Beginning in 2017 the timing of the Fundamentals sequence is shifted forward from previous years, meaning that incoming students in 2017 will have the opportunity to begin their major studies in their first year. In 2018, BIOS 20186 will be offered in Spring and BIOS 20187 will be taught in the Autumn. BIOS 20189 moves to Winter in 2019 and BIOS 20190 in moves to Spring 2019. The timing of BIOS 20188 and BIOS 20191 are unchanged.

For rising second year students who completed BIOS 20150 and BIOS 20151 or 20152 in Spring of 2017, a legacy sequence will be taught in 2017-18 ONLY, maintaining the previous timing of the Fundamentals sequence. BIOS 20186 will be taught in Autumn 2017, BIOS 20187 will be taught in Winter 2018, and BIOS 20189 will be in Spring 2018. After Autumn 2017, BIOS 20190 will not be taught again until Spring 2019.

PROGRAM OF STUDY

Biology is the study of life, past and present. Life operates within supportive ecosystems that generate selective pressures driving diversity and complexity through natural selection. The faculty of the College believe that a sound knowledge of biology is essential for understanding many of the most pressing problems of modern life and for intelligent involvement in their eventual solution. The Biological Sciences Collegiate Division, therefore, provides a variety of general education courses for all College students—prospective biologists and non-biologists alike. Although most of the course offerings beyond the introductory year are designed to serve the needs of students majoring in biological sciences, many of these courses are well suited to students in other areas who wish to study some aspect of modern biology in greater detail. Courses on the ethical and societal implications of the biological sciences, for example, are of interest to many non-majors.

Academic Honesty

Academic dishonesty is a matter of grave concern to the faculty of the Biological Sciences Collegiate Division and will not be tolerated. Students should become familiar with the guidelines presented in Doing Honest Work in College by Charles Lipson and consult with each of their instructors to make sure they understand the specific expectations of each course. Consequences of academic dishonesty (including plagiarism) may result in suspension or expulsion from the University.

The General Education Requirement in the Biological Sciences

Students choose one of the following options to meet the general education requirement for the biological sciences:

1. a two-quarter general education sequence for non-majors; or
2. The Pre-Med Sequence for non-science majors (described below, the first two courses of BIOS 20170 through BIOS 20175); or
3. BIOS 20150 How Can We Understand the Biosphere? and BIOS 20151 Introduction to Quantitative Modeling in Biology (Basic) or BIOS 20152 Introduction to Quantitative Modeling in Biology (Advanced) are required for students majoring in the Biological Sciences.

Advanced Placement Credit

For students who do not plan to major in the biological sciences or prepare for the health professions, a score of 4 or 5 on the AP biology test confers credit for BIOS 10130 Core Biology. These students meet the general education requirement with either one or two topics courses in the biological sciences, depending on how the requirements in the mathematical and physical sciences are met; consult your College adviser for details.

Students with a score of 4 or 5 on the AP biology test who complete the first three quarters of an Advanced Biology Fundamentals Sequence will be awarded a total of two quarters of credit to be counted toward the general education requirement for the biological sciences. This option is especially appropriate for students who plan to major in the biological sciences or prepare for the health professions, but it is open to all qualified students.

REQUIREMENTS FOR THE BACHELOR OF ARTS DEGREE IN THE BIOLOGICAL SCIENCES

The goals of the biological sciences program are to give students (1) an understanding of currently accepted concepts in biology and the experimental support for these concepts and (2) an appreciation of the gaps in our current understanding and the opportunities for new research in this field. Emphasis is placed on introducing students to the diversity of subject matter and methods of investigation in the biological sciences. The program prepares students for graduate or professional study in the biological sciences and for careers in the biological sciences. The following sections describe the requirements for a BA in the biological sciences. Sequences in the first year of the program are referred to as the Fundamentals and include the following: (1) The Advanced Biology sequence is designed for first-year students who have achieved a score of 4 or 5 on the Advanced Placement Biology test and are primarily interested in pursuing a research career. (2) The Track A (Section 1) and B (Section 2) sequences are designed for second-year students and are structured to provide them with a broad-based understanding of contemporary biology. (3) Track C (Life, Ecosystems, and Evolution) is designed for students interested in pursuing careers in ecology and evolution or environmental science. At the completion of the first three quarters of a Fundamentals sequence students begin taking the upper-level advanced elective courses and may start a specialization.
General Education Courses for Biological Sciences Majors

To prepare for more advanced work in the biological sciences, students must take the following to satisfy general education requirements:

**PHYSICAL SCIENCES.** One of the following sequences:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 10100</td>
<td>Introductory General Chemistry I</td>
</tr>
<tr>
<td>&amp; CHEM 10200</td>
<td>and Introductory General Chemistry II (or equivalent)</td>
</tr>
<tr>
<td>CHEM 11100-11200</td>
<td>Comprehensive General Chemistry I-II</td>
</tr>
</tbody>
</table>

**MATHEMATICAL SCIENCES.** One of the following sequences:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 13100-13200</td>
<td>Elementary Functions and Calculus I-II (or higher)</td>
</tr>
<tr>
<td>MATH 15100-15200</td>
<td>Calculus I-II</td>
</tr>
<tr>
<td>MATH 16100-16200</td>
<td>Honors Calculus I-II</td>
</tr>
</tbody>
</table>

**BIOLOGICAL SCIENCES.** One of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOS 20150 &amp; BIOS 20151</td>
<td>How Can We Understand the Biosphere? and Introduction to Quantitative Modeling in Biology (Basic)</td>
</tr>
<tr>
<td>BIOS 20150 &amp; BIOS 20152</td>
<td>How Can We Understand the Biosphere? and Introduction to Quantitative Modeling in Biology (Advanced)</td>
</tr>
</tbody>
</table>

**Total Units:** 600

Students with a score of 4 or 5 on the AP biology test may use their AP credit to meet the general education requirement for the biological sciences if the first three quarters of the Advanced Biology sequence are completed.

Courses Required for the Biological Sciences Major*

**Natural Science excluding Biology**

In addition to the General Education requirements, students majoring in biological sciences must complete the third quarter of general chemistry (CHEM 11300 Comprehensive General Chemistry III, or equivalent); two quarters of organic chemistry (CHEM 22000-22100 Organic Chemistry I-ICHEM 23100 Honors Organic Chemistry II)***; two quarters of physics (PHYS 12100-12200 General Physics I-II, or higher); and one additional quantitative course (BIOS 26210 Mathematical Methods for Biological Sciences I, PHYS 12300 General Physics III (or higher), or STAT 22000 Statistical Methods and Applications (or higher)).

**Biology Fundamentals Sequence**

Students register for four quarters of Biology Fundamentals courses associated with one of four tracks.

- **Track A** includes BIOS 20186 Fundamentals of Cell and Molecular Biology (Section 1), BIOS 20187 Fundamentals of Genetics (Section 1), BIOS 20188 Fundamentals of Physiology, and BIOS 20190 Principles of Developmental Biology;
- **Track B** includes BIOS 20186 Fundamentals of Cell and Molecular Biology (Section 2), BIOS 20187 Fundamentals of Genetics (Section 2), BIOS 20189 Fundamentals of Developmental Biology, and BIOS 20191 Integrative Physiology or BIOS 20242 Principles of Physiology;
- **Track C** (Life, Ecosystems, and Evolution) includes BIOS 20186 Fundamentals of Cell and Molecular Biology, BIOS 20187 Fundamentals of Genetics, BIOS 20198 Biodiversity, and BIOS 20196 Ecology and Conservation;
- **the Advanced Biology Fundamentals sequence** (open only to first-year students who have scored a 4 or 5 on the AP Biology exam), which includes BIOS 20234 Molecular Biology of the Cell, BIOS 20235 Biological Systems, BIOS 20236 Biological Dynamics, and BIOS 20242 Principles of Physiology), makes up the final track.

Students who do not enter the Advanced Biology sequence must complete BIOS 20150 How Can We Understand the Biosphere? in Winter Quarter and BIOS 20151 Introduction to Quantitative Modeling in Biology (Basic) or BIOS 20152 Introduction to Quantitative Modeling in Biology (Advanced) in Winter or Spring Quarter of their first year. (These two courses fulfill the general education requirement in the biological sciences.)

**NOTE FOR THE 2017–18 ACADEMIC YEAR AND BEYOND**

Beginning in 2017 the timing of the Fundamentals sequence is shifted forward from previous years, meaning that incoming students in 2017 will have the opportunity to begin their major studies in their first year.

*For rising second years who completed BIOS 20150 and BIOS 20151 or 20152 in Spring of 2017, a legacy sequence will be taught in 2017-18 ONLY, maintaining the previous timing of the Fundamentals sequence. BIOS 20186 will be taught in Autumn 2017, BIOS 20187 will be taught in Winter 2018, and BIOS 20189 will be in Spring 2018. After Autumn 2017, BIOS 20190 will not be taught again until Spring 2019.*

*Students planning to apply to medical school should be aware of individual medical school admissions requirements and should tailor their program accordingly with the help of UChicago Careers in Health Professions (http://ccihp.uchicago.edu) (UCIHP).*
The first two quarters of organic chemistry are required for all biology majors except for those completing Track C (Life, Ecosystems, and Evolution), who may take either two quarters of Organic Chemistry or two quarters of General Physics.

NOTE: Biological Sciences does NOT require the third quarter of calculus in any of the sequences. Students entering Tracks A, B, or C MUST take BIOS 20151 Introduction to Quantitative Modeling in Biology (Basic) or BIOS 20152 Introduction to Quantitative Modeling in Biology (Advanced), and students in the Advanced Biology sequence MUST take BIOS 20236 Biological Dynamics. NO MATH courses may be substituted for these requirements.

20200-level and Above Courses in Biological Sciences

Students in Tracks A and B and the Advanced Biology sequence also register for BIOS 20200 Introduction to Biochemistry plus five additional 20242 to 28000-level and above courses in Biological Sciences. Track C also requires five additional 20242 to 28000-level and above courses in the Biological Sciences, but not BIOS 20200 Introduction to Biochemistry. These courses may be selected by the student or in consultation with the BSCD Senior Advisers (Megan McNulty, mmcnulty@uchicago.edu and Christine Andrews, candrews@uchicago.edu). If the student chooses to complete a “specialization” (see sections that follow), courses should be chosen in consultation with the Specialization adviser (listed below).

NOTE: BIOS 00199 Undergraduate Research, BIOS 00206 Readings: Biology, and BIOS 00299 Advanced Research: Biological Sciences may not be used to meet requirements for the biological sciences major. In most cases, courses listed under the heading Specialized Courses (numbered in the 29000 range) may not be used to meet requirements for the biological sciences major. Limited exceptions are specifically noted.

Summary of General Education Requirements for Advanced Biology and Tracks A, B, and C

GENERAL EDUCATION

§ Credit may be granted by examination.

Grading

Students must receive quality grades in all courses that meet requirements for the biological sciences major.

Research Opportunities

Students are encouraged to carry out individual guided research in an area of their interest. A student may propose an arrangement with any faculty member in the Division of the Biological Sciences to sponsor and supervise research on an individual tutorial basis. Students register for BIOS 00199 Undergraduate Research or BIOS 00299 Advanced Research: Biological Sciences for general elective credit. Consult the following course description section for information about procedures, grading, and requirements for registration in BIOS 00199 Undergraduate Research and BIOS 00299 Advanced Research: Biological Sciences. For more information, see bscd.uchicago.edu/content/undergrad-research. NOTE: Course credit cannot be given for work that is compensated by a salary.

Some financial support may be available to students for summer research through their research supervisors or through fellowships awarded competitively by the Biological Sciences Collegiate Division. The deadline for applications for fellowships is early March preceding the summer of the fellowship application.

Honors

Honors in Biological Sciences can be earned via one of two tracks. Scholar Honors: This track recognizes exceptional academic performance (minimum cumulative GPA of 3.6 or above), including submission and acceptance of a scholarly thesis. Research Honors: This track emphasizes exceptional achievement in a program of original research (minimum cumulative GPA of 3.25 or above) plus submission and acceptance of an in-depth research thesis. Both programs require formal declarations of intent to seek Honors by the candidates. The details of each program are provided on the BSCD Website (http://bscd.uchicago.edu/page/honors-biology). Candidates must apply for either program no later than the beginning of Spring quarter of their third year in the College.

Pre-Med Sequence for Nonmajors

This integrated, five-course sequence explores the molecular, cellular, organismal, and biochemical properties of living systems. Open only to first- or second-year non-biology majors, it is designed to prepare students with the fundamental knowledge required for graduate study in the health professions. The sequence begins with BIOS 20170 Microbial and Human Cell Biology in the Winter Quarter and BIOS 20171 Human Genetics and Developmental Biology and BIOS 20172 Mathematical Modeling for Pre-Med Students in the Spring Quarter. The second year of the sequence continues with BIOS 20173 Perspectives of Human Physiology in the Autumn Quarter and then concludes in the Winter Quarter with BIOS 20175 Biochemistry and Metabolism. BIOS 20171 Human Genetics and Developmental Biology must be taken concurrently with BIOS 20172 Mathematical Modeling for Pre-Med Students in the Spring Quarter of the first year of the sequence, and BIOS 20173 Perspectives of Human Physiology must be taken in the Autumn Quarter of the second year of the sequence. The courses in this sequence cannot be applied toward a major in Biological Sciences. Students who complete this sequence are, however, eligible for the Biological Sciences minor. These students must combine the sequence with four upper-level Biological Sciences courses to complete the requirement for the minor. (Please review the section on the Minor Program in the Biological Sciences for additional relevant information.)
SPECIALIZATION PROGRAMS IN THE BIOLOGICAL SCIENCES

Students who wish to complete a "specialization" should discuss their plans with the specialization chair in Spring Quarter of their second year. Students may complete only one specialization. All courses must be taken for a quality grade in order to count towards a specialization.

Specialization in Cancer Biology

Students who complete the requirements detailed below will be recognized as having completed a specialization in cancer biology.

To be eligible to carry out a specialization in cancer biology, students must average a B grade in the first three quarters of a Biological Sciences Fundamentals Sequence.

Students who plan to specialize in cancer biology are advised to begin the required specialization courses below in their third year. Students who elect to specialize should consult Dr. Kay F. Macleod, The Ben May Department for Cancer Research and the Committee on Cancer Biology (kmacleod@uchicago.edu), who is available to advise on the objectives of the specialization and the importance of each of the classes, and to identify labs in which individual research projects can be carried out.

The following three courses are required for a specialization in cancer biology. To continue in the specialization, students must achieve an A or B grade in both courses.

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOS 25108</td>
<td>Cancer Biology</td>
<td>100</td>
</tr>
<tr>
<td>BIOS 25308</td>
<td>Heterogeneity in Human Cancer: Etiology and Treatment</td>
<td>100</td>
</tr>
<tr>
<td>BIOS 25326</td>
<td>Tumor Microenvironment and Metastasis</td>
<td>100</td>
</tr>
</tbody>
</table>

To complete the specialization in cancer biology, students should also take one of the following two courses in either their third or fourth year, having successfully completed BIOS 25108 and BIOS 25308 above, and started work in their chosen research laboratory.

<table>
<thead>
<tr>
<th>Course</th>

<td>Pharmacogenomics: Discovery and Implementation</td>
<td>100</td>
</tr>
<tr>
<td>BIOS 25327</td>
<td>Health Disparities in Breast Cancer</td>
<td>100</td>
</tr>
</tbody>
</table>

Laboratory Research

To complete the specialization in cancer biology, students will also carry out individual guided research, participate in the honors research program, and attend cancer biology-related seminars. Participation in the research component of the specialization in cancer biology is by invitation only and is based on: (1) performance in the above-mentioned courses, (2) identification of a research project and mentor, (3) submission of a research abstract for consideration by the end of the Winter Quarter of their junior year to the Director of the Specialization in Cancer Biology (Dr. Kay Macleod).

Independent research projects performed by students in the specialization in cancer biology must be approved by the Director of the Specialization (Dr. Macleod) and be of sufficiently high standard to qualify as a senior honors project and ideally to produce data that contributes to peer-reviewed publication.

Students are encouraged to begin their research project no later than the Spring/Summer Quarter of their junior year.

Specialization in Cellular and Molecular Biology

Students majoring in biological sciences who meet the following requirements will be recognized as having completed a specialization in the area of cellular and molecular biology.

The following requirements must be met:

Courses

<table>
<thead>
<tr>
<th>One of the following:</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 22200 Organic Chemistry III</td>
<td>100</td>
</tr>
<tr>
<td>CHEM 23200 Honors Organic Chemistry III</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

</tr>
<tr>
<td>BIOS 23299 Plant Development and Molecular Genetics</td>
<td></td>
</tr>
<tr>
<td>BIOS 21208 Fundamentals of Molecular Biology</td>
<td></td>
</tr>
<tr>
<td>BIOS 21360 Advanced Molecular Biology</td>
<td></td>
</tr>
</tbody>
</table>

Total Units 400

* If students choose a developmental course, they must choose between BIOS 21237 or BIOS 23299.

Laboratory Research
Completion of an independent research project is required under the guidance of a faculty mentor/adviser that either:

1. Qualifies as a senior honors project; or
2. Is approved by the director of the specialization and the student’s research adviser.

The specialization in cellular and molecular biology is administered by the Department of Molecular Genetics and Cell Biology. The director of this specialization is TBA.

Specialization in Ecology and Evolution

Students majoring in biological sciences who complete the course work indicated below and write a research-based senior thesis will be recognized as having completed a specialization in ecology and evolution. This specialization is recommended for students who are interested in pursuing graduate work in the field or in laboratory sciences of ecology, evolution, population genetics, or behavior. Based on the student’s particular interest, he or she will select a faculty adviser, who then may recommend specific courses necessary to meet the specialization requirements (see following section). The faculty adviser may also help the student find an appropriate research lab in which to conduct an individual research project.

The following requirements must be met:

Courses

1. Students intending to pursue the Ecology and Evolution specialization are strongly encouraged to follow Track C for the BIOS fundamentals sequence.
2. Students in the Ecology and Evolution specialization must take three courses in statistics (STAT 22000 Statistical Methods and Applications or higher) or other quantitative approaches relevant to their research plans (BIOS 26210 Mathematical Methods for Biological Sciences I and BIOS 26211 Mathematical Methods for Biological Sciences II recommended). These courses can count toward the quantitative requirements for Track C. (bscd.uchicago.edu/page/quantitative-courses)
3. Three of the upper-level courses required for completion of the BIOS major must be chosen from a menu of courses in behavior, ecology, evolution, and genetics. Students must select the courses required for the Ecology and Evolution specialization in consultation with the faculty research adviser, the director of the specialization (Cathy Pfister, 773.834.0071, cpfister@uchicago.edu) or the BSCD Ecology and Evolution adviser (Chris Andrews, 773.702.1214, candrews@uchicago.edu).

Laboratory or Field Research

Students specializing in Ecology and Evolution must perform original research under the guidance of a member of the ecology and evolution faculty and write a senior thesis based on this research. The research paper draft should be submitted before the end of fifth week in Spring Quarter, with the final thesis due in eighth week. NOTE: Students must complete field research by the end of the growing season (summer) of their third year.

The specialization in ecology and evolution is administered by the Department of Ecology and Evolution. For more information, please consult the director of the specialization, Cathy Pfister (773.834.0071, cpfister@uchicago.edu).

Specialization in Endocrinology

After taking the following three courses, students majoring in biological sciences will be recognized as having completed a specialization in endocrinology. Students who complete the specialization will be well versed in all aspects of endocrinology, ranging from basic cell signaling to the integration of endocrine systems and their dysregulation in human disease. Students will also have the option of participating in a hands-on research component in an endocrinology lab. The prerequisite for these courses is completion of the Fundamentals Sequence. It is strongly recommended that students complete a Biochemistry course before enrolling; however, the specialization can be completed as Endocrinology I–II-III or Endocrinology II-III-I.

</tr>
</tbody>
</table>

The specialization in endocrinology is administered by the Section of Endocrinology, Diabetes and Metabolism, the Committee on Molecular Metabolism & Nutrition, and the NIH funded Diabetes Research & Training Center. For more information, consult Matthew Brady (mbrady@medicine.bsd.uchicago.edu).

