (including three letters of recommendation)
- Official transcripts
- The GRE exam is **not** required for admission.
- If the application meets the criteria, students will be invited to an interview during the Winter Quarter of their third year in the College.

For more information, please email Diane Wright, UChicago UTEP student services administrator and recruiter/admissions coordinator, at dianenew@uchicago.edu.

Joint BA/MA in the Humanities

Department Website: <http://maph.uchicago.edu>

Students in the College may pursue the master of arts degree in the Humanities while working toward an undergraduate degree. Undergraduate students admitted to this program pursue a specific course of study depending on their specific research and professional interests. Students may design their own course of study in any of the departments within the Humanities Division, such as Philosophy, English Language and Literature, or Art History, specializing in a single field or moving across disciplines. Alternatively, they may choose a more directed course of study in a number of fields with specific Master of Arts Program in the Humanities (MAPH) program options, like Gender and Sexuality Studies, Theater and Performance Studies, Digital Humanities, Cinema and Media Studies, Classics, Cultural Policy, or Creative Writing.

Undergraduate students who wish to complete an MA in the Humanities concurrently with a bachelor's degree should begin by discussing this option with their College adviser in the Autumn Quarter of their third year and with the director of undergraduate studies in their major, followed by a conversation with the associate director of the MAPH Program and the dean of students in the Division of the Humanities.

Undergraduate students pursuing this option are in "concurrent residence" beginning in the Autumn Quarter of their fourth year at the University and remain in this status for three contiguous quarters.

Qualifications and Eligibility

Permission to receive concurrent BA and MA in the Humanities degrees is granted only to those undergraduate students who have demonstrated, in their undergraduate work, a record of uncommon excellence and who are sufficiently advanced in the fulfillment of the undergraduate degree requirements. The academic demands on these students are significant and applicants are carefully reviewed in the context of both the undergraduate major and the MA in the Humanities degree requirements.

Applicants should have a minimum GPA for their undergraduate work comparable to that required for honors in the major and have completed the College general education requirements as well as 39 courses.

In addition to a distinguished record of achievement during their time in the College, applicants must convincingly demonstrate that they will be able to complete all requirements for the two degrees by the end of the allotted three quarters of full-time concurrent residence. For this purpose, potential applicants should meet with their College adviser and fill out a BA/MA Worksheet. The adviser's signature certifies that prospective applicants are far enough along in their College program to complete the course requirements for both degrees within four years.

Two-Year Language Option

Year 1

During the first year, students participating in the Two-Year Language Option (<https://maph.uchicago.edu/tlo/>) (TLO) move through the MAPH year (<https://maph.uchicago.edu/study/maph-year/>) in the traditional manner—a required core course in the Autumn Quarter, seven elective courses, and completion of a thesis in the Spring Quarter. However, BA/MA TLO students must devote at least one of their electives to language study every quarter. Students are eligible for College aid in the first year.

Year 2

In the second year, BA/MA TLO students take nine courses—three electives and any outstanding language study courses for a minimum of nine language courses over the two years. Students are no longer eligible for College aid, but, in the second year, TLO students receive a scholarship that covers 90 percent of that year's tuition. To receive this scholarship, students must have completed all nine first-year courses by the start of Autumn Quarter and maintained a 3.5 GPA in those courses.

For more information, please email ma-humanities@uchicago.edu or contact Maren Robinson (marenr@uchicago.edu), associate director, at 773.834.1201.

Time Limits

This course of study is not intended to prolong registration beyond four undergraduate years for those completing the standard BA/MA option or five years for the Two-Year Language Option. All course registrations for both degrees must be completed in three quarters after enrollment into the MAPH Program for the standard BA/MA option or six quarters after enrollment for the Two-Year Language Option. Students who have finished all requirements for the BA and the MA in the Humanities in the Spring Quarter may take both the BA and the MA in the Humanities degrees at Convocation in June. Students in the TLO may take the BA in the fourth year and the MA in the fifth year at Spring Convocation.

Registration, Tuition, and Financial Aid

To receive at the same time both the BA degree and the MA in the Humanities degree requires that the last three quarters of the undergraduate course of study be spent in full-time (three courses per quarter) registration status in MAPH. Students are to register for a minimum of nine graduate courses. Three graduate-level courses may be double counted, that is, applied to both the College and the MAPH requirements. (Students may petition their director of undergraduate studies to apply the three graduate-level courses to their undergraduate major; otherwise the courses will be applied to general

electives). For each of the three quarters in which the students are registered in MAPH, they pay tuition at the graduate tuition rate, which is somewhat higher than the undergraduate tuition rate.*

Students are not eligible for financial assistance from the Humanities Division. However, any awards a student receives from College Aid will continue in the MA year. Students in the TLO may be eligible for funding in the fifth year.

- * Students pursuing a BA project are typically expected to register for one or two BA workshops in their fourth year. These workshops count as courses in the undergraduate program and are in addition to the nine graduate courses associated with the MAPH curriculum. Joint degree candidates should be aware that registration for a fourth course in any term may result in higher tuition.

Course Requirements

Students will be required to take MAPH 30100 Foundations of Interpretive Theory (the MAPH core course). The core starts two weeks prior to the beginning of Autumn Quarter and is only offered in the autumn. In addition to the core, students take eight courses, three per quarter, over the course of the year. One of these courses is MAPH 30200 Thesis Writing Workshop A/MAPH 30400 Thesis Writing Workshop B.

Students prepare their theses under the supervision of faculty members and their preceptors. During the winter, students participate in a non-credit thesis workshop (MAPH 30200 Thesis Writing Workshop A) with their precept groups. Students exchange drafts with their peers and workshop their writing in biweekly to weekly sessions. In addition, preceptors are available for individual consultations as the thesis workshop progresses. During the spring, students participate in a for-credit workshop (MAPH 30400 Thesis Writing Workshop B). Preceptors divide their group into subgroups for weekly or biweekly meetings, supplementing this with individual meetings.

For courses counting toward the MA in the Humanities degree, including any courses that are double counted, students must earn a *B-* or better in the core, must maintain a *B* average with no grade lower than *B-*, and must earn a *B* or better on their thesis.

Application Procedures

Students interested in obtaining both the BA degree and the MA in the Humanities degree should submit an online application (<https://humanities.uchicago.edu/students/admissions/apply-now/>). The application should be submitted by February 15, but applications are accepted and reviewed starting January 1.

The following documents must be on file with the Humanities Dean of Students office before the application will be reviewed:

1. the application
2. two letters of recommendation
3. official transcript(s)
4. BA/MA Worksheet: filled out and signed by the College adviser
5. Joint BA/MA in the Humanities Form: top portion filled out
6. Applicants interested in the Two-Year Language Option (TLO) (<https://maph.uchicago.edu/tlo/>) must submit the above materials and a supplemental document. In the supplement, applicants should indicate why they are interested in the TLO and what language(s) they plan to study.

Applicants are not required to pay the application fee nor are they required to sit for the Graduate Record Examination.

Applicants will be interviewed by the MAPH program director. These conversations will focus on the program's requirements and the applicant's qualifications and objectives.

For more information, please email ma-humanities@uchicago.edu or contact Maren Robinson (marenr@uchicago.edu), associate director, at 773.834.1201.

General Guidelines

- Students who begin work towards the MA in the Humanities degree and then leave the University without completing the program will not be allowed to complete the MA in the Humanities at a later date.
- Once a student has begun to pursue both the BA degree and the MA in the Humanities degree, a leave of absence is not normally possible. Students who find that they must take a leave of absence for a medical or family emergency during this period must obtain the approval of the dean of students in the Humanities as well as the dean of students in the College.
- Admissions decisions are usually not released before College preregistration for the following year takes place. Admissions committees often wish to see Winter Quarter grades before making decisions. Thus, applicants should preregister for the coming academic year as usual.

