History, Philosophy, and Social Studies of Science and Medicine (HIPS)

Program of Study

The BA program in the History, Philosophy, and Social Studies of Science and Medicine (HIPS) is designed for College students interested in studying science in terms of its historical development, conceptual structure, and social role. Students in the program must do sufficient work in one or more sciences to acquire a sound foundation for studying the nature of science. After securing this basis, they are expected to gain an understanding of how science arose, as well as how the content of scientific thought has changed and is changing, because of both its own internal dynamic and its interaction with the larger society in which it is embedded.

The HIPS program is designed to make possible the study of a wide range of social, historical, and conceptual issues relating to science. Students completing the program follow a number of different careers. Some pursue graduate study in the history and philosophy of science or in some field of science. Others find the program valuable preparation for the study of medicine, law, public policy, or science journalism. More generally, the goal of the program is to provide students with a sound basis on which to interpret and evaluate science and science policy. Some students choose to construct a degree program combining the requirements for the HIPS major with those for a major in the physical or biological sciences. Others, having met the HIPS program requirements, use electives to broaden their liberal arts education.

Students in other fields of study may also complete a minor in HIPS. Information follows the description of the major.

HIPS Sponsor

The Morris Fishbein Center for the History of Science and Medicine sponsors the HIPS program. Further information can be obtained in the center’s office (SS 207) and at fishbein.uchicago.edu (http://fishbein.uchicago.edu).

Program Requirements

Elements of the Curriculum. The curriculum of the program contains five principal elements:

1. The Foundation. All students must:

   a. complete an approved sequence that fulfills the biological sciences general education requirement;
   
   b. complete the general education requirement in the physical sciences with a physics sequence (PHYS 12100-12200 General Physics I-II or equivalent) or a chemistry sequence (CHEM 11100-11200 Comprehensive General Chemistry I-II, CHEM 10100 Introductory General Chemistry I and CHEM 10200 Introductory General Chemistry II, or equivalent), or have earned a score of 5 on the AP Chemistry or Physics test or a score of 4 or 5 on the AP Physics C Mechanics and E&M test;
   
   c. complete a calculus sequence (MATH 13100-13200 Elementary Functions and Calculus I-II or higher), or have earned a score of 5 on the AP Calculus BC test;
   
   d. complete three courses on the origins and development of science in the West: one course in each of the following three chronological periods: ancient, early modern, and modern.

2. Advanced Science. In addition to the science courses typically taken as part of the general education requirements, students are expected to take three courses in science, social sciences, or mathematics beyond the introductory level. They select these advanced courses according to their special aims, their area of concentration, and the subject of their bachelor’s thesis.

3. Areas of Concentration. All students in the program determine an area of concentration in the anthropology, ethics, history, philosophy, or sociology of science and medicine. In consultation with the program director and their program adviser, students select five courses to constitute this concentration area. For example, some students may be particularly interested in the intellectual and social interactions between changing scientific knowledge and institutions, on the one hand, and evolving social institutions, on the other; a second group may be concerned with either epistemological issues related to the growth of science or moral and political problems attending the employment of technology; and a third group may wish to emphasize the study of science as a social or cultural activity.

4. Tutorials. Students are required to take two tutorial courses; this is typically done early in their program. With a specific focus that changes each year, these tutorials are small classes (from three to ten students) that
emphasize discussion and writing. An updated list of courses is available in the HIPS office (SS 207) or at registrar.uchicago.edu/classes (http://registrar.uchicago.edu/classes/).

5. Bachelor’s Thesis and Junior Seminar. Third-year students enroll in a designated one-quarter seminar (HIPS 29800 Junior Seminar: My Favorite Readings in the History and Philosophy of Science) that deals with general aspects of history, philosophy, and social studies of science and medicine. In Spring Quarter of their third year, students must discuss their proposal for their bachelor’s thesis with the program director. In consultation with the program director, students then sign up for a reading and research course (HIPS 29700 Readings and Research in History, Philosophy, and Social Studies of Science and Medicine) with an appropriate faculty member. In their fourth year, this research course should lead to a bachelor’s thesis (HIPS 29900 Bachelor’s Thesis) that integrates each student’s academic studies, bringing them to bear on a significant question related to some historical, conceptual, ethical, or social aspect of science. Fourth-year students also enroll in a two-quarter HIPS 29810 Bachelor’s Thesis Workshop, which is comprised of meetings that focus on organizing, researching, writing, and revising the thesis.

SUMMARY OF REQUIREMENTS

GENERAL EDUCATION

Three courses: one from each of the following chronological periods: 300
- Ancient: HIPS 18300
- Early Modern: HIPS 18400-18403
- Modern: HIPS 18500-18503
An approved sequence that fulfills the biological sciences general education requirement 200
One of the following sequences: 200
- CHEM 10100 & CHEM 10200 Introductory General Chemistry I and Introductory General Chemistry II (or equivalent) *
- CHEM 11100-11200 Comprehensive General Chemistry I-II (or equivalent) *
- PHYS 12100-12200 General Physics I-II (or higher) *
- MATH 13100-13200 Elementary Functions and Calculus I-II (or higher) *

Total Units 900

MAJOR

Three courses in science, social sciences, or mathematics beyond the introductory level 300
Five courses in an area of concentration 500
Two tutorials 200
HIPS 29700 Readings and Research in History, Philosophy, and Social Studies of Science and Medicine 100
HIPS 29800 Junior Seminar: My Favorite Readings in the History and Philosophy of Science 100
HIPS 29900 Bachelor’s Thesis 100
HIPS 29810 Bachelor’s Thesis Workshop 100

Total Units 1400

* Credit may be granted by examination.

EXAMPLES OF CONCENTRATIONS

The following are meant to illustrate areas of concentration. They are not prescriptive, only suggestive. For the particular courses that might constitute their area of concentration, students should consult with the director of the program, examine this course catalog, and visit registrar.uchicago.edu/classes (http://registrar.uchicago.edu/classes/).

History and Philosophy of Biological Science

- HIPS 23600 History and Theory of Human Evolution 100
- BIOS 29321 Problem of Evil: Disease? 100
- HIPS 23900 Biological and Cultural Evolution 100
- HIPS 25801 Evolutionary Theory and Its Role in the Human Sciences 100
- HIPS 27860 History of Evolutionary Behavioral Sciences 100

Total Units 500

Philosophy of Science

- HIPS 22000 Introduction to Philosophy of Science 100
- HIPS 25104 History and Philosophy of Biology 100
History of Medicine and Medical Ethics

**ADMISSION**

To be eligible for admission, students should have completed at least two of the four foundation course sequences listed in the preceding section and should have maintained a 3.2 GPA or higher in previous coursework. Students should apply for admission no later than Autumn Quarter of their third year to the director of the program. The director advises students about the requirements, arranges a preliminary plan of study, and discusses scheduling conflicts and special cases. Thereafter, a student chooses, in consultation with the director, a BA adviser from the staff.

**HONORS**

Students who meet the following criteria are considered for graduation with honors: (1) overall GPA of 3.3 or higher, (2) completion of a bachelor’s thesis of A quality, and (3) a majority vote by the faculty in favor of honors.

**GRADING**

Students majoring in HIPS must receive quality grades in all courses meeting the requirements of the degree program, except HIPS 29810 Bachelor's Thesis Workshop, which must be taken for Pass/Fail grading. Nonmajors may take courses for Pass/Fail grading with consent of instructor.

**ADVISERS**

Drawn from many parts of the University, those listed in the Faculty Section of the HIPS program have direct responsibility for admitting students, formulating curriculum, and advising students.

**MINOR PROGRAM IN HISTORY, PHILOSOPHY, AND SOCIAL STUDIES OF SCIENCE AND MEDICINE**

Students in other fields of study may complete a minor in HIPS, which offers students who are majoring in science the opportunity to gain an understanding of the conceptual, historical, and social contexts in which their disciplines are situated.

The minor requires a total of six courses. Courses in the minor (1) may not be double counted with the student’s major(s) or with other minors and (2) may not be counted toward general education requirements. Courses in the minor must be taken for quality grades, and more than half of the requirements for the minor must be met by registering for courses bearing University of Chicago course numbers.

Students should take at least two courses focusing on the origins and development of science in the West (one course in each of two of the following chronological periods: ancient, early modern, and modern) to meet the general education requirement in civilization studies. Additional courses in these sequences that are not used to meet the general education requirement can count toward courses required for the minor.

Students must complete one tutorial course.

The remaining five courses for the minor program should constitute an area of concentration in the anthropology, ethics, history, philosophy, or sociology of science and medicine. Students select the courses that constitute this concentration in consultation with the program director and their program adviser.

Students who elect the minor program in HIPS should meet with the program director before the end of Spring Quarter of their third year to declare their intention to complete the program. The director's approval for the minor program should be submitted to the student's College adviser by the deadline above on the Consent to Complete a Minor Program (https://humanities-web.s3.us-east-2.amazonaws.com/college-prod/s3fs-public/documents/Consent_Minor_Program.pdf) form obtained from the College adviser or online.

The following groups of courses would satisfy the requirements for a minor in HIPS. They are only meant to illustrate possible plans of study; they are not prescriptive.

History, Philosophy, and Social Studies of Science and Medicine Courses

Please visit this page (https://chss.uchicago.edu/content/fishbein-center/current-courses/) for a list of currently offered courses.

HIPS 18300, HIPS 18400–18403, and HIPS 18500–18503 Science, Culture, and Society in Western Civilization

These courses focus on the origins and development of science in the West. They aim to trace the evolution of the biological, psychological, natural, and mathematical sciences as they emerge from the culture and social matrix of their periods and, in turn, affect culture and social. In order to satisfy the general education requirement in civilization studies, students must take a course in two or three of the following chronological periods: ancient (numbered HIPS 18300), early modern (HIPS 18400–18403), and modern (HIPS 18500–18503). Taking these courses in sequence is recommended but not required. Only one course per category may count toward the requirement unless special approval is granted.

HIPS 18301. Science, Culture, and Society in Western Civilization I: Ancient Science and Medicine. 100 Units.

This undergraduate course represents the first quarter of the Science, Culture, and Society in Western Civilization general education sequence. Taking these courses in sequence is recommended but not required. This quarter will focus on science and medicine in societies across the ancient world. Students will gain an introduction to methods of healing and knowing practiced in Africa, Asia, Europe, and North and South America before 1500. Students will also acquire an understanding of the many questions that historical research raises for our own understanding of contemporary medicine and science, and some of the methods that historians use to bring the past to light. Topics include ancient surgery and pharmacology; the manifold meanings of “disease;” the function and recognition of “the body,” of “mind,” and of perception; how to acquire “good” and “true” knowledge; continuity and discontinuity of beliefs and practices over time and place; and exchange of ideas and materials across cultures, among other subjects.

Instructor(s): Michael Rossi
Terms Offered: Winter. Offered in Winter 2023
Equivalent Course(s): HIST 17311

HIPS 18400. Science, Culture, and Society in Western Civilization II: Renaissance to Enlightenment. 100 Units.

This lecture-discussion course examines the development science and scientific philosophy from the mid-fifteenth to the mid-nineteenth centuries. The considerations begin with the recovery of an ancient knowledge in the works of Leonardo, Vesalius, Harvey, and Copernicus. Thereafter the course will focus on Enlightenment science, as represented by Galileo, Descartes, Newton, and Hume. The course will culminate with the work of Darwin, who utilized traditional concepts to inaugurate modern science. For each class, the instructor will provide a short introductory lecture on the texts, and then open discussion to pursue with students the unexpected accomplishments of the authors under scrutiny.

Instructor(s): R. Richards
Terms Offered: Winter. Course is offered in Winter 2022
Equivalent Course(s): KNOW 18400, HIST 17410

HIPS 18401. Science, Culture, and Society in Western Civilization II: History of Medicine 1500 to 1900. 100 Units.

This course examines the theory and practice of medicine between 1500 and 1900. Topics include traditional early modern medicine; novel understandings of anatomy, physiology, and disease from the Renaissance on; and new forms of medical practice, training, and knowledge-making that developed in the eighteenth and nineteenth centuries.

Instructor(s): M. Rossi
Terms Offered: Autumn. Course is not offered in 2021-2022 Academic Year
Equivalent Course(s): HIST 17411
HIPS 18402. Science, Culture, and Society in Western Civilization II: The Scientific Revolution. 100 Units.
This course focuses on one of the most radical transformations in the history of Western thought: the so-called "Scientific Revolution." In addition to analyzing the origin and development of Copernicanism, Galilean mechanics, and Paracelsian alchemy-among other revolutionary ideas-we will examine several institutional and methodological innovations that profoundly altered how early modern Europeans investigated the natural world, including the advent of the experimental philosophy and the creation of scientific academies.
Instructor(s): Zachary Barr Terms Offered: Autumn. Offered Autumn 2021

HIPS 18501. Science, Culture, and Society in Western Civilization III: History of Medicine 1900-Present. 100 Units.
This course is an examination of various themes in the history of medicine in Western Europe and America since 1900. Topics include key developments of medical theory (e.g., the circulation of the blood and germ theory), relations between doctors and patients, rivalries between different kinds of healers and therapists, and the development of the hospital and laboratory medicine.
Instructor(s): M. Rossi Terms Offered: Winter. Course is not offered in 2021-2022 Academic Year
Equivalent Course(s): HIST 17511

HIPS 18502. Science, Culture, and Society in Western Civilization III: The Environment. 100 Units.
This course charts the development of modern science and technology with special reference to the environment. Major themes include natural history and empire, political economy in the Enlightenment, the discovery of deep time and evolutionary theory, the dawn of the fossil fuel economy, Malthusian anxieties about overpopulation, the birth of ecology, the Cold War development of climate science, the postwar debates about the limits to growth, and the emergence of modern environmentalism. We will end with the new science of the Anthropocene.
Instructor(s): F. Albritton Jonsson Terms Offered: Spring. Course is not offered in 2021-2022 Academic Year
Equivalent Course(s): HIST 17512

HIPS 18505. Science, Culture, and Society in Western Civilization III: Histories of the Bomb. 100 Units.
In the long history of the planet, the years since 1945 have a remarkable and unique geological signature: one left by the creation and testing of atomic weapons, medicine, and energy. This class explores the intellectual, social, economic, and political histories of nuclear research, including topics such as transnational scientific migrations; the Manhattan Project; weapons testing and development; the rise of "Big Science"; postcolonial histories of nuclear development; domestic and international anti-nuclear activism; and ecological and environmental impacts of fallout, waste, and nuclear accidents. Drawing on both primary and secondary sources, we will consider how the story we tell about the history of the nuclear age and the rise of science came to be, and how that story has transformed at different points in the twentieth century.
Instructor(s): Paula Martin Terms Offered: Winter. Offered in Spring 2022
Note(s): This course counts as a Foundations Course for GNSE majors
Equivalent Course(s): HIST 17515