Specialization in Genetics

Biological sciences majors who obtain a B or better in the five courses from the categories listed below and complete an independent research project will be recognized as having fulfilled the requirements for a specialization in the area of genetics. Please consult Vincent Lynch (vjl Lynch@uchicago.edu) if you would like to request approval for any non-listed course with significant genetics content to satisfy this requirement.

One of the following:
**Specialization in Global Health Sciences**

Students majoring in biological sciences who complete the following requirements will be recognized as having completed a specialization in global health sciences. Note that this specialization fulfills two upper-level elective requirements in the biological sciences major, and students must take three additional upper-level electives to complete the major.

Students register for the three required courses listed below. BIOS 27810 and BIOS 27811 qualify as upper-level electives in the biological sciences major, and BIOS 29812 qualifies as a general elective in the College. There are two ways to complete this specialization:

1. **On campus:** Offered every other year, as a yearlong sequence beginning Autumn 2016, or
2. **At the University of Chicago Center in Paris:** Offered every other year during Winter Quarter in even years. See [http://study-abroad.uchicago.edu/programs/paris-global-health](http://study-abroad.uchicago.edu/programs/paris-global-health).

Additional courses may be available but are not required. These courses should be identified in consultation with the director of the specialization, Dr. Sola Olopade (solopade@bsd.uchicago.edu (solopade@bsd.uchicago.edu)).

**Courses**

Students are required to take the following three courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>

<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOS 27810</td>
<td>Epidemiology &amp; Population Health: Global Health Sciences I</td>
<td>100</td>
<td>Offered Autumn Quarter every year on campus; Winter Quarter in Paris as part of Study Abroad, beginning 2018 and every other year thereafter</td>
</tr>
<tr>
<td>BIOS 27811</td>
<td>Microbiology: Global Health Sciences II</td>
<td>100</td>
<td>Offered Winter Quarter on campus beginning 2017 and every other year thereafter; Winter Quarter in Paris as part of Study Abroad, beginning 2018 and every other year thereafter</td>
</tr>
<tr>
<td>BIOS 29812</td>
<td>Bio/Social Determinants of Health: Global Health Sciences III</td>
<td>100</td>
<td>Offered Spring Quarter every other year on campus beginning 2017; Winter Quarter in Paris as part of Study Abroad, beginning 2018 and every other year thereafter. This course may not be counted toward the Biological Sciences major.</td>
</tr>
</tbody>
</table>

**Total Units**

500
Thesis Option

For students interested in a career in the area of Global Health, a thesis is recommended and should be arranged with the director of the specialization during the Spring Quarter of their third year. The thesis may be either a report on an original research project conducted under the direction of a faculty mentor or an original review of a current area of interest in the literature and must be approved by the director of the specialization.

For more information, students should consult with Dr. Sola Olopade (solopade@bsd.uchicago.edu).

Specialization in Immunology

After taking three of the four courses listed below, students majoring in biological sciences will be recognized as having completed a specialization in immunology. The fourth course is available to students who wish further study.

Students are required to take the following three courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOS 25256</td>
<td>Immunobiology (Autumn)</td>

<td>Immunopathology (Winter)</td>
<td>100</td>
</tr>
<tr>
<td>BIOS 25266</td>
<td>Molecular Immunology (Spring)</td>
<td>100</td>
</tr>
</tbody>
</table>

The following is an elective course:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOS 25260</td>
<td>Host Pathogen Interactions (Autumn)</td>
<td>100</td>
</tr>
</tbody>
</table>

For more information, students should consult with Bana Jabri, Department of Pathology and the Committee on Immunobiology (773.834.8670, bjabri@bsd.uchicago.edu).

Accelerated Program in Immunology

The University of Chicago Graduate Program in Immunology permits undergraduate students who have demonstrated outstanding potential for graduate studies in biology to begin graduate school during their fourth year in the College. This is a competitive merit-award program.

Because of the accelerated nature of the curriculum, applicants must have outstanding academic credentials (i.e., GPA typically in the range of 3.7 and GRE scores typically not less than 1400). Eligible students also have a clear understanding of their motivation for immunology. Laboratory experience is not mandatory but highly encouraged.

Candidates will apply to the Graduate Program in Immunology at the University of Chicago during their third year in the College. Eligible students must have completed thirty-three credits (of the forty-two required for a degree in the College) by the end of their third year. These thirty-three credits must include all fifteen general education requirements and one-half of the requirements for their major.

For further information, contact Bana Jabri, Department of Pathology and the Committee on Immunobiology (773.834.8670, bjabri@bsd.uchicago.edu).

Specialization in Microbiology

Students majoring in biological sciences who complete three courses on the list that follows will be recognized as having completed a specialization in microbiology.

Students should preferentially register for BIOS 25206 Fundamentals of Bacterial Physiology, BIOS 25216 Molecular Basis of Bacterial Diseases, and BIOS 25287 Introduction to Virology.

With prior approval from the specialization chair, Dominique Missiakas (dmissiak@bsd.uchicago.edu), students may substitute BIOS 25206 and BIOS 25216 for the two elective courses GEOS 26650 Environmental Microbiology and BIOS 27811 Microbiology: Global Health Sciences II respectively. The elective courses are also available to students who wish to pursue additional studies in microbiology.

Students are encouraged to begin this sequence in Autumn Quarter of their third year, carry out individual guided research, participate in the honors research program, and attend the Microbiology Seminar series (https://biomedsciences.uchicago.edu/page/committee-microbiology-activities). Students who elect to specialize should consult Dominique Missiakas (dmissiak@bsd.uchicago.edu) (dmissiak@bsd.uchicago.edu) for advice on the choice of courses and identification of a laboratory to carry out research projects in microbiology.

Students are required to take the following three courses:

Specialization in Neuroscience

Beginning with the entering class of Autumn 2017, the Specialization in Neuroscience will no longer be available. Rising second-, third-, and fourth-years who still wish to complete the specialization should contact Megan McNulty (mmcnulty@uchicago.edu) for guidance regarding course selection.

REQUIREMENTS FOR THE BACHELOR OF SCIENCE DEGREE IN THE BIOLOGICAL SCIENCES

Students can earn a BS in the Biological Sciences by (1) completing three upper-level BIOS courses beyond those required for the BA degree, and (2) writing a BS thesis (research paper or literature review) under the supervision of an adviser who is on the BSD research faculty. The additional upper-level courses must be chosen in consultation with the thesis adviser and a BSCD senior adviser. The BA is designed for students who wish to gain extensive training in modern biology but also retain the flexibility to take elective courses outside the major. The BS is suitable for students who wish to take more courses within the major and to write a senior thesis. Students completing the honors program or a specialization that requires a senior thesis can submit the same thesis for the BS degree. If you have any questions, please contact BSCD Senior Adviser Chris Andrews (candrews@uchicago.edu) or Megan McNulty (mmcnulty@uchicago.edu@uchicago.edu(nichoo@uchicago.edu)). Details of the BS degree and a timeline for completion of requirements are provided on the BSCD website at https://bscd.uchicago.edu/page/bs-biological-sciences.

MINOR PROGRAM IN THE BIOLOGICAL SCIENCES

Students who elect the minor program must meet with the master or one of the senior advisers of the Biological Sciences Collegiate Division by the Spring Quarter of their second year in order to obtain consent to pursue the minor and to plan out the appropriate curriculum.

The minor in Biological Sciences requires a total of seven BIOS courses beyond the general education requirement. Courses in the minor may be selected from a specific area of the biological sciences (e.g., molecular and cell biology, genetics, evolutionary biology, developmental biology, organismal biology, ecology, neurobiology, immunobiology, microbiology). Alternatively, courses may be selected from related areas to construct a program that gives a more inclusive account of how different disciplines of biology interact. These areas could comprise, for instance, immunology and microbiology, organismal biology and evolution, genetics and genomics, developmental biology and evolution, or ecology and evolution. Other combinations are also possible.

Students must meet general education requirements for the biological sciences and the physical sciences before entering the program. Biological Sciences courses at the 10000-level or above and MATH 13100 Elementary Functions and Calculus I and MATH 13200 Elementary Functions and Calculus II are the minimal general education requirements for the minor. Students interested in completing the minor are strongly encouraged to take BIOS 20150 How Can We Understand the Biosphere? and BIOS 20151 Introduction to Quantitative Modeling in Biology (Basic) or (BIOS 20152 Introduction to Quantitative Modeling in Biology (Advanced)) to complete the general education requirement in the biological sciences, as these courses also serve as prerequisites to the Fundamentals courses (BIOS 20186-88/89 or BIOS 20196-98), three of which are required for the minor. Students who fulfill their BIOS general education requirements via other paths may also request approval to pursue the minor. General Chemistry and Organic Chemistry are not specifically required. These courses would, however, allow for a greater variety of upper-level Biological Sciences courses, especially those in the areas of molecular and cellular biology; chemistry and/or biochemistry are usually prerequisites for those courses.

Following completion of the general education requirements, the minor can then be completed by taking three Fundamentals courses and at least four upper level electives to be chosen in consultation with one of the senior advisers in the Biological Sciences Collegiate Division.

Students who complete the pre-med sequence for non-majors (BIOS 20170s) are also eligible for the Biological Sciences minor. BIOS 20170 Microbial and Human Cell Biology and BIOS 20171 Human Genetics and Developmental Biology satisfy the general education requirement in biology; BIOS 20172 Mathematical Modeling for Pre-Med Students, BIOS 20173 Perspectives of Human Physiology and BIOS 20175 Biochemistry and Metabolism satisfy the fundamentals requirement. These students must follow up the 20170s with at least four upper-level electives to be chosen in consultation with one of the senior advisers in the Biological Sciences Collegiate Division.

No course in the minor can be double counted with the student’s major(s) or with other minors, nor can they be counted toward general education requirements. More than half of the requirements for the minor must be met by registering for courses with University of Chicago course numbers. All courses for the minor must be taken for quality grades.

Prior to beginning the minor program, students must obtain formal approval from the master or one of the senior advisers in the biological sciences on a form obtained from their College adviser and returned to the adviser by the deadline. To schedule an appointment with one of the senior advisers, contact Christine Andrews (candrews@uchicago.edu) or Megan McNulty (mmcnulty@uchicago.edu).

Minor Program in Computational Neuroscience

The minor in computational neuroscience is offered by the Biological Sciences Collegiate Division. Computational neuroscience is a relatively new interdisciplinary area of inquiry that is concerned with how components of animal and human nervous systems interact to produce behaviors. It relies on quantitative and modeling approaches to understand the function of the nervous system and to design human-made devices that duplicate behaviors. Course work in computational neuroscience can prepare students for graduate studies in neurobiology or psychology, in the mathematical or engineering
This minor is a good option for students who are majoring in biological sciences and are interested in mathematical approaches to biology, or for students who are majoring in computer science, mathematics, physics, psychology, or statistics and have an interest in neuroscience. Students electing this minor must have completed, or placed out of, the equivalent of a year of collegiate-level calculus and must have completed the general education requirement for the biological sciences.

The minor requires completion of the following five courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOS 24231</td>
<td>Methods in Computational Neuroscience</td>
<td>100</td>
</tr>
<tr>
<td>BIOS 24232</td>
<td>Computational Approaches to Cognitive Neuroscience</td>
<td>100</td>
</tr>
<tr>
<td>BIOS 24408</td>
<td>Modeling and Signal Analysis for Neuroscientists</td>
<td>100</td>
</tr>
<tr>
<td>BIOS 26210-26211</td>
<td>Mathematical Methods for Biological Sciences I-II</td>
<td>200</td>
</tr>
</tbody>
</table>

Total Units: 500

* Autumn and Winter Quarters of the Mathematical Methods for Biological Sciences sequence

Students who select the minor program are required to meet with the faculty adviser for Computational Neuroscience (Stephanie Palmer) by the end of Spring Quarter of their third year. Students must obtain formal approval from the chair to complete the minor program on a form obtained from their College adviser and returned to the adviser by the deadline. No courses in the minor can be double counted with the student's major(s) or with other minors, nor can they be counted toward general education requirements. More than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers. Students must earn a B- average or above in courses counted toward the minor. All courses for the minor must be taken for quality grades.

Courses: Biological Sciences (BIOS)

Students must confirm their registration with their instructors by the second class meeting or their registration may be canceled.

In the following course descriptions, L indicates courses with a laboratory.

September Courses at Marine Biological Laboratory

The College offers three courses in September 2017 at the Marine Biological Laboratory (MBL) in Woods Hole, Massachusetts. These intensive, three-week-long courses are designed for students with a strong interest in research in the sciences. All are taught by University of Chicago and MBL faculty, and take advantage of both the unique research strengths and the natural environmental resources found at MBL. The courses will each meet 5–6 days/week, 8 hours per day, with lecture in the mornings and lab or fieldwork in the afternoons. Students may only enroll in one course. Classes are small (12–15 students maximum), and the teaching environment will allow extensive contact with the instructors. The course topics cross several disciplines; students in such majors as Biological Sciences, Neuroscience, Computer Science, Physics, Mathematics, Molecular Engineering, Geophysical Sciences, Environmental Science, and Chemistry are particularly encouraged to consider these opportunities.

Each course carries 100 units of credit. All courses count as upper-level electives for Biological Sciences majors; for students in other majors, the courses can be used as Biology Topics courses to fulfill the second quarter of the general education requirement in biology. Descriptions for BIOS 27720 Microbiomes Across Environments, BIOS 27721 Observing Proteins in Action: How to Design and Build Your Own, and BIOS 27722 Marine Invertebrates of Woods Hole: Ecology/Diversity/Function can be found in the General Courses section of this page.

Students register for a September MBL course as part of their Autumn Quarter course load. The courses will take place from September 2 through September 22, 2017. This will allow students to return to campus in time for the remainder of the Autumn Quarter. Since the courses at MBL are considered part of Autumn Quarter, students who participate in the program will take either 200 or 300 units of credit for the rest of the quarter. This is something applicants should consider carefully when looking at major and general education requirements.

In addition to tuition, each course has a program fee of $2,750, which covers three weeks’ dorm-style housing and meals at MBL, as well as all supplies and excursions. A limited number of need-based scholarships are available. Students seeking financial assistance are encouraged to apply early. Because of the small course sizes, the MBL program will be admissions-based. An application form can be found at http://college.uchicago.edu/academics/mbl-september-courses.

For questions about the program, contact Jocelyn Malamy at jmalamy@bsd.uchicago.edu.

Biological Sciences Sequences for Nonmajors

Students choose from the following options to meet the biological sciences requirement. The requirement should be completed by the end of the second year.

1. Students may choose to take BIOS 10130 Core Biology as their first course. For their second quarter, students choose from a menu of topics courses (BIOS 11000–19999) that are comprehensive reviews of specialized topics in the
Multiple sections of BIOS 10130 Core Biology are taught throughout the year. Sections are taught from a different perspective based upon the specialty of the instructor. The different descriptions are listed below. The student should register for the section that best suits their interests based upon the descriptions below.

**BIOS 10130. Core Biology. 100 Units.**
What is life? How does it work and evolve? This course uses student-centered interactive learning in the lab, assigned readings from both the popular press and primary scientific literature, and directed writing exercises to explore the nature and functions of living organisms, their interactions with each other, and their environment.

**Instructor(s):** Staff
**Terms Offered:** Autumn, Spring, Winter

**Section Descriptions of 10130. Core Biology**

- **A. Neurobiology.** This course explores the principles governing the organization, operation, and evolution of living systems by examining these concepts through the lens of neuroscience. Through laboratory investigations, readings from the popular and scientific press, and directed writing exercises, the methods of scientific inquiry and logic of scientific reasoning will be introduced. In this exploration, the following questions will be addressed: How are all living organisms organized and how does that organization contribute to their function? What are the mechanisms by which organisms sense and respond to changes in their environment and engage in functional interactions within that environment? What are the biological and evolutionary mechanisms that underlie natural organismal behaviors including, but not limited to, motivated and circadian-driven behaviors? Both invertebrate and vertebrate model systems will be examined to explore the processes at work in all living systems as well as the mechanisms underlying the formation and maintenance of life's diversity. M. McNulty. Autumn, Spring. L.

- **B. Microbes and Immunity.** These sections cover the most basic concepts in biology, such as life, macromolecules, cells, energy, metabolism, evolution, and genomics, as well as human anatomy and physiology. These particular sections draw examples from microbiology and immunology to tie these basic concepts together. The impact of our interactions with microorganisms in our evolution is highlighted in many ways. Hands-on laboratories, readings, and discussion sessions complement lectures. B. Fineschi. Autumn, Winter, Spring. L.

- **C. Basic Biology.** What is life? How does it work and evolve? This course uses student-centered interactive learning in the lab, assigned readings from both the popular press and primary scientific literature, and directed writing exercises to explore the nature and functions of living organisms, their evolution, and their interactions with each other. A. Hunter. Autumn, Spring. L.

- **D. Biotechnology.** In the first half of this course, basic biology concepts related to biotechnology are covered. These include lectures on life, cells, macromolecules, metabolism, and genetics, complemented by hands-on laboratories. The second half of the course involves student-led topical research and presentations on various aspects of biotechnology, such as plant biotechnology, animal biotechnology, microbial biotechnology, response to bioterrorism, and examining the consequences of developments in these areas. N. Bhasin. Spring. L.

- **E. Ecology.** Have you wondered how the environment has influenced your anatomy, physiology, and psychology through your lifetime? Each one of us continuously interacts, directly or indirectly, with the rest of the Earth’s biodiversity at different levels, from molecules, cells, organisms, populations, ecosystems, and the whole biosphere. Are we really independent individuals, or do we need a better concept that broadens our understanding of the world we live in? In this course you will examine fundamental biological principles to understand how organisms live and thrive in a complex and intricate network that we call nature. You will develop your own criteria based on evidence obtained through hypothesis testing and identification of legitimate sources of information. O. Pineda. Autumn, Winter. L.

2. Students may choose one of the sequences below (BIOS 10450 Pharmacological Perspectives in Cell and Molecular Biology and BIOS 10451 Pharmacological Perspectives II or BIOS 10500 Metabolism and Exercise and BIOS 10501 Metabolism and Nutrition or BIOS 10602 Multiscale Modeling of Biological Systems I and BIOS 10603 Multiscale Modeling of Biological Systems II) as an alternative to BIOS 10130 Core Biology plus a Topics course. Taking one of these sequences meets the general education requirement in biological sciences. **Students MUST take BOTH courses in a sequence.**

**BIOS 10450. Pharmacological Perspectives in Cell and Molecular Biology. 100 Units.**
This course introduces concepts related to the use, pharmacodynamic properties, manner in which drugs act at the molecular and/or cellular level, and their effects at the organismal level.

**Instructor(s):** R. Zaragosa
**Terms Offered:** Autumn

**Prerequisite(s):** This course is equivalent to BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition. This course MUST be followed by the second course in the sequence.
BIOS 10451. Pharmacological Perspectives II. 100 Units.
Must new taken in sequence with BIOS 10450. The goal of this course is to learn the pharmacological principles by which drugs act, at the molecular and cellular level, to affect an organ/organ systems of the human body. The pharmacodynamics, pharmacokinetic, pharmacotherapeutics and toxicology of a number of drugs are discussed. Drugs currently in the media, how these drugs affect different systems ranging from cardiovascular to the central nervous system, and the fundamental basis for the use of drugs are covered.
Instructor(s): R. Zaragoza Terms Offered: Winter
Prerequisite(s): BIOS 10450. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 10500. Metabolism and Exercise. 100 Units.
Must be taken in sequence with BIOS 10501. This course examines the flow of energy through the human body—from what we eat to what we can do. Basic physiology, metabolism, and exercise concepts are covered from cells to systems. Students should be prepared to alter their diet and/or physical activity. This course is intended to be followed by BIOS 10501 (Metabolism and Nutrition).
Instructor(s): J. Kennedy Terms Offered: Autumn
Prerequisite(s): This course MUST be followed by the second course in the sequence. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 10501. Metabolism and Nutrition. 100 Units.
Must be taken in sequence with BIOS 10500. Taking a scientific approach to nutrition, this course covers nutritional requirements and why they are required for human health by exploring their function at the cellular and molecular level. Basic physiology concepts related to nutritional health are covered, including digestive physiology and some aspects of endocrinology. As a continuation of the exercise concepts covered in BIOS 10501, the relationship between exercise and nutrition is considered. Students complete a dietary analysis of their food intake to critique their individual nutritional health.
Instructor(s): P. Strieleman Terms Offered: Winter
Prerequisite(s): BIOS 10500. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.
Note(s): Credit may not be earned for both BIOS 10501 and BIOS 12114.

