Environment, Geography, and Urbanization

Department Website: https://cegu.uchicago.edu

The transdisciplinary major in Environment, Geography, and Urbanization is housed in the Committee on Environment, Geography, and Urbanization (CEGU). The CEGU undergraduate major prepares students to understand and confront the wide-ranging societal, historical, and spatial dimensions of contemporary planetary environmental crises, including climate change, biodiversity loss, and other forms of large-scale socio-environmental transformation. Such issues are explored in diverse spaces, including cities and metropolitan regions; zones of extraction, agriculture, energy production, and waste; dispersed settlement spaces and village ecologies; rangeland, forest, and jungle landscapes; remote wildlands; and coastlines, rivers, watersheds, and oceans. The curriculum emphasizes a plurality of theoretical approaches to the histories and geographies of socio-environmental transformation, underscoring the contested character of environmental knowledge in a polarized and turbulent world order.

Program of Study

The Environment, Geography, and Urbanization major consists of a sequence of foundational courses; substantive and methodological training in environmental, geographical, and urban studies; transdisciplinary electives spanning diverse thematic areas; and various capstone options, including the senior thesis and a community study. The major provides students with strong foundations in spatialized and historical approaches to environmental studies, with more specialized thematic tracks available in several fields, including urban environmental studies, energy histories and geographies, and environmental humanities. Through engagement with these fields of inquiry, students explore the wide-ranging social, historical, and spatial transformations that have produced the environmental emergencies of our time.

Through coursework, programming, thesis research, and capstone projects, CEGU emphasizes experiential learning. Experiential learning opportunities include course field trips and site visits, hands-on and practical student assessments and research, as well as quarter-long engagements with a site or case study such as the Calumet Quarter (in collaboration with Chicago Studies) or intensive study during September Term. These experiences are designed to foster creative vision and method-based applications outside the classroom, often involving community partners and specific forms of community engagement. Experiential learning offers innovative ways for students to learn and develop critical skills through sites of practical, experiential engagement.

Graduates of the CEGU major will be well-equipped to conduct advanced research on socio-environmental processes, transformations, and crises across time and space, and to engage in diverse fields of urban and environmental practice. The curriculum combines scholarly inquiry, methodological training, experiential learning, and community engagement to prepare students to contribute to—and transform—the collective process of forging more equitable, livable, and hopeful planetary futures.

Thematic Tracks

Students have the option to complete the CEGU general major, which offers an expansive set of courses in broad fields. Students also have the option to specialize in one of several thematic tracks: Urban Environmental Studies, Energy Histories and Geographies, and Environmental Humanities.

- **Urbanization** is intermeshed with the remaking of human and nonhuman environments, within cities and beyond. The **Urban Environmental Studies** thematic track of the CEGU major explores these connections and their wide-ranging implications for urban space and for the non-city zones that support urban life. Topics include the politics of environmental planning, design, and architecture; the role of class-based, gendered, and racialized forms of oppression in the production of urban built environments and political ecologies; the changing material and resource flows through which urban spaces are reproduced; the role of states, international organizations, and social movements in the governance of urban environmental restructuring; the emergence and evolution of urban climate politics; and ongoing struggles to create more just, inclusive, and sustainable spaces of urbanization.

- **The Energy Histories and Geographies thematic track** explores the historical roots of climate change and other global environmental problems with special attention to how energy use shapes human societies over time. From prehistory to the present, coursework in this track examines how people have variably harnessed sources of energy from environmental constituents—including plants, animals, wind, water, stones, metals, fossil fuels, and other humans—in tandem with the technological and social changes associated with their use. Topics include energy flow through and across natural and built environments, energy’s role in shaping political structures and social inequalities, the radical expansion and intensification of energy use under capitalism, the uneven globalization of energy-intensive lifestyles, the changing geopolitics of energy, and possible futures beyond fossil-fuel dependence.
• The Environmental Humanities represent a multidisciplinary field of research that studies how society, culture, and politics shape and are shaped by human-environment relationships. This track of the CEGU major examines a diverse range of humanistic material and methods, such as storytelling, source criticism, and formal analysis, to think critically about how environments, ecologies, and non-humans become part of social life. The track also explores how humanistic inquiry sheds light on socioenvironmental transformations and crises, and is integral, along with the natural and social sciences, to strategies and struggles to forge more equitable, democratic, vibrant, and hopeful planetary futures.

For CEGU majors who opt to specialize in a thematic track, one foundations course is selected from a smaller cluster of gateway courses that offer a broad introduction to the specific track. Students who decide not to specialize in a thematic track are able to take a variety of general foundations option courses.

For students in a thematic track, electives are selected from a smaller menu of courses that offer advanced engagement with key research agendas in this particular area. To complete a thematic track, students select three of the five electives from a specific menu of options associated with that track. The other two electives may be chosen from the broader menu of options available to all CEGU majors. Students who decide not to specialize in a thematic track must take a total of five general electives.

BA THESIS/CAPSTONE

The CEGU major culminates in a fourth-year capstone, which currently consists of either a BA Thesis or Capstone project. Either option provides students with an opportunity to apply some of the key concepts, theories, and methods they have encountered throughout the major to an original research project on some aspect of urbanization and/or socio-environmental relations. While distinct in scope and approach, the two senior project options offer students valuable research experience that will help prepare them for future careers in these and related fields.

Information about BA Thesis/Capstone research grants and prizes is available on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).

BA Thesis: The BA thesis gives students a valuable opportunity to conduct extended research, writing, and analysis on a topic of particular significance to them. Frequently, undergraduates who write and reason well are nevertheless unaccustomed to directing their own academic inquiry from within by formulating and conducting a research project from start to finish. Therefore, the BA thesis program offers students pursuing these independent projects significant guidance and support from faculty and preceptors. To this end, students are matched with faculty advisers from across the University, receive mentorship from CEGU faculty and instructional assistants, and participate in a two-quarter BA Colloquium sequence in the Autumn and Winter Quarters of their fourth year. Some theses are self-styled and may take students to far-off places, both geographically and intellectually. The results are often remarkable in their scope and creativity.

In their third year, prospective BA thesis students must attend an information session and brainstorming workshop, submit a BA thesis application form in consultation with CEGU program faculty or staff (https://cegu.uchicago.edu/undergraduate-studies/cegu-major-minor/advising-and-office-hours/), and, if accepted into the program, attend a meeting to prepare a summer reading list and BA thesis plan. By the first day of Autumn Quarter of their fourth year, BA thesis students must submit a 10-entry annotated bibliography focused on scholarly literature related to their chosen research topic.

Students must enroll in CEGU 29801 BA Colloquium I in the Autumn Quarter and CEGU 29802 BA Colloquium II in the Winter Quarter of their fourth year. The BA Thesis is due in the third week of the Spring Quarter.

BA Capstone: The BA Capstone is an alternative to the thesis that explores community engagement, experiential learning, or applied research in a key field of environmental practice. This option allows for structured creativity using skills developed throughout the major program, culminating in an engaged project showcasing knowledge and experience in environmental and urban studies. Students will fulfill the capstone through a community study, which will consist of a combination of course work, internships, and/or practice. The community study will feature training in community-based and community-led methods, engaged internships, and a Capstone project developed over the course of a year. Students who are specializing in one of the thematic tracks, and who opt for the community study option of the Capstone sequence, are expected to complete the community study on a topic related to the track in question. Students must present their community study project in the final symposium held in the ninth week of the Spring Quarter of their fourth year.

For further details and important dates and deadlines related to the BA Thesis and BA Capstone, please visit the CEGU website (https://cegu.uchicago.edu/).

ENVIRONMENT, GEOGRAPHY, AND URBANIZATION MAJOR FOUNDATIONAL AND METHODOLOGICAL REQUIREMENTS

All students must take four CEGU foundational courses:
• CEGU 20001 Climate Change, Environment, and Society  
• CEGU 20002 The Politics of Environmental Knowledge  
• CEGU 20003 Global Environmental Change  
• A foundations option course

For CEGU majors who opt to specialize in a thematic track, this fourth foundations option course is selected from a smaller set of courses that offer a broad introduction to the specific thematic track. A full list of foundations option courses within each thematic track, as well as general foundations option courses, are available on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).

All students are also required to take two methods courses:
• CEGU 23517 Introduction to Critical Spatial Media: Visualizing Urban, Environmental, and Planetary Change  
• A second methods course, chosen from a menu of options in the qualitative/quantitative social sciences, geospatial analysis and geographical information sciences, and environmental humanities.

Total Units 600

Students may use a maximum of 100 units of supervised individual reading and research credit toward their primary track requirements in the major.

For a full list of CEGU-approved methods courses, please visit the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).

All courses counting towards major requirements must be taken for a quality grade. Aside from the foundation courses CEGU 20001 Climate Change, Environment, and Society, CEGU 20002 The Politics of Environmental Knowledge, CEGU 20003 Global Environmental Change, and CEGU 23517 Introduction to Critical Spatial Media: Visualizing Urban, Environmental, and Planetary Change, the menu of courses for the CEGU requirements will change from year to year depending on instructor offerings. New courses will be regularly added to these course menus.

**THEMATIC TRACK REQUIREMENTS**

**URBAN ENVIRONMENTAL STUDIES TRACK**

All students in the Urban Environmental Studies Track must choose a foundations option course from a selected list available on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/). In addition, students take three elective courses from an approved list of Urban Environmental Studies courses, as well as two general electives from a menu of courses. All thematic track electives also count as general electives in the CEGU major. Once the fourth foundations course has been completed, additional foundations courses count towards elective courses.

Students who choose to complete a BA Thesis must complete CEGU 29801 BA Colloquium I and CEGU 29802 BA Colloquium II in the Autumn and Winter Quarters of their senior year. Students who choose to complete the BA Capstone must register for a Capstone course, chosen from a CEGU-approved list, as well as an additional elective within Urban Environmental Studies.

Approved courses for each requirement can be found on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).

### General Requirements (No Thematic Track)

All students who choose not to opt into a thematic track can take a general foundations option course, as well as the three other foundation courses for their foundation requirements. See the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/) for more information on general foundations option courses. In addition to the foundational requirements, students who are not in a thematic track can take any five general electives. All thematic track electives also count as general electives in the CEGU major. Once the fourth foundations course has been completed, additional foundations courses count towards elective courses.

Students who choose to complete a BA Thesis must complete CEGU 29801 BA Colloquium I and CEGU 29802 BA Colloquium II in the Autumn and Winter Quarters of their senior year. Students who choose to complete the BA Capstone must register for a Capstone course, chosen from a CEGU-approved list, as well as an additional general elective.

Approved courses for each requirement can be found on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).

### MAJOR DECLARATION

Students may begin taking courses in a major at any time (including their first quarter). However, the deadline to declare the Environment, Geography, and Urbanization major is the first week of the Spring Quarter in the third year. Students must complete a course of study form (https://cegu.uchicago.edu/undergraduate-studies/cegu-major-minor/petitions-and-forms/) and meet with the CEGU student affairs administrator or other CEGU faculty/staff in order to declare the major.

### HONORS

In addition to a minimum GPA of 3.25 overall, and 3.7 in the major, students must complete the BA Thesis Track and receive a high pass grade on the thesis to receive honors for the major.

### TRANSFER CREDIT

No credit from Advanced Placement (AP) exams can be used in the major. Up to four courses taken outside the University of Chicago may be counted towards the CEGU major, contingent on approval by the College and Director of Undergraduate Studies. Students planning to take courses outside the University are urged to consult with the Director of Undergraduate Studies as they formulate their plans. Students should also consult with their College adviser to be sure that they understand the University’s procedures for transfer credit. Refer to Transfer Credit (http://collegecatalog.uchicago.edu/thecollege/transfercredit/) for more information.

### ENVIRONMENT, GEOGRAPHY, AND URBANIZATION MINOR REQUIREMENTS

Students who elect the minor program in Environment, Geography, and Urbanization (CEGU) should meet with the student affairs administrator before the end of the Spring Quarter of their third year to declare their intention to complete the minor and select appropriate courses. The approval of the program director for the minor program should be submitted to a student’s College adviser by the deadline above on the Consent to
Complete a Minor Program (https://cpb-us-w2.wpmucdn.com/voices.uchicago.edu/dist/a/1176/files/2019/04/Consent_Minor_Program-26nrq41.pdf) form, available online or from the College adviser.

Courses in the minor (1) may not be double counted with the student’s major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for quality grades, and at least half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Summary of CEGU Minor Requirements

Three electives from any track chosen from CEGU-approved list

Total Units 600

PETITIONS AND FORMS

Students majoring/minoring in Environment, Geography, and Urbanization must complete all program requirements. Exceptions will be made only in extenuating circumstances and must be requested via the College’s General Petition (https://college.uchicago.edu/advising/tools-forms/) form.

All petitions and forms related to CEGU requirements are on the program website (https://cegu.uchicago.edu/undergraduate-studies/enst-major-minor/petitions-and-forms/). These must be submitted via the website (https://cegu.uchicago.edu/undergraduate-studies/enst-major-minor/petitions-and-forms/) portal during the two quarterly review windows.

