The transdisciplinary major in Environment, Geography, and Urbanization is housed in the Committee on Environment, Geography, and Urbanization (CEGU). The CEGU undergraduate major prepares students to understand and confront the wide-ranging societal, historical, and spatial dimensions of contemporary planetary environmental crises, including climate change, biodiversity loss, and other forms of large-scale socio-environmental transformation. Such issues are explored in diverse spaces, including cities and metropolitan regions; zones of extraction, agriculture, energy production, and waste; dispersed settlement spaces and village ecologies; rangeland, forest, and jungle landscapes; remote wildlands; and coastlines, rivers, watersheds, and oceans. The curriculum emphasizes a plurality of theoretical approaches to the histories and geographies of socio-environmental transformation, underscoring the contested character of environmental knowledge in a polarized and turbulent world order.

**PROGRAM OF STUDY**

The Environment, Geography, and Urbanization major consists of a sequence of foundational courses; substantive and methodological training in environmental, geographical, and urban studies; transdisciplinary electives spanning diverse thematic areas; and various capstone options, including the senior thesis and a community study. The major provides students with strong foundations in spatialized and historical approaches to environmental studies, with more specialized thematic tracks available in several fields, including urban environmental studies, energy histories and geographies, and environmental humanities. Through engagement with these fields of inquiry, students explore the wide-ranging social, historical, and spatial transformations that have produced the environmental emergencies of our time.

Graduates of the CEGU major will be well-equipped to conduct advanced research on socio-environmental processes, transformations, and crises across time and space, and to engage in diverse fields of urban and environmental practice. The curriculum combines scholarly inquiry, methodological training, experiential learning, and community engagement to prepare students to contribute to—and transform—the collective process of forging more equitable, livable, and hopeful planetary futures.

**THEMATIC TRACKS**

Students have the option to complete the CEGU general major, which offers an expansive set of courses in broad fields. Students also have the option to specialize in one of several thematic tracks: Urban Environmental Studies, Energy Histories and Geographies, and Environmental Humanities.

- **Urbanization** tracks the remaking of human and nonhuman environments, within cities and beyond. The **Urban Environmental Studies** thematic track of the CEGU major explores these connections and their wide-ranging implications for urban space and for the non-city zones that support urban life. Topics include the politics of environmental planning, design, and architecture; the role of class-based, gendered, and racialized forms of oppression in the production of urban built environments and political ecologies; the changing material and resource flows through which urban spaces are reproduced; the role of states, international organizations, and social movements in the governance of urban environmental restructuring; the emergence and evolution of urban climate politics; and ongoing struggles to create more just, inclusive, and sustainable spaces of urbanization.

- The **Energy Histories and Geographies** thematic track explores the historical roots of climate change and other global environmental problems with special attention to how energy use shapes human societies over time. From prehistory to the present, coursework in this track examines how people have variably harnessed sources of energy from environmental constituents—including plants, animals, wind, water, stones, metals, fossil fuels, and other humans—in tandem with the technological and social changes associated with their use. Topics include energy flow through and across natural and built environments, energy’s role in shaping political structures and social inequalities, the radical expansion and intensification of energy use under capitalism, the uneven globalization of energy-intensive lifestyles, the changing geopolitics of energy, and possible futures beyond fossil-fuel dependence.

- The **Environmental Humanities** represent a multidisciplinary field of research that studies how society, culture, and politics shape and are shaped by human-environment relationships. This track of the CEGU major examines a diverse range of humanistic material and methods, such as storytelling, source criticism, and formal analysis, to think critically about how environments, ecologies, and non-humans...
become part of social life. The track also explores how humanistic inquiry sheds light on socio-environmental transformations and crises, and is integral, along with the natural and social sciences, to strategies and struggles to forge more equitable, democratic, vibrant, and hopeful planetary futures.

For CEGU majors who opt to specialize in a thematic track, one foundations course is selected from a smaller cluster of gateway courses that offer a broad introduction to the specific track. Students who decide not to specialize in a thematic track are able to take a variety of general foundations option courses.

For students in a thematic track, electives are selected from a smaller menu of courses that offer advanced engagement with key research agendas in this particular area. To complete a thematic track, students select three of the five electives from a specific menu of options associated with that track. The other two electives may be chosen from the broader menu of options available to all CEGU majors. Students who decide not to specialize in a thematic track must take a total of five general electives.

**BA Thesis/Capstone**

The CEGU major culminates in a fourth-year capstone, which currently consists of either a BA Thesis or Capstone project. Either option provides students with an opportunity to apply some of the key concepts, theories, and methods they have encountered throughout the major to an original research project on some aspect of urbanization and/or socio-environmental relations. While distinct in scope and approach, the two senior project options offer students valuable research experience that will help prepare them for future careers in these and related fields.

All information about BA Thesis/Capstone research grants and prizes is available on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).

**BA Thesis:** The BA Thesis gives students a valuable opportunity to conduct extended research, writing, and analysis on a topic of particular significance to them. Frequently, undergraduates who write and reason well are nevertheless unaccustomed to directing their own academic inquiry from within by formulating and conducting a research project from start to finish. The program, therefore, offers significant guidance and support from faculty and preceptors in these independent projects. For this purpose, students choose expert advisers from across the University, receive mentorship from program faculty, and participate in a two-quarter BA Colloquium course sequence in their fourth year. Some theses are not only self-styled but may take students to far-off places, both geographically and intellectually. The results are often remarkable in their scope and creativity.

Starting in 2022–23, in the Spring Quarter of the third year, students will attend a BA information session and brainstorming workshop, and meet with a graduate student preceptor. Students wishing to complete a BA Thesis must submit a BA Thesis application with endorsement by a faculty adviser in the Spring Quarter of their third year. If approved, students will attend Spring Quarter workshops to prepare a reading list and BA Thesis plan.

Students must enroll in CEGU 29801 BA Colloquium I in the Autumn Quarter and CEGU 29802 BA Colloquium II in the Winter Quarter of their fourth year. The BA Thesis is due in the third week of the Spring Quarter.

**BA Capstone:** The BA Capstone option is open to all students in the major but does not qualify any student for honors. In this track, students must complete one individual (not group-based) BA Capstone project as required within a designated Capstone course. While certain Capstone courses can be taken prior to the fourth year, they will only count towards the BA Capstone requirement if taken in the fourth year. The course-based BA Capstone project will be designed by the instructor for all students in the course, regardless of major or track. The project may be an extended research or policy paper (7,500–10,000 words), a series of writings for art or media (several 3,000–5,000 word articles), a design project in a studio course, a creative project (e.g., short film, artwork, creative writing, or podcast), or another type of project designed by the instructor.

All fourth-year students must present their BA Thesis or BA Capstone project in the final symposium held in the ninth week of the Spring Quarter of their fourth year.

For further details and important dates and deadlines related to the BA Thesis and BA Capstone, please visit the CEGU website (https://cegu.uchicago.edu/).

Starting in academic year 2024–25, students will complete a new, two-course sequence in their fourth year of study that explores community engagement and experiential learning in a key field of environmental practice, generally in the Chicago metropolitan region. The community study will feature training in community-based and community-led methods, engaged internships, and a Capstone project developed over the course of a year. Students who are specializing in one of the thematic tracks, and who opt for the community study option of the Capstone sequence, are expected to complete the community study on a topic related to the track in question. Students must present their community study project in the final symposium held in the ninth week of the Spring Quarter of their fourth year.
For further details and important dates and deadlines related to the Thesis and Capstone, please visit the CEGU website.

ENVIRONMENT, GEOGRAPHY, AND URBANIZATION MAJOR FOUNDATIONAL AND METHODOLOGICAL REQUIREMENTS

All students must take four CEGU foundational courses:
- CEGU 20001 Climate Change, Environment, and Society
- CEGU 20002 The Politics of Environmental Knowledge
- CEGU 20003 Global Environmental Change
- A foundations option course

For CEGU majors who opt to specialize in a thematic track, this fourth foundations option course is selected from a smaller set of courses that offer a broad introduction to the specific thematic track. A full list of foundations option courses within each thematic track, as well as general foundations option courses, are available on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).

All students are also required to take two methods courses:
- CEGU 23517 Introduction to Critical Spatial Media: Visualizing Urban, Environmental, and Planetary Change
- A second methods course, chosen from a menu of options in the qualitative/quantitative social sciences, geospatial analysis and geographical information sciences, and environmental humanities.

Students may use a maximum of 100 units of supervised individual reading and research credit toward their primary track requirements in the major.

For a full list of CEGU-approved methods courses, please visit the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).

All courses counting towards major requirements must be taken for a quality grade. Aside from the foundation courses CEGU 20001 Climate Change, Environment, and Society, CEGU 20002 The Politics of Environmental Knowledge, CEGU 20003 Global Environmental Change, and CEGU 23517 Introduction to Critical Spatial Media: Visualizing Urban, Environmental, and Planetary Change, the menu of courses for the CEGU requirements will change from year to year depending on instructor offerings. New courses will be regularly added to these course menus.

THEMATIC TRACK REQUIREMENTS

URBAN ENVIRONMENTAL STUDIES TRACK

All students in the Urban Environmental Studies Track must choose a foundations option course from a selected list available on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/). In addition, students take three elective courses from an approved list of Urban Environmental Studies courses, as well as two general electives from a menu of courses. All thematic track electives also count as general electives in the CEGU major. Once the fourth foundations course has been completed, additional foundations courses count towards elective courses.

Students who choose to complete a BA Thesis must complete CEGU 29801 BA Colloquium I and CEGU 29802 BA Colloquium II in the Autumn and Winter Quarters of their senior year. Students who choose to complete the BA Capstone must register for a Capstone course, chosen from a CEGU-approved list, as well as an additional elective within Urban Environmental Studies.

Approved courses for each requirement can be found on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).
Summary of Urban Environmental Studies Track—Thesis Requirements
Foundational requirements (above) including foundations option course within thematic track 600
3 Urban Environmental Studies Track electives from CEGU-approved course list 300
2 general electives from CEGU-approved course list 200
CEGU 29801 BA Colloquium I 100
CEGU 29802 BA Colloquium II 100
Total Units 1300

Summary of Urban Environmental Studies Track—Capstone Requirements
Foundational requirements (above) including foundations option course within thematic track 600
4 Urban Environmental Studies Track electives from CEGU-approved course list 400
2 general electives from CEGU-approved course list 200
Capstone course chosen from CEGU-approved list 100
Total Units 1300

ENERGY HISTORIES AND GEOGRAPHIES TRACK
All students in the Energy Histories and Geographies Track must choose a foundations option course from a selected list available on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/). In addition, students take three elective courses from an approved list of Energy Histories and Geographies courses, as well as two general electives from a menu of courses. All thematic track electives also count as general electives in the CEGU major. Once the fourth foundations course has been completed, additional foundations courses count towards elective courses.

Students who choose to complete a BA Thesis must complete CEGU 29801 BA Colloquium I and CEGU 29802 BA Colloquium II in the Autumn and Winter Quarters of their senior year. Students who choose to complete the BA Capstone must register for a Capstone course, chosen from a CEGU-approved list, as well as an additional elective within Energy Histories and Geographies.

Approved courses for each requirement can be found on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).