BIOS 10602. Multiscale Modeling of Biological Systems I. 100 Units.
This two-sequence course is intended for students with strong quantitative background, such as those majoring in physical sciences or economics. Modern biology generates massive amounts of data; this course is devoted to biological information and the models and computational techniques used to make sense of it. The first course in the sequence begins with the organization of life at the molecular level, and builds a physical understanding to the structure of macromolecules such as DNA, RNA and proteins. Students learn about biological databases, algorithms for sequence alignment and phylogenetic tree building. Students will also be introduced to basics of high performance computation and its application to the field of bioinformatics. They will learn how to use our in-house supercomputer to process and analyze next generation gene sequencing data in order to identify disease-relevant variants. Students implement computational algorithms using R and Unix.
Instructor(s): E. Haddadian Terms Offered: Autumn,Winter. L.
Prerequisite(s): MATH 13300/15300/16300 or equivalent placement. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition. This course MUST be followed by the second course in the sequence.

BIOS 10603. Multiscale Modeling of Biological Systems II. 100 Units.
Must be taken in sequence with BIOS 10602. Major Advances in understanding how life works at the molecular level have revolutionized biology. The second course in the sequence is dedicated to the study of how large molecules, such as proteins, DNA, carbohydrates, and phospholipids, perform their functions. The course will begin with a solid grounding in molecular chemistry and the forces that govern interactions between atoms and molecules. This is followed by an overview of structure and function of macromolecules, in particular of proteins and enzymes. The students will learn how to visualize macromolecules and measure their basic properties and to model their physical movements by means of molecular dynamic simulations running at university’s super computer facility. The course will then proceed to describe how interactions of these molecules produce functioning organelles and cells, and how molecular mishaps can lead to disease.
Instructor(s): E. Haddadian Terms Offered: Spring,Winter. L.
Prerequisite(s): BIOS 10602 or consent of instructor. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

Topics Courses for Nonmajors
The courses that follow have a prerequisite of BIOS 10130 Core Biology, or a score of 4 or 5 on the AP biology test. Attendance is required at the first class to confirm enrollment.
BIOS 11125. Life through a Genomic Lens. 100 Units.
The implications of the double helical structure of DNA has triggered a revolution in cell biology. More recently, the technology to sequence vast stretches of DNA has offered new vistas in fields ranging from human origins to the study of biodiversity. This course considers a set of these issues, including the impact of a DNA perspective on the legal system, on medicine, and on conservation biology.
Instructor(s): A. Turkewitz, M. Nobrega Terms Offered: Winter
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.
Equivalent Course(s): ENST 12402

BIOS 11128. Introduction to Human Genetics. 100 Units.
This course covers both classical Mendelian human genetics and advances in molecular genetics. We discuss the inheritance of normal human traits and a variety of genetic diseases, including single gene traits and multifactorial, complex traits. Other topics include chromosome abnormalities, sex inheritance, human population genetics, and microevolution.
Instructor(s): T. Christianson Terms Offered: Spring
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 11135. Epigenetics. 100 Units.
For a long time it was thought that all of the information for producing an organism is contained in the DNA sequence inherited from the parent(s), but reality turned out to be more complicated. The expression of genes (turning translation on and off) is regulated by chemical modifications that do not change the DNA sequence but are passed along with it to the offspring. The study of these modifications and their impact on gene regulation is called epigenetics (“around” genetics); it has disrupted our understanding of pure biology, specifically of evolution, as well as of applied topics like cancer medicine. The goals of the course are: a) to gain an understanding of the molecular basis of epigenetics; b) to appreciate the paradigm shift that epigenetics has brought to our understanding of inheritance; c) to read publications in the field and to learn to critically assess the quality of scientific and medical research.
Instructor(s): Dmitry Kondrashov Terms Offered: Autumn
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 11140. Biotechnology for the 21st Century. 100 Units.
This course is designed to provide a stimulating introduction to the world of biotechnology. Starting with an overview of the basic concepts of molecular biology and genetics that serve as a foundation for biotechnology, the course will segue into the various applied fields of biotechnology. Topics will include microbial biotechnology, agricultural biotechnology, biofuels, cloning, bioremediation, medical biotechnology, DNA fingerprinting and forensics. The goal of this course is to provide the Biology non-majors with an appreciation of important biotechnology breakthroughs and the associated bioethics issues.
Instructor(s): N. Bhasin Terms Offered: Autumn,Spring,Winter
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 12114. Nutritional Science. 100 Units.
This course examines the underlying biological mechanisms of nutrient utilization in humans and the scientific basis for setting human nutritional requirements. The relationships between food choices and human health are also explored. Students consider how to assess the validity of scientific research that provides the basis for advice about how to eat healthfully. Class assignments are designed to help students apply their knowledge by critiquing their nutritional lifestyle, nutritional health claims, and/or current nutrition policy issues.
Instructor(s): P. Strieleman Terms Offered: Autumn,Spring,Summer
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.
Note(s): Credit may not be earned for both BIOS 12114 and BIOS 10501

BIOS 12115. Responses of Cardiopulmonary System to Stress. 100 Units.
This course is designed to provide students an overview of basic concepts involved in the functioning of cardiopulmonary vascular systems. Special emphasis will be given to different regulatory mechanisms working at the cell, tissue and organ levels to control the systems functioning during stress conditions. We also discuss recent topics related to molecular basis of adaptation and drugs designed to treat mal-adaptive changes taking place in the heart and lungs (vessels) subjected to various types of pathological stresses. Instructors, who are both actively engaged in research to understand molecular basis of cardiopulmonary vascular diseases take this course beyond the knowledge of standard textbook content.
Instructor(s): M. Gupta, Y. Fang Terms Offered: Spring
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.
BIOS 12116. The Human Body in Health and Disease. 100 Units.
This course is designed to provide an overview of physiological organ systems under different states of health and disease. A comprehensive tour through the human body will take students through the anatomy and functioning of several systems including, but not limited to, the cardiovascular, respiratory, nervous, renal, gastrointestinal, and immune systems. We will examine each of these systems under normal conditions and from the perspective of disease. A variety of pathological conditions including diabetes, heart and kidney diseases, neurodegenerative conditions, and autoimmune diseases, will be covered with an emphasis on how many diseases involve multiple organ systems.
Instructor(s): M. McNulty Terms Offered: Autumn
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 12117. The 3.5 Billion Year History of the Human Body. 100 Units.
This course looks at the structure, function, and deep history of the human body. Each major organ and system of the body is explored from perspectives of anatomy, paleontology, and developmental genetics to reveal the deep history of the body and our connections to the rest of life on the planet.
Instructor(s): N. Shubin Terms Offered: Spring
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 12119. Essentials of Exercise Physiology and Nutrition. 100 Units.
This course is intended to give a basic knowledge concerning the relationship between nutrient-energy intake, nutrient-energy metabolism, and energy transfer during exercise. The course will cover biochemical metabolism and nutrition, the interconnection of the macronutrients, and the physiologic systems that support exercise. The basic physiology of the muscular system, cardiovascular system, pulmonary system, and endocrine system will be introduced with emphasis on their role in exercise. How exercise impacts the nutritional macronutrient needs of the athlete will be explored.
Instructor(s): P. Strielemann Terms Offered: Winter
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 13111. Natural History of North American Deserts. 100 Units.
This lecture course focuses on the ecological communities of the Southwest, primarily on the four subdivisions of the North American Desert, the Chihuahuan, Sonoran, Mohave, and Great Basin Deserts. Lecture topics include climate change and the impact on the flora and fauna of the region; adaptations to arid landscapes; evolutionary, ecological, and conservation issues in the arid Southwest, especially relating to isolated mountain ranges; human impacts on the biota, land, and water; and how geological and climatic forces shape deserts.
Instructor(s): E. Larsen Terms Offered: Spring
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 13112. Natural History of North American Deserts: Field School. 100 Units.
This lecture/lab course is the same course as BIOS 13111, but includes a lab section preparatory to a two-week field trip at end of Spring Quarter, specific dates to be announced. Our goal in the lab is to prepare proposals for research projects to conduct in the field portion of this course. Field conditions are rugged. Travel is by twelve-passenger van. Lodging during most of this course is tent camping on developed campsites.
Instructor(s): E. Larsen Terms Offered: Spring
Prerequisite(s): Consent of instructor. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 13123. Biological Evolution. 100 Units.
This course is an introduction to evolutionary processes and patterns in present-day organisms and in the fossil record and how they are shaped by biological and physical forces. Topics emphasize evolutionary principles. They include DNA and the genetic code, the genetics of populations, the origins of species, and evolution above the species level. We also discuss major events in the history of life, such as the origin of complex cells, invasion of land, and mass extinction.
Instructor(s): D. Jablonski Terms Offered: Winter
Prerequisite(s): Students using this course as part of the general education requirement register for GEOS 13900 or BIOS 13123; prerequisite BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS except by petition to the BSCD Senior Advisers. Due to significant overlap of course content, students may register for only one of PHSC 11000, BIOS 12117, or GEOS 13900 ( =NTSC 10300, =BIOS 13123). Students using this course for credit in the GEOS or ENSC major register for GEOS 27300; additional work, including a term paper, will be required.
Equivalent Course(s): GEOS 27300, GEOS 13900

BIOS 13125. Ecology and the Environment. 100 Units.
This course introduces the principles of ecology and environmental biology. Focusing on both studies of wild populations of plants and animals as well as human ecology, we discuss population growth, the distribution and abundance of species, and conservation biology. Other topics include such current environmental issues as climate change, invasive species, and resource use. This course is intended for students who are not majoring in biological sciences or who are seeking an introductory understanding of ecology and environmental biology.
Instructor(s): S. Pruett-Jones Terms Offered: Summer
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.
BIOS 13128. Plant-Animal Interactions. 100 Units.
In this course we investigate the ecological interactions between plants and animals, and their evolution. Through readings and discussion we explore herbivory and mutualisms (pollination, seed dispersal). How do plants defend themselves against herbivores? How have plants and their seed dispersers, pollinators, and predators co-evolved?
Instructor(s): A. Hunter Terms Offered: Winter
Prerequisite(s): BIO 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 13131. Chicago's Natural History: Where Is it? What Is It? and There It Goes! 100 Units.
In this course you will explore the organisms of the Chicago region, and learn how to identify major groups of organisms: animal phyla and some orders and classes, plant divisions and higher plant families. The identification principles will be useful beyond Chicago as well. The class will combine field and lab exercises in sampling and identification, and lectures on the ecology and evolution of the organisms, with an emphasis on species native to the region. Be prepared to work outdoors and walk around Hyde Park, carrying a net and with binoculars on, in all sorts of weather.
Instructor(s): A. Hunter Terms Offered: Autumn
Prerequisite(s): BIO 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 13132. Ecology in the Anthropocene. 100 Units.
This course emphasizes basic scientific understanding of ecological principles that relate most closely to the ways humans interact with their environments. It includes lectures on the main environmental pressures, notably human population growth, disease, pollution, climate change, habitat destruction, and harvesting. We emphasize the ongoing impacts on the natural world, particularly causes of population regulation and extinction and how they might feedback on to humans. Discussion required.
Instructor(s): T. Price Terms Offered: Autumn
Prerequisite(s): Bio 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.
Equivalent Course(s): ENST 13132

BIOS 13140. The Public and Private Lives of Insects. 100 Units.
This course examines the ecology and evolution of insects, from their early evolution over 350 million years ago to their adaptations that allow them to exploit nearly every habitat on earth and become the most diverse animal group on the planet. We explore the basic biology of insects that have allowed them to become the largest group of animals on the planet, making up approximately 1.5 million of the 2 million described species.
Instructor(s): E. Larsen Terms Offered: Autumn
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 13253. Apes and Human Evolution. 100 Units.
This course is a critical examination of the ways in which data on the behavior, morphology, and genetics of apes have been used to elucidate human evolution. We emphasize bipedalism, hunting, meat eating, tool behavior, food sharing, cognitive ability, language, self-awareness, and sociability. Visits to local zoos and museums, film screenings, and demonstrations with casts of fossils and skeletons required.
Instructor(s): R. Tuttle Terms Offered: TBD
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.
Equivalent Course(s): HIPS 21428, ANTH 38600, EVOL 38600, ANTH 21428

BIOS 14112. Workings of the Human Brain: From Brain to Behavior. 100 Units.
This course examines how the brain generates behavior. Topics include the organization of the nervous system; the mechanisms by which the brain translates external stimuli into electrical and chemical signals to initiate or modify behavior; and the neurological bases of learning, memory, sleep, cognition, drug addiction, and neurological disorders.
Instructor(s): M. McNulty Terms Offered: Spring, Summer
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 14114. Drugs Galore: What They Are and What They Do to You. 100 Units.
The course will cover several drugs used and abused (such as alcohol, ritalin, adderall, cannabinoids), their targets and pharmacological actions.
Instructor(s): R. Zaragoza Terms Offered: Spring
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

BIOS 14115. From Social Neuroscience to Medical Neuroscience and Back. 100 Units.
This course considers the roles of brain activity, as modulated by states of health and by neural, hormonal, cellular, genetic and epigenetic mechanisms in determining social interactions. It also considers the inverse, but inextricably linked impact of social interactions on nervous system and brain function.
Instructor(s): S. Cacioppo Terms Offered: Spring. Every other year in even years
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.
**BIOS 15115. Cancer Biology: How Good Cells Go Bad. 100 Units.**
This lecture/discussion course examines the multi-step process by which normal cells become malignant cancer cells. Topics include how defects in the regulation of proliferation, differentiation, and apoptosis can occur in cancer cells, as well as how cancer cells can acquire the ability to attract blood vessels (angiogenesis) and to invade other organ systems (metastasis). We emphasize the study of signal transduction pathways and how they are altered in cancer cells. The concept of genes that cause cancer (oncogenes) and genes that deter cancer (tumor suppressor genes) is discussed. New disease treatments that target specific molecular defects within cancer cells are reviewed.

Instructor(s): M. Villereal Terms Offered: Spring, Winter
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

**BIOS 15123. The Microbiome in Human and Environmental Health. 100 Units.**
Modern microbiology is an exciting time. We are just now discovering the full extent of the impact microbial life - bacteria, archaea, eukaryotes and viruses – has on our lives. In this course we will examine and dissect a brief history of microbiology, uncover the vast biochemical and metabolic diversity of the microbial world examining life at the extremes, delve into the human microbiome and its myriad roles in our health, physiological and psychological wellbeing, examine the microbiome of our human world (the built environment), and highlight the myriad ways microbes influence our social and economic success. We will present a compelling multidisciplinary examination of the current state of the art in microbial sciences.

Instructor(s): J. Gilbert, H. Shuman Terms Offered: Spring
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

**BIOS 15124. The Principles of Microbiology/Global Infectious Diseases. 100 Units.**
Infectious diseases – of both viral and bacterial origins – remain a major global health burden. This course introduces students to the excitingly diverse world of microbes and discusses the roles they play in causing infectious diseases in humans. Various types of microbes are described, with the focus on viruses and bacteria that have caused, or continue to cause, significant morbidity and mortality in humans worldwide. A central part of this subject outlines some of the strategies used by infectious agents to cause disease, their transmission, and principal mechanisms employed by the human immune system to prevent disease. Other measures of controlling infectious diseases, including vaccines and antimicrobial therapies, are also discussed. This course provides students with an understanding of the basic concepts in Microbiology/Infectious Diseases.

Instructor(s): M. Gack Terms Offered: Winter
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-MAJOR PRE-MED STUDENTS, except by petition.

**BIOS 16120. The Biological Nature of Psychological Problems. 100 Units.**
This course is based on the strong assumption that psychology is a biological science, albeit with elements of the social sciences. The course uses a combination of lectures and classroom discussion of primary and secondary source readings assigned for each class meeting. It presents a strong biological science perspective on individual differences in emotions, motivations, and cognitions that cause distress or interfere with adaptive life functioning, but does so in a non-stigmatizing manner. The course begins with a description and discussion of the nature of psychological problems. The course will survey what is known about the genetic, environmental, and epigenetic bases of such problems and the methods used to study genetic influences and gene-environment interactions. Next, students will review what is currently known about the neural and other biological mechanisms involved in maladaptive individual difference in emotion, motivation, and cognitive processes, with discussion of the methods of studying such mechanisms in humans and nonhumans. The pros and cons of the medical model of ‘mental illness’ will be discussed as the major contrast with the natural science view advocated by the instructor.

Instructor(s): B. Lahey Terms Offered: Spring
Prerequisite(s): BIOS 10130. NO BIOLOGICAL SCIENCES MAJORS OR NON-MAJOR PRE-MED STUDENTS, except by petition.
Equivalent Course(s): PSYC 28850

**Biological Sciences Sequences for Majors and Students Preparing for the Health Professions**

**Fundamentals Sequences**

All first-year students who wish to major in Biological Sciences must take BIOS 20150 How Can We Understand the Biosphere? and either BIOS 20151 Introduction to Quantitative Modeling in Biology (Basic) or BIOS 20152 Introduction to Quantitative Modeling in Biology (Advanced) during their first year as prerequisites for the Fundamentals courses. Beginning in 2017, BIOS 20151 Introduction to Quantitative Modeling in Biology (Basic)/BIOS 20152 Introduction to Quantitative Modeling in Biology (Advanced) can be taken together with the first course of the Fundamentals sequence. (Chemistry, Biological Chemistry, and Neuroscience majors can take the Fundamentals Sequences without the Biological Sciences prerequisites (BIOS 20150-20151/20152) unless they pursue a double major in Biological Sciences. They are expected to show competency in mathematical modeling of biological phenomena covered in BIOS 20151 or BIOS 20152.)

Beginning in 2017 the timing of the Fundamentals sequence is shifted forward from previous years, meaning that incoming students in 2017 will have the opportunity to begin their major studies in their first year. In 2018, BIOS 20186 will be offered in Spring and BIOS 20187 will be taught in the Autumn. BIOS 20189 moves to Winter in 2019 and BIOS 20190 in moves to Spring 2019. The timing of BIOS 20188 and BIOS 20191 are unchanged.
For rising second year students who completed BIOS 20150 and BIOS 20151 or 20152 in Spring of 2017, a legacy sequence will be taught in 2017-18 ONLY, maintaining the previous timing of the Fundamentals sequence. BIOS 20186 will be taught in Autumn 2017. BIOS 20187 will be taught in Winter 2018, and BIOS 20189 will be in Spring 2018. After Autumn 2017, BIOS 20190 will not be taught again until Spring 2019.

BIOS 20150. How Can We Understand the Biosphere? 100 Units.
This course surveys the basic principles of ecology and evolutionary biology to lay the foundation for further study in all fields of biology. Broad ecological concepts, such as population growth, disease dynamics, and species interactions, will be explored through a combination of published data, simulations, and mathematical models. The emphasis is on "ecological thinking" rather than specific notions. Essential topics in the modern study of evolutionary biology will be covered with a focus on both theory and empirical examples. Examples of topics include history of evolutionary thought, evidence for evolution, mechanisms of microevolution, phylogenetics, molecular evolution, and speciation. This course requires a weekly 120-minute lab period.
Instructor(s): S. Allesina, M. Kronforst, C. Andrews, A. Hunter Terms Offered: Winter. L.
Prerequisite(s): Concurrent enrollment in CHEM 10100-10200 or CHEM 11100-11200 or CHEM 12100-12200

BIOS 20151. Introduction to Quantitative Modeling in Biology (Basic) 100 Units.
The goal for this course is to give future biologists the quantitative tools to fully participate in modern biological research. These include descriptive statistics, linear regression, stochastic independence and hypothesis testing, Markov models and stationary probability distributions, solutions of linear differential equations, equilibria and stability analysis of nonlinear differential equations. The ideas are applied to different areas of biology, e.g. molecular evolution, allometry, epidemiology, and biochemistry, and implemented by students in computer assignments using the R computational platform.
Instructor(s): D. Kondrashov Terms Offered: Spring. L.
Prerequisite(s): Two quarters of calculus of any sequence (MATH 13200 or 15200 or 16200) AND CHEM 10100-10200 or CHEM 11100-11200 or CHEM 12100-12200. First-year Biology Major standing only.

