ENVIRONMENTAL SCIENCE

Department Website: http://geosci.uchicago.edu

PROGRAM OF STUDY

The Department of the Geophysical Sciences offers a BS degree in Environmental Science. The program is intended for students whose interests fall at the intersection of biology, chemistry, and earth sciences, and is designed to prepare them to enter a variety of interdisciplinary fields in the environmental sciences, including the interface of environmental science and public policy. Students are given the opportunity to study such topics as the biogeochemical cycles, environmental chemistry, microbiology, ecology, the chemistry and dynamics of the ocean and atmosphere, climate change, and environmentally relevant aspects of economics and policy. Students are encouraged to participate in the Semester in Environmental Science at the Marine Biological Laboratory, and undergraduate research is also strongly encouraged.

PROGRAM REQUIREMENTS FOR THE BS IN ENVIRONMENTAL SCIENCE

The requirements for the BS degree in Environmental Science involve completion of:

- six required courses that fulfill general education requirements for the physical sciences, biological sciences, and mathematics
- seven required science or mathematics courses
- eleven elective courses pertinent to the major from the electives lists below, which must include
  - four courses designated ENSC or GEOS
  - one course in Statistics, and two more in any of Mathematics, Statistics, or Computing
  - one to three courses in Social Science/Public Policy

Candidates for the BS in Environmental Science complete a year of chemistry, a year of mathematics (including Calculus I-II), and a year of biology (ENSC 24400 Ecology and Conservation, GEOS 27300 Biological Evolution-Advanced, and BIOS 20198 Biodiversity), as well as PHYS 13100 Mechanics or the equivalent. (Note that some advanced chemistry courses require further physics as a prerequisite.)

Students are encouraged to begin discipline-specific courses as early as possible. Required disciplinary courses include ENSC 13300 The Atmosphere, ENSC 23800 Global Biogeochemical Cycles, and ENSC 24400 Ecology and Conservation. (Note that ENSC 23800 Global Biogeochemical Cycles is typically offered every other year.) Of ENSC/GEOS science electives, one can be a field course, and one may be ENSC 29700 Reading and Research in Environmental Science. Students participating in the Semester in Environmental Science receive credit for four courses in environmental science, two of which can be used to substitute for ENSC 24400 Ecology and Conservation and ENSC 24500 Environmental Microbiology.

The major is designed to be flexible enough to accommodate students whose primary interests cover various aspects of environmental science. Sample course schedules below give examples of course plans appropriate to students focusing on climatology, conservation, and biogeochemistry. Students with a focus on policy questions may take up to three courses in social science/public policy. These courses are available through undergraduate programs in Economics (http://collegecatalog.uchicago.edu/thecollege/economics/), Public Policy Studies (http://collegecatalog.uchicago.edu/thecollege/publicpolicystudies/), and Environmental and Urban Studies (http://collegecatalog.uchicago.edu/thecollege/environmentalstudies/), or through the Harris School of Public Policy (http://collegecatalog.uchicago.edu/harrispolicy/courses/).

Because analysis of data and mathematical modeling are fundamental to environmental science, the major requires six courses in quantitative methods: a year of mathematics, one course in statistics, and two additional courses in mathematics, statistics, or computing.

Note that while students taking calculus through the more introductory MATH 13000s sequence are encouraged to complete the third quarter of calculus, MATH 13300 Elementary Functions and Calculus III, in the higher tracks Calculus III (e.g., MATH 15300 Calculus III) is not specifically required or recommended, as the first two courses offer a sufficiently comprehensive calculus training for students to move on to other courses. Depending on the choice of electives, students may credit as many as nine Mathematics/Statistics/Computing courses toward the major.

SUMMARY OF REQUIREMENTS FOR THE BS IN ENVIRONMENTAL SCIENCE

GENERAL EDUCATION

<table>
<thead>
<tr>
<th>Sequence</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 10100 &amp; CHEM 10200</td>
<td>Introductory General Chemistry I and Introductory General Chemistry II</td>
</tr>
<tr>
<td>CHEM 11100-11200</td>
<td>Comprehensive General Chemistry I-II*</td>
</tr>
<tr>
<td>CHEM 12100 &amp; CHEM 12200</td>
<td>Honors General Chemistry I and Honors General Chemistry II</td>
</tr>
</tbody>
</table>
One of the following sequences: 200
- MATH 13100-13200 Elementary Functions and Calculus I-II *
- MATH 15100-15200 Calculus I-II
- MATH 16100-16200 Honors Calculus I-II
Both of the following: **
- BIOS 20198 Biodiversity
- GEOS 27300 Biological Evolution-Advanced %