Joint BA/MA in International Relations

Department Website: <http://cir.uchicago.edu>

General Information

The special strength of the Committee on International Relations (CIR), the first graduate program of its kind in the nation, lies in its interdisciplinary approach to a wide range of questions relating to international issues. The Committee's faculty includes members of the various departments in the Division of the Social Sciences, as well as the University of Chicago Booth School of Business, the Irving B. Harris Graduate School of Public Policy Studies, the Divinity School, and the Law School. Their expertise extends over a broad range of subjects: international relations theory, security studies, international political economy, international history, history and conduct of U.S. foreign policy, human rights, international law and organization, international development, and regional international relations.

Joint BA/MA Program

Qualified students in the College who wish to pursue a joint MA degree in international relations should consult with their College adviser, the Associate Dean of Students in the Social Sciences (Kelly Pollock (kpollock@uchicago.edu)), and a CIR preceptor. These meetings should happen in the Autumn Quarter of the student's third year and are a mandatory component of the application process. Students are expected to have a GPA of 3.55 or higher, and at that time they are also expected to have met most of their general education requirements and to have chosen their major.

Application

Applications are due by February 1.

The application is submitted online to the dean of students of the Division of the Social Sciences (ssd.uchicago.edu/apply (<https://apply-ssd.uchicago.edu/apply/>)).

More information on the application process can be found at socialsciences.uchicago.edu/admissions/ (<https://socialsciences.uchicago.edu/admissions/>).

The Application for Admission and Financial Aid, with instructions and deadlines, is available online at: ssd.uchicago.edu/apply. (<https://apply-ssd.uchicago.edu/apply/>)

BA/MA applicants should not pay the application fee. Email ssd-admissions@uchicago.edu to ask how to receive the fee waiver.

Based on the available course list, applicants to the CIR BA/MA program must also submit a Proposed Curriculum document that identifies (1) up to three courses completed as part of the BA degree that will be petitioned to count toward the MA degree distribution requirements (NOTE: These courses cannot be counted as part of the required nine graduate-level courses—see Program Requirements below) and (2) the graduate-level courses they intend to take during their year in the program. CIR preceptors are available for consultation and guidance on a student's preparation of the document. NOTE: A student admitted to the CIR BA/MA program must submit changes to the CIR Program Chair.

Space in the CIR BA/MA program is limited, and admission is very competitive. The application is evaluated by the CIR Admissions Committee on the basis of the student's academic record, letters of recommendation, GRE scores if available, a 10- to 20-page term or research paper, and a personal statement of intellectual and academic goals. Admission to the MA program is also subject to approval by the College. BA/MA students are expected to complete all but three of their BA requirements before entering joint residence status for the three quarters preceding the anticipated quarter of graduation (up to three graduate courses can be used as electives in the undergraduate program or they can be applied to the undergraduate major by petition to the Director of Undergraduate Studies). Students in joint residence status are charged tuition at graduate rates.

Program Requirements

Students selected to participate in the joint degree program must meet all the normal BA requirements for their particular field of study, as well as all the general education requirements. In addition, joint degree students in international relations must meet the following requirements:

1. Completion of nine graduate-level courses for quality grades, including seven CIR-approved courses. NOTE: The total number of CIR-approved credits required for the joint degree is 48, assuming that three courses taken at the graduate level in the fourth year may be double counted toward both degrees.

2. Fulfillment of the CIR distribution requirement. This is designed to ensure that, within the nine required courses for the MA degree, students achieve sufficient depth and breadth in the study of international relations. Students may petition the CIR to count toward their MA distribution requirements up to three appropriate courses taken for their BA degree. Currently, each student must pass three courses each in two of four fields of international relations:

- a. Security, International History, and International Relations Theory
- b. International Political Economy and Development
- c. Regional Studies and Nationalism

d. Human Rights, Environment, and Law

3. A passing grade in the Committee's noncredit Perspectives on International Relations (INRE 30000) course in Autumn Quarter.

4. A passing grade in the Committee's MA paper workshop (INRE 46500) in Winter and Spring Quarters.

5. Completion of an MA paper that is approved by a faculty adviser and a preceptor.

6. Completion of both BA and MA degrees within a quarter of each other.

Details are available in the Committee office (5730 S. Woodlawn Ave.).

Joint BA/MS or BS/MS in Mathematics

Qualified College students may receive both a bachelor's and a master's degree in mathematics concurrently at the end of their studies in the College. Qualification consists of satisfying all requirements of both degrees in mathematics. While only a few students complete the joint bachelor's/master's program, many undergraduates enroll in graduate-level mathematics courses. Admission to all mathematics graduate courses requires prior written consent of the director of undergraduate studies. This consent is based on an assessment by the director that it is in the student's best interest to enroll in the graduate course.

Students should submit their application for the joint program to one of the co-directors of undergraduate studies in the Department of Mathematics as soon as possible, but no later than the Winter Quarter of their third year. For more information, contact John Boller, co-director of undergraduate studies, at 773.702.5754 or oller@math.uchicago.edu.

Joint BA/MA in Middle Eastern Studies

Students in the College may pursue the master of arts degree in Middle Eastern Studies leading to the award of a four-year undergraduate degree in their declared major and a two-year graduate degree in Middle Eastern Studies after five years of studies at the University of Chicago.

Undergraduate students who wish to complete both degrees in five years should begin by discussing this option in the Autumn Quarter of their third year with their College adviser and with the BA adviser in their major, followed by a conversation with the deputy director for academic programs of the Middle Eastern Studies program (Paul Walker, 773.702.4619, pwalker@uchicago.edu) and the dean of students representative of the Social Sciences or Humanities Division, depending on the student's undergraduate major.

Undergraduate students pursuing this option are in "concurrent residence" beginning in the Autumn Quarter of their fourth year at the University and remain in this status for three contiguous quarters. Upon completion of the BA at the end of the fourth year, the students continue to be registered as graduate students for three contiguous quarters in the second year of the Middle Eastern Studies program.

Qualifications and Eligibility

Permission to receive both the BA in a major field and the MA in Middle Eastern Studies is not an automatic perquisite of undergraduate study at Chicago. It is a privilege extended only to those undergraduate students who have demonstrated, in their undergraduate work, a record of uncommon excellence and who are sufficiently advanced in the fulfillment of the undergraduate degree requirements. The academic demands on these students are significant, and applicants are carefully reviewed in the context of both their undergraduate major and the master's degree requirements.

Applicants should have a minimum GPA for their undergraduate work comparable to that required for honors in their major and have completed the College general education requirements as well as 39 courses, including some graduate-level courses.

Furthermore, applicants are required to have completed by the end of their third year:

- one year (three courses) of a Middle Eastern language, and
- three courses related to Middle Eastern studies

Applicants who are pursuing an undergraduate major that requires a BA thesis will be permitted to register for the BA thesis workshop as a fourth course during the fourth year of undergraduate studies.

In addition to a distinguished record of achievement during their time in the College, applicants must convincingly demonstrate that they will be able to complete all requirements for the two degrees by the end of the allotted six quarters of full-time residence. For this purpose, potential applicants should meet with their adviser in the College and fill out a BA/MA Worksheet. The adviser's signature certifies that prospective applicants are far enough along in their College program to complete the course requirements for both degrees within five years.

Time Limits

This course of study prolongs registration at the University to five years. Students are expected to complete the BA requirements at the end of the fourth year in the College to be allowed to continue into the second year of the MA program and receive their BA at the end of the fourth year in the College.

Students enrolled in the second year of the Middle Eastern Studies program as part of this BA/MA program will be enrolled as any other students in the second year of the Middle Eastern Studies program and subject to the same rules and requirements for graduation.