BIOS 20152. Introduction to Quantitative Modeling in Biology (Advanced) 100 Units.
This is a more advanced version of 20151, intended for students with greater mathematical maturity. In addition to the topics covered in the regular version, students will learn about nonlinear least-squares fitting, eigenvalues and eigenvectors, bifurcations and bistability in differential equations. Additional applications will include phylogenetic distance and systems biology.
Instructor(s): D. Kondrashov Terms Offered: Winter, Spring. L.
Prerequisite(s): MATH placement of 15200 or higher OR completion of MATH 16200 AND CHEM 10100-10200 or CHEM 11100-11200 or CHEM 12100-12200. First-year Biology Major standing only.

BIOS 20170 through BIOS 20175

This integrated sequence explores the molecular, cellular, organismal, and biochemical properties of living systems. It is designed to prepare students who do not intend to major in biology for graduate study in the health professions. This five-course sequence begins with BIOS 20170 Microbial and Human Cell Biology in the Winter Quarter and both BIOS 20171 Human Genetics and Developmental Biology and BIOS 20172 Mathematical Modeling for Pre-Med Students in the Spring Quarter. The second year of the sequence continues with BIOS 20173 Perspectives of Human Physiology in the Autumn Quarter and concludes with BIOS 20175 Biochemistry and Metabolism in the Winter Quarter. BIOS 20172 must be taken concurrently with BIOS 20171 in the Spring Quarter of the first year. This sequence is open only to first- and second-year non-biology majors and cannot be applied toward a major in Biological Sciences.

BIOS 20170. Microbial and Human Cell Biology, 100 Units.
This course is the entry point into an integrated biology sequence designed to prepare non-biology majors for application to medical school. We explore topics in human cell biology within the context of evolutionary biology, chemistry, microbiology, and medicine. We pay special attention to the influence of prokaryotes on the history of life and to the ecological interactions between humans and their microbiota, which have major implications for human health and disease. Students read and discuss papers from the scientific literature, attend discussions led by physicians and other medical professionals, and gain experience with microbiological basic microscopy techniques and vertebrate dissection in lab.
Instructor(s): C. Andrews, R. Zaragoza, E. Kovar Terms Offered: Winter. L.
Prerequisite(s): First or second-year standing, or consent of instructors.

BIOS 20171. Human Genetics and Developmental Biology, 100 Units.
This course covers the fundamentals of genetics, with an emphasis on human traits and diseases. Topics include Mendelian genetics, simple and complex traits, genetic diseases, the human genome, and testing for human traits and diseases. After establishing a foundation in genetics, we will discuss mechanisms underlying differentiation and development in humans. We will focus on events that lead to gastrulation and the establishment of the body plan (how humans develop from an unpatterned egg into a recognizable human form). Other topics may include limb development and stem cell biology.
Instructor(s): T. Christianson, C. Schonbaum, R. Zaragoza Terms Offered: Spring. L.
Prerequisite(s): BIOS 20170
BIOS 20172. Mathematical Modeling for Pre-Med Students. 100 Units.
This course covers mathematical approaches in biology and medicine, including basic statistics and hypothesis testing, mathematical modeling of biological systems, and an introduction to bioinformatics. Students will apply what they learn as they analyze data and interpret primary papers in the biological and clinical literature. BIOS 20172 lays the foundation for biomathematical approaches explored during subsequent courses in the BIOS 20170s sequence.
Instructor(s): E. Haddadian Terms Offered: Spring. L.
Prerequisite(s): BIOS 20170

BIOS 20173. Perspectives of Human Physiology. 100 Units.
This course will explore the structure and function of the human body as a set of integrated, interdependent systems. We will continue the cellular, genetic, and developmental themes of the previous courses to explore the emergent functions of the human body, from cells to systems. The laboratory exercises will allow the students to experience the concepts discussed in lecture in a way that introduces them to the methods of academic research, including the application of mathematical models to physiological questions. Students will be asked to serve as test subjects in several of the laboratory exercises. In required weekly discussions, students will present on papers from the scientific literature and attend talks by physicians and other medical professionals.
Instructor(s): C. Andrews, E. Kovar Terms Offered: Autumn. L.
Prerequisite(s): BIOS 20170, BIOS 20171, BIOS 20172

BIOS 20175. Biochemistry and Metabolism. 100 Units.
The course introduces cellular biochemistry and metabolism. The chemical characteristics, biochemical properties, and function of carbohydrates, proteins, and lipids are introduced. Basic protein structure and enzyme kinetics including basic allosteric interactions are considered. The integration of carbohydrates, proteins, and lipids in cellular intermediary metabolism is examined including pathway regulation and bioenergetics. Adaptation of the pathways to changes in nutritional or disease state is used to highlight interrelationships in cellular metabolism.
Instructor(s): P. Strieleman Terms Offered: Winter
Prerequisite(s): BIOS 20170, BIOS 20171, BIOS 20172

BIOS 20186 through 20191
This sequence is an introduction to the breadth of biology as a modern scientific discipline. It is designed for students who are preparing for a career in the biological sciences. Topics include cell and molecular biology, genetics, physiology and developmental biology. Students registering for this sequence must have completed or placed out of general or honors chemistry or be enrolled concurrently in general or honors chemistry.

BIOS 20186. Fundamentals of Cell and Molecular Biology. 100 Units.
This course is an introduction to molecular and cellular biology that emphasizes the unity of cellular processes amongst all living organisms. Topics are the structure, function, and synthesis of nucleic acids and protein; structure and function of cell organelles and extracellular matrices; energetics; cell cycle; cells in tissues and cell signaling; temporal organization and regulation of metabolism; regulation of gene expression; and altered cell functions in disease states.
Prerequisite(s): An average grade of C or higher in, and completion of, CHEM 10100-10200-10300 or CHEM 11100-11200-11300 or CHEM 12100-12200-12300, a 5 on the AP Chemistry exam, or consent of the department.

BIOS 20187. Fundamentals of Genetics. 100 Units.
The goal of this course is to integrate recent developments in molecular genetics and the human genome project into the structure of classical genetics. Topics include Mendelian inheritance, linkage, tetrad analysis, DNA polymorphisms, human genome, chromosome aberrations and their molecular analysis, bacterial and virus genetics, regulatory mechanisms, DNA cloning, mechanism of mutation and recombination, and transposable elements.
Prerequisite(s): BIOS 20186

BIOS 20188. Fundamentals of Physiology. 100 Units.
This course focuses on the physiological problems that animals (including humans) face in natural environments; solutions to these problems that the genome encodes; and the emergent physiological properties of the molecular, cellular, tissue, organ, and organismal levels of organization. Lectures and labs emphasize physiological reasoning, problem solving, and current research.
Instructor(s): D. McGehee, J. Kennedy. Terms Offered: Spring. L.
Prerequisite(s): BIOS 20187
Note(s): Credit cannot be earned for both BIOS 20188 and BIOS 20191.

BIOS 20189. Fundamentals of Developmental Biology. 100 Units.
This course covers both the classical experiments that contributed to our understanding of developmental biology and the recent explosion of information about development made possible by a combination of genetic and molecular approaches. Examples from both vertebrate and invertebrate systems are used to illustrate underlying principles of animal development.
Instructor(s): R. Ho, S. Horne-Badovinac, C. Schonbaum, E. Kovar Terms Offered: Spring. L.
Prerequisite(s): BIOS 20187 BB, or section 2.
BIOS 20190. Principles of Developmental Biology. 100 Units.
This course will cover important concepts of developmental biology including differentiation, lineage, fate, pattern formation, and morphogenesis. We will review developmental processes and experimental evidence used to uncover underlying mechanisms. We will focus on a few model organisms—vertebrates (chicken and mice) and non-vertebrates (Drosophila).
Instructor(s): A. Imamoto, W. Du Terms Offered: Autumn. L. Will be offered ONLY in Spring Quarter beginning in 2019. Prerequisite(s): BIOS 20187

BIOS 20191. Integrative Physiology. 100 Units.
This course investigates body function in animals (including humans) at times of rest and under various environmental stresses such as temperature, salinity, altitude, fasting, activity, and others. The lectures and labs of this course will draw together concepts of physics, chemistry, and quantitative biology to explore the interactions of molecules, cells, tissues, and organs in living organisms. Students will be asked to serve as test subjects in the various laboratory exercises of this course.
Instructor(s): J. Kennedy, C. Andrews Terms Offered: Winter. L. Prerequisite(s): BIOS 20189. This course is intended for students in the Fundamentals Sequence BB or Section 2 tracks only. Note(s): Credit can NOT be earned for both BIOS 20188 and BIOS 20191.

BIOS 20196 through 20198
Life, Ecosystems, and Evolution
This sequence is designed for students majoring in Biology and interested in pursuing a course of study in ecology and evolution or environmental science. Students will begin the sequence with the BB variants of BIOS 20186 Fundamentals of Cell and Molecular Biology and BIOS 20187 Fundamentals of Genetics and continue with courses that emphasize biological diversity, conservation biology, principles of ecology, and mechanisms of evolution (BIOS 20198 Biodiversity, BIOS 20196 Ecology and Conservation).

BIOS 20196. Ecology and Conservation. 100 Units.
This course focuses on the contribution of ecological theory to the understanding of current issues in conservation biology. We emphasize quantitative methods and their use for applied problems in ecology (e.g., risk of extinction, impact of harvesting, role of species interaction, analysis of global change). Course material is drawn mostly from current primary literature; lab and field components complement concepts taught through lecture. Overnight field trip required.
Instructor(s): C. Pfister, E. Larsen Terms Offered: Autumn. L. Prerequisite(s): BIOS 20150, BIOS 20151 or BIOS 20152
Note(s): BIOS 20196 is identical to the previously offered BIOS 23251. Students who have taken BIOS 23251 should not enroll in BIOS 20196. Equivalent Course(s): ENSC 24400

BIOS 20198. Biodiversity. 100 Units.
An overview of the diversity of living organisms, both prokaryotes and eukaryotes, is presented. We emphasize the major groups of organisms, their evolutionary histories and relationships, and the biological and evolutionary implications of the characteristic features of each group. We discuss how the biosphere transformed to its present state over the past four billion years.
Instructor(s): M. LaBarbera, C. Andrews Terms Offered: Spring. L. Prerequisite(s): BIOS 20150 except for Geophysical Sciences majors
Note(s): BIOS 20198 is identical to the previously offered BIOS 20184. Students who have taken BIOS 20184 should not enroll in BIOS 20198.

Four-Quarter Advanced Biology Fundamentals Sequence
Advanced Biology is an accelerated four-quarter Fundamentals sequence designed for motivated first-year students with exceptionally strong science and math backgrounds and an intense interest in examining and understanding biological mechanisms. Successful students are those motivated to learn about biological processes and mechanisms through learning how to interpret the primary evidence that supports modern understanding. The courses emphasize experimental design and interpretation, together with quantitative and theoretical approaches to understanding biological mechanisms. This sequence is most appropriate for students considering careers in biomedical sciences. Students are expected to devote significant time to this sequence (minimum four to eight hours/week for reading primary literature and background information and for working problem sets, in addition to attendance at lectures and participation in laboratory exercises and discussion sections). A score of 4 or 5 on the Biology AP exam is required and successful students usually also have strong preparation in chemistry and calculus as well as some experience in computer programming.

Upon completion of the first three quarters of the Advanced Biology sequence, students will have three credits in the major and they will have met the general education requirement in the biological sciences. Beginning with the graduating class of 2015, all students must register for BIOS 20234 Molecular Biology of the Cell (Autumn Quarter), BIOS 20235 Biological Systems (Winter Quarter), and BIOS 20236 Biological Dynamics (Spring Quarter). Students complete the sequence by taking BIOS 20242 Principles of Physiology.* During their second year, Advanced Biology students are required to take BIOS 20242 Principles of Physiology (Autumn Quarter).

* BIOS majors unable to complete the sequence after the first quarter must then complete BIOS 20151/BIOS 20152 which will be applied to their biological sciences general education requirement along with their AP Biology credit. BIOS
20234 Molecular Biology of the Cell would then be applied toward their major and then completing the requirements for Tracks A, B, or C.

BIOS 20234. Molecular Biology of the Cell. 100 Units.
This course covers the fundamentals of molecular and cellular biology. Topics include protein structure and function; DNA replication, repair, and recombination; transcription, translation, control of gene expression; cytoskeletal dynamics; protein modification and stability; cellular signaling; cell cycle control; mitosis; and meiosis.
Instructor(s): M. Glotzer, A. Ruthenburg, N. Bhasin. L. Terms Offered: Autumn
Prerequisite(s): Score of 4 or 5 on the AP biology test
Note(s): To continue in the sequence, students must receive a minimum grade of B- in BIOS 20234

BIOS 20235. Biological Systems. 100 Units.
Students preparing for the health professions must take BIOS 20235 and 20242 in sequence. This course builds upon molecular cell biology foundations to explore how biological systems function. Topics include classical and molecular genetics, developmental signaling networks, genomics, proteomics, transcriptomics, and biological networks.
Instructor(s): I. Rebay, M. Pascual, N. Bhasin. L. Terms Offered: Winter
Prerequisite(s): A grade of B- or above in BIOS 20234

BIOS 20236. Biological Dynamics. 100 Units.
This class introduces the use of quantitative approaches to study biological dynamics. Deeper exploration of cellular and developmental processes introduced in BIOS 20234 and BIOS 20235 will emphasize the use of quantitative analysis and mathematical modeling to infer biological mechanisms from molecular interactions. The lab portion of the class will introduce basic approaches for simulating biological dynamics using examples drawn from the lectures.
Instructor(s): E. Munro, M. Rust, E. Kovar. Terms Offered: Spring. L.
Prerequisite(s): BIOS 20234 and BIOS 20235 with a minimum grade of B- in each course.

BIOS 20242. Principles of Physiology. 100 Units.
This course focuses on the physiological problems that animals (including humans) face in natural environments; solutions to these problems that the genome encodes; and the emergent physiological properties of the molecular, cellular, tissue, organ, and organismal levels of organization. We emphasize physiological reasoning, problem solving, and current research.
Instructor(s): M. Feder, E. Kovar. Terms Offered: Autumn. L.
Prerequisite(s): BIOS 20236 or BIOS 20189 or consent of instructor

Course Summary
The following list provides information for students who are planning programs of study. Letters after course titles refer to the subject matter presented in the course: (C) Cell and Molecular, Genetics, Developmental Biology, or Biochemistry; (CI) Computer Intensive; (E&E) Ecology and Evolution; (F) Fundamentals Sequence; (MIV) Microbiology, Immunology, or Virology; (N) Neuroscience; (O) Organismal; and (S) Specialized. L indicates courses with laboratory.

Autumn Quarter
20173. Human Physiology. L. (F)
20186. Fundamentals of Cell and Molecular Biology. L. (F) (For the 2017-18 academic year only)
20190. Principles of Developmental Biology. (F)
20196. Ecology and Conservation. L. (F)
20200. Introduction to Biochemistry. L. (F)
20234. Molecular Biology of the Cell. L. (F)
20242. Principles of Physiology. L. (F)
21236. Genetics of Model Organisms. (C)
21416. Stem Cells and Regeneration. (C)
22233. Comparative Vertebrate Anatomy. L. (O)
22249. Principles of Toxicology. (O)
22306. Evolution and Development. (O)
23261. Invertebrate Paleobiology and Evolution. (E&E)
23262. Mammalian Evolutionary Biology. L. (E&E)
23266. Evolutionary Adaptation. (E&E)
23404. Reconstructing the Tree of Life: An Introduction to Phylogenetics. (E&E)
23409. The Ecology and Evolution of Infectious Diseases. (E&E)
24206. Peering Inside the Black Box: Neocortex. (N)
22 Biological Sciences

24208. Survey of Systems Neuroscience. (N)
24209. Photons to Consciousness. (N)
25206. Fundamentals of Bacterial Physiology. (MIV)
25226. Endocrinology I: Cell Signaling. (MIV)
25256. Immunobiology. (MIV)
25260. Host Pathogen Interactions. (MIV)
25308. Heterogeneity in Human Cancer: Etiology and Treatment. (MIV)
25309. Cancer Metastasis. (MIV)
26120. An Introduction to Bioinformatics and Proteomics. L. (CI)
26210. Mathematical Models for Biological Sciences I. (CI)
27810. Epidemiology and Population Health: Global Health Sciences I
29265. Evolution and Economics of Human Behavior. (S)
29271. The Psychology and Neurobiology of Stress. (S)

Winter Quarter
20150. How Do We Understand the Biosphere? (F)
20152. Introduction to Quantitative Modeling in Biology. L. (Advanced) (F)
20170. Microbial and Human Cell Biology. L. (F)
20175. Biochemistry and Nutrition. (F)
20187. Fundamentals of Genetics. L. (F)
20191. Integrative Physiology. L. (F)
20235. Biological Systems. L. (F)
20242. Physiology. (F)
21216. Introductory Statistical Genetics. (C)
21229. Genome Informatics: How Cells Reorganize Genomes. (C)
21237. Developmental Mechanisms. (C)
21238. Cell Biology. (C)
21306. Human Genetics and Evolution. (C)
21358. Simulation, Modeling, and Computation in Biophysics. (C)
21360. Advanced Molecular Biology. (C)
21415. Stem Cells in Development of Diseases. (C)
21508. Cellular Engineering. (C)
22226. Human Developmental Biology. (O)
22233. Comparative Vertebrate Anatomy. (O)
22245. Biomechanics: How Life Works. (O)
23247. Bioarchaeology and the Human Skeleton. (E&E)
23249. Animal Behavior. (E&E)
23258. Molecular Evolution I: Fundamentals and Principles. (E&E)
23289. Marine Ecology. (E&E)
23365. Evolutionary and Genomic Medicine I. (E&E)
23406. Biogeography. (E&E)
24217. Conquest of Pain. (N)
24249. Neurobiology of Seeing. (N)
25108. Cancer Biology. (MIV)
25216. Molecular Basis of Bacterial Disease. (MIV)
25227. Endocrinology II: Systems and Physiology. (MIV)
25258. Immunopathology. (MIV)
25327. Health Disparities in Breast Cancer. (MIV)
25407. Organ Transplantation. (MIV)
26211. Mathematical Models for Biological Sciences II. (CI)
27811. Microbiology: Global Health Sciences II. (MIV)
29294. Introduction to Global Health. (S)
29300. Biological Psychology. (S)

Spring Quarter
20150. How Do We Understand the Biosphere? (F)
20151. Introduction to Quantitative Modeling in Biology. L. (Basic) (F)
20152. Introduction to Quantitative Modeling in Biology. L. (Advanced) (F)
20171. Human Genetics and Developmental Biology. L. (F)
20172. Mathematical Modeling for Pre-Med Students I. L. (F)
20186. Fundamentals of Cell and Molecular Biology. L. (F)
20188. Fundamentals of Physiology. L. (F)
20189. Fundamentals of Developmental Biology. L. (F)
20198. Biodiversity. L. (F)
20200. Introduction to Biochemistry. L. (F)
20236. Biological Dynamics. L. (F)
21249. Organization, Expression, and Transmission of Genome Information. (C)
21317. Topics in Biological Chemistry. (C)
21328. Biophysics of Biomolecules. (C)
21349. Protein Structure and Functions in Medicine. (C)
21356. Vertebrate Development. (O)
21407. Image Processing In Biology. (C)
21417. Systems Biology: Molecular Regulatory Logic of Networks. (C)
21418. Historical and Conceptual Foundations of DevoEvo. (C)
21507. Selected Topics in Molecular Engineering. (C)
22236. Reproductive Biology of Primates. (C)
22250. Chordates: Evolution and Comparative Anatomy. (O)
22260. Vertebrate Structure and Function. (O)
23100. Dinosaur Science. (O)
23232. Ecology and Evolution in the Southwest. (E&E)
23233. Ecology and Evolution in the Southwest: Field School. (E&E)
23242. Primate Evolution and the Roots of Human Biology. (E&E)
23252. Field Ecology. L. (E&E)
Advanced-Level Courses

There are three types of advanced courses. In courses listed under the heading General Courses, instructors present the general principles and recent developments for broad areas within the biological sciences. Such courses are usually offered on a regular basis, either annually or biennially. In courses listed under the heading Specialized Courses, the focus is on either a topic of particular interest to the instructor or on topics that are examined at a more advanced level than in General Courses. Such courses are offered less regularly, as warranted by student and faculty interest. Unless otherwise stated, most General Courses and Specialized Courses assume mastery of the material covered in the Fundamentals Sequences. Courses listed under the headings Specialized Courses and Independent Study and Research may not be counted toward the courses required for the major with the exception of BIOS 00296 Undergraduate Honors Research.