The deadlines for all program petition submissions each quarter are:

- Friday of second week by 11:59 p.m. CT
- Friday of eighth week by 11:59 p.m. CT

No petitions will be reviewed outside of these windows.

EMAIL LIST

Students majoring, minoring, or interested in Environment, Geography, and Urbanization should subscribe to our email list (http://eepurl.com/gLQL49/) to receive announcements concerning courses, internships, fellowships, and other information connected with the major.

IMPORTANT DATES AND DEADLINES

All important dates and deadlines can be found on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).

COMMITTEE ON ENVIRONMENT, GEOGRAPHY AND URBANIZATION COURSES

CEGU 13132. Ecology in the Anthropocene. 100 Units.

This course emphasizes basic scientific understanding of ecological principles that relate most closely to the ways humans interact with their environments. It includes lectures on the main environmental pressures, notably human population growth, disease, pollution, climate change, habitat destruction, and harvesting. We emphasize the ongoing impacts on the natural world, particularly causes of population regulation and extinction and how they might feedback on to humans. Discussion required.

Instructor(s): T. Price Terms Offered: Autumn

Prerequisite(s): BIOS 10130 or BIOS 10140. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLOGY PRE-MED STUDENTS, except by petition.

Equivalent Course(s): ENST 13132, BIOS 13132

CEGU 20001. Climate Change, Environment, and Society. 100 Units.

How has natural and anthropogenic climate change shaped historical relationships between humans and their environments? Against the backdrop of planetary environmental emergencies of the early-21st century, this discussion-based course will consider various time scales of ecological, technological, social, and political transformation, including: the rise of agriculture, state formation, and civilizational collapse; the “Medieval Warm Period” and the “Little Ice Age”; the Industrial Revolution, imperialism, and the consolidation of a global fossil fuel regime; the “Great Acceleration” of the mid-20th century; the development of modern climate science; and the social, political, and technological responses to human-induced global warming. Within these time scales, we will explore past dynamics of climate change, the environment, and society through the historical study of land management, population displacement and migration, resource extraction, energy production and consumption, the global commons, as well as the role of national and international governance arrangements in mediating the
unequal distribution of environmental risk across the world. Ethics, morality, equity, and justice, among other concepts, will be investigated as we analyze historical connections among socio-environmental transformations and class-based, racialized, and gendered forms of inequality.
Instructor(s): Christopher Kindell Terms Offered: Offered twice a year.
Note(s): Students who have taken ENST 21201: Human Impact on the Global Environment may not enroll in this course.
Equivalent Course(s): GLST 30001, ENST 27001, HIST 25031

CEGU 20002. The Politics of Environmental Knowledge. 100 Units.
How has “nature” been understood and investigated in the modern world? Building upon diverse approaches to environmental history and philosophy, the history of science, and cultural studies, this course surveys the major frameworks through which the environment has been understood, investigated, and transformed since the origins of global modernity. Such issues are explored with reference to the mobilization of science, technology, and politics in several major areas of socio-environmental transformation in the modern world. Case studies might explore, among other issues, empire, race, and public health; cities and infectious disease since the Black Death; the ‘great enclosures’ of land associated with settler colonialism; the ‘Green Revolution’ in industrial agriculture; strategies of resource stewardship, land conservation, terraforming, hydrological engineering and watershed protection; the politics of global warming; and current debates on urban sustainability, carbon capture and geo-engineering. The course also considers the rise and evolution of environmentalist movements and conservation strategies, and the contested visions of nature they have embraced. The course concludes by investigating the competing paradigms of knowledge, science, and environment that underpin divergent contemporary programs of environmental governance and visions of ‘sustainability’.
Instructor(s): Jessica Landau Terms Offered: Offered twice a year.
Equivalent Course(s): HIST 25032, GLST 21002, ENST 20012

CEGU 20003. Global Environmental Change. 100 Units.
Critical examination of contemporary environmental crises requires deep immersion in key fields of environmental science that illuminate how societal processes have transformed the earth system. This course considers the genealogy of environmental problems in the modern world with reference to, among other core issues, the role of global land-use change, fossil energy, and waste production in climate change, biodiversity loss, water and soil contamination, and infectious disease transmission. The course introduces students to the major elements of earth system science and the study of global land-use change, with particular attention to key theoretical paradigms, methodological approaches, and forms of environmental and spatial data. Students will also gain familiarity with key fields of earth systems research such as the carbon cycle, hydrological processes; the physics and chemistry of the oceans and the atmosphere; the histories and geographies of carbon emissions; and planetary boundaries.
Instructor(s): Mary Beth Pudup and Sol Kim Terms Offered: Winter
Equivalent Course(s): ENST 20013

CEGU 20061. Ancient Landscapes I. 100 Units.
This is a two-course sequence that introduces students to theory and method in landscape studies and the use of Geographical Information Systems (GIS) to analyze archaeological, anthropological, historical, and environmental data. Course one covers the theoretical and methodological background necessary to understand spatial approaches to landscape and the fundamentals of using ESRI’s ArcGIS software, and further guides students in developing a research proposal. Course two covers more advanced GIS-based analysis (using vector, raster, and satellite remote sensing data) and guides students in carrying out their own spatial research project.
In both courses, techniques are introduced through the discussion of case studies (focused on the archaeology of the Middle East) and through demonstration of software skills. During supervised laboratory times, the various techniques and analyses covered will be applied to sample archaeological data and also to data from a region/topic chosen by the student.
Instructor(s): Mehrnoush Sorough Terms Offered: Autumn
Equivalent Course(s): NEAA 30061, GISC 20061, CEGU 30061, ANTH 26710, GISC 30061, NEAA 20061, ANTH 36710

CEGU 20062. Ancient Landscapes II. 100 Units.
This is a two-course sequence that introduces students to theory and method in landscape studies and the use of Geographical Information Systems (GIS) to analyze archaeological, anthropological, historical, and environmental data. Course one covers the theoretical and methodological background necessary to understand spatial approaches to landscape and the fundamentals of using ESRI’s ArcGIS software, and further guides students in developing a research proposal. Course two covers more advanced GIS-based analysis (using vector, raster, and satellite remote sensing data) and guides students in carrying out their own spatial research project.
In both courses, techniques are introduced through the discussion of case studies (focused on the archaeology of the Middle East) and through demonstration of software skills. During supervised laboratory times, the various techniques and analyses covered will be applied to sample archaeological data and also to data from a region/topic chosen by the student.
Instructor(s): Mehrnoush Sorough Terms Offered: Winter
Prerequisite(s): NEAA 20061
CEGU 20107. Nature and Technology in the Capitalist Mode of Production. 100 Units.
The crisis of nature and technology is at the heart of the 21st century mode of production as unprecedented planetary scale ecological destruction, climate change, and exhaustion of fossil fuels undercut the dynamics of capitalist accumulation. At the same time, novel techno-natural fixes are being designed to contain the crises inherent to the life process of capital. However, these movements are far from seamless; new tensions, contradictions, and horizons of struggles emerge making a critical inquiry of these concepts urgent to Anthropological thinking. In this course, the students will be introduced to foundational approaches to these problems. The first half of the course will intensively engage with dialectical materialist frameworks to understand the interrelationship between nature, technology, and consciousness in the capitalist mode of production. From this engagement, we will derive critical concepts that will be used to engage with the pertinent questions of planetary scale appropriation of human, non-human and more-than-human life in emergent anthropological theory and ethnographic literature. In doing so, our goal is to reflect on a series of questions: What is the place of nature and technology in the capitalist mode of production? How and if they embody limits to the workings of capital? How does anthropology allow us to develop political and theoretical horizons that emerge in the wake of these developments?
Instructor(s): Ashima Mittal

CEGU 20150. Sustainable Urban Development. 100 Units.
The course covers concepts and methods of sustainable urbanism, livable cities, resiliency, and smart growth principles from a social, environmental and economic perspective. In this course we examine how the development in and of cities - in the US and around the world - can be sustainable, especially given predictions of a future characterized by increasing environmental and social volatility. We begin by critiquing definitions of sustainability. The fundamental orientation of the course will be understanding cities as complex socio-natural systems, and so we will look at approaches to sustainability grouped around several of the most important component systems: climate, energy, transportation, and water. With the understanding that sustainability has no meaning if it excludes human life, perspectives from both the social sciences and humanities are woven throughout: stewardship and environmental ethics are as important as technological solutions and policy measures.
Instructor(s): Winter: Staff, Spring: Evan Carver Terms Offered: Spring Winter

CEGU 20154. Class, Race and Urban Space: Producing The City. 100 Units.
Class and race are through lines in the determinative processes that transform urban space and inform conceptual models of urban growth and change. This lecture course examines historical geographies of class and race relations in crucial domains of urban life like employment, housing, public space and urgently during the contemporary era, climate change. The course emphasizes how Chicago-based models emerged as dominant frameworks purporting to make sense of urban morphology writ large, epitomized in publication of The City in 1925.
Instructor(s): Mary Beth Pudup Terms Offered: Autumn

CEGU 20160. Cities on Screen. 100 Units.
How do the movies shape our collective imagination about cities? Why do we so often turn to them for visions of disaster and dystopia, on the one hand, or a futuristic utopia on the other? How has film responded to cities in the past, and how can it help investigate our present urban condition? How can film be understood as a tool for exploring what a city is? In this seminar, we will watch and discuss feature films in which the built environment or urban issues play important roles. Students will improve their film literacy -- learning not just what a film does but how it does it -- and understand applications for film in the analysis of social, spatial, temporal, and immersive phenomena, as well as how it can help inspire and communicate design more effectively.
Instructor(s): Evan Carver Terms Offered: Spring Equivalent Course(s): ENST 20160, ARCH 20160

CEGU 20164. Exhibiting the Environmental Humanities: Curatorial Practicum. 100 Units.
Collaboratively, students in this course will design and mount an exhibition based on research in the Environmental Humanities. Students will explore not just the exhibition's content and historical contextualization but think through critical questions about choices made in the collecting and display of selected objects as well as examine the history of exhibitions in the United States. Drawing on methods from museum studies, art history, history, environmental studies, and others, students will develop interdisciplinary approaches to research and practice communicating humanistic inquiry to general audiences. In the Fall 2024 Quarter, Students in Exhibiting the Environmental Humanities will have the opportunity to collaborate with the Sterling Morton Library at the Morton Arboretum to tell the story of May Theilgaard Watts, an early environmental educator at the Arboretum, naturalist, author, and UChicago alumna.
Instructor(s): Jessica Landau Terms Offered: Autumn Equivalent Course(s): ENST 20164
CEGU 2070. Pandemics, Urban Space, and Public Life. 100 Units.
Much of the cultural vibrance, economic strength, and social innovation that characterizes cities can be credited to their density. Put simply, cities bring people together, and togetherness allows for complex and fruitful exchange. But togetherness also brings risks, notably from infectious disease. A pandemic feeds on propinquity. “Social distance,” while a short-term public health imperative, is antithetical to the very idea of the urban. In this seminar, we will explore these competing tensions in light of current and past disease outbreaks in urban settings. Drawing on a range of texts from history, design theory, sociology, and anthropology, as well as cultural artifacts like film, graphic memoir, and photography, we will engage questions like: How are the risks of contagion balanced with the benefits of density? How are such risks distributed throughout society? What creative responses have architects, urban designers, and planners brought to this challenge? Most importantly, how can we respond constructively to the challenge of pandemic to create cities where the benefits of togetherness are maximized, perhaps even improved on compared with the pre-outbreak condition? Students will have the opportunity to propose design or policy interventions to help their own communities respond to the coronavirus/COVID-19 crisis, return to a vibrant post-pandemic life, and prepare for the pandemics of the future.
Instructor(s): Evan Carver Terms Offered: Autumn Spring Equivalent Course(s): ARCH 20170, PBPL 20170, GEOG 20170, ENST 20170, HLTH 20170

CEGU 2080. Writing the City. 100 Units.
How do great writers convey sense-of-place in their writing? What are the best ways to communicate scientific and social complexity in an engaging, accessible way? How can we combine academic rigor with journalistic verve and literary creativity to drive the public conversation about urgent environmental and urban issues? These are just some of the questions explored in WRITING THE CITY, an intensive course dedicated to honing our skills of verbal communication about issues related to the built and natural environments. Students will research, outline, draft, revise, and ultimately produce a well-crafted piece of journalistic writing for publication in the program’s new annual magazine, Expositions. Throughout the quarter we will engage intensely with a range of authors of place-based writing exploring various literary and journalistic techniques, narrative devices, rhetorical approaches, and stylistic strategies.
Instructor(s): Evan Carver Terms Offered: Autumn
Prerequisite(s): At least one ENST, GEOG, or ARCH course; or one PBPL, ARTH, ANTH, or SOCI course with an urban focus; or instructor permission. Please contact ehc@uchicago.edu with questions.
Note(s): Restricted to 3rd and 4th years This course counts towards the ENST 4th year Capstone requirement.
Equivalent Course(s): ARCH 2080, ENST 20180