Summary of Energy Histories and Geographies Track—Thesis Requirements
Foundational requirements (above) including foundations option course within thematic track 600
3 Energy Histories and Geographies Track electives from CEGU-approved course list 300
2 general electives from CEGU-approved course list 200
CEGU 29801 BA Colloquium I 100
CEGU 29802 BA Colloquium II 100
Total Units 1300

Summary of Energy Histories and Geographies Track—Capstone Requirements
Foundational requirements (above) including foundations option course within thematic track 600
4 Energy Histories and Geographies Track electives from CEGU-approved course list 400
2 general electives from CEGU-approved course list 200
Capstone course chosen from CEGU-approved list 100
Total Units 1300

ENVIRONMENTAL HUMANITIES TRACK
All students in the Environmental Humanities Track must choose a foundations option course from a selected list available on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/). In addition, students take three elective courses from an approved list of Environmental Humanities courses, as well as two general electives from a menu of courses. All thematic track electives also count as general electives in the CEGU major. Once the fourth foundations course has been completed, additional foundations courses count towards elective courses.

Students who choose to complete a BA Thesis must complete CEGU 29801 BA Colloquium I and CEGU 29802 BA Colloquium II in the Autumn and Winter Quarters of their senior year. Students who choose to complete the BA Capstone must register for a Capstone course, chosen from a CEGU-approved list, as well as an additional elective within Environmental Humanities.

Approved courses for each requirement can be found on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).
Summary of Environmental Humanities Track—Thesis Requirements
Foundational requirements (above) including foundations option course within thematic track 600
3 Environmental Humanities Track electives from CEGU-approved course list 300
2 general electives from CEGU-approved course list 200
CEGU 29801 BA Colloquium I 100
CEGU 29802 BA Colloquium II 100
Total Units 1300

Summary of Environmental Humanities Track—Capstone Requirements
Foundational requirements (above) including foundations option course within thematic track 600
4 Environmental Humanities Track electives from CEGU-approved course list 400
2 general electives from CEGU-approved course list 200
Capstone course chosen from CEGU-approved list 100
Total Units 1300

GENERAL REQUIREMENTS (NO THEMATIC TRACK)
All students who choose not to opt into a thematic track can take a general foundations option course, as well as the three other foundation courses for their foundation requirements. See the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/) for more information on general foundations option courses. In addition to the foundational requirements, students who are not in a thematic track can take any five general electives. All thematic track electives also count as general electives in the CEGU major. Once the fourth foundations course has been completed, additional foundations courses count towards elective courses.

Students who choose to complete a BA Thesis must complete CEGU 29801 BA Colloquium I and CEGU 29802 BA Colloquium II in the Autumn and Winter Quarters of their senior year. Students who choose to complete the BA Capstone must register for a Capstone course, chosen from a CEGU-approved list, as well as an additional general elective.

Approved courses for each requirement can be found on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).

Summary of General Thesis Requirements
Foundational requirements (above) including general foundations option course 600
5 general electives from CEGU-approved course list 500
CEGU 29801 BA Colloquium I 100
CEGU 29802 BA Colloquium II 100
Total Units 1300

Summary of General Capstone Requirements
Foundational requirements (above) including general foundations option course 600
6 general electives from CEGU-approved course list 600
Capstone course chosen from CEGU-approved list 100
Total Units 1300

ENVIRONMENTAL AND URBAN STUDIES & GEOGRAPHICAL SCIENCES MAJORS
As of Autumn Quarter 2023, the major in Environmental and Urban Studies (ENST) will become the major in Environment, Geography, and Urbanization (CEGU). For all ENST majors declared before Autumn Quarter 2023, the ENST requirements will remain in effect. The new requirements for the CEGU major will go into effect as of Autumn Quarter 2023 for all newly declared majors. New requirements for the CEGU minor will also then replace those currently in effect for the ENST minor.

Starting in 2022–23, the Geographical Sciences major and associated courses (GEOG) were embedded within the Environmental and Urban Studies (ENST) major and minor program. Beginning in 2023–24, students interested in the previous Geographical Sciences major are encouraged to declare the CEGU major. Students interested in the minor program in Geographic Information Science (GISC) should refer to the minor program page in the College Catalog (http://collegecatalog.uchicago.edu/thecollege/geographicalstudies/). (http://collegecatalog.uchicago.edu/thecollege/geographicinformationscience/)

MAJOR DECLARATION
Students may begin taking courses in a major at any time (including their first quarter). However, the deadline to declare the Environment, Geography, and Urbanization major is the fourth week of the Spring
Quarter in the third year. Students must meet with the CEGU Program Administrator or Program Director when declaring their major.

HONORS
In addition to a minimum GPA of 3.25 overall, and 3.7 in the major, students must complete the BA Thesis Track and receive a high pass grade on the Thesis to receive honors for the major.

EXPERIENTIAL LEARNING
CEGU will continue to expand the robust experiential learning program established by Program on the Global Environment, often in collaboration with Chicago Studies and the Architectural Studies minor, through additional practicum courses, design studios, and community studies. These experiences are designed to foster creative vision and method-based applications outside the classroom, often involving community partners and specific forms of community engagement. The courses offer an innovative way for students to learn and develop critical skills through sites of practical, experiential engagement.

ENVIRONMENT, GEOGRAPHY, AND URBANIZATION MINOR REQUIREMENTS

Students who elect the minor program in Environment, Geography, and Urbanization (CEGU) should meet with the program director before the end of the Spring Quarter of their third year to declare their intention to complete the minor and select appropriate courses. The approval of the program director for the minor program should be submitted to a student’s College adviser by the deadline above on the Consent to Complete a Minor Program (https://cpb-us-w2.wpmucdn.com/voices.uchicago.edu/dist/a/1176/files/2019/04/Consent_Minor_Program-26nrq41.pdf) form, available online or from the College adviser.

Courses in the minor (1) may not be double counted with the student’s major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for quality grades, and at least half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Summary of CEGU Minor Requirements

Choose 3 of the following: 300

| CEGU 20001 | Climate Change, Environment, and Society |
| CEGU 20002 | The Politics of Environmental Knowledge |
| CEGU 20003 | Global Environmental Change |
| CEGU 23517 | Introduction to Critical Spatial Media: Visualizing Urban, Environmental, and Planetary Change |

3 electives from any track chosen from CEGU-approved list 300

Total Units 600

PETITIONS AND FORMS

Students majoring/minoring in Environment, Geography, and Urbanization must complete all program requirements.Exceptions will be made only in extenuating circumstances and must be requested via the College’s General Petition (https://college.uchicago.edu/advising/tools-forms/) form.

All petitions and forms related to CEGU requirements are on the program website (https://cegu.uchicago.edu/undergraduate-studies/enst-major-minor/petitions-and-forms/). These must be submitted via the website (https://cegu.uchicago.edu/undergraduate-studies/enst-major-minor/petitions-and-forms/) portal during the two quarterly review windows.

The deadlines for all program petition submissions each quarter are:

- Friday of second week by 11:59 p.m. CT
- Friday of eighth week by 11:59 p.m. CT

No petitions will be reviewed outside of these windows.

EMAIL LIST

Students majoring, minoring, or interested in Environment, Geography, and Urbanization should subscribe to our email list (http://eepurl.com/gLQL49/) to receive announcements concerning courses, internships, fellowships, and other information connected with the major.

IMPORTANT DATES AND DEADLINES

All important forms and deadlines are also available on the CEGU website (https://cegu.uchicago.edu/undergraduate-studies/).

Winter 2024

Week 3: Third-years - Finalize your course of study form and meet with your preceptor
Week 8: Third-years - Attend BA Thesis information session

Spring 2024

Week 2: Fourth-years - Internship Evaluation Form due

Week 3: Fourth-years - BA Thesis due for evaluation

Week 5: Third-years - BA Thesis application due. See the CEGU website for additional deadlines related to the BA Thesis. Students who are not approved for the BA Thesis must complete the BA Capstone requirements.

Week 6: Third-years - BA Thesis brainstorm session

Week 7: Fourth-years - Final BA Thesis due

End of Spring Quarter: Students present at the BA Thesis and Capstone Symposium

COMMITTEE ON ENVIRONMENT, GEOGRAPHY AND URBANIZATION COURSES

CEGU 20001. Climate Change, Environment, and Society. 100 Units.
How has natural and anthropogenic climate change shaped human relationships with the environment? Against the backdrop of planetary environmental emergencies of the early-21st century, this discussion-based course will consider various time scales of ecological, technological, social, and political transformation, including: the rise of agriculture, state formation, and civilizational collapse; the "Medieval Warm Period" and the "Little Ice Age"; the Industrial Revolution, imperialism, and the consolidation of a global fossil fuel regime; the "Great Acceleration" of the mid-20th century; the development of modern climate science; and the social, political, and technological responses to human-induced global warming. Within these time scales, we will explore the dynamics of climate change, the environment, and society through the historical study of land management, population displacement and migration, resource extraction, energy production and consumption, the global commons, as well as the role of national and international governance arrangements in mediating the unequal distribution of environmental risk across the world. Ethics, morality, equity, and justice, among other concepts, will be investigated as we analyze connections among socio-environmental transformations and class-based, racialized, and gendered forms of inequality.

Instructor(s): Christopher Kindell Terms Offered: Autumn Winter

Equivalent Course(s): ENST 20011, HIST 25031, GLST 21001

CEGU 20002. The Politics of Environmental Knowledge. 100 Units.
How has "nature" been understood and investigated in the modern world? Building upon diverse approaches to environmental history and philosophy, the history of science, and cultural studies, this course surveys the major frameworks through which the environment has been understood, investigated, and transformed since the origins of global modernity. Such issues are explored with reference to the mobilization of science, technology, and politics in several major areas of socio-environmental transformation in the modern world. Case studies might explore, among other issues, empire, race, and public health; cities and infectious disease since the Black Death; the 'great enclosures' of land associated with settler colonialism; the 'Green Revolution' in industrial agriculture; strategies of resource stewardship, land conservation, terraforming, hydrological engineering and watershed protection; the politics of global warming; and current debates on urban sustainability, carbon capture and geo-engineering. The course also considers the rise and evolution of environmentalist movements and conservation strategies, and the contested visions of nature they have embraced. The course concludes by investigating the competing paradigms of knowledge, science, and environment that underpin divergent contemporary programs of environmental governance and visions of 'sustainability'.

Instructor(s): Jessica Landau Terms Offered: Winter

Equivalent Course(s): ENST 20012, HIST 25032, GLST 21002

CEGU 20003. Global Environmental Change. 100 Units.
Critical examination of contemporary environmental crises requires deep immersion in key fields of environmental science that illuminate how societal processes have transformed the earth system. This course considers the genealogy of environmental problems in the modern world with reference to, among other core issues, the role of global land-use change, fossil energy, and waste production in climate change, biodiversity loss, water and soil contamination, and infectious disease transmission. The course introduces students to the major elements of earth system science and the study of global land-use change, with particular attention to key theoretical paradigms, methodological approaches, and forms of environmental and spatial data. Students will also gain familiarity with key fields of earth systems research such as the carbon cycle, hydrological processes; the physics and chemistry of the oceans and the atmosphere; the histories and geographies of carbon emissions; and planetary boundaries.