General Courses

Most general and specialized courses that are at the 20000-level and above assume mastery of the material covered in the Fundamentals Sequences. Students who have not yet completed the Fundamentals Sequence should consult with the individual instructor and the BSCD senior adviser before registering for the following courses. Students must confirm their registration with their instructors by the second class meeting or their registration may be canceled.

BIOS 20200. Introduction to Biochemistry. 100 Units.
This course meets the biochemistry requirement in the biological sciences major. This course examines the chemical nature of cellular components, enzymes, and mechanisms of enzyme activity, energy interconversion, and biosynthetic reactions. Strong emphasis is given to control and regulation of metabolism through macromolecular interactions.
Instructor(s): M. Makinen, E. Ozkan, P. Strieleman. L. Terms Offered: Autumn,Spring,Summer. L.
Prerequisite(s): Completion of a Biological Sciences fundamentals sequence with an average grade of C and CHEM 22000-22100/23100 with an average grade of C.

BIOS 21216. Intro Statistical Genetics. 100 Units.
This course focuses on genetic models for complex human disorders and quantitative traits. Topics covered also include linkage and linkage disequilibrium mapping and genetic models for complex traits, and the explicit and implicit assumptions of such models.
Instructor(s): X. He Terms Offered: Winter
Prerequisite(s): For Biology Majors: Three quarters of a Biological Sciences Fundamentals sequence
Equivalent Course(s): HGEN 47100
BIOS 21229. Genome Informatics: How Cells Reorganize Genomes. 100 Units.
This course deals with the molecular and cellular basis of genetic change. We discuss DNA repair functions, mutator loci, induced mutation, mechanisms of homologous recombination and gene conversion, site-specific recombination, transposable elements and DNA rearrangements, reverse transcription and retrotransposons, transposable vector systems for making transgenic organisms, and genetic engineering of DNA sequences in antibody formation. Discussion section required.
Instructor(s): J. Shapiro Terms Offered: Winter
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.

BIOS 21236. Genetics of Model Organisms. 100 Units.
A small number of organisms have been chosen for extensive study by biologists. The popularity of these organisms derives largely from the fact that their genomes can be easily manipulated, allowing sophisticated characterization of biological function. This course covers modern methods for genetic analysis in budding yeast (Saccharomyces cerevisiae), fruit flies (Drosophila melanogaster), plants (Arabidopsis thaliana), and mice (Mus musculus). Case studies demonstrate how particular strengths of each system have been exploited to understand such processes as genetic recombination, pattern formation, and epigenetic regulation of gene expression.
Instructor(s): D. Bishop, H.-C. Lee, E. Ferguson, I. Moskowitz Terms Offered: Autumn
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20187.

BIOS 21237. Developmental Mechanisms. 100 Units.
This course provides an overview of the fundamental questions of developmental biology, with particular emphasis on the genetic, molecular and cell biological experiments that have been employed to reach mechanistic answers to these questions. Topics covered will include formation of the primary body axes, the role of local signaling interactions in regulating cell fate and proliferation, the cellular basis of morphogenesis, and stem cells.
Instructor(s): E. Ferguson, R. Fehon Terms Offered: Winter
Prerequisite(s): For undergraduates only: Three quarters of a Biological Sciences Fundamentals sequence including BIOS 20189, BIOS 20190, or BIOS 20235.
Equivalent Course(s): DVBI 36400, MGCB 36400

BIOS 21238. Cell Biology II. 100 Units.
This course covers the mechanisms with which cells execute fundamental behaviors. Topics include signal transduction, cell cycle progression, cell growth, cell death, cancer biology, cytoskeletal polymers and motors, cell motility, cytoskeletal diseases, and cell polarity. Each lecture will conclude with a dissection of primary literature with input from the students. Students will write and present a short research proposal, providing excellent preparation for preliminary exams.
Instructor(s): M. Glotzer, D. Kovar Terms Offered: Winter
Prerequisite(s): For undergraduates: Three quarters of a Biological Sciences Fundamentals sequence.
Equivalent Course(s): DVBI 31700, MGCB 31700

BIOS 21249. Organization, Expression, and Transmission of Genome Information. 100 Units.
This seminar course examines how genomes are organized for coding sequence expression and transmission to progeny cells. The class discusses a series of key papers in the following areas: bacterial responses to external stimuli and genome damage, control of eukaryotic cell differentiation, complex loci regulating developmental expression in animals, centromere structure and function, position effect variegation, chromatin domains, chromatin remodeling, RNAi, and chromatin formatting.
Instructor(s): J. Shapiro Terms Offered: Spring
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence. Recommended for Advanced Biology students

BIOS 21306. Human Genetics and Evolution. 100 Units.
The goal of this course is to provide an evolutionary perspective on the molecular genetic bases of human diseases and non-clinical human traits. The course covers fundamental concepts and recent progress in Mendelian and complex trait mapping as well as evolutionary principles as they apply to genomics analyses of DNA sequence variation in human populations. These topics will be introduced through lectures and will be complemented by discussion and student presentations of original research papers.
Instructor(s): V. Lynch, A Di Rienzo. Terms Offered: Winter
Prerequisite(s): Three quarters of a Biological Fundamentals Sequence including BIOS 20187 or BIOS 20235.

BIOS 21317. Topics in Biological Chemistry. 100 Units.
Required of students who are majoring in biological chemistry. This course examines a variety of biological problems from a chemical and structural perspective, with an emphasis on molecular machines. Topics include macromolecular structure-function relationships, DNA synthesis and repair, RNA folding and function, protein synthesis, targeting and translocation, molecular motors, membrane proteins, photosynthesis, and mechanisms of signal transduction. Computer graphics exercises and in-class journal clubs complement the lecture topics.
Instructor(s): P. Rice, R. Keenan Terms Offered: Spring
Prerequisite(s): BIOS 20200
BIOS 21328. Biophysics of Biomolecules. 100 Units.
This course covers the properties of proteins, RNA, and DNA, as well as their interactions. We emphasize the interplay between structure, thermodynamics, folding, and function at the molecular level. Topics include cooperativity, linked equilibrium, hydrogen exchange, electrostatics, diffusion, and binding.
Instructor(s): T. Sosnick Terms Offered: Spring
Prerequisite(s): Consent of instructor
Equivalent Course(s): BCMB 32200, BPHS 31000

BIOS 21349. Protein Structure and Functions in Medicine. 100 Units.
This course explores how molecular machinery works in the context of medicine (vision, fight or flight, cancer, and action of drugs). We first explore the physical and biochemical properties of proteins in the context of cellular signaling. We then examine how proteins and other cellular components make up the signal transduction pathway of humans and conduct their biological functions. The course engages students to strengthen their scientific communication and teaching skills via the in-class podcast, oral examinations, computer-aided structural presentations, student lectures, and discussions.
Instructor(s): W-J. Tang Terms Offered: Spring
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence. Biochemistry strongly recommended.
Equivalent Course(s): NURB 31349

BIOS 21356. Vertebrate Development. 100 Units.
This advanced-level course combines lectures, student presentations, and discussion sessions. It covers major topics on the developmental biology of embryos (e.g., formation of the germ line, gastrulation, segmentation, nervous system development, limb patterning, organogenesis). We make extensive use of the primary literature and emphasize experimental approaches including embryology, genetics, and molecular genetics.
Instructor(s): V. Prince, C. Ragsdale. Terms Offered: Spring
Prerequisite(s): For College students: Three quarters of a Biological Sciences Fundamentals sequence.
Equivalent Course(s): DVBI 35600, MGCB 35600, ORGB 33600

BIOS 21358. Simulation, Modeling, and Computation in Biophysics. 100 Units.
This course develops skills for modeling biomolecular systems. Fundamental knowledge covers basic statistical mechanics, free energy, and kinetic concepts. Tools include molecular dynamics and Monte Carlo simulations, random walk and diffusion equations, and methods to generate random Gaussian and Poisson distributors. A term project involves writing a small program that simulates a process. Familiarity with a programming language or Mathlab would be valuable.
Instructor(s): B. Roux Terms Offered: Winter
Prerequisite(s): BIOS 20200 and Bios 26210-26211, or consent from instructor
Equivalent Course(s): BCMB 31358, CPNS 31358

BIOS 21360. Advanced Molecular Biology. 100 Units.
This course covers genome structures, transcription of DNA to RNA, messenger RNA splicing, translation of RNA to protein, transcriptional and post-transcriptional gene regulations, non-coding RNA functions, epigenetics and epitranscriptomics. Basic methods in molecular biology will also be covered. The course also includes special, current topics on genomics, single molecule studies of gene expression, epitranscriptomics, and others.
Instructor(s): J. Fei, T. Pan. Terms Offered: Winter
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and Organic Chemistry, or consent of instructor.

BIOS 21407. Image Processing in Biology. 100 Units.
Whether one is trying to read radio signals from faraway galaxies or to understand molecular structures, it is necessary to understand how to read, interpret, and process the data that contain the desired information. In this course, we learn how to process the information contained in images of molecules as seen in the electron microscope. We also deal with the principles involved in processing electron microscope images, including the underlying analytical methods and their computer implementation.
Instructor(s): R. Josephs Terms Offered: Spring
Prerequisite(s): For College students: Three quarters of a Biological Sciences Fundamentals sequence and one year of calculus
Equivalent Course(s): MGCB 34300

BIOS 21415. Stem Cells in Development and Diseases. 100 Units.
This course will provide a survey of concepts and biology of stem cells based on experimental evidence for their involvement in developmental processes and human diseases. Topics will discuss classic models as well as recent advances made in the biomedical research community.
Instructor(s): A. Imamoto, X. Wu Terms Offered: Spring
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, including BIOS 20186 and BIOS 20187

BIOS 21416. Stem Cells and Regeneration. 100 Units.
The course will focus on the basic biology of stem cells and regeneration, highlighting biomedically relevant findings that have the potential to translate to the clinic. We will cover embryonic and induced pluripotent stem cells, as well as adult stem cells from a variety of systems, both invertebrate and vertebrates.
Instructor(s): E. Ferguson, V. Prince, J. Cunningham, J. De Jong, X. Wu Terms Offered: Autumn
Prerequisite(s): For undergraduates only: completion of a biological sciences fundamentals sequence
Equivalent Course(s): DVBI 36200
BIOS 21417. Systems Biology: Molecular Regulatory Logic of Networks. 100 Units.
Systems biologists investigate networks of genes and model how they function. They do this to better understand the nature of systems-based mechanisms that control development, physiology, evolution, and disease resistance. Quantitative techniques and computational tools help investigators analyze heterogeneous data about molecular networks to uncover meaningful relationships about key components. These studies inspire a framework for understanding the molecular regulatory logic of living states. Related principles about dynamic biological systems are the focus of the course.
Instructor(s): B. Aprison, E. Kovar. Terms Offered: Spring
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and consent of Instructor

BIOS 21418. Historical and Conceptual Foundations of DevoEvo. 100 Units.
The goal of this course is to explore the historical and conceptual foundations of Developmental Evolution (DevoEvo) through readings and group discussions of historical and philosophical literature on evolutionary and developmental biology, in particular the role developmental biology played in the formulation of evolutionary theory and it’s subsequent banishment from the Modern Synthesis. The course begins with a review of nineteenth-century scientific and evolutionary thought, including an examination of competing theories of evolution (Theistic Evolutionism, Lamarckism, Orthogenesis, and Mutation Theory) and their contribution (or lack thereof) to modern evolutionary biology. We then explore how (and why) developmental biology was excluded from the formulation of the Synthesis and Neo-Darwinian thought, and examine the source of continued conflicts between Neo-Darwinism and DevoEvo. The course concludes with a discussion of what (if anything) DevoEvo can contribute to evolutionary theory that other research programs cannot (for example, what kinds of phenomena do developmental mechanisms contribute more to the explanation of evolutionary processes than population genetic mechanisms?).
Instructor(s): V. Lynch. Terms Offered: Spring
Prerequisite(s): For Biology Majors: Three quarters of a Biological Sciences Fundamentals sequence.

BIOS 21507. Selected Topics in Molecular Engineering: The Engineering and Biology of Tissue Repair. 100 Units.
In this course, students will gain an understanding of the science and application of tissue engineering, a field that seeks to develop technologies for restoring lost function in diseased or damaged tissues and organs. The course will first introduce the underlying cellular and molecular components and processes relevant to tissue engineering: extracellular matrices, cell/matrix interactions such as adhesion and migration, growth factor biology, stem cell biology, inflammation, and innate immunity. The course will then discuss current approaches for engineering a variety of tissues, including bone and musculoskeletal tissues, vascular tissues, skin, nerve, and pancreas. Students will be assessed through in-class discussions, take-home assignments and exams, and an end-of-term project on a topic of the student’s choice.
Instructor(s): Jeffrey Hubbell. Terms Offered: Spring
Prerequisite(s): Completion of the first three quarters of a Biological Sciences Fundamentals Sequence Equivalent Course(s): MENG 24300

BIOS 22226. Human Developmental Biology. 100 Units.
This course covers the anatomic and physiologic development of the human from conception to birth, on an organ-by-organ basis. Special attention is paid to the profound physiologic events that take place in the transition from intra-uterine to extra-uterine life. Examples of clinical conditions due to specific errors in development are presented in context. Genetic regulation of organogenesis with reference to mouse models are discussed where the data are available.
Instructor(s): J. Marks. Terms Offered: Winter
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence

BIOS 22233. Comparative Vertebrate Anatomy. 100 Units.
This course covers the structure and function of major anatomical systems of vertebrates. Lectures focus on vertebrate diversity, biomechanics, and behavior (from swimming and feeding to running, flying, seeing, and hearing). Labs involve detailed dissection of animals (muscles, organs, brains) and a focus on skull bones in a broad comparative context from fishes to frogs, turtles, alligators, mammals, birds, and humans. Field trip to Field Museum and visit to medical school lab for human dissection required.
Instructor(s): M. Westneat. L. Terms Offered: Spring
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence

BIOS 22236. Reproductive Biology of Primates. 100 Units.
The aim of this advanced-level course is to provide a comparative overview of adaptations for reproduction in primates as a background to human reproductive biology. Where appropriate, reference will be made to other mammals and some comparisons will be even wider. Ultimately, the aim of all comparisons is to arrive at concrete lessons for human reproduction, notably in the realm of obstetrics and gynecology. For this reason, the course will be of interest for medical students as well as for those studying anthropology, biology or psychology.
Instructor(s): R. Martin. Terms Offered: Spring
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.

BIOS 22249. Principles of Toxicology. 100 Units.
This course covers basic concepts of toxicology including routes of exposure and uptake, metabolic conversion, and elimination of toxic agents, as well as fundamental laws governing the interaction of external chemicals with biological systems. In addition to toxins of biological origin, we also consider a set of physical and chemical toxicants in the environment, including air pollution, radiation, manufactured chemicals, metals, and pesticides. Methods of risk assessment will also be considered.
Instructor(s): Y-Y He. Terms Offered: Autumn
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and BIOS 20200
BIOS 22250. Chordates: Evolution and Comparative Anatomy. 100 Units.
Chordate biology emphasizes the diversity and evolution of modern vertebrate life, drawing on a range of sources (from comparative anatomy and embryology to paleontology, biomechanics, and developmental genetics). Much of the work is lab-based, with ample opportunity to gain firsthand experience of the repeated themes of vertebrate body plans, as well as some of the extraordinary specializations manifest in living forms. The instructors, who are both actively engaged in vertebrate-centered research, take this course beyond the boundaries of standard textbook content.
Instructor(s): M. Coates Terms Offered: Winter.
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence. Recommended for Advanced Biology students.
Equivalent Course(s): EVOL 30250, ORGB 30250

BIOS 22260. Vertebrate Structure and Function. 100 Units.
This course is devoted to vertebrate bones and muscles, with a focus on some remarkable functions they perform. The first part takes a comparative look at the vertebrate skeleton via development and evolution, from lamprey to human. The major functional changes are examined as vertebrates adapted to life in the water, on land, and in the air. The second part looks at muscles and how they work in specific situations, including gape-feeding, swimming, leaping, digging, flying, and walking on two legs. Dissection of preserved vertebrate specimens required.
Instructor(s): P. Sereno. L. Terms Offered: Spring.
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and consent of instructor. See also http://paulsereno.uchicago.edu/fossil_lab/classes/vertebrate_structure_and_function for more information.

BIOS 22306. Evolution and Development. 100 Units.
The course examines the evolution of animal development. Special attention is given to the development of invertebrate phyla from sponges to lower chordates. References to vertebrate body plans are included. Original research papers will be assigned to introduce current debates. Students will be asked to contribute an oral presentation on a selected research topic that fits the broader goal of the course.
Instructor(s): U. Schmidt-Ott Terms Offered: Autumn.
Prerequisite(s): Advanced undergraduates may enroll with the consent of the instructor.
Equivalent Course(s): DVBI 33850, EVOL 33850, ORGB 33850

BIOS 23100. Dinosaur Science. 100 Units.
This introductory-level (but intensive) class includes a ten-day expedition to South Dakota and Wyoming (departing just after graduation). We study basic geology (e.g., rocks and minerals, stratigraphy, Earth history, mapping skills) and basic evolutionary biology (e.g., vertebrate and especially skeletal anatomy, systematics and large-scale evolutionary patterns). This course provides the knowledge needed to discover and understand the meaning of fossils as they are preserved in the field, which is applied to actual paleontological sites. Participants fly from Chicago to Rapid City, and then travel by van to field sites. There they camp, prospect for, and excavate fossils from the Cretaceous and Jurassic Periods. Field trip required.
Instructor(s): P. Sereno. L. Terms Offered: Spring.
Prerequisite(s): Consent of instructor, three quarters of a Biological Sciences Fundamentals sequence and a prior course in general science, preferably geology. See also http://paulsereno.uchicago.edu/fossil_lab/classes/dinosaur_science for more information.

BIOS 23232. Ecology and Evolution in the Southwest. 100 Units.
This lecture course focuses on the ecological communities of the Southwest, primarily on the four subdivisions of the North American Desert, the Chihuahuan, Sonoran, Mohave, and Great Basin Deserts. Lecture topics include climate change and the impact on the flora and fauna of the region; adaptations to arid landscapes; evolutionary, ecological, and conservation issues in the arid Southwest, especially relating to isolated mountain ranges; human impacts on the biota, land, and water; and how geological and climatic forces shape deserts.
Instructor(s): E. Larsen Terms Offered: Spring.
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, or consent of instructor.

BIOS 23233. Ecology and Evolution in the Southwest: Field School. 100 Units.
This lecture/lab course is the same course as BIOS 13111, but includes a lab section preparatory to a two-week field trip at end of Spring Quarter, specific dates to be announced. Our goal in the lab is to prepare proposals for research projects to conduct in the field portion of this course. Field conditions are rugged. Travel is by twelve-passenger van. Lodging during most of this course is tent camping on developed campsites.
Instructor(s): E. Larsen Terms Offered: Spring.
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and consent of instructor.
BIOS 23242. Primate Evolution and the Roots of Human Biology. 100 Units.
The course is designed to achieve a state-of-the-art synthesis of primate evolution and human origins. An overview of the biology and evolution of the mammalian order Primates provides a broad foundation for considering the special case human evolution. Across primates as a group, the course explores and integrates comparative evidence from anatomy, physiology, behavior, chromosomal studies, and molecular genetics. Both living primates and their fossil relatives are covered, with due reference to theoretical aspects. Particular emphasis is given to evaluation of characters for inference of evolutionary relationships and to explicit examination of scaling effects of body size in between-species comparisons. Within the general framework of origins and adaptations of primates, human evolution is examined with respect to all features covered. Special features of humans are identified and related to an overview of the hominid fossil record. A specific goal of this course is to guide students to read, interpret, and synthesize scientific literature, and exercise critical thinking with respect to selected topics. As shown by examples, the course is directly relevant to the field of Darwinian medicine, which considers health and disease in relation to the evolutionary background of human biology.
Instructor(s): R. Martin
Terms Offered: Spring
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, or consent of instructor.