Registration, Tuition, and Financial Aid

To receive both the BA in an undergraduate discipline and MA in Middle Eastern Studies requires that the last three quarters of the regular undergraduate course of study be spent in full-time (three courses per quarter) registration status in the Middle Eastern Studies program and an additional three quarters of registration in the Middle Eastern Studies program. For each of the six quarters in which students are registered in the MA program, the students are charged the graduate tuition rate, which is somewhat higher than the undergraduate tuition rate.

Students are not eligible for financial assistance from the Social Sciences or Humanities Division in the first year of the MA program (their fourth year in the College). Therefore, students admitted to this program should consult the College Aid Office to determine if their financial aid will be affected. In the second year of the MA program, students are eligible for financial aid from the Social Sciences or Humanities Division on the same terms as any other second-year graduate student in the Middle Eastern Studies program.

A minimum of six quarters of undergraduate residence in the College is required, including the three quarters of registration of the first year in the Middle Eastern Studies program.

Courses and Requirements

No more than three graduate-level courses taken in the fourth year in the College may be double-counted; that is, applied to both the College requirements and the MA requirements. Graduate courses taken during the second or third year

in the College may not be counted toward the BA/MA in Middle Eastern Studies. Once admitted to the BA/MA program, students will be required to complete the core course requirements of the MA degree.

During their fourth year in the College (first year of the MA program), students retain their undergraduate privilege of registering for four courses per quarter. However, students are encouraged to take no more than three, if possible. During the second year of the MA program, students must follow MA rules, which restrict enrollment to three courses per quarter. The MA program requires a master's thesis which must be planned, researched, and written, and this requires a significant amount of time.

Application Procedures

Third-year students in the College who have been certified by their adviser that they are prepared to pursue both the BA and MA degrees in Middle Eastern Studies in five years should obtain a graduate program application. Depending on the undergraduate major of the student, the graduate application should be obtained from either the Dean of Students Office in the Social Sciences (Foster 103) or Dean of Students Office in the Humanities (Walker 111). The application should be completed, signed, and returned to the same office with all the necessary supporting documents by February 1.

The following documents must be on file with the divisional Dean of Students Office before the application will be reviewed:

1. the application
2. two letters of recommendation
3. a writing sample
4. official transcript(s)
5. BA/MA Worksheet: Filled out and signed by the College adviser
6. BA/MA Form: Top portion filled out

Applicants are not required to pay the application fee nor are they required to sit for the Graduate Record Examination. Applicants will be interviewed by the Center for Middle Eastern Studies deputy director for academic programs. These conversations will focus on the program's requirements and the applicant's qualifications and objectives.

Admissions decisions are usually not released before College preregistration for the following year takes place. Admissions committees often wish to see Winter Quarter grades before making decisions. Thus, applicants should preregister for the coming academic year as any other undergraduate student.

Other Guidelines

- Students who begin work towards the MA degree in Middle Eastern Studies and then leave the University without completing the program will not be allowed to complete the MA at a later date.
- Once a student has begun to pursue both the BA and the MA degree, a leave of absence is not normally possible. Students who find that they must take a leave of absence for a medical or family emergency during this period must obtain the approval of the dean of students of the applicable graduate division as well as the dean of students in the College.

Contact

For more information, please contact Paul Walker, Deputy Director for Academic Programs (pwalker@uchicago.edu; 773.702.4619).

Joint BA/MPP in Public Policy Studies (Harris)

The University of Chicago Harris School of Public Policy offers students an opportunity to begin their professional training in public policy while still in the College, leading to the awarding of a four-year undergraduate degree in their declared major and a two-year master of public policy (MPP) degree after five years of studies at the University of Chicago.

The MPP is a professional degree program designed for students who wish to gain rigorous training in public policy skills and issues. The core curriculum draws on a variety of disciplines and fields, including economics, statistics, sociology, political science, political economy, organizational theory, and program evaluation. These areas provide a foundation in critical analysis, reflecting Harris Public Policy's belief that mastering quantitative and analytical skills prepares students to be effective public policy leaders.

Program Requirements

Students selected to participate in the joint degree program must meet all normal BA requirements for their particular field of study, as well as all general education requirements. In addition, joint degree students in the BA/MPP program must satisfy the following criteria:

1. Students are encouraged to complete all general education and BA requirements in their third year in the College before beginning the MPP degree in the fourth year. Students who wish to count these courses toward their undergraduate major must receive permission from their major's director of undergraduate studies. Students must complete all BA requirements before beginning the fifth year.
2. Applicants are expected to have a GPA of 3.25 or higher.
3. All majors are strongly encouraged to apply.
4. Students must have completed at least one course, at any level, in at least two of the following three areas at the College: microeconomics, statistics, or calculus. Examination credit will not be accepted for this requirement, i.e., AP course work.
5. Students must register for at least nine courses (900 units of credit) in their fifth year.
6. PPHA courses taken prior to entering the BA/MPP program will not count toward the MPP. If the courses taken prior to matriculation are required for the MPP, the student will substitute them with approved electives.
7. Students enter joint residence status during the three quarters prior to the anticipated date of College graduation, during which time they will be charged tuition at Harris's master's rates. Students will still be eligible for financial aid from the College while in joint residence.
8. Students must complete all requirements of the MPP, as stated in the Graduate Announcements (<http://registrar.uchicago.edu/page/catalogs-and-announcements/>), to receive the BA/MPP degree.

Application Procedures

Before beginning the application process with Harris, students are encouraged to first meet with their College adviser. Students should make appointments during their second year to ensure that all College requirements are met. After reviewing with their College adviser, students should speak with Sparkle Dalphinis, associate director of student recruitment at Harris (sdalphinis@uchicago.edu), early in the third year. Interested students should submit their formal application to the program by April 15 of their third year in the College: apply-harris.uchicago.edu/apply (<https://apply-harris.uchicago.edu/apply/>). Please note that BA/MPP applicants are exempt from the application fee and do not have to submit a GRE score.

For more information, please contact Harris Recruitment and Admissions at harrisadmissions@uchicago.edu.

Joint BA/MS in Computational Analysis and Public Policy (Harris)

The University of Chicago Harris School of Public Policy in conjunction with the Department of Computer Science offers students an opportunity to begin their professional training in the growing field of civic technology and data science in public policy while still in the College, leading to the awarding of a four-year undergraduate degree in their declared major and a two-year master of science degree in computational analysis and public policy (MSCAPP) after five years of study at the University of Chicago.

The BA/MSCAPP is a professional degree program for students in the College who wish to gain rigorous training in the emerging and critical role of technologists fluent in public policy skills and issues. The policy piece of the core curriculum draws on a variety of disciplines and fields, including economics, statistics, sociology, political science, political economy, organizational theory, and program evaluation. These areas provide a foundation in critical analysis, reflecting Harris Public Policy's belief that mastering quantitative and analytical skills prepares students to be effective public policy leaders.

The computer science core curriculum augments the core policy training with courses in computer programming, data analytics and machine learning, and database management. The unique combination equips students with technical expertise that is useful for many aspects of society but increasingly in demand in the public sector. By combining the strengths of the two faculties, the program builds on the tradition of interdisciplinary teaching and research at the University.

Program Requirements

The BA/MSCAPP program assumes students have no formal computer science training or exposure to programming at the onset of admission to the program. Students from all majors are encouraged to apply.