HIPS 12103. Treating Trans-: Practices of Medicine, Practices of Theory. 100 Units.
Medical disciplines from psychiatry to surgery have all attempted to identify and to treat gendered misalignment, while queer theory and feminisms have simultaneously tried to understand if and how trans-theories should be integrated into their respective intellectual projects. This course looks at the logics of the medical treatment of transgender (and trans- more broadly) in order to consider the mutual entanglement of clinical processes with theoretical ones. Over the quarter we will read ethnographic accounts and theoretical essays, listen to oral histories, discuss the intersections of race and ability with gender, and interrogate concepts like "material bodies" and "objective science". Primary course questions include: 1.
Instructor(s): Zachary Barr Terms Offered: Autumn. Offered Autumn 2021

HIPS 15000. Common-Year Seminar: Science and the State. 100 Units.
The end of knowledge is power," wrote the English philosopher Thomas Hobbes in 1665. This introductory seminar looks at the interwining historical relationships between states and the making of scientific knowledge and global political power from the eighteenth century to the present day. In this seminar, we will look at how past societies have wrestled with questions like the place of scientific expertise in different systems of government; the dynamics of state vs. private support for scientific research; and the coproduction of state power and scientific knowledge.
Instructor(s): E. Kern Terms Offered: Autumn
Prerequisite(s): Open to 1st- and 2nd-yr students who are interested in history.
Note(s): Common-Year Seminars are small courses that address big themes. Classes introduce newer, readable, and accessible literature and teach writing skills for history classes at the college level. Assignments: two short papers and one final paper.
Equivalent Course(s): HIST 15000

HIPS 15100. Visualization and Biology: Science, Culture, and Representation. 100 Units.
How do scientific images get made? This deceptively simple question lies at the heart of this course. Over three weeks at the MBL, we will examine the techniques, technologies, philosophies and histories of scientific image making, with a particular focus on marine biology. Rather than simply reading theories of visualization and representation, students will immerse themselves in the making of images themselves. Students will perform
hands-on work with historical and contemporary theories and techniques of microscopy, taxonomy, anatomy, and specimen collecting. They will also examine the theoretical, philosophical, and ethical underpinnings of those practices. Through a combination of ethnographic (participant observation) and historical (archival) work, students will develop rich accounts of scientific visualization - from matters of objectivity and instrumentation, to problems of vision and the limits of (human) senses, to questions of aesthetics, abstraction, and representation. During the course, students will have the opportunity to work with Marine Biological Laboratory faculty, have access to laboratory and archives, and will develop new data and novel accounts of the social, cultural, and technical creation of scientific images.

Instructor(s): Michael Paul Rossi
Terms Offered: Autumn
Prerequisite(s): Consent Only
Note(s): Prerequisite: Consent Only. Course meets for three weeks, 9/9 thru 9/27 (5–6 days/week, 8 hours per day), at Marine Biological Laboratories, in Woods Hole Massachusetts. Course will be part of Autumn quarter course load. For more information see http://college.uchicago.edu/academics/mbl-september-courses
Equivalent Course(s): ENST 25111, ANTH 23809, HIST 14904

HIPS 18506. Science, Culture, and Society in Western Civilization III: Modern Science. 100 Units.
This course will examine the constitutive relationship between major sociopolitical and scientific events in Western and Central Europe between 1815 and 1945, including the role of the post-Napoleonic "Vienna System" in the consolidation of the statistical style of reasoning in France and the connection between interwar politics and the rise of eugenics. By the end of the course, students should have a better understanding of a critical period in European history and acquired a set of theoretical tools for understanding how sociopolitical and epistemic developments are related.

Instructor(s): Zachary Barr
Terms Offered: Spring, Spring 2023
Note(s): Satisfies the Core CIV requirement as the third course in the Science, Culture, and Society in Western Civilization sequence (modern period).
Equivalent Course(s): HIST 17516

HIPS 20033. Reading Race. 100 Units.
Before and since Anthropology became a discrete scientific field of study, questions about the biological reality, potential utility and misuse of the concept of race in Homo sapiens have been debated. We will read and discuss a sample of writings by 18th, 19th, and 20th century and contemporary authors who attempted to define human races and those who have promoted or debunked the utility of the concept of race with special attention to its role in retarding social progress, and the extermination and exploitation of some populations and individuals.

Instructor(s): Russell Tuttle
Equivalent Course(s): CRES 12300, ANTH 20003, ANTH 38305

HIPS 20151. Pacific Worlds: Race, Gender, Health, and the Environment. 100 Units.
This discussion-based course will introduce students to both classical and recent scholarship in Pacific World historiography. By adopting micro-historical, comparative, and transnational methods, students will examine the formation of three overlapping "worlds": The Antipodes, Polynesia, and the northeastern Pacific. Analyzing the myriad intersections of race, gender, health, and the environment, we will explore a range of large-scale historical processes that shaped and reshaped the Pacific between the mid-eighteenth and the mid-twentieth centuries. These processes include European exploration, settler colonialism, and indigenous sovereignty; sex, depopulation, and race science; labor, migration, and urbanization; industrialization and environmental exploitation; and imperial expansion and citizenship. The course is intended for students with an interest in the Pacific Islands, Australasia, and the North American West, as well as those interested in race, gender, health, or the environment within indigenous, immigrant, or settler colonial contexts. Required readings - which will consist of book chapters and academic articles - will be used to contextualize and critically analyze a variety of primary sources during each class session.

Instructor(s): Christopher Kindell
Terms Offered: Spring
Equivalent Course(s): HLTH 2151, GNSE 22151, GLST 25151, HIST 25030, ENST 20151

HIPS 20205. Race in African History. 100 Units.
This course examines how the category of race has been identified and discussed in African history from the nineteenth century to the contemporary era. The course combines cultural and social history with recent research from the history of science, gender and sexuality studies, and the history of slavery in Islamic Africa to illuminate the debates, actors, and encounters that animate this dynamic field. Students will analyze case studies from across the continent-from Ghana to Sudan to South Africa-while also keeping an eye to transnational debates about difference, diaspora, imperialism, and nationalism. With readings ranging from classics in Pan-African thought to comparative studies of white settler colonialism, this course will highlight the ways in which race has shaped and continues to shape African states and societies. Students will also consider film, literature, music, fashion, and studies of the built environment.

Terms Offered: Winter
Note(s): Students who have not take African Civilizations I, II, and III are asked to read African History: A Very Short Introduction (Oxford, 2007) in preparation for this course.
Equivalent Course(s): GNSE 22225, HIST 20205, CRES 20205
HIPS 20301. The Science, History, Policy, and Future of Water. 100 Units.
Water is shockingly bizarre in its properties and of unsurpassed importance throughout human history, yet so mundane as to often be invisible in our daily lives. In this course, we will traverse diverse perspectives on water. The journey begins with an exploration of the mysteries of water’s properties on the molecular level, zooming out through its central role at biological and geological scales. Next, we travel through the history of human civilization, highlighting the fundamental part water has played throughout, including the complexities of water policy, privatization, and pricing in today’s world. Attention then turns to technology and innovation, emphasizing the daunting challenges dictated by increasing water stress and a changing climate as well as the enticing opportunities to achieve a secure global water future.
Instructor(s): Seth Darling Terms Offered: Winter. This course will not be offered in the 2022-2023 academic year.
Prerequisite(s): None
Equivalent Course(s): ENST 20300, GLST 26807, ANTH 22131, MENG 20300, HIST 25426

HIPS 20401. Philosophy of Mind. 100 Units.
This is a survey of some of the central questions in the philosophy of mind. These questions include: What is consciousness? How can mental states represent things in the world? How do our minds relate to our bodies? Do we have free will? Can we blame someone for the beliefs or desires she has? What are the emotions? To help us with these questions, we will focus on 20th-century analytic work (by Putnam, Nagel, Searle, Jackson, Dennett, Chalmers, Block, Dretske, and others), but we will also read important historical texts on the nature of the mind by Aristotle, Descartes, and Hume.
Instructor(s): B. Callard Terms Offered: Autumn
Equivalent Course(s): PHIL 23501

HIPS 20506. Cities, Space, Power: Introduction to urban social science. 100 Units.
This lecture course provides a broad, multidisciplinary introduction to the study of urbanization in the social sciences. The course surveys a broad range of research traditions from across the social sciences, as well as the work of urban planners, architects, and environmental scientists. Topics include: theoretical conceptualizations of the city and urbanization; methods of urban studies; the politics of urban knowledges; the historical geographies of capitalist urbanization; political strategies to shape and reshape the built and unbuilt environment; cities and planetary ecological transformation; post-1970s patterns and pathways of urban restructuring; and struggles for the right to the city.
Instructor(s): N. Brenner Terms Offered: Winter
Equivalent Course(s): PLSC 20506, CHSS 30506, ENST 20506, CCCT 30506, PLSC 30506, ARCH 20506, SOCI 30506, CHST 20506, SOCI 20506, KNOW 30506

HIPS 20567. Introduction to Computational Sociology. 100 Units.
Advances in machine learning, high performance computing, and big data are opening exciting new ways of doing social science. This course introduces students to the burgeoning field of computational sociology, emphasizing both conceptual understanding and hands-on training. The course does not require any prior experience with coding, computer science, or statistics. The only requirement is that students have fluency in high-school mathematics (pre-calculus) and an interest in acquiring computational skills. Students will learn the basics of R and Python, and will gain practical experience with simulation modeling, computational text analysis, and neural networks. This course will pair a practical training in computational methods with a critical examination of how these technologies are being deployed in the real world and their roles in reproducing systems of power and inequality. This class is recommended for students who want a basic introduction to "data science" and who are seeking the conceptual knowledge necessary to participate in current debates over information technology in contemporary society.
Instructor(s): A. Kozlowski Terms Offered: Winter
Equivalent Course(s): SOCI 20567, MAAD 10567

HIPS 20574. Sociology Structure and Agency. 100 Units.
The course will unpack two fundamental concepts in sociology-social structure and agency-and examine how they relate to one another. In this endeavor, we will consult both classical and contemporary sources and discuss theoretical elaborations as well as empirical applications. We will pay particular attention to what may be the three most powerful social structures in America: gender, class, and race. The aim of the course is to impart a distinctly sociological perspective and equip students with sociological modes of explanation (as opposed to, say, economic or biological/evolutionary modes) in the belief that such a framework will enrich their understanding of the world. To this end, students majoring in other disciplines-in economics, STEM fields, and the humanities-are encouraged to enroll. While the readings will include dense social theory, every effort will be made to make the ideas at stake accessible to a non-specialized audience.
Instructor(s): M. Garrido Terms Offered: Winter
Equivalent Course(s): SOCI 20574, CHSS 30574, SOCI 30574

HIPS 20700. Introduction to Logic. 100 Units.
An introduction to the concepts and principles of symbolic logic. We learn the syntax and semantics of truth-functional and first-order quantificational logic, and apply the resultant conceptual framework to the analysis of valid and invalid arguments, the structure of formal languages, and logical relations among sentences of ordinary discourse. Occasionally we will venture into topics in philosophy of language and philosophical logic, but our primary focus is on acquiring a facility with symbolic logic as such.
8 History, Philosophy, and Social Studies of Science and Medicine (HIPS)

Instructor(s): G. Schultheis Terms Offered: Autumn
Equivalent Course(s): CHSS 33500, LING 20102, PHIL 30000, PHIL 20100

HIPS 20905. Advanced Logic. 100 Units.
This class will explore dependent type theory, with a focus on the identity relation. Different ways of thinking of the identity relation will be examined, culminating in a presentation of the Univalence axiom and a discussion of its role as a potential foundation for mathematics. (B) (II)
Instructor(s): K. Davey Terms Offered: Winter
Prerequisite(s): Although background material will be discussed in the first lectures, students will be expected to have some familiarity with the lambda calculus and the theory of types. Interested students without this background should contact the instructor in advance to discuss possible material to read to help prepare for the course.
Equivalent Course(s): CHSS 39405, PHIL 39405, PHIL 29405

HIPS 20962. Nature's Authority. 100 Units.
From ancient times to the present, nature's authority has been invoked by revolutionaries and reactionaries alike to justify social, political, and economic arrangements made by humans. Despite much trenchant philosophical criticism, nature seems to an irresistible resource in very human debates about power, work, sex, money, and much else. This seminar asks why this tradition has been so persistent and pervasive and where nature's authority comes from. Readings will emphasize primary sources, from Aristotle to contemporary environmentalists. This course will meet two times per week for 3 hours, during the 1st five weeks of the quarter, March 28 - April 27.
Terms Offered: Spring. Course will be taught Spring 2022
Note(s): Instructor consent required. Primarily aimed at graduate students, but also open to well-qualified undergraduates.
Equivalent Course(s): HIST 45005, CHSS 30962, SCTH 30962

HIPS 21000. Introduction To Ethics. 100 Units.
An exploration of some of the central questions in metaethics, moral theory, and applied ethics. These questions include the following: are there objective moral truths, as there are (as it seems) objective scientific truths? If so, how can we come to know these truths? Should we make the world as good as we can, or are there moral constraints on what we can do that are not a function of the consequences of our actions? Is the best life a maximally moral life? What distribution of goods in a society satisfies the demands of justice? Can beliefs and desires be immoral, or only actions? What is "moral luck"? What is courage? (A)
Instructor(s): B. Callard Terms Offered: Spring
Equivalent Course(s): FNDL 23107, PHIL 21000

HIPS 21100. Celebrity and Science in Paleoanthropology. 100 Units.
This seminar explores the balance among research, "showbiz" big business, and politics in the careers of Louis, Mary, and Richard Leakey; Alan Walker; Donald Johanson; Jane Goodall; Dian Fossey; and Birutė Galdikas.
Information is gathered from films, taped interviews, autobiographies, biographies, pop publications, instructor’s anecdotes, and samples of scientific writings.
Instructor(s): R. Tuttle Terms Offered: TBD
Prerequisite(s): This course qualifies as a Discovering Anthropology selection for Anthropology majors.
Equivalent Course(s): ANTH 21406, ANTH 38300

HIPS 21108. Time After Physics. 100 Units.
This course provides a historical survey of the philosophy of time. We begin with the problems of change, being and becoming as formulated in Ancient Greece by Parmenides and Zeno, and Aristotle’s attempted resolution in the Physics by providing the first formal theory of time. The course then follows theories of time through developments in physics and philosophy up to the present day. Along the way we will take in Descartes’ theory of continuous creation, Newton’s Absolute Time, Leibniz’s and Mach’s relational theories, Russell’s relational theory, Broad’s growing block, Whitehead’s epochal theory, McTaggart’s A, B and C theories, Prior’s tense logic, Belnap’s branching time, Einstein’s relativity theory and theories of quantum gravity. (B) (II)
Instructor(s): T. Pashby Terms Offered: Spring
Equivalent Course(s): PHIL 31108, KNOW 21108, KNOW 31108, CHSS 31108, PHIL 21108

HIPS 21347. To Preserve or Destroy: Anthropologies of Heritage. 100 Units.
Why do some monuments matter more than others? Why do we destroy some sites and preserve others? How do these objects and sites attain value? As witnessed in Charlottesville, heritage is at the heart of intense debates in politics and culture today. Questions of theft and colonial violence haunt museums, galleries, and other cultural institutions. Looting and repatriation-linked to archaeology’s complex history and of equal concern to contemporary anthropology-force us to contend with the very meaning of heritage, including why it matters, what it does, and to whom it rightfully belongs. Bringing archaeology and anthropology together, this course attends to these complex questions, exploring how monuments, heritage sites, and material culture are enmeshed in power and condense contested histories. Drawing together ethnographies of heritage, theories of history and art, and accounts of dispossession and destruction, we will examine heritage as a conceptual formation, a set of social, political, and economic practices, and as a locus of both enchantment and endangerment. In doing so, students will gain a better sense of why the category of heritage seems to matter so much in the 21st century,
paradoxically weaponized by both nationalist narratives and decolonial movements, and what futures heritage builds.