CEGU 2098. Biodiversity. 100 Units.
Section 1. Students will review the three biodiversity levels, i.e., genetic, species, and ecosystem, using a systemic approach to appraise the complex network of interactions among living organisms on our planet. During the course, students will survey the main taxonomic groups, such as archaea, bacteria, single-celled eukaryotes, fungi, plants, and animals, to identify their defining characteristics, describe their evolutionary origin, and evaluate their role in ecosystems. Students will integrate knowledge and analytical tools to assess the biodiversity in their neighborhoods, as well as differentiate parameters that impact distribution and abundance of organisms in their local ecosystems. Section 2. This course presents an overview of the diversity of living organisms, including archaea, bacteria, single-celled eukaryotes, fungi, plants, and animals, with an emphasis on their evolutionary histories, relationships, and the biological and evolutionary implications of the characteristic features of each group. We will explore how these different lineages have evolved remarkable solutions to challenges in locomotion, metabolism, and life in extreme environments. Work in the lab will take advantage of the diversity of organisms that live around, or are maintained at, the Marine Biological Laboratory at Woods Hole, MA.
Instructor(s): Section 1: O. Pineda, C. Andrews; Section 2: A. Gillis. Terms Offered: Spring. L. Section 1 will be taught on the Chicago campus. Section 2 will be taught during Spring Quarter at MBL in Woods Hole, MA (https://college.uchicago.edu/academics/mbl-spring-quarter-biology)
Prerequisite(s): PQ: BIOS 20153 for Biological Sciences majors; not required for GeoSci majors or students taking BIOS 20198 as part of a general education sequence.
Equivalent Course(s): BIOS 20198

CEGU 2021. Grünes Deutschland. 100 Units.
Over the past three decades Germany has become a global leader in environmentalism and sustainability practices. This course develops students’ proficiency in all four skills (speaking, listening, reading, writing) and reviews basic grammar while exploring various aspects of “Green Germany,” from recycling and transportation to renewable energies (die Energiewende) to the history of the green movement. We investigate environmental practices and attitudes in German-speaking countries while comparing them with those in the US and other countries. In doing so, we consider whether environmental practices in German-speaking countries represent positive and feasible models for other countries. Students work with authentic and current materials (articles, websites, videos) and pursue a variety of independent projects (research, creative), including a final project on how to make the university campus more sustainable.
Terms Offered: Autumn Spring Winter
Prerequisite(s): Prerequisite(s): GRMN 20100 or placement exam
Equivalent Course(s): GRMN 20201
CEGU 20253. Introduction to Spatial Data Science. 100 Units.
Spatial data science consists of a collection of concepts and methods drawn from both statistics and computer science that deal with accessing, manipulating, visualizing, exploring and reasoning about geographical data. The course introduces the types of spatial data relevant in social science inquiry and reviews a range of methods to explore these data. Topics covered include formal spatial data structures, geovisualization and visual analytics, rate smoothing, spatial autocorrelation, cluster detection and spatial data mining. An important aspect of the course is to learn and apply open source GeoDa software.
Instructor(s): Y. Lin Terms Offered: Autumn
Prerequisite(s): STAT 22000 (or equivalent), familiarity with GIS is helpful, but not necessary
Equivalent Course(s): SOCI 20253, GISC 30500, SOCI 30253, GISC 20500, MACS 54000, ENST 20253

CEGU 20336. Researching Chicago’s Historic Parks and Neighborhoods. 100 Units.
Often considered a “City of Neighborhoods,” Chicago has a fascinating network of community areas that were shaped by historical events and developments. Many of the city’s neighborhoods include parks that have their own significant architectural, landscape and social histories. The class will introduce students to some of Chicago’s most interesting historic neighborhoods and parks; expose them to key regional digital and on-site archives; and instruct them in appropriate methodologies for conducting deep research on sites and landscapes, with a special focus on Chicago’s historic park system. Students will utilize an array of resources including Sanborn maps, US Census records, historic plans, photographs, and archival newspapers to provide in-depth studies of unsaved sites. The course will also expose students to historic preservation policies, methodologies, and guidelines to provide practical strategies for preserving lesser-known places and sites. As a Chicago Studies class, its pedagogy will also include excursions into the city, engagement with local guest speakers, and research in relevant Chicago-area archives/special collections.
Instructor(s): Julia Bachrach Terms Offered: Winter
Note(s): This special class is offered in conjunction with the University’s ongoing commemoration of the 200th anniversary of the birth of Frederick Law Olmsted, the father of American landscape architecture. Olmsted and his sons, the Olmsted Brothers, had a substantial influence on the city’s South Side, including the University’s campus and the development of small parks that provided services to dense immigrant neighborhoods in the early 20th century. The class will include field trips during some Friday class sessions.
Equivalent Course(s): ENST 20336, HIST 27312, ARCH 10336, ARTH 20336, CHST 20336

CEGU 20506. Cities, Space, Power: Introduction to urban social science. 100 Units.
This lecture course provides a broad, multidisciplinary introduction to the study of urbanization in the social sciences. The course surveys a broad range of research traditions from across the social sciences, as well as the work of urban planners, architects, and environmental scientists. Topics include: theoretical conceptualizations of the city and urbanization; methods of urban studies; the politics of urban knowledges; the historical geographies of capitalist urbanization; political strategies to shape and reshape the built and unbuilt environment; cities and planetary ecological transformation; post-1970s patterns and pathways of urban restructuring; and struggles for the right to the city.
Instructor(s): N. Brenner Terms Offered: Winter
Equivalent Course(s): CHSS 30506, CCCS 30506, ENST 20506, KNOW 30506, PLSC 20506, PLSC 30506, SOCI 30506, SOCI 20506, CHST 20506, HIPS 20506, ARCH 20506

CEGU 20521. Sociology of urban planning: cities, territories, environments. 100 Units.
This course provides a high-intensity introduction to the sociology of urban planning practice under modern capitalism. Building upon urban sociology, planning theory and history as well as urban social science and environmental studies, we explore the emergence, development and continual transformation of urban planning in relation to changing configurations of capitalist urbanization, modern state power, sociopolitical insurgency and environmental crisis. Following an initial exploration of divergent conceptualizations of “planning” and “urbanization,” we investigate the changing sites and targets of planning; struggles regarding the instruments, goals and constituencies of planning; the contradictory connections between planning and diverse configurations of power in modern society (including class, race, gender and sexuality); and the possibility that new forms of planning might help produce more socially just and environmentally sane forms of urbanization in the future.
Instructor(s): N. Brenner Terms Offered: Winter
Equivalent Course(s): PPHA 30521, ARCH 20521, PBPL 20521, PLSC 20521, GEOG 20521, KNOW 30521, SOCI 30521, CHST 20521, ENST 20521, SOCI 20521, PLSC 30521

CEGU 20700. Global Health, Environment, and Indigenous Futures. 100 Units.
The global coronavirus pandemic has made evident the significance of ecological (im)balances for the well-being of societies. The relationship between structural inequalities, changing environments and health, especially for historically and socio-economically marginalized communities, is now well established. At the same time, a growing body of literature links the material conditions of marginalized communities—for instance, spaces of dwelling and conditions of labor-to-health status, globally. Based on a set of interdisciplinary literature arranged through anthropological theories, this course will critically engage with notions of health and well-being for indigenous communities, tracing injustices that stem histories of racial, caste- and ethnicity-based, and environmental exclusions. The readings are organized around one central question: What does it mean to be indigenous in a changing planet where social, political, and economic systems are marked by enduring legacies of systemic violence? This graduate and undergraduate level course will introduce contexts within which structural exclusions lead to ill-health and loss of well-being among indigenous communities across the
The environment is a field of social action in which organizations attempt to effect change in large domains like resource conservation, access, stewardship, and a basic right to environmental quality in everyday life. The goal of this survey course is to analyze the impact of the human enterprise on the world that sustains it. Topics include human population dynamics and historical trends in global impact, with most of the course focusing on how humans have altered the Earth system through a variety of processes (including climate change, air, water, nutrient cycling, pollution/novel entities, biodiversity, and land use). We read and discuss diverse sources, write short analytical papers, and a final argument based research paper.

Instructor(s): Christopher Kindell Terms Offered: Summer
Equivalent Course(s): CHST 20806, HIIPS 20608, ENST 20806

CEGU 21201. Human Impact on the Global Environment. 100 Units.
The course is designed to immerse students in architectural drawing and making at a site of prolific drawing and making past, in a remarkable environment both natural and built. Working both individually and together, we will use our surroundings at Taliesin to tackle five short projects, increasing in scale, from the tiniest architectural details up through consideration of city and region. As part of the latter portion of the course, we will also consider the Driftless region of Wisconsin specifically, and issues facing this unique rural area in 2023, including environmental challenges, questions of housing, and rural foodways. Typical days will include studio time in the Hillside studio, ample exploration of the Taliesin grounds both programmed and free, conversations with guests familiar with the work of Frank Lloyd Wright and others who spent time at Taliesin, excursions across the Driftless region (including additional buildings designed by Wright and others close to him), and a modest amount of work helping to maintain the Taliesin site.

Terms Offered: Autumn
Equivalent Course(s): ENST 20704, ARCH 20704, ARTH 20704, ARTH 30704

CEGU 20806. Remaking the Prairie: The Cultural Politics of Ecological Restoration. 100 Units.
This course uses the Midewin National Tallgrass Prairie as a case study to understand the environmental and cultural challenges of ecological restoration. In essence, we will look at the Midewin as an environmental humanities problem, asking the questions: What does it mean to restore a landscape or an ecosystem? What values or biases are in place in ecological restoration and how do we overcome them? The Midewin National Tallgrass Prairie, managed by the US Forest Service, is a restored prairie on the former site of the WWII era Joliet Army Ammunition Plant. Throughout the September Term, we will visit the site several times to meet with Forest Service employees, participate in environmental restoration work, collect data for ecological studies, and learn more about the complicated history of the prairie and efforts to restore it. Analysis of the Midewin National Tallgrass Prairie and ecological restoration more broadly will be done from an interdisciplinary lens that takes seriously the sometimes-competing stakes of indigeneity, agriculture, settler colonialism, ecology, history, militarism, and recreation, among others.

Instructor(s): Jessica Landau Terms Offered: Summer
Equivalent Course(s): CHST 20806, HIIPS 20608, ENST 20806

CEGU 21301. Making the Natural World: Foundations of Human Ecology. 100 Units.
What’s natural about nature? Humans have “made” the natural world both materially, through millennia of direct action in and on the landscape, and conceptually, through the creation of various ideas about nature, ecosystem, organism, and ecology. In this course we will consider how the conceptual underpinnings of contemporary Western notions of nature, environment, balance, power and race are intertwined. We will trace this trajectory using the lens of the historical development of the field of ecology, then broaden our view to consider worldviews and ontologies about the environment from non-Western cultures. How then do these worldviews influence attitudes and policies towards land, environment, and its stewardship? Taking examples from current environmental topics (e.g. land rights, environmental justice, park access, conservation, extinction) we will evaluate the extent and character of human entanglement with the environment. Throughout the course student voices will be prominent in the many discussion-based class sessions.

Instructor(s): Christopher Kindell Terms Offered: Winter
Equivalent Course(s): ANTH 21303, ENST 21301

CEGU 21501. Genealogies of Environmental Organizing and Activism. 100 Units.
This course explores how organizations-civic, private, governmental-working in the field of environmental advocacy construct, deploy and are shaped by distinct discourses governing relationships between nature and society. The environment is a field of social action in which organizations attempt to effect change in large domains like resource conservation, access, stewardship, and a basic right to environmental quality in everyday life. The work of effecting change in these complex domains can assume a variety of forms including public policy (through the agencies of the state), private enterprise (through the agency of the market), ‘third sector’ advocacy (through the agency of nonprofit organizations) and social activism (through the agency of social movements and community organizations). State, market, civil society and social movement organizations are
where ideas are transmitted from theory to practice and back again in a recursive, dialectical process. These contrasting forms of organization have different histories, wellsprings and degrees of social power. Moreover, they bring different epistemologies to their claims about being legitimate custodians of nature—that is to say they can be understood genealogically. As such, organizations working to effect environment change are at once animated by and constitutive of distinct discourses governing the relationships between nature and society. The course explores how these distinct discourses are associated with a suite of different organizational realms of social action; the goal is trying to connect the dots between discursive formations and organizational forms.

Instructor(s): Mary Beth Pudup Terms Offered: Autumn

Note(s): This course counts towards the ENST 4th year Capstone requirement.

Equivalent Course(s): SSAD 21501, HMRT 21501, GLST 21501, CEGU 31501, MAPS 31101, ENST 21501, SSAD 41501

CEGU 21502. Problems of Community. 100 Units.

Communities can be considered the locus of social problems and the wellspring of solutions to social problems. Communities are the "object of study" in social science research and communities often fiercely struggle for their own self-representation. This course examines social science approaches to the study of community, many of them pioneered in Chicago, and considers how the concept of community is invoked and deployed to draw boundaries of belonging and exclusion.

Instructor(s): STAFF Terms Offered: Winter

Equivalent Course(s): ENST 21502

CEGU 21503. Practicing Community Studies. 100 Units.

What does it mean to "study the community" and what knowledge can be gained from that endeavor? This course explores epistemologies and ethics of engaging in community studies while developing skills, methods, and the requisite intellectual stance for learning in, about, and from contemporary communities in Chicago and beyond.