Students selected to participate in the joint degree program must meet all BA requirements for their particular field of study, as well as all general education requirements. In addition, joint degree students in the BA/MSCAPP program must satisfy the following criteria:

1. Admission to the BA/MSCAPP program assumes no prior computer science course work or coding experience. Candidates are evaluated on the strength of their application, similar to the metrics used for admission to the BA/MPP program.
2. Students are encouraged to complete all BA requirements in their third year before beginning the MSCAPP degree program in the fourth year. Students with two or fewer courses remaining in the BA, excluding any thesis, research, or final paper requirements, are eligible for admission with approval from the MSCAPP program director. The final two courses can be double-counted toward the BA and the MS, but these courses must be graduate-level courses (course number 30000 or above). Students who wish to count these courses toward their undergraduate major must receive permission from their major's director of undergraduate studies. Students must complete all BA requirements before beginning the fifth year.
3. Applicants are expected to have an overall GPA of 3.25 or higher.
4. All majors are strongly encouraged to apply.
5. Students must have completed at least one course, at any level, in at least two of the following three areas in the College: microeconomics, statistics, or calculus. Examination credit will not be accepted for this requirement, i.e., AP credit.
6. Students must register for at least nine courses (900 units of credit) in their fifth year.
7. No courses taken in CMSC (Computer Science) or PPHA (Public Policy/Harris) prior to entering the BA/MSCAPP program will be allowed to count toward the requirements for the MSCAPP. If the courses taken before entering the program would have fulfilled MSCAPP requirements, students will be permitted to replace those courses with approved electives.
8. Students enter joint residence status during the three quarters prior to the anticipated date of College graduation, during which time they will be charged tuition at Harris's master's rates. During their fourth year of study students will still be eligible for College aid.
9. Students must complete all requirements of the MSCAPP program, as stated in the Graduate Announcements (<http://registrar.uchicago.edu/page/catalogs-and-announcements/>), to receive the BA/MSCAPP degree.
10. The GRE is not required for admission to the BA/MSCAPP program for students who have taken at least two MATH (Mathematics) courses and received a B grade or higher. Applicants who have not taken MATH courses should submit a GRE as part of their application.

Application Procedures

Before beginning the application process with Harris Public Policy, students should make appointments during their second year to ensure that all College requirements are met. After reviewing with their College adviser, students should speak with Sparkle Dalphinis, Associate Director of Student Recruitment at Harris (sdalphinis@uchicago.edu), early in the third year. Interested students should submit their formal application to the program by April 15 of their third year in the College: apply-harris.uchicago.edu/apply (<https://apply-harris.uchicago.edu/apply/>). Please note that BA/MSCAPP program applicants are exempt from the application fee.

For more information, please contact Harris Recruitment and Admissions at harrisadmissions@uchicago.edu.
(jerickson1@uchicago.edu)

Joint BA/MA in the Social Sciences

Department Website: <http://mapss.uchicago.edu>

General Information

The MA Program in the Social Sciences (MAPSS) is an intense, intellectually transformative one-year program. Students concentrate in Anthropology, Economics, History, Political Science, Psychology, and Sociology. Some pursue interdisciplinary work in Comparative Human Development, Social Thought, or Conceptual and Historical Studies of Science. Others may specialize in Quantitative Methods for Social Analysis, Education and Society, Gender and Sexuality Studies, and Geographic Information Science.

All MAPSS students take nine graduate courses, selected from all University of Chicago departments and professional schools. Each student works closely with the program directors, our senior academic staff, and an assigned preceptor, designing a customized curriculum and defining an area of scholarly research. They work directly with University of Chicago faculty on the MA thesis.

Students must take MAPS 30000 (<http://collegecatalog.uchicago.edu/search/?P=MAPS%2030000>) Perspectives in Social Science Analysis, our core course, in the Autumn Quarter. In addition, students must satisfy a methods requirement by selecting among dozens of graduate alternatives in ethnography, historical methods, involved interviewing, network analysis, survey analysis, content analysis, game theory, rational choice, causal inference, statistics, interpretive methods, comparative case study, and others.

We offer preeminent training for those aspiring to go on to funded PhD study in the social sciences. Each year 70 to 90 of our graduates do so successfully, at a 90 percent placement rate. More than 100 MAPSS graduates are pursuing the PhD at the University of Chicago alone.

MAPSS also offers an exceptional program of career placement, working directly with our director of career services, with weekly workshops, on-campus recruitment, and visits by leading alumni who provide mentorship in a variety of fields.

Joint BA/MA Program

Qualified students in the College who wish to pursue a joint BA/MA degree in the Master of Arts Program in the Social Sciences should consult with their College adviser, the associate dean of students in the social sciences (Kelly Pollock, kpollock@uchicago.edu), and Chad Cyrenne (c-cyrenne@uchicago.edu), managing director of MAPSS, as early as possible in their third year, during the Autumn Quarter.

Please see this page (<https://mapss.uchicago.edu/bama-degree-requirements-current-uchicago-college-students/>) to review our eligibility requirements for the BA/MA.

Application

Applicants are expected to have a GPA of 3.55 or higher.

Applications are due by February 1.

The application is submitted online to the dean of students of the Division of the Social Sciences ([apply](https://ssd.uchicago.edu/apply) (<https://apply-ssd.uchicago.edu/apply/>)).

More information on the application process can be found at socialsciences.uchicago.edu/admissions/ (<https://socialsciences.uchicago.edu/admissions/>).

BA/MA applicants should not pay the application fee. Email admissions@ssd.uchicago.edu to ask how to receive the fee waiver.

The Application for Admission and Financial Aid, with instructions and deadlines, is available online at [apply-ssd.uchicago.edu/apply](https://ssd.uchicago.edu/apply). (<https://apply-ssd.uchicago.edu/apply/>)

Space in the MAPSS BA/MA program is limited, and admission is very competitive. The application is evaluated by the MAPSS Admissions Committee on the basis of the student's academic record, letters of recommendation, and a personal statement of intellectual and academic goals. Admission to the MA program is also subject to approval by the College. Prospective BA/MA students are expected to complete all but three of their BA requirements before entering joint residence status for the three quarters preceding the anticipated quarter of graduation. Up to three graduate courses can be used as electives in the undergraduate program or they can be applied to the undergraduate major by petition to the director of undergraduate studies. Students in joint residence status are charged tuition at graduate rates.

Program Requirements

Students selected to participate in the joint degree program must meet all normal BA requirements for their particular field of study, as well as all general education requirements. In addition, joint degree students in MAPSS must satisfy the following criteria:

1. Completion of nine MAPSS-approved graduate-level courses for quality grades, including MAPS 30000 Perspectives in Social Science Analysis in the Autumn Quarter and a course that satisfies the graduate methods requirement.

2. Completion of 48 total credits for the joint degree. Up to three courses taken at the graduate level in the fourth year may be double-counted toward both the BA and the MA degree, with permission from the College.
3. Completion of an MA paper that is approved by the faculty adviser.
4. Completion of both the BA and MA degrees, the second awarded no later than the August convocation following a September matriculation.

Preceptors/Graduate Advisors

Please contact E. G. Enbar (egenbar@uchicago.edu) to be put in touch with a preceptor who shares your disciplinary or research interests.

Joint BA/MA in Social Service Administration

The School of Social Service Administration (SSA) offers students an opportunity to begin their professional training in social work and social welfare administration and policy while still in the College. Qualified students who wish to pursue a joint MA degree in Social Work and Social Welfare at SSA should consult with their College adviser and with the admissions office (admissions@ssa.uchicago.edu) at SSA as soon as their first year, but no later than early in their third year.

Students will need a GPA of 3.25 or higher and to have completed both their general education requirements and the requirements for their College major by the end of their third year.

BA/MA students take nine courses in their fourth College year: seven SSA Core courses and two electives. Students will also complete two field placements (an evaluated internship): one in the first year (College year four) and one in the second year of joint residence. The nine graduate-level courses together with field work constitute a demanding curriculum; therefore students are encouraged to complete their BA projects before beginning their graduate course work.

BA/MA students enter joint residence status during the three quarters prior to the anticipated date of College graduation, during which time they will be charged tuition at SSA's graduate rates.

For more information, contact the admissions office for SSA, at 773.702.1250 or admissions@ssa.uchicago.edu, or visit ssa.uchicago.edu/ab-am-program (<http://www.ssa.uchicago.edu/ab-am-program/>).

Joint BA/MS or BS/MS in Statistics

This program enables unusually well-qualified undergraduate students to complete an MS in Statistics along with a BA or BS during their four years at the College. The BA or BS can be in any field, not necessarily Statistics. Outstanding undergraduates in other majors are welcome to apply.