Instructor(s): Hilary Leathem Terms Offered: Course is essentially deactivated
Equivalent Course(s): ARCH 21347, ANTH 21347, GLST 23317

HIPS 21358. The Social Afterlives of Loss. 100 Units.
We are living through multiple and overlapping narratives of loss, whether the unevenly unfolding global pandemic, the historical and everyday injustice of legalized racism and police violence, widening economic inequality and insecurity, or the accelerating turbulence of the climate crisis. Loss also shapes social life in a minor key, through everyday acts of forgetting, letting go, or withdrawal. What kind of a social phenomenon is loss? How do people go on in the face of it? How can we study such a highly variable phenomenon, and what insight might we find in the process? This course investigates loss and its social afterlives, from the ordinary to the earth-shattering. We examine how loss arises and discuss why, even when expected or familiar, its disorienting effects invite creative acts of wayfinding. We first engage the material, historical, and psychic dimensions of loss and then shift scope to examine how loss affects entire communities, becomes institutionalized, and puts entire worlds into question. By engaging ethnography, history, social theory, as well as literature and popular media, we will develop a constellation of questions and approaches to loss and answer why it happens, how we live through it, and what we find in its wake.
Instructor(s): Bright, Damien Terms Offered: Winter. Winter 2022
Equivalent Course(s): ENST 21358, ANTH 21358

HIPS 21407. The Vocation of a Scientist. 100 Units.
Max Weber wrote that to be a scientist one needed a “strange intoxication” with scientific work and a “passionate devotion” to research as a calling. And yet, such passion seemed to conflict with the ideal of value-neutral inquiry. This class considers the vocation of science since the turn of the twentieth century. What political, economic, and cultural forces have shaped scientific professions in the United States? How are scientists represented in public culture? How was American science experienced during the colonization of the Philippines? By exploring these questions, this class will examine the values and norms that make science into a meaningful vocation.
Terms Offered: TBD
Equivalent Course(s): ANTH 22129, KNOW 21407

HIPS 21408. History of Medicine. 100 Units.
This course surveys the history of medicine from the medieval period to the present. How did medicine emerge as a defined body of knowledge? To what extent do diseases and disorders have an independent existence, and to what extent are they cultural constructs? How have social mores-particularly those related to religion, class, nationality, race, and gender-influenced the ways in which health was and is understood and maintained, and illness treated? What does it mean to practice medicine ethically, and how has that changed over time? Topics include the emergence and evolution of the medical profession, the history of medical research and method, the interpretation and treatment of the unhealthy and healthy alike, eugenics, euthanasia, the quest for immortality, and the changing relationship between technology and disease.
Equivalent Course(s): KNOW 21408, HIST 25314, CCTS 21408

HIPS 21409. History of Extraterrestrial Life. 100 Units.
In 2014, the Vatican Radio made a splash when it reported that the pontiff, Pope Francis, condoned the baptism of extraterrestrials—if they so desired it. “Who are we to close doors?” he asked rhetorically. It was both a metaphor for spiritual inclusion and an accurate representation of the modern Vatican’s position on the possibilities of modern astrobiology and the search for extrasolar planets, fields whose rapid growth over the past two decades make serious consideration of extraterrestrial life seem like a uniquely modern phenomena. Its history, however, is in fact many centuries old. In this course we will examine the development of beliefs concerning life in the universe from the sixteenth century to the present. How did historical actors understand the nature, abilities, and location of extraterrestrial life, and its relationship to man and god? We will analyze connections between these beliefs and contemporary political, social, scientific, and religious developments. These include the role of the plurality of worlds in the debates over heliocentrism, its impact and application in the context of deism and social and political freethought, its literary and artistic depictions and use as a tool of satire and social commentary, its influence on natural philosophy, its decline and the subsequent rise of alien conspiracists and their critics, and how and why conceptions of the extraplanetary other took a dark and sinister turn toward the early-to-mid twentieth century.
Equivalent Course(s): ECEV 31409, HIST 24917, KNOW 21409

HIPS 21410. Politics of Technoscience in Africa. 100 Units.
Euro-American discourse has often portrayed Africa as either a place without science and technology or as the home of deep and ancient wisdom. European imperialists used the alleged absence of science and technology as a justification for colonialism while pharmaceutical companies sought out African knowledge about healing plants. In addition to their practical applications, science and technology carry significant symbolic weight in discussions about Africa. In this class, we examine the politics of scientific and technical knowledge in Africa with a focus on colonialism and its aftermath. How have different people produced and used knowledge about the environment, medicine, and technology? What kinds of knowledge count as indigenous and who gets credit for innovation? How have independent African governments dealt with the imperial legacies of science? From
the interpretation of archaeological ruins to the design of new medical technologies, this course will examine science and technology as political practice in Africa.
Equivalent Course(s): CRES 21410, ANTH 22165, KNOW 21410

HIPS 21411. Sex, Race, and Empire. 100 Units.
This course surveys how science, race, and gender interacted in the early modern Atlantic world from 1500-1800. We will critically examine how new modes of scientific inquiry brought Africans, Americans, and Europeans into contact and conflict. Along the way, we will ask how, why, and with consequences imperial science created new knowledge claims about human inequality, especially racial and sexual difference. We will draw primarily on British, Iberian, and French imperial agendas in order to track the experiences of men and women from all corners of the Atlantic world, including indigenous peoples, enslaved black Africans, free people of color, and white Europeans. Through a variety of primary and secondary sources, we will uncover European aspirations to curate, control, and exploit the natural world and the agency of subjugated peoples in responding to and resisting these designs. Topics covered include natural history collecting and classification; the invention of racial theory; slavery and maroons; women, gender, and reproduction; consumption; and violence, resistance, and revolution.
Equivalent Course(s): CRES 21411, HIST 25315, GNSE 21411, KNOW 21411

HIPS 21413. Sex and Enlightenment Science. 100 Units.
What do a lifelike wax woman, a birthing dummy, and a hermaphrodite have in common? This interdisciplinary course seeks answers to this question by exploring how eighteenth-century scientific and medical ideas, technologies, and practices interacted with and influenced contemporary notions of sex, sexuality, and gender. In our course, the terms "sex," "Enlightenment," and "science" will be problematized in their historic contexts using a variety of primary and secondary sources. Through these texts, as well as images and objects, we will see how emerging scientific theories about sex, sexuality, and gender contributed to new understandings of the human, especially female, body. We will also see how the liberating potential of Enlightenment thought gave way to sexual and racial theories that insisted on fundamental human difference. Topics to be covered include theories of generation, childbirth, homosexuality, monstrosities, race and procreation, and hermaphrodites and questions about the "sex" of the enlightened scientist and the gendering of scientific practices.
Equivalent Course(s): CHSS 31413, HIST 22218, KNOW 21413, GNSE 21413

HIPS 21414. What is Technology? 100 Units.
In the nineteenth century, the word "technology" referred to the science of the useful and industrial arts. While the term is today synonymous with machinery and other material tools, this contemporary usage dates only to the 1930s. A word once used to describe a specialist mode of writing about applied knowledge has come to refer to tools and their use.
Equivalent Course(s): KNOW 21414

HIPS 21419. Indigenous Knowledge and the Foundations of Modern Social Theory. 100 Units.
Indigenous people are often seen as "objects" of social theory; this course considers their role as subjects of social theory-makers of modern knowledge who made foundational contributions to basic ideas about humanity. We will take up three case studies, each of which highlights an indigenous people who unleashed a cascade of fresh thinking: the Australian Aborigines who influenced the ideas of Émile Durkheim and Sigmund Freud; the Native peoples of the Northwest Coast of America who stimulated Franz Boas to reconstruct the concept of culture; and the indigenous peoples of the Trobriand Islands who shaped Bronislaw Malinowski’s ideas about gifts, hospitality, and reciprocity. As we will see, much of what we call social theory turns out to rely on a vast archive of nonstate knowledge generated by indigenous intellectuals.
Instructor(s): Isaiah Lorado Wilner Terms Offered: Spring
Equivalent Course(s): CRES 21419, KNOW 21419

HIPS 21813. Race and Nation in Latin America. 100 Units.
How does race operate in Latin America and the Caribbean, and in what ways does it intersect with the concept of nation and national belonging? This course follows the history of race and national formation in the region, from the wake of the independence movements of the early nineteenth century to the present. It draws on historical, anthropological, sociological, artistic, and literary approaches to identifying, analyzing, and interpreting the varied meanings of race and nation throughout the region. We will discuss changing notions of race over time and their relationship to contemporaneous social theories; we will analyze notions of citizenship, equality, and race both in ideas and in practice; and we will examine the intersection of racial formation and gender and sexual politics.
Instructor(s): Diana Schwartz-Francisco Terms Offered: Winter
Equivalent Course(s): LACS 21813, HIST 26510, CRES 21813, GLST 21813, SOCI 20532

HIPS 21428. Apes and Human Evolution. 100 Units.
This course is a critical examination of the ways in which data on the behavior, morphology, and genetics of apes have been used to elucidate human evolution. We emphasize bipedalism, hunting, meat eating, tool behavior, food sharing, cognitive ability, language, self-awareness, and sociability. Visits to local zoos and museums, film screenings, and demonstrations with casts of fossils and skeletons required.
Instructor(s): Russell Tuttle Terms Offered: Spring
Prerequisite(s): BIOS 10130 or BIOS 10140. NO BIOLOGICAL SCIENCES MAJORS OR NON-BIOLGY PRE-MED STUDENTS, except by petition. Preference to 3rd and 4th year Anthropology Majors.
HIPS 21609. Topics in Medical Ethics. 100 Units.
Decisions about medical treatment and medical policy often have profound moral implications. Taught by three philosophers, a physician, and a medical lawyer, this course will examine such issues as paternalism, autonomy, informed consent, assisted suicide, abortion, organ markets, distributive justice in health care, and pandemic ethics. (A)
Instructor(s): D. Brudney; Staff Terms Offered: Winter
Prerequisite(s): Third or fourth year standing. This course does not meet requirements for the Biological Sciences major.
Note(s): Philosophy majors: this course fulfills the practical philosophy (A) requirement.
Equivalent Course(s): BIOS 13253, ANTH 38600, ANTH 21428, EVOL 38600

HIPS 22000. Introduction to Philosophy of Science. 100 Units.
We will begin by trying to explicate the manner in which science is a rational response to observational facts. This will involve a discussion of inductivism, Popper’s deductivism, Lakatos and Kuhn. After this, we will briefly survey some other important topics in the philosophy of science, including underdetermination, theories of evidence, Bayesianism, the problem of induction, explanation, and laws of nature. (B) (II)
Instructor(s): T. Pashby Terms Offered: Spring
Equivalent Course(s): PHIL 22000, PHIL 32000, HIST 25109, HIST 35109, CHSS 33300

HIPS 22003. Einstein for Everyone. 100 Units.
Einstein’s revolutions in physics led to fundamental changes in how we understand the universe. Among other things, we seem to have learned from Einstein about the existence of black holes and gravitational waves, that time is not absolute but relative, that the universe is expanding, that gravity is not a force. But how is someone who doesn’t know much physics to figure out if this or that moral really is vindicated by Einstein’s work? This course covers just enough of Einstein’s work at an elementary level to help answer such questions. High school math is required but we will provide an understanding of special and general relativity at a conceptual level, without calculations or problem sets. (B)
Instructor(s): T. Pashby Terms Offered: Winter
Equivalent Course(s): FNDL 24307, PHIL 22003

HIPS 22202. We Other Victorians. 100 Units.
This course examines the construction of otherness, difference, and belonging in England during the long Nineteenth Century from a historical perspective. Each week students will study a different “other” by drawing on a variety of primary sources, including novels, autobiographies, government reports, legal documents, private correspondence, newspapers, and scientific publications. Special attention will be paid to how and why emerging social sciences such as anthropology, sociology, and psychology both contributed to and were themselves informed by, (1) broader discussions about cultural ethnicity, biological race, national identity, and modern society; as well as (2) changing conceptions of class, gender, race, religion, and illness. By working historically, students in this course will also develop a conceptual framework for studying otherness that transcends geographic and temporal boundaries. Students will learn about the socio-political, cultural, legal, scientific, and ideological construction of otherness in Victorian Britain while also developing a conceptual framework for studying otherness that transcends geographic and temporal boundaries. This course relies almost entirely on primary sources and is designed to help students develop the skills needed to complete an original research project independently.
Instructor(s): Kristine Palmieri Terms Offered: Autumn
Equivalent Course(s): KNOW 32201, HIST 31103, CHSS 35202