Instructor(s): STAFF Terms Offered: Spring

Equivalent Course(s): ENST 21503

CEGU 21504. Theory and Practice of Urban Agriculture. 100 Units.

Food cultivation within the city-urban agriculture—is a vast and fascinating terrain of social practice associated with diverse historical geographies. The course examines urban agriculture as a global phenomenon with an intensely local presence by incorporating experiential education with Chicago-based projects that are exemplars in the contemporary urban food movement.

Instructor(s): STAFF Terms Offered: Spring

Equivalent Course(s): ENST 21504

CEGU 21710. Rocks, plants, ecologies: science fiction and the more-than-human. 100 Units.

Science fictional worlds are full of entities more familiar and perhaps less noticeable than the aliens that are often thought to typify the genre. Rock formations, plants, metallic seams, plastics, crystalline structures, nuclear waste and oozing seepages are among the entities that allow SF to form estranging questions about what it means to be in relation to others, what it means to live in and through an environment, and what it means to form relations of sustenance and communal possibility with those who do not or cannot return human care and recognition. Such questions about are urgent ones for thinking about climate catastrophe, capital, settler colonialism and endemic pandemics, as well as for thinking substantively about resistance and what life and livable worlds beyond the bleak horizons of the capitalocene could be. This class will engage science fiction (authors may include Ursula Le Guin, Vonda McIntyre, Nalo Hopkinson, Jeff Vandermeer and others) and environmental and social theory of various kind (authors may include Elizabeth Povinelli, Eduardo Kohn, James C. Scott, David Graeber, Jasper Bernes, Max Liboiron, Michele Murphy and others).

Instructor(s): Hilary Strang Terms Offered: Spring

Equivalent Course(s): ENST 21502

CEGU 21720. Climate Change and Human Health. 100 Units.

Climate change is one of the greatest global health threats facing the world in the 21st century. Through this course, students will gain foundational knowledge in the health effects of climate change. We will begin with several lectures on climate science as it related to the patterns of weather extremes experienced by populations. We will then identify the varying health outcomes linked to different climate-related exposures, emphasizing the specific impacts in vulnerable and high-risk populations. Specific topics include the effects of air pollution, extreme heat and heat waves, droughts, tropical cyclones, changes in vector habitats, and sea-level rise. Finally, we will discuss strategies for public health practitioners to aid communities in preventing or alleviating these adverse effects.

Instructor(s): K. Burrows Terms Offered: Autumn

Prerequisite(s): PBHS 32100 or STAT 22000 or introductory statistics

Equivalent Course(s): CEGU 31720, PBHS 31720, HLTH 21720

CEGU 21740. Ecology and Governance in Israel and the Middle East. 100 Units.

Ecological governance has emerged as an aspirational concept in recent years in political science, philosophy, and anthropology in response to concerns over the increasing likelihood of an unprecedented global ecological crisis as a result of human driven climate change. This course will trace the conceptual genealogy of ecological governance in Western and Eastern political theory and environmental history as it explores the political
ecologies of Israel and the Middle East. In so doing, the course embarks from the assertion that environmental justice and the struggle for justice overall are inseparable challenges. Of central concern will be to understand how Israel’s politics, culture, and history technological development together with its particular environmental conditions provide conceptual and methodological interventions into current and historical articulations of ecological governance. Note: Enrollment in this class is by consent only. Please request via the enrollment site.

Instructor(s): Michael Fisch
Equivalent Course(s): ANTH 21740

CEGU 21800. Economics and Environmental Policy. 100 Units.
This course combines basic microeconomic theory and tools with contemporary environmental and resources issues and controversies to examine and analyze public policy decisions. Theoretical points include externalities, public goods, common-property resources, valuing resources, benefit/cost analysis, and risk assessment. Topics include pollution, global climate change, energy use and conservation, recycling and waste management, endangered species and biodiversity, nonrenewable resources, congestion, economic growth and the environment, and equity impacts of public policies.
Prerequisite(s): S. Shaikh
Terms Offered: Autumn

Note(s): Not offered in Autumn of the 2020-21 academic year.
Equivalent Course(s): ECON 10000 or higher, or PBPL 20000

Instructor(s): Michael Conzen
Terms Offered: Winter

CEGU 21900. Historical Geography of the United States. 100 Units.
This course examines the historical and geographical roots of American regional diversity and national spatial organization, from 1500 to 1920, and asks why American regions have developed and retained distinctive characteristics-and what consequences this has had for contemporary society. These issues are pursued through an examination of colonization processes, economic development, spatial differentiation, settlement patterns and the changing role of cities. The emphasis is on the kind and quantity of European cultural transfer, physical changes wrought by colonization, the modification of natural environments, the conquest of distance, and the general approach of American society to the uses of space. This course requires no prerequisites. There will be an all-day field trip in the Chicago region.

Instructor(s): Michael Conzen
Terms Offered: Autumn

Note(s): Restricted to 3rd and 4th years
This course counts towards the ENST 4th year Capstone requirement.
This course offered in the Autumn Quarter of even-numbered years

Equivalent Course(s): HIST 28800, HIST 38800, GEOG 31900, ENST 21900, CHST 21900

CEGU 22100. Disease, Health, and the Environment in Global Context. 100 Units.
Recent concerns about monkeypox, COVID-19, Zika virus, and Ebola have attracted renewed attention to previous disease outbreaks that have significantly shaped human political, social, economic, and environmental history. Such diseases include: smallpox during the 16th-century Columbian exchange; syphilis during the 18th-century exploration and settlement of the Pacific; bubonic plague in the late-19th-century colonization and urbanization of South and East Asia; and yellow fever during America’s 20th-century imperial projects across the Caribbean. Through readings, discussions, library visits, and written assignments that culminate in a final project, students in this course will explore how natural and human-induced environmental changes have altered our past experiences with disease and future prospects for health. First, we will examine how early writers understood the relationship between geography, environment, hereditary constitution, race, gender, and human health. We will then analyze the symbiotic relationship among pathogens, human hosts, and their environments. Finally, we will explore how social factors (e.g. migration, gendered divisions of labor, poverty, and segregation) and human interventions (e.g. epidemiology, medical technology, and sanitary engineering have influenced the distribution of infectious diseases and environmental risks.

Instructor(s): Christopher Kindell
Terms Offered: Spring

Note(s): This course counts towards the CEGU/ENST 4th year Capstone requirement. CEGU/ENST 4th years wanting to take this course must contact instructor and BA Capstone Director Dr. Evan Carver.
Equivalent Course(s): HLTH 22100, GLST 22101, HIPS 22210, HIST 25033, RDIN 22100

CEGU 22101. Changing America in the Last 100 Years. 100 Units.
This course examines the economic and social forces that have transformed the critical character and performance of the major regions of the United States since the 1920s, and how the interactions between regions has profoundly shifted. The course completes the historical sweep of American geographical development following on from the Autumn course, Historical Geography of the United States, but can be taken as an independent course. Emphasized are the ways in which socio-cultural, technological and economic changes have played out differently across continental space, and produced variable environmental consequences. An all-day field trip in the Chicago region visits sites that reflect some of the larger forces at work at the intra-regional scale.

Instructor(s): Michael Conzen
Terms Offered: Winter

Note(s): Restricted to 3rd and 4th years
This course counts towards the ENST 4th year Capstone requirement.

Equivalent Course(s): HIST 37506, ARCH 27506, CHST 22101, ENST 22101, HIST 27506, GEOG 32101

CEGU 22102. Methods in Environmental Humanities. 100 Units.
What are the environmental humanities and how do their approaches differ from those of other humanistic disciplines? In answering these questions, this course will equip students with tools to reckon with some of our planet’s most pressing concerns, including climate change and biodiversity loss, and emphasize the
importance of approaching these issues through an interdisciplinary lens that includes humanistic lines of inquiry. Throughout the course, students will explore different methods used in the environmental humanities to gain an understanding of this emergent discipline as well as learn tools and methods they can employ in their own scholarship. Rather than work on long term research projects, however, students will sample and practice a variety of approaches to environmental humanities research and apply them to targeted case studies. This will include approaches from fields such as art history, Indigenous studies, animal studies, comparative literature, and history, among others.

Instructor(s): Jessica Landau
Terms Offered: Winter
Equivalent Course(s): ENST 22102

CEGU 22211. Riding about the South Side. 100 Units.
This course is based on bicycling through the South Side neighborhoods surrounding the University of Chicago. There will be some readings, but the primary input will be from riding-from seeing things at street level and speaking with people who are committed to living in places that often have been abandoned by others. We can read and theorize about the community surrounding us, but the premise in this class is that our work should begin with experience in that world, with direct contact and in conversation. My approach in this class is less to teach than to lead you to where things are waiting to be learned and to people who can teach you about their world better than I. Some of the themes we will cover include land rights and exploitation, architecture, town planning, placemaking, urban farming and ecology, sustainability, grass roots organization, labor rights and exploitation, immigration, social work, and street art. Each ride is organized around a set of key concerns and includes a conversation with a local insider who can help us better understand them.

Instructor(s): William Nickell
Note(s): This course includes weekend morning bicycle rides 2.5-3 hours in length. Weekend flexibility is required, rides happen on either Saturday or Sunday dependent on weather conditions.
Equivalent Course(s): CEGU 32211, KNOW 22211, ENST 22211, ARCH 22211, CHST 22211

CEGU 22301. Digital Geographies of Climate Justice. 100 Units.
Struggles for climate and environmental justice are increasingly mediated by digital technologies and geospatial data, especially in the Global South. In Amazonia, for example, the plight of indigenous groups bearing the brunt of ecological dispossession and political violence by deforestation is frequently represented through remotely-sensed data showing time-series of canopy loss; in turn, these data are often prompted, groundtruthed, and mobilized by indigenous communities and affiliated activists in legal and political campaigns. In parallel, across the world ocean, countries across the Global South- from Papua New Guinea and Ecuador to Ghana- are partnering with watch-dog organizations using satellite imagery and GPS data to track illegal fishing and human rights abuses at sea, acting as an auxiliary ecological police force to identify and provide data to prosecute offending vessels. The proliferation of these digital geographic technologies and techniques pose a number of complex questions. Drawing on contemporary cases, experimental projects in “forensic” approaches to activism, and recent work in critical geography, aesthetics, STS, and political theory, this seminar will attempt to map out these digital geographies of climate justice as they emerge. The course will also involve introduction to entry-level remote sensing + GIS workflows (no prior experience required) in a pair of intensive workshops led by guest lecturers/practitioners.

Instructor(s): Alexander Arroyo
Terms Offered: Spring
Note(s): Undergraduate/Graduate Course - only open to 3rd and 4th year undergraduate students. This course counts toward the 4th year ENST capstone requirement.
Equivalent Course(s): CEGU 32301, CLST 29301, ENST 22301, MAPH 32301

CEGU 22311. Berlin: Conflict, Community, and Sustainability. 100 Units.
Berlin: What makes a city? Who decides how a city grows and changes, and what criteria do they use - should it be beautiful, efficient, sustainable, open, just? How do economic systems and political ideologies shape urban development? What is the “right to the city,” and what does it mean for city-dwellers to exercise it? These are just some of the questions we will seek to answer in our course, Berlin: Conflict, Community, and Sustainability. This is a September Term study abroad course. The program includes a side trip over a long weekend to the cities of Hamburg and Lübeck.

Instructor(s): Evan Carver
Terms Offered: Summer
Prerequisite(s): Admission to Berlin: Conflict, Community, and Sustainability study abroad program.
Note(s): Study Abroad September Term AY 23-24
Equivalent Course(s): GRMN 22311, ENST 22311

CEGU 22312. Cities, Nature and the Planet. 100 Units.
Cities face major challenges in addressing environmental risk and vulnerability, but also great opportunity to reconsider the design, planning and economic systems upon which they have traditionally relied. This course takes a contemporary look into how urbanization affects planetary health, focusing on cities as sites of global resource extraction, waste generation, biodiversity loss, and increasing social inequality and climate vulnerability; but also as centers of population, innovation and social organization, which can facilitate climate solutions. Using a range of social science approaches and methods, students will consider critiques of historical urban planning and linear city resource economies, and analyze contemporary approaches related to climate action, green space planning, and nature-based solutions, with specific attention on environmental goals and equity outcomes. Through critical exploration of both historical urban planning, and contemporary frameworks for sustainable city agenda setting, students will consider the environmental past, present and future of global
cities. In Autumn 2024, this course will be part of the Paris Urbanism Study Abroad program. Students will focus on Paris but take a comparative look at cities across the Global North and Global South.