Only a small number of students will be selected for the program through a competitive admissions process. Participants must apply to the MS program in Statistics by June 1 of their third year for admission to candidacy for an MS in Statistics during their fourth year. To be considered, students should have completed almost all of their undergraduate requirements, including all of their general education and language competence requirements, by the end of their third year. They should also have completed, at a minimum, both STAT 24400-24500 Statistical Theory and Methods I-II (or STAT 24410-24510 Statistical Theory and Methods Ia-IIa) with A or A- grades and all the mathematics requirements for the Statistics major with very high grades. While these are the minimum criteria, admission is competitive, and additional qualifications may be needed. Interested students are strongly encouraged to consult both the departmental adviser for majors and their College adviser early in their third year.

Participants in the joint BA/MS or BS/MS program must meet the same requirements as students in the MS program in Statistics. Of the nine courses that are required at the appropriate level, up to three may also meet the requirements of an undergraduate program. For example, STAT 24410-24510 Statistical Theory and Methods Ia-IIa and STAT 34300 Applied Linear Stat Methods, which satisfy requirements for the MS in Statistics, could also be used to satisfy requirements of a BA or BS program in Statistics.

Other requirements include a master's paper and participation in the Consulting Program of the Department of Statistics. For details, visit <https://stat.uchicago.edu/academics/graduate-programs/graduate-student-resources/academic-life/requirements-and-regulations-for-m.s.-candidates> (<https://stat.uchicago.edu/academics/graduate-programs/graduate-student-resources/academic-life/requirements-and-regulations-for-m.s.-candidates/>).

Professional Option: Medicine

The University of Chicago Pritzker School of Medicine's Professional Option Program in Medicine permits undergraduate students who have demonstrated outstanding potential for success in medicine to begin medical school during their fourth year in the College. This is a highly competitive, merit-award program.

Due to the accelerated nature of the curriculum, applicants must have outstanding academic credentials as evidenced by a combination of GPA and MCAT scores that place them among the top candidates nationwide for medical school. The academic requirements for eligibility include a minimum GPA of 3.7 and an MCAT score not less than the 93rd percentile, with no individual section score less than the 85th percentile. Additionally, eligible students have a clear understanding of their motivation for medicine and can provide evidence of analytical thinking, effective communication skills, leadership, and meaningful engagement in the various communities in which they participate, in addition to compelling reasons to attend Pritzker.

Candidates will apply to this program during their third year in the College. Eligible students must have completed 33 credits (of the 42 required for a degree in the College) by the end of their third year. These 33 credits must include all 15 general education requirements and one-half of the requirements for their major.

Through this program, students will, upon completion of the first year of medical school at Pritzker, be allowed to use credit from their medical school courses to fulfill the remaining nine credits for the undergraduate degree. At the successful conclusion of their first year of medical school, students completing their degree in this fashion will receive the *Bachelor of Arts in Professional Option: Medicine*. Because students pursuing a professional option program do not complete the requirements for a College major, they are not eligible for departmental honors upon receiving their bachelor's degree.

Interested students should schedule an appointment with their UChicago Careers in Health Professions (<https://careeradvancement.uchicago.edu/uchicago-careers-in/health-professions/>) (UCIHP) adviser early in their second year, and in the Autumn Quarter of their third year will need to meet with their College adviser to evaluate their curricular progress. Following those meetings, students should schedule an appointment with their UCIHP adviser to further solidify their plans and intent to apply. The deadline for applications is February 26.

Students with questions or who would like more information, please contact UChicago Careers in Health Professions (ucihp@uchicago.edu).

Study Abroad

Department Website: <http://study-abroad.uchicago.edu>

Study Abroad Programs

The University of Chicago Study Abroad program encourages students to expand their education through diverse intellectual perspectives, active participation in a new culture, and critical, firsthand engagement with local and global challenges. Study Abroad's distinctive range of faculty-led programming blends the academic rigor and spirit of intellectual curiosity that is central to the College curriculum with the University's wide-reaching international mission.

The College sponsors 66 study abroad programs in 20 countries (32 cities) around the world. These include faculty-led, direct enrollment, and language-intensive programs.

Faculty-Led Programs

Civilization Abroad Programs

The following programs allow students to fulfill their civilization studies requirement in a single quarter. Courses are taught primarily by University of Chicago faculty and carry no language prerequisite, other than for the civilization sequences taught in French and Spanish. Students also study a local language.

- Athens (Spring Quarter)
- Barcelona (Winter Quarter taught in English, Spring Quarter taught in Spanish)
- Beijing (Autumn Quarter)
- Cairo (Winter Quarter)
- Dakar (Winter Quarter, offered in alternating years)
- Granada (Spring Quarter)
- Hong Kong (Spring Quarter: Colonizations)
- Hong Kong (Autumn Quarter: Gender and Sexuality in World Civilizations)
- Jerusalem (Spring Quarter)
- Oaxaca (Winter Quarter)
- Paris (Autumn Quarter: African Civilizations, offered in alternating years)
- Paris (Autumn, Winter, Spring, and Summer Quarters: European Civilization taught in English)
- Paris (Autumn Quarter: European Civilization taught in French)
- Paris (Spring Quarter: Russian Civilization)
- Pune (Autumn Quarter)
- Rabat (Winter Quarter)
- Rome (Autumn Quarter)
- Vienna (Autumn Quarter)

Thematic Programs

Thematic programs are also taught primarily by University of Chicago faculty and offer a range of courses across disciplines, some of which meet major, minor, or general education requirements.

- Barcelona: Public Policy (Spring Quarter)
- Florence: Living with History (September Course)
- Hong Kong: Economics (Winter Quarter)
- Hong Kong: The Global Urban (September Course)
- London: British Literature and Culture (Autumn Quarter)
- Paris: Astronomy (Spring Quarter)
- Paris: Cinema and Media Studies (Winter Quarter)
- Paris: Classics of Social and Political Thought (Autumn Quarter, offered in alternating years)
- Paris: Global Health (Winter Quarter)
- Paris: Humanities (Spring Quarter)
- Paris: Law, Letters, and Society (September Course)
- Paris: Mathematics (Spring Quarter)
- Paris: Neuroscience (Autumn Quarter)
- Paris: Social Sciences - Urbanism (Winter Quarter)
- Vienna: Human Rights (Spring Quarter)

Direct Enrollment Programs

Direct enrollment programs are available at partner universities in the following cities:

- Barcelona: Universitat Pompeu Fabra
- Beijing: Peking University, Renmin University
- Berlin: Freie Universität Berlin
- Bologna: University of Bologna
- Great Britain and Ireland
 - King's College London
 - London School of Economics and Political Science
 - Trinity College Dublin
 - University College London
 - University of Bristol
 - University of Cambridge
 - University of Edinburgh
 - University of Oxford
- Kyoto: Kyoto Consortium for Japanese Studies
- Menton: Sciences Po
- Milan: Bocconi University
- Paris: various universities, including Sciences Po
- Santiago: Catholic University of Chile
- Seoul: Yonsei University
- Shanghai: Fudan University
- St. Petersburg: Smolny College
- Tokyo: Waseda University

Language Programs

Quarter-long intensive language programs offer intermediate- and advanced-level instruction. Upon your return, you may be able to earn the University of Chicago's Office of Language Assessment foreign language proficiency certifications. Visit languageassessment.uchicago.edu/flpc (<https://languageassessment.uchicago.edu/flpc/>) for more information.