Terms Offered: Autumn Spring

Equivalent Course(s): ENST 20013

CEGU 20150. Sustainable Urban Development. 100 Units.
The course covers concepts and methods of sustainable urbanism, livable cities, resiliency, and smart growth principles from a social, environmental and economic perspective. In this course we examine how the development in and of cities - in the US and around the world - can be sustainable, especially given predictions
of a future characterized by increasing environmental and social volatility. We begin by critiquing definitions of sustainability. The fundamental orientation of the course will be understanding cities as complex socio-natural systems, and so we will look at approaches to sustainability grouped around several of the most important component systems: climate, energy, transportation, and water. With the understanding that sustainability has no meaning if it excludes human life, perspectives from both the social sciences and humanities are woven throughout: stewardship and environmental ethics are as important as technological solutions and policy measures.

Instructor(s): Winter: Staff, Spring: Evan Carver Terms Offered: Spring Winter

Note(s): ENST 21201 and 20150 are required of students who are majoring in Environmental and Urban Studies and may be taken in any order.

Equivalent Course(s): ARCH 20150, GLST 20150, PBPL 20150, ENST 20150

CEGU 20160. Cities on Screen. 100 Units.

How do the movies shape our collective imagination about cities? Why do we so often turn to them for visions of disaster and dystopia, on the one hand, or a futuristic utopia on the other? How has film responded to cities in the past, and how can it help investigate our present urban condition? How can film be understood as a tool for exploring what a city is? In this seminar, we will watch and discuss feature films in which the built environment or urban issues play important roles. Students will improve their film literacy -- learning not just what a film does but how it does it -- and understand applications for film in the analysis of social, spatial, temporal, and immersive phenomena, as well as how it can help inspire and communicate design more effectively.

Instructor(s): Evan Carver Terms Offered: Spring

Equivalent Course(s): ARCH 20160, ENST 20160

CEGU 20170. Pandemics, Urban Space, and Public Life. 100 Units.

Much of the cultural vibrance, economic strength, and social innovation that characterizes cities can be credited to their density. Put simply, cities bring people together, and togetherness allows for complex and fruitful exchange. But togetherness also brings risks, notably from infectious disease. A pandemic feeds on propinquity. "Social distance," while a short-term public health imperative, is antithetical to the very idea of the urban. In this seminar, we will explore these competing tensions in light of current and past disease outbreaks in urban settings. Drawing on a range of texts from history, design theory, sociology, and anthropology, as well as cultural artifacts like film, graphic memoir, and photography, we will engage questions like: How are the risks of contagion balanced with the benefits of density? How are such risks distributed throughout society? What creative responses have architects, urban designers, and planners brought to this challenge? Most importantly, how can we respond constructively to the challenge of pandemic to create cities where the benefits of togetherness are maximized, perhaps even improved on compared with the pre-outbreak condition? Students will have the opportunity to propose design or policy interventions to help their own communities respond to the coronavirus/COVID-19 crisis, return to a vibrant post-pandemic life, and prepare for the pandemics of the future.

Instructor(s): Evan Carver Terms Offered: Autumn Spring

Equivalent Course(s): HLTH 20170, PBPL 20170, GEOG 20170, ENST 20170, ARCH 20170

CEGU 20180. Writing the City. 100 Units.

How do great writers convey sense-of-place in their writing? What are the best ways to communicate scientific and social complexity in an engaging, accessible way? How can we combine academic rigor with journalistic verve and literary creativity to drive the public conversation about urgent environmental and urban issues? These are just some of the questions explored in WRITING THE CITY, an intensive course dedicated to honing our skills of verbal communication about issues related to the built and natural environments. Students will research, outline, draft, revise, and ultimately produce a well-crafted piece of journalistic writing for publication in the program's new annual magazine, Expositions. Throughout the quarter we will engage intensely with a range of authors of place-based writing exploring various literary and journalistic techniques, narrative devices, rhetorical approaches, and stylistic strategies.

Instructor(s): Evan Carver Terms Offered: Autumn

Prerequisite(s): At least one ENST, GEOG, or ARCH course; or one PBPL, ARTH, ANTH, or SOCI course with an urban focus; or instructor permission. Please contact eehc@uchicago.edu with questions.

Note(s): Restricted to 3rd and 4th years This course counts towards the ENST 4th year Capstone requirement.

Equivalent Course(s): ARCH 20180, ENST 20180

CEGU 20253. Introduction to Spatial Data Science. 100 Units.

Spatial data science consists of a collection of concepts and methods drawn from both statistics and computer science that deal with accessing, manipulating, visualizing, exploring and reasoning about geographical data. The course introduces the types of spatial data relevant in social science inquiry and reviews a range of methods to explore these data. Topics covered include formal spatial data structures, geovisualization and visual analytics, rate smoothing, spatial autocorrelation, cluster detection and spatial data mining. An important aspect of the course is to learn and apply open source GeoDa software.

Instructor(s): L. Anselin Terms Offered: Autumn. Cancelled - Not being offered in 2023/24

Prerequisite(s): STAT 22000 (or equivalent), familiarity with GIS is helpful, but not necessary

Equivalent Course(s): GISC 30500, SOCI 20253, SOCI 30253, MACS 54000, GISC 20500, ENST 20253
CEGU 20336. Researching Chicago’s Historic Parks and Neighborhoods. 100 Units.

Often considered a “City of Neighborhoods,” Chicago has a fascinating network of community areas that were shaped by historical events and developments. Many of the city’s neighborhoods include parks that have their own significant architectural, landscape and social histories. The class will introduce students to some of Chicago’s most interesting historic neighborhoods and parks; expose them to key regional digital and on-site archives; and instruct them in appropriate methodologies for conducting deep research on sites and landscapes, with a special focus on Chicago’s historic park system. Students will utilize an array of resources including Sanborn maps, US Census records, historic plans, photographs, and archival newspapers to provide in-depth studies of unserved sites. The course will also expose students to historic preservation policies, methodologies, and guidelines to provide practical strategies for preserving lesser-known places and sites. As a Chicago Studies class, its pedagogy will also include excursions into the city, engagement with local guest speakers, and research in relevant Chicago-area archives/special collections.

Instructor(s): Staff Terms Offered: Winter
Note(s): This special class is offered in conjunction with the University’s ongoing commemoration of the 200th anniversary of the birth of Frederick Law Olmsted, the father of American landscape architecture. Olmsted and his sons, the Olmsted Brothers, had a substantial influence on the city’s South Side, including the University’s campus and the development of small parks that provided services to dense immigrant neighborhoods in the early 20th century. The class will include field trips during some Friday class sessions.
Equivalent Course(s): CHST 20336, ENST 20336

CEGU 20506. Cities, Space, Power: Introduction to urban social science. 100 Units.

This lecture course provides a broad, multidisciplinary introduction to the study of urbanization in the social sciences. The course surveys a broad range of research traditions from across the social sciences, as well as the work of urban planners, architects, and environmental scientists. Topics include: theoretical conceptualizations of the city and urbanization; methods of urban studies; the politics of urban knowledges; the historical geographies of capitalist urbanization; political strategies to shape and reshape the built and unbuilt environment; cities and planetary ecological transformation; post-1970s patterns and pathways of urban restructuring; and struggles for the right to the city.

Instructor(s): N. Brenner Terms Offered: Winter. Not offered in 2023-2024 academic year.
Equivalent Course(s): ENST 20506, PLSC 20506, SOCI 20506, ARCH 20506, KNOW 30506, HIPS 20506, CHST 20506, CHSS 30506, CCCT 30506, PLSC 30506, SOCI 30506

CEGU 20521. Sociology of urban planning: cities, territories, environments. 100 Units.

This course provides a high-intensity introduction to the sociology of urban planning practice under modern capitalism. Building upon urban sociology, planning theory and history as well as urban social science and environmental studies, we explore the emergence, development and continual transformation of urban planning in relation to changing configurations of capitalist urbanization, modern state power, sociopolitical insurgency and environmental crisis. Following an initial exploration of divergent conceptualizations of “planning” and “urbanization,” we investigate the changing sites and targets of planning; struggles regarding the instruments, goals and constituencies of planning; the contradictory connections between planning and diverse configurations of power in modern society (including class, race, gender and sexuality); and the possibility that new forms of planning might help produce more socially just and environmentally sane forms of urbanization in the future.

Instructor(s): N. Brenner Terms Offered: Winter
Equivalent Course(s): PLSC 20521, PPHA 30521, GEOG 20521, PBPL 20521, CHST 20521, ARCH 20521, SOCI 30521, ENST 20521, PLSC 30521, KNOW 30521, SOCI 30521

CEGU 20704. Traveling Studio: From Detail to City at Taliesin. 100 Units.

The course is designed to immerse students in architectural drawing and making at a site of prolific drawing and making past, in a remarkable environment both natural and built. Working both individually and together, we will use our surroundings at Taliesin to tackle five short projects, increasing in scale, from the tiniest architectural details up through consideration of city and region. As part of the latter portion of the course, we will also consider the Driftless region of Wisconsin specifically, and issues facing this unique rural area in 2023, including environmental challenges, questions of housing, and rural foodways. Typical days will include studio time in the Hillside studio, ample exploration of the Taliesin grounds both programmed and free, conversations with guests familiar with the work of Frank Lloyd Wright and others who spent time at Taliesin, excursions across the Driftless region (including additional buildings designed by Wright and others close to him), and a modest amount of work helping to maintain the Taliesin site.

Terms Offered: Autumn
Equivalent Course(s): ARTH 30704, ARTH 20704, ENST 20704, ARCH 20704

CEGU 20806. Remaking the Prairie: The Cultural Politics of Ecological Restoration. 100 Units.

This course uses the Midewin National Tallgrass Prairie as a case study to understand the environmental and cultural challenges of ecological restoration. In essence, we will look at the Midewin as an environmental humanities problem, asking the questions: What does it mean to restore a landscape or an ecosystem? What values or biases are in place in ecological restoration and how do we overcome them? The Midewin National Tallgrass Prairie, managed by the US Forest Service, is a restored prairie on the former site of the WWII era Joliet Army Ammunition Plant. Throughout the September Term, we will visit the site several times to meet with Forest Service employees, participate in environmental restoration work, collect data for ecological studies, and learn more about the complicated history of the prairie and efforts to restore it. Analysis of the Midewin
National Tallgrass Prairie and ecological restoration more broadly will be done from an interdisciplinary lens that takes seriously the sometimes-competing stakes of indigeneity, agriculture, settler colonialism, ecology, history, militarism, and recreation, among others.

Instructor(s): Jessica Landau  
Equivalent Course(s): ENST 20806, CHST 20806, HIPS 20608

CEGU 21201. Human Impact on the Global Environment. 100 Units.  
The goal of this survey course is to analyze the impact of the human enterprise on the world that sustains it. Topics include human population dynamics and historical trends in global impact, with most of the course focusing on how humans have altered the Earth system through a variety of processes (including climate change, air, water, nutrient cycling, pollution/novel entities, biodiversity, and land use). We read and discuss diverse sources, write short analytical papers, and a final argument based research paper.

Instructor(s): Christopher Kindell  
Note(s): ENST 21201 and 20150 are required of students who are majoring in Environmental and Urban Studies and may be taken in any order.  
Equivalent Course(s): ENST 21201

CEGU 21301. Making the Natural World: Foundations of Human Ecology. 100 Units.  
What's natural about nature? Humans have 'made' the natural world both materially, through millennia of direct action in and on the landscape, and conceptually, through the creation of various ideas about nature, ecosystem, organism, and ecology. In this course we will consider how the conceptual underpinnings of contemporary Western notions of nature, environment, balance, power and race are intertwined. We will trace this trajectory using the lens of the historical development of the field of ecology, then broaden our view to consider worldviews and ontologies about the environment from non-Western cultures. How then do these worldviews influence attitudes and policies towards land, environment, and its stewardship? Taking examples from current environmental topics (e.g. land rights, environmental justice, park access, conservation, extinction) we will evaluate the extent and character of human entanglement with the environment. Throughout the course student voices will be prominent in the many discussion-based class sessions.