Instructor(s): Sabina Shaikh
Terms Offered: Autumn
Note(s): This course is part of the Paris Urbanism Study Abroad program
Equivalent Course(s): PBPL 22312, GLST 22312

CEGU 22500. Expositions Practicum. 100.00 Units.
Expositions Magazine is a quarterly publication on environmental change and the built environment—written, edited, designed, and produced by students. The goal of the publication is to communicate broadly and in an engaging, persuasive manner about important issues in the contemporary world. Since issues relating to the environment, geography, and urbanization almost invariably have spatial, visual, and expressive dimensions, the magazine showcases cartography, photography, illustration, and other modes alongside exceptional narrative and place-based writing. The primary goal of this practicum is to help students hone a broad range of analytic and representational tools associated with communicating complex issues to a general audience. Weekly two-hour lab meetings provide collaborative work time for the three primary stages of publication-editing, design, and production—while bi-weekly one-hour seminar meetings introduce relevant technical skills, theoretical frameworks, and historical context. Through this diverse program, students will confront the wide range of questions and problems involved in publishing and design in the environmental social sciences and humanities.

Instructor(s): Evan Carve and staff
Terms Offered: Autumn Spring Winter. Autumn and Winter will be 0 credit courses, Spring Quarter will count as a 100 credit course.
Prerequisite(s): Writing the City (CEGU/ENST 20180), Intro to Critical Spatial Media (CEGU 23517), or consent of the instructor.
Note(s): This course requires 3 quarters of enrollment/participation for 100 credits.
Equivalent Course(s): ENST 22500

CEGU 22550. Performing Nature. 100 Units.
What is it like to be a bat? A tree? A slime mold? Art that attempts to represent non-human experience helps to orient environmentalism around radical and highly personal moments of inter-species empathy. Portraying non-human perspectives, we escape the abstraction of environmental data, and instead approach ecological entanglement on the level of individual imagination. Giving voice and human embodiment to nature is a theme in much 19th, 20th and 21st century creative writing (fiction/nonfiction) and performance work (theater, dance, puppetry). Accordingly, this class offers a broad survey of non-human representation in these arts with special attention to first-person narratives and embodiment of flora and fauna. The course draws on philosophers of mind (i.e. Shaviro’s ‘Discognition’) and nature-science writing, plus contemporary performance projects and digital works by art/technology companies who deploy virtual reality and electronic media to explore the points of view of natural beings and systems. Reading about anthropomorphization and the problem of the subject in nature writing from Erasmus Darwin to the present will allow students to adopt a critical as well as appreciative eye toward this field of study and expression. Creative writing assignments will ask students to write (and perform) monologues from nonhuman perspectives.

Instructor(s): S. Bockley
Terms Offered: Spring
Equivalent Course(s): TAPS 22550, TAPS 32550, ENST 22550

CEGU 22704. Writing Persuasion: Health and Environment. 100 Units.
A writing-intensive course in persuasive techniques that influence opinions and attempt to change behavior. This year our focus will be on an issue that presents a challenge for persuasion theory: the environment. People are notoriously slow to change their beliefs and behavior on environmental issues, and persuasion theory suggests reasons why this might be the case. Environmental problems ask readers to weigh costs that affect one group against benefits that might accrue to someone else. They involve time frames ranging from moments (which are easy to think and write about) to millennia (not so easy) to geological epochs, a time scale so remote from our experience as to be opaque to the imagination. Environmental problems are complex in ways that make them difficult to capture in a coherent, emotionally compelling narrative. Many individually innocuous and seemingly unrelated environmental events can converge over time to produce consequences that are counter-intuitively larger and graver than their causes. This felt disparity between actions and outcomes can violate an audience’s sense of fairness, biasing the audience against a persuasive appeal.

Instructor(s): Tracy Weiner
Terms Offered: Spring
Equivalent Course(s): ENGL 32704, ENGL 12704, ENST 12704

CEGU 23100. Environmental Law. 100 Units.
This course will examine the bases and assumptions that have driven the development of environmental law, as well as the intersection of this body of law and foundational legal principles (including standing, liability, and the Commerce Clause). Each form of lawmaking (statutes, regulations, and court decisions) will be examined, with emphasis on reading and understanding primary sources such as court cases and the laws themselves. The course also analyzes the judicial selection process in order to understand the importance of how the individuals who decide cases that determine the shape of environmental law and regulations are chosen.

Instructor(s): Ray Lodato
Terms Offered: Winter
Prerequisite(s): 3rd or 4th year standing, or consent of instructor
Equivalent Course(s): ENST 23100, PBPL 23100
CEGU 23401. Revision, Expression & Portfolio Design. 100 Units.
This studio course, similar to a “senior seminar” in other disciplines, serves five purposes: (1) to allow students to pick up a few elements (drawings, models, collages, visual and place-based research, etc.) they’ve produced in other ARCH studio courses and spend more time refining them, outside the broader demands of a thematic studio class, (2) to acquaint students with advanced skills in expression and representation related to the revision and refinement of these elements, based on student interest and needs, (3) to assist students in the development of a portfolio of studio work, either toward application for graduate school or simply to have for themselves, and in systems to organize projects and revisions, (4) to add to students’ typographic and graphic design skillsets, primarily using the Adobe Creative Suite, as part of the portfolio process, and (5) to practice and hone communication and writing skills related to discussing architectural projects. While there will be a modest set of skills-based exercises each week, to help structure the studio, most of the work for this class will be students’ own project revisions and portfolios, and most of class time will be spent sharing and refining both.
Instructor(s): L. Joyner Terms Offered: Autumn
Prerequisite(s): Priority for this “senior studio” course will be given to third and fourth years who’ve taken at least two other ARCH studio classes already. Students who have not already taken “Skills & Processes for Architecture and Urban Design” may be asked to consult some of the problem sets from that class ahead of this one, to ensure a baseline upon which this class will build. Starting July 31, please visit archconsent.uchicago.edu/archconsent to request instructor consent for this class or other ARCH studios. (Please do not send consent requests by email.)
Note(s): This course counts towards the ENST 4th year Capstone requirement.
Equivalent Course(s): ARCH 23401, ARTH 23401, ENST 23401

CEGU 23505. Environmental Ethics. 100 Units.
This course examines foundational issues of environmental ethics. What kind of values (economic, aesthetic, existence) are important? What kind of value do individual biota, humans, other species, ecosystems, humans, or inorganic entities have? What is the relationship of humans to the rest of the world? What should it be? Do religious and philosophical traditions contribute to or help address environmental degradation?
Instructor(s): S. Fredericks Terms Offered: Winter
Equivalent Course(s): ENST 23505, RLST 23505

CEGU 23517. Introduction to Critical Spatial Media: Visualizing Urban, Environmental, and Planetary Change. 100 Units.
This course introduces critical theories and techniques for visualizing interconnected transformations of urban, environmental, and planetary systems amidst the pressures of climate change, urbanization, and global economies of capitalism. Weekly lectures will introduce major themes and theoretical debates, paired with hands-on lab tutorials exploring a selection of methods in conventional and experimental geographic visualization. Thematically, the course will be organized around critical interpretations of the Anthropocene, a concept designating the epoch in which anthropogenic activities are recognized as the dominant force of planetary climatic and ecological change. We will present these interpretations through modules structured around different conceptual paradigms and alternative epochal designations (e.g. the Urbanocene, the Capitalocene, the Plantationocene). Through weekly lab exercises and a final, synthetic project, the course will move from critically analyzing prevalent theoretical frameworks, geospatial data, and associated visualization techniques to creatively visualizing critical alternatives. Students will learn how to construct visual narratives through a variety of spatial media (e.g. maps, diagrams, visual timelines), scales (e.g. bodies, neighborhoods, landscapes, the planetary), and techniques/platforms (e.g. GIS, web mapping, basic programming language tools, and vector/raster visualization programs).
Instructor(s): Alexander Arroyo, Grrga Basic, Sol Kim Terms Offered: Autumn Winter
Equivalent Course(s): MAAD 13517, ARCH 23517, ENST 23517, ARTV 20665

CEGU 23624. The Geography of Italian Cinema. 100 Units.
Italian cinema is widely known and appreciated, especially thanks to the masterpieces of Neorealism and some authors and actors capable of imposing themselves on an international scale. But Italian cinema is also made up of unforgettable places, mountains, volcanoes, rivers or trees that have taken on repeatedly the role of anonymous protagonists. Italian cinema is thus closely linked to means of transportation and all those infrastructures that have made and make possible the internal migration and viability along the Peninsula. This course rethinks the history and present of Italiancinema in relation to geography. Through the analysis of different films, the course examines the ability of filmmakers to document and, at the same time, participate in the physical, cultural, and social aspects of Italy, and how these depictions have changed over time. We will ask how Italian cinema has contributed to building a recognizable and shared image of a country characterized by profound landscape, economic and cultural differences. But we will also ask how the landscapes themselves have influenced and still influence the choices of directors and the aesthetic orientations of our gazes.
Instructor(s): Francesco Zucconi Terms Offered: Spring
Note(s): Taught in English.
Equivalent Course(s): ITAL 23624, CMST 23624

CEGU 24000. Is It Ethical to Have Children in the Climate Crisis? 100 Units.
Climate change is not just an urgent environmental crisis for scientists, engineers, and policy makers: it is a moral problem that also informs individual and intimate aspects of human life, including choices about reproduction and parenting. For example, a 2018 survey published in the New York Times found that young adults in the
U.S. are having fewer children than they would otherwise prefer, in part due to concerns about climate change and overpopulation. In this course, we examine the moral dimensions of having and raising children in an era shaped by climate change, looking closely at two main questions: 1) Is it ethical to have children in light of the world that the next generation will inherit, which may include more extreme weather events, involuntary human migrations, diminished access to resources, and heightened insecurity? 2) Is it ethical to have children in the context of the affluent West, where consumptive human populations disproportionately contribute to the effects of climate change that impact the world’s most vulnerable? We will examine various points of view on these questions, engaging material from the disciplines of environmental studies and ethics, science and technology studies, and religious and philosophical ethics. Responses from feminist, queer, Indigenous, Black, and religiously diverse authors (and intersections therein) will shape our course readings and discussions.

Instructor(s): Kristi Del Vecchio Terms Offered: Spring
Equivalent Course(s): RLST 24000, GNSE 23154, CCTS 21023, HIPS 24100, ENST 24000, HLTH 24000

CEGU 24102. Environmental Politics. 100 Units.
Politics determines not only what particular faction holds power, but the parameters upon which contests for power are conducted. Competing political factions may diverge in the details of the policies they favor, but may agree on a central organizing principle upon which their policy differences are contested. This course acknowledges that such principles exist and structure politics, economics, and social arrangements, but also challenges the notion that these are immutable, and argues that other principles could be substituted which would drastically change these arrangements. The course introduces students to alternative theories of economics, politics, and environmental policy that challenge mainstream notions of what is acceptable under the current structural and institutional constraints, including how the retreat to notions of realism and practicality place limits on changes necessary to preserve and protect the natural environment.

Instructor(s): R. Lodato Terms Offered: Spring
Equivalent Course(s): ENST 24102, PBPL 24102

CEGU 24110. Nature and the Natural in the Middle Ages. 100 Units.
In this course we will undertake a study of nature and ideas about what is “natural” centered around three main axes, and will adopt a variety of relevant critical perspectives (e.g., ecocriticism, studies of gender and sexuality, political theory) to support our analyses. First, we will explore nature as the created world of which humans are a part (as one of God’s creations), yet from which they also stand apart (as sovereign caretakers). Second, we will examine how the diffusion of Aristotelian works (notably the Politics) in the later Middle Ages provided a justificatory framework for social and political hierarchies and practices of economic exploitation. Third, we will consider the intersection of nature with gender, sexuality, and reproduction, a topic complicated by the fact that Nature is itself represented, in allegorical terms, as a woman.

Instructor(s): Daisy Delogu Terms Offered: Course not offered in 24-25.
Prerequisite(s): Reading knowledge of French for all students. FREN 20500, 20503 or a literature course taught in French for those seeking credit for the French major/minor.
Note(s): Taught in English.
Equivalent Course(s): GNSE 24103, FREN 34100, GNSE 34103, FREN 24100, MDVL 24103, ENST 24110

CEGU 24190. Imagining Chicago’s Common Buildings. 100 Units.
This course is an architectural studio based in the common residential buildings of Chicago and the city’s built environment. While design projects and architectural skills will be the focus of the course, it will also incorporate readings, a small amount of writing, some social and geographical history, and several explorations around Chicago. The studio will: (1) give students interested in pursuing architecture or the study of cities experience with a studio course and some skills related to architectural thinking; (2) acquaint students intimately with Chicago’s common residential buildings and built fabric, and (3) situate all this within a context of social thought about residential architecture, common buildings, housing, and the city. This course is part of the College Course Cluster program: Urban Design.