- Paris (Summer Quarter)
- Toledo (Autumn Quarter)

Additional Details

Students who wish to study abroad should attend the Autumn Quarter information meetings organized by the Study Abroad Office. Students should discuss their plans with their College adviser to determine how study abroad fits into their degree program in Chicago and should make an appointment with the relevant Study Abroad staff member to discuss the program and application process. Visit the College Scheduling site (<https://collegescheduling.uchicago.edu/samonline/BookAppt/?C=C&T=P&P=88>) to make an appointment. For more information, including the most current list of program locations, visit study-abroad.uchicago.edu (<https://study-abroad.uchicago.edu>).

Participants in University of Chicago Study Abroad programs pay the same tuition as if they were on campus, plus a nonrefundable study abroad administrative fee and, in most cases, a program fee set by the College. Each program fee includes housing and subsidizes the cost of excursions, instruction, and local support. Please visit the specific program pages (<https://study-abroad.uchicago.edu/programs/>) for precise fees. Participants retain their financial aid (<https://study-abroad.uchicago.edu/tuition/financial-aid/>) eligibility while abroad. Financial aid packages are extended to take into account the program fee when a University of Chicago student studies abroad on a College program, and Odyssey Scholars receive additional funding.

Students participating in some study abroad programs (e.g., direct enrollment programs) are not eligible for the Dean's List for that year. Please note that more than half of the requirements for a major or minor must be met by registering for courses bearing University of Chicago course numbers. Please see the Direct Enrollment Credit Guide (<https://study-abroad.uchicago.edu/direct-enrollment-credit-guide/>) for more information.

Summer International Travel Grants

Each year the College awards approximately 100 Summer International Travel Grants to support outstanding undergraduates for intensive language study or research abroad. Awards are \$5,000. Applications are submitted online (see the Study Abroad website (<https://study-abroad.uchicago.edu/sitg/>) for details) and are normally due in early February.

Foreign Language Acquisition Grants (FLAG)

The FLAG Program offers awards of \$5,000 to defray the costs of intermediate or advanced language study abroad. Study programs must be at least eight weeks in duration of intensive language study (at least 15 hours per week) and located in a setting where the target language is predominantly spoken. Applicants must have completed or placed out of the first

year of the target language by the program start date. If a language is not offered on campus, applicants may apply at any level. For French and Spanish language applications, preference will be given to students who have completed some intermediate language study.

Research Grants

Research grants provide \$5,000 to support students conducting six to eight weeks of summer research outside the United States. In most cases these awards support research leading to a BA paper; however, other academic research projects may also be considered.

Preparation for Professional Study

Department Website: <http://careeradvancement.uchicago.edu>

Business

The College general education curriculum provides excellent preparation in the critical thinking skills needed for graduate-level study in business administration. Along with the course work required to complete their major, it is advisable for interested students to pursue courses that hone their quantitative, verbal, and written skills. In addition, after their first year, students may enroll in up to six graduate-level courses at the University of Chicago Booth School of Business, with four of those courses counting toward the degree requirement. While many sections allow undergraduate enrollment, Chicago Booth also offers undergraduate versions of many classes with 20000-level numbers. BUSN 20000-level (undergraduate-only) courses will follow some College policies regarding registration, scheduling, grading, etc. The BUSF 30000-level versions will be subject to Chicago Booth's academic and administrative policies. Consult the Booth website for details.

Additional support for students considering graduate study in business is provided through the Dougan Scholars Certificate Program, Trott Business Program, Financial Markets Program, and Business Career Services.

The Dougan Scholars Certificate Program is a selective program managed by Chicago Booth, while the Trott Business Program and Financial Market Program are selective programs managed by the College through Career Advancement. Applications are accepted from all students, regardless of their major, during the first and second year for the Dougan Scholars Certificate Program, and during the first year for the Trott Business Program and Financial Markets Program. While the specific focus and requirements of the selective programs vary, each includes course work requirements at Chicago Booth, opportunities to build additional business understanding through special events with industry and academic professionals, and mentoring opportunities with upper-level College students and MBA students.

Business Career Services is an open enrollment option available to all students in the College offering industry-experienced advising and a menu of optional workshops and experiential opportunities.

Most graduate business schools require applicants to take the Graduate Management Admissions Test (GMAT). A GMAT score is currently valid for five years. Students planning to apply to graduate studies in business administration within five years of graduation should take the GMAT in their final year in the College; students can learn more and register at <http://www.mba.com/us> (<http://www.mba.com/us/>). Graduate business schools typically expect matriculating students to have acquired, on average, five years of work experience.

Education Professions

To strengthen the University of Chicago's reputation as a 'teacher of teachers,' the College and Career Advancement launched UChicago Careers in Education Professions (<https://careeradvancement.uchicago.edu/uchicago-careers-in-education-professions/>) in the fall of 2012. UChicago Careers in Education Professions provides specialized preparation for students in pursuing careers in teaching as well as educational administration, research, and policy.

UChicago Careers in Education Professions is a selective program that provides a variety of resources for students, including advising, workshops, guest speakers, teacher-training programs, partnerships with public and private local schools, internship opportunities, and treks to various education institutions.

Advising: Students have access to one-on-one advising with the program director of UChicago Careers in Education Professions, an expert with extensive experience in education. The program director provides students with personalized assistance in career planning, finding job and internship opportunities that match their interests, and preparing application materials.

Workshops and Events: Workshops are held throughout the academic term and cover an array of issues in the education field. Events have included, for example, talks with former U.S. Secretary of Education Arne Duncan, education technology entrepreneurs, local principals in community schools, and researchers investigating promising best practices in teaching, learning, and child development.

Metcalf Internship Opportunities and Career Treks: Education Professions is committed to offering students valuable internship opportunities at a wide range of education-focused organizations. In addition, the program offers career treks to Chicago area schools, non-profits, and leading policy and research institutes. During these treks, students have the opportunity to experience firsthand myriad work environments and career roles in these organizations.

Partnership with the Urban Education Institute: Through a close partnership with the Urban Education Institute (<http://uei.uchicago.edu>) (UEI) and numerous academic departments, the College offers over 30 education-related courses. These include: ECON 26700 Economics of Education, SOCI 20105 Bidwell's Educ Organization/Social Inequality, and BPBL 25405 Child Poverty and Chicago Schools.

Gap Year Support: Increasingly, College students wait to apply for graduate programs until after they graduate, giving them time to make sure they are making the right decision and are able to assemble a competitive application. Education Professions supports students who choose to take time between college and their graduate programs in several

ways. We continue to work with alumni who may need assistance with their applications or decision-making process. We also help students and alumni find appropriate gap year experiences in the field of education.

Entrepreneurship

Students with an interest in starting a business, working at a start-up, or exploring entrepreneurial finance will find a wide range of resources available to them through UChicago Careers in Entrepreneurship (<https://careeradvancement.uchicago.edu/uchicago-careers-in/entrepreneurship/>). The goal of this pre-professional program is not to have every student start a business, but rather for every student to have the opportunity to be exposed to an entrepreneurial way of thinking through experiential learning opportunities that complement the general education curriculum.

In addition to organizing College-specific workshops and opportunities, this Career Advancement program also works closely with the Polsky Center for Entrepreneurship and Innovation (<http://research.chicagobooth.edu/polsky/>). College students are able to take advantage of world-class opportunities and resources available through the Polsky Center, including attending industry conferences, attending workshops organized by the MBA student-run Entrepreneurship and Venture Capital Club, and attending office hours with Entrepreneurs-in-Residence. Students are also able to take courses at Chicago Booth, notably an undergraduate-only section of Building the New Venture, an undergraduate-only section of Application Development, and the College New Venture Challenge course.