Instructor(s): Christopher Kindell  
Equivalent Course(s): ANTH 21303, ENST 21301

CEGU 21406. Britain 1760-1880: The Origins of Fossil Capitalism. 100 Units.  
Britain rose to global dominance after 1760 by pioneering the first fossil-fuel economy. This course explores the profound impact of coal and steam on every aspect of British society, from politics and religion to industrial capitalism and the pursuit of empire. Such historical investigation also serves a second purpose by helping us see our own fossil-fuel economy with fresh eyes through direct comparison with Victorian energy use. How much does the modern world owe to the fossil capitalism of the Victorians? Assignments include short essays that introduce students to primary sources (texts, artifacts, and images) and a longer paper that examines in greater depth a specific aspect of the age of steam.

Instructor(s): F. Allbritton Jonsson  
Equivalent Course(s): CEGU 31406, CHSS 31406, HIPS 21406, HIST 21406, HIST 31406

CEGU 21426. More than Human Ethnography. 100 Units.  
In this course we explore the growing field of multispecies ethnography. We will focus on examples of multi-species work emerging primarily from anthropology in recent decades, reading foundational texts on interspecies engagements, explorations, and dependencies by Deborah Bird Rose, Eduardo Kohn, Anna Tsing, and Augustin Fuentes among many others. We will consider the role other species played in early ethnographic and archaeological work, will examine ethnoprimitological studies, and will contemplate recent examinations of “becoming with” other animals, plants, fungi, bacteria, ‘aliens,’ and mutants-encountering complex ecological kin relationships, examining naturalcultural borders, and examining the legacies of decolonial scholarship. The course is a discussion-based seminar, with significant time devoted both to understanding the theoretical potentials of multispecies work and its logistical or methodological aspects-querying how multispecies studies have been conducted in practice. As multispecies and posthumanist approaches encourage a decentering of traditional methodologies, we will also couple ethnographic examples with literature by biologists, philosophers and at least one novelist.

Instructor(s): Willihott  
Equivalent Course(s): MAPS 31404, ANTH 21426, KNOW 32404, ANTH 33807, GNSE 31404, GNSE 21404

CEGU 21501. Genealogies of Environmental Organizing and Activism. 100 Units.  
This course explores how organizations-civic, private, governmental-working in the field of environmental advocacy construct, deploy and are shaped by distinct discourses governing relationships between nature and society. The environment is a field of social action in which organizations attempt to effect change in large domains like resource conservation, access, stewardship, and a basic right to environmental quality in everyday life. The work of effecting change in these complex domains can assume a variety of forms including public policy (through the agencies of the state), private enterprise (through the agency of the market), third sector advocacy (through the agency of nonprofit organizations) and social activism (through the agency of social movements and community organizations). State, market, civil society and social movement organizations are where ideas are transmitted from theory to practice and back again in a recursive, dialectical process. These contrasting forms of organization have different histories, wellsprings and degrees of social power. Moreover,
they bring different epistemologies to their claims about being legitimate custodians of nature—that is to say they can be understood genealogically. As such, organizations working to effect environment change are at once animated by and constitutive of distinct discourses governing the relationships between nature and society. The course explores how those distinct discourses are associated with a suite of different organizational realms of social action; the goal is trying to connect the dots between discursive formations and organizational forms.

Instructor(s): S. Shaikh Terms Offered: Autumn
Note(s): This course counts towards the ENST 4th year Capstone requirement.
Equivalent Course(s): CEGU 31501, HMRT 21501, ENST 21501, GLST 21501, SSAD 41501, SSAD 21501

CEGU 21502. Problems of Community. 100 Units.
Communities can be considered the locus of social problems and the wellspring of solutions to social problems. Communities are the “object of study” in social science research and communities often fiercely struggle for their own self-representation. This course examines social science approaches to the study of community, many of them pioneered in Chicago, and considers how the concept of community is invoked and deployed to draw boundaries of belonging and exclusion.

Instructor(s): STAFF Terms Offered: Winter
Equivalent Course(s): ENST 21502

CEGU 21503. Practicing Community Studies. 100 Units.
What does it mean to “study the community” and what knowledge can be gained from that endeavor? This course explores epistemologies and ethics of engaging in community studies while developing skills, methods, and the requisite intellectual stance for learning in, about, and from contemporary communities in Chicago and beyond.

Instructor(s): STAFF Terms Offered: Spring
Equivalent Course(s): ENST 21503

CEGU 21504. Theory and Practice of Urban Agriculture. 100 Units.
Food cultivation within the city-urban agriculture-is a vast and fascinating terrain of social practice associated with diverse historical geographies. The course examines urban agriculture as a global phenomenon with an intensely local presence by incorporating experiential education with Chicago-based projects that are exemplars in the contemporary urban food movement.

Instructor(s): STAFF Terms Offered: Spring
Equivalent Course(s): ENST 21504

CEGU 21710. Rocks, plants, ecologies: science fiction and the more-than-human. 100 Units.
Science fictional worlds are full of entities more familiar and perhaps less noticeable than the aliens that are often thought to typify the genre. Rock formations, plants, metallic seams, plastics, crystalline structures, nuclear waste and oozing seepages are among the entities that allow SF to form estranging questions about what it means to be in relation to others, what it means to live in and through an environment, and what it means to form relations of sustenance and communal possibility with those who do not or cannot return human care and recognition. Such questions about are urgent ones for thinking about climate catastrophe, capital, settler colonialism and endemic pandemics, as well as for thinking substantively about resistance and what life and livable worlds beyond the bleak horizons of the capitalocene could be. This class will engage science fiction (authors may include Ursula Le Guin, Vonda McIntyre, Kim Stanley Robinson, Nalo Hopkinson, Jeff Vandermeer and more) and environmental and social theory of various kind (authors may include Elizabeth Povinelli, Katherine Yusoff, Andreas Malm, Eduardo Kohn, James C. Scott, David Graeber, Jasper Bernes, Mike Davis and more).

Instructor(s): STAFF Terms Offered: Winter
Equivalent Course(s): ENGL 21710, ENGL 41710, MAPH 41710

CEGU 21800. Economics and Environmental Policy. 100 Units.
This course combines basic microeconomic theory and tools with contemporary environmental and resources issues and controversies to examine and analyze public policy decisions. Theoretical points include externalities, public goods, common-property resources, valuing resources, benefit/cost analysis, and risk assessment. Topics include pollution, global climate change, energy use and conservation, recycling and waste management, endangered species and biodiversity, nonrenewable resources, congestion, economic growth and the environment, and equity impacts of public policies.

Instructor(s): S. Shaikh Terms Offered: Autumn
Prerequisite(s): ECON 19800 or higher, or PBPL 20000
Note(s): Not offered in Autumn of the 2020-21 academic year.
Equivalent Course(s): ECON 16520, ENST 21800

CEGU 21900. Historical Geography of the United States. 100 Units.
This course examines the historical and geographical roots of American regional diversity and national spatial organization, from 1500 to 1920, and asks why American regions have developed and retained distinctive characteristics-and what consequences this has had for contemporary society. These issues are pursued through an examination of colonization processes, economic development, spatial differentiation, settlement patterns and the changing role of cities. The emphasis is on the kind and quantity of European cultural transfer, physical changes wrought by colonization, the modification of natural environments, the conquest of distance, and the general approach of American society to the uses of space. This course requires no prerequisites. There will be an all-day field trip in the Chicago region.
Instructor(s): Michael Conzen Terms Offered: Autumn
Note(s): Restricted to 3rd and 4th years This course counts towards the ENST 4th year Capstone requirement. This course offered in the Autumn Quarter of even-numbered years
Equivalent Course(s): HIST 38800, GEOG 31900, CHST 21900, ENST 21900, HIST 28800

CEGU 22100. Disease, Health, and the Environment in Global Context. 100 Units.
Recent concerns about monkeypox, COVID-19, Zika virus, and Ebola have attracted renewed attention to
previously disease outbreaks that have significantly shaped human political, social, economic, and environmental
history. Such diseases include: smallpox during the sixteenth-century Columbian exchange; syphilis during
the eighteenth-century exploration and settlement of the Pacific; bubonic plague in the late-nineteenth-century
colonization and urbanization of South and East Asia; and yellow fever during America’s twentieth-century
imperial projects across the Caribbean. In each instance, changes in trading patterns and human habitation
within the environment created new opportunities for different diseases to flourish. Through readings, public
governmental outlets, in-class discussions, special collection library visits, and a series of written assignments that
culminate in a final project, students in this course will explore how natural and human-induced environmental
changes have altered our past experiences with disease and our future prospects for health.
Instructor(s): Christopher Kindell Terms Offered: Spring
Note(s): This course counts towards the CEGU/ENST 4th year Capstone requirement. CEGU/ENST 4th years
wanting to take this as their Capstone must contact instructor and BA Capstone Director Dr. Evan Carver.

CEGU 22101. Changing America in the Last 100 Years. 100 Units.
This course examines the economic and social forces that have transformed the critical character and
performance of the major regions of the United States since the 1920s, and how the interactions between regions
has profoundly shifted. The course completes the historical sweep of American geographical development
following on from the Autumn course, Historical Geography of the United States, but can be taken as an
independent course. Emphasized are the ways in which socio-cultural, technological and economic changes have
played out differently across continental space, and produced variable environmental consequences. An all-day
field trip in the Chicago region visits sites that reflect some of the larger forces at work at the intra-regional scale.
Instructor(s): Michael Conzen Terms Offered: Winter
Note(s): Restricted to 3rd and 4th years This course counts towards the ENST 4th year Capstone requirement.
Equivalent Course(s): HIST 37506, CHST 22101, ENST 22101, ARCH 27506, HIST 27506, GEOG 32101

CEGU 22123. Ecopoetics: Literature and Ecology. 100 Units.
This course will introduce students to recent debates in the environmental humanities and simultaneously to
a range of creative responses across fiction, documentary, poetry, and the visual arts spurred by the effects of what
has come to be called the Anthropocene epoch (despite substantive challenges to the term that we will address)-
in a period of perceived grave environmental crisis. Students will be asked to respond critically to the works at
hand, but also to conduct their own research and on-site fieldwork in Chicago on an environmental issue of their
choosing. Students must be available for several field trips. (20th/21st) Undergraduates must email Prof. Jennifer Scappettone for consent.
Instructor(s): Jennifer Scappettone Terms Offered: Winter
Equivalent Course(s): ENGL 32123, ARCH 22123, ARTH 32123, ARTH 22123

CEGU 22211. Riding about the South Side. 100 Units.
This course is based on bicycling through the South Side neighborhoods surrounding the University of Chicago. There will be some readings, but the primary input will be from riding-from seeing things at street level and
speaking with people who are committed to living in places that often have been abandoned by others. We can
read and theorize about the community surrounding us, but the premise in this class is that our work should
begin with experience in that world, with direct contact and in conversation. My approach in this class is less
to teach than to lead you to where things are waiting to be learned and to people who can teach you about your
world better than I. Some of the themes we will cover include land rights and exploitation, architecture, town
planning, placemaking, urban farming and ecology, sustainability, grass roots organization, labor rights and
exploitation, immigration, social work, and street art. Each ride is organized around a set of key concerns and
includes a conversation with a local insider who can help us better understand them.
Instructor(s): William Nickell Terms Offered: Autumn
Equivalent Course(s): KNOW 22211, ENST 22211, ARCH 22211, CHST 22211