HIPS 22203. Capturing the Stars: Exhibiting the History of Women at Yerkes Observatory in early 20th C America. 100 Units.
Capturing the Stars," the exhibit, that will illuminate the history of women at Yerkes Observatory and demonstrate how their labor contributed to the advancement of astronomy and astrophysics in Fall 2023. In this experimental and hands-on course, students will actively participate in the creation of this physical exhibit for the Special Collections Research Center and its digital counterpart. Students will begin by learning about the history of women in science, the social, economic, and cultural history of early twentieth-century America, as well as the history of astronomy and astrophysics. They will then develop skills in historical research, exhibition development, community outreach, and science communication while working on final projects to be featured in the exhibit. No prior historical, scientific, or museum experience is required for this course. Students will learn how to conduct historical research and how to communicate with a public audience by contributing to the production of a physical exhibit on the history of women at Yerkes Observatory with an ambitious digital footprint. This highly experimental class will move beyond the confines of a traditional history seminar by involving students in the development and execution of an exhibit on the history of women at Yerkes Observatory.
Instructor(s): Kristine Palmieri Terms Offered: Winter
Equivalent Course(s): KNOW 32203, HIST 37802, ASTR 18950, CHSS 32503, GNSE 32510, GNSE 22510, HIST 27802
HIPS 22204. Science, Governance, and the Crisis of Liberalism. 100 Units.
In the era of "post-truth" it has become common to link a crisis of scientific authority with a crisis of liberalism. Democracies around the world are under threat, this reasoning goes, in part because of an attack on scientific truth. But what does liberalism - as political culture and as a form of governance - need (or want) from science? Depending where you look, the answer might appear to be facts, truth, a model 'public sphere,' an ethic of objectivity, tactics for managing risk and uncertainty, or technologies of population management (to name a few). In addition to exploring the complex historical relationship between science and liberalism in the modern era, this course will critically assess how the history of science and the history of political thought have theorized truth and governance. We will examine what models of "coproduction" and "social construction" - nearly ubiquitous in the historiography of modern science - fail to capture about the histories of science and state power. We will also think about how political and intellectual historians' theories of truth and mendacity in politics might be enriched by more attention to scientific knowledge in both its technical and epistemological forms. This course focuses on 19th- and 20th-century Europe and the United States in global perspective, and readings will draw from political theory, history, economic thought, the natural and human sciences, and critical theory. Instructor(s): Isabel Gabel Terms Offered: Winter
Equivalent Course(s): HIST 28308, CHSS 32504, HIST 38308, KNOW 32204

HIPS 22207. The Social History of Alcohol in Early Modern Europe. 100 Units.
This course will examine the multifaceted role that beer, wine, cider, and spirits played in European society and will challenge students to consider how a seemingly familiar commodity was a key component in shaping early modern social relations. It will focus on several major themes that have guided historical inquiry and show how hard drink intersects with and entangles these histories. Major themes will include alcohol and gender relations; state legality and taxation; moral policing; environmental projects and crises; labor and technology; and colonialism. Using both primary and secondary sources will push students to look below the surface to see how drink alternately challenged or reinforced social hierarchies, much as it continues to do in the present time. Instructor(s): C. Rydell Terms Offered: Spring
Equivalent Course(s): HUTH 22207, HIST 22207

HIPS 22310. The Commons: Environment and Economy in Early Modern Europe. 100 Units.
Drawing on case studies from Europe and the Atlantic world, this course will track changes in land use and property rights over the early modern period (ca. 1500-1800), inviting students to reflect on the relationship between natural environments (woodlands, waterways, pasture) and histories of state formation, economic growth, rebellion, and colonialism. Organizing concepts and debates will include the tragedy of the commons, moral economies, sustainability and scarcity, the "organic economy" of the old regime, primitive accumulation, and economic takeoff. Readings will encompass classic works in agrarian, environmental, and social history (i.e., Marc Bloch, E. P. Thompson, Silvia Federici, James Scott, Carolyn Merchant) as well as primary documents and contemporary texts (i.e., More, Bacon, Smith, Paine, Babeuf). We will also reflect on how these histories bear on debates about land use and natural resources in the present day. Instructor(s): O. Cussen Terms Offered: Winter
Equivalent Course(s): ENST 22310, LLSO 22310, HIST 22310

HIPS 22708. Planetary Britain, 1600-1900. 100 Units.
What were the causes behind Britain's Industrial Revolution? In the vast scholarship on this problem, one particularly heated debate has focused on the imperial origins of industrialization. How much did colonial resources and markets contribute to economic growth and technological innovation in the metropole? The second part of the course will consider the global effects of British industrialization. To what extent can we trace anthropogenic climate change and other planetary crises back to the environmental transformation wrought by the British Empire? Topics include ecological imperialism, metabolic rift, the sugar revolution, the slave trade, naval construction and forestry, the East India Company, free trade and agriculture, energy use and climate change. Equivalent Course(s): HIST 32708, HIST 22708, CHSS 32708, ENST 22708, KNOW 32808, KNOW 22708

HIPS 22800. Experiencing Madness: Empathic Methods in Cultural Psychiatry. 100 Units.
This course provides students with an introduction to the phenomenological approach in cultural psychiatry, focusing on the problem of "how to represent mental illness" as a thematic anchor. Students will examine the theoretical and methodological groundings of cultural psychiatry, examining how scholars working in the phenomenological tradition have tried to describe the lived experiences of various forms of "psychopathology" or "madness." By the end of the course, students will have learned how to describe and analyze the social dimension of a mental health experience, using a phenomenologically-grounded anthropological approach, and by adopting a technical vocabulary for understanding the lived experiences of mental illness (for instance, phenomena, life-world, being-in-the-world, intentionality, epoché, embodiment, madness, psychopathology, melancholia/ depression, schizophrenia, etc). In addition, given the ongoing problematic of "how to represent mental illness," students will also have the opportunity to think through the different ways of presenting their analysis, both in the form of weekly blog entries and during a final-week mock-workshop, where they will showcase their work in a creative medium appropriate to that analysis. Equivalent Course(s): MAPS 32800, CHSS 32800, ANTH 35135, ANTH 24355, CHDV 32822
HIPS 22905. Topics in the History of Attention. 100 Units.
Our data," said a recent social critic, "is the oil of the twenty-first century." In these infinite reserves, perhaps no data is more "ours" than the data we generate simply by paying attention to some things over other things. This particular feature of how our minds work has become the natural resource supply for the vastly profitable attention economy. But has this always been thus? In this course, we will explore how something every human has always had becomes a new resource and a new problem from one historical moment to another. We will pursue our quarry with zealous particularism and zealous universalism, by tracking discourses of attention across several recurring themes: questions of autonomy and choice; problems of overabundance; forms of collective attention, trained attention, and pathological attention-including pathologies of excess, deficiency, and erroneous attention. Throughout the course, we will ask what problems of attention say about the cultures and societies that produce them, and how all problems of attention might be different historical attempts to come to terms with human limitation and human potential. 
Instructor(s): Huang, Lily Terms Offered: Spring 
Equivalent Course(s): CHSS 32905, MAPS 32905

HIPS 23410. Sex in Twentieth-Century Europe. 100 Units.
This course will examine the "synchronized" history of sexuality across this tumultuous century. The period took Europeans from bourgeois norms of sexuality through the 1960s sexual revolution to same-sex marriages; genocide and the emergence of rape as a war crime; and the unprecedented regulation of sexuality and biomedical developments treating infertility. Since the history of sex and sexuality in Europe cannot be thought outside of European colonialism and the Cold War, the course will also examine how sexuality shaped and was shaped by political ideologies. In short, by examining the centrality of "who can have sex with whom," students will rethink "standard" political narratives of twentieth-century Europe. Working with Dagmar Herzog's "Sexuality in Europe: A Twentieth-Century History," the main text of the course, and drawing on a variety of primary sources-including law and medical treatises, popular culture, and autobiographies-students will also gain an insight into the ways in which sexuality can be studied beyond archival sources. 
Instructor(s): M. Appeltová Terms Offered: Winter 
Equivalent Course(s): GNSE 23400, HLTH 23400, HMRT 23400, HIST 23400

HIPS 24001. Sexual and Reproductive Health and Gender. 100 Units.
This course will cover topics related to medicine, gender, and sexuality, including: the medicalization of sexual desire and performance; medical, sociocultural, and public health responses to sexually transmitted infections; caring for and criminalizing pregnant (and potentially) pregnant bodies; commodification of reproduction and markets in reproductive materials; and the medicalization of gender and the history and sociology of gender confirming treatment. We will primarily focus on medical cultures in the United States, but will draw on counter-examples from other countries. The readings will approach the material through an intersectional lens.
Instructor(s): Virginia Rangos Terms Offered: Winter. Offered 2022-23
Equivalent Course(s): HLTH 24001, SOCI 20570, GNSE 12118

HIPS 24103. Bioethics. 100 Units.
This is a lecture and discussion class that will explore how a variety of philosophic and religious thinkers approach the issues and problems of modern dilemmas in medicine and science in a field called bioethics. We will consider a general argument for your consideration: that the arguments and the practices from faith traditions and from philosophy offer significant contributions that underlie policies and practices in bioethics. We will use a case-based method to study how different traditions describe and defend differences in moral choices in contemporary bioethics. This class is based on the understanding that case narratives serve as another core text for the discipline of bioethics and that complex ethical issues are best considered by a careful examination of the competing theories as work themselves out in specific cases. We will examine both classic cases that have shaped our understanding of the field of bioethics and cases that are newly emerging, including the case of research done at our University. Through these cases, we will ask how religious traditions both collide and cohere over such topics as embryo research, health care reform, terminal illness, issues in epidemics and public health, and our central research question, synthetic biology research. This class will also explore how the discipline of bioethics has emerged to reflect upon such dilemmas, with particular attention to the role that theology and philosophy have played in such reflection. 
Instructor(s): Laurie Zoloth Terms Offered: Spring 
Note(s): Graduate students will meet in a separate section. This course meets the CS or LMCS Committee distribution requirement for Divinity students.
Equivalent Course(s): HLTH 24103, RETH 30600, SIGN 26069, BIOS 29216, RLST 24103

HIPS 24240. Buddhism and Science: A Critical Introduction. 100 Units.
Buddhism is the only religion able to cope with modern scientific needs." This quotation, often erroneously attributed to Albert Einstein, prompts the question: Why are such statements about Buddhism so easily taken nowadays as credible and plausible? Currently, it seems no other religion is held as compatible with science as Buddhism: From the recent 'mindfulness' craze in psychology and medicine, to the 'Emptyness' of quantum physics, Buddhism is uniquely hailed as a 'rational religion' whose insights anticipated modern science by millennia. Some even suggest it is not a 'religion' at all, but rather a sort of 'mind-science.' This course functions as both an introduction to Buddhism and a critical survey of its modern scientific reception. As we explore Buddhism's relationship to contemporary scientific theories in psychology and physics, we will be guided by questions such as: What methodological principles distinguish the practices of religion and science? What are
the different ways they can be brought into relation? Why is Buddhism, in particular, singled out as uniquely scientific? What modern historical factors, like colonialism and secularization, contribute to this contemporary meme? Why does it matter whether Buddhism is compatible with science or not? What, exactly, is at stake in this relationship? And for whom? No prior study of Buddhism or the philosophy of science is expected.

**Instructor(s):** R. Richards

**Terms Offered:** Autumn

Note(s): The publication of On the Origin of Species. (B) (IV)

The year 2019 was the 210th anniversary of Darwin's birth and the 160th anniversary of the religious foundations of his ideas and the religious reaction to them; and the social-political consequences of his logical, epistemological, and rhetorical status of Darwin's several theories, especially his evolutionary ethics; the his theories before 1859. Then we will turn to his two books. Among the topics of central concern will be the two will explore the state of biology prior to Darwin's Beagle voyage, and then consider the development of his theories.

**HIPS 24341. Topics in Medical Anthropology. 100 Units.**

Over the past two decades, the field of “global health” has become the dominant narrative and organizing logic for interventions into health and well-being worldwide. This seminar will review theoretical positions and debates in anthropology, focusing on the decolonizing global health movement. Divergent historical legacies of colonialism and racism, institutionalized forms of structural violence, and modern-day extractive capitalism have resulted in stark global inequities, which currently stand at shockingly unprecedented levels. This seminar offers a critical lens to reframe contemporary global health’s logic and practice by considering other histories and political formations, experiences, and knowledge production systems. This seminar opens up a space for generative dialogue on the future directions of what constitutes health, equity, and aid, and whether social justice is or should be the new imperative for action.

**Instructor(s):** P. Sean Brotherton

**Terms Offered:** Not Offered 2021-22; may be offered 2022-23

**Prerequisite(s):** Strongly recommended: previous lower-division courses in the social studies of health and medicine through ANTH, HIPS, HLTH, or CHDV

**Note(s):** This is an advanced reading seminar. Among undergraduates, 3rd and 4th year students are given priority. Consent only: Use the online consent form via the registrar to enroll.

**Equivalent Course(s):** ANTH 40310, CHDV 24341, CHSS 40310, HLTH 24341, KNOW 24341, KNOW 40312, CHDV 40301, RES 24341, ANTH 24341

**HIPS 24352. Health, Value, Politics. 100 Units.**

**TBD**

**Instructor(s):** Kaushik Sunder Rajan

**Terms Offered:** TBD

**Equivalent Course(s):** HLTH 24352, ANTH 24352

**HIPS 24706. Science in the South: Decolonizing the Study of Knowledge in Latin America & the Caribbean. 100 Units.**

This seminar will bridge anthropologies and histories of science, technology, and medicine to Latin American decolonial thought. Throughout Latin America, techno-scientific objects and practices, with their presumed origin in the Euro-Atlantic North, are often complexly entangled with neo-imperial projects of development and modernization that elongate social forms of colonization into the present. Technoscience and its objects, however, can also generate new creative, political, and life-enhancing potentials beyond or despite their colonial resonances, or even provide tools to ongoing struggles for decolonization. Together, seminar participants will explore what a decolonial approach to the study of science, technology, and medicine in the Global South, particularly in Latin America, has been and could become and how decolonial theory can inflect our own disciplinary, conceptual, and political commitments as anthropologists of technoscience.

**Instructor(s):** S. Graeter

**Terms Offered:** TBD

**Equivalent Course(s):** ANTH 23026, LACS 24706

**HIPS 24803. History of Sexuality and Sin. 100 Units.**

Since Foucault’s groundbreaking work on the History of Sexuality, we have become attuned to the effects of power and the political implications of the science of sexuality. While Foucault’s text has offered a critical avenue to examine the secular state’s administrations of sexuality, it begins with Christianity’s techniques of power based on the confession of one’s sex. The Christian formulation of the relationship between ‘sex’ and ‘sin’ is essential to understanding the techniques of power that connect sexuality, legality, criminality, normality, and transgression in modern secular contexts. This class, we will begin with the critical questions of the History of Sexuality, then turn to primary texts in order to examine the way ‘sex’ and ‘sin’ became conceptually connected in Christianity, and finally interrogate the effects of this relation for medieval and modern politics. Over the course of these readings, we will trace the relation between the concepts and their effects to discern the histories of sexuality that lie at the root of contemporary debates on freedom, power, resistance, and desire. No prerequisites.