Programming highlights for UChicago Careers in Entrepreneurship include:

- The College New Venture Challenge is an undergraduate-only business plan competition that enables students to go through the progression of discovering an idea, building a team, creating a proof of concept, and pitching to investors. Throughout the competition, students are engaged with mentors drawn from alumni and local entrepreneurs.
- Many student teams also enter competitions that are not sponsored by the University. Examples include competitions sponsored by Clinton Global Initiative, Clean Energy Trust, Net Impact, Microsoft, Google, and Wal-Mart, as well as competitions sponsored by other universities like Stanford and MIT.
- Social entrepreneurship is a popular topic on campus with many student organizations, including GlobeMed, Campus Catalyst, and Envision Do, supporting students who want to solve social and environmental issues through new innovations.
- Start-up careers and internships are another area of student interest. Many local companies participate in the Metcalf Internship program, and local start-up companies are encouraged to hire UChicago students through subsidies and other promotions. Of note, UChicago Careers in Entrepreneurship has strong partnerships with the University's Polsky Exchange in Hyde Park, the 1871 incubator at the Merchandise Mart, and the health care incubator Matter.
- In addition to bringing in alumni and local entrepreneurs as speakers, the program also engages with local angel investors and venture capital firms. Students have worked in associate roles while in school with such local groups as Chicago Ventures, OCA Ventures, and Hyde Park Angels.
- Career treks are an outstanding way for students to meet with companies in various industries as well as learn about different regions of the country or the world. In addition to treks to Silicon Valley, UChicago Careers in Entrepreneurship looks to engage with other regional hubs of entrepreneurial opportunity, including New York City, Boston, Austin, and Chicago.

Health Professions

UChicago Careers in Health Professions (<https://careeradvancement.uchicago.edu/uchicago-careers-in/health-professions/>) (UCHHP) provides students with the resources and support to develop the knowledge, skills, competencies, and experiences required for advanced study in the health professions. The College's broad and intellectually expansive liberal arts education, coupled with pre-health courses and support from UChicago Careers in Health Professions, is exceptional preparation for a career in health and medicine. Students develop the competencies required by graduate schools of the health professions, including: in-depth experience with the process of scientific inquiry; a facility in drawing linkages among scientific disciplines; strong critical thinking and communication skills; the ability to use mathematics to explain the natural world; mastery of basic principles of physics and chemistry; an understanding of the diversity of subject matter and methods of investigation in the biological sciences; and a sophisticated appreciation of the social context of health and medicine.

Upon meeting the College's general education requirements, *students are encouraged to major in any discipline in which they have a strong interest*, while fulfilling the following common entry requirements for advanced study in the field:

- 3 quarters of general chemistry with labs
- 3 quarters of organic chemistry with labs
- 3 quarters of biology with labs
- 3 quarters of physics with labs
- 1 quarter of biochemistry
- 3 quarters of a general education humanities sequence (recommended)
- 3 quarters of calculus (recommended)
- 1 quarter of statistics (recommended)

The Biological Sciences Collegiate Division (BSCD) offers several course sequences that prepare students for advanced study in the health professions. Students should consult the Biological Sciences page in this catalog and work closely with their College advisers to determine which sequence is most appropriate.

Students should be aware that the MCAT has expanded to include a section on Behavioral and Psychological Sciences; for more information, visit students-residents.aamc.org/applying-medical-school/article/whats-mcat-exam (<https://students-residents.aamc.org/applying-medical-school/article/whats-mcat-exam/>). Students are encouraged to consider SOSC 18100 Topics in Behavioral and Social Sciences Relevant to Medicine or other course work within the Social Sciences Collegiate Division to assist in preparing for this section.

Students who are unable to complete three quarters of a general education humanities sequence in their first year should plan to take a writing-intensive English course when their schedule allows. They should understand however, that this English course cannot be applied to the general education humanities requirement.

It is recommended that students work closely with their College advisers to choose courses appropriate to their level of preparation and interest. Although the College offers course sequences that fulfill all of the above requirements, some schools of the health professions have additional requirements. To ensure all requirements are met, students are also encouraged to check directly with the schools to which they intend to apply.

UChicago Careers in Health Professions supports students and alumni as they explore the health professions, among them allopathic (MD) and osteopathic (DO) medicine, nursing (PhD), dental (DDS) and podiatric (DPM) medicine, veterinary medicine (DVM), pharmacy (PharmD), and health services research (PhD). In addition to curricular assistance, UChicago Careers in Health Professions offers a wide range of cocurricular support that empowers students to achieve a high level of academic, professional, and personal success.

Students interested in the health professions should consult first with their College adviser and then with UChicago Careers in Health Professions. Appointments may be made with UCIHP via AdviseStream (<http://uchicago.advisestream.com>).

Journalism, Arts, and Media

Journalism, arts, and media converge and flourish at the University of Chicago. Through the College's strong liberal arts curriculum and the Reva and David Logan Center for the Arts, students pursue multiple interdisciplinary areas, even as they become experts in specific areas of interest. As part of Career Advancement, UChicago Careers in Journalism, Arts, and Media (UCIJAM) provides essential professional development opportunities to help students launch successful careers in these fields. Internships, fellowships, employment opportunities, and alumni networks take University students across the country and around the globe, allowing them to grow outside the classroom, develop as professionals, and pursue opportunities in a wide variety of disciplines.

UChicago Careers in Journalism, Arts, and Media (<https://careeradvancement.uchicago.edu/uchicago-careers-in/journalism-arts-media/>) complements the College's emphasis on academics with one-on-one career advising and programming designed to connect students with emerging and established professionals in the fields of journalism, publishing, visual art, music, film, television, theater, architecture, design, and more. Internships, mentorships, apprenticeships, and collaborations with working professionals provide students with the hands-on experience and deep networking needed to launch successful careers.

The program is organized and managed by Career Advancement. The components include:

- Individual advising to help students win internships and jobs in their particular areas of interest
- Workshops with leading practitioners to develop practical skills and networking opportunities
- UChicago Careers in Journalism, Arts, and Media—wide emphasis on building a body of work, including an emphasis on personal entrepreneurship
- Grants and apprenticeships to help support students working in unpaid internships and student-initiated projects
- Advising of registered student organizations

Law

The College curriculum provides excellent preparation for the study of law. More important than a specific major is the acquisition of certain skills necessary for the intelligent practice of law: the ability to communicate effectively in oral and written expression, a critical understanding of human institutions and values, and the ability to reason closely from given premises and propositions to tenable conclusions. Such skills can be developed in any major and by taking courses in English language and literature, philosophy, public policy, American history, political science, mathematics, and economics.

Students interested in a career in law should use the resources provided by the UChicago Careers in Law (<https://careeradvancement.uchicago.edu/uchicago-careers-in/law/>) program, which is organized and managed by the Career Advancement office. UChicago Careers in Law supports students as they explore their interest in law through programming, internships, treks, and advising.

Advising: Students have access to one-on-one advising with the program director and assistant director of UChicago Careers in Law, experts with extensive experience in the legal field. The directors provide students with personalized assistance in career exploration and planning, finding job and internship opportunities that match their interests, and

preparing application materials for those positions. UChicago Careers in Law also assists students and College alumni in targeting law schools, preparing successful applications, and choosing the most appropriate law school.

Workshops and Guest Speakers: UChicago Careers in Law workshops are held throughout the academic year and cover an array of current topics and issues in the field of law, including an introduction to legal research and writing. These programs include alumni lawyers practicing in private, public, and nonprofit sectors who give students an accurate picture of professional experiences across a broad range of fields, including international law, corporate law, public interest, and government services.

Metcalf Internship Opportunities: Internships in law-related organizations provide students with on-the-job experience—which can be extremely useful in determining whether or not law is the correct path to take—and allow them to explore different areas of legal practice. The Metcalf Internship Program provides paid, substantive internships exclusively available to UChicago students.

Treks: UChicago Careers in Law students visit public and private institutions in order to gain exposure to a wide range of legal careers and workplaces. Local Treks are available to students throughout the academic year and also include opportunities to meet with attorneys in such major legal markets as New York and Washington, DC.

Mentor Program: With nearly 100 students participating each year, the Mentor Program creates a community between University of Chicago law students and undergraduates, providing students from the College with guidance and helpful insights into the law school experience. The Law School and the College have sustained a very close relationship over the years, and the College is consistently one of the largest feeder undergraduate schools to the Law School.