CEGU 22301. Digital Geographies of Climate Justice. 100 Units.
Struggles for climate and environmental justice are increasingly mediated by digital technologies and geospatial
data, especially in the Global South. In Amazonia, for example, the plight of indigenous groups bearing the
brunt of ecological dispossession and political violence by deforestation is frequently represented through
remotely-sensed data showing time-series of canopy loss; in turn, these data are often prompted, grounded, and mobilized by indigenous communities and affiliated activists in legal and political campaigns. In parallel, across the world ocean, countries across the Global South- from Papua New Guinea and Ecuador to Ghana- are partnering with watch-dog organizations using satellite imagery and GPS data to track illegal fishing and human rights abuses at sea, acting as an auxiliary ecological police force to identify and provide data to prosecute offending vessels. The proliferation of these digital geographic technologies and techniques pose a number of complex questions. Drawing on contemporary cases, experimental projects in “forensic” approaches to activism, and recent work in critical geography, aesthetics, STS, and political theory, this seminar will attempt to map out
these digital geographies of climate justice as they emerge. The course will also involve introduction to entry-
level remote sensing + GIS workflows (no prior experience required) in a pair of intensive workshops led by
guest lecturers/practitioners.
Instructor(s): Alexander Arroyo and Grga Basic Terms Offered: Spring
Note(s): Undergraduate/Graduate Course - only open to 3rd and 4th year undergraduate students
Equivalent Course(s): ENST 22301, CEGU 32301

CEGU 22311. Berlin: Conflict, Community, and Sustainability. 100 Units.
Berlin: What makes a city? Who decides how a city grows and changes, and what criteria do they use - should
it be beautiful, efficient, sustainable, open, just? How do economic systems and political ideologies shape urban
development? What is the “right to the city,” and what does it mean for city-dwellers to exercise it? These are just
some of the questions we will seek to answer in our course, Berlin: Conflict, Community, and Sustainability. This
is a September Term study abroad course. The program includes a side trip over a long weekend to the cities of
Hamburg and Lübeck.
Instructor(s): Evan Carver Terms Offered: Summer
Prerequisite(s): Admission to Berlin: Conflict, Community, and Sustainability study abroad program.
Note(s): Study Abroad September Term AY 23-24
Equivalent Course(s): ENST 22311, GRMN 22311

CEGU 22550. Performing Nature. 100 Units.
What is it like to be a bat? A tree? A slime mold? Art that attempts to represent non-human experience helps
to orient environmentalism around radical and highly personal moments of inter-species empathy. Portraying
non-human perspectives, we escape the abstraction of environmental data, and instead approach ecological
entanglement on the level of individual imagination. Giving voice and human embodiment to nature is a theme
in much 19th, 20th and 21st century creative writing (fiction/nonfiction) and performance work (theater, dance,
puppetry). Accordingly, this class offers a broad survey of non-human representation in these arts with special
attention to first-person narratives and embodiment of flora and fauna. The course draws on philosophers of
mind (i.e. Shaviro’s ‘Discognition’) and nature-science writing, plus contemporary performance projects and
digital works by art/technology companies who deploy virtual reality and electronic media to explore the points
of view of natural beings and systems. Reading about anthropomorphization and the problem of the subject in
nature writing from Erasmus Darwin to the present will allow students to adopt a critical as well as appreciative
eye toward this field of study and expression. Creative writing assignments will ask students to write (and
perform) monologues from nonhuman perspectives.
Instructor(s): S. Bockley Terms Offered: Spring
Equivalent Course(s): ENST 22550, TAPS 22550

CEGU 22704. Writing Persuasion: Health and Environment. 100 Units.
A writing-intensive course in persuasive techniques that influence opinions and attempt to change behavior. This
year our focus will be on an issue that presents a challenge for persuasion theory: the environment. People are
notoriously slow to change their beliefs and behavior on environmental issues, and persuasion theory suggests
reasons why this might be the case. Environmental problems ask readers to weigh costs that affect one group
against benefits that might accru favor one cause. Therefore, time frames ranging from moments (which are
easy to think and write about) to millennia (not so easy) to geological epochs, a time scale so remote from our
experience as to be opaque to the imagination. Environmental problems are complex in ways that make them
difficult to capture in a coherent, emotionally compelling narrative. Many individually innocuous and seemingly
unrelated environmental events can converge over time to produce consequences that are counter-intuitively
larger and greater than their causes. This felt disparity between actions and outcomes can violate an audience’s
sense of fairness, biasing the audience against a persuasive appeal.
Instructor(s): Tracy Weiner Terms Offered: Spring
Equivalent Course(s): ENST 22704, ENGL 32704, ENGL 12704

CEGU 22900. People in Motion: Rethinking Transit in Chicago and Beyond. 100 Units.
How do you get from A to B? Within and between today’s urbanized areas, that seemingly simple question
has become one of the most fraught and intractable problems. This course seeks to address questions about
public transit across scales, from pedestrian and bicycle infrastructure at the level of individual intersections
and blocks up to regional train networks and beyond. Like other design studio courses, the class will be project-
based, and will ask students to develop a wide understanding of existing systems, but also to learn through
creative design projects that expand their sense of what’s possible. After working together to understand many
existing transit solutions across different scales, to come to terms with and document Chicago’s transit landscape,
and to dream speculatively about untested transit possibilities both low- and high-tech, students will focus on
building a portfolio of creative suggestions for their respective “clients” (e.g., the University of Chicago, the 4th
Ward Alderman). Alongside this project work, assigned readings and explorations around Chicago will immerse
students in the culture and philosophy of moving people and things, across different moments past, present and
future.
Instructor(s): E. Carver, L. Joyner Terms Offered: Winter
Prerequisite(s): Third or fourth-year standing
Note(s): This course counts towards the ENST 4th year Capstone requirement.
Equivalent Course(s): ARCH 22909, ENST 22900, BPRO 22900, ARTH 22909, CHST 22900
CEGU 23100. Environmental Law. 100 Units.
This course will examine the bases and assumptions that have driven the development of environmental law, as well as the intersection of this body of law and foundational legal principles (including standing, liability, and the Commerce Clause). Each form of lawmaker (statutes, regulations, and court decisions) will be examined, with emphasis on reading and understanding primary sources such as court cases and the laws themselves. The course also analyzes the judicial selection process in order to understand the importance of how the individuals who decide cases that determine the shape of environmental law and regulations are chosen.
Instructor(s): Ray Lodato Terms Offered: Winter
Prerequisite(s): 3rd or 4th year standing, or consent of instructor
Equivalent Course(s): PBPL 23100, ENST 23100

CEGU 23401. Revision, Expression & Portfolio Design. 100 Units.
This studio course, similar to a 'senior seminar' in other disciplines, serves five purposes: (1) to allow students to pick up a few elements (drawings, models, collages, visual and place-based research, etc.) they've produced in other ARCH studio courses and spend more time refining them, outside the broader demands of a thematic studio class, (2) to acquaint students with advanced skills in expression and representation related to the revision and refinement of these elements, based on student interest and needs, (3) to assist students in the development of a portfolio of studio work, either toward application for graduate school or simply to have for themselves, and in systems to organize projects and revisions, (4) to add to students' typographic and graphic design skillsets, primarily using the Adobe Creative Suite, as part of the portfolio process, and (5) to practice and hone communication and writing skills related to discussing architectural projects. While there will be a modest set of skills-based exercises each week, to help structure the studio, most of the work for this class will be students' own project revisions and portfolios, and most of class time will be spent sharing and refining both.
Instructor(s): L. Joyner Terms Offered: Autumn
Prerequisite(s): Priority for this 'senior studio' course will be given to third and fourth years who've taken at least two other ARCH studio classes already. Students who have not already taken "Skills & Processes for Architecture and Urban Design" may be asked to consult some of the problem sets from that class ahead of this one, to ensure a baseline upon which this class will build. Starting July 31, please visit arthistory.uchicago.edu/archconsent to request instructor consent for this class or other ARCH studios. (Please do not send consent requests by email.)
Note(s): This course counts towards the ENST 4th year Capstone requirement.
Equivalent Course(s): ARTH 23401, ARCH 23401, ENST 23401

CEGU 23505. Environmental Ethics. 100 Units.
This course examines foundational issues of environmental ethics. What kind of values (economic, aesthetic, existence) are important? What kind of value do individual biota, humans, other species, ecosystems, humans, or inorganic entities have? What is the relationship of humans to the rest of the world? What should it be? Do religious and philosophical traditions contribute to or help address environmental degradation?
Instructor(s): S. Fredericks Terms Offered: Winter
Equivalent Course(s): RLIST 23505, ENST 23505

CEGU 23516. Environment and Society in the Ancient Mediterranean. 100 Units.
This seminar examines the interplay between social and environmental actors, practices, and changes across time in the Mediterranean basin, as well as explores the study and analysis of those interactions from the beginnings of classical scholarship to the present. Key themes include: environmental determinism, human and non-human interactions, interpretive approaches to space and place, the role of science in archaeological and historical practice, and the compartmentalization of "environment" and "landscape" as analytic focus. These themes loom large now - during what might be called the "environmental turn" spurred on by the controversial Anthropocene in the humanities and social sciences - and their intensifying resonance provides the basis for critical reflection of past and future trends in classics, history, archaeology, and anthropology.
Instructor(s): C. Kearns. Terms Offered: Winter
Equivalent Course(s): CLAS 33516, ENST 23516, CLCV 23516

CEGU 23517. Introduction to Critical Spatial Media: Visualizing Urban, Environmental, and Planetary Change. 100 Units.
This course introduces critical theories and techniques for visualizing interconnected transformations of urban, environmental, and planetary systems amidst the pressures of climate change, urbanization, and global economies of capitalism. Weekly lectures will introduce major themes and theoretical debates, paired with hands-on lab tutorials exploring a selection of methods in conventional and experimental geographic visualization. Thematically, the course will be organized around critical interpretations of the Anthropocene, a concept designating the epoch in which anthropogenic activities are recognized as the dominant force of planetary climatic and ecological change. We will present these interpretations through modules structured around different conceptual paradigms and alternative epochal designations (e.g. the Urbanocene, the Capitalocene, the Plantationocene). Through weekly lab exercises and a final, synthetic project, the course will move from critically analyzing prevalent theoretical frameworks, geospatial data, and associated visualization techniques to creatively visualizing critical alternatives. Students will learn how to construct visual narratives through a variety of spatial media (e.g. maps, diagrams, visual timelines), scales (e.g. bodies, neighborhoods, landscapes, the planetary), and techniques/platforms (e.g. GIS, web mapping, basic programming language tools, and vector/raster visualization programs).
Instructor(s): Alexander Arroyo, Grga Basic Terms Offered: Spring Winter
Equivalent Course(s): ARCH 23517, ARTV 20665, DIGS 23517, MAAD 13517, ENST 23517