Total Units 600

MAJOR
ENSC 13300 The Atmosphere 100
ENSC 23800 Global Biogeochemical Cycles 100
ENSC 23900 Environmental Chemistry 100
ENSC 24400 Ecology and Conservation 100
CHEM 11300 Comprehensive General Chemistry III * 100
or CHEM 12300 Honors General Chemistry III

One of the following: 100
- PHYS 12100 General Physics I ‡
- PHYS 13100 Mechanics
- PHYS 14100 Honors Mechanics

One of the following: 100
- MATH 18300 Mathematical Methods in the Physical Sciences I
- MATH 20250 Abstract Linear Algebra
- PHYS 22000 Introduction to Mathematical Methods in Physics
- BIOS 20152 Introduction to Quantitative Modeling in Biology (Advanced)
- MATH 13300 Elementary Functions and Calculus III *
- MATH 15300 Calculus III
- MATH 16300 Honors Calculus III

Eleven electives as follows: 1100
- Four courses designated ENSC or GEOS from List E-1: Physical and Biological Sciences
- One course from List E-2: Social Sciences
- Three courses from List E-3: Computational Sciences, of which one must be under the heading of Statistics
- Three more courses from any of the elective lists, but only up to two of these may be from List E-2: Social Sciences

Total Units 1800

* Credit may be granted by examination.

** Only students majoring in Environmental Science or Geophysical Sciences may use this pairing toward the general education requirement in the Biological Sciences. Environmental Science and Geophysical Sciences majors can take these courses without the BIOS prerequisites (BIOS 20150-20151/20152) unless they pursue a double major in Biological Sciences. They are expected to show competency in mathematical modeling of biological phenomena covered in BIOS 20151/20152.

‡ PHYS 13100 or PHYS 14100 are the preferred courses. PHYS 12100 is allowable on a case-by-case basis but may not provide adequate preparation to allow for enrollment in higher level PHYS courses. Additionally, PHYS 12100 has a prerequisite of a year of Chemistry. Special petition to the department counselor is required for PHYS 12100 approval.

% Biological Evolution-Advanced has several cross-listings. Environmental Sciences majors must register for it under the GEOS 27300 listing.

LISTS OF ELECTIVE COURSES
LIST E-1: PHYSICAL AND BIOLOGICAL SCIENCES
ENSC 21100 Energy: Science, Technology, and Human Usage 100
ENSC 24000 Geobiology 100
The following courses are the College designations for the Semester in Environmental Science that is taught at the Marine Biological Laboratory (MBL) in Woods Hole, Massachusetts. One quarter at MBL counts for four courses: ENSC 23820, ENSC 24100, ENSC 29800, and an elective of ENSC 24200, ENSC 24300, or ENSC 28100. Admission to the Semester in Environmental Science program is by application, which must be received by the MBL generally in March of the year preceding the start of the semester. Admissions decisions will generally be sent in April. Note that these courses start at the beginning of September, typically four weeks prior to the start of the College’s Autumn Quarter and are completed by the end of Autumn Quarter. More information on the course content and the application process, and deadlines can be found at college.uchicago.edu/academics/semester-environmental-science. (https://college.uchicago.edu/academics/semester-environmental-science/)

Students participating in the Semester in Environmental Science receive credit for four courses in environmental science, two of which can be used to substitute for ENSC 24400 Ecology and Conservation and ENSC 23900 Environmental Chemistry.

ENSC 23820 Biogeochemical Analysis in Terrestrial and Aquatic Ecosystems # Marine Biological Laboratory 100
ENSC 24100 Ecology - Marine Biological Laboratory 100
ENSC 29800 Independent Undergraduate Research in Environmental Sciences Marine Biological Laboratory 100
ENSC 24200 Methods in Microbial Ecology - Marine Biological Laboratory 100
ENSC 24300 Roles of Animals in Ecosystems # Marine Biological Laboratory 100
ENSC 28100 Quantitative Environmental Analyses # Marine Biological Laboratory 100

FIELD COURSES IN ENVIRONMENTAL SCIENCE

The department sponsors field trips that range in length from one day to several weeks. Shorter field trips typically form part of lecture-based courses and are offered each year. (The trips are open to all students and faculty if space permits.) Longer trips are designed as undergraduate field courses, and one such course may be used as an elective science course for the major. Destinations of field courses have recently included Baja California and the Bahamas. (http://collegecatalog.uchicago.edu/thecollege/geophysicalsciences/#_msocom_1)