**Instructor(s):** Maureen Kelly

**Terms Offered:** Spring

**Equivalent Course(s):** CCTS 21018, KNOW 24240, RLST 24240

**HIPS 24901. Darwin’s “On the Origin of Species” and “The Descent of Man” 100 Units.**

This lecture-discussion course will focus on a close reading of Darwin’s two classic texts. An initial class or two will explore the state of biology prior to Darwin’s Beagle voyage, and then consider the development of his theories before 1859. Then we will turn to his two books. Among the topics of central concern will be the logical, epistemological, and rhetorical status of Darwin’s several theories, especially his evolutionary ethics; the religious foundations of his ideas and the religious reaction to them; and the social-political consequences of his accomplishment. The year 2019 was the 210th anniversary of Darwin’s birth and the 160th anniversary of the publication of On the Origin of Species. (B) (IV)

**Instructor(s):** R. Richards

**Terms Offered:** Autumn

**Note(s):** Assignments: several short papers and one long paper.

---

**Note(s):** Assignments: several short papers and one long paper.
HIPS 24908. Being Human: Histories of Paleoanthropology, Origins, and Deep Time. 100 Units.
What does it mean to be “human,” and how have different sciences been used at different points in time to answer that question? While the scientific discipline of paleoanthropology—the study of human evolution and the deep human past—only emerged at the start of the twentieth century, it grew out of both nineteenth-century investigations into mysterious stone tools and the fossils of strange prehistoric creatures and much older traditions about origins, creation, and the nature of human difference drawn from history, religious faith, and the mythological tradition. This seminar will explore the connected histories of paleoanthropology, prehistory, and the geosciences from the late eighteenth to the early twenty-first century, and consider how these sciences have been shaped by ideas about history, human nature, gender and race, and the earth itself.
Instructor(s): E. Kern
Note(s): Assignments: two short papers and one long final research paper.
Equivalent Course(s): HIST 24908, CHSS 34908, HIST 34908

HIPS 24921. Darwinism and Literature. 100 Units.
In this course we will explore the notion that literary fiction can contribute to the generation of new knowledge of the human mind, human behavior, and human societies. Some novelists in the late 19th and early 20th century provided fictional portraits of human nature that were grounded into Darwinian theory. These novelists operated within the conceptual framework of the complementarity of science and literature advanced by Goethe and the other romantics. At a time when novels became highly introspective and psychological, these writers used their literary craftsmanship to explore and illustrate universals aspects of human nature. In this course we read the work of several novelists such as George Eliot, HG Wells, Joseph Conrad, Jack London, Yuvgeny Zamyatin, Leopold von Sacher-Masoch, Italo Svevo, and Elias Canetti, and discuss how these authors anticipated the discoveries made decades later by cognitive, social, and evolutionary psychology.
Instructor(s): D. Maestripieri Terms Offered: Autumn
Note(s): Distribution requirements: Undergraduate: A; Graduate: I
Equivalent Course(s): CHDV 37861, KNOW 21418, HIST 34921, CHDV 27861, CHSS 34921, KNOW 31418, HIST 24921

HIPS 25001. Kant’s Critique of Pure Reason. 100 Units.
This will be a careful reading of what is widely regarded as the greatest work of modern philosophy, Immanuel Kant’s Critique of Pure Reason. Our principal aims will be to understand the problems Kant seeks to address and the significance of his famous doctrine of “transcendental idealism”. Topics will include: the role of mind in the constitution of experience; the nature of space and time; the relation between self-knowledge and knowledge of objects; how causal claims can be justified by experience; whether free will is possible; the relation between appearance and reality; the possibility of metaphysics. (B) (IV)
Instructor(s): M. Boyle Terms Offered: Winter
Equivalent Course(s): CHSS 37901, FNDL 27800, PHIL 27500, PHIL 37500

HIPS 25011. Debating Science: Legitimacy, Authority, and Knowledge. 100 Units.
How can we tell what counts as science? That is, how does science make itself legible as science? Are the social sciences “as scientific” as the natural sciences? By concerning itself with practices of legitimation, this course introduces students to the social study of science and linguistic anthropological theory. Students will consider the sociopolitical dimensions of scientific activity through a theoretical lens which takes language use as a form of social action. They will consider concepts such as reliability, reproducibility, and objectivity. Case studies will likely include climate change skepticism, education research, and neurodiversity. Students will end the quarter by writing and presenting on a current or historical topic of “scientific” debate, that is, debate on the scientific status of a field or claim.
Instructor(s): Lily Ye Ye Terms Offered: Spring
Equivalent Course(s): CHDV 25011

HIPS 25014. Introduction to Environmental History. 100 Units.
How have humans interacted with the environment over time? This course introduces students to the methods and topics of environmental history by way of classic and recent works in the field: Crosby, Cronon, Worster, Russell, and McNeill, etc. Major topics of investigation include preservationism, ecological imperialism, evolutionary history, forest conservation, organic and industrial agriculture, labor history, the commons and land reform, energy consumption, and climate change. Our scope covers the whole period from 1492 with case studies from European, American, and British imperial history.
Instructor(s): F. Albritton Jonsson Terms Offered: Winter
Equivalent Course(s): ENST 25014, HIST 25014, HIST 35014, CHSS 35014

HIPS 25104. History and Philosophy of Biology. 100 Units.
This lecture-discussion course will consider the main figures in the history of biology, from the Hippocratics and Aristotle to Darwin and Mendel. The philosophic issues will be the kinds of explanations appropriate to biology versus the other physical sciences, the status of teleological considerations, and the moral consequences for human beings.
Instructor(s): R. Richards Terms Offered: Autumn
Note(s): For students taking PHIL 23405, the course is (B) (II).
HIPS 25110. Philosophy of History: Narrative & Explanation. 100 Units.

This lecture-discussion course will focus on the nature of historical explanation and the role of narrative in providing an understanding of historical events. Among the figures considered are Gibbon, Kant, Humboldt, Ranke, Collingwood, Acton, Fraudel, Furet, Hempel, Danto. (B) (III)

Instructor(s): R. Richards

Terms Offered: Winter

Equivalent Course(s): HIST 35110, PHIL 30506, HIST 25110, PHIL 20506, KNOW 31401, CHSS 37510

HIPS 25114. Natural History and Empire, circa 1500-1800. 100 Units.

This course will examine natural history-broadly defined as a systematic, observational body of knowledge devoted to describing and understanding the physical world of plants, animals, natural environments, and (sometimes) people-in the context of European imperial expansion during the early modern era. Natural history was pioneered by the first European encounters with the New World. The encounter with these new lands exposed Europeans for the first time to unknown flora and fauna, which required acute empirical observation, collection, cataloguing, and circulation between periphery and metropole in order to understand their properties and determine their usefulness. As the Spanish, Portuguese, British, French, and Dutch competed with one another to establish overseas trade and military networks in the sixteenth, seventeenth, and eighteenth centuries, they also competed over and shared information on natural resources. The course will combine lecture and discussion and mix primary source readings on natural history in the early modern world with modern historical writings. Though the readings skew a bit toward Britain and the British Atlantic world, every effort has been made to include multiple European and colonial locales. Topics and themes will include early modern collecting cultures and cabinets of curiosities; Linnaeus and the origins of Instructor(s): J. Niermeier-Dohoney

Terms Offered: Autumn

Equivalent Course(s): ENST 25114, HIST 25114

HIPS 25121. The Brazil-Argentina Nuclear Cooperation Agreement and Thermoelectric Transition in Brazil. 100 Units.

In this course we present a history of Brazil-Argentina nuclear cooperation and how Brazil is planning the transition of its electric matrix from predominantly hydraulic towards a mix with increased share of nuclear power. Proliferation risks are a main concern of international community when nuclear programs expansion is considered. The Brazilian-Argentine Agency for Accounting and Control of Nuclear Materials, created in 1991, has been fundamental in assuring the international community (via the International Atomic Energy Agency) that the nuclear materials and facilities of both countries are being used for peaceful purposes. Domestically, the debate has been environmental in nature, and concerns topics ranging from mining to power generation, and from radioactive materials disposal to radiation effects in living organisms and major accidents. These diplomatic, environmental, social and political issues are in turn dependent on technical details of the thermoelectric generating process, and this nexus of issues provides the topics for the course.

Instructor(s): Ramos, Alexandre

Terms Offered: Autumn

Note(s): Tinker Visiting Professor Autumn 2018

Equivalent Course(s): PPHA 39921, CHSS 35121, LACS 35121, LACS 25121

HIPS 25202. Feminist Perspectives on Science. 100 Units.

Feminist perspectives on science come from anthropology, sociology, history, and philosophy. What they have in common is a determination to uproot the deepest and least visible forms of oppression in our society: those pertaining to facts and methods we unquestioningly take to be true, known, and valid. We will first acquaint ourselves with the value-free ideal of science as an objective, rational process of discovery, and the ways this ideal has been wielded as an instrument of domination. We will spend the rest of the quarter challenging this dogma by (1) historically demonstrating science’s symbiotic alliances with political ideologies of gender and race, (2) ethnographically examining structural and interactive practicalities of knowledge-construction and -circulation that reproduce social oppression, and (3) epistemologically deconstructing the very notions of objectivity and rationality that are used to insulate science from feminist critique. Works include but are not limited to authors Londa Schiebinger, Evelynn Hammonds, Emily Martin, Sharon Traweek, Susan Leigh Star, Joan Fijimura, Helen Longino, Heather Douglas, Donna Haraway, Elizabeth Anderson, Sandra Harding, and Susan Haack.

Instructor(s): F. Mostajir

Terms Offered: Autumn

Equivalent Course(s): SOCI 20517, GNSE 25222, ANTH 22124

HIPS 25205. Computers, Minds, Intelligence & Data. 100 Units.

How are we co-evolving with our machines? How do we teach ourselves and our computers how to learn? What kinds of human intelligences do we promote in liberal education in comparison with artificial intelligence(s)? Through our distributed cognition with tools of all kinds, as we engage in participatory culture using digital computers and networks, we provide information that generates the basis for big (and small) data. At the crux of our investigation-on the one hand into reading and conversation and on the other hand into algorithms and information theory—are issues about human action and the multifaceted agency of the universal Turing machine-as mobile phone, laptop, internet, robot.

Instructor(s): A. Tinker

Terms Offered: Autumn

Equivalent Course(s): MAA 14205, HUMA 25205
HIPS 25206. Digital Culture: Artificial Intelligence, Algorithms, and the Web. 100 Units.
In contrast to print culture and electronic culture, yet embedded in them, contemporary digital culture engages us in human-computer systems empowered as media for mobile communication in the global network society. In our conjoined online and offline environments, we inhabit human-computer hybrids in which (for instance) we learn, imagine, communicate, pay attention, and experience affect. How can we understand and critique our theories, concepts, practices, and technologies of intelligence and information in relation to the capacities of these digital machines with which we co-evolve? For exploring this question, our case studies include comparing artificial and natural intelligences, as well as examining algorithms and their socio-political impacts, in current web functionalities such as search (Google) and social media (Facebook, Twitter).
Instructor(s): Browning, Margot Terms Offered: Course was not offered in 2019-20
Equivalent Course(s): LLSO 25206, HUMA 25206

HIPS 25207. Mindfulness: Experience and Media. 100 Units.
How do we experience media (of all kinds) with (or without) awareness? Methods of mindfulness offer principles and practices of awareness focusing on mind, body, and embodied mind. Mindfulness (a flexible, moment-to-moment, non-judging awareness) is an individual experience and at the same time, practices of mindfulness can be a mode of public health intervention. Mindfulness involves social epistemologies of how we know (or don't know) collectively, as we interact with immediate sensory experience as well as with mediated communication technologies generating various sorts of virtual realities (from books to VR). In addition to readings and discussions, this course teaches embodied practices of attention and awareness through the curriculum of Mindfulness-Based Stress Reduction.
Instructor(s): M. Browning Terms Offered: Winter
Equivalent Course(s): HUMA 25207, HLTH 25207, TAPS 20507, MAAD 14207

HIPS 25209. American Pragmatism, Evolution, and the Sciences. 100 Units.
Classical American pragmatism was not an insular philosophical tradition. Rather, it was a major movement, spanning almost a century of U.S. intellectual history, incorporating evolutionary-theoretical insights into all areas of inquiry. This applied not only to the problems of philosophy, but also to various branches of scientific research. Why did pragmatist thinkers construct a philosophical basis out of Darwinian and Spencerian theories of evolution? How was this evolutionary philosophical basis applied towards a transformation of sciences such as psychology, sociology, education science, economics, and even physics? Who were the agents of such transformation projects? How did their lives and projects overlap and diverge? Our class will explore the origins and development of this intellectual movement that occupied a dominant position in major American schools such as Harvard, Columbia, and our own University of Chicago between the 1860s and the 1900s.
Instructor(s): P. Mostajir Terms Offered: Spring. Spring 2020
Equivalent Course(s): SOCI 20534, KNOW 25209, AMER 25209

HIPS 25210. Medical Ethics in the Hospital and Clinic. 100 Units.
In this course, we separate from the ethical conversations that UChicago students may be used to having in the core. Instead, we will examine the ethical quandaries that involve patients and families, doctors, nurses, researchers, and larger society by using a clinical perspective to frame our discussions. How is good medicine practiced? How should physicians think about conflicting social, professional, and personal duties? How do physicians integrate their knowledge with considering a clinical perspective to frame our discussions. In the first week, we will introduce basic frameworks to organize our thinking around complex ethical problems. We will use these frameworks to discuss general issues of ethical import to all fields of medicine: informed consent, decisional capacity, and end-of-life care. Most of our time will be spent exploring the big ethical questions in various medical specialties: surgery, psychiatry, obstetrics and gynecology, and pediatrics. Consideration will also be given to ethical research practices and global health service. Weekly, lectures regarding relevant clinical and basic medical scientific topics will be offered to inform students' ethical decision-making.
Instructor(s): S. Server Terms Offered: Spring. Spring 2022