Public Policy and Service

The public and social service sectors cover a wide range of opportunities in government and nonprofits, including domestic and international policy, direct social service, philanthropy and development, and nonprofit consulting and administration, among many others. The Fried Public Policy and Service Program (<https://careeradvancement.uchicago.edu/uchicago-careers-in/public-social-service/>) engages with students interested in the diverse range of government and nonprofit careers. Employers in these arenas look for individuals with deep commitment to their organization's mission. Through their rigorous academic studies, University of Chicago students learn the essential skills necessary to contribute meaningfully in service fields, including qualitative and quantitative research skills, the ability to analyze complex problems and to develop creative and effective solutions, exemplary written and oral communication skills, and an aptitude for managing and prioritizing numerous projects and commitments.

Fried programs and advising hours are open to students of all levels, and students may participate in the program at any point during their College years. Students interested in public policy and service are encouraged to meet with Fried Public Policy and Service Program advisers to explore specific areas of interest. Numerous resources are offered to educate students about specific areas within public and social service and to connect them with alumni and employers in their chosen fields. Resources include:

- Paid internship opportunities with government agencies and nonprofit organizations
- Skill-building workshops to educate students about how to navigate job searches and careers in the public and social service sectors
- Information sessions with industry experts to help students learn about different organizations and agencies and the types of opportunities available
- Panels with alumni from a variety of fields to offer students networking opportunities and the opportunity to learn how University of Chicago graduates have translated their educations into careers in these sectors
- Treks to such locations as Washington, DC, and New York City, as well as in Chicago, to visit a variety of organizations and agencies to learn about public and social service work in the field

Science, Technology, Engineering, and Math

UChicago Careers in Science, Technology, Engineering, and Math (<https://careeradvancement.uchicago.edu/uchicago-careers-in/science-technology/>) (UCISTEM) helps students explore, prepare for, and obtain careers or professional school placement in STEM fields. Students of any major may join UChicago Careers in Science, Technology, Engineering, and Math, in which they have the opportunity to participate in an elective workshop curriculum as well as such experiential learning options as research assistantships, internships, externships, and innovation competitions. Opportunities for mentorship, alumni networking, and one-on-one advising are readily available as well. UChicago Careers in Science, Technology, Engineering, and Math students have successfully gone on to graduate school programs and careers in a variety of fields, including alternative energy, biotechnology, entrepreneurship, and national laboratory research.

Components of the program include advising, workshops, and expert speakers, the Annual Undergraduate Research Symposium, research and internship opportunities, career treks, the Facilitating UChicago Students in Engineering (FUSE) cohort, and connections with the P (<http://ime.uchicago.edu>)ritzker School of Molecular Engineering (<http://pme.uchicago.edu>), the Marine Biological Laboratory (<http://www.uchicago.edu/mbi/>), and Fermi National Accelerator Laboratory (<http://www.fnal.gov/>). Benefits may include:

- Exploration of the diverse career options in STEM fields through workshops led by alumni, industry treks, and facility tours to such Chicagoland organizations as Argonne National Laboratory (<http://www.anl.gov>)

- Exposure to industry information, workplace cultures, and networks of alumni mentors and student peers on diverse industry treks such as the Houston Energy Trek or the San Francisco Tech Trek
- Opportunities to hone skill sets for graduate school applications and employers such as GRE preparation and programming skill sets
- Finding laboratory positions on campus or off campus through the Metcalf Internship Program

Research and Fellowships

The College Center for Research and Fellowships (CCRF) (<http://ccrf.uchicago.edu/>) provides comprehensive advising and institutional support for undergraduate research and nationally competitive fellowships. Students benefit from a wide range of information sessions and targeted workshops on specific opportunities, as well as on how to write research proposals and personal statements, how to build relationships with faculty, how to secure strong letters of recommendation and how to create a comprehensive *curriculum vitae* for use in securing research experiences, grants and fellowships.

Students also benefit from high-impact individual advising about getting started in research, identifying research opportunities and counsel on making research public through presentations publications. Undergraduates interested in applying for nationally and internationally competitive fellowships benefit from extensive advising about preparing and applying for opportunities including, but not limited to: the Fulbright US Student Program (<http://us.fulbrightonline.org/fulbright-us-student-program/>), Knight-Hennessy Scholars (<https://knight-hennessy.stanford.edu/>), Schwarzman Scholars (<http://schwartzmanscholars.org/>), Yenching Academy Scholars (<https://yenchingacademy.pku.edu.cn/>), National Science Foundation Graduate Research Fellowship (<https://www.nsfgrfp.org/>), and the Marshall (<http://www.marshallscholarship.org/>), Rhodes (<http://www.rhodesscholar.org/>), Truman (<https://www.truman.gov/>), Gates Cambridge (<https://www.gatescambridge.org/>), Mitchell (<https://www.us-irelandalliance.org/mitchellscholarship/>), Churchill (<http://www.winstonchurchillfoundation.org/scholarship.html>), Goldwater (<https://goldwater.scholarsapply.org/>), Udall (<https://www.udall.gov/OurPrograms/Scholarship/Scholarship.aspx>), and Beinecke (<http://fdnweb.org/beinecke/>) scholarship programs.

CCRF staff members (<http://ccrf.uchicago.edu/about-ccrf/our-staff/>) provide general support to all students by helping them to identify relevant opportunities and assist them in strategically planning for those opportunities, closely mentor students through rigorous application processes, and facilitate campus endorsement procedures when relevant. CCRF Research staff also assist faculty in supporting current research opportunities and aiding in the creation and curating of new opportunities.

Undergraduates can access a searchable database of undergraduate research opportunities (<http://ccrf.uchicago.edu/undergraduate-research/finding-research-opportunities/>)—including funding—and guidance on getting involved in research on the CCRF website (<http://ccrf.uchicago.edu/undergraduate-research-uchicago/>). Students can also search the national fellowship opportunity database (<http://ccrf.uchicago.edu/search/>)—which also includes UChicago-based funding on the CCRF website (<http://ccrf.uchicago.edu/national-scholarships-and-fellowships/>) as well.

Students are strongly encouraged to sign up for the CCRF weeklylistserv (<http://ccrf.uchicago.edu/>) to stay up to date about opportunities, deadlines, and relevant information sessions. Individual advising appointments are strongly recommended for any student in getting involved in undergraduate research or applying to national scholarships, fellowships, or postgraduate opportunities. Appointments can be made through College Scheduling via the CCRF website (<http://ccrf.uchicago.edu/contact-us/>).

Academic Calendar

2020 Summer Quarter

Description	Date(s)
Quarter Begins	Monday, June 22
Independence Day Holiday	Friday, July 3
Quarter Ends	Saturday, August 29

2020 Autumn Quarter

Description	Date(s)
College Orientation Begins	Tuesday, September 8
Quarter Begins	Tuesday, September 29
Study Week/Thanksgiving Break	Monday–Friday, November 23–27
College Reading Period	Saturday–Monday, December 5–7
Quarter Ends	Saturday, December 12

2021 Winter Quarter

Description	Date(s)
Quarter Begins	Monday, January 4
Martin Luther King Jr. Day	Monday, January 18
College Break	Friday, February 12
College Reading Period	Thursday–Friday, March 11–12
Quarter Ends	Saturday, March 20

2021 Spring Quarter

Description	Date(s)
Quarter Begins	Monday, March 29
Memorial Day	Monday, May 31
College Reading Period	Thursday–Friday, June 3–4
Convocation	Saturday, June 12
Quarter Ends	Saturday, June 12

All dates are subject to change with no notice.

Up-to-date academic calendars can be found at [uchicago.edu/academics/calendar](https://www.uchicago.edu/academics/calendar) (<https://www.uchicago.edu/academics/calendar/>).