ENSC 29002 Field Course in Modern and Ancient Environments 100

GEOPHYSICAL SCIENCES

GEOS 21000 Mineralogy 100
GEOS 21400 Thermodynamics and Phase Change 100
GEOS 22060 What Makes a Planet Habitable? 100
GEOS 22200 Geochronology 100
GEOS 22700 Analytical Techniques in Geochemistry 100
GEOS 23205 Introductory Glaciology 100
GEOS 23600 Chemical Oceanography 100
GEOS 24220 Climate Foundations 100
GEOS 24230 Geophysical Fluid Dynamics: Foundations 100
GEOS 24240 Geophysical Fluid Dynamics: Rotation and Stratification 100
GEOS 24250 Geophysical Fluid Dynamics: Understanding the Motions of the Atmosphere and Oceans 100
GEOS 24300 Paleoclimatology 100
GEOS 24750 Humans in the Earth System 100
GEOS 25400 Intro to Numerical Techniques for Geophysical Sciences 100
GEOS 26100 Phylogenetics and the Fossil Record 100
GEOS 26300 Invertebrate Paleobiology and Evolution 100
GEOS 28600 The Science of Landscapes 100

CHEMISTRY

CHEM 20100-20200 Inorganic Chemistry I-II 200
CHEM 22000-22100-22200 Organic Chemistry I-II-III 300
CHEM 23300 Intermediate Organic Chemistry * 100
CHEM 26100-26200-26300 Quantum Mechanics; Thermodynamics; Chemical Kinetics and Dynamics ** 300
### Biology and Ecology***

- BIOS 20200: Introduction to Biochemistry 100
- BIOS 23232: Ecology and Evolution in the Southwest 100
- BIOS 23252: Field Ecology 100
- BIOS 23254: Mammalian Ecology 100
- BIOS 23258: Molecular Evolution I: Fundamentals and Principles 100
- BIOS 23266: Evolutionary Adaptation 100
- BIOS 23289: Marine Ecology 100
- BIOS 23404: Reconstructing the Tree of Life: An Introduction to Phylogenetics 100
- BIOS 23406: Biogeography 100
- BIOS 25206: Fundamentals of Bacterial Physiology 100

### Physics

- PHYS 12200 & PHYS 12300: General Physics II and General Physics III 200
- PHYS 13200-13300: Electricity and Magnetism; Waves, Optics, and Heat 200
- PHYS 14200-14300: Honors Electricity and Magnetism; Honors Waves, Optics, and Heat 200
- PHYS 18500: Intermediate Mechanics 100
- PHYS 22500: Intermediate Electricity and Magnetism I 100
- PHYS 22600: Electronics 100
- PHYS 22700: Intermediate Electricity and Magnetism II 100

* Enrollment in CHEM 23300 requires a grade of C or higher in CHEM 22200 or 23200
** Prerequisites include MATH 20100 and PHYS 13300
*** ENSC majors can take these courses without the BIOS prerequisites (20150-20151) unless they pursue a double major in biology. Students are expected to show competency in the mathematical modeling of biological phenomena covered in BIOS 20151.
† PHYS 13200-13300 or PHYS 14200-14300 are the preferred sequences. PHYS 12200-12300 is allowable on a case-by-case basis but may not provide adequate preparation to allow for enrollment in higher level PHYS courses. Special petition to the department counselor is required for PHYS 12100-12200-12300 approval.

### List E-2: Social Sciences

#### Microeconomics Foundations

Students may take one of the following:

- ECON 10000: Principles of Microeconomics 100
- ECON 20000: The Elements of Economic Analysis I* 100
- ECON 20100: The Elements of Economic Analysis II* 100
- PBPL 20000: Economics for Public Policy 100
- PPFA 32300: Principles of Microeconomics and Public Policy I* 100
- PPFA 32400: Principles of Microeconomics and Public Policy II* 100

#### Other Social Science Electives

(Note that many courses below require microeconomics as a prerequisite)