HIPS 25211. Computers, Minds, Intelligence and Data. 100 Units.
This course will cover the history of machine intelligence, with an emphasis on the sociological, philosophical, and ethical questions raised by this history up to our present moment. We’ll look at how people throughout the last two hundred years have grappled with questions like: Can machines think? What is information? How does data relate to the “real world”? Who is responsible for the actions of a machine? We will examine how developments in mathematical logic, electrical engineering, cybernetics, and statistics interact with each other and with the wider political and cultural context. This course does not require any specific technical background, though we will sometimes read and discuss technical materials together in class. Weekly reading, writing, and research assignments will culminate in an independent research project.
Instructor(s): J. Foley Terms Offered: Spring. Spring 2021

HIPS 25212. Scientism. 100 Units.
Scientism is the controversial view that scientific methods are the best or only valid means for acquiring knowledge. The implications of this position are vast. If only science can provide knowledge, what are the arts and humanities contributing? If only scientific structures and categories adequately reflect reality, how should we understand human morality and culture? What does all this suggest about how we should determine public policy? While scientism is a topic of intense contemporary debate, it has a deep history in which its theoretical and practical components have evolved according to shifting intellectual, social, and political demands. We
will explore debates on scientism (and its cousin, positivism) throughout Europe and the United States in the
nineteenth, twentieth, and twenty-first centuries to better understand the many facets and consequences of this
controversial viewpoint. A major question in this course is whether our historical analysis can provide insights
(and perhaps solutions) for twenty-first century debates on scientism.
Instructor(s): P. Mostajir Terms Offered: Winter. Offered Winter 2022.
Equivalent Course(s): HIST 25108

HIPS 25213. Modernities and Microscopes: Sociopolitical Conflict and Scientific Knowledge in Modern
Europe. 100 Units.
Modernities and Microscopes: Sociopolitical Conflict and Scientific Knowledge in Modern Europe” examines
the relationship between major sociopolitical and scientific events in Western and Central Europe between 1815
and 1945. In week two, for example, we will analyze the role of the post-Napoleonic “Vienna System” in the
consolidation of the statistical style of reasoning in France, while in week seven we will explore the connection
between interwar politics in Austria and Germany and the rise of various eugenicist movements. By the end of
the course, students should have a better understanding of a critical period in European history and acquired a
set of theoretical tools for understanding how sociopolitical and epistemic developments are related.
Instructor(s): Zachary Barr Terms Offered: Spring. Offered in Spring 2022
Equivalent Course(s): HIST 25122

HIPS 25214. Histories of Scientific Communication, 1650-1914. 100 Units.
This seminar offers an overview of the development and history of the “book” and its physical forms, broadly
conceived, in East Asia from ancient times to the present. Drawing on recent scholarship, selected primary
sources, and rare books housed within the library system, this course familiarizes students with the evolution
of the book and methods of book production in China, Korea, and Japan, the principles and practices of material
bibliography and the application of such to physical and digital objects, and selected topics salient to the social
and cultural meanings of books: authorship, the book trade, reading, censorship, and more. Assignments include
a short paper, a short presentation, and a longer final paper. All readings in English, but knowledge of East Asian
history or languages helpful.
Instructor(s): G. Reynolds Terms Offered: Winter
Equivalent Course(s): HIST 24215, EALC 34225, EALC 24225, CHSS 34215, HIST 34215

HIPS 25215. A Laboratory for the End of the World: Philosophy and Science in Fin de Siècle Central Europe.
100 Units.
Throughout the fin de siècle period (1880-1914), academics, artists, and intellectuals across Austria and Germany
were convinced that they were in the midst of a radical-and not necessarily positive-cultural transformation.
Perhaps most famously, the Viennese journalist Karl Kraus declared that pre-war Central Europe had become
“a laboratory for the end of the world.” Although Kraus primarily had various aesthetic and sociopolitical
experiments in mind when he expressed this apocalyptic sentiment, his remark was no less applicable to
Germanophone science and philosophy, which were then experiencing a period of dramatic intellectual
uncertainty and crisis stemming from the decline of traditional perspectives and the rise of new successors. The
aim of this course is to explore these revolutionary changes in more detail.
Instructor(s): Zachary Barr Terms Offered: Winter. Offered in Winter 2022
Equivalent Course(s): HIST 25105

HIPS 25218. American Epidemics, Past and Present. 100 Units.
This course explores how disease epidemics have shaped watershed periods in US history from the late
eighteenth century to the present. Through readings, lectures, and in-class discussions, we will employ different
categories of analysis (e.g., race, gender, class, and citizenship) to answer a range of historical questions focused
on disease, health, and medicine. For instance, to what extent did smallpox alter the trajectory of the American
Revolution? How did cholera and typhoid affect the lived experiences of slaves and soldiers during the Civil
War? In what ways did the US government capitalize on fears over yellow fever and bubonic plague to justify
continued interventions across the Caribbean and the Pacific? What do these episodes from the American past
reveal about contemporary encounters with modern diseases like HIV/AIDS, Ebola, and COVID-19? Course
readings will be drawn from book chapters and scholarly articles, as well as primary sources ranging from
public-health reports, medical correspondence, and scientific journals to newspapers, political cartoons, maps, and personal diaries. Grades will be based on participation, weekly Canvas posts, peer review, and a series of written assignments (a proposal and an annotated bibliography, primary source analysis, book review, and rough draft) all of which will culminate in a ten-page final research paper.

Instructor(s): C. Kindell
Terms Offered: Winter
Equivalent Course(s): AMER 25218, HLTH 25218, GLST 25218, GNSE 25210, CRES 25218, HIST 25218, ENST 25218

HIPS 25219. Science, Culture, and Society in Wittgenstein's Vienna, 1867-1934. 100 Units.
Fin de siècle Vienna is perhaps best known as the birthplace of Gustav Klimt, Egon Schiele, Arnold Schoenberg, and Otto Wagner, among other pioneering modernist artists, but it was also home to several of the most important philosophers and scientists of the early twentieth century, including Ernst Mach, Ludwig Boltzmann, and Ludwig Wittgenstein. Indeed, the city’s artists drew considerable inspiration from its philosophers and scientists and vice versa. The purpose of this course is to examine these cultural entanglements in more detail, and to analyze why Vienna was integral to the development of so many of the aesthetic and intellectual trends that scholars now associate with “modernity.”

Instructor(s): Zachary Barr
Terms Offered: Autumn. Autumn 2022
Equivalent Course(s): HIST 25119

HIPS 25220. Constructivism: A History. 100 Units.
Constructivism, or the theory that human beings in some way make rather than uncover reality, is one of contemporary academia’s great success stories, insofar as one can find avowed constructivists across a wide variety of seemingly unrelated disciplines. Like Darwinism and Freudianism before it, constructivism has also become firmly ensconced in the public imagination, as evidenced by the ubiquity of claims about the “social construction” of various phenomena across social media platforms. The aim of this course is not to offer judgment on the validity of such claims but to better understand what is at stake in them by examining their long and varied history in Western philosophy and science.

Instructor(s): L. Chatterjee
Terms Offered: Spring. Spring 2023
Equivalent Course(s): HIST 25120

HIPS 25270. Infrastructure Histories. 100 Units.
Dams, sewers, container ships, water pipes, power lines, air conditioning, and garbage dumps: the critical infrastructures that enable modern life are so often invisible, except when they fail. This course explores the historical role of infrastructure as a set of planet-spanning systems of resource extraction and crucial conduits of social and political power. Looking at cases from apartheid South Africa and the Suez Canal to Mumbai and Chicago itself, we will consider the relationship of infrastructure with capitalism, settler colonialism, and postcolonial development. We will see how forms of citizenship and exclusion have been shaped and negotiated via wires, leaky pipes, and improvised repairs, and we will consider perhaps the biggest question of all: In this age of ecological crisis, do energy-guzzling infrastructural systems have a strange form of more-than-human agency all of their own?

Instructor(s): L. Chatterjee
Terms Offered: Autumn
Note(s): Assignment: a long paper
Equivalent Course(s): ENST 25027, ARCH 25027, HIST 35027, CHSS 35270, HIST 25027

HIPS 25309. History of Perception. 100 Units.
Knowing time. Feeling space. Smelling. Seeing. Touching. Tasting. Hearing. Are these universal aspects of human consciousness, or particular experiences contingent upon time, place, and culture? How do we come to know about our own perceptions and those of others? This course examines these and related questions through detailed readings of primary sources, engagement in secondary scholarship in the history and anthropology of sensation, and through close work with participants’ own sensations and perceptions of the world around them.

Equivalent Course(s): ANTH 24308, ANTH 34308, CHSS 35309, HIST 25309, KNOW 31404, HIST 35309, KNOW 21404

HIPS 25402. Disastrous Histories: Scientific and Social Understandings of Modern Disasters. 100 Units.
How could this happen? This question reverberates following a disaster. You yourself may have asked it about COVID-19, the 2020 California wildfires, or the 2021 Texas power grid failure, to name a few. While scientific disciplines can help us understand the hazards and risks that lead to disaster, they cannot equip us with all the tools to prevent or mitigate disaster. This course argues that disasters arise when environmental hazards interact with societal structures (infrastructure, racial disparities, religious belief, historical inequalities, etc.) to produce human loss and suffering. This means that there are no “man-made” or “natural” disasters, each being a combination of human and environmental factors. In order to understand and communicate about disaster events, one must understand the history of these societal structures. This class aims to provide students with the tools to understand and talk about disaster. Following the long arch of global disaster history in the modern age, the class starts with the emergence of the categories of man-made and natural disaster in the early modern era and ends with a consideration of how climate change has once again collapsed these categorizations. In order to recognize the relevance of disaster histories to the present day, the class culminates in a final project on conveying information about a historical disaster to a public audience.

Instructor(s): A. Jania
Terms Offered: Autumn
Equivalent Course(s): GLST 25402, HIST 25402
HIPS 25421. Renaissance Book History: Censorship and the Print Revolution. 100 Units.
Collaborative research seminar on the history of censorship and information control, with a focus on the history of books and information technologies. The class will meet in Special Collections, and students will work with rare books and archival materials. Half the course will focus on censorship in early modern Europe, including the Inquisition, the spread of the printing press, and clandestine literature in the Renaissance and Enlightenment, with a special focus on the effects of censorship on classical literature, both newly rediscovered works like Lucretius and lost books of Plato, and authors like Pliny the Elder and Seneca who had been available in the Middle Ages but became newly controversial in the Renaissance. The other half of the course will look at modern and contemporary censorship issues, from wartime censorship, to the censorship of comic books, to digital-rights management, to free speech on our own campus.
Instructor(s): A. Palmer
Note(s): Assignments: short and long papers, alternative assignments

HIPS 25427. The Global Atomic Age. 100 Units.
The nuclear bombings of Hiroshima and Nagasaki 75 years ago was the advent of the atomic age. Paradoxically, the same technology that had unleashed infernos on the Japanese population was heralded in other contexts as utopia in waiting. This course examines how the atom transformed global politics and remade social life, culture, and even the way people experienced emotions. We will use a broad range of sources—including but not limited to historical scholarship, film, poetry, and architecture—to examine the global expansion of nuclear energy, weapons proliferation and militarization, gender and the politics of reproduction, decolonization, nuclear fear and disasters, labor at atomic facilities and in uranium mines, environmentalism and the problem of waste, and nuclear mass politics. Assignments: three essays (1,000-1,500 words each) due in weeks three, six, and nine, which use course-related materials to respond to an assigned prompt. In lieu of a final exam, a portfolio of work from the quarter and a short reflective essay (1,000-1,250 words).
Instructor(s): T. Kahle
Equivalent Course(s): HIST 25427, ENST 25427

HIPS 25525. Environmental Histories of the Global South. 100 Units.
Drawing on cases from Africa, Latin America, and especially Asia, this course explores key themes in the modern environmental history of the world beyond the rich industrialized North. Our investigations will focus on the ecological impacts of colonialism, war, and development, and how environmental management has helped to construct modern states and capitalist practices in turn. Ranging from the malarial plantations of the Caribbean to the forests of southeast Asia, we will analyze not-so-natural disasters like floods and chemical spills as well as the slow violence of deforestation and droughts. Combining primary sources with classic scholarship, we will encounter pioneering green activists like the original "tree huggers" of the Himalayas and environmental advocates for brutal population control. The course will conclude by examining the emergence of a newly assertive Global South in international climate negotiations, and its implications for the environmental history of our planet at large. The course is open to all, but may be of particular interest to students who have taken "Introduction to Environmental History."
Instructor(s): L. Chatterjee
Terms Offered: Winter
Note(s): Assignments: in-class presentation and a long paper.
Equivalent Course(s): SALC 25025, ENST 25025, CHSS 35525, SALC 35025, HIST 35024, HIST 25025

HIPS 25600. History of Statistics. 100 Units.
This course covers topics in the history of statistics, from the eleventh century to the middle of the twentieth century. We focus on the period from 1650 to 1950, with an emphasis on the mathematical developments in the theory of probability and how they came to be used in the sciences. Our goals are both to quantify uncertainty in observational data and to develop a conceptual framework for scientific theories. This course includes broad views of the development of the subject and closer looks at specific people and investigations, including reanalyses of historical data.
Instructor(s): S. Stigler
Terms Offered: Not offered in 2021-2022.
Prerequisite(s): Prior statistics course
Equivalent Course(s): CHSS 32900, STAT 26700, STAT 36700

HIPS 25808. Lab, Field, and Clinic History and Anthropology of Medicine and the Life Sciences. 100 Units.
In this course we will examine the ways in which different groups of people—in different times and places—have understood the nature of life and living things, bodies and bodily processes, and health and disease, among other notions. We will address these issues principally, though not exclusively, through the lens of the changing sets of methods and practices commonly recognizable as science and medicine. We will also pay close attention to the methods through which scholars in history and anthropology have written about these topics, and how current scientific and medical practices affect historical and anthropological studies of science and medicine.
Instructor(s): M. Rossi
Equivalent Course(s): ANTH 34307, ANTH 24307, HIST 25308, KNOW 30202, KNOW 25308, CHSS 35308, HIST 35308
HIPS 26000. History of Philosophy II: Medieval and Early Modern Philosophy. 100 Units.
A survey of the thought of some of the most important figures of the period from the fall of Rome to the Scottish Enlightenment. The course will begin with an examination of the medieval hylomorphism of Aquinas and Ockham and then consider its rejection and transformation in the early modern period. Three distinct early modern approaches to philosophy will be discussed in relation to their medieval antecedents: the method of doubt, the principle of sufficient reason, and empiricism. Figures covered may include Ockham, Aquinas, Descartes, Avicenna, Princess Elizabeth, Émilie du Châtelet, Spinoza, Leibniz, Abelard, Berkeley, Hume, and al-Ghazali.
Instructor(s): D. Moerner Terms Offered: Winter
Prerequisite(s): Completion of the general education requirement in humanities required; PHIL 25000 recommended.
Equivalent Course(s): PHIL 26000, MDVL 26000