Instructor(s): L. Joyner Terms Offered: Autumn
Note(s): While this class does not require prior experience, all ARCH studio courses require consent. Starting July 31, please visit archhistory.uchicago.edu/archconsent to request instructor consent for this class or other ARCH studios. (Please do not send consent requests by email.) Please also note that this course will include several field trips around Chicago during class time; if you have any questions or concerns about that, please share them in the consent form when you complete it.
Equivalent Course(s): ENST 24190, CHST 24190, AMER 24190, GEOG 24190, ARTV 20210, ARCH 24190, ARTH 24190

CEGU 24191. City Imagined, City Observed. 100 Units.
This urban design studio course takes two distinct notions of the city as its starting point: grand, imaginative plans -- utopian, unbuilt, semi-realized, real... both as aesthetic objects, and as ideas -- and how the minute flows of day-to-day life, up from the smallest scale, enter into dialogue with little built and lived details, intended or not. Drawing on both Chicago and other places (not just urban) that individual students know well, we will dream both big and small, search both present and past, and tap precisely into both what we dream and what we experience... seeking not to dictate what the city will be, but to use these different modes of understanding to expand our sense of what a city can be. Necessarily, we’ll grapple with difficult contradictions cities pose, our most central personal assumptions about spaces and places, and with questions of how, especially in present-day capitalism, cities change. We take as given the inevitable gap between how places actually evolve and how,
perhaps, they could, and use that gap as a site for the imagination to step in, while also confronting the hubris of imagining cities real. The studio work will proceed in three stages: individually developing an alternate vision for a place you know well, at a historical moment of your choice... then breaking each others' plans... and finally using real observations and factors (and even spontaneous impulse) to complicate and rebuild your vision into something lovelier.

Instructor(s): L. Joyner
Note(s): Consent is required to enroll in this class. Priority will be given to students who have completed ARTH 24190.
Equivalent Course(s): ENST 24191, AMER 24191, CHST 24191, GEOG 24191, ARTV 20205, ARTH 24191, ARCH 24191

CEGU 24193. Water Water Everywhere? 100 Units.
This interdisciplinary course explores aesthetics, environmental racism, and a human rights approach to the Commons to inform our perspective on the politics and aesthetics of water from the local to the global. The course will look at issues of scarcity and abundance through the lenses of art and human rights. The course will incorporate work by artist Iñigo Manglano-Ovalle, who will visit the class. Students will consider works by other artists including Mel Chin, Allan Kaprow, LaToya Ruby Frazier, and Fazal Sheikh, to understand how art can confront the 21st century's environmental challenges. Readings will include Susan Sontag's Regarding the Pain of Others, and Fred Moten & Stefano Harney's The Undercommons. The course will include visits to site specific installations by artists Iñigo Manglano-Ovalle and Mel Chin, and visits to Chicago-area natural sites such as the Big Marsh and Lake Michigan. This course is an extension of a collaborative project at the Gray Center for Arts and Inquiry with human rights lawyer Susan Gzesh, artist Iñigo Manglano-Ovalle, and curator Abigail Winograd.

Instructor(s): Susan Gzesh, Abigail Winograd
Terms Offered: Autumn
Equivalent Course(s): HMRT 24193, SOSC 21005, BPRO 24193, ARTH 24193, CHST 24193, ENST 24193

CEGU 24196. Second Nature: New Models for the Chicago Park District. 100 Units.
The Chicago Park District seems to preserve "first nature" within the metropolitan field. But the motive for establishing this sovereign territory was hardly natural. Today, cultural change raises questions about the significance and operation of this immense network of civic spaces. What opportunities emerge as we rethink them? While this design studio focuses on the development of new model parks for Chicago, it can support students coming from a broad range of disciplines. Texts, seminar discussions, and field trips will complement and nourish the development of architectural proposals.

Instructor(s): A. Schachman
Terms Offered: Autumn
Equivalent Course(s): HMRT 24193, SOSC 21005, BPRO 24193, ARTH 24193, CHST 24193, ENST 24193

CEGU 24555. Ecological Explorations of the Francophone World. 100 Units.
The environmental humanities - that is, the study of nature through humanistic disciplines such as literature and history - has long been dominated by texts and theories from privileged sections of Europe and North America. However, alternative understandings of our natural world, including the role of living beings within it, have always existed. In this course, we will explore how contemporary francophone literature can renew, expand and complicate our perceptions of the oceans, deserts, mangroves and forests that surround us. Particular attention will be paid to questions of race, gender, language and indigeneity; course material may include theoretical texts, fiction, poetry, songs, podcasts, film, graphic novels and social media material.

Instructor(s): Nikhita Obegadoo
Terms Offered: Winter
Equivalent Course(s): FREN 20500 or equivalent.

Note(s): Taught in English or French, based on course composition

CEGU 24600. Introduction to Urban Sciences. 100 Units.
This course is a grand tour of conceptual frameworks, general phenomena, emerging data and policy applications that define a growing scientific integrated understanding of cities and urbanization. It starts with a general outlook of current worldwide explosive urbanization and associated changes in social, economic and environmental indicators. It then introduces a number of historical models, from sociology, economics and geography that have been proposed to understand how cities operate. We will discuss how these and other facets of cities can be integrated as dynamical complex systems and derive their general characteristics as social networks embedded in structured physical spaces. Resulting general properties of cities will be illustrated in different geographic and historical contexts, including an understanding of urban resource flows, emergent institutions and the division of labor and knowledge as drivers of innovation and economic growth. The second part of the course will deal with issues of inequality, heterogeneity and (sustainable) growth in cities. We will explore how these features of cities present different realities and opportunities to different individuals and how these appear as spatially concentrated (dis)advantage that shape people's life courses. We will show how issues of inequality also have consequences at more macroscopic levels and derive the general features of population and economic growth for systems of cities and nations.
CEGU 24615. History of Energy in East Asia. 100 Units.
This course discusses the history of major energy sources in East Asia with a focus on coal, hydropower, and nuclear power plant. We pay close attention to both the technological side of the history of energy and how different energy sources interact with the social and political environment in Japan, China, and Koreas.
Instructor(s): Y. Dong
Terms Offered: Spring
Equivalent Course(s): EALC 35615, HIST 24615, CHSS 34615, HIST 34615, EALC 24615, HIPS 24615

CEGU 24660. Urban Geography. 100 Units.
This course examines the spatial organization and current restructuring of modern cities in light of the economic, social, cultural, and political forces that shape them. It explores the systematic interactions between social process and physical system. We cover basic concepts of urbanism and urbanization, systems of cities urban growth, migration, centralization and decentralization, land-use dynamics, physical geography, urban morphology, and planning. Field trip in Chicago region required. This course is part of the College Course Cluster, Urban Design.
Instructor(s): M. Conzen
Terms Offered: Winter
Note(s): This course counts towards the ENST 4th year Capstone requirement. This course offered in even years.
Equivalent Course(s): ARCH 24660, ENST 24660, CEGU 34660

CEGU 24701. U.S. Environmental Policy. 100 Units.
How environmental issues and challenges in the United States are addressed is subject to abrupt changes and reversals caused by extreme partisanship and the heightened significance of the issues for the health of the planet and all its inhabitants. The relatively brief history of this policy area, and the separate and distinct tracts in which public lands and pollution control issues are adjudicated, makes for a diverse and complex process by which humanity’s impact on the natural world is managed and contained. This course focuses on how both types of environmental issues are addressed in each branch of the Federal government, the states and localities, as well as theories of how environmental issues arrived onto the public agenda and why attention to them is cyclical.
Students are encouraged to understand the life cycle of public policy from its initial arrival on the public agenda to the passage of legislation to address adverse conditions, as well as how changes in the policy occur after the inevitable decline of intensive attention.
Instructor(s): R. Lodato
Terms Offered: Winter
Note(s): This course counts towards the ENST 4th year Capstone requirement.
Equivalent Course(s): PBPL 24701, ENST 24701

CEGU 24705. Energy: Science, Technology, and Human Usage. 100 Units.
This course covers the technologies by which humans appropriate energy for industrial and societal use, from steam turbines to internal combustion engines to photovoltaics. We also discuss the physics and economics of the resulting human energy system: fuel sources and relationship to energy flows in the Earth system; and modeling and simulation of energy production and use. Our goal is to provide a technical foundation for students interested in careers in the energy industry or in energy policy. Field trips required to major energy converters (e.g., coal-fired and nuclear power plants, oil refinery, biogas digester) and users (e.g., steel, fertilizer production). This course is part of the College Course Cluster program: Climate Change, Culture and Society.
Instructor(s): E. Moyer
Terms Offered: Spring
Prerequisite(s): Knowledge of physics or consent of instructor
Equivalent Course(s): GEOS 34705, ENST 24705, ENSC 21100, GEOS 24705

CEGU 24776. International Environmental Policy. 100 Units.
Environmental issues have become a prominent part of the work of international organizations and their member nations. However, the resolution to issues and concerns shared in common by the nations of the world often faces obstacles based on access to wealth and resources, political and military power, and the demands of international economic institutions. While multinational agreements have been achieved and successfully implemented, resolutions to issues such as climate change have been harder to achieve. The course will look at the origins of international cooperation on environmental issues, several case studies of issues upon which the international community has attempted to bring about cooperative solutions (climate change, the ozone hole, climate refugees, etc.), and the work that regional associations of nations have done to jointly address shared environmental challenges. In addition, speakers from various consulates have addressed the class to discuss environmental policymaking in their countries.
Instructor(s): R. Lodato
Terms Offered: Spring
Equivalent Course(s): ENST 24776, PBPL 24776

CEGU 24918. Early Traveling Writing: Pausanias in Roman Greece. 100 Units.
Through a close reading of Pausanias, who wrote his Description of Greece during the Roman imperial period, this course explores ancient forms of travel writing and associated interests in the places, peoples, myths, ruins, and material objects of the Mediterranean world. Moving from the apparent ethnographic lens of earlier Greek literature to Roman imperialist expeditions, readings and discussions will examine the sociopolitical contexts out of which Pausanias emerged as a literary author, and his legacies in and relationship to the wide array of genres of modern travel writing, from Lewis and Clark to John Steinbeck. Key topics will include: movement through
space, tourism, nature, landscape, town and country, sites and spectacles, myth, ritual, and acts of remembering and forgetting.

Instructor(s): Catherine Kearns Terms Offered: Spring
Equivalent Course(s): FNDL 24918, CLAS 34918, ENST 24918, CLCV 24918, ANCM 34918

CEGU 25000. The Amazon: Literature, Culture, Environment. 100 Units.
From colonial travelers to contemporary popular culture, the Amazonian forest has been a source of endless fascination, greed and, more recently, ecological concern. The numerous actors that have been shaping the region, including artists, writers, scientists, anthropologists, indigenous peoples, and the extractive industry, among others, bring a multifaceted view of this region that has been described as the paradise on earth as much as a green hell. This course offers an overview of Amazonian history, cultures, and environmental issues that spans from the sixteenth to the twenty-first century. What are the major topics, works, and polemics surrounding the ways the Amazon has been depicted and imagined? How can the region’s history help us understand the state of environmental policies and indigenous rights today? What can we learn about the Amazon from literature and film? What is the future of the Amazon in the context of Brazil’s current political climate? From an interdisciplinary perspective, we will cover topics such as indigenous cultures and epistemologies, deforestation, travel writing, modern and contemporary literature, music, photography, and film, among others. Authors may include Claudia Andujar, Eduardo Viveiros de Castro, Euclides da Cunha, Susanna Hecht, Davi Kopenawa, the project Video in the Villages, among others.

Instructor(s): Victoria Saramago Terms Offered: Winter
Note(s): Taught in English. Materials available in English, Portuguese and Spanish.
Equivalent Course(s): SIGN 26059, SPAN 35555, PORT 25000, LACS 25005, SPAN 25555, ENST 25000, PORT 35000, LACS 35005

CEGU 25014. Introduction to Environmental History. 100 Units.
How have humans interacted with the environment over time? This course introduces students to the methods and topics of environmental history by way of classic and recent works in the field: Crosby, Cronon, Worster, Russell, and McNeill, etc. Major topics of investigation include preservationism, ecological imperialism, evolutionary history, forest conservation, organic and industrial agriculture, labor history, the commons and land reform, energy consumption, and climate change. Our scope covers the whole period from 1492 with case studies from European, American, and British imperial history.

Instructor(s): F. Albritton Jonsson Terms Offered: Winter
Equivalent Course(s): ENST 25014, HIST 35014, CHSS 35014, HIPS 25014, HIST 25014

CEGU 25074. Environmental Justice in Chicago. 100 Units.
This course will examine the development of environmental justice theory and practice through social scientific and ethical literature about the subject as well as primary source accounts of environmental injustices. We will focus on environmental justice issues in Chicago including, but not limited to waste disposal, toxic air and water, and climate change. Particular attention will be paid to environmental racism and the ethics of environmental justice, energy consumption, and climate change. Throughout the course we will explore how normative commitments are expressed in different types of literature as well as the basis for normative judgments and the types of authorities authors utilize and claim as they consider environmental justice.

Instructor(s): Sarah Fredericks Terms Offered: Winter
Note(s): Graduate students can enroll with permission of instructor and will have additional requirements.
Equivalent Course(s): RDIN 25704, CHST 25704, KNOW 25704, PBPL 25704, ENST 25704, RLST 25704, HMRT 25704, AMER 25704

CEGU 25075. Climate Ethics. 100 Units.
Anthropogenic climate change is the largest challenge facing human civilization. Its physical and temporal scale and unprecedented complexity at minimum require extensions of existing ethical systems, if not new ethical tools. In this course we will examine how religious and philosophical ethical systems respond to the vast temporal and spatial scales of climate change. For instance, common principles of environmental ethics such as justice and responsibility are often reimagined in climate ethics even as they are central to the ethical analysis of its effects. In the course, we will take a comparative approach to environmental ethics, examining perspectives from secular Western philosophy, Christianity (Catholic and Protestant), Buddhist, and Indigenous thought. We will also look at a variety of ethical methods. Throughout the course we will focus on communication about climate change as well as articulating rigorous ethical arguments about its causes and implications.