- ECON 10200: Principles of Macroeconomics 100
- ENST 23550: Urban Ecology and the Nature of Cities 100
- ENST 24102: Environmental Politics 100
- PBPL 21800: Economics and Environmental Policy 100
- PBPL 23100: Environmental Law 100
- PBPL 24701: U.S. Environmental Policy 100
- PBPL 26530: Environment, Agriculture, and Food: Economic and Policy Analysis 100
- PPFA 36921: Energy Economics and Policy 100
- PPFA 36930: Environmental Economics: Theory and Applications 100
- PPFA 38900: Environmental Science/Policy 100
- PPFA 39901: Policy Approaches to Mitigating Climate Change 100
List E-3: Computational Sciences

<td>100</td>
</tr>
</tbody>
</table>

* Recommended prerequisite is MATH 19620 or MATH 15300 or MATH 16300
** Would generally substitute for MATH 20000-20100
*** Recommended in addition to MATH 20000-20100 for advanced students—covers partial differential equations
‡ Must be taken as a sequence
‡‡ Higher programming component than STAT 22000
§ Recommended for advanced students. Must be taken as a sequence to be credited. STAT 24400-24500 have no prerequisite but it is possible to take both STAT 23400 and STAT 24400-24500.
§§ AP credit for STAT 22000 does not count toward the major requirements. Students with AP credit for STAT 22000 should plan to take at least three other courses from List E-3: Computational Sciences, one of which must be under the heading of Statistics.
Students seeking to double major in Computer Science must complete CMSC 12100-12200-12300 as a sequence per the Computer Science rule.

GRADING

Students majoring in Environmental Science must receive quality grades in all courses taken to meet requirements in the major.

HONORS

The BS degree with honors is awarded to students who meet the following requirements: (1) a GPA of 3.25 or higher in the major and of 3.0 or higher overall; (2) completion of a paper based on original research, supervised and approved by a faculty member in geophysical sciences; (3) an oral presentation of the thesis research. All theses will be examined by the supervisor and a second reader from the faculty. Manuscript drafts will generally be due in the sixth week of the quarter in which the student will graduate (fifth week in Summer Quarter), and final manuscripts and oral presentations in the eighth week (seventh week in Summer Quarter).

Students are strongly encouraged to reach out to potential faculty supervisors no later than their third year, since theses generally arise out of research projects already begun with faculty members. When a thesis topic is determined, students should notify the undergraduate adviser of their intent to complete a thesis and confirm their eligibility. ENSC 29700 Reading and Research in Environmental Science can be devoted to the preparation of the required paper; however, students using this course to meet a requirement in the major must take it for a quality grade.

Students who wish to submit a single paper to meet the honors requirement in Environmental Science and the BA paper requirement in another major should discuss their proposals with the undergraduate advisers from both programs no later than the end of third year. Certain requirements must be met. A consent form, to be signed by the undergraduate advisers, is available from the College adviser. It must be completed and returned to the College adviser by the end of Autumn Quarter of the student’s year of graduation.

SAMPLE BS PROGRAMS

Each student will design an individual plan of course work, choosing from a wide range of selections that take advantage of rich offerings from a variety of subdisciplines. The sample programs that appear below are merely for the purpose of illustration; many other variations would be possible. NOTE: Courses that meet general education requirements and are required for the major are not listed.

ENVS 29700 Reading and Research in Environmental Science can be devoted to the preparation of the required paper; however, students using this course to meet a requirement in the major must take it for a quality grade.

**Environmental Science Courses**

**ENSC 13300. The Atmosphere. 100 Units.**
This course introduces the physics, chemistry, and phenomenology of the Earth's atmosphere, with an emphasis on the fundamental science that underlies atmospheric behavior and climate. Topics include (1) atmospheric composition, evolution, and structure; (2) solar and terrestrial radiation in the atmospheric energy balance; (3) the role of water in determining atmospheric structure; and (4) wind systems, including the global circulation, and weather systems.

Instructor(s): T. Shaw Terms Offered: Spring
Prerequisite(s): MATH 13100-MATH 13200
Equivalent Course(s): ENST 13300, GEOS 13300

**ENSC 13400. Global Warming: Understanding the Forecast. 100 Units.**
This course presents the science behind the forecast of global warming to enable the student to evaluate the likelihood and potential severity of anthropogenic climate change in the coming centuries. It includes an overview of the physics of the greenhouse effect, including comparisons with Venus and Mars; an overview of the carbon cycle in its role as a global thermostat; predictions and reliability of climate model forecasts of the greenhouse world. This course is part of the College Course Cluster program, Climate Change, Culture, and Society. (L)