BIOS 23247. Bioarchaeology and the Human Skeleton. 100 Units.
This course is intended to provide students in archaeology with a thorough understanding of bioanthropological and osteological methods used in the interpretation of prehistoric societies by introducing bioanthropological methods and theory. In particular, lab instruction stresses hands-on experience in analyzing the human skeleton, whereas seminar classes integrate bioanthropological theory and application to specific cases throughout the world. Lab and seminar-format class meet weekly.
Instructor(s): M. C. Lozada
Terms Offered: Winter
Note(s): This course qualifies as a Methodology selection for Anthropology majors.
Equivalent Course(s): ANTH 38800, ANTH 28400

BIOS 23249. Animal Behavior. 100 Units.
This course introduces the mechanism, ecology, and evolution of behavior, primarily in nonhuman species, at the individual and group level. Topics include the genetic basis of behavior, developmental pathways, communication, physiology and behavior, foraging behavior, kin selection, mating systems and sexual selection, and the ecological and social context of behavior. A major emphasis is placed on understanding and evaluating scientific studies and their field and lab techniques.
Instructor(s): S. Pruett-Jones (even years), J. Mateo (odd years)
Terms Offered: Winter
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.
Note(s): CHDV Distribution: A
Equivalent Course(s): CHDV 23249, PSYC 23249

BIOS 23252. Field Ecology. 100 Units.
Open only to students who are planning to pursue graduate research. This course introduces habitats and biomes in North America and the methods of organizing and carrying out field research projects in ecology and behavior, focusing on questions of evolutionary significance. A two-week field trip to southern Florida during the Winter/Spring Quarter break consists of informal lectures and discussions, individual study, and group research projects. During Spring Quarter, there are lectures on the ecology of the areas visited and on techniques and methods of field research. Field trip required.
Instructor(s): S. Pruett-Jones
Terms Offered: Spring
Prerequisite(s): Consent of instructor

BIOS 23254. Mammalian Ecology. 100 Units.
This course introduces the diversity and classification of mammals and their ecological relationships. Lectures cover natural history, evolution, and functional morphology of major taxonomic groups. Lab sessions focus on skeletal morphology, identifying traits of major taxonomic groups, and methods of conducting research in the field. Participation in field trips, occasionally on Saturday, is required.
Instructor(s): E. Larsen
Terms Offered: Spring
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and third-year standing or consent of instructor.

BIOS 23258. Molecular Evolution I: Fundamentals and Principles. 100 Units.
The comparative analysis of DNA sequence variation has become an important tool in molecular biology, genetics, and evolutionary biology. This course covers major theories that form the foundation for understanding evolutionary forces that govern molecular variation, divergence, and genome organization. Particular attention is given to selectively neutral models of variation and evolution, and to alternative models of natural selection. The course provides practical information on accessing genome databases, searching for homologous sequences, aligning DNA and protein sequences, calculating sequence divergence, producing sequence phylogenies, and estimating evolutionary parameters.
Instructor(s): M. Kreitman
Terms Offered: Winter
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and two quarters of calculus, or consent of instructor.
Equivalent Course(s): ECEV 44001, EVOL 44001
BIOS 23261. Invertebrate Paleobiology and Evolution. 100 Units.
This course provides a detailed overview of the morphology, paleobiology, evolutionary history, and practical uses of the invertebrate and microfossil groups commonly found in the fossil record. Emphasis is placed on understanding key anatomical and ecological innovations within each group and interactions among groups responsible for producing the observed changes in diversity, dominance, and ecological community structure through evolutionary time. Labs supplement lecture material with specimen-based and practical application sections. An optional field trip offers experience in the collection of specimens and raw paleontological data. Several "Hot Topics" lectures introduce important, exciting, and often controversial aspects of current paleontological research linked to particular invertebrate groups. (L)
Prerequisite(s): GEOS 13100 and 13200, or equivalent. For BIOS students: Three quarters of a Biological Sciences Fundamentals sequence.
Equivalent Course(s): EVOL 32400, GEOS 36300, GEOS 26300

BIOS 23262. Mammalian Evolutionary Biology. 100 Units.
This course examines mammalian evolution—the rise of living mammals from ancient fossil ancestors stretching back over 300 million years. Lectures focus on the evolutionary diversification of mammals, including anatomical structure, evolutionary adaptations, life history, and developmental patterns. Labs involve detailed comparative study of mammalian skeletons, dissection of muscular and other systems, trips to the Field Museum to study fossil collections, and studies of human anatomy at the Pritzker School of Medicine. Students will learn mammalian evolution, functional morphology, and development, and will gain hands-on experience in dissection. Taught by instructors who are active in scientific research on mammalian evolution, the course is aimed to convey new insights and the latest progress in mammalian paleontology, functional morphology, and evolution.
Instructor(s): Z. Luo, K. Angielczyk Terms Offered: Autumn. L.
Prerequisite(s): Second-year standing and three quarters of a Biological Sciences Fundamentals sequence; or GEOS 13100-13200 or GEOS 22300, or consent of instructors.
Equivalent Course(s): ORGB 31201

BIOS 23266. Evolutionary Adaptation. 100 Units.
This course deals with the adaptation of organisms to their environments and focuses on methods for studying adaptation. Topics include definitions and examples of adaptation, the notion of optimization, adaptive radiations, the comparative method in evolutionary biology, and the genetic architecture of adaptive traits. Students will draw on the logical frameworks covered in lecture as they evaluate primary papers and prepare two writing assignments on an adaptive question of their choice.
Instructor(s): C. Andrews Terms Offered: Autumn 2018
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence or consent of instructor.

BIOS 23289. Marine Ecology. 100 Units.
This course provides an introduction into the physical, chemical, and biological forces controlling the function of marine ecosystems and how marine communities are organized. The structures of various types of marine ecosystems are described and contrasted, and the lectures highlight aspects of marine ecology relevant to applied issues such as conservation and harvesting.
Instructor(s): T. Wootton Terms Offered: Winter
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and prior introductory course in ecology or consent of instructor.
Equivalent Course(s): ENST 23289

BIOS 23299. Plant Development and Molecular Genetics. 100 Units.
Genetic approaches to central problems in plant development will be discussed. Emphasis will be placed on embryonic pattern formation, meristem structure and function, reproduction, and the role of hormones and environmental signals in development. Lectures will be drawn from the current literature; experimental approaches (genetic, cell biological, biochemical) used to discern developmental mechanisms will be emphasized. Graduate students will present a research proposal in oral and written form; undergraduate students will present and analyze data from the primary literature, and will be responsible for a final paper.
Instructor(s): J. Greenberg Terms Offered: Spring
Prerequisite(s): For undergraduates only: Three quarters of a Biological Sciences Fundamentals sequence.
Equivalent Course(s): DVBI 36100, ECEV 32900, MGCB 36100

BIOS 23365. Evolutionary and Genomic Medicine I. 100 Units.
Evolution is regularly investigated in free-living organisms, but some of its most fascinating and important examples occur in the interface between free-living and non-free-living states. In this course, we will use evolutionary and ecological principles to study the dynamics of viruses, unicellular organisms and cells in multi-cellular organisms relevant to human medicine. In EGM I, the emphasis will be on the evolution of pathogens, the evolution of cells of the immune system in response to pathogen invasion, the basis of autoimmune disorders, and the population genetics of cancerous cells in light of recent cancer genomic studies. EGM II will cover more general topics including Darwinian medicine, aging, and systems biology/medicine.
Instructor(s): S. Cobey, C.-I. Wu Terms Offered: Winter
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence. Background in evolution and population genetics.
Equivalent Course(s): ECEV 33365
BIOS 23404. Reconstructing the Tree of Life: An Introduction to Phylogenetics. 100 Units.
This course is an introduction to the tree of life (phylogeny): its conceptual origins, methods for discovering its structure, and its importance in evolutionary biology and other areas of science. Topics include history and concepts, sources of data, methods of phylogenetic analysis, and the use of phylogenies to study the tempo and mode of lineage diversification, coevolution, biogeography, conservation, molecular biology, development, and epidemiology. One Saturday field trip and weekly computer labs required in addition to scheduled class time. This course is offered in alternate (odd) years.
Instructor(s): C. Moreau, R. Ree. Terms Offered: Autumn. L.
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence or consent of instructor
Note(s): This course is offered in alternate (odd) years.
Equivalent Course(s): EVOL 35401

BIOS 23406. Biogeography. 100 Units.
This course examines factors governing the distribution and abundance of animals and plants. Topics include patterns and processes in historical biogeography, island biogeography, geographical ecology, areography, and conservation biology (e.g., design and effectiveness of nature reserves).
Instructor(s): B. Patterson (odd years, lab). L., Heaney (even years, discussion) Terms Offered: Winter
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and a course in either ecology, evolution, or earth history; or consent of instructor
Equivalent Course(s): ENST 25500, EVOL 45500, GEOG 25500, GEOG 35500

BIOS 23409. The Ecology and Evolution of Infectious Diseases. 100 Units.
Understanding the ecology and evolution of infectious diseases is crucial for both human health and for preservation of the natural environment. In this course, we combine mathematical modeling with ecological and evolutionary analyses to understand how fundamental mechanisms of host-pathogen interactions are translated into disease dynamics and host-pathogen co-evolution.
Instructor(s): G. Dwyer Terms Offered: Spring. L.
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and Integral calculus.

BIOS 23410. Complex Interactions: Coevolution, Parasites, Mutualists, and Cheaters. 100 Units.
This course emphasizes the enormous diversity of interactions between organisms. It is an introduction to the biology and ecology of parasitic and mutualistic symbiotic associations and their evolution. Topics include endosymbioses and their impact on the evolution of photosynthetic organisms, bacterial symbioses (e.g., nitrogen fixation), symbioses that fungi evolved with plants and animals (e.g., endophytes, mycorrhizae, lichens), pollination biology, insect-plant associations, and associations of algae with animals. Methods to elucidate the evolution of these associations are discussed with a focus on coevolutionary events and the origin of cheaters.
Instructor(s): T. Lumbsch Terms Offered: Spring.
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.

BIOS 24110. Fundamental Neuroscience. 100 Units.
This course is a rigorous introduction to the study of neurons, nervous systems and brains. The systems anatomy and physiology of the vertebrate brain will be covered in depth. Common features of neural circuits, such as those subserving the stretch reflex, will be examined. The biology of brain evolution and development will be introduced. A highlight of this course will be student dissections of sheep brains and the laboratory presentation of human brain dissections by the instructors.
Instructor(s): C. Ragsdale, P. Mason Terms Offered: Autumn
Prerequisite(s): At least two quarters of Biological Sciences instruction (including courses taken concurrently) or consent of instructor
Equivalent Course(s): NSCI 20110

BIOS 24120. Cellular Neuroscience. 100 Units.
This course describes the cellular and subcellular properties of neurons, including passive and active electrophysiological properties, and their synaptic interactions. Readings are assigned from a general neuroscience textbook.
Instructor(s): R. A. Eatock, W. Wei, Staff Terms Offered: Winter
Prerequisite(s): NSCI 20110, along with completion of MATH 13100, or MATH 15100, or MATH 16100 Equivalent Course(s): NSCI 20120

BIOS 24130. Systems Neuroscience. 100 Units.
This course covers vertebrate and invertebrate systems neuroscience with a focus on the anatomy, physiology, and development of sensory and motor control systems. The neural bases of form and motion perception, locomotion, memory, and other forms of neural plasticity are examined in detail. We also discuss clinical aspects of neurological disorders.
Instructor(s): D. Freedman, Staff Terms Offered: Spring
Prerequisite(s): NSCI 20110, and NSCI 20120 or consent of instructor
Equivalent Course(s): NSCI 20130
BIOS 24206. Peering Inside the Black Box: Neocortex. 100 Units.
The neocortex is the multilayered outermost structure of the mammalian brain. It is the site of higher brain functions
including reasoning and creativity. However, the complexity of the neocortex—it is comprised of ~20 billion neurons which
have 0.15 quadrillion connections between them—seems to preclude any hope of achieving a fundamental understanding
of the system. Recent technological innovations have opened novel avenues of investigation making realization of the
neocortex an increasingly tractable problem. This course will place particular emphasis on how to critically read scientific
papers as we evaluate and discuss current experimental approaches to the neocortex. Integral to this evaluation will be the
detailed discussion of the latest technological approaches.
Instructor(s): J. MacLean Terms Offered: Autumn
Prerequisite(s): NSCI 20130 or consent of instructor. For Biology majors: Three quarters of a Biological Sciences
Fundamentals sequence.
Equivalent Course(s): CPNS 34206

BIOS 24208. Survey of Systems Neuroscience. 100 Units.
This lab-centered course teaches students the fundamental principles of vertebrate nervous system organization. Students
learn the major structures and the basic circuitry of the brain, spinal cord, and peripheral nervous system. Early sensory
processing and the motor system are presented in particular depth. A highlight of this course is that students become
practiced at recognizing the nuclear organization and cellular architecture of the rodent, cat, and primate brain.
Instructor(s): S. Bensmaia Terms Offered: Autumn
Prerequisite(s): Consent of instructor

BIOS 24209. Photons to Consciousness: Cellular and Integrative Brain Functions. 100 Units.
This course uses the visual system as a model to explore how the brain works. We begin by considering the physical
properties of light. We then proceed to consider the mechanism of sensory transduction, cellular mechanisms of neuron to
neuron communication, the operation of small neural networks, strategies of signal detection in neuron networks, and the
hierarchical organization of cortical function. We conclude with visually guided behavior and consciousness.
Instructor(s): E. Schwartz Terms Offered: Winter
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.

BIOS 24217. Conquest of Pain. 100 Units.
This course examines the biology of pain and the mechanisms by which anesthetics alter the perception of pain. The
approach is to examine the anatomy of pain pathways both centrally and peripherally, and to define electrophysiological,
biophysical, and biochemical explanations underlying the action of general and local anesthetics. We discuss the role of
opiates and enkephalins. Central theories of anesthesia, including the relevance of sleep proteins, are also examined.
Instructor(s): K. Ruskin Terms Offered: Winter
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, CHEM 2200-22100-22200 or BIOS 20200
and prior course in neurobiology or physiology is recommended.

BIOS 24218. Molecular Neurobiology. 100 Units.
This lecture/seminar course explores the application of modern cellular and molecular techniques to clarify basic questions
in neurobiology. Topics include mechanisms of synaptic transmission, protein trafficking, exo- and endo-cytosis, and
development and mechanisms of neurological diseases.
Instructor(s): S. Sisodia Terms Offered: Spring
Prerequisite(s): For Biology majors: Three quarters of a Biological Sciences Fundamentals sequence, BIOS 20200, NSCI
20120 and BIOS 20200, or consent of instructor

BIOS 24231. Methods in Computational Neuroscience. 100 Units.
Topics include (but are not limited to): Hodgkin-Huxley equations, Cable theory, Single neuron models, Information theory,
Signal Detection theory, Reverse correlation, Relating neural responses to behavior, and Rate vs. temporal codes.
Instructor(s): S. Bensmaia Terms Offered: Winter, L.
Prerequisite(s): BIOS 26210 and BIOS 26211 which must be taken concurrently, or consent of instructor.
Equivalent Course(s): CPNS 34231

BIOS 24232. Computational Approaches to Cognitive Neuroscience. 100 Units.
This course is concerned with the relationship of the nervous system to higher order behaviors (e.g., perception, object
recognition, action, attention, learning, memory, and decision making). Psychophysical, functional imaging, and
electrophysiological methods are introduced. Mathematical and statistical methods (e.g. neural networks and algorithms for
studying neural encoding in individual neurons and decoding in populations of neurons) are discussed. Weekly lab sections
allow students to program cognitive neuroscientific experiments and simulations.
Instructor(s): N. Hatsopoulos Terms Offered: Spring, L.
Prerequisite(s): BIOS 26210, a course in systems neuroscience, and knowledge using Matlab, or consent of instructor.
Equivalent Course(s): CPNS 33200, ORGB 34650, PSYC 34410
BIOS 24248. Biological Clocks and Behavior. 100 Units.
This course will address physiological and molecular biological aspects of circadian and seasonal rhythms in biology and behavior. The course will primarily emphasize biological and molecular mechanisms of CNS function, and will be taught at a molecular level of analysis from the beginning of the quarter. Those students without a strong biology background are unlikely to resonate with the course material.
Instructor(s): B. Prendergast Terms Offered: Spring
Prerequisite(s): A quality grade in PSYC 20300 Biological Psychology. Additional biology courses are desirable. Completion of Core biology will not suffice as a prerequisite. For Biology majors: Completion of three quarters of a Biological Sciences Fundamentals Sequence.
Equivalent Course(s): PSYC 21750

BIOS 24408. Modeling and Signal Analysis for Neuroscientists. 100 Units.
The course provides an introduction into signal analysis and modeling for neuroscientists. We cover linear and nonlinear techniques and model both single neurons and neuronal networks. The goal is to provide students with the mathematical background to understand the literature in this field, the principles of analysis and simulation software, and allow them to construct their own tools. Several of the 90-minute lectures include demonstrations and/or exercises in Matlab.
Instructor(s): W. van Drongelen Terms Offered: Spring. L.
Prerequisite(s): BIOS 26210 and 26211, or consent of instructor.
Equivalent Course(s): CPNS 32111

BIOS 25108. Cancer Biology. 100 Units.
This course covers the fundamentals of cancer biology with a focus on the story of how scientists identified the genes that cause cancer. The emphasis is on “doing” science rather than “done” science: How do scientists think, how do they design experiments, where do these ideas come from, what can go wrong, and what is it like when things go right? We stress the role that cellular subsystems (e.g., signal transduction, cell cycle) play in cancer biology, as well as evolving themes in cancer research (e.g., ongoing development of modern molecular therapeutics).
Instructor(s): M. Rosner, W. Du Terms Offered: Winter
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.

BIOS 25109. Topics in Reproduction and Cancer. 100 Units.
This course focuses on several aspects of the molecular and cellular biology of human reproduction. We also discuss the basis of chemical/viral carcinogenesis and the progression, treatment, and prevention of cancer. The role of steroid hormones and their receptors in the control of growth, development, and specialized cell function is discussed in the context of normal and abnormal gene expression in human development and disease. Key historical events, research approaches, utilization of knowledge, recent advances in drug design and herbal medicines, and philosophies of scientific research are also covered.
Instructor(s): G. Greene, D. Vander Griend Terms Offered: Spring
Prerequisite(s): For Biology majors: Three quarters of a Biological Sciences Fundamentals sequence and Biochemistry, or consent of Instructor.