CEGU 24102. Environmental Politics. 100 Units.
Politics determines not only what particular faction holds power, but the parameters upon which contests for power are conducted. Competing political factions may diverge in the details of the policies they favor, but may agree on a central organizing principle upon which their policy differences are contested. This course acknowledges that such principles exist and structure politics, economics, and social arrangements, but also challenges the notion that these are immutable, and argues that other principles could be substituted which would drastically change these arrangements. The course introduces students to alternative theories of economics, politics, and environmental policy that challenge mainstream notions of what is acceptable under the current structural and institutional constraints, including how the retreat to notions of realism and practicality place limits on changes necessary to preserve and protect the natural environment.
Instructor(s): R. Lodato Terms Offered: Spring
Equivalent Course(s): PBPL 24102, ENST 24102

CEGU 24106. Introduction to Environmental Ethics. 100 Units.
This course will examine answers to four questions that have been foundational to environmental ethics: Are religious traditions responsible for environmental crises? To what degree can religions address environmental crises? Does the natural world have intrinsic value in addition to instrumental value to humans, and does the type of value the world has imply anything about human responsibility? What point of view (anthropocentrism, biocentrism, theocentrism) should ground an environmental ethic? We will examine a constellation of responses to each question through texts from a wide variety of religious and philosophical perspectives. The course prioritizes theoretical issues in environmental ethics that can relate to many different applied subjects (e.g. energy, water, animals, climate change) rather than emphasizing these applied issues themselves. Taking this focus will give you a solid background for future work in these areas.
Instructor(s): Sarah Fredericks Terms Offered: Autumn
Note(s): This course meets the CS Committee distribution requirement for Divinity students. Undergraduates must petition to enroll.
Equivalent Course(s): KNOW 30702, RETH 30702

CEGU 24110. Nature and the Natural in the Middle Ages. 100 Units.
In this course we will undertake a study of nature and ideas about what is “natural” centered around three main axes, and will adopt a variety of relevant critical perspectives (e.g., ecocriticism, studies of gender and sexuality, political theory) to support our analyses. First, we will explore nature as the created world of which humans are a part (as one of God’s creations), yet from which they also stand apart (as sovereign caretakers). Second, we will examine how the diffusion of Aristotelian works (notably the Politics) in the later Middle Ages provided a justificatory framework for social and political hierarchies and practices of economic exploitation. Third, we will consider the intersection of nature with gender, sexuality, and reproduction, a topic complicated by the fact that Nature is itself represented, in allegorical terms, as a woman.
Instructor(s): Daisy Delogu Terms Offered: Autumn
Prerequisite(s): Reading knowledge of French for all students. FREN 20500, 20503 or a literature course taught in French for those seeking credit for the French major/minor.
Note(s): Taught in English.
Equivalent Course(s): GNSE 24103, MDVL 24103, GNSE 34103, FREN 24100, ENST 24110, FREN 34100

CEGU 24190. Imagining Chicago's Common Buildings. 100 Units.
This course is an architectural studio based in the common residential buildings of Chicago and the city’s built environment. While design projects and architectural skills will be the focus of the course, it will also incorporate readings, a small amount of writing, some social and geographical history, and several explorations around Chicago. The studio will: (1) give students interested in pursuing architecture or the study of cities experience with a studio course and some skills related to architectural thinking, (2) acquaint students intimately with Chicago’s common residential buildings and built fabric, and (3) situate all this within a context of social thought about residential architecture, common buildings, housing, and the city. This course is part of the College Course Cluster program: Urban Design.
Instructor(s): L. Joyner Terms Offered: Autumn
Note(s): While this class does not require prior experience, all ARCH studio courses require consent. Starting July 31, please visit arthistory.uchicago.edu/archconsent to request instructor consent for this class or other ARCH studios. (Please do not send consent requests by email.) Please also note that this course will include several field trips around Chicago during class time; if you have any questions or concerns about that, please share them in the consent form when you complete it.
Equivalent Course(s): ARCH 24190, CHST 24190, ENST 24190, AMER 24190, GEOG 24190, ARTV 20210, ARTH 24190

CEGU 24191. City Imagined, City Observed. 100 Units.
This urban design studio course takes two distinct notions of the city as its starting point: grand, imaginative plans — utopian, unbuilt, semi-realized, real… both as aesthetic objects, and as ideas — and how the minute flows of day-to-day life, up from the smallest scale, enter into dialogue with little built and lived details, intended or not. Drawing on both Chicago and other places (not just urban) that individual students know well, we will
dream both big and small, search both present and past, and tap precisely into both what we dream and what we experience... seeking not to dictate what the city will be, but to use these different modes of understanding to expand our sense of what a city can be. Necessarily, we'll grapple with difficult contradictions cities pose, our most central personal assumptions about spaces and places, and with questions of how, especially in present-day capitalism, cities change. We take as given the inevitable gap between how places actually evolve and how, perhaps, they could, and use that gap as a site for the imagination to step in, while also confronting the hubris of imagining cities real. The studio work will proceed in three stages: individually developing an alternate vision for a place you know well, at a historical moment of your choice... then breaking each others' plans... and finally using real observations and factors (and even spontaneous impulse) to complicate and rebuild your vision into something lovelier.

Instructor(s): L. Joyner Terms Offered: Winter
Note(s): Consent is required to enroll in this class. Priority will be given to students who have completed ARTH 24190.
Equivalent Course(s): ENST 24191, ARTH 24191, GEOG 24191, CHST 24191, ARTV 20205, ARCH 24191, AMER 24191

CEGU 24193. Water Water Everywhere? 100 Units.
This interdisciplinary course explores aesthetics, environmental racism, and a human rights approach to the Commons to inform our perspective on the politics and aesthetics of water from the local to the global. The course will look at issues of scarcity and abundance through the lenses of art and human rights. The course will incorporate work by artist Iñigo Manglano-Ovalle, who will visit the class. Students will consider works by other artists including Mel Chin, Allan Kaprow, LaToya Ruby Frazier, and Fazal Sheikh, to understand how art can confront the 21st century’s environmental challenges. Readings will include Susan Sontag’s Regarding the Pain of Others, and Fred Moten & Stefano Harney’s The Undercommons. The course will include visits to site specific installations by artists Iñigo Manglano-Ovalle and Mel Chin, and visits to Chicago-area natural sites such as the Big Marsh and Lake Michigan. This course is an extension of a collaborative project at the Gray Center for Arts and Inquiry with human rights lawyer Susan Gzesh, artist Iñigo Manglano-Ovalle, and curator Abigail Winograd.
Instructor(s): S. Gzesh, Staff Terms Offered: September Term
Prerequisite(s): Third- or fourth-year standing
Note(s): Students must attend first class to confirm enrollment.
Equivalent Course(s): CHST 24193, ARTH 24193, SOSC 21005, HMRT 24193, ENST 24193, BPRO 24193

CEGU 24196. Second Nature: New Models for the Chicago Park District. 100 Units.
The Chicago Park District seems to preserve “first nature” within the metropolitan field. But the motive for establishing this sovereign territory was hardly natural. Today, cultural change raises questions about the significance and operation of this immense network of civic spaces. What opportunities emerge as we rethink them? While this design studio focuses on the development of new model parks for Chicago, it can support students coming from a broad range of disciplines. Texts, seminar discussions, and field trips will complement and nourish the development of architectural proposals.
Instructor(s): A. Schachman Terms Offered: Autumn
Prerequisite(s): Consent only
Note(s): Students must attend first class to confirm enrollment. Please also note that architecture studio courses comprise one 80-minute meeting and one 170-minute meeting per week. Scroll down to see timing.
Equivalent Course(s): CHST 24193, ARTH 24193, SOSC 21005, HMRT 24193, ENST 24193, BPRO 24193

CEGU 24600. Introduction to Urban Sciences. 100 Units.
This course is a grand tour of conceptual frameworks, general phenomena, emerging data and policy applications that define a growing scientific integrated understanding of cities and urbanization. It starts with a general outlook of current worldwide explosive urbanization and associated changes in social, economic and environmental indicators. It then introduces a number of historical models, from sociology, economics and geography that have been proposed to understand how cities operate. We will discuss how these and other facets of cities can be integrated as dynamical complex systems and derive their general characteristics as social networks embedded in structured physical spaces. Resulting general properties of cities will be illustrated in different geographic and historical contexts, including an understanding of urban resource flows, emergent institutions and the division of labor and knowledge as drivers of innovation and economic growth. The second part of the course will deal with issues of inequality, heterogeneity and (sustainable) growth in cities. We will explore how these features of cities present different realities and opportunities to different individuals and how these appear as spatially concentrated (dis)advantage that shape people’s life courses. We will show how issues of inequality also have consequences at more macroscopic levels and derive the general features of population and economic growth for systems of cities and nations.
Instructor(s): Luis Bettencourt Terms Offered: TBD. Not offered in 2023-2024 academic year.
Prerequisite(s): STAT 22000
Equivalent Course(s): PBPL 24605, SOCI 20285, GISC 34600, GISC 24600, ENST 24600

CEGU 24660. Urban Geography. 100 Units.
This course examines the spatial organization and current restructuring of modern cities in light of the economic, social, cultural, and political forces that shape them. It explores the systematic interactions between social process and physical system. We cover basic concepts of urbanism and urbanization, systems of cities urban growth,
CEGU 24701. U.S. Environmental Policy. 100 Units.
How environmental issues and challenges in the United States are addressed is subject to abrupt changes and reversals caused by extreme partisanship and the heightened significance of the issues for the health of the planet and all its inhabitants. The relatively brief history of this policy area, and the separate and distinct tracts in which public lands and pollution control issues are adjudicated, makes for a diverse and complex process by which humanity’s impact on the natural world is managed and contained. This course focuses on how both types of environmental issues are addressed in each branch of the Federal government, the states and localities, as well as theories of how environmental issues arrived onto the public agenda and why attention to them is cyclical.
Students are encouraged to understand the life cycle of public policy from its initial arrival on the public agenda to the passage of legislation to address adverse conditions, as well as how changes in the policy occur after the inevitable decline of intensive attention.
Instructor(s): R. Lodato Terms Offered: Winter
Note(s): This course counts towards the ENST 4th year Capstone requirement.
Equivalent Course(s): ENST 24701, PBPL 24701

CEGU 24705. Energy: Science, Technology, and Human Usage. 100 Units.
This course covers the technologies by which humans appropriate energy for industrial and societal use, from steam turbines to internal combustion engines to photovoltaics. We also discuss the physics and economics of the resulting human energy system: fuel sources and relationship to energy flows in the Earth system; and modeling and simulation of energy production and use. Our goal is to provide a technical foundation for students interested in careers in the energy industry or in energy policy. Field trips required to major energy converters (e.g., coal-fired and nuclear power plants, oil refinery, biogas digester) and users (e.g., steel, fertilizer production). This course is part of the College Course Cluster program: Climate Change, Culture and Society.
Instructor(s): E. Moyer Terms Offered: Spring
Prerequisite(s): Knowledge of physics or consent of instructor
Equivalent Course(s): ENST 24705, GEOG 34705, ENSC 21100, GEOG 24705