Instructor(s): D. MacAyeal Terms Offered: PHSC 13400 is no longer offered; PHSC 13410 is the replacement
Prerequisite(s): Some knowledge of chemistry or physics helpful.
Equivalent Course(s): ENST 13400, GEOS 13400, PHSC 13400

**ENSC 13410. Global Warming: Understanding the Forecast (Flipped Class) 100 Units.**
This course presents the science behind the forecast of global warming to enable the student to evaluate the likelihood and potential severity of anthropogenic climate change in the coming centuries. It includes an overview of the physics of the greenhouse effect, including comparisons with Venus and Mars; predictions and reliability of climate model forecasts of the greenhouse world. This course is part of the College Course Cluster program, Climate Change, Culture, and Society. This course covers the same material as PHSC 13400, but is organized using a flipped classroom approach in order to increase student engagement and learning.

Instructor(s): D. Abbot Terms Offered: Autumn Spring
Prerequisite(s): Some knowledge of chemistry or physics helpful.
Equivalent Course(s): PHSC 13410, GEOS 13410, ENST 13410

**ENSC 21100. Energy: Science, Technology, and Human Usage. 100 Units.**
This course covers the technologies by which humans appropriate energy for industrial and societal use, from steam turbines to internal combustion engines to photovoltaics. We also discuss the physics and economics of the resulting human energy system: fuel sources and relationship to energy flows in the Earth system; and modeling and simulation of energy production and use. Our goal is to provide a technical foundation for students interested in careers in the energy industry or in energy policy. Field trips required to major energy converters (e.g., coal-fired and nuclear power plants, oil refinery, biogas digester) and users (e.g., steel, fertilizer production). This course is part of the College Course Cluster program: Climate Change, Culture and Society.

Instructor(s): E. Moyer
Prerequisite(s): Knowledge of physics or consent of instructor.
Note(s): See GEOS 24750/ENSC 21150.
Equivalent Course(s): GEOS 24705, GEOS 34705, ENST 24705

**ENSC 21150. Humans in the Earth System. 100 Units.**
Human activities now have global-scale impact on the Earth, affecting many major biogeochemical cycles. One third of the Earth's surface is now used for production of food for humans, and CO2, the waste product of human energy use, now substantially affects the Earth's radiative balance. This course provides a framework for understanding humanity as a component of Earth system science. The course covers the Earth's energy flows and cycles of water, carbon, and nitrogen; their interactions; and the role that humans now play in modifying them. Both agriculture and energy technologies can be seen as appropriation of natural energy flows, and we cover the history over which human appropriations have become globally significant. The course merges geophysical and biological sciences and engineering, and includes lab sessions and field trips to agriculture, water management, and energy facilities to promote intuition. One year of university-level science is recommended.

Terms Offered: Spring
Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn. L.

ENSC 24100. Ecology - Marine Biological Laboratory. 100 Units.
This course examines the structure and functioning of terrestrial and aquatic ecosystems including the application of basic principles of community and ecosystem ecology. The course also examines contemporary environmental problems such as the impacts of global and local environmental change on community composition and food webs within forest, grassland, marsh and nearshore coastal ecosystems on Cape Cod. This course examines the structure and functioning of terrestrial and aquatic ecosystems including the application of basic principles of community and ecosystem ecology. The course also examines contemporary environmental problems such as the impacts of global and local environmental change on community composition and food webs within forest, grassland, marsh and nearshore coastal ecosystems on Cape Cod.
Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn. L.
Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710 and BIOS 27711 along with one of BIOS 27713, BIOS 27714 or BIOS 27715.
Equivalent Course(s): BIOS 27710

ENSC 24200. Methods in Microbial Ecology - Marine Biological Laboratory. 100 Units.
This course explores the biology of microbes found in the environment, including relationships with the physical, chemical, and biotic elements of their environment. Emphasis is placed on understanding the science underlying the various methodologies used in the study of these organisms and systems. In the laboratory, students will work with the latest techniques to measure microbial biomass, activity, extracellular enzymes, and biogeochemical processes. Students are also introduced to molecular methods for assessing microbial genomic diversity.
Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn. L.
Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710, BIOS 27711 and BIOS 27712.
Equivalent Course(s): BIOS 27714