HIPS 26070. Explorations of Mars. 100 Units.
Mars is more than a physical object located millions of miles from Earth. Through centuries of knowledge-making people have made the “Red Planet” into a place that looms large in cultural and scientific imagination. Mars is now the focus of human exploration and colonization in the Solar System. How did this happen? What does this mean? Do we know about Mars, and what’s at stake when we make knowledge about it? Combining perspectives from the social sciences and humanities, this course investigates how knowledge about Mars is created and communicated in not only science and technology fields but across public culture. A major focus will be exploring how Mars has been embedded within diverse social and political projects here on Earth. Through reading-inspired group discussions and instructor-led experiential research projects, the course will move from the earliest visual observations of Mars to recent robotic missions on the planet’s surface. In doing so, this seminar will critically grapple with evolving human efforts to make Mars usable. No prior knowledge of Mars is required.
Instructor(s): Jordan Bimm Terms Offered: Autumn
Equivalent Course(s): KNOW 36070, HIST 35200, ENST 26070

HIPS 26075. The End of Certainty? Chaos, Complexity, and Human Life. 100 Units.
What is uncertainty? Is it a temporary state of affairs, a situation to be resolved with more data, or is it permanent feature of our world? This course examines how uncertainty, once understood as the absence of knowledge, has become an object of knowledge in its own right. We will pay particular attention to the fields of chaos theory and complexity science, which emerged in the late twentieth century from physics and mathematics but have since become widely applied sciences, making their way into fields as diverse as molecular biology and economic theory. Together we will follow the path of ‘complexity’ in its many forms, reading texts by geneticists, physicists, climate scientists, philosophers, economists and many others. By the end of the course we will have developed a shared archive of uncertainty, and gained a better understanding of how uncertainty underpins what we do, in fact, know. This course is collaborative, interdisciplinary and historical, and welcomes all interested students, including those with backgrounds in history, philosophy, biological sciences, environmental studies, mathematics, and economics.
Instructor(s): I. Gabel Terms Offered: Autumn
Note(s): This course partially fulfills the research seminar requirement for the IRHUM major.
Equivalent Course(s): IRHU 27005, KNOW 26075

HIPS 26078. Normal People. 100 Units.
Worrying about what’s normal and what’s not is an endemic feature of both our popular and scientific cultures. Is my intelligence above average? What about my height? Should I be feeling this way? Is there a pill for that? People seem to have always been concerned with fitting in, but the way of describing the general run of practices and conditions as “normal” is a rather recent phenomenon; testament to the vast influence of the modern human sciences on how we understand ourselves and others. This seminar will offer a broad historical overview of the ways that group behaviors and individual traits - bodily, moral, intellectual - were methodically described and measured in the past 200 years. We will become acquainted with the work of sociologists and anthropologists, psychiatrists and psychologists, polling experts and child development specialists, and ask about the kinds of people their efforts brought into being, from sexual perverts to the chronically depressed. The course will focus on the scientific theories and techniques used to distinguish the normal from the pathological, together with the new social institutions that translated this knowledge into forms of control. We will read Émile Durkheim on suicide rates and Cesare Lombroso on born criminals; learn about IQ tests and developmental milestones; and consider whether, with the advent of personalized medicine and self-data, we have indeed reached the "end of average.”
Instructor(s): Tal Arbel Terms Offered: Winter
Equivalent Course(s): CHSS 36078, CHDV 36078, SOCI 40255, HLTH 26078, KNOW 36078, IRHU 20009

Full title: "Nature, Science, and Empire in the Early Modern Iberian World, 1400-1800.” Historians have often relegated Iberia and its New World domains from accounts of the developments of modern science. They have traditionally claimed that strict censorship and a commitment to orthodox Catholicism prevented Spain, once the most powerful empire of the world, from embarking on the path towards scientific modernity in the eighteenth century. Modern scholars, however, have challenged this narrative by embracing more inclusive concepts of “science” to explain the many ways in which early modern people related to nature. Some of these practices
include the writing of natural histories, botanical research, and linguistic studies, all fields that Iberian scholars pioneered in their efforts to govern their vast domains. This course will introduce students to a diversity of scientific practices that flourished in the Hispanic world between 1400 and 1800.

Equivalent Course(s): LACS 26121, HIST 26121

HIPS 26207. History Colloquium: Epidemics, Public Health, and Cities. 100 Units.
The ongoing COVID-19 epidemic has brought a new awareness of the devastating impact of epidemic disease, particularly in cities where population density and other factors contribute to high rates of infection. This undergraduate colloquium aims to guide students through the research and writing of an original research paper that explores public health response to epidemic disease in cities around the world. Topics to be examined include defining an appropriate research question, identifying relevant secondary literature, finding primary sources, and constructing a compelling narrative.

Instructor(s): S. Burns Terms Offered: Winter
Prerequisite(s): Priority registration is given to History majors.
Equivalent Course(s): HIST 29607

HIPS 26230. Death Panels: Exploring dying and death through comics. 100 Units.
What do comics add to the discourse on dying and death? What insights do comics provide about the experience of dying, death, caregiving, grieving, and memorialization? Can comics help us better understand our own wishes about the end of life? This is an interactive course designed to introduce students to the field of graphic medicine and explore how comics can be used as a mode of scholarly investigation into issues related to dying, death, and the end of life. The framework for this course intends to balance readings and discussion with creative drawing and comics-making assignments. The work will provoke personal inquiry and self-reflection and promote understanding of a range of topics relating to the end of life, including examining how we die, defining death, euthanasia, rituals around dying and death, and grieving. The readings will primarily be drawn from a wide variety of graphic memoirs and comics, but will be supplemented with materials from a variety of multimedia sources including the biomedical literature, philosophy, cinema, podcasts, and the visual arts. Guest participants in the course may include a funeral director, chaplain, hospice and palliative care specialists, cartoonists, and authors. The course will be taught by a nurse cartoonist and a physician, both of whom are active in the graphic medicine community and scholars of the health humanities.

Instructor(s): Brian Callendar Terms Offered: Spring

HIPS 26301. Religion and AIDS. 100 Units.
The AIDS crisis was not an epoch that we survived. It is a battle that we are still fighting…when Americans talk about AIDS they are rarely just talking about a scientific problem or a pharmaceutical solution. They are instead offering a sociology of suffering and a plan for spiritual warfare.” - Kathryn Lofton Is it possible to understand current debates over public health or the role of religion in the public sphere without first examining religious responses to the AIDS crisis? This course focuses on the emergence of the AIDS epidemic during the peak of the American culture wars. As such, students will analyze the fraught intersection of political power structures, medical epistemologies, and religious views on bodies, sex, and public morality. Through a varied catalog of disciplinary frameworks, e.g., history, theology, medical ethics, sociology of religion, and history of medicine, students will weigh the accuracy of Lofton’s claim that for Americans, AIDS is more than just a disease. Thus, we will scrutinize moral rhetoric surrounding contraception and its public availability. We will discuss the extent to which religious philanthropy, especially on the international stage, reshaped approaches to global health. Finally, we will revisit the role of religious communities in providing both care for the sick and theological responses to suffering. Prior knowledge of religious studies and/or medical history is not required for the course.

HIPS 26304. Religion and Abortion in the United States. 100 Units.
In American public discourse, it is common to hear abortion referred to as a “religious issue.” But is abortion a religious issue? If so, in what ways, to whom, and since when? In this course we will answer these questions by tracing the relationship between religion and abortion in American history. We will examine the kinds of claims religious groups have made about abortion; how religion has shaped the development of medical, legal, economic, and cultural perspectives on the topic; how debates over abortion have led to the rise of a certain kind of religious politics in the United States; and how issues of race, class, gender, sexuality, and the body are implicated in this conversation. Although the course will cover a range of time periods, religious traditions, and types of data (abortion records from Puritan New England, enslaved people’s use of root medicine to induce miscarriage, and Jewish considerations of the personhood of the fetus, among others), we will give particular attention to the significance of Christianity in legal and political debates about abortion in the twentieth and twenty-first centuries. There are no prerequisites for this course and no background in Religious Studies is required. However, this course may be particularly well-suited to students interested in thinking about how their areas of study (medicine and medical sciences, gender and sexuality, race and ethnicity, political science) converge with religion and Religious Studies.

Instructor(s): tbd
HIPS 26316. Medical Innovation and Religious Reform in Early Modernity. 100 Units.
Through a survey of innovative medical authorities and religious reformers, students will investigate the co-constitution of two bodies of knowledge at a historical moment (the sixteenth and seventeenth centuries) when questions of authority and epistemology are in considerable flux. This period has long been implicated in the "conflict thesis"—a hugely influential argument that portrays the centuries-long relationship between religion and science/medicine as an inherently adversarial one. This course shall scrutinize that argument through a discussion of seemingly contradictory examples where reformers that touted the all-encompassing reach of divine providence also promoted intricate public health infrastructures; where the Vatican increasingly relied on university-trained physicians to validate saints and their miracles; where theologians were viewed as authorities on Galen and responsible for medical breakthroughs; and where medicine and metaphysics were considered complementary pursuits. Ultimately, students will unveil a portrait not of conflict, but of a symbiotic relationship between religion and medicine. The goal of our course will then be to query why religious reformers were not only unthreatened by but also actively esteemed the medical arts as a valuable ally.

HIPS 26382. Development and Environment in Latin America. 100 Units.
Description: This course will consider the relationship between development and the environment in Latin America and the Caribbean. We will consider the social, political, and economic effects of natural resource extraction, the quest to improve places and peoples, and attendant ecological transformations, from the onset of European colonialism in the fifteenth century, to state- and private-led improvement policies in the twentieth. Some questions we will consider are: How have policies affected the sustainability of land use in the last five centuries? In what ways has the modern impetus for development, beginning in the nineteenth century and reaching its current intensity in the mid-twentieth, shifted ideas and practices of sustainability in both environmental and social terms? And, more broadly, to what extent does the notion of development help us explain the historical relationship between humans and the environment?

HIPS 26390. Science and Society in Latin America. 100 Units.
How have ideas about and practices of science shaped life and society in Latin America? This course explores the interconnected social and political realities of scientific theory and practice in modern Latin America. Taking a historical approach, it will focus on the scientific management of social and political life, including the construction of categories such as sex and race; the production, consumption, and policing of drugs; and public health. In this discussion-based course, students will develop their own research project that historicizes a contemporary question related to scientific knowledge and/or practice in the region.
Instructor(s): Diana Schwartz Francisco Terms Offered: Spring
Equivalent Course(s): LACS 26390, HIST 26390

HIPS 26701. Goethe: Literature, Science, Philosophy. 100 Units.
This lecture-discussion course will examine Johann Wolfgang von Goethe's intellectual development, from the time he wrote Sorrows of Young Werther through the final states of Faust. Along the way, we will read a selection of Goethe's plays, poetry, and travel literature. We will also examine his scientific work, especially his theory of color and his morphological theories. On the philosophical side, we will discuss Goethe's coming to terms with Kant (especially the latter's third Critique) and his adoption of Schelling's transcendental idealism. The theme uniting the exploration of the various works of Goethe will be unity of the artistic and scientific understanding of nature, especially as he exemplified that unity in "the eternal feminine." (B) (IV)