CEGU 24776. International Environmental Policy. 100 Units.
Environmental issues have become a prominent part of the work of international organizations and their member nations. However, the resolution to issues and concerns shared in common by the nations of the world often faces obstacles based on access to wealth and resources, political and military power, and the demands of international economic institutions. While multinational agreements have been achieved and successfully implemented, resolutions to issues such as climate change have been harder to achieve. The course will look at the origins of international cooperation on environmental issues, several case studies of issues upon which the international community has attempted to bring about cooperative solutions (climate change, the ozone hole, climate refugees, etc.), and the work that regional associations of nations have done to jointly address shared environmental challenges. In addition, speakers from various consulates have addressed the class to discuss environmental policymaking in their countries.
Instructor(s): R. Lodato Terms Offered: Spring
Note(s): This course counts towards the ENST 4th year Capstone requirement.
Equivalent Course(s): ENST 24776, PBPL 24776, ENST 24776

CEGU 24830. Oil, Power, Modernity: The Anthropology of Energy. 100 Units.
Oil is often regarded as the quintessential commodity of modern industrial capitalism. Oil is a material substrate of power-as a source of energy, an impetus for warfare, and a source of windfall revenue for multinational corporations and petrostates. This undergraduate seminar surveys social scientific approaches to oil and adjacent energy complexes. This seminar will debate the character of oil as a material substance and an instrument of political power. To this end, students will consult the writings of anthropologists, geographers, and economists alongside creative media including film, television, and short stories.
Instructor(s): Ryan Jobson Terms Offered: TBD
Note(s): Course is designed for undergraduates and master’s students
Equivalent Course(s): LACS 34830, LACS 24830, ANTH 24830, ANTH 35515

CEGU 24918. Early Traveling Writing: Pausanias in Roman Greece. 100 Units.
Through a close reading of Pausanias, who wrote his Description of Greece during the Roman imperial period, this course explores ancient forms of travel writing and associated interests in the places, peoples, myths, ruins, and material objects of the Mediterranean world. Moving from the apparent ethnographic lens of earlier Greek literature to Roman imperialist expeditions, readings and discussions will examine the sociopolitical contexts out of which Pausanias emerged as a literary author, and his legacies in and relationship to the wide array of genres of modern travel writing, from Lewis and Clark to John Steinbeck. Key topics will include: movement through space, tourism, nature, landscape, town and country, sites and spectacles, myth, ritual, and acts of remembering and forgetting.
Instructor(s): Catherine Kearns Terms Offered: Winter
Equivalent Course(s): ENST 24918, FNDL 24918, CLAS 34918, ANCM 34918, CLCV 24918
CEGU 25012. Undergraduate research seminar: Chicago Urban Morphology. 100 Units.
This seminar is open to Seniors and Juniors, particularly for but not necessarily limited to those in the fields of geography, environmental science, and urban studies. It is designed for students to undertake original research on a topic of their own choosing within the broad scope of Chicago's built environment. Following a brief reading course in the theoretical literature of urban morphology, each student will identify and select a topic of interest to research using Chicago sources, with the objective of a formal written research paper. Discussions will center around formulating research questions, theoretical underpinnings, suitable methodology, modes of writing, appropriate presentation of evidence, and effective illustration. Sessions will combine open discussion with a rotating series of periodic individual progress reports to the group, reflecting an interesting diversity of topics and mutual support in gaining experience in the research process.
Instructor(s): Michael Conzen Terms Offered: Winter
Note(s): Restricted to 3rd and 4th years This course counts towards the ENST 4th year Capstone requirement.
Equivalent Course(s): SOCI 20552, PBPL 25012, GEOG 25012, CHST 25012, ENST 25012, ARCH 25012

CEGU 25014. Introduction to Environmental History. 100 Units.
How have humans interacted with the environment over time? This course introduces students to the methods and topics of environmental history by way of classic and recent works in the field: Crosby, Cronon, Worster, Russell, and McNeill, etc. Major topics of investigation include preservationism, ecological imperialism, evolutionary history, forest conservation, organic and industrial agriculture, labor history, the commons and land reform, energy consumption, and climate change. Our scope covers the whole period from 1492 with case studies from European, the Americas, and British imperial history.
Instructor(s): F. Albritton Jonsson Terms Offered: Winter
Equivalent Course(s): ENST 25014, HIST 35014, HIST 25014, HIPS 25014, CHSS 35014

CEGU 25130. Social Theory for a Green New Deal. 100 Units.
U.S. House Resolution 109—popularly known as the Green New Deal—pledges a systemic corrective to the social and ecological harms of late industrial capitalism. With a particular focus on questions of economic and environmental justice, this seminar anthropologically assesses the prospect of a Green New Deal and its potential relationship to society, policy, and the built environment. Thinking relationally across scales and systems, we will consider the stakes of this large-scale yet still largely undefined legislative proposal and its implications for the social contract in a warming world. Attending to the ways in which race, class, and gender inform late industrial life, the seminar will explore (via the environmental humanities and feminist & indigenous STS) concepts such as stewardship, climate justice, environmental racism, intergenerational ethics, more-than-human ontologies, and the Anthropocene (plus alternative frames).
Instructor(s): Journey, Rebecca Terms Offered: TBD
Equivalent Course(s): ENST 25130, ANTH 23812, GLST 25130

CEGU 25704. Environmental Justice in Chicago. 100 Units.
This course will examine the development of environmental justice theory and practice through social scientific and ethical literature about the subject as well as primary source accounts of environmental injustices. We will focus on environmental justice issues in Chicago including, but not limited to waste disposal, toxic air and water, the Chicago heat wave, and climate change. Particular attention will be paid to environmental racism and the often understudied role of religion in environmental justice theory and practice. Throughout the course we will explore how normative commitments are expressed in different types of literature as well as the basis for normative judgments and the types of authorities authors utilize and claim as they consider environmental justice.
Instructor(s): Sarah Fredericks Terms Offered: Winter
Note(s): Graduate students need permission to enroll and will have additional requirements.
Equivalent Course(s): Rlst 25704, PBPL 25704, KNOW 25704, CHST 25704, AMER 25704, ENST 25704, HMRT 25704, CRES 25704

CEGU 25705. Climate Ethics. 100 Units.
Anthropogenic climate change is the largest challenge facing human civilization. Its physical and temporal scale and unprecedented complexity at minimum require extensions of existing ethical systems, if not new ethical tools. In this course we will examine how religious and philosophical ethical systems respond to the vast temporal and spatial scales of climate change. For instance, common principles of environmental ethics such as justice and responsibility are often reimagined in climate ethics even as they are central to the ethical analysis of its effects. In the course, we will take a comparative approach to environmental ethics, examining perspectives from secular Western philosophy, Christianity (Catholic and Protestant), Buddhist, and Indigenous thought. We will also look at a variety of ethical methods. Throughout the course we will focus on communication about climate change as well as articulating rigorous ethical arguments about its causes and implications.
Instructor(s): Sarah Fredericks Terms Offered: Spring
Equivalent Course(s): Rlst 25703, ENST 25705

CEGU 26100. Roots of the Modern American City. 100 Units.
This course traces the economic, social, and physical development of the city in North America from pre-European times to the mid-twentieth century. We emphasize evolving regional urban systems, the changing spatial organization of people and land use in urban areas, and the developing distinctiveness of American urban landscapes. All-day Illinois field trip required. This course is part of the College Course Cluster, Urban Design.
Instructor(s): M. Conzen Terms Offered: Autumn. Offered 2021-22
Note(s): This course counts towards the ENST 4th year Capstone requirement. This course offered in odd years.
Equivalent Course(s): HIST 38900, ARCH 26100, HIST 28900, ENST 26100, CEGU 36100, CHST 26100

CEGU 26106. Tropical Commodities in Latin America. 100 Units.
This colloquium explores selected aspects of the social, economic, environmental, and cultural history of tropical export commodities from Latin America--e.g., coffee, bananas, sugar, tobacco, henequen, rubber, vanilla, and cocaine. Topics include land, labor, capital, markets, transport, geopolitics, power, taste, and consumption.
Instructor(s): E. Kourí Terms Offered: Winter
Equivalent Course(s): LACS 26106, HIST 36106, LACS 36106, HIST 26106

CEGU 26260. Environmental Justice in Principle and Practice. 100 Units.
This course will investigate the foundational texts on environmental justice as well as case studies, both in and out of Chicago. Students will consider issues across a wide spectrum of concerns, including toxics, lead in water, waste management, and access to greenspaces, particularly in urban areas. These topics will be taught in accompaniment with a broader understanding of how social change occurs, what barriers exist to producing just outcomes, and what practices have worked to overcome obstacles in the past. The class will welcome speakers from a variety of backgrounds to address their work on these topics.
Instructor(s): Ray Lodato Terms Offered: Winter
Note(s): This course counts towards the ENST 4th year Capstone requirement. This course will cover the same content as ENST 26255.
Equivalent Course(s): ENST 26260, PBPL 26260, CHST 26259

CEGU 26330. Making the Maya World. 100 Units.
What do we know about the ancient Maya? Pyramids, palaces, and temples are found from Mexico to Honduras, texts in hieroglyphic script record the histories of kings and queens who ruled those cities, and painted murals, carved stone stelae, and ceramic vessels provide a glimpse of complex geopolitical dynamics and social hierarchies. Decades of archaeological research have expanded that view beyond the rulers and elites to explore the daily lives of the Maya people, networks of trade and market exchange, and agricultural and ritual practices. Present-day Maya communities attest to the dynamism and vitality of languages and traditions, often entangled in the politics of archaeological heritage and tourism. This course is a wide-ranging exploration of ancient Maya civilization and of the various ways archaeologists, anthropologists, linguists, historians, and indigenous communities have examined and manipulated the Maya past. From tropes of long-hidden mysteries rescued from the jungle to New Age appropriations of pre-Columbian rituals, from the thrill of decipherment to painstaking and technical artifact studies, we will examine how models drawn from astrology, ethnography, classical archaeology and philology, political science, and popular culture have shaped current understandings of the ancient Maya world, and also how the Maya world has, at times, resisted easy appropriation and defined expectations.
Instructor(s): Sarah Newman Terms Offered: TBD
Equivalent Course(s): ANTH 26330, LACS 26330, LACS 36330, ANTH 36330

CEGU 26382. Development and Environment in Latin America. 100 Units.
Description: This course will consider the relationship between development and the environment in Latin America and the Caribbean. We will consider the social, political, and economic effects of natural resource extraction, the quest to improve places and peoples, and attendant ecological transformations, from the onset of European colonialism in the fifteenth century, to state- and private-led improvement policies in the twentieth. Some questions we will consider are: How have policies affected the sustainability of land use in the last five centuries? In what ways has the modern impetus for development, beginning in the nineteenth century and reaching its current intensity in the mid-twentieth, shifted ideas and practices of sustainability in both environmental and social terms? And, more broadly, to what extent does the notion of development help us explain the historical relationship between humans and the environment?
Instructor(s): Diana Schwartz Francisco Terms Offered: Winter
Equivalent Course(s): HIST 26317, GEOG 26382, ANTH 23094, LACS 26382, GLST 26382, LACS 36382, ENST 26382, HIST 36317, HIPS 26382

CEGU 26383. Mapping Global Chicago Research Lab: Environmental Justice and Diaspora. 100 Units.
Mapping Global Chicago is a collaborative, interdisciplinary undergraduate research initiative investigating the idea of the "global city." This year, we will investigate the relationships that people have with nature. In particular, we will ask: How do the environmental injustices that immigrants may have faced in their regions of origin compare to the ones they may face here in the diaspora of Chicago? How does facing environmental injustice impact people's relationships with land and nature? What are the environmental justice issues in people's regions of origin and in Chicago? Why do those issues exist? We will be working in partnership with the community organization Semillas y Raíces, whose mission is committed to building community and healing trauma through Indigenous practices, including gardening. Students from across disciplines are encouraged to participate in this lab. The lab has been student-designed and will take shape according to diverse student interests and skill sets, including but not limited to ethnographic fieldwork, interviews, surveys, Geographic Information Science, and data science. Working collaboratively, students will produce public scholarship to be featured on the Mapping Global Chicago website (https://mappingglobalchicago.rcc.uchicago.edu/). This course may be repeated for credit.
Environment, Geography, and Urbanization