ENSC 24300. Roles of Animals in Ecosystems - Marine Biological Laboratory. 100 Units.
This course addresses the question, How do animals, including man, affect the structure and function of ecosystems. The course takes an interdisciplinary approach focused on the interactions of animal diversity, migration patterns, population dynamics, and behavior with biogeochemical cycles, productivity, and transport of materials across ecosystems. This course is an elective option within the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA.
Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn
Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710, BIOS 27711, and BIOS 27712.
Equivalent Course(s): BIOS 27715

ENSC 24400. Ecology and Conservation. 100 Units.
This course focuses on the contribution of ecological theory to the understanding of current issues in conservation biology. We emphasize quantitative methods and their use for applied problems in ecology (e.g., risk of extinction, impact of harvesting, role of species interaction, analysis of global change). Course material is drawn mostly from current primary literature; lab and field components complement concepts taught through lecture. Prerequisite(s): BIOS 20150, BIOS 20151 or BIOS 20152 Note(s): BIOS 20196 is identical to the previously offered BIOS 23251. Students who have taken BIOS 23251 should not enroll in BIOS 20196. Equivalent Course(s): ENSC 24400
Instructor(s): C. Pfister, E. Larsen Terms Offered: Autumn. L.
Prerequisite(s): BIOS 20150, BIOS 20151 or BIOS 20152
Note(s): BIOS 20196 is identical to the previously offered BIOS 23251. Students who have taken BIOS 23251 should not enroll in BIOS 20196. Equivalent Course(s): BIOS 20196

ENSC 24500. Environmental Microbiology. 100 Units.
The objective of this course is to understand how microorganisms alter the geochemistry of their environment. The course will cover fundamental principles of microbial growth, metabolism, genetics, diversity, and ecology, as well as methods used to study microbial communities and activities. It will emphasize microbial roles in elemental cycling, bioremediation, climate, and ecosystem health in a variety of environments including aquatic, soil, sediment, and engineered systems.
Instructor(s): M. Coleman Terms Offered: Autumn
Prerequisite(s): CHEM 11100-11200 and BIOS 20186 or BIOS 20196 or BIOS 20198 Equivalent Course(s): GEOS 36650, GEOS 26650

ENSC 28100. Quantitative Environmental Analyses - Marine Biological Laboratory. 100 Units.
This course emphasizes the application of quantitative methods to answering ecological questions. Students apply mathematical modeling approaches to simulating biological and chemical phenomena in terrestrial and marine ecosystems.
Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn. L.
Prerequisite(s): Consent Only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710, BIOS 27711 and BIOS 27712.
Equivalent Course(s): BIOS 27713

ENSC 29002. Field Course in Modern and Ancient Environments. 100 Units.
This course uses weekly seminars during Winter Quarter to prepare for a one-week field trip over spring break, where students acquire experience with sedimentary rocks and the modern processes responsible for them, learn field methods, and complete an original research project. We consider biological as well as physical processes of sediment production, dispersal, accumulation, and post-depositional modification. Destinations vary; past trips have examined tropical carbonate systems of Jamaica and the Bahamas and subtropical coastal Gulf of California.
Instructor(s): S. Kidwell, M. LaBarbera Terms Offered: Winter
Note(s): Organizational meeting and deposit usually required in Autumn Quarter; interested students should contact an instructor in advance. Enrollment allowed by permission of instructor.
Equivalent Course(s): GEOS 29002, GEOS 39002

**ENSC 29700. Reading and Research in Environmental Science. 100 Units.**
Independent study; regular meetings with Geophysical Sciences faculty member required. Register by section corresponding to faculty supervisor.
Terms Offered: Autumn Spring Summer Winter
Prerequisite(s): Consent of instructor and departmental counselor
Note(s): Students are required to submit the College Reading and Research Course Form. Available to nonmajors for P/F grading. Must be taken for a quality grade when used to meet a requirement in the major.

**ENSC 29800. Independent Undergraduate Research in Environmental Sciences Marine Biological Laboratory. 100 Units.**
This course is the culmination of the Semester in Environmental Science at the Marine Biological Laboratory. An independent research project, on a topic in aquatic or terrestrial ecosystem ecology, is required. Students will participate in a seminar for scientific communication as well as submit a final paper on their project.
Instructor(s): Marine Biological Laboratory Staff Terms Offered: Autumn.
Prerequisite(s): Consent only. Admission by application to the Semester in Environmental Science program at the Marine Biological Laboratory in Woods Hole, MA; concurrent registration in BIOS 27710 and BIOS 27711 along with one of BIOS 27713, BIOS 27714 or BIOS 27715.
Equivalent Course(s): BIOS 27712