BIOS 25126. Animal Models of Human Disease. 100 Units.
This course introduces the use of animals in biomedical research for the purposes of understanding, treating, and curing human disease. Particular emphasis is placed on rodent models in the context of genetic, molecular, and immunologic manipulations, as well as on the use of large animal surgical models. University veterinarians also provide information regarding humane animal care.
Instructor(s): K. Luchins Terms Offered: Spring
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, or consent of instructor

BIOS 25206. Fundamentals of Bacterial Physiology. 100 Units.
This course meets one of the requirements of the microbiology specialization. This course introduces bacterial diversity, physiology, ultra-structure, envelope assembly, metabolism, and genetics. In the discussion section, students review recent original experimental work in the field of bacterial physiology.
Instructor(s): D. Missiakas Terms Offered: Autumn
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, or consent of instructor
Equivalent Course(s): MICR 30600

BIOS 25216. Molecular Basis of Bacterial Diseases. 100 Units.
This course meets one of the requirements of the microbiology specialization. This lecture/discussion course involves a comprehensive analysis of bacterial pathogens, the diseases that they cause, and the molecular mechanisms involved during pathogenesis. Students discuss recent original experimental work in the field of bacterial pathogenesis.
Instructor(s): H. Shuman Terms Offered: Winter
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.
Equivalent Course(s): MICR 31600

BIOS 25226. Endocrinology I: Cell Signaling. 100 Units.
The subject matter of this course considers the wide variety of intracellular mechanisms that, when activated, change cell behavior. We cover aspects of intracellular signaling, the latter including detailed discussions of receptors, G-proteins, cyclic nucleotides, calcium and calcium-binding proteins, phosphoinositides, protein kinases, and phosphatases.
Instructor(s): M. Brady, R. Cohen Terms Offered: Autumn
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and BIOS 20200.
Equivalent Course(s): CPHY 33600,NPHP 33600
BIOS 25227. Endocrinology II: Systems and Physiology. 100 Units.
Endocrinology is the study of hormones, which are chemical messengers released by tissues that regulate the activity of other cells in the body. This course covers the classical hormone systems, including hormones regulating metabolism, energy mobilization and storage, calcium and phosphate metabolism, reproduction, growth, “fight or flight,” and circadian rhythms. We focus on historical perspective, the mechanisms of action, homeostatic regulation, and relevant human diseases for each system.
Instructor(s): M. Brady, R. Cohen Terms Offered: Winter
Prerequisite(s): Completion of the first three quarters of a Biological Fundamentals Sequence.

BIOS 25228. Endocrinology III: Human Disease. 100 Units.
This course is a modern overview of the patho-physiologic, genetic, and molecular basis of endocrine based human diseases (e.g., hypertension, cardiovascular diseases, obesity, diabetes, osteoporosis, thyroid disorders).
Instructor(s): Y. C. Li Terms Offered: Spring
Prerequisite(s): Completion of BIOS 25227 and three quarters of a Biological Sciences Fundamentals sequence.

BIOS 25256. Immunobiology. 100 Units.
This comprehensive survey course presents an integrated coverage of the tactics and logistics of innate and adaptive immunity in mammalian organisms. It conveys the elegance and complexity of immune responses against infectious agents. It introduces their implications in autoimmune diseases, cancer and organ transplantation and presents some of the emerging immunotherapeutics that are transforming health care. Prior knowledge of microbiology (e.g., BIOS 25206) will be advantageous.
Instructor(s): A. Bendelac Terms Offered: Autumn
Prerequisite(s): BIOS 20186, BIOS 20187, BIOS 20189 and BIOS 20188 or BIOS 20191.

BIOS 25258. Immunopathology. 100 Units.
This course will expand on general immunological concepts that have implications for our understanding of immune-related disorders such as autoimmune diseases, inflammatory bowel diseases, infection immunity, immunodeficiencies and transplant rejection. Students will read and discuss primary immunological papers and become familiarized with typical experiment designs in immunology. At the end of course, students will have learned how to design experiments in order to address specific hypotheses related to immune-mediated disorders.
Instructor(s): B. Jabri Terms Offered: Winter
Prerequisite(s): BIOS 25256 with a grade of B or higher.
Equivalent Course(s): IMMU 30010, PATH 30010

BIOS 25260. Host Pathogen Interactions. 100 Units.
This course explores the basic principals of host defense against pathogens and pathogens' strategies to overcome host immune mechanisms. We address evolutionary aspects of innate and adaptive immune responses, while also studying specific examples of viral and bacterial interactions with their hosts. The reviews of relevant immunological mechanisms necessary for appreciation of host/pathogen interactions are incorporated in the studies of specific cases.
Instructor(s): A. Chervonsky Terms Offered: Autumn
Prerequisite(s): BIOS 25206 and BIOS 25256

BIOS 25266. Molecular Immunology. 100 Units.
This discussion-oriented course examines the molecular principles of immune recognition. We explore the roles of protein modification, protein-protein and protein-DNA interactions in the discrimination between self and non-self, and study the molecular fundamentals of cell stimulation and signaling. Primary literature focused on molecular research of the immune system is integrated with lectures on commonly used biochemical, structural and immunological techniques used in the research papers examined.
Instructor(s): E. Adams Terms Offered: Spring. Offered in odd years
Prerequisite(s): BIOS 20200 or 25256, or consent of instructor
Equivalent Course(s): IMMU 30266

BIOS 25267. Mucosal Immunology. 100 Units.
This course addresses how the gut associated lymphoid tissue distinguishes innocuous dietary antigens and commensal bacteria from pathogenic microbes and mounts an appropriate response. The realization that we live in a dynamic relationship with the trillions of bacteria that form the commensal microbiome has added additional complexity to our understanding of this conundrum. In this course a topic will be introduced with a lecture and review article for the first class of each week. In the second class each week students will lead the discussion of the primary articles assigned. The course will be graded on class participation and a final essay-based exam. Although intended primarily for graduate students in the Immunology, Microbiology, MPMM and CMMN programs, undergraduates may enroll with the permission of the instructor.
Instructor(s): C. Nagler Terms Offered: Spring. Offered in even years
Prerequisite(s): BIOS 25256
Equivalent Course(s): IMMU 37000
BIOS 25287. Introduction to Virology. 100 Units.
This class on animal viruses considers the major families of the viral kingdom with an emphasis on the molecular aspects of genome expression and virus-host interactions. Our goal is to provide students with solid appreciation of basic knowledge, as well as instruction on the frontiers of virus research.
Instructor(s): B. Manicassamy Terms Offered: Spring
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and third- or fourth-year standing
Equivalent Course(s): MICR 34600

BIOS 25308. Heterogeneity in Human Cancer: Etiology and Treatment. 100 Units.
This course addresses the importance of understanding human tumor heterogeneity (organ site by organ site) in terms of predicting whether tumors will progress to malignancy and how tumors will respond to standard treatments or require tailored molecular therapeutics. Alternating lecture and discussion lectures will explore and tease apart the controversies in the field that limit progress in cancer prevention, diagnosis and treatment. At the end of the course, students should have an in-depth understanding of the complexities, challenges and opportunities facing modern cancer researchers and clinical oncologists and be able to discuss novel scientific approaches to solving these issues.
Instructor(s): K. MacLeod Terms Offered: Autumn 2018
Prerequisite(s): A grade of B or better in BIOS 25108

BIOS 25309. Cancer Metastasis. 100 Units.
This course focuses on the fundamental principles of cancer metastases as well as new and emerging concepts in metastatic colonization of target organs. Metastasis remains the most lethal aspect of cancer, thus its importance to cancer biologists cannot be overstated. In this course, students will gain a robust knowledge of hypothesis-driven studies that laid the foundation for our current understanding of cancer metastases, recent breakthroughs, and discussion of ongoing novel, cross-disciplinary studies. This course builds molecular and cellular knowledge gained in preceding courses and specifically addresses the discovery and implementation of use of metastasis suppressors in dissecting molecular mechanisms controlling dormancy, metastatic colonization of target organs, and cancer cell-microenvironment interactions that may be targeted therapeutically.
Instructor(s): C. Rinker-Schaeffer Terms Offered: Autumn
Prerequisite(s): B average or above in a Biological Sciences Fundamentals Sequence.

BIOS 25310. Pharmacogenomics: Discovery and Implementation. 100 Units.
Pharmacogenomics is aimed at advancing our knowledge of the genetic basis for variable drug response. Advances in genetic knowledge gained through sequencing have been applied to drug response, and identifying heritable genetic variants that predict response and toxicity is an area of great interest to researchers. The ultimate goal is to identify clinically significant variations to predict the right choice and dose of medications for individuals—"personalizing medicine."
The study of pharmacogenomics is complicated by the fact that response and toxicity are multigenic traits and are often confounded by nongenetic factors (e.g., age, co-morbidities, drug-drug interactions, environment, diet). Using knowledge of an individual's DNA sequence as an integral determinant of drug therapy has not yet become standard clinical practice; however, several genetics-guided recommendations for physicians have been developed and are highlighted. The ethics and economics of pharmacogenomics are also discussed.
Instructor(s): R. S. Huang, B. Stranger Terms Offered: Spring
Prerequisite(s): Ugrads (3 & 4 yrs only) must have taken BIOS 20187 & are required to email instructors for approval (bstranger@medicine.bsd.uchicago.edu & rhuang@medicine.bsd.uchicago.edu) prior to registering.
Equivalent Course(s): CABI 47510, CCTS 40006

BIOS 25326. Tumor Microenvironment and Metastasis. 100 Units.
The tumor microenvironment regulates disease progression and chemoresistance in most cancers. This course addresses the functional contribution of the different cellular and non-cellular constituents of the tumor that surround the malignant cancer cells in cancer progression and metastasis. We will thoroughly discuss the function of stroma, inflammation, tumor senescence, immunity and the interactome in cancer progression and metastasis. Moreover, we will evaluate the translational impact of targeting the tumor microenvironment. Optional weekend, one-day, workshops will introduce key techniques and organotypic model systems to elucidate these functions. At the end of the course, students should be able to understand the biology behind cancer metastasis and to evaluate manuscripts reporting novel findings in cancer biology.
Instructor(s): H. Kenny, E. Lengyel Terms Offered: Spring
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence.
Note(s): Three optional weekend, one-day workshops will be offered during the quarter. This course qualifies in the Cancer Specialization.
BIOS 25327. Health Disparities in Breast Cancer. 100 Units.
Across the globe, breast cancer is the most common women’s cancer. In the last two decades, there have been significant advances in breast cancer detection and treatment that have resulted in improved survival rates. Yet, not all populations have benefited equally from these improvements, and there continues to be a disproportionate burden of breast cancer felt by different populations. In the U.S., for example, white women have the highest incidence of breast cancer but African-American women have the highest breast cancer mortality overall. The socioeconomic, environmental, biological, and cultural factors that collectively contribute to these disparities are being identified with a growing emphasis on health disparities research efforts. In this 10-week discussion-based course students will meet twice weekly and cover major aspects of breast cancer disparities.
Instructor(s): E. Dolan and S. Conzen Terms Offered: Winter. Course not offered every year.
Prerequisite(s): Biology majors: Three quarters of a Biological Sciences Fundamentals sequence and third or fourth year standing
Equivalent Course(s): CCTS 20400,CCTS 40400

BIOS 25407. Organ Transplantation. 100 Units.
This course presents biological, technical, ethical, and economic issues associated with organ transplantation. We sharply focus the immunologic knowledge from BIOS 25256 onto the biologic barriers to organ acceptance and the ultimate goal of immunologic tolerance. We also address principles of organ preservation and the mechanisms of ischemia/reperfusion injury. The technical aspects and physiology of organ transplantation (i.e., kidney, liver, heart, lung, pancreas, islet, intestinal) are covered. The social, economic, and ethical issues raised in transplantation (i.e., allografts, xenografts, living donation) are also discussed. This course is offered in alternate years.
Instructor(s): A. Chong Terms Offered: Winter. Every other year in odd years.
Prerequisite(s): BIOS 25256

BIOS 25419. Infectious Disease Epidemiology, Networks and Modeling. 100 Units.
This intermediate-level epidemiology course directed by two infectious disease epidemiologist-physicians will provide an up to date perspective on forgotten, contemporary and emerging infections. The course lectures and readings will provide a rigorous examination of the interactions among pathogens, hosts and the environment that produce disease in diverse populations. In addition to the demographic characteristics and the behaviors of individuals that are associated with a high risk of infection, we will examine complex aspects of the environment as they pertain to disease transmission. These include poverty, globalization, social networks, public health, and racial and ethnic disparities. Methodologic approaches to infectious disease epidemiology that will be covered include traditional study designs, molecular epidemiology, social network analysis, modeling, and network science. Local and global approaches will be applied to case studies from the United States, Asia and Africa.
Instructor(s): M. David Terms Offered: Spring. Not offered 2017-18
Prerequisite(s): PBHS 30700 or PBHS 30900 or introductory epidemiology or consent of instructor.
Equivalent Course(s): PBHS 31300

BIOS 26120. An Introduction to Bioinformatics and Proteomics. 100 Units.
Modern biology generates massive amounts of data; this course is devoted to biological information and the models and techniques used to make sense of it. Students learn about biological databases, algorithms for sequence alignment, phylogenetic tree building, and systems biology. They will also learn about the basics of large-scale study of proteins, particularly their structures and functions. Students will be introduced to basics of high performance computation (HPC) and its application to the field of bioinformatics. They will learn how to use our in-house Super Computer to process and analyze next generation sequencing data. Using state of the art tools, students will align and genotype a group of genes in order to identify disease-relevant variants. The course will be taught as a hands on computer approach (a computation background would be helpful, but not needed).
Instructor(s): E. Haddadian Terms Offered: Autumn. L.
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence or BIOS 20172 or consent of Instructor. No computation background required.

BIOS 26210-26211. Mathematical Methods for Biological Sciences I-II.
BIOS 26210. Mathematical Methods for Biological Sciences I. 100 Units.
This course builds on the introduction to modeling course biology students take in the first year (BIOS 20151 or 152). It begins with a review of one-variable ordinary differential equations as models for biological processes changing with time, and proceeds to develop basic dynamical systems theory. Analytic skills include stability analysis, phase portraits, limit cycles, and bifurcations. Linear algebra concepts are introduced and developed, and Fourier methods are applied to data analysis. The methods are applied to diverse areas of biology, such as ecology, neuroscience, regulatory networks, and molecular structure. The students learn computations methods to implement the models in MATLAB.
Instructor(s): D. Kondrashov Terms Offered: Autumn. L.
Prerequisite(s): BIOS 20151 or BIOS 20152 and three quarters of a Biological Sciences Fundamentals sequence or consent of the instructor
Equivalent Course(s): CPNS 31000,PSYC 36210
BIOS 26211. Mathematical Methods for Biological Sciences II. 100 Units.
This course is a continuation of BIOS 26210. The topics start with optimization problems, such as nonlinear least squares fitting, principal component analysis and sequence alignment. Stochastic models are introduced, such as Markov chains, birth-death processes, and diffusion processes, with applications including hidden Markov models, tumor population modeling, and networks of chemical reactions. In computer labs, students learn optimization methods and stochastic algorithms, e.g., Markov Chain, Monte Carlo, and Gillespie algorithm. Students complete an independent project on a topic of their interest.
Instructor(s): D. Kondrashov Terms Offered: Winter. L.
Prerequisite(s): BIOS 26210 or equivalent.
Equivalent Course(s): CPNS 31100, PSYC 36211

BIOS 27710-27711-27712-27713-27714-27715. Ecology – Marine Biological Laboratory; Biogeochemical Analysis in Terrestrial and Aquatic Ecosystems – Marine Biological Laboratory; Independent Undergraduate Research in Environmental Sciences – Marine Biological Laboratory; Quantitative Environmental Analyses – Marine Biological Laboratory; Methods in Microbial Ecology – Marine Biological Laboratory; Roles of Animals in Ecosystems – Marine Biological Laboratory.
Marine Biological Laboratory Semester in Environmental Science Sequence (SES). Courses BIOS 27710-27715 are the College designations for the Semester in Environmental Science that is taught at the Marine Biological Laboratory (MBL) in Woods Hole, Massachusetts. Registration in BIOS 27710, 27711, and 27712, plus one of BIOS 27713, 27714, or 27715 is required. Admission to the Semester in Environmental Science program is by application, which must be received by the MBL in March of the year preceding the start of the semester. Admissions decisions will be mailed in April. Note that these courses start at the beginning of September, typically four weeks prior to the start of the College’s Autumn Quarter and are completed by the end of Autumn Quarter. More information on the course content and the application process can be found at www.mbl.edu/ses.

BIOS 27710. Ecology – Marine Biological Laboratory. 100 Units.
This course examines the structure and functioning of terrestrial and aquatic ecosystems including the application of basic principles of community and ecosystem ecology. The course also examines contemporary environmental problems such as the impacts of global and local environmental change on community composition and food webs within forest, grassland, marsh and nearshore coastal ecosystems on Cape Cod. This course examines the structure and functioning of terrestrial and aquatic ecosystems including the application of basic principles of community and ecosystem ecology. The course also examines contemporary environmental problems such as the impacts of global and local environmental change on community composition and food webs within forest, grassland, marsh and nearshore coastal ecosystems on Cape Cod.
Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn. L.
Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27711 and BIOS 27712 along with one of BIOS 27713, BIOS 27714 or BIOS 27715.
Equivalent Course(s): ENSC 24100

BIOS 27711. Biogeochemical Analysis in Terrestrial and Aquatic Ecosystems – Marine Biological Laboratory. 100 Units.
This course examines the interface of biological processes with chemical processes in ecological systems. Course content emphasizes aquatic chemistry and the role of microbes in the cycling of nitrogen, carbon, and other elements. Effects of global changes on chemical cycling are emphasized.
Instructor(s): Marine Biological Laboratory Staff. Terms Offered: Autumn. L.
Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710 and BIOS 27712 along with one of BIOS 27713, BIOS 27714 or BIOS 27715.
Equivalent Course(s): ENSC 23820

BIOS 27712. Independent Undergraduate Research in Environmental Sciences – Marine Biological Laboratory. 100 Units.
This course is the culmination of the Semester in Environmental Science at the Marine Biological Laboratory. An independent research project, on a topic in aquatic or terrestrial ecosystem ecology, is required. Students will participate in a seminar for scientific communication as well as submit a final paper on their project.
Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn. L.
Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710 and BIOS 27711 along with one of BIOS 27713, BIOS 27714 or BIOS 27715.
Equivalent Course(s): ENSC 29800
BIOS 27713. Quantitative Environmental Analyses – Marine Biological Laboratory. 100 Units.  
This course emphasizes the application of quantitative methods to answering ecological questions. Students apply mathematical modeling approaches to simulating biological and chemical phenomena in terrestrial and marine ecosystems. 
Instructor(s): Marine Biological Laboratory Staff  
Terms Offered: Autumn, L. 
Prerequisite(s): Consent Only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710, BIOS 27711 and BIOS 27712. 
Equivalent Course(s): ENSC 28100

BIOS 27714. Methods in Microbial Ecology – Marine Biological Laboratory. 100 Units.  
This course explores the biology of microbes found in the environment, including relationships with the physical, chemical, and biotic elements of their environment. Emphasis is placed on understanding the science underlying the various methodologies used in the study of these organisms and systems. In the laboratory, students will work with the latest techniques to measure microbial biomass, activity, extracellular enzymes, and biogeochemical processes. Students are also introduced to molecular methods for assessing microbial genomic diversity. 
Instructor(s): Marine Biological Laboratory Staff 
Terms Offered: Autumn, L. 
Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710, BIOS 27711 and BIOS 27712. 
Equivalent Course(s): ENSC 24200

BIOS 27715. Roles of Animals in Ecosystems – Marine Biological Laboratory. 100 Units.  
This course addresses the question, How do animals, including man, affect the structure and function of ecosystems. The course takes an interdisciplinary approach focused on the interactions of animal diversity, migration patterns, population dynamics, and behavior with biogeochemical cycles, productivity, and transport of materials across ecosystems. This course is an elective option within the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA. 
Instructor(s): Marine Biological Laboratory Staff 
Terms Offered: Autumn 
Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710, BIOS 27711, and BIOS 27712. 
Equivalent Course(s): ENSC 24300

BIOS 27720. Microbiomes Across Environments. 100 Units.  
Microbiomes Across Environments provides a comprehensive introduction to microbiome research, tools and approaches for investigation, and a lexicon for biological understanding of the role of microbial communities in environmental and host environments. Microbiome science is an emerging field that bridges disciplines, merging microbiology with genomics, ecosystem science, computation, biogeochemistry, modeling, medicine, surgery, immunology, molecular engineering, and many others, including architecture, social science, chemistry and even economics. In this course we will uncover the vast biochemical and metabolic diversity of the microbial world by examining life in ocean and marine systems, terrestrial ecosystems, and animal (including human) host-associated contexts. Students will develop or strengthen biological field/lab techniques, analyze and compare data prepared from student-collected samples, and will integrate fundamental knowledge, modeling, and theory as it pertains to microbiome research. 
Instructor(s): J. Gilbert, D. Welch 
Terms Offered: Autumn. Meets in September 2017. L. 
Note(s): This course will be given at Marine Biological Laboratory, Woods Hole, Massachusetts.