HIPS 26943. Diasporic Narratives and Memories. 100 Units.
Diasporic Narratives and Memories: Designing a New Concept for a Multi-Ethnic Museum of Belarusian Emigration. This course project takes the instability of Belarusian identity as an advantage for creating a new model of multi-ethnic, open emigrant community with a potential of cooperative democratic integration into a larger multi-ethnic landscape of Chicago. This project's relevance goes beyond the Chicago community, offering a model of multi-ethnic integration for building a civil society in the Belarusian homeland. The course will involve theoretical readings in the studies of diaspora, training in oral histories gathering provided by the Chicago History Museum, and weekly field trips to the diasporic museums in Chicago. We will analyze these museums' curatorial and narrative concepts in order to build upon their strengths and to avoid their weaknesses. This course is part of IFK's Experimental Capstone (XCAP) program for students interested in building upon their experience by adding practice, impact, and influence as important dimensions of their undergraduate work.
Instructor(s): Olga Solovieva and Bozena Shallcross Terms Offered: Spring
Throughout the course we will attend to a generative diversity of epistemologies, anthropologies, and religious approaches to health and healing with particular attention to the postcolonial hybridity of these practices. wellness, selfhood, and the boundaries of medicine. Third, we will reflect upon contemporary Indigenous practices as they are steeped in and curated by Indigenous traditions and religious beliefs. Our goal is to including the Caribbean, Mexico, United States, and Hawaii. Second, we shall attempt to understand healing among the Indigenous peoples of the Americas. Our task will be threefold: first, to examine the drastic effects articulated a view of the human persona (including issues of identity and personality) from French philosophers such as Henri Bergson and Alfred Binet. read the novel 'One, No One, and 100,000' (1926) by Luigi Pirandello and discuss how this author elaborated and incorporated into literary fiction in the genre known as 'the novel of ideas'. As an example of the latter, we will investigate how and why science shifted from a subject intended for the elite few, to a more democratic ideal that embraced public demonstration. The role of patronage in the development of scientific knowledge, and the complex interaction between science and religion will be central to our discussions. Writing assignments will respond to thematic questions based on the readings. This course traces the relationship between openness, secrecy, and the construction of scientific knowledge. Our sources span several millennia of intellectual history, from cuneiform tablets containing glassmaking recipes and the "secrets of the gods," to Medieval alchemical recipes, and to the first museums of natural history. We will investigate how and why science shifted from a subject intended for the elite few, to a more democratic ideal that embraced public demonstration. The role of patronage in the development of scientific knowledge, and the complex interaction between science and religion will be central to our discussions. Writing assignments will respond to thematic questions based on the readings. This course introduces students to the central concepts and methods of medical anthropology. Drawing on a number of classic and contemporary texts, we will consider both the specificity of local medical cultures and the processes which increasingly link these systems of knowledge and practice. We will study the social and political economic shaping of illness and suffering and will examine medical and healing systems-including biomedicine-as social institutions and as sources of epistemological authority. Topics covered will include the problem of belief; local theories of disease causation and healing efficacy; the placebo effect and contextual healing; theories of embodiment; medicalization; structural violence; modernity and the distribution of risk; the meanings and effects of new medical technologies; and global health. In this course, we will explore whether the sciences and the humanities can make complementary contributions to the formation of knowledge, thus leading to the integration and unification of human knowledge. In the first part of the course we will take a historical approach to the issue; we will discuss how art and science were considered complementary for much of the 18th and 19th century (for example, in the views and work of Wolfgang Goethe), how they became separate (the two cultures') in the middle of the 20th century with the compartmentalization of academic disciplines, and how some attempts have recently been made at a reunification under the concept of 'consilience'. In the second part of the course, we will focus on conceptual issues such as the cognitive value of literature, the role of ideas in knowledge formation in science and literature, the role of creativity in scientific and literary production, and how scientific and philosophical ideas have been incorporated into literary fiction in the genre known as 'the novel of ideas'. As an example of the latter, we will read the novel 'One, No One, and 100,000' (1926) by Luigi Pirandello and discuss how this author elaborated and articulated a view of the human persona (including issues of identity and personality) from French philosophers and psychologists such as Henri Bergson and Alfred Binet. In 1946 the famed economist John Maynard Keynes declared that Isaac Newton "was the last of the magicians, the last of the Babylonians." We find throughout history, in the writings of Galileo, Jorge Luis Borges, Ibn Khaldun, Herodotus, and the Hebrew Bible, a city of Babylon full of contradictions. At once sinful and reverential, a site of magic and science, rational and irrational, Babylon seemed destined to resound in the historical imagination as the birthplace of knowledge itself. But how does the myth compare to reality? How did the Babylonians themselves envisage their own knowledge? And is it reasonable to draw, as Keynes did, a line that begins with Babylon and ends with Newton? In this course we will take a cross comparative approach, investigating the history of the ancient city and its continuity in the scientific imagination. HIPS 27004. Babylon and the Origins of Knowledge. 100 Units. In 1946 the famed economist John Maynard Keynes declared that Isaac Newton "was the last of the magicians, the last of the Babylonians." We find throughout history, in the writings of Galileo, Jorge Luis Borges, Ibn Khaldun, Herodotus, and the Hebrew Bible, a city of Babylon full of contradictions. HIPS 28319. Ephron course: Imagining Nature among the Greeks. 100 Units.
The goal of this course is to gain an understanding of the historical roots of the concept of nature (Greek physis), while being attentive to the diversity of ancient Greek thought about nature even in its early history. In the texts we will read, numerous notions of "nature" can be discerned: for instance, nature as the physical form of an individual, nature as an underlying reality of someone or something, nature as an autonomous thing distinct from human art and from the supernatural, nature as the all-encompassing natural order, or nature as the natural environment. The conceptual and ideological work done by these conceptions also varies widely. Furthermore, the images associated with the concepts are similarly diverse, ranging from human bodies to magical plants and cosmic spheres, and with a comparable repertory of conceptual and ideological purposes. Yet discussions of the concept of nature typically deal almost exclusively in abstractions: this is true, for instance, of the standard study of physis written over a century ago as a U of C dissertation, which we will read in excerpt. Throughout this class, we will consider not only the explicit and abstract conceptualization of nature, but also a number of related images-especially in the form of metaphors, analogies and personifications—that ultimately fed into the literary and philosophical depictions of nature in the long traditions that have followed.
Instructor(s): L. Wash Terms Offered: Winter
Equivalent Course(s): CLCV 28319

HIPS 28350. XCAP: The Experimental Capstone - The Art of Healing: Medical Aesthetics in Russia and the U.S. 100 Units.
What makes a medical treatment look like it will work? What makes us feel that we are receiving good care, or that we can be cured? Why does the color of a pill influence its effectiveness, and how do placebos sometimes achieve what less inert medication cannot? In this course we will consider these problems from the vantage points of a physician and a cultural historian. Our methodology will combine techniques of aesthetic analysis with those of medical anthropology, history and practice. We will consider the narratology of medicine as we examine the way that patients tell their stories-and the way that doctors, nurses, buildings, wards, and machines enter those narratives. The latter agents derive their meaning from medical outcomes, but are also embedded in a field of aesthetic values that shape their apprehension. We will look closely at a realm of medical experience that continues to evade the grasp of instruments: how the aesthetic experience shapes the phenomenon of medical treatment.
Instructor(s): William Nickell; Brian Callender; Elizabeth Murphy Terms Offered: Autumn
Prerequisite(s): for BIOS 29209: This course does not meet the requirements for the Biological Sciences major.
Note(s): This course is one of three offered in The Experimental Capstone (XCAP) in the 2019-20 academic year. Enrollment in this course is restricted to 3rd and 4th year undergraduates in the College. For more information about XCAP, visit https://sifk.uchicago.edu/courses/xcap/
Equivalent Course(s): ANTH 24360, KNOW 29901, BIOS 29209, HLTH 29901, ARTV 20014

HIPS 29412. The Face in Western Culture from the Mona Lisa to the Selfie. 100 Units.
The course will approach the history of the human face from a variety of disciplinary perspectives, ranging across art history through to the history of science and technology. Topics will include the Mona Lisa and Renaissance portraiture; early modern identity and identity documents; the discipline of physiognomy; Johann Kaspar Lavater and the makings of racial science; the impact of photography; Alphonse Bertillon and the "mug shot"; smiles in advertisements; biometrics to facial recognition technologies; and the art and science of the selfie. The course will draw on specialized readings from secondary literature alongside a wide range of literary and visual primary sources, including scientific texts, paintings, drawings, identity documents, photographs, advertisements, cosmetics, and prosthetic parts. The subject offers a great deal of room for the selection of a topic for a research paper on a subject of students' choices.
Prerequisite(s): Open to upper-level undergraduates.
Equivalent Course(s): HIST 29412

HIPS 29637. Tutorial: Evolution Beyond Darwin. 100 Units.
One of the most identifiable images associated with evolution is the visage of Charles Darwin. Historical narratives of evolution center on Darwin's work, and scientific publications today still note whether or not Darwin pre-empted their ideas. This course aims to build a narrative of evolution that brings the story up to today, asking why so many see Darwin as a shorthand for evolution and what consequences that might have for the development and communication of the science. In addition, it will interrogate other "iconic" images and narratives in evolution, like the tree of life. We will ask where our ideas about evolution have come from, how they are perpetuated, and what consequence that might have for the discipline of evolutionary biology.
The course has three aims: 1) to provide a historical understanding of evolution after Darwin; 2) to reflect on how evolution is communicated between scientists and to the broader public, and to ask how "icons" or Darwin himself suggest implicit meanings counter to the work of the scientists; and 3) to more broadly examine what is a science-a process or a body of knowledge?
Instructor(s): E. Kitchen Terms Offered: Spring. Spring 2021
Equivalent Course(s): HIST 25023

HIPS 29638. TUTORIAL - Vitalism and Teleology in Biology: Historical and Philosophical Approaches. 100 Units.
Unsurprisingly, "what is life?" has a claim to being one of the oldest questions in science, lagging only a little behind "what is?" It may be more surprising to learn that arguably all major answers to the question-with materialism and epiphenomenalism on one end of the spectrum, holism and essentialism on the other-are about as old, and that the history of biology has been more a matter of recombining these answers than coming up with new ones. If biology is a game, its ground rules were laid early on. You may propose ingenious modifications of strategy, but go too far outside the box and your fellow players will likely accuse you of playing a different game altogether-if you haven't already been disqualified by the referees. We will approach these questions by considering the history of biology as the history of philosophical attempts at making sense of life, broadly conceived, from Aristotle to Darwin. Such "philosophies" of life need not be held self-consciously-the most interesting ones often aren't. Rather, any scientific account of life necessarily entails making metaphysical commitments. By tracing the history of these commitments, we will consider which (if any) of their historical mutations have been novel, and where we currently stand. We will also consider the ways in which philosophies of life, with all their metaphysical entanglements, have themselves been entangled with politics and ideology.
Instructor(s): B. Deadman Terms Offered: Winter. Winter 2020
Equivalent Course(s): HIST 25022

HIPS 29639. TUT: The World's Columbian Exposition: Science, Race, Gender, & Music at the 1893 Chicago World Fair. 100 Units.
This course surveys the sights, sounds, and tastes that filled Jackson Park and the Midway Plaisance between May 1 and October 30, 1893. During those six months, over 27 million people flocked to Chicago's south side from across the United States and beyond the Atlantic to experience the marvels illuminating the World's Columbian Exposition. Visitors weaved their way through the newly-designed Midway Plaisance, where they passed exhibits of "authentic villages of native peoples" in "traditional" garb until they reached the entrance of the American White City—or, as it was presented, "the apex of civilization"—where exhibits and lectures on the newest theories and innovations filled 200 Neoclassical buildings under 100,000 incandescent lights. Walking up the Midway demonstrated progress in human development in tune with the main topic of the White City's Congress of Evolution-Social Darwinism. In this course, students will learn about explicit displays of "progress" during the Gilded Age and will be challenged to interrogate allegories of it at the Columbian Exposition. Together, we will practice close-reading of primary and secondary texts, close-looking of images and objects, and close-listening of music and sounds. We will investigate how "progress" was staged and cogitated in terms of: Evolutionary theory, Race, Gender, Music, Architecture, and Technology.
Instructor(s): A. Clark Terms Offered: Autumn. Autumn 2020
Equivalent Course(s): GNSE 25021, CRES 25021, HIST 25021

HIPS 29644. Tutorial - Introduction to Historical Epistemology. 100 Units.
Philosophers of science and historians of science have explored the dynamics of scientific change in distinct ways. Historical epistemology integrates methods from both approaches, attending to epistemology as a situated, cultural activity. Rather than focusing on a single knowing subject, historical epistemology conceives of science and knowledge as ongoing cultural projects with associated structures of knowledge, ways of perceiving and reasoning, and values. Methodologically, historical epistemology focuses on the emergence of certain epistemic concepts, practices, and assumptions. In this course, students will be introduced to this approach to science studies through a survey of readings by authors such as Lorraine Daston, Ian Hacking, and Steven Shapin. We will primarily concentrate on epistemological shifts in modern European history. The readings will allow students to ask questions about objects of knowledge, styles of reasoning, imaginations of time and space, understandings of nature, and conceptions of rationality, truth, reality, and history. The structure of the course is non-linear, giving students different sites to engage with the relation between epistemological change and how disciplines, subjects, spaces, things, and worlds are made.
Instructor(s): Eman Elshaikh Terms Offered: Autumn. Tentatively offered Autumn 2022
Equivalent Course(s): HIST 25028

HIPS 29645. Tutorial - Algorithms and Big Data in Society. 100 Units.
Algorithms and Big Data have become a ubiquitous presence in our lives. From routine internet searches to predictive policing, these technologies shape how we acquire knowledge, relate to other people, and interact with the State. But despite their prevalence in society, most consign the study of algorithms to the realm of computer science. In doing so, we become suffice to consider algorithms as opaque and inscrutable technical objects, all the while missing the distinct social histories and the human subjectivities inhered in their code. This seminar examines these histories, and the ways that algorithms and Big Data shape social processes and institutions. We’ll examine the consequences of these technologies for governing people, managing economies, and for our everyday “micro” interactions. To do so, we’ll wrestle with a range of empirical examples and theoretical pieces to help us make sense of these phenomena. Our goal is to develop a better understanding of
how algorithms shape individuals and society, and to integrate that new knowledge into our own scholarly or professional practice.

Instructor(s): Adam Peri Terms Offered: Winter. Offered in Winter 2023
Equivalent Course(s): SOCI 20566

HIPS 29646. Tutorial - Science and Literature in Twentieth Century Russia. 100 Units.
This course examines the interactions between the science and literature of late Imperial Russia and the early Soviet Union. The relationship between sciences and humanities is difficult to disentangle. Are they antithetical, or allies? Disparate or proximate? The possibilities that science offers for literature, and literature for science, are exemplified in their interactions in Russia. The dynamic culture of the waning Empire and the turbulence of the nascent Soviet Union are captured in the literature of the early 20th century, as authors and scientists contend with the social and political upheaval. Literature embodies the engagements between science and humanities, inspiring, reflecting, and reinterpreting scientific aspirations. Readings will be balanced between primary fictional texts, including novels, short stories, plays, films, and poetry, and secondary scholarship on the history of science. Authors include Mikhail Bulgakov, Alexander Solzhenitsyn, Anna Akhmatova, and more, while we will explore Cold War and contemporary historiography though scholars such as David Joravsky, Loren Graham, and Nikolai Krementsov.
Instructor(s): Reese Fulgenzi Terms Offered: Spring. Tentatively scheduled for Spring 2023

HIPS 29678. History Colloquium: Medicine and Society. 100 Units.
How does medical knowledge change? How do medical practices transform over time? What factors influence the ways in which doctors and patients-and scientists, artists, politicians, legislators, activists, and educators, among others—understand matters of health and disease, of proper and improper interventions, of the rights of individuals and the needs of communities? This course treats these questions as a starting point for exploring the interactions of medicine and society from 1800 to the present. Through a combination of primary and secondary sources we will examine changing causes of morbidity and mortality, the development of new medical technologies and infrastructures, shifting patterns of disease and shifting ideas about bodies, and debates about health care policy, among other topics. Students will be expected to conduct original research and produce an original research paper of fifteen to twenty pages.
Instructor(s): M. Rossi Terms Offered: Spring
Prerequisite(s): Priority registration is given to History majors.
Equivalent Course(s): HIST 29678

HIPS 29700. Readings and Research in History, Philosophy, and Social Studies of Science and Medicine. 100 Units.
Reading and Research for HIPS seniors working on their senior thesis.
Terms Offered: Autumn Spring Winter
Note(s): Students are required to submit the College Reading and Research Course Form.

HIPS 29800. Junior Seminar: My Favorite Readings in the History and Philosophy of Science. 100 Units.
This course introduces some of the most important and influential accounts of science to have been produced in modern times. It provides an opportunity to discover how philosophers, historians, anthropologists, and sociologists have grappled with the scientific enterprise, and to assess critically how successful their efforts have been. Authors likely include Karl Popper, Thomas Kuhn, Robert Merton, Steven Shapin, and Bruno Latour.
Instructor(s): R. Richards Terms Offered: Autumn
Equivalent Course(s): PHIL 25503, HIST 25503

HIPS 29810. Bachelor’s Thesis Workshop. 100 Units.
Thesis writing workshop for HIPS seniors.
Terms Offered: Autumn,Spring,Winter

HIPS 29900. Bachelor’s Thesis. 100 Units.
This is a research course for independent study related to thesis preparation.
Terms Offered: Autumn,Winter,Spring
Note(s): Students are required to submit the College Reading and Research Course Form.