Instructor(s): Callie Maidhof  Terms Offered: Spring
Prerequisite(s): Please contact Prof. Callie Maidhof (cmaidhof@uchicago.edu) or TA Bek Erl (bek@uchicago.edu) with any questions.
Equivalent Course(s): PBPL 26383, ENST 26383, CHST 26383, GLST 26383

CEGU 26400. Quantitative Methods in Public Policy. 100 Units.
This class will provide an introduction to quantitative analysis in public policy. Much of the class is devoted to learning about the effects of policies and answering empirical, policy-relevant questions from observational data. In doing so, the course provides an introduction to critical and quantitative thinking in general. Students will be introduced to the basic toolkit of policy analysis, which includes sampling, hypothesis testing, Bayesian inference, regression, experiments, instrumental variables, differences in differences, and regression discontinuity. Students will also learn how to use a statistical software program to organize and analyze data. More importantly, students will learn the principles of critical thinking essential for careful and credible policy analysis.
Instructor(s): Anthony Fowler  Terms Offered: Winter
Equivalent Course(s): PBPL 26400

Instructor(s): Crystal Bae  Terms Offered: Autumn. Offered 2023-24
Equivalent Course(s): GISC 37100, GISC 27100, CHST 27100

CEGU 27110. Cartographic Design and Geovisualization. 100 Units.
This course is a hands-on introduction to core principles and techniques associated with cartographic design, especially with regards to digital map design and the geographic visualization of data. Main topics include map generalization, symbology, scale, visual variables, scales of measurement, 2D and 3D design, map animation and interaction, and web mapping. Students will work with open-source GIS software and web tools, culminating in a final project and peer critique.
Instructor(s): Crystal Bae  Terms Offered: Autumn. Offered 2023-24
Equivalent Course(s): GISC 37100, GISC 27100, CHST 27100

CEGU 27155. Urban Design with Nature. 100 Units.
This course will use the Chicago region as the setting to evaluate the social, environmental, and economic effects of alternative forms of human settlement. Students will examine the history, theory and practice of designing cities in sustainable ways - i.e., human settlements that are socially just, economically viable, and environmentally sound. Students will explore the literature on sustainable urban design from a variety of perspectives, and then focus on how sustainability theories play out in the Chicago region. How can Chicago's neighborhoods be designed to promote environmental, social, and economic sustainability goals? This course is part of the College Course Cluster program: Urban Design.
Instructor(s): Sabina Shaikh and Emily Talen  Terms Offered: Autumn
Note(s): This course counts towards the ENST 4th year Capstone requirement. Restricted to 3rd and 4th year students
Equivalent Course(s): ENST 27155, CHST 27155, PBPL 27156, GISC 27155, BPRO 27155

CEGU 27450. Cities in Motion: the Architecture of Public Transit. 100 Units.
How do you get from A to B? Within and between today's urbanized areas, that seemingly simple question has become one of the most fraught and intractable problems. This course seeks to address questions about public transit across scales, from pedestrian and bicycle infrastructure at the level of individual intersections and blocks up to regional train networks and beyond. Like other design studio courses, the class will be project-based, and will ask students to develop a wide understanding of existing systems, but also to learn through creative design projects that expand their sense of what's possible. After working together to understand many existing transit solutions across different scales, to come to terms with and document Chicago's transit landscape, and to dream speculatively about untested transit possibilities both low- and high-tech, students will focus on building a portfolio of creative suggestions for their respective "clients" (e.g., the University of Chicago, the 4th Ward Alderman). Alongside this project work, assigned readings and explorations around Chicago will immerse students in the culture and philosophy of moving people and things, across different moments past, present and future.
Instructor(s): L. Joyner  Terms Offered: Winter
Note(s): While this class does not require prior experience, all ARCH studio courses require consent. Starting November 6, please visit arthistory.uchicago.edu/archconsent to request instructor consent for this class or other ARCH studios. (Please do not send consent requests by email.)
Equivalent Course(s): ARTH 27450, ENST 27450
CEGU 27521. Energy in World Civilizations I. 100 Units.
This two-quarter course explores the historical roots of climate change and other global environmental problems with a special attention to how energy use shapes human societies over time. Part I covers energy systems across the world from prehistory to the end of the nineteenth century.
Instructor(s): F. Albritton Jonsson Terms Offered: Winter
Prerequisite(s): Parts I and II should be taken in sequence. This sequence meets the general education requirement in civilization studies.
Equivalent Course(s): HIST 17521, HIPS 17521, ENST 27521

CEGU 27522. Energy in World Civilizations II. 100 Units.
This two-quarter course explores the historical roots of climate change and other global environmental problems with a special attention to how energy use shapes human societies over time. Part II covers energy systems across the world from the early twentieth century to the present, examining themes such as the uneven globalization of energy-intensive lifestyles, the changing geopolitics of energy, and possible futures beyond fossil-fuel dependence.
Instructor(s): J. Mead Terms Offered: Spring
Prerequisite(s): Parts I and II should be taken in sequence. This sequence meets the general education requirement in civilization studies.
Equivalent Course(s): HIST 17522, HIPS 17522, ENST 27522

CEGU 28307. Global Environmental Humanities. 100 Units.
This course is an introduction to the interdisciplinary field of environmental humanities, which calls on us to study the global environment, and the threats posed by globalization and climate change, using the tools of history, cultural studies, philosophy, and literature. Reading texts from these and other disciplines, we will attend to the ways that "environment" registers in political, aesthetic, and social life across the globe. Sample authors: Fernand Braudel, William Cronon, Dipesh Chakrabarty, Amitav Ghosh, Ursula Heise, Joseph Masco, Jed Purdy, Anna Tsing.
Instructor(s): Isabel Gabel Terms Offered: Autumn. Offered in Autumn 2023
Equivalent Course(s): HIST 25422, KNOW 28307, CHSS 38307, HIPS 28307, ENST 28307, KNOW 38307

CEGU 28702. Introduction to GIS and Spatial Analysis. 100 Units.
This course provides an introduction and overview of how spatial thinking is translated into specific methods to handle geographic information and the statistical analysis of such information. This is not a course to learn a specific GIS software program, but the goal is to learn how to think about spatial aspects of research questions, as they pertain to how the data are collected, organized and transformed, and how these spatial aspects affect statistical methods. The focus is on research questions relevant in the social sciences, which inspires the selection of the particular methods that are covered. Examples include spatial data integration (spatial join), transformations between different spatial scales (overlay), the computation of "spatial" variables (distance, buffer, shortest path), geovisualization, visual analytics, and the assessment of spatial autocorrelation (the lack of independence among spatial variables). The methods will be illustrated by means of open source software such as QGIS and R.
Instructor(s): Crystal Bae Terms Offered: Spring Summer. Offered 2023-24
Equivalent Course(s): ENST 28702, SOCI 30283, GISC 38702, GISC 28702, ARCH 28702, SOCI 20283

CEGU 28728. Climate Change and Society: Human Impacts, Adaptation, and Policy Solutions. 100 Units.
Time is running out to prevent the worst impacts of climate change. The next decade will be critical both for the transformation of society and learning to adapt to changes that cannot be avoided, and climate change will be a key part of everyday life. This class discusses how we face this global challenge. During the course, our focus will be on the impacts of climate change upon society, and the necessity of solutions that deal with the global scope, local scales, and often unequal nature of the impacts. This interdisciplinary course covers the tools and insights from economic analysis, environmental science, and statistics that inform our understanding of climate change impacts, the design of mitigation and adaptation policies, and the implementation of these policies. Students will develop a mastery of key conceptual ideas from multiple disciplines relevant for climate change and acquire tools for conducting analyses of climate impacts and policies. The latter parts of the course will hone students' ability to apply and communicate these insights through practical analysis of national policies and writing op-eds about climate-related issues. The goal is to help students from any background become informed and critically-minded practitioners of climate-informed policy making, able to communicate the urgency to any audience.
Instructor(s): Jina. A. Terms Offered: Winter
Note(s): This course is intended to be accessible to people from all disciplines and backgrounds interested in climate solutions. Some introduction to statistics and economics (e.g., PBPL 20000 or ECON 20000) may be helpful, but definitely not essential.
Equivalent Course(s): PBPL 28728, ENST 28728

CEGU 29400. Climate Change and Human Mobility. 100 Units.
A 2021 UN report estimated that 21.5 million people have been forced to move, each year, for over a decade, due to climate change. The report states: "weather-related crises have triggered more than twice as much displacement as conflict and violence in the last decade" (UNHCR, 2021). In spite of mounting evidence that climate change is to blame for these catastrophic weather-related events and associated increases in migration,
the UNHCR eligibility criteria for refugee status doesn’t include climate change. Due to political challenges involved in considering such a definition change, the UN convened member states to establish a global compact for migration that takes the effects of climate change into consideration. The Global Compact suggests rights and obligations of climate change migrants, and standards to guide sovereign states in protecting these rights. Given the growth in climate change related migration over the last decade, and the complicated nature of implementation with such a broad international instrument such as the Global Compact, there is much room for development within the climate change and human mobility sector. This course will: examine the issue of climate change and its relationship to human mobility using human rights, political ecology, and social policy perspectives; consider how these different perspectives for understanding the problem suggest different types of policy solutions; and consider the impact of these solutions for those affected.

Terms Offered: TBD
Equivalent Course(s): SSAD 69400, HMRT 39401, SSAD 29400, CHST 29400, CEGU 69400, ENST 29400

CEGU 29520. Sustainability and Computing. 100 Units.
Once a darling of the economy, the computing industry has come under fire as “techlash” brings a spotlight to its negative environmental and societal impacts. We focus on understanding computing’s environmental impact, and the productive and substantial (not greenwashing) actions that can be taken to reduce it. The objective of this course is to expose students to a sophisticated view of how computing affects the environment, and how it can become more sustainable through action in several dimensions, including technology invention and design, business/ecosystem structure, individual and government action. Students will be empowered with the intellectual tools to understand and act with insight on these issues in their professional careers.
Prerequisite(s): Students must be in their third or fourth year of study.
Note(s): This course may be used as a College elective, but not as a CS major elective.
Equivalent Course(s): ENST 29520, CMSC 39520, BPRO 29520, CMSC 29520

CEGU 29801. BA Colloquium I. 100 Units.
This colloquium is designed to aid students in their thesis research. Students are exposed to different conceptual frameworks and research strategies. The class meets weekly.
Instructor(s): Sabina Shaikh Terms Offered: Autumn
Prerequisite(s): Students must have an approved topic proposal and a faculty reader.
Equivalent Course(s): ENST 29801

CEGU 29802. BA Colloquium II. 100 Units.
This colloquium assists students in conceptualizing, researching, and writing their BA theses.
Instructor(s): Christopher Kindell Terms Offered: Winter
Prerequisite(s): Students must have an approved topic proposal and a faculty reader.
Equivalent Course(s): ENST 29802