Instructor(s): Sarah Fredericks Terms Offered: Spring
Equivalent Course(s): RLST 25703, ENST 25705

CEGU 25723. Does the Devil Wear Prada?": The Political Economy and Global Geographies of Fashion. 100 Units.
What can the fashion industry tell us about the global economy? What kinds of geographical, economic, and ecological relations are embedded in fashion commodities? What kinds of work-creative, destructive, and mundane-and what kinds of workers make our clothes, shoes, and accessories? Is there a difference between “fast” and “slow” fashion? Using the fashion industry as a site of analysis, this course will examine various aspects of the contemporary economy including the commodity.

Instructor(s): Anindita Chatterjee Terms Offered: Winter
In the ancient Maya world, and also how the Maya world has, at times, resisted easy appropriation and defied classical archaeology and philology, political science, and popular culture have shaped current understandings to painstaking and technical artifact studies, we will examine how models drawn from astrology, ethnography, rescued from the jungle to New Age appropriations of pre-Columbian rituals, from the thrill of decipherment indigenous communities have examined and manipulated the Maya past. From tropes of long-hidden mysteries ancient Maya civilization and of the various ways archaeologists, anthropologists, linguists, historians, and practices. Present-day Maya communities attest to the dynamism and vitality of languages and traditions, often out of Chicago. Students will consider issues across a wide spectrum of concerns, including toxics, lead in water, waste management, and access to greenspaces, particularly in urban areas. These topics will be taught in accompanying with a broader understanding of how social change occurs, what barriers exist to producing just outcomes, and what practices have worked to overcome obstacles in the past. The class will welcome speakers from a variety of backgrounds to address their work on these topics. The class will conduct “deep-dive” research into the community selected, and will learn not only about the area, but techniques for how to do community-based research in a manner that acknowledges and appreciates the organization. Building on knowledge gained in the first half of this course, students will examine what makes a condition an environmental justice issue, how to conduct a literature review, how to develop and administer a questionnaire for key informant interviews, and how to access, understand, and utilize Census data. Students should expect to work in the community as well as the classroom, and in close collaboration with classmates. The class will conduct “deep-dive” research into the community selected, and will learn not only about the area, but techniques for how to do community-based research in a manner that acknowledges and appreciates the lived wisdom of the neighborhood’s residents. The result will be a research report delivered to the community organization with students in the class listed as co-authors. What do we know about the ancient Maya? Pyramids, palaces, and temples are found from Mexico to Honduras, texts in hieroglyphic script record the histories of kings and queens who ruled those cities, and painted murals, carved stone stelae, and ceramic vessels provide a glimpse of complex geopolitical dynamics and social hierarchies. Decades of archaeological research have expanded that view beyond the rulers and elites to explore the daily lives of the Maya people, networks of trade and market exchange, and agricultural and ritual practices. Present-day Maya communities attest to the dynamism and vitality of languages and traditions, often entangled in the politics of archaeological heritage and tourism. This course is a wide-ranging exploration of ancient Maya civilization and of the various ways archaeologists, anthropologists, linguists, historians, and indigenous communities have examined and manipulated the Maya past. From tropes of long-hidden mysteries rescued from the jungle to New Age appropriations of pre-Columbian rituals, from the thrill of decipherment to painstaking and technical artifact studies, we will examine how models drawn from astrology, ethnography, classical archaeology and philology, political science, and popular culture have shaped current understandings of the ancient Maya world, and also how the Maya world has, at times, resisted easy appropriation and defied expectations.
CEGU 26366. Planning for Land and Life in the Calumet. 100 Units.
The collaborative plan to create a Calumet National Heritage Area that touches aspects of environmental conservation, economic development, cultural heritage, recreation, arts, and education will ground this course’s exploration of landscape history and landscape planning in the Calumet region. Students will investigate this planning process and its relationship to other local and regional plans. A strong focus of the course is on the opportunities and challenges this complex and richly textured industrial region faces in its transition to a more sustainable future.
Instructor(s): Mark Bouman Terms Offered: Spring, not offered in 2022-23
Note(s): This course is part of the Chicago Studies Quarter: Calumet. This course includes required field trips every Friday from 9am-3pm.
Equivalent Course(s): ENST 26366, PBPL 26366, CHST 26366, HIST 27313

CEGU 26367. Objects, Place and Power. 100 Units.
Objects are not only formed and interpreted through ideas of place and power, but also shape place and identity. This course looks at how material culture has, in part, formed understandings of the Calumet. Through methods drawn from art history and museum studies, we will look closely at objects, collections, and institutions in the region to analyze the power and politics of representation in placemaking.
Instructor(s): Jessica Landau Terms Offered: Spring
Note(s): This course is part of the Chicago Studies Quarter: Calumet. This course includes required field trips every Friday from 9am-3pm.
Equivalent Course(s): ARTH 26367, ENST 26367, HIST 27314, PBPL 26367, CHST 26367

CEGU 26368. Environmental Transitions and Unnatural Histories. 100 Units.
The course considers changes wrought in the natural landscape of the greater Calumet region beginning with indigenous Potawatomi and their forced removal. Students will examine how the Calumet’s natural environment became collateral damage of the industrial capitalism that transformed the region into an economic powerhouse and explore efforts to rehabilitate the Calumet’s rich biodiversity, identifying the challenges and achievements of this most recent environmental transition.
Instructor(s): Mary Beth Pudup Terms Offered: Spring
Note(s): This course is part of the Chicago Studies Quarter: Calumet. This course includes required field trips every Friday from 9am-3pm.
Equivalent Course(s): PBPL 26368, CHST 26368, HIST 27315, ENST 26368, ANTH 26368

CEGU 26381. Water in Latin America. 100 Units.
The course will explore how water shapes-and is shaped by-humans in Latin America. Drawing from case studies from the pre-Columbian era to the present, the course will consider struggles over aquatic resources, dam building, and hydraulic development, as well as the social life of water in the region. Some background in Latin American history or politics is helpful but not required.
Instructor(s): Diana Schwartz-Francisco Terms Offered: Course not offered in 24-25
Equivalent Course(s): HIST 26306, LACS 26381

CEGU 26382. Development and Environment in Latin America. 100 Units.
Description: This course will consider the relationship between development and the environment in Latin America and the Caribbean. We will consider the social, political, and economic effects of natural resource extraction, the quest to improve places and peoples, and attendant ecological transformations, from the onset of European colonialism in the fifteenth century, to state- and private-led improvement policies in the twentieth. Some questions we will consider are: How have policies affected the sustainability of land use in the last five centuries? In what ways has the modern impetus for development, beginning in the nineteenth century and reaching its current intensity in the mid-twentieth, shifted ideas and practices of sustainability in both environmental and social terms? And, more broadly, to what extent does the notion of development help us explain the historical relationship between humans and the environment?
Instructor(s): Diana Schwartz Francisco Terms Offered: Course not offered in 24-25
Equivalent Course(s): ENST 26382, LACS 26382, ANTH 23094, HIST 36317, LACS 26382, GEOG 26382, GLST 26382, HIPS 26382, HIST 26317

CEGU 26400. Quantitative Methods in Public Policy. 100 Units.
This class will provide an introduction to quantitative analysis in public policy. Much of the class is devoted to learning about the effects of policies and answering empirical, policy-relevant questions from observational data. In doing so, the course provides an introduction to critical and quantitative thinking in general. Students will be introduced to the basic toolkit of policy analysis, which includes sampling, hypothesis testing, Bayesian inference, regression, experiments, instrumental variables, differences in differences, and regression discontinuity. Students will also learn how to use a statistical software program to organize and analyze data. More importantly, students will learn the principles of critical thinking essential for careful and credible policy analysis.
Instructor(s): Anthony Fowler Terms Offered: Winter
Equivalent Course(s): PBFL 26400
Cengage 26511. Cities from Scratch: The History of Urban Latin America. 100 Units.
Latin America is one of the world's most urbanized regions and its urban heritage long predates European conquest. Yet the region's urban experience has generally been understood through North Atlantic models, which often treat Latin American cities as disjunctive, distorted knockoffs of idealized US or European cities. This class interrogates and expands those North Atlantic visions by emphasizing the history of vital urban issues such as informality, inequality, intimacy, race, gender, violence, plural regulatory regimes, the urban environment, and rights to the city. Interdisciplinary course materials include anthropology, sociology, history, fiction, film, photography, and journalism produced from the late nineteenth to the early twenty-first centuries.
Instructor(s): B. Fischer Terms Offered: Winter.
Prerequisite(s): Some coursework in Latin American studies, urban studies, and/or history
Equivalent Course(s): LACS 26510, HIST 26511, LACS 36510, HIST 36511, ARCH 26511, ENST 26511

Cengage 26770. Stories of Oceans and Archipelagos. 100 Units.
According to Fijian-Tongan writer Epeli Hau’ofa, "There is a world of difference between viewing the Pacific as ‘islands in a far sea’ and as ‘a sea of islands.’" In this course, we will delve into the "world of difference" that exists between viewing islands as remote and insignificant, and considering them as crucial nodes in an ever-expanding planetary network. Simultaneously, we will consider the stakes of moving away from traditional representations of the ocean as a blank canvas for human movement, to instead consider it as a vibrant material and multispecies space. This course will encourage students to formulate their own approaches to cutting-edge debates in archipelagic theory and critical ocean studies, and to situate those debates within the broader fields of environmental humanities and postcolonial studies. Readings will be drawn from the Pacific Ocean, the Atlantic Ocean (including the Caribbean Sea), and the Indian Ocean.
Instructor(s): Nikhita Obeegadoo Terms Offered: Spring
Prerequisite(s): For students seeking credit, FREN 20500 or equivalent.
Note(s): Taught in French.
Equivalent Course(s): RDIN 26770, FREN 26770, CMLT 26771

Cengage 27100. Cartographic Design and Geovisualization. 100 Units.
This course is a hands-on introduction to core principles and techniques associated with cartographic design, especially with regards to digital map design and the geographic visualization of data. Main topics include map generalization, symbology, scale, visual variables, scales of measurement, 2D and 3D design, map animation and interaction, and web mapping. Students will work with open-source GIS software and web tools, culminating in a final project and peer critique.
Instructor(s): Crystal Bae Terms Offered: Spring. Offered 2024–25
Equivalent Course(s): GISC 27100, ENST 27111, GISC 37100, CHST 27100

Cengage 27102. Spatial Cognition. 100 Units.
This course serves as an overview of spatial cognition and environmental perception, which relates to all aspects of spatial thinking, spatial behavior, and human-environment interaction in spatial and social contexts. Topics of study include cognitive maps and wayfinding behavior, spatial and environmental learning, spatial choice and decision-making, migration and travel, time geography, place and regional identity, and the role of gender and culture in spatial cognition.
Instructor(s): Crystal Bae Terms Offered: Spring. Offered 2023-24
Equivalent Course(s): GISC 37102, CHST 27102, GISC 27102, ENST 28722

Cengage 27110. Spatial Thinking in Historical Cartography. 100 Units.
The course will introduce students to the ways in which cartographers in the English-speaking world have conceived of representing spatial patterns in map form, and how that has changed over time beginning in the 18th century, given changes in world view, cultural background, cartographic technology, business organization, and educational fashion. The objective is to sharpen students' ability to think critically about how maps have been produced in history, evaluate their design, effectiveness, and limitations, and the uses to which they have been put.
Instructor(s): M. Conzen Terms Offered: Autumn
Note(s): This course can be counted toward as a 4th year CEGU/ENST Capstone course.
Equivalent Course(s): ENST 27110, GISC 27110, CHST 27110

Cengage 27111. Animal Policy. 100 Units.
Brief Description: Humans share the Earth with countless multitudes of sentient, non-human beings. We categorize our fellow earthlings into, for example, farm animals; pets; wild animals; pests; and so on. For each of these animal categories, we have laws, policies, and norms that influence our interactions with our fellow creatures and also profoundly affect the births, lives, and deaths of animals. This discussion-based course examines animal-related policies. We will look at broad questions - should animal wellbeing be directly taken into account in policy analysis, or only accounted for via human interest in animal wellbeing? - as well as specific policies with respect to farm animals, zoo animals, companion animals, and so on.
Instructor(s): James Leitzel Terms Offered: Spring
Equivalent Course(s): PBPL 27110

Cengage 27155. Urban Design with Nature. 100 Units.
This course will use the Chicago region as the setting to evaluate the social, environmental, and economic effects of alternative forms of human settlement. Students will examine the history, theory and practice of
designing cities in sustainable ways - i.e., human settlements that are socially just, economically viable, and environmentally sound. Students will explore the literature on sustainable urban design from a variety of perspectives, and then focus on how sustainability theories play out in the Chicago region. How can Chicago's neighborhoods be designed to promote environmental, social, and economic sustainability goals? This course is part of the College Course Cluster program: Urban Design.