BIOS 27721. Observing Proteins in Action: How to Design and Build Your Own. 100 Units.  
New insights into cell function are now possible using technologies that resolve single molecules. However, as devices become more complicated, we are often faced with three questions: What is it that our instruments actually measure; how can we change the instrument to see a new behavior; and, how do we analyze the data to get the greatest insight? We will learn how to answer these questions by designing, building, and using our own electrical and optical instruments, making measurements, and then analyzing the results. Membrane proteins play an essential role in the behavior of all cells. We will study membrane protein channels in synthetic membranes, host cells, and giant axons from squid collected in the waters surrounding the MBL. The movement of electrical charge produced by conformational changes will be correlated with both the current passing through single channels and structural information obtained from light and electron microscopy. The course will proceed from simple measurements to student-designed projects. 
Instructor(s): E. Schwartz, F. Bezanilla, A. Correa, E. Perozo 
Terms Offered: Autumn. Meets in September 2017. L. 
Note(s): This course will be given at Marine Biological Laboratory, Woods Hole, Massachusetts
BIOS 27722. Marine Invertebrates of Woods Hole: Ecology/Diversity/Function. 100 Units.
Over 90% of the macroscopic species in the marine biosphere are “invertebrates” — metazoans other than fish, amphibians, reptiles, birds, or mammals. This course takes advantage of the marine biota of the Woods Hole region to illustrate the principles of invertebrate organization, ecology, and biodiversity with particular emphasis on comparative study of form and function (particularly biomechanical) in both phylogenetic and ecological contexts. Biodiversity is a topical subject in biology, in part because of the accelerating erosion of biodiversity as a result of increasing human pressures and global change, in part because the revolution in phylogenomics over the past fifteen years has allowed the study of biodiversity to be placed in a robust evolutionary context. Having a working knowledge of the diversity of life is fundamental to the study of any subject in biology. Students will study living representatives of most major groups of marine metazoans, both in the laboratory and through fieldwork in the diverse marine habitats surrounding Woods Hole, a particularly appropriate location for such a course given the wealth of local diversity and accumulated knowledge of the local fauna built over 125 years of biological investigation at the Marine Biological Laboratory.
Instructor(s): M. LaBarbera
Terms Offered: Autumn. Meets in September 2017. L.
Note(s): This course will be given at Marine Biological Laboratory, Woods Hole, Massachusetts.

BIOS 27810. Epidemiology & Population Health: Global Health Sciences I. 100 Units.
Epidemiology is the basic science of public health. It is the study of how diseases are distributed across populations and how one designs population-based studies to learn about disease causes, with the object of identifying preventive strategies. Epidemiology is a quantitative field and draws on biostatistical methods. Historically, epidemiology’s roots were in the investigation of infectious disease outbreaks and epidemics. Since the mid-twentieth century, the scope of epidemiologic investigations has expanded to a fuller range of non-infectious diseases and health problems. This course will introduce classic studies, study designs, and analytic methods, and will include articles that approach epidemiology from the global context.
Instructor(s): D. Lauderdale. Terms Offered: Autumn, Winter. This course is offered Autumn Quarter every year on campus and Winter Quarter every other year in Paris as part of Study Abroad beginning Winter 2018.
Prerequisite(s): Completion of the three quarters of a Biological Sciences Fundamentals Sequence and completion of the quantitative requirements for the biological sciences major. STAT 22000 or other introductory statistics highly desirable.

BIOS 27811. Microbiology: Global Health Sciences II. 100 Units.
This course will examine infectious diseases with global health impact, analyzing their historic and projected impact, their biological foundations, treatment, and preventative control. Course topics include gastrointestinal infections (e.g., cholera, bacillary dysentery, typhoid fever, rotavirus infections), sexually transmitted diseases (HIV), infections transmitted via aerosol droplets (tuberculosis, meningitis), and vector borne diseases (e.g., malaria, typhus, dengue fever, plague). Special emphasis will be placed on emerging infectious diseases (Ebola, Lassa, Rift Valley fever) and either completed or ongoing studies for infectious disease elimination (smallpox, polio, diphtheria, river blindness). The course encompasses lectures, student presentations, and the preparation of a capstone essay.
Instructor(s): D. Missiakas, O. Schneewind
Terms Offered: Winter. This course is offered on campus in alternate years beginning Winter Quarter 2017 and in Paris in alternate years beginning Winter Quarter 2018
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence, or consent of Instructor.

BIOS 28407. Genomics and Systems Biology. 100 Units.
This lecture course explores the technologies that enable high-throughput collection of genomic-scale data, including sequencing, genotyping, gene expression profiling, assays of copy number variation, protein expression and protein-protein interaction. We also cover study design and statistical analysis of large data sets, as well as how data from different sources can be used to understand regulatory networks (i.e., systems). Statistical tools introduced include linear models, likelihood-based inference, supervised and unsupervised learning techniques, methods for assessing quality of data, hidden Markov models, and controlling for false discovery rates in large data sets. Readings are drawn from the primary literature.
Instructor(s): Y. Gilad
Terms Offered: Spring
Prerequisite(s): Three quarters of a Biological Sciences Fundamentals sequence and STAT 23400 or BIOS 26210 and BIOS 26211
Equivalent Course(s): HGEN 47300, IMMU 47300

Big Problems Courses
These courses may not be used towards the general education requirement in biological sciences unless approved through petition to the BSCD Senior Advisers.
BIOS 02280. Drinking Alcohol: Social Problem or Normal Cultural Practice? 100 Units.
Alcohol is the most widely used psychoactive agent in the world, and, as archaeologists have recently demonstrated, it has a very long history dating back at least 9,000 years. This course will explore the issue of alcohol and drinking from a transdisciplinary perspective. It will be co-taught by an anthropologist/archaeologist with experience in alcohol research and a neurobiologist who has experience with addiction research. Students will be confronted with literature on alcohol research from anthropology, sociology, history, biology, medicine, psychology, and public health and asked to think through the conflicts and contradictions. Selected case studies will be used to focus the discussion of broader theoretical concepts and competing perspectives introduced in the first part of the course. Topics for lectures and discussion include: What is alcohol? chemical definition, cultural forms, production processes, biological effects; The early history of alcohol: archaeological studies; Histories of drinking in ancient, medieval, and modern times; Alcohol and the political economy: trade, politics, regulation, resistance; Alcohol as a cultural artifact: the social roles of drinking; Styles of drinking and intoxication; Alcohol, addiction, and social problems: the interplay of biology, culture, and society; Alcohol and religion: integration vs. prohibition; Alcohol and health benefits: ancient beliefs and modern scientific research; Comparative case studies of drinking.
Instructor(s): M. Dietler, W. Green Terms Offered: Winter
Prerequisite(s): Third- or fourth-year standing. This course does not meet requirements for the biological sciences major.
Equivalent Course(s): ANTH 25310, BPRO 22800

BIOS 02490. Biology and Sociology of AIDS. 100 Units.
This co-listed course explores the biology and sociology of AIDS from interdisciplinary perspectives. Roughly half of the course explores the basic biology of the HIV retrovirus, HIV treatments such as HAART medications, opportunities and obstacles to effective HIV vaccines, the epidemiology of HIV infection. The remainder of course sessions explore social, political, and policy concerns: HIV risk behaviors, clinical and policy interventions in HIV prevention, public policies that finance HIV care, the challenge of global HIV treatment and prevention, with a special focus on sub-Saharan Africa. The course features guest speakers who are leading experts in these areas.
Instructor(s): H. Pollack, J. Schneider Terms Offered: Not offered 2017-2018
Prerequisite(s): Third- or fourth-year standing
Note(s): This course does not meet requirements for the biological sciences major.
Equivalent Course(s): BPRO 24900

Specialized Courses
These courses may not be counted toward the courses required for the Biological Sciences major.

BIOS 29100. Biology of Toxoplasma. 100 Units.
This course is suitable for undergraduates with a good background in biology and molecular genetics. This course does not meet requirements for the biological sciences major. This course undertakes a study of Toxoplasma gondii and toxoplasmosis: a model system to study the cellular and molecular biology, biochemistry, and genetics of an obligate intracellular protozoan parasite; the immune responses it elicits; its interactions with host cells; and the pathogenesis of the diseases it causes. This information is also applied to consideration of public health measures for prevention of infection, for vaccines, and for development of new antimicrobial treatments. General principles applicable to the study of other microorganisms are emphasized.
Instructor(s): R. Mcleod Terms Offered: Autumn, Spring
Prerequisite(s): Consent of instructor. This course does not meet the requirements for the Biological Sciences Major.

BIOS 29265. Evolution and Economics of Human Behavior. 100 Units.
This course explores how evolutionary biology and behavioral economics explain many different aspects of human behavior. Specific topics include evolutionary theory, natural and sexual selection, game theory, cost-benefit analyses of behavior from an evolutionary and a behavioral economics perspective, aggression, power and dominance, cooperation and competition, biological markets, parental investment, life history and risk-taking, love and mating, physical attractiveness and the market, emotion and motivation, sex and consumer behavior, cognitive biases in decision-making, and personality and psychopathology.
Instructor(s): D. Maestripieri Terms Offered: Autumn
Prerequisite(s): This course does not meet the requirements for the Biological Sciences Major.
Note(s): CHDV Distribution: A; 1*
Equivalent Course(s): CHDV 37950, PSYC 27950, PSYC 37950, ECON 14810, CHDV 27950

BIOS 29270. A History of Cell and Molecular Biology. 100 Units.
This course will trace the parallel histories of cell and molecular biology, primarily in the 20th century, by exploring continuities and discontinuities between these fields and their precursors. Through discussion, attempts will be made to develop definitions of cell and molecular biology that are based upon their practices and explanatory strategies, and to determine to what extent these practices and strategies overlap. Finally, the relevance of these definitions to current developments in biology will be explored. The course is not designed to be comprehensive, but will provide an overall historical and conceptual framework.
Instructor(s): K. Matlin Terms Offered: Spring
Prerequisite(s): This course does not meet the requirements for the Biological Sciences Major.
Equivalent Course(s): HIPS 25902
BIOS 29271. The Psychology and Neurobiology of Stress. 100 Units.
This course explores the topic of stress and its influence on behavior and neurobiology. Specifically, the course will discuss how factors such as age, gender, and social context interact to influence how we respond to stressors both physiologically and behaviorally. The course will also explore how stress influences mental and physical health.
Instructor(s): G. Norman Terms Offered: Spring
Prerequisite(s): This course does not meet the requirements for the Biological Sciences Major.
Equivalent Course(s): PSYC 25750

BIOS 29294. Introduction to Global Health. 100 Units.
This course provides an overview of global health from the historical perspective to the current state of global health. The course features weekly guest lecturers with a broad range of expertise in the field: topics include the social and economic determinants of health, the economics of global health, global burden of disease, and globalization of health risks, as well as the importance of ethics, human rights, and diplomacy in promoting a healthier world. The course is designed for graduate-level students and senior undergraduates with an interest in global health work in resource-limited settings.
Instructor(s): C. Babcock, N. Fenny Terms Offered: Winter
Prerequisite(s): This course does not meet requirements for the biological sciences major
Equivalent Course(s): CCTS 43000, PBPL 29294

BIOS 29300. Biological Psychology. 100 Units.
What are the relations between mind and brain? How do brains regulate mental, behavioral, and hormonal processes; and how do these influence brain organization and activity? This course introduces the anatomy, physiology, and chemistry of the brain; their changes in response to the experiential and sociocultural environment; and their relation to perception, attention, behavioral action, motivation, and emotion.
Instructor(s): L. Kay, B. Prendergast Terms Offered: Winter
Prerequisite(s): Some background in biology and psychology.
Note(s): This course does not meet requirements for the biological sciences major. CHDV Distribution: A
Equivalent Course(s): CHDV 20300, PSYC 20300

BIOS 29314. Medical Ethics: Central Topics. 100 Units.
Decisions about medical treatment, medical research, and medical policy often have profound moral implications. Taught by a philosopher, two physicians, and a medical lawyer, this course will examine such issues as paternalism, autonomy, assisted suicide, kidney markets, abortion, and research ethics.
Instructor(s): D. Brudney; Staff Terms Offered: Autumn
Prerequisite(s): Third or fourth year standing. This course does not meet requirements for the Biological Sciences major.
Note(s): Undergrads enroll in sections 01 and 02. Graduates enroll in section 03. For Philosophy majors: This course fulfills the practical philosophy (A) requirement.
Equivalent Course(s): PHIL 21609, BPRO 22612, HIPS 21609, PHIL 31609

BIOS 29323. Health Care and the Limits of State Action. 100 Units.
In a time of great human mobility and weakening state frontiers, epidemic disease is able to travel fast and far, mutate in response to treatment, and defy the institutions invented to keep it under control: quarantine, the cordon sanitaire, immunization, and the management of populations. Public health services in many countries find themselves at a loss in dealing with these outbreaks of disease, a deficiency to which NGOs emerge as a response (an imperfect one to be sure). Through a series of readings in anthropology, sociology, ethics, medicine, and political science, we will attempt to reach an understanding of this crisis of both epidemiological technique and state legitimacy, and to sketch out options.
Instructor(s): E. Lyon, H. Saussy Terms Offered: Spring. May be offered in 2017-2018
Prerequisite(s): Third- or fourth-year standing. This course does not meet requirements for the biological sciences major.
Equivalent Course(s): BPRO 28600, CMLT 28900, HMRT 28602, KNOW 27006

BIOS 29326. Introduction to Medical Physics and Medical Imaging. 100 Units.
This course does not meet requirements for the biological sciences major. Students majoring in physics may use this course either as an elective or as one of the topics courses to meet the general education requirement in the biological sciences. This course covers the interaction of radiation with matter and the exploitation of such interactions for medical imaging and cancer treatment. Topics in medical imaging include X-ray imaging and radionuclide imaging, as well as advanced technologies that provide three-dimensional images, including X-ray computed tomography (CT), single photon emission computed tomography (SPECT), positron emission tomography (PET), magnetic resonance imaging (MRI), and ultrasonic imaging.
Instructor(s): S. Armato, P. La Riviere, C. Pelizzari Terms Offered: Spring
Prerequisite(s): PHYS 23500. This course does not meet requirements for the biological sciences major. Students majoring in physics may use this course either as an elective or as one of the topics courses to meet the general education requirement in the biological sciences.
BIOS 29327. Topics in Clinical Research. 100 Units.
This course provides an overview of clinical research subject matter from the history and ethics of clinical research to the types and practice of contemporary clinical research. How does clinical research differ from other research traditions? What is special about clinical research? What types of questions can be answered by clinical research (what questions not)? What types of ethical oversight over the responsible conduct of research have arisen over the years? We will learn how to read and critique clinical research, survey the major types of clinical research designs, and the differences between hypothesis generation and hypothesis testing. Finally, we provide an overview of the mechanics of developing and implementing clinical research, including grant writing, regulatory issues, and quality assurance. Along the way, we will be teaching core statistical concepts including prevalence, risk ratios, and sensitivity and validation techniques. The objectives are for students to obtain an understanding of how and why to perform clinical research and to do so in an ethical and responsible manner.
Instructor(s): Valerie Press Terms Offered: Spring
Prerequisite(s): Completed general education requirement in the social sciences. This course does not meet the requirements for the Biological Sciences Major.
Equivalent Course(s): CCTS 21003

BIOS 29328. Biological Materials. 100 Units.
In this course, students will gain an understanding of the science and application of biomaterials, a field that utilizes fundamental principles of materials science with cell biology for applications in therapeutics and diagnostics. The course will introduce the basic classes of biomaterials, considering metals used in medicine, ceramic and biological inorganic materials such as hydroxyapatite, and polymers used in medicine. The basis of protein adsorption modulating biological interactions with these materials will be elaborated. Examples to be covered in the course will include polymers used in drug delivery, polymers used in protein therapeutics, polymers used in degradable biomaterial implants, polymers used in biodiagnostics, and hybrid and polymeric nanomaterials used as bioactives and bioactive carriers. An emphasis in the course will be placed on bioactive materials development. Students will be assessed through in-class discussions, take-home assignments and exams, and an end-of-term project on a topic of the student’s choice.
Instructor(s): Staff Terms Offered: TBD
Prerequisite(s): Undergraduates must have completed BIOS 20186 and BIOS 20187. This course does not meet the requirements for the Biological Sciences major.
Equivalent Course(s): MENG 27100

BIOS 29812. Bio/Social Determinants of Health: Global Health Sciences III. 100 Units.
This course will review the major factors that influence the health of individuals and communities worldwide and seek to gain a better understanding of the complexities of global health. Students will study both broad and disease-specific global health challenges (e.g., cancer, diabetes, and cardiopulmonary disease) and strategies for responding to them; key institutions and stakeholders; environmental impacts on health; ethical considerations in research and interventions; maternal and child health; health and human rights; and international legal frameworks within global health diplomacy. The course encompasses lectures, student presentations, and the preparation of a proposal addressing a significant global health problem with major impact.
Instructor(s): C. Olopade, O. Olopade Terms Offered: Spring,Winter. This course is offered in alternate years on campus beginning Spring Quarter 2017 and in alternate years in Paris beginning Winter Quarter 2018.
Prerequisite(s): This course does not meet the requirements for the Biological Sciences major.

Independent Study and Research

BIOS 00199. Undergraduate Research. 100 Units.
This course may be elected for up to three quarters. Before Friday of fifth week of the quarter in which they register, students must submit a one-page summary of the research that they are planning to their research sponsor and to the director of undergraduate research and honors. A detailed two to three page summary on the completed work must be submitted to the research sponsor and the Master of BSCD before Friday of examination week.
Instructor(s): BSCD Master Terms Offered: Autumn, Spring, Summer, Winter
Prerequisite(s): Consent of research sponsor and the Master of BSCD.
Note(s): Students are required to submit the College Reading and Research Course Form. This course is graded P/F. This course does not meet requirements for the biological sciences major.

BIOS 00206. Readings: Biology. 100 Units.
Students may register for only one BIOS 00206 tutorial per quarter. Enrollment must be completed by the end of the second week of the quarter. This tutorial offers individually designed readings.
Terms Offered: Autumn, Winter, Spring, Summer
Prerequisite(s): Consent of faculty sponsor
Note(s): Students are required to submit the College Reading and Research Course Form. This course is graded P/F. This course does not meet requirements for the biological sciences major.

BIOS 00292. Interdisciplinary Research Seminar III. 100 Units.
No description available.
Instructor(s): S. Kron, Staff Terms Offered: Spring
Prerequisite(s): Consent of Instructor
BIOS 00296. Undergraduate Honors Research. 100 Units.
This course is required for students accepted into the BSCD Research Honors program. Students must register for this course both Autumn and Winter Quarters of their fourth year. This course can be counted toward the Biological Sciences major and may be counted among the three upper-level courses required for the BS. See also bscd.uchicago.edu/page/honors-biology.
Instructor(s): S. Kron Terms Offered: Autumn, Winter
Prerequisite(s): Consent Only. Acceptance in BSCD Honors Research Program.

BIOS 00299. Advanced Research: Biological Sciences. 100 Units.
Before Friday of fifth week of the quarter in which they register, students must submit a one-page summary of the research that they are planning to their research sponsor and to the director of undergraduate research and honors. A detailed two to three page summary on the completed work must be submitted to the research sponsor and the Master of BSCD before Friday of examination week. This course does may be counted as a general elective but does not meet requirements for the Biological Sciences major. In the first quarter of registration, students must submit College Reading and Research form to their research sponsor and the director of undergraduate research and honors.
Instructor(s): BSCD Master Terms Offered: Autumn, Spring, Summer, Winter
Prerequisite(s): Fourth-year standing and consent of research sponsor and Master of BSCD.
Note(s): Students are required to submit the College Reading and Research Course Form. This course is graded P/F.

Graduate-Level Courses
Many graduate-level courses in the Division of the Biological Sciences are open to qualified College students. Students should consult their advisers, the BSCD office, or the various departments and committees in the division to identify appropriate courses.