Instructor(s): Sabina Shaikh and Emily Talen Terms Offered: Autumn
Note(s): This course counts towards the ENST 4th year Capstone requirement. Restricted to 3rd and 4th year students
Equivalent Course(s): CHST 27155, ENST 27155, PBPL 27156, BPRO 27155, GISC 27155

CEGU 27450. Cities in Motion: the Architecture of Public Transit. 100 Units.
How do you get from A to B? Within and between today’s urbanized areas, that seemingly simple question has become one of the most fraught and intractable problems. This course seeks to address questions about public transit across scales, from pedestrian and bicycle infrastructure at the level of individual intersections and blocks up to regional train networks and beyond. Like other design studio courses, the class will be project-based, and will ask students to develop a wide understanding of existing systems, but also to learn through creative design projects that expand their sense of what’s possible. After working together to understand many existing transit solutions across different scales, to come to terms with and document Chicago’s transit landscape, and to dream speculatively about untested transit possibilities both low- and high-tech, students will focus on building a portfolio of creative suggestions for their respective “clients” (e.g., the University of Chicago, the 4th Ward Alderman). Alongside this project work, assigned readings and explorations around Chicago will immerse students in the culture and philosophy of moving people and things, across different moments past, present and future.

Instructor(s): L. Joyner Terms Offered: Winter
Note(s): While this class does not require prior experience, all ARCH studio courses require consent. Starting November 6, please visit arthistory.uchicago.edu/archconsent to request instructor consent for this class or other ARCH studios. (Please do not send consent requests by email.)
Equivalent Course(s): ENST 27450, ARTH 27450

CEGU 27521. Energy in World Civilizations I. 100 Units.
This two-quarter course explores the historical roots of climate change and other global environmental problems with a special attention to how energy use shapes human societies over time. Part I covers energy systems across the world from prehistory to the end of the nineteenth century.

Instructor(s): Staff Terms Offered: Autumn Winter
Prerequisite(s): Parts I and II should be taken in sequence. This sequence meets the general education requirement in civilization studies.
Equivalent Course(s): HIST 17521, SOSC 27521, HIPS 17521, ENST 27521

CEGU 27522. Energy in World Civilizations II. 100 Units.
This two-quarter course explores the historical roots of climate change and other global environmental problems with a special attention to how energy use shapes human societies over time. Part II covers energy systems across the world from the early twentieth century to the present, examining themes such as the uneven globalization of energy-intensive lifestyles, the changing geopolitics of energy, and possible futures beyond fossil-fuel dependence.

Instructor(s): Staff Terms Offered: Spring Winter
Prerequisite(s): Parts I and II should be taken in sequence. This sequence meets the general education requirement in civilization studies.
Equivalent Course(s): ENST 27522, SOSC 27522, HIST 17522, HIPS 17522

CEGU 27700. Sensing the Anthropocene. 100 Units.
In this co-taught course between the departments of English (Jennifer Scappettone) and Visual Arts (Amber Ginsburg), we will deploy those senses most overlooked in academic discourse surrounding aesthetics and urbanism—hearing, taste, touch, and smell—to explore the history and actuality of Chicago as a site of anthropogenic changes. Holding the bulk of our classes out of doors, we will move through the city seeking out and documenting traces of the city’s foundations in phenomena such as the filling in of swamp; the river as pipeline; and the creation of transportation and industrial infrastructure—all with uneven effects on human and nonhuman inhabitants. Coursework will combine readings in history and theory of the Anthropocene together with examples of how artists and activists have made the Anthropocene visible, tangible, and audible, providing forums for playful documentation and annotations as we draw, score, map, narrate, sing, curate and collate our sensory experience of the Anthropocene into a final experimental book project. Admission is by consent only: please write a short paragraph briefly sketching your academic background and naming your interest in the course. Send this submission to: jscape@uchicago.edu, amberginsburg@gmail.com

Instructor(s): J. Scappettone, A. Ginsburg Terms Offered: Autumn
Prerequisite(s): PQ: Third or fourth-year standing.
Equivalent Course(s): ARCH 22322, BPRO 27200, ENGL 47700, ENST 27700, ARTV 22322, ARTV 32322, CHST 27200, ENGL 27700
CEGU 28300. Topics in Geographic Information Science. 100 Units.
This advanced course extends and connects both foundational and functional concepts in Geographic Information Science. Students will gain a comprehensive understanding of key areas, including web GIS as well as advanced geospatial visualization techniques. In addition, the course emphasizes the utilization of the R programming language. Students will delve into static, animated, and interactive mapping in R and develop skills in building interactive web mapping applications using Shiny.
Instructor(s): Yue Lin Terms Offered: Winter. Offered 2024-25
Equivalent Course(s): GISC 28300, GISC 38300, ARCH 28602

CEGU 28307. Global Environmental Humanities. 100 Units.
This course is an introduction to the interdisciplinary field of environmental humanities, which calls on us to study the global environment, and the threats posed by globalization and climate change, using the tools of history, cultural studies, philosophy, and literature. Reading texts from these and other disciplines, we will attend to the ways that “environment” registers in political, aesthetic, and social life across the globe. Sample authors: Fernand Braudel, William Cronon, Dipesh Chakrabarty, Amitav Ghosh, Ursula Heise, Joseph Masco, Jed Purdy, Anna Tsing.
Instructor(s): Isabel Gabel Terms Offered: Autumn. Offered in Autumn 2023
Equivalent Course(s): ENST 28307, CHSS 38307, HIST 25422, KNOW 38307, KNOW 28307, HIPS 28307

CEGU 28702. Introduction to GIS and Spatial Analysis. 100 Units.
This course provides an introduction and overview of how spatial thinking is translated into specific methods to handle geographic information and the statistical analysis of such information. This is not a course to learn a specific GIS software program, but the goal is to learn how to think about spatial aspects of research questions, as they pertain to how the data are collected, organized and transformed, and how these spatial aspects affect statistical methods. The focus is on research questions relevant in the social sciences, which inspires the selection of the particular methods that are covered. Examples include spatial data integration (spatial join), transformations between different spatial scales (overlay), the computation of "spatial" variables (distance, buffer, shortest path), geovisualization, visual analytics, and the assessment of spatial autocorrelation (the lack of independence among spatial variables). The methods will be illustrated by means of open source software such as QGIS and R.
Instructor(s): Crystal Bae Terms Offered: Spring Summer. Offered 2024–25
Equivalent Course(s): GISC 28702, PPHA 38712, ARCH 28702, SOCI 30283, ENST 28702, SOCI 20283, GISC 38702

CEGU 28728. Climate Change and Society: Human Impacts, Adaptation, and Policy Solutions. 100 Units.
Time is running out to prevent the worst impacts of climate change. The next decade will be critical both for the transformation of society and learning to adapt to changes that cannot be avoided, and climate change will be a key part of everyday life. This class discusses how we face this global challenge. During the course, our focus will be on the impacts of climate change upon society, and the necessity of solutions that deal with the global scope, local scales, and often unequal nature of the impacts. This interdisciplinary course covers the tools and insights from economic analysis, environmental science, and statistics that inform our understanding of climate change impacts, the design of mitigation and adaptation policies, and the implementation of these policies. Students will develop a mastery of key conceptual ideas from multiple disciplines relevant for climate change and acquire tools for conducting analyses of climate impacts and policies. The latter parts of the course will hone students’ ability to apply and communicate these insights through practical analysis of national policies and writing op-eds about climate-related issues. The goal is to help students from any background become informed and critically-minded practitioners of climate-informed policy making, able to communicate the urgency to any audience.
Instructor(s): Jina, A. Terms Offered: Winter
Note(s): This course is intended to be accessible to people from all disciplines and backgrounds interested in climate solutions. Some introduction to statistics and economics (e.g., PBPL 20000 or ECON 20000) may be helpful, but definitely not essential.
Equivalent Course(s): ENST 28728, PBPL 28728

CEGU 28800. History of Cartography. 100 Units.
This course offers a grand overview of the key developments in mapmaking throughout history worldwide, from pre-literate cartography to the modern interactive digital environment. It looks at the producers, their audience, the technologies and artistic systems used, and the human and global contexts in which they developed. The course also features experiential learning components with field trips to map collections at Regenstein Library and Newberry Library.
Instructor(s): Yue Lin Terms Offered: Autumn 2024–25
Equivalent Course(s): HIST 25121, GISC 28800, ARCH 28800, GISC 38800, HIST 35121, CHST 28800

CEGU 28925. Health Impacts of Transportation Policies. 100 Units.
Governments invest in transport infrastructure because it encourages economic growth and mobility of people and goods, which have direct and indirect benefits to health. Yet, an excessive reliance on motorized modes of transport harms population health, the environment, and social well-being. The impact on population health is substantial: Globally, road traffic crashes kill over 1.3 million annually. Air pollution, to which transport is an important contributor, kills another 3.2 million people. Motorized modes of transport are also an important contributor to sedentary lifestyles. Physical inactivity is estimated to cause 3.2 million deaths every year, globally.
This course will introduce students to thinking about transportation as a technological system that affects human health and well-being through intended and unintended mechanisms. The course will examine the complex relationship between transportation, land use, urban form, and geography, and explore how decisions in other sectors affect transportation systems, and how these in turn affect human health. Students will learn to recognize how the system level properties of a range of transportation systems (such as limited-access highways, urban mass transit, inter-city rail) affect human health.

Instructor(s): Bhalia, Kavi
Terms Offered: Spring
Equivalent Course(s): PBPL 28925, ARCH 28925, HLTH 28925, ENST 29825

CEGU 29400. Climate Change and Human Mobility. 100 Units.
A 2021 UN report estimated that 21.5 million people have been forced to move, each year, for over a decade, due to climate change. The report states: “weather-related crises have triggered more than twice as much displacement as conflict and violence in the last decade” (UNHCR, 2021). In spite of mounting evidence that climate change is to blame for these catastrophic weather-related events and associated increases in migration, the UNHCR eligibility criteria for refugee status doesn't include climate change. Due to political challenges involved in considering such a definition change, the UN convened member states to establish a global compact for migration that takes the effects of climate change into consideration. The Global Compact suggests rights and obligations of climate change migrants, and standards to guide sovereign states in protecting these rights. Given the growth in climate change related migration over the last decade, and the complicated nature of implementation with such a broad international instrument such as the Global Compact, there is much room for development within the climate change and human mobility sector. This course will: examine the issue of climate change and its relationship to human mobility using human rights, political ecology, and social policy perspectives; consider how these different perspectives for understanding the problem suggest different types of policy solutions; and consider the impact of these solutions for those affected.
Terms Offered: TBD
Equivalent Course(s): SSAD 29400, SSAD 69400, HIST 39401, HIST 29400, CHST 29400, CEGU 69400, ENST 29400

CEGU 29634. African Cities and Urbanism. 100 Units.
This course looks at urbanism and urbanization in the nineteenth and twentieth centuries through a focus on selected cities in East, Southern, and West Africa. Beginning with existing trade routes and economic centers onto which some colonial cities were mapped, the course explores waves of migration over different historical periods, infrastructural imaginaries and the policies that shaped them, informal and formal economies, and cultural expressions and representations of life and living in the city. We will draw from a diversity of sources including fiction, non-fiction, architecture, town planning, photography, and the arts to examine political, social, economic, and topographical features and forces that drove the growth and development of each city studied, and also to reflect on commonalities that emerged between cities across different regions of the continent.
Instructor(s): T. Thipe
Terms Offered: Spring
Equivalent Course(s): RDIN 29634, HIST 29634

CEGU 29700. Reading & Research: Environmental Law Practicum I. 100 Units.
The Abrams Environmental Law Clinic attempts to solve some of the most pressing environmental and energy challenges throughout the Chicago area, the Great Lakes region, and the country. On behalf of a range of different clients, the clinic takes on entities which pollute illegally, fights for stricter permits, advocates for changes to regulations and laws, holds environmental and energy agencies accountable, and develops innovative approaches for improving the environment, public health, and the energy system. Through clinic participation, students learn substantive environmental law and procedures for addressing concerns through the courts, administrative agencies, and legislative bodies. Students develop core advocacy competencies, such as spotting issues, conducting factual investigations, performing practical legal research, advocating through written and oral communications, planning cases, managing time, and addressing ethical issues and dilemmas. In addition, students develop an appreciation for the range of strategic and tactical approaches that effective advocates use.
Instructor(s): Mary Beth Pudup
Terms Offered: Autumn Winter
Note(s): Participation in the CEGU law clinic practicum is limited to third and fourth-year declared CEGU majors. Enrollment by application only. See the CEGU website for more information.

CEGU 29701. Reading & Research: Environmental Law Practicum II. 100 Units.
Independent study with an individual faculty member.
Terms Offered: Spring
Note(s): This course is open to advanced undergraduates. Students selected for the Environmental Law Practicum will be enrolled in this course. Registration by consent only.

CEGU 29801. BA Colloquium I. 100 Units.
This colloquium is designed to aid students in their thesis research. Students are exposed to different conceptual frameworks and research strategies. The class meets weekly.
Instructor(s): Christopher Kindell
Terms Offered: Autumn
Prerequisite(s): Students must have an approved topic proposal and a faculty reader.
Equivalent Course(s): ENST 29801
